Followers of positive psychology generally advocate for three fundamental pillars of positive psychology: positive experience, individual traits, and positive institutions. (https://mu.ac.in/wpcontent/uploads/2022/05/Positive-Psychology-English-

Version.pdf). Positive schooling emerged based on these principles and pillars of positive psychology. Positive schooling is an applied part of positive psychology that focuses on the student's overall development rather than addressing their weaknesses. Positive schooling from childhood is also effective for developing trust, care, team effort, respect for other members of the group, respect for diversity, responsibility, creativity, courage, leadership qualities, work ethic, self-discipline, integrity, critical thinking ability, different skills, perseverance, honesty, kindness, modesty, humanity, passion, social intelligence, emotional control, diligence, self-monitoring, bravery and other vital traits of personality. So, positive schooling

is positively correlated with the student's cognitive, affective, and psycho-motoral development. At the same time, it must be mentioned that positive schooling directly affects the mental health and well-being of the students. Therefore, to strengthen the future generation of any society or Nation, positive social and educational institutions and positive schooling are of paramount importance.

In Santiniketan, which was established by Mahrshi Devendranath Tagore in 1863, Rabindranath Tagore, in 1901, established a Brahmacharya Vidyalaya in, the lab of the nature, which was probably his answer to his dissatisfaction about the educational system that he had to face during his childhood and the educational system that was in practice in the during Colonial India. However, the *Brahmacharya Vidyalaya*, as an Ashram, was a unique example of positive schooling. A multidimensional curriculum with a range of extra-curricular activities has been incorporated into the educational system to prioritize students' interest in learning. Teaching and learning in the open air added a new dimension to the educational system. The main aim of education in this educational institution, as set by Tagore, was the "joy of mind" of the students. Tagore adopted the principle of free discipline in educational institutions. The educational experiments by Tagore in Santiniketan were based on scientific approaches, while the principles of educational psychology, child psychology, and positive psychology were equally emphasized.

A blend of naturalism and pragmatism was perfectly planned and implemented to nurture, grow, and develop young minds from their childhood and ensure the overall development of the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

student's personalities. Tagore also followed the ancient Indian educational tradition in the educational practices at Santiniketan. So, at the beginning of the 20th century, the educational experimental executive and practiced by Tagore informed of a *Brahmacharya Vidyalaya* was a revolutionary and innovative educational effort which, over time, was acclaimed by the entire world.

Positive psychology is essential and related to the mental well-being of an individual by providing positive experiences. Positive schooling during the initial days of formal learning helps develop a positive attitude among the students toward the teaching and learning process. It strengthens the foundation of the Nation's future generations. Tagore's educational institution started as a *Brahmacharya Vidyalaya*, which today is popularly known as "*Patha Bhavana*," also practiced the same from its inception. On the other hand, positive psychology was come in to light as a formal discipline in 2000. This study attempts to study whether or how far a century back the educational system synchronizes with the concept of positive schooling or, in a broader sense, with positive psychology.

Aims of Education

Tagore defined education as "The highest education is that which does not merely gives information but brings our life in harmony with all existence." (Tagore.R,1917,p.116)

Through this definition, Tagore had fixed a very simple but high aim of education, which not only ensured individual development but also emphasized the symbiotic relationship of the students with nature as well as with society. According to Tagore, the main aim of education must be the "joy of mind," and he advocated for the spontaneous participation of the students in the educational system. From the inception of the Brahmacharya Vidyalaya or Patha-Bhavana, closeness to the natural environment had been one of the prime aims of the educational system. Closeness to nature ensures happiness and helps develop the students' freethinking ability. It also has a positive correlation with the mental well-being of the students. For this reason, Tagore believed in the burden-free learning of the students was mainly during the early days of their education. Developing creativity within the students through a well-planned positive schooling system was another aim of his educational practice. Accordingly, Tagore adopted a multidimensional curriculum in his educational system with many co-curricular subjects equally important to traditional school subjects. Another important aspect that needs to be mentioned in this context is the principle of choice and the demands of the students in the selection of subjects. Tagore adopted this practice almost a century before, and it is equivalent and pertinent in modern times too.

Tagore's educational philosophy also emphasizes the development of different social, cultural, moral, and environmental values through education. "Ashram Sammilini," a unique form of student self-governance, was introduced by takers in 1912 in his educational institution, which ultimately aimed to

develop the student's personalities. Different activities were arranged to involve the students in various social, cultural, and literary activities. Spontaneous engagement of the students in the different types of activities has added an extra dimension to Tagore's educational practices.

A range of co-curricular subjects was also incorporated into the school curriculum to orient students to different kinds of vocational skills and trades. "Ananda Mela" is an event where students can exhibit creativity and sell their products. "Ananda Mela," the fair of joy, from its name itself, can be realized how eager the student is for this day of the year.

Nurturing immature minds with freedom in a fearless natural environment with the prime objective of "joy of mind" was set as the main aim of education by Tagore in his educational institution. Positive psychology and positive schooling advocate for the mental well-being of the students during the early days of their learning by providing relevant real-life experience in a positive environment, which will ultimately motivate the students to acquire their life skills and overall personality development. In this context, it can be said that Tagore educational practice in Santiniketan is a living example of such positive schooling.

Developing responsible and sensitive future generations for the Nation was another important objective of Tagore's education. Orient in the young minds, with the different kinds of constructive, organized, valued, rich group efforts, etc., were planted by Tagore in his educational experiment to ensure the overall development of the students. *Ashram Sammiliani* was initiated by Tagore in 1912, and it was probably the first organized form of student self-governance. The students organize different kinds of activities like cultural, literary, social work, games, sports, health and hygiene, environmental awareness, and various occasions mainly initiated by Tagore, like *Anand Bazar*, *Sarad-Utsab*, etc. Organizing and participating in these activities around the year is a source that plays an essential role in the student's mental well-being and cognitive development.

So along with the regular school subjects, a range of co-curricular subjects, activities of *Ashram Sammilini*, different functions, and festivals around the year, admiring the various seasons and the changes in nature were the main four pillars of the curriculum of Rabindranath Tagore, which were developed and practice in his educational institution in Santiniketan.

In this context, two kindergarten schools of Visva Bharati must be mentioned, namely *Anand Pathshala* and *Santosh Pathshala*. Two schools are entirely in the lap of nature where, till today, the play-way method of education is being followed to transition the entire curriculum. Singing, dancing, clay modeling, nature study, acting, etc., have occupied a vital position in the curriculum, along with the contents of the early days.

It is evident enough that Tagore's educational practice indirectly strengthens the foundation of an ideal concept of positive schooling and positive psychology. Tagore fixed the child's

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

harmonious development as the main aim of education in his educational practice.

Curriculum

The curriculum in any educational system is the most important part as it is the road map to reach or achieve the goals of education. Different principles are followed while framing the curriculum to ensure the physical, mental, social, cognitive, emotional, moral, or, better to say, the overall development of an individual or an entire generation. The curriculum is the tool that bridges the gap between theoretical knowledge and practical experience in a controlled environment with real-world situations and in the development of different life skills. The principles of positive psychology play an important role in curriculum design as they ensureburden-free learning for students and maintain their mental health and well-being. So, curriculum design is an essential area of positive schooling.

Rabindranath Tagore, in his educational experiments and later in practices from the very inception, had implemented a multidimensional curriculum. The important dimensions are as follows.

- The regular school subjects
- Compulsory co-curricular subjects with games and sports
- Ashram Sammiliani and its activities
- Functions and festivals

Alone with the regular conventional School subjects, activities of the other three parts of the curriculum are equally emphasized by Tagore in his educational practices after several experiments.

From Tagore's different writings, mainly about his childhood, it was clear enough how he was mentally disturbed by the educational pattern in practice during that time. *Brahmacharya Vidyalaya*, in the form of the *Tapovan Ashram*, was established by Tagore in 1901 in Santiniketan, which answered his childhood displeasure and dissatisfaction. This displeasure with the educational process is a potential factor for developing a negative attitude within the students toward their early childhood or the early days of learning. This part was possibly most meticulously taken by Tagore in his educational practices, and this is probably the reason behind determining "joy of mind" as the prime in education. To ensure the achievement of such an aim, Tagore designed and executed a multidimensional curriculum in his school.

Regular school subjects like Bengali, English, Mathematics, Life science, Physics, Chemistry, History, Geography, Hindi, Sanskrit, Economics, Home science etc. compose one part of the curriculum. These subjects strengthen the theoretical base of the students and provide them with essential knowledge of their lives. Contents are selected according to the age of the students, but at the same time, it must be mentioned that these conventional subjects formed only a part of the entire curriculum. The mother tongue, mainly Bengali, the regional language, was also adopted

with a particular focus on teaching these subjects, and the principle of burden-free learning was practiced from the beginning so as not to stress the students. Classes are organized in the open air, in the lab of nature, so that the students can visualize and connect their lessons with nature's happenings.

Another uniqueness of the schooling system is that despite sitting in a particular place or a particular classroom, the students have to go to different places to attend their classes. So the time to reach a class from another class is arranged carefully to refresh the students for their next class. The grading system was implemented in the evaluation process from the very early stage of its journey. Tagore followed a continuous and comprehensive evaluation process in his educational experiment, and most importantly, no detention policy was adopted up to a certain standard.

So, the entire formal educational system was designed and implemented according to the principles of education and Child Psychology. Every step in executing this part of the curriculum set almost a century ago was the best example and practice of positive schooling. Nurturing young minds in a burden-free, fearless natural environment to enable them to find absolute joy in their mind can be referred to as the best practice or the principle of positive schooling. All these practices of the century before are highly recommended and followed widely by almost all the conscious nations in the present era.

The second important part of Tagore's educational curriculum is the principle of a wide range of co-curricular subjects in the formal educational process. A wide range of co-curricular subjects of equal importance were incorporated into the curriculum. Painting, clay modeling, singing, dancing, origami, playing different Indian musical instruments, weaving, woodwork, leatherwork, etc., are some extra-curricular subjects almost compulsory for all students. So, a wide range of choices to date is being provided to the students to enable them to develop their inner potential according to their own choices, interests, and demands. Participation in all these-curricular activities ensures the development of various skills within the students and develops good habits for managing their free hours effectively. It refreshes the students' minds for their studies and helps them develop a positive attitude towards the different vocational activities. Co-curricular subjects are an essential part of the total educational system of Santiniketan, and this is the unique character of the educational experiment and practice of Tagore that made the difference and is widely admired. The National Education Policy-2020 mentions the importance of incorporating co-curricular subjects at the school level. Educational psychology also advocated incorporating co-curricular subjects along with conventional School subjects. Participation in such different activities reduces the negative emotions within the students. It accelerates the process of positive emotion, hence happiness and mental well-being, which are the main objectives of positive schooling and positive psychology. According to the concept of positive psychology, happiness, and mental well-being have a

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

positive impact on the cognitive development of the students, which enhances their quality of life. It also is a significant source of motivation and self-expression for the students. It can be said that incorporating co-curricular subjects or activities in the educational system, mainly at the school level, has multiple benefits. Almost the century before, Tagore, in his educational system, had implemented this principle of incorporating a wide range of co-curricular activities, an example for the educational psychologist and the entire world.

The third important pillar of Tagore's educational curriculum for the school level was *Ashram Sammilani*, which has different activities. *Ashram Sammilani* was introduced by Tagore in 1912 in Patha Bhavan and later in Sikha Satra. *Ashram Sammilani* was possibly the pioneer form of student self-governance in the formal educational system. *Ashram Sammilani* has is a well-defined constitution with specific constitutional provisions and subsections explaining different rules and regulations related to the formation of different groups, different activities of this Vibhag, selection or election of the secretary or the *sampadak* for the different groups, provisions for General Meeting, Cabinet formation, revisions of rules, account rules and others. The different Vibhags of *Ashram Sammilani* are as follows:

- Sahitya Vibhag
- Seva Vibhag
- Swasthya Vibhag
- Aharjya Vibhag
- Krira Vibhag
- Bichar Vibhag
- Sakha Sangha
- Paribesh Vibhag

Each Vibhag has a male student representative as a *sampadak* and one female representative as a sampadika, except the Bichar-Vibhag, which has around eight members. All the representatives of the Ashram Sammilani form the Cabinet which is popularly known as Protinidhi Sabha. The other students select or elect the student representatives through a well-defined democratic voting system. All the Vibhags have a set of well-defined activities around the year. All the school's students are directly or indirectly involved or participate in these activities. The tenure for one cabinet is for one year. After that, the cabinet is reconstructed with new sets of student representatives. One term is divided into two sessions, and at the end of each session, all the representatives of different Vibhags have to present an account of the different activities they organize. These details are presented in a general meeting, which is presided over by an invited external member, and in the general meeting, all the students are allowed to raise any question. One school teacher is appointed as a Proctor or Chatra-Sanchalak of Ashram Sammilani and for each Vibhag or group. One teacher in charge, or Adhyapak, is appointed to advise the representatives of the concerned Vibhag. Adhyaksha, or the Principal of the school, will be the Hon'ble President of Ashram Sammilani by virtue of the chair.

Ashram Sammilani was a unique creation of Tagore with multiple goals: development of democratic awareness, responsibility, decision-making ability, administrative skill, leadership quality, development of team effort, organizing different events, respect for hard work and others, self-dependency, active agent of the society, disciplined behavior and most importantly harmonious development of the personality.

So, a significantly positive correlation exists between the philosophy of introducing *Ashram Sammilani* and the positive schooling practice. Instead, it would be more appropriate to say that the different activities of *Ashram Sammilani* provide ample practical opportunity to grow in a balanced, harmonious, and probably in the best possible way. *Ashram Sammilani* was an exemplary educational creation of Tagore. In the present-day context, in almost all societies and different schools, students' self-governance and youth parliament are being practiced to ensure the development of democratic awareness, dutifulness, responsibility, and sensitivity to future generations of the Nation. In this context, the role of *Ashram Sammilani*, initiated almost a century ago, must be mentioned with importance and respect.

The fourth important pillar of the curriculum developed by Tagore was introducing and incorporating different functions and festivals with education. Functions and festivals around the year in Santiniketan are like the heartbeat of the entire university campus and the community. Around twenty eight different festivals are celebrated in Visva-Bharati during the year. Students are the main participants in these functions and festivals. The students, even the school students, also lead in organizing of such functions. The functions and festivals related to the change in the seasons, remembering the different eminent personalities, celebrating the days with national and international importance, organizing different fairs, organizing dramas, exhibitions, and many more are the important functions of this university. Some of these festivals like Ananda mela, Basant-Utsav, Sarad utsav, Poush-Utsav, Gandhi Purnaho, Ritu-Utsav, Barsha Mangala, Briksha Ropan, Nanden Mela, Shilpo Utsav etc. are important.

Creativity, cooperation, leisure hour management, leadership quality, attitude towards social equilibrium and residence, aesthetic sense, management, ability exposure to the greater world, environmental sensitivity and awareness, cultural development, respect for cultural diversity, knowledge about the cultural heritage, attitude towards the social services, practical experience for organizing different events, development of social and model values, self-discipline, vocational attitude, etc. are some of the crucial traits that are targeted to develop in the personality of the students through these function and festivals. Apart from the functions and festivals of Santiniketan, they also play a significant role in mass education. Tagore consciously organized these functions and festivals and incorporated them with the formal educational system to achieve the educational goals he envisaged.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Adopting this particular principle in formal education was a master stroke by Tagore for the effective development of the student's personality through education. Positive schooling nowadays is being practiced to ensure the happiness and mental well-being of the students on the school premises, mainly for their development. Different kinds of activities are also arranged and organized in this concern. Still, the creative and intellectual practice Tagore developed in this context was unparalleled and instant to society.

The four-fold curriculum of Tagore was based purely on the principles of educational psychology. Tagore's educational experiments and practices in Santiniketan strengthen the foundation, concept, and practice of positive schooling, especially in the context of Indian society. Keeping the importance of such educational planning, the National Education Policy 2020 also incorporated some of the principles from the Educational Philosophy of Tagore while paving the way for national development through education.

Teachers in Tagore Educational Practices

Teaching and learning are the main two activities in the educational process. Especially in formal educational systems, the conventional form of face-to-face classroom teaching and learning process is still widely practiced worldwide. Teachers and students are the main living components of this process in the classroom. In a conventional classroom, the active role of a teacher is more than that of the students. Classroom teaching requires an ideal situation for accessible communication between the teachers and the students. Any hurdle in this process can hamper the total teaching-learning environment. Therefore, it is essential to have a genuine teacher who can play an effective role in the child's learning process.

"Ashram-er-Rup-O-Bikas" (1416 Bengali Year) was an essay by Rabindranath Tagore in which he put his view forward about the quality of an ideal teacher. In his educational system, Tagore recommended an intimate relationship between the student and the teacher. According to him, this intimate relation in the natural environment will ultimately be the key to achieving the highest goal of education. To establish this bonding, the teacher has to take the leading role. For this reason, Tagore mentioned that the teacher must be a human being, not a machine, to deliver information only. He also noted that the teacher will be an energetic and active agent of nature and perform the teaching passionately. A teacher's vast knowledge and thinking ability can answer all the students' queries, satisfy the young inquisitive minds in the early days of life, and inspire them to think beyond boundaries. Tagore also mentioned that the teacher would be an active agent of nature, and all the happenings of nature would attract the teacher equally as they attract a child. The teacher will motivate the students to explore their immediate surroundings and gain theoretical knowledge. In his writing, Tagore explicitly mentions that a child's innocence must be there in a teacher, which will be the key factor in the intimate relationship between the teachers and the students.

Positive schooling has specific reservations about the quality and role of a teacher in school education. The teacher has to play the most vital role in inspiring the child to the education process and their mental well-being. Therefore, in positive schooling, the teacher is considered the most important biological factor of education as they are assigned to nurture young minds through direct contact. Even the lack of infrastructure can also be overcome with the help of an active, sensitive, inspiring motivator as a teacher.

In this context, it can be mentioned that Tagore, in his educational philosophy, perfectly drew the character of an ideal teacher. The characteristics of a teacher, highlighted by Tagore, are very significant psychologically and are according to the principles of positive psychology and positive schooling for ensuring the holistic development of the students.

Discipline

The approach to student discipline in any educational philosophy and practice is one of the important parameters for the analysis and evaluation of the educational system. In the present era, any punishment or harsh discipline is strictly prohibited and discouraged in the educational system as it is not psychologically accepted, mainly in the early days of learning. Equally, any physical and mental punishment stands in the way of a positive environment and schooling. A fearless environment is highly recommended for the mental well-being of the students in the school setup, as it will positively motivate the students.

Rabindranath Tagore had established his *Brahmacharya Vidyalaya* in the lab of nature where freedom was the central pillar of the entire educational practice. Tagore recommended self-discipline in his educational system, where discipline in an automated way will develop within the students according to the demands of the situation. Therefore, in view of Tagore, in a well-structured educational system, freedom and discipline complement each other, ultimately providing a fearless environment for the students in their schooling process.

CONCLUSION

The application of psychological principles in education, mainly in the school educational system, has brought radical changes in the present time. More significantly positive schooling, a major branch of positive psychology, emerged as the formal discipline in 2000 and has more intensely focused on making school education more effective for the holistic development of the student in the school premises by ensuring their mental well-being and mental health. A good state of mind all along is a significant factor in the development of a balanced personality. It is essential to have a positive environment as a part of positive schooling to develop a positive attitude towards education in the early days of life. Happiness is the prime objective of positive psychology. Positive schooling is also based on the principle of learning in a joyful environment that can create happiness within the students.

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Rabindranath Tagore, in 1901, had established *Brahmacharya Vidyalaya* under, the roof of the open sky in the lap of nature. "Joy of mind" was education's prime aim, as Tagore defined in his educational institution. Along with it, the harmonious development of the students' personality was also fixed as an objective of education. Accordingly, minor aims, four-fold curriculum, different activities of *Ashram Sammilani*, Cocurricular activities, functions and festivals, teachers student positive relation, freedom, self-discipline etc., were planned meticulously by Tagore to achieve the objective as framed by him at the early stage of this journey. The educational system in the schools of Visva-Bharati is widely appreciated by all the educated societies in the world. Its richness and fundamental principles followed in the educational system were a source of different educational research over the decades.

The multidimensional and multi-disciplinary education developed for school by Tagore was unique in many senses. The openness in the outer setup and the inner structure of the educational system is the most essential characteristic of Tagore's educational model. It significantly reduces the load of formal education and enables students to actively participate in learning according to their choices, demands, and interests. The concept of a choice-based learning system was implemented in Tagore-designed educational institution possibly for the first time. Therefore, it can be said that Tagore perfectly follows the spirit of burden-free learning in his educational system.

Burden-free learning. fearless environment. positive environment, freedom with self-discipline, choice-based educational system, positive teacher-student relationship, closeness to nature, participation in different kinds of cocurricular activities, functions, and festivals, participation in different social activities, respect for cultural diversity, etc. are the major principles of any form of positive schooling. Considering the uniqueness and relevance of Rabindranath Tagore's educational system, National Education Policy- 2020 in India also emphasized Tagore's Educational Philosophy while drafting the Educational policy for the Nation. Therefore, in the concluding remarks, the educational system developed by Tagore in 1901 was based on the principles of Sociology, Child Psychology, and Social Psychology. Moreover, it also merged with the basic principles of positive psychology. Hence, it can be concluded that a school in a rural setup, surrounded by the natural environment, away from the artificial urban environment established a century before, to find the "joy of mind" is a perfect and extraordinary example of positive schooling.

ABSTRACT

Road infrastructure drives global economic growth by facilitating the movement of goods, services, and people, enhancing trade and regional integration; recent improvements in developing countries have reduced cost overruns, highlighting the importance of effective strategy implementation, stakeholder engagement, and sustainability considerations for project success. The aim of the study was to establish whether leadership styles influence the performance of road projects by Kenya Rural Roads Authority. The study sought to establish whether leadership styles influence the performance of road projects by Kenya Rural Roads Authority. The study employs multiple theories, including Resource-Based Theory, Agency Theory, and others, within a mixed-methods approach guided by pragmatism. Focused on 140 Development Road Projects by KeRRA, it includes 104 Strategy Implementation Officers, Contractors' CEOs, and KeRRA officials. Data, gathered through questionnaires and interviews, underwent statistical analysis revealing a significant positive correlation (r = 0.508, p < 0.05) between leadership styles and project performance, using SPSS Version 27. The study suggests that project managers at the Kenya Rural Roads Authority demonstrate positive leadership qualities, such as agreeableness and visionary leadership, which are linked to timely completion of road construction projects, although challenges like resistance to change and laissez-faire leadership tendencies may impede project success. Recommendations include reinforcing and promoting positive leadership qualities among project managers at the Kenya Rural Roads Authority, focusing on aspects such as agreeableness, visionary leadership, and developmental leadership, while addressing challenges related to laissez-faire and resistance to change through training and support initiatives, and emphasizing the importance of directive leadership to improve project outcomes and ensure successful completion of road construction projects.

KEY WORDS: Leadership Styles, Performance of Road Construction Projects, Kenya Rural Roads Authority

INTRODUCTION

Road infrastructure is integral to economic growth and development globally, facilitating the movement of goods, services, and people, thus enhancing trade and regional integration. Notably, road projects in developing countries have shown significant performance improvements, with cost overruns decreasing from 35% to 18% over the past decade (World Bank, 2020). Effective strategy implementation is crucial for project success, involving stakeholder engagement, risk management, and performance measurement (UNECE, 2020; World Bank, 2019). Sustainability considerations, encompassing social, economic, and environmental aspects, are also essential for road projects, requiring the adoption of performance indicators, risk assessment, and stakeholder engagement (IMF, 2018).

In African nations like Ghana, Nigeria, and Kenya, road construction projects are vital for economic growth, commerce enhancement, and poverty reduction (World Bank, 2020). Studies underscore the importance of effective project planning, implementation, stakeholder involvement, and risk management for the success of road initiatives (Osei-Kyei and Chan, 2015; Oladapo et al., 2017; Kigera and K'Obonyo, 2016). Organizations like the UNECA (2019), IMF (2018), and World Bank (2020) emphasize the critical role of strategy implementation in fostering economic development across these African countries.

Project Performance of Road Projects

Several international studies have examined the performance of road projects across different regions and countries. Ismail et al. (2020) focused on Malaysia, finding that inadequate planning, project design, management, and construction quality

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

significantly affected project success. Notably, China leads in road infrastructure projects globally, driven by extensive government spending. Advanced technology, efficient management, and quality materials are crucial for project success in China. However, the COVID-19 pandemic has hindered road project development in Iraq, leading to delays and increased costs (Ayed & Albadri, 2021). In India, poor management, funding, and land acquisition delays affect road project performance (Singh & Sharma, 2022). African road projects have shown relative success compared to developed economies, despite challenges such as cost overruns, disease outbreaks, and conflicts (Andrić et al., 2019; Mushato et al., 2020). These findings highlight the need for effective planning and management strategies to mitigate risks and ensure project success.

Strategy implementation and Performance of Road Projects

Effective strategy implementation is crucial for the successful execution of construction projects, encompassing strategic planning, project management, resource allocation, and risk management (Shen et al., 2020). Road construction projects play a vital role in national development, requiring robust strategic management practices including planning, resource allocation, risk management, and stakeholder engagement. However, inadequate strategy application often leads to project delays and cost overruns (Liu & Chen, 2020). Studies emphasize the significance of strategic planning and project management in enhancing project performance by improving project quality, reducing delays, and enhancing communication among stakeholders (Al-Fadhli et al., 2021).

In Africa, effective strategy implementation is pivotal for road project success, evidenced in studies from Ghana and Uganda. Effective implementation involves clear vision development, planning, monitoring, stakeholder engagement, and risk management (Asare, Agyapong, & Owusu, 2021; Kavuma, 2019). Indicators of successful strategy implementation include project planning, risk management, stakeholder engagement, and resource allocation (Fawzy et al., 2016; Olomolaiye et al., 2019). Strategic planning, monitoring, evaluation, and communication are critical components for successful road project management (Abdullahi et al., 2021). The application of effective strategy implementation positively impacts project quality, timeliness, and cost-effectiveness in road construction projects in Uganda (Kavuma, 2019).

Effective leadership is crucial for project success, impacting safety, quality, cost, and timeliness. Li et al. (2019) found transformational leadership positively impacted safety in Chinese road projects, while Li et al. (2021) noted its favorable effect on cost effectiveness. Zhang et al. (2022) observed transactional and transformational leadership's effectiveness in Chinese road construction. Dhakal & Poudel (2019) found in Nepal, transformational leadership improved performance, contrasting with authoritarian leadership's detriment. Murimi (2016) identified transformational leadership traits in Kenya, including

proactive problem-solving and positive relationships, contrasting with autocratic leadership's delays and poor relationships, and permissive leadership's engagement issues leading to delays and corruption. Leadership styles profoundly impact project outcomes, necessitating careful consideration in project management.

According to research by Mwathi and Mwenda (2017), poor performance of road projects is a major challenge facing Kenya's infrastructure sector. The study, which was conducted in 20 road projects across the country, revealed that many road projects were characterized by poor quality work, delays, cost overruns, and poor stakeholder engagement. Another report by the Kenya National Highways Authority (2019) confirmed the findings of the study by Mwathi and Mwenda, which revealed many road projects in the country were behind schedule and over budget. The report attributed the poor performance to corruption, inadequate funding, poor planning, and weak project management. A report by the African Development Bank (2018) identified weak institutional capacity, inadequate maintenance, and poor project preparation as major elements for Kenya's road projects to perform poorly. The report recommended the need for a more effective and efficient procurement process, improved project preparation, and increased stakeholder engagement to improve the performance of road projects in the country.

Kenya's rural roads are developed and maintained by the KeRRA. Over the years, KeRRA has faced numerous challenges in implementing road projects, including inadequate resources, poor planning, and project delays. The literature suggests that the adoption of effective strategy implementation and leadership styles can enhance project performance. However, there is a dearth of research on the connection between project performance, leadership philosophies, and strategy execution in KeRRA's context (Kenya Rural Roads Authority, 2021).

The study was driven by the disconnection between strategy implementation and road project performance at Kenya Rural Roads Authority (KeRRA), leading to concerns about road quality, delays, and increased costs. Previous studies suggest a link between strategy implementation and road project performance, but geographical variations and methodological limitations hinder generalizability, necessitating further research to identify improvement areas and enhance road project implementation in Kenya.

General Objective

The general objective of this research was to establish whether leadership styles influence the performance of road projects by Kenya Rural Roads Authority.

Research Hypothesis

Ho1 Leadership styles have no statistically significant influence on the performance of road projects by Kenya Rural Roads Authority.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

LITERATURE REVIEW

Theoretical Review

The influence of leadership styles on the performance of road projects is crucially examined through various theoretical lenses. The Agency Theory highlights the importance of effective governance measures, such as board independence and accountability, in enhancing oversight and financial reporting accuracy, thus influencing project success (Jensen & Meckling, 1976). Additionally, leadership styles, particularly transformational leadership, can impact employee motivation and project outcomes. The Resource-Based Theory emphasizes the significance of resource administration, including technology and leadership, in influencing project performance (Barney, 1991). Legitimacy Theory underscores the role of effective governance and technology adoption in maintaining organizational legitimacy and influencing project outcomes (Scott, 2004). These theoretical frameworks collectively inform the study's exploration of factors influencing road project performance, providing a comprehensive understanding and guiding strategic resource allocation for enhanced effectiveness..

Empirical Review Leadership Styles on the Performance of Road Projects

A study by Li, Wang, and Liu (2019) in China found that transformational leadership had a positive impact on project performance through enhancing team learning and team creativity. They also found that transactional leadership had a negative impact on project performance by reducing team learning and team creativity. They suggested that project managers should adopt a more transformational leadership style to foster a learning-oriented and creative team culture.

A study by Raziq, Borini, Malik, Ahmad, and Shabaz (2018) in Pakistan found that goal clarity partially mediated the relationship between transformational leadership and project success. They also found that contingent reward, a component of transactional leadership, was positively associated with project success, while active management by exception, another component of transactional leadership, was negatively associated with project success. They recommended that project managers should use transformational leadership and contingent reward to enhance goal clarity and project success.

In their 2019 study, Biaousz and Szafra-Bohdan looked at how leadership philosophies affected the success of Polish road projects and the link between strategy implementation and it. Project managers and team members participating in road building projects in Poland were surveyed for the study's data. 267 respondents from various Polish organizations and areas made up the sample. Structural equation modeling (SEM) was used to evaluate the data and test the hypotheses and correlations between the variables. According to the report, strategy implementation has a beneficial impact on how well Polish road projects perform. The study also showed that different leadership philosophies affected the connection between strategy execution

and project performance. Particularly, transformational leadership style had a favorable impact, whereas autocratic leadership style had a negative impact, on the link between strategy execution and project performance.

The impact of leadership styles on the link between strategy execution and performance of road projects in India was examined by Kumar et al. (2019). The effectiveness of leadership styles and strategy execution on the performance of road projects in India was investigated in this study using a survey questionnaire and multiple regression analysis. 102 project managers from diverse public and commercial companies were included in the sample. The results showed that project performance was greatly impacted by strategy implementation. The association between strategy implementation and project success was also positively moderated by transformational leadership style, whereas transactional and laissez-faire leadership styles had the opposite impacts. The study also identified specific indicators of leadership styles, such as vision, communication, and delegation, that were significant predictors of project performance.

Goh et al. (2021) investigated leadership style and its effects on strategy execution in Malaysia's construction sector. A survey questionnaire and semi-structured interviews were used in this study's mixed-method approach to examine the connection between leadership style and strategy execution in Malaysia's construction sector. 211 construction industry experts from various organizations were included in the sample. The results demonstrated that, in contrast to transactional and laissez-faire leadership styles, transformational leadership style had a considerable beneficial influence on plan execution. The study also identified specific indicators of strategy implementation, such as goal setting, performance measurement, and risk management, that were significantly related to leadership style.

Ahmad and Zailani (2019) examined the effect of leadership styles on the relationship between strategy implementation and the performance of road projects was conducted by Ahmad and Zailani (2019) in Malaysia. The study utilized a survey questionnaire distributed to 380 road project managers and engineers across Malaysia. The questionnaire assessed their perceptions of strategy implementation, leadership styles, and project performance indicators. Structural equation modeling was used to assess the data that had been obtained. The study's conclusions showed that the link between strategy execution and the success of road projects was positively impacted by the transformational leadership style. Conversely, the relationship suffered from the transactional and laissez-faire leadership philosophies. Indicators of project success, such as project quality, completion date, cost performance, and customer happiness, were also found by the study's findings.

In Bangladesh, road project performance and the link between strategy implementation and it was examined by Kazi and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Rahman (2019). Data from 120 road development projects in Bangladesh were obtained for the study using a quantitative research methodology. Data on the four leadership styles were gathered through the use of a standardized questionnaire. The findings indicated that whereas transactional and autocratic leadership styles had a detrimental impact on the connection between strategy execution and project success, transformational leadership style had a considerable positive impact. The connection was unaffected significantly by the laissez-faire leadership style. The study also discovered that project performance was significantly improved by strategy implementation.

Owusu-Frimpong, Adjei, and Agyei (2019) investigated the effect of leadership styles on the relationship between strategy implementation and the performance of road projects in Ghana. The methodology involved a quantitative survey of 127 road construction project managers, engineers, and contractors. The participants' assessments of project performance, leadership philosophies, and strategy execution were the subject of data collection by the researchers. The results showed that transactional leadership was not substantially associated to either variable whereas transformational leadership was favorably related to the usage of strategy implementation and project performance. The study also showed that transformational leadership significantly impacted the connection between strategy execution and project performance. The authors came to the conclusion that leaders that exhibit transformational leadership traits can increase the efficiency with which strategies are implemented and the success of road projects.

The impact of leadership styles on the link between strategy execution and performance of road projects in Ghana was examined by Kwame, et al. (2019). The study focused on how leadership styles affected the success of road projects in Ghana and the link between strategy implementation and it. 155 road project managers in Ghana were given a standardized questionnaire as part of a quantitative research strategy. The study's conclusions showed that the link between strategy execution and road project performance was significantly and favorably impacted by transformational leadership style Autocratic leadership style had a negative and significant effect on the relationship between strategy implementation and road project performance. The study also identified effective communication, participative decision-making, and shared vision as the critical indicators of transformational leadership style, while control, rigidity, and centralization were the critical indicators of autocratic leadership style. The study concludes that the adoption of transformational leadership style is crucial for improving the performance of road projects in Ghana.

Research on leadership styles and their moderating impact on the execution of road projects in Ghana, Nigeria, and Kenya was undertaken by Oduro et al. in 2021. 230 participants in road projects in Ghana, Nigeria, and Kenya provided data for the

study, which employed a cross-sectional survey approach. The survey's questionnaire included questions on project performance, leadership styles, and plan execution. The data were examined using hierarchical regression analysis, and the Multifactor Leadership Questionnaire (MLQ) was used to measure the leadership styles. The results of the study showed that the performance of road projects in Ghana, Nigeria, and Kenya was significantly improved by the use of the method. The study also discovered that the connection between strategy implementation and project performance was significantly improved by transformational leadership.

With a focus on leadership styles, strategy execution, and the performance of road projects in Nigeria, Adeleye et al. (2021) investigated leadership styles and the performance of road projects in that country. The study included both qualitative and quantitative data gathering techniques as part of a mixed-methods research design. According to the study's findings, laissez-faire leadership style had a detrimental impact on the performance of road projects, whereas transformational and transactional leadership styles had a good impact. The study identified effective communication, employee motivation, and vision sharing as the critical indicators of transformational leadership style, while reward and punishment, delegation, and monitoring were the critical indicators of transactional leadership style. The study concludes that the adoption of transformational and transactional leadership styles, as well as effective strategy implementation, is essential for improving the performance of road projects in Nigeria.

Owusu-Frimpong, Adjei, and Agyei (2019) investigated the effect of leadership styles on the relationship between strategy implementation and the performance of road projects in Ghana. The methodology involved a quantitative survey of 127 road construction project managers, engineers, and contractors. The participants' assessments of project performance, leadership philosophies, and strategy execution were the subject of data collection by the researchers. The results showed that transactional leadership was not substantially associated to either variable whereas transformational leadership was favorably related to the usage of strategy implementation and project performance. The study also showed that transformational leadership significantly impacted the connection between strategy execution and project performance. Idealized influence (attributed and behavioral), inspiring motivation, intellectual stimulation, and customized attention were the leadership style markers employed in the study. The authors came to the conclusion that leaders may improve the performance of road projects and increase the efficacy of strategy execution by exhibiting transformational leadership traits.

A study by Pretorius, Steyn, and Bond-Barnard (2018) in South Africa found that leadership styles in projects were influenced by the project characteristics, such as complexity, uncertainty, and novelty. They found that project managers used different leadership styles depending on the project phase and the project

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

team composition. They also found that project managers used a combination of transformational, transactional, and situational leadership styles to achieve project success. They proposed a framework for selecting the appropriate leadership style for different project situations.

A study by Asiedu-Appiah, Agyapong, and Lituchy (2016) in Ghana found that culture and its effect on leadership styles influenced project success. They found that Ghanaian project managers adopted a paternalistic leadership style, influenced by the traditional rule system where the chief is seen as the father of the community. They also found that effective leaders were perceived as being achievement-oriented, focused, committed, courageous, hardworking, and having integrity. They also found that gender, religion, and humor were important factors in leadership effectiveness

Kiama et al. (2019) conducted a study on leadership styles, strategy implementation and performance of road projects in Kenya. A total of 163 road development projects in Kenya were chosen for this study's cross-sectional survey design using a stratified random selection technique. To evaluate the hypotheses, the data was examined using structural equation modeling. The study discovered that the connection between strategy implementation and road project success was positively moderated by transformational leadership style. The same connection, however, was negatively impacted by a transactional leadership style. Additionally, it was discovered that approach implementation improved project performance. The Multifactor Leadership Questionnaire (MLQ), created by Bass and Avolio (1995), served as the basis for the leadership style indicators employed in this study. Through elements including motivational inspiration, idealized impact, customized concern, and intellectual stimulation, the MLQ assessed transformational leadership. On the other side, management-by-exception and contingent compensation were used to gauge transactional leadership. The study emphasizes how crucial leadership qualities are to the accomplishment of road building projects and contends that transformational leadership is superior to transactional leadership in terms of encouraging plan execution and project performance.

A study by Muthike (2016) in Kenya found that different leadership styles influenced the timely completion of road construction projects. He found that transformative and democratic leadership styles were preferred by the respondents, while autocratic and permissive leadership styles were least preferred. He also found that transformative and democratic leadership styles had a positive correlation with timely completion of road projects, while autocratic and permissive leadership styles had a negative correlation. He advised that project managers should adopt transformative and democratic leadership styles to improve project performance.

Performance of Road Projects

A study by Kumar et al. (2019), evaluated the effectiveness of India's national roads. The study employed a case study methodology. Six Indian national highways were evaluated for performance using a variety of metrics, including travel time, safety, road quality, and serviceability. The authors come to the conclusion that while performance on India's national highways has improved, there is still a need for greater maintenance and safety measures.

Aremu et al. (2021) performed research on how well Nigerian road projects performed. The study's main objective was to assess the government of Nigeria's road development initiatives during the previous ten years. The writers combined quantitative and qualitative methodologies to examine the projects' performance. The completion rate, building quality, adherence to environmental rules, and cost effectiveness of the road projects were all considered as performance factors in the research. The study's findings showed that although the road projects' completion rates were high, sometimes poor construction quality and insufficient respect to environmental standards occurred. The analysis also discovered that the projects' general cost effectiveness was low.

Oluwajana et al. (2022) evaluate the variables influencing the project cost and timely completion of roads in the Nigerian states of Ondo and Ekiti. The study's findings indicate that insufficient equipment, poor planning, and other factors were the main reasons why road projects in Nigeria didn't finish on time. poor managerial abilities, the complexity of the project's development, equipment failure, and a lack of supplies. Inflation, inaccurate estimates, dishonest business practices, contractors' lack of project knowledge, insufficient planning, and overdesign were other key factors that had an impact on the expense of road building projects.

The prompt completion of a project is the one goal that clients and contractors have in common. This is due to the likelihood that potential income will be lost, and additional expenses will arise. Construction projects around the world, especially in Developing Nations, are plagued by the same issue of time and cost overruns (Oluwajana et al. 2022). However, schedule and expense overruns are frequent in Nigeria's construction sector and have continued unabatedly, according to Oluwajana et al. (2022).

When it comes to the planning and management of construction projects, three factors of time, cost, and quality play a major role (Oluwajana et al. 2022). Meeting output quality standards as well as the timeline and financial goals are all part of Oluwajana et al. (2022) concept of the success of the project. The main challenges to its success are therefore project changes that compel trade-offs in terms of cost, time, and quality. Oluwajana et al. (2022) claim that recent increases in public investment have been made to refresh and revive the existing networks of highways and roads, which are quickly growing old and degrading and require prompt restoration efforts

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Additionally, government organizations have lately started employing novel contracting strategies that aim to accomplish numerous objectives, reduce project costs and timelines, and maximize quality and long-term return on public investment. As a result, for new and rising contracts, there is increasing need to identify an ideal resource utilization approach that minimizes construction costs and time while optimizing quality.

METHODOLOGY

Research Philosophy

The study utilized a mixed-methods approach, blending qualitative and quantitative methods to comprehensively explore the link between leadership styles, road project performance, and strategy execution (Tashakkori & Teddlie, 2010). Pragmatism served as the optimal research philosophy, prioritizing real-world application of knowledge to address practical issues, allowing for flexibility in data collection and analysis techniques (Creswell, 2014). This approach facilitated the collection of both quantitative data, such as surveys and statistical analyses, and qualitative data, including case studies and interviews, enabling a nuanced understanding of the contextual factors influencing the relationship between leadership styles, road project performance, and strategy execution.

The research utilized a sequential explanatory design, to explore the relationship between strategy implementation, leadership styles, and road project success. This design allowed for both qualitative and quantitative data collection, with the qualitative phase providing deeper insights and the quantitative phase measuring the extent of their relationship. Creswell and Plano-Clark's methodology guided this process, leading to a comprehensive understanding of the study topic and potential implications for industry decision-making.

Target Population

The entire number of phenomena under examination was referred to as a population, often known as the universe in the area of inquiry (Zikmund et al., 2010; Kothari, 2010). Lavrakas (2008) defined population as a collection of distinct elements that could be finite or infinite, while Hyndman (2008) defined population as the entire set of "things" that a researcher was interested in. The target population was 140 road projects from which an accessible population of 208 Strategy Implementation Officers (SIOs) in Charge was obtained. The SIOs included 140 Strategy Implementation Officers (SIOs) in Charge at KeRRA and 140 Contractors' Chief Executive Officers (CEOs) or their equivalents. The Director General at KeRRA was also considered part of the target population. These professionals were responsible for strategy implementation in road projects.

Sampling Technique and Sample Size

The study employed various sampling techniques, including cluster sampling, stratified random sampling, and purposive sampling, to select a representative sample of KeRRA's SIOs and Contractors' SIOs. The combination of these techniques

facilitated efficient data collection while ensuring adequate representation of different subgroups within the population. The sample size for road projects was determined using Slovin's formula, resulting in a total sample of 208 SIOs. Data was collected using questionnaires with Likert-style questions to gauge respondents' opinions on various aspects related to road project performance. Additionally, interviews were conducted with the Director General to gather more detailed insights into the challenges and successes of road engineering projects. These data collection methods were chosen for their reliability, scalability, and ability to capture nuanced information essential for the study.

Data Collection Procedure

In order to gather data, the researcher physically distributed questionnaires to respondents, accompanied by 4 research assistants. To increase the response rate, the researcher made follow-up calls and handed out the letters of reference from Kenya Methodist University and the National Commission for Science, Technology, and Innovation (NACOSTI). By keeping a registry of all the questionnaires that were sent out to respondents, the researcher took great care to ensure that they were all returned. Pilot testing of research instruments involved 10% of the sample size, comprising 10 SIOs from KeRRA and 10 from contractors, ensuring methodological robustness and feasibility. Reliability analysis, based on Cronbach's alpha, confirmed the consistency of data collection instruments, aligning with Oson and Onen's reliability criteria, and ensuring dependable results. Pre-testing of questionnaires was conducted to establish validity, incorporating both content and criterion validity principles, as advocated by Cable & DeRue (2002) and Golafshani (2003). The study's research design encompassed meticulous piloting, reliability assessment, and validity confirmation, following established methodological guidelines and ensuring the integrity and accuracy of data collection procedures.

Data Analysis and Presentation

The researcher utilized both quantitative and qualitative data analysis approaches to examine data from various groups of respondents. Statistical analysis of the quantitative data gathered through questionnaires, including descriptive statistics, correlation analysis, and regression analysis, was performed using the SPSS program version 23. Descriptive statistics were employed to compile responses to Likert scale questions, offering an overview of respondents' perceptions regarding the relationship between road project success and strategy execution. Correlation analysis determined the intensity and direction of the independent variables association between implementation and leadership styles) and the dependent variable (performance of road projects). Regression analysis was utilized to establish how effectively the independent variables predicted the dependent variable. Results were presented using tables, percentages, and test statistics, along with any necessary explanations.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Ethical considerations in the study emphasized confidentiality and respect for respondents, ensuring their anonymity and avoiding inappropriate questioning. With approval from KeRRA and voluntary participation from respondents, the study maintained ethical standards, fostering willingness and objectivity among participants.

RESULTS AND DISCUSSIONS

The response rate for the study among SIOs at KeRRA and those with contractors exceeded 86.5% and 95.2%, respectively, indicating high participation levels. Demographic characteristics of the respondents, including gender, age, educational qualification, tenure with the organization, involvement in road development projects with KeRRA, and positions within their organizations, were analyzed to ensure diverse representation. The majority of respondents were male (61.9%), aged between 28 to 37 years (50.8%), holding college-level qualifications (66.1%), and having tenure with their current organization for 4 to 8 years (51.9%). Additionally, all respondents reported involvement in road development projects with KeRRA, with positions primarily held by Road Engineers (47.6%) and Chief Executive Officers (52.4%), ensuring varied perspectives and reducing potential biases.

Descriptive Statistics for Leadership Styles

Table 1 shows the descriptive statistics for the leadership styles of the project managers of the Kenya Rural Roads Authority. The table includes the sample size (N), the minimum and maximum scores, the mean and the standard deviation for each statement that measures a leadership style. The statements are based on a 5-point Likert scale, where 1 means strongly disagree and 5 means strongly agree.

The project managers exhibited a moderate to high level of agreeableness, with a mean score of 3.66 and minimal variation in responses. This suggests they are perceived as friendly and supportive, enhancing team morale and performance. Visionary

leadership, with a mean score of 3.55, indicates moderate agreement among managers in communicating goals clearly. Intellectual stimulation, with a mean score of 3.55, implies managers encourage innovative problem-solving. Developmental leadership, scoring 3.57, suggests managers moderately support team growth. Contingent reward, scoring 3.58, indicates moderate agreement in clarifying expectations. Compliance, scoring 3.60, suggests moderate satisfaction when rules are followed. Laissez-faire leadership, scoring 3.59, indicates moderate willingness to let teams work independently. Trustworthiness, scoring 3.55, suggests moderate establishment of trust. Inspirational leadership, scoring 3.55, suggests moderate use of vivid examples to engage teams. Intellectual stimulation, scoring 3.68, indicates a high level of agreement in providing fresh perspectives. Feedback provision, scoring 3.64, suggests moderate to high agreement in giving constructive feedback. Recognition, scoring 3.65, suggests moderate to high acknowledgment of team achievements. These findings align with Muthike's (2016) study, indicating various leadership aspects positively influence timely completion of road projects in Kenya.

The thirteenth statement assesses project managers' resistance to change, indicating a moderate level of agreement with a mean score of 3.63. This suggests a balanced approach between maintaining stability and fostering innovation, although excessive resistance may hinder responsiveness and competitiveness (Goh et al., 2021). The fourteenth statement evaluates managers' flexibility, with a similar mean score of 3.63, indicating moderate agreement. While openness to others' ideas promotes inclusiveness, excessive flexibility may compromise direction and control, potentially affecting team coherence and effectiveness (Oduro et al., 2021). These findings underscore the need for balanced leadership approaches to navigate change and foster team dynamics effectively within the Kenya Rural Roads Authority.

Table 1: Descriptive Statistics for Leadership Styles

| | N | Mean | Std. Dev |
|---|-----|------|----------|
| I am a pleasant person to be around. | 189 | 3.66 | 0.81 |
| I sum up what we could and ought to accomplish in a few straightforward lines. | 189 | 3.55 | 0.80 |
| I help people come up with fresh solutions to long-standing issues. | 189 | 3.55 | 0.84 |
| I assist others in growing. | 189 | 3.57 | 0.85 |
| I advise others on what to do in order to receive compensation for their labor. | 189 | 3.58 | 0.82 |
| When people adhere to the norms set out, I am satisfied. | 189 | 3.60 | 0.82 |
| I'm happy to let people carry on doing things the same way they always have. | 189 | 3.59 | 0.78 |
| Others have full confidence in me. | 189 | 3.55 | 0.81 |
| I show enticing illustrations of what we can do. | 189 | 3.55 | 0.76 |
| I provide folks fresh perspectives on perplexing issues. | 189 | 3.68 | 0.78 |
| I express to others my opinion of their performance. | 189 | 3.64 | 0.78 |
| When people accomplish their goals, I praise them. | 189 | 3.65 | 0.82 |
| I don't attempt to modify anything as long as it's working. | 189 | 3.63 | 0.86 |
| I'am okay with anything others want to do. | 189 | 3.63 | 0.82 |
| People are pleased to associate with me. | 189 | 3.57 | 0.79 |
| I support people in finding purpose in their job. | 189 | 3.60 | 0.87 |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| I cause people to reconsider things they had never given much thought to before. | 189 | 3.68 | 0.80 |
|---|-----|------|------|
| I pay close attention to people who seem to have been ignored. | | 3.65 | 0.79 |
| I draw emphasis to the rewards that others might receive for their efforts. | 189 | 3.68 | 0.82 |
| I inform people of the standards they must adhere to in order to do their duties. | 189 | 3.62 | 0.81 |
| I don't expect anything more of others than what is absolutely necessary. | 189 | 3.57 | 0.79 |
| Valid N (listwise) | 189 | | |

Correlations

There is a significant positive correlation between Leadership Styles (X1) and Performance of Road Projects (Y) with a correlation coefficient of 0.508 (p < 0.05). The correlation coefficient of 0.508 indicates a moderate positive correlation between leadership styles and the performance of road projects, suggesting that as leadership styles within road project management become more effective or favorable, project performance tends to improve. This finding highlights the importance of leadership in influencing the success of road

projects, indicating that the manner in which leaders approach their roles and interact with project teams can significantly impact project outcomes. The statistically significant correlation (p < 0.05) reinforces the reliability of this relationship, suggesting that it is unlikely to have occurred by chance. Therefore, investing in leadership development and fostering leadership styles that prioritize collaboration, motivation, and effective decision-making may lead to enhanced performance and success in road projects.

Table 2: Association between Strategy Implementation and performance of Road Projects

| Position | | | \mathbf{X}_{1} |
|-----------------------|------------------------------|---------------------|------------------|
| SIOs at KeRRA | Leadership Styles | Pearson Correlation | 1 |
| | | Sig. (2-tailed) | |
| | | N | 90 |
| | Performance of Road Projects | Pearson Correlation | .508 |
| | | Sig. (2-tailed) | .000 |
| | | N | 90 |
| SIOs with Contractors | Leadership Styles | Pearson Correlation | 1 |
| | | Sig. (2-tailed) | |
| | | N | 99 |
| | Performance of Road Projects | Pearson Correlation | .652 |
| | | Sig. (2-tailed) | .000 |
| | | N | 99 |

^{**.} Correlation is significant at the 0.05 level (2-tailed).

Regression Analyses

The regression model demonstrates a significant relationship between Leadership Styles and the Performance of Road Projects, with an R-squared value of 0.658, indicating that approximately 65.8% of the variance in project performance can be explained by variations in leadership styles. The adjusted R-squared value of 0.656 indicates that this model accounts for the sample size and the number of predictors adequately.

Table 3: Model Summary

| Model | el R R Square | | Adjusted R Square | Std. Error of the Estimate | |
|-------|---------------|------|-------------------|----------------------------|--|
| 1 | .811a | .658 | .656 | .33732 | |

a. Predictors: (Constant), Leadership Style

The ANOVA table further confirms the significance of the regression model. The F-statistic of 359.431 is highly significant (p < 0.001), indicating that the regression model as a whole is a

good fit for the data. This suggests that Leadership Styles significantly predict the Performance of Road Project

Table 4: Analysis of Variances

| Mo | odel | Sum of Squares | df | Mean Square | F | Sig. |
|----|------------|----------------|-----|-------------|---------|-------|
| 1 | Regression | 40.898 | 1 | 40.898 | 359.431 | .000b |
| | Residual | 21.278 | 187 | .114 | | |
| | Total | 62.176 | 188 | | | |

- a. Dependent Variable: The Performance of Road Projects
- b. Predictors: (Constant), Leadership Styles

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The coefficients table shows that Leadership Styles have a significant positive effect on the Performance of Road Projects. The unstandardized coefficient (B) is 0.650, indicating that for every one-unit increase in Leadership Styles, there is a corresponding increase of 0.650 units in the Performance of Road Projects. The standardized coefficient (Beta) of 0.811 suggests that Leadership Styles have a strong positive impact on project

performance. The regression analysis reveals that Leadership Styles strongly influence Road Project Performance, as evidenced by a high R-squared value indicating significant variance explanation. Effective leadership fosters collaboration, motivation, and decision-making, underscoring its pivotal role in project success, urging organizations to prioritize leadership development for improved outcomes.

Table 5: Beta Coefficients

| Model | | | Unstandardized Coefficients | | t | Sig. |
|-------|-------------------|-------|--------------------------------|------|--------|------|
| | | В | Std. Error | Beta | | |
| 1 | (Constant) | 065 | .194 | | 338 | .736 |
| | Leadership Styles | 1.012 | .053 | .811 | 18.959 | .000 |

a. Dependent Variable: The Performance of Road Projects

Hypothesis Testing

Based on the p < 0.05 rule for statistical significance, let's evaluate each research hypothesis using the results from Table 4.14

HO1: Leadership styles have no statistically significant influence on the performance of road projects by Kenya Rural Roads Authority.

HA1: Leadership styles have a statistically significant influence on the performance of road projects.

The p-value for leadership styles is 0.000, which is less than 0.05. This indicates that leadership styles have a statistically significant influence on the performance of road projects. The Beta coefficient is 0.129, suggesting a positive relationship. Therefore, we reject HO1 and accept HA1. This decision implies that on the performance of road projects do have a statistically significant positive influence on the performance of road projects. The findings are in agreement with those in a study by Ahmad and Zailani (2019) who found that the link between strategy execution and the success of road projects was positively impacted by the transformational leadership style.

Conclusion

In conclusion, the study indicates that project managers at the Kenya Rural Roads Authority generally exhibit positive leadership qualities, with moderate to high levels of agreement in various leadership aspects. These qualities, including agreeableness, visionary leadership, and developmental leadership, are positively related to the timely completion of road construction projects. However, potential drawbacks are observed in high scores for laissez-faire and resistance to change aspects, which may have adverse effects on project completion. Directive leadership, while moderately agreed upon, also seems to positively impact project outcomes. These findings provide insights into the leadership landscape at KeRRA and its potential impact on project success.

Recommendations

Based on the findings from the study, it is recommended that the Kenya Rural Roads Authority (KeRRA) consider reinforcing and promoting leadership qualities that have been positively associated with timely project completion. This include further developing and encouraging agreeableness, visionary leadership, and developmental leadership among project managers, as these aspects exhibit moderate to high levels of agreement and have demonstrated a positive relationship with project outcomes. Additionally, it is advisable to address potential drawbacks by providing training and support to mitigate high scores in laissezfaire and resistance to change aspects, as these could have adverse effects on project completion. Furthermore, the organization may benefit from emphasizing and encouraging directive leadership, which, despite moderate agreement, appears to positively impact project outcomes. These recommendations can help KeRRA enhance its leadership landscape and, in turn, contribute to the successful completion of road construction projects.

ABSTRACT

Background: A stroke can profoundly affect the functionality of the lower limbs. It can greatly influence a person's ability to walk and maintain balance. disruption of the brain's ability to control muscle movements, which is often a consequence of a stroke. No published studies focused on Body weight-supported treadmill training in improving lower limb functions. However, body weight treadmill training has proven successful in improving the lower limb functions of acute stroke patients.

Aim: To examine the effects of body weight-supported treadmill training in improving the gait and balance in acute stroke patients. **Methods:** A comprehensive research on Pubmed, Medline, Google Scholar, and Science Direct databases using specific keywords stroke, interventions used in stroke, lower limb functions, and physiotherapy evidence-based database was utilized for quality assessment.

Results: This review included ten studies; the findings of this review demonstrate that body weight-supported treadmill training will improve the lower limb functions of acute stroke patients.

Conclusion: The results of this review offer abundant proof that body weight-supported treadmill training improves lower limb function in patients suffering from acute stroke.

KEYWORDS: Treadmill training with weight support, stroke, evidence-based practice, lower limb functions, and evidence-based physiotherapy

INTRODUCTION

A stroke is commonly characterized as a neurological impairment resulting from a sudden, localized injury to the central nervous system. This injury can be vascular events are cerebral infarction, or intra cerebral Hemorrhage is a medical term that refers to excessive bleeding, either internally or externally. (ICH), or subarachnoid Hemorrhage is a medical term that refers to excessive bleeding, either internally or externally. (SAH). It stands as one of the foremost reasons for disability and mortality on a global scale. (1) Stroke is a significant and escalating global health issue. It stands as a leading cause of physical disability acquired in adulthood globally, and it holds the second position as a cause of death in middle- to high-income nations. In these countries, the total incidence of ischemic and hemorrhagic stroke has increased over the past decade to 85–94 per 100,000, but it is substantially higher (1151-1216 per 100,000) in individuals aged over 75 years. Furthermore, low-income countries account for 85% of all stroke-related deaths and 87% of disability-adjusted life years related to stroke. (2)

The incidence of stroke is on the rise, from 0.84 out of every 1,000 individuals are at a high risk of experiencing a stroke. This can result in conditions such as hemiplegic and hemi paresis. Following a stroke, the resulting weakness can make daily activities challenging and significantly impact the individual's quality of life. ⁽³⁾

Stroke often leads to a variety of pathological symptoms that result in functional disorders, including disturbances in gait. Consequently, a primary objective of rehabilitation is to restore optimal gait. The abnormal gait observed in stroke patients is influenced by several factors such as asymmetrical stride time and length, reduced speed, poor control of joints and posture, Weakness in muscles and irregular muscle tone, and irregular muscle activation patterns. Among these, muscle weakness is a common impairment following a stroke and is a significant contributor to abnormal gait patterns in patients. The strength of the lower limbs is intricately connected to walking capability. Consequently, a primary objective of stroke rehabilitation is to bolster muscle strength, thereby enhancing the patient's walking capacity.⁽⁴⁾

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Body weight-supported treadmill training represents a task-oriented approach to gait restoration following stroke. It provides clear benefits over traditional therapy by enabling higher intensity, more repetitive, and task-specific practice within the same duration. Numerous studies have illustrated the superiority of BWSTT in enhancing gait speed compared to traditional physiotherapy. Additionally, BWSTT brings about changes in cortico motor excitability, leading to improved balance and gait performance in acute stroke patients. Some studies suggesting that BWSTT does not surpass conventional gait training. BWSTT can improve walking endurance in the sub acute stage post-stroke, enhancements in balance and 10-meter gait speed may not be substantial. (5)

However, there remains a dearth of studies employing gait analysis to elucidate the mechanisms underlying improvements in gait parameters following BWSTT or conventional therapy. A fundamental understanding of how gait training impacts lower limb motor patterns is crucial, given that gait impairments stem from deficient neuromuscular control. Improvements in specific biomechanical aspects of walking, such as leg swing and balance control, correlate positively with overall walking performs. ⁽⁶⁾

Body weight supported (BWS) treadmill training is a rehabilitation technique aimed at retraining walking abilities. During BWS, individuals are supported either by a metal frame or suspended from the ceiling, reducing the weight borne by their feet while walking on a treadmill. The level of support can be adjusted gradually based on individual requirements. For instance, if the treadmill speed increases, more support may be needed momentarily to maintain balance and posture. This approach is especially advantageous for individuals experiencing difficulties with walking after a stroke. BWS treadmill training offers a safe starting point for walking when independent walking is not yet feasible. It enables some individuals to initiate walking sooner after a stroke, especially those who currently rely on assistance from two individuals for

over-ground walking. Additionally, it provides an opportunity for practice when walking over ground is not yet achievable. (7)

METHODOLOGY

Study Design

Search Methods and Eligibility Criteria

A thorough literature search was conducted; the search engines used were Pub Med, Google Scholar, Medline, and Pedro. Based on the available study there is an improvement of lower limb functioning by body weight supported treadmill training. Keywords used are stroke, lower limb rehabilitation, and body weight supported treadmill training. The study encompassed solely articles that focused on enhancing lower limb function through Body weight-supported treadmill training assistance, while excluding articles not published in English.

Sample Size

A sample size of 30 articles was searched with the keywords of stroke, lower limb rehabilitation, and body weight supported treadmill training. Out of these articles, papers obeying the criteria for inclusion and exclusion were filtered and finally, 10 were obtained for the review.

Inclusion Criteria

Articles explaining stroke Rehabilitation were included.

- Articles published in recent years.
- Full-text articles.
- Articles published in English.

Exclusion Criteria

- Articles of past 2014.
- Articles explaining other than stroke were excluded.
- •. Articles addressing subjects beyond than body weightsupported treadmill training were excluded.
- Articles not containing relevant discussion were excluded.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Flow Chart

Data obtained for the study is 30 articles

Excluded after checking the titles and abstract, according to the exclusion and criteria inclusion criteria

Articles excluded were 20 according to the criteria

Articles included in the study were 10

DISCUSSION

Elif Tarihci Cakmak et al 2024: This research investigated of conventional rehabilitation (CR) alone versus CR combined with treadmill training with support from body weight. (BWSTT) on mobility and the quality of life in individuals recovering from stroke. The research revealed that incorporating BWSTT into the therapy regimen resulted in more substantial enhancements in comfortable walking speed, evaluated through the 10-Meter Walk Test (10MWT), and functional mobility rehabilitation alone. Furthermore, in a study examining In sub acute stroke patients, improvements were observed in lower extremity motor functions, balance, and gait parameters with both body weight-supported treadmill training

(BWSTT) and over ground gait training. However, the BWSTT group exhibited notable enhancements in kinematic parameters of lower limb joints and gait patterns, a distinction not observed in the control training group.⁽⁸⁾

Ponnada Ramakrishna et al 2021: The study aimed to gauge the efficacy of treadmill training supported by body weight improving gait speed among ambulatory stroke patients. All 20 subjects successfully completed the entire four-week training protocol. Assessment of treatment impact prior to and following the intervention, conducted using paired t-tests, ten meter walk used as the outcome measure. Comparison between body weight and conventional physiotherapy was administered using

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

paired sample t-tests, revealing a significant enhancement with treadmill training supported by body weight in comparison to traditional physiotherapy. Stroke patients underwent progressive body weight-supported forward and backward walking training, and the impact of these programs on their walking abilities was evaluated. Significant improvements were observed in training period, with notable differences noted in affected walking time among the groups. (10)

After reviewing these articles, it's evident treadmill training with support from body weight Proves effective. Research indicates that in post-stroke patients, traditional physiotherapy, BWSTT, and a combination therapy group all enhance balance and mobility while reducing fear of falling. Particularly, the combination therapy demonstrated superior performance In comparison both CT and BWSTT terms of balance and mobility. Despite CT and BWSTT having different training frequencies, both positively impacted the measured outcomes. In a study by after 30 sessions, there was no notable distinction in balance function between the CTG (five times per week) and the BWSTTG (three times CT plus two times BWSTT per week). However, in our present study, we observed that the Combination therapy (five times CT per week + twice BWSTT per week over 30 sessions) significantly surpassed the CTG in enhancing balance.

CONCLUSION

The articles referenced above have demonstrated the significant the efficacy Treadmill training supported by body weight assistance and modified therapy in enhancing gait, balance, motor functions, and ambulation among acute stroke patients. Therefore, it is recommended that therapists incorporate treadmill training with support from body weight into their treatment plans for acute stroke patients.

HEDGING AND FIRM VALUE IN INDIAN MANUFACTURING **COMPANIES**

Priyanka Mohanty

Research Scholar, School of Management, National Institute of Technology Rourkela.

ABSTRACT

The practice of hedging using derivatives by firms and its impact on the value of the firm has received much attention in the last few years. Its main motive is to study the relationship between hedging and firm value. This study focuses on the hedge effectiveness of financial derivatives used by BSE500 listed Indian manufacturing companies. The entire sample for the study was made up of 1845 firm year from 2016-2022. It also focuses to conclude if the results are consistent among the subsamples of large & small companies. Using Tobin's Q as a measure of firm value and by employing different models; we find a positive and significant impact of derivatives use (hedging) on the firm value. We also find that within the subsamples the hedgers have a higher hedging premium as compared to the non-hedgers.

KEYWORDS: Hedge effectiveness, firm value, derivatives, Tobin's Q.

INTRODUCTION

Corporate Risk Management (CRM) has emerged as a very important practice among companies for assessing, managing and optimizing risks. It also resulted in the development of various risk management techniques which could add value to the firm. Almost all firms make use of financial contracts as a part of corporate risk management. They enter into contracts that can fix the price of raw materials, output, the foreign exchange rate, etc. Such financial contracts are collectively known as 'derivatives' and such instruments derive their value from their underlying assets. It is seen that out of the world's 500 largest companies, most of them made use of derivatives to manage different types of risks. Majority of them use derivatives for hedging currency risks, followed by interest rate risks and commodity risk.

However, a classical finance theory given by (Modigliani & Miller 1958) posits that financial transactions undertaken solely for reducing risk will not add any value to the firm in the presence of perfect capital and efficient market conditions. Yet, some evidence has shown that in the real world with imperfect market conditions, such derivative contracts can add value. Conditions like presence of taxes, agency problems, financial distress, underinvestment, etc. can help in value addition. Many previous works have focused on the effect of the use of derivatives and the value of the firm but the results are mixed as well as conflicting. Through this particular study, we are reassessing the effect of derivatives use on the value of the firm in the Indian context. Most of the previous studies were conducted in the developed countries like U.S., U. K., China, etc. and very little evidence is available focusing on developing nations including India.

The Indian Derivatives Market has also evolved a lot in the last few decades as it gave a new investment options for people. Originally the farmers were in need of such derivative instruments to protect themselves from the risk of fluctuations

in the price of their crops. Later on a number of organised commodity future exchanges were set up. However, in the year 1952 government put a ban on the trading of options and other derivative instruments. It was in the last two decades that the government has liberalized the futures trading and also introduced the national electronic exchanges. After the liberalization, the derivatives market has grown rapidly.

The annual reports of the Indian companies are the main source of derivatives information useful for various shareholders. investors, financial analysts, etc. However, the disclosure of such financial derivatives instruments is not done in a detailed and consistent format. The disclosures mostly appears in the notes to financial statements. Moreover, complete disclosure of derivative position is not a mandatory requirement for firms in India and firms do it voluntarily. Even though there is no obligation on the part of Indian firms for disclosures but still it was seen that over the years the financial derivatives disclosure has increased a lot. Many countries around the world have introduced Accounting Standards for derivatives in order to improve the disclosure process. For example- in United States (US) the Financial Accounting Standards Board (FASB) issued statement 133 and 137 in this regard, United Kingdom (UK) issued FRS 13, etc. After the introduction of such mandatory standards, the disclosure of derivatives process has improved in those countries. The Indian government is also now working on to align our accounting standards with global standards and improve the overall disclosure and reporting norms.

REVIEW OF LITERATURE

According to Modigliani and Miller (1958) in the presence of perfect capital market conditions, risk management has no value addition, as the shareholders can manage their risks themselves. An alternate view (e.g. Smith and Stulz 1985) states that corporate hedging can enhance firm value by reducing the risk of cash shortfalls or financial stress, reducing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the bankruptcy costs, asymmetric information, costly external financing, taxes and agency costs. Empirical tests on this topic have given conflicting results.

Early evidence (Allayannis and Weston 2001) has shown the positive effects of the use of Foreign Currency Derivatives (FCD) for hedging on the firm value. The paper revealed 4.87% higher firm value for non-financial firms which have foreign sales and undertake hedging activities as compared to firms without foreign sales. It was also found that firms that begin hedging exhibit a higher value than the non-hedging firms. Bartram et al (2006) used a sample of 6888 non-financial companies and found that the use of FCD and Interest Rate Derivatives (IRD) increases the firm value. Adam and Fernando (2006) reveal positive cash flows for gold mining firms from the use of derivatives, which would result in increased shareholder value. However, there is no evidence of reduction in the systematic risks of such gold mining firms. The use of derivatives to hedge fuel price risk by the airline industry has also been shown by Carter et al (2006) to increase the firm value. In the study conducted by Bartram, Brown, and Conrad (2011) it was found that after employing the propensity score matching technique hedging increases the firm value. The study initiated by Bae, Kim & Kwon (2017) focused on Korean firms. They found that firms with low exposures and manageable risk undertaking FCDs for hedging experience an increase in the firm value. However, there is not much significant reduction in the risks of those firms. Operational hedging along with the financial hedging activities also increases the shareholder's value of firms as is revealed by Allayannis & Weston (2001). Other studies which show the positive impact of derivatives use on the firm value include the works of Clark & Judge (2009), Zhou & Wang (2013), Leland (1998) & Froot, Scharfstein and Stein (1993). Clark & Judge (2009) states that hedge with financial derivatives taken against foreign currency debt increases firm value. The work of Zhou & Wang (2013) revealed that hedging activities when numerically disclosed to investors reduces the risk exposures and raise the value of the firm. Leland (1998) found that hedging increases a firm's debt capacity and thus it ultimately increases the firm value by increasing the debt tax shield. Froot, Scharfstein, and Stein (1993) also studied that hedging by reducing the costs of external financing also increases firm value.

But in contrast to this positive impact of derivative usage on the firm value some studies have concluded a negative or insignificant impact of hedging and firm value. Jin & Jorion (2006) by taking a sample of firms from the oil & gas industry found that there is no significant impact of hedging on the firm value. Firms with higher basis risk (arising due to imperfect hedging) or financial distress undertaking hedging activities face a reduction in the overall firm value that was revealed by Gilje and Taillard (2017). Santos, Lima, Gatsios and Almedia (2017) also revealed through their study that hedging does not add any value as companies use derivatives not for adding any value to the firm but rather for managing the cash flows. Again Fauver & Naranjo (2010) revealed that a firm with higher agency and monitoring problems faces a negative impact of hedging on the firm value. The work of Belghitar, Clark & Mefteb (2013) also showed that hedging has no significant

impact on firm value. Nguyen and Faff (2010) concluded that there is a negative impact of derivative usage on firm value and is more significant for Interest Rate Derivatives.

Some of the studies also revealed ambiguous or conditional positive results. The study initiated by Law, Chee &Kwong (2016) revealed that hedging activities had a negative impact on the firm value measured by Tobin's Q but had a positive impact on Return on Equity (ROE) and Return on Assets (ROA). Bae, Kim and Kwon (2017) also concluded that hedging with more derivative use does not reduce any risk but it increases firm value. While for firms having high exposures, high foreign sales and foreign debt when undertake hedging activities experience lower firm value. The work of Jankensgard (2015) also said that centralised hedging activities lead to a higher firm value while decentralised results in no value addition. Treanor, Rogers and Carter (2014) found that in the airline industry hedging with more exposures experience no significant impact on the firm value. While on the other hand firms hedging with no exposure increases the firm value.

Thus, many articles have shown a positive impact of derivative use on the value of the firm which indicates that hedgers have a higher value as compared to the non-hedgers. While there are other articles that have concluded either a negative, insignificant or conditional positive relationship between the two.

Hypothesis Development

After going through the literature, we find that the impact of derivatives use on the value of the firm has not been conclusively determined. There can be a number of reasons for such conflicting and different results, such as incorrect set of control variables, differences in risks faced by firms, endogeneity issues in the model, choice of methodology, etc. This paper empirically investigates the same objective. We reexamine the impact of derivative use on firm value while attempting to avoid a recurrent issue in past studies, that of endogeneity and control variables. We do this by using different models to study the same underlying objectives. It may be hypothesized that:

Hypothesis 1: Hedgers have a higher firm value as compared to the non-hedgers.

Size has been known to influence the value creation by hedging (Nance et al. (1993), Geczy et al. (1997)). Mostly the larger firms are able to undertake more hedging activities by bearing the cost of hedging. Such firms by identifying and assessing the risks are able to hedge accordingly and have higher Tobin's Q as compared to smaller firms. Thus, it may be hypothesized that larger hedging firms have higher firm value as compared to smaller firms undertaking hedging activities. This leads us to the following hypothesis:

Hypothesis 2: Hedging adds more value to larger firms, than to smaller firms.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

METHODS OF STUDY

The scope of this study was restricted to BSE500 companies, as on financial year 2019. Out of those companies, only the manufacturing companies were selected for the study. From National Industries Classification 2008, industry codes 14 to 34, except 1412 (Production of milk from cows or buffaloes), 1410(Manufacture of wearing apparel) and 17093 (Manufacture of printing, writing and photocopying paper) were taken. A total of 205 companies were found appropriate for the study out of the top 500 companies. The data for these companies from 2016 to 2022 was considered for the study. So a total of 1845 firm years form a sample of the study.

The financial statements and the annual reports of the companies were obtained from ProwessIQ and BSE websites. Data related to the use of derivatives, types of derivatives used,

etc. was extracted manually from the special notes of such annual reports. As in the Indian context, it is not a mandatory requirement for the companies to reveal the notional value of derivative contracts and to disclose the mark- to- market profits or gains arising out of such transactions so, many companies did not disclose the same. So there were companies who had revealed the use of derivatives for hedging as well as its different types but without any notional value of the contracts. So there is still a lot to develop in the information disclosure process of risk management. The rest of the data related to the companies was obtained from the ProwessIQ website. We employed a number of combinations of different variables in order to study the impact of derivatives use in the presence of different control variables. A variety of such models were studied in all the subsamples, however, for lack of space, we report only the following 5 models:

 $\begin{array}{l} \textbf{Model 1:} Leading\ Tobin's Q(t+1)\alpha\ \beta_1 \cdot ROA +\ \beta_2 \cdot ROE + \beta_3 \cdot Leverage + \beta_4 \cdot Size + \beta_5 \cdot R\&D\ ratio +\ \beta_6 \cdot \\ Dummy\ derivatives\ use \end{array}$

 $\begin{array}{c} \textbf{Model 2:} \textit{Leading Tobin'sQ}(t+1) \ \alpha \ \beta_1 \cdot \textit{ROA} + \beta_2 \cdot \textit{Leverage} + \beta_3 \cdot \textit{Size} + \beta_4 \cdot \textit{R\&D ratio} + \ \beta_5 \cdot \textit{Dummy derivatives use} \end{array}$

Model 3: Leading Tobin's $Q(t+1) \alpha \beta_1 \cdot ROA + \beta_2 \cdot ROE + \beta_3 \cdot Leverage + \beta_4 \cdot Dummy derivatives use$

Model 4: Leading Tobin's $Q(t+1) \alpha \beta_1 \cdot ROA + \beta_2 \cdot Leverage + \beta_3 \cdot Dummy derivatives use$

Model 5: Leading Tobin's $Q(t+1) \alpha \beta_1 \cdot Tobin's Q + \beta_2 \cdot Leverage + \beta_3 \cdot R\&D$ Ratio + $\beta_4 \cdot Foreign$ sales to assets + $\beta_5 \cdot Dummy$ Derivatives use

For studying the relationship between the usage of derivatives (hedging) and firm value we have used variables similar to some of the previous studies. They are stated as below:

Dependent Variable: Leading Tobin's Q(t+1) is used as a measure of firm market value which is the leading year's Tobin's Q. Tobin's Q is calculated as a ratio of the (Market value of Equity + Book Value of Assets - Book Value of Equity) to the Book Value of Total Assets. It is selected as a measure of firm value as it is very simple, accurate and a very popular measure of representing the same. Tobin's Q = (Market Value of Equity + Book Value of Assets - Book Value of Equity)/ Book Value of Assets

Independent Variable: We have used a dummy variable as a proxy for measuring corporate hedging or the use of derivatives. [1] A dummy variable (1) for the use of either Foreign Currency Derivatives (FCD) or Interest Rate Derivatives (IRD) or Commodity Derivatives for hedging and (0) otherwise. We have used the dummies for measuring this variable because it is a more reliable proxy for measuring the use of derivatives for hedging.

Control Variables: There are also a number of control variables which can have an impact on the value of the firm. The details of such variables are stated below:

Profitability- Return on Equity (ROE) and Return on Assets (ROA) are taken as two proxies for measuring profitability or the financial performance of the companies. ROE = Net Income/ Total Equity. ROA = Net Income/ Total Assets

Size of the Firm- We have used natural log of total assets as a measure of firm size. Size= Natural log of total assets

Leverage- In our study we have used the ratio of total debt to total assets as a measure of leverage. Leverage= Total Debt/ Total Assets

Research & Development Expenses- The Research & Development (R&D) ratio is measured as a proxy for future or upcoming investment opportunities and identification of various possible risks. R&D Ratio= Research and Development expenses / Total Assets

Foreign Sales- The foreign sales to total assets ratio is taken as a proxy for measuring foreign sales of firms. Foreign Sales -to-Assets Ratio= Foreign Sales/ Total Assets

EMPIRICAL RESULTS AND DISCUSSION

The Table 1 gives summary statistics of main variables used in the study. It shows the mean values of all variables for the entire sample. It also reveals the means values for hedgers and nonhedgers separately. In addition to this the values of standard error of mean is mentioned within the brackets below each mean value. The last column reveals the t-statistics for both hedgers and non-hedgers. We perform our analysis separately by dividing the entire sample on the basis of size i.e., large (natural log of total assets > median) and small (natural log of total assets < median) companies.

| | | (0.387) | (0.657) | (0.213) | |
| Leading Tobin's Q(t+1) | 1611 | 4.071 | 4.024 | 3.737 | 427 |
| | | (0.247) | (0.388) | (0.235) | |

We started our hypotheses tests by comparing mean firm values of hedgers and non-hedgers. For large companies, it can be seen from the Table 2 that the hedgers have a significantly (t= 2.7) higher firm value (Tobin's Q) than the non-hedgers. For small companies also the mean firm value of hedgers was higher as compared to non-hedgers but it was not statistically significant. It ultimately shows that whether it is a case of small or large

companies the hedgers have a higher firm value (Leading Tobin's Q) as compared to that of non-hedgers. But when compared between large and small companies, the small companies have a higher firm value compared to the larger ones. The possible reason for this is that as small firms have smaller risk exposures and manageable risks, so hedging becomes more effective in adding more value to smaller firms.

Table 2: Descriptive Statistics (Large Companies) and (Small Companies)

LARGE SMALL

| LANGE | | | | | SMALL | |
|---------------------------------|---------|----------------|-------------|---------|----------------|-------------|
| Derivatives Dummy | Hedgers | Non Hedgers | t-statistic | Hedgers | Non Hedgers | t-statistic |
| Return on Equity (ROE) | 0.024 | 0.139 | 0.511 | 0.160 | 0.179 | 1.207 |
| Return on Assets (ROA) | 0.086 | 0.060 | -1.798** | 0.710 | 0.146 | -0.68 |
| Size (Natural log of assets) | 11.566 | 11.442 | -1.454 | 9.568 | 9.545 | -0.409 |
| Leverage | 0.191 | 0.111 | -5.071* | 0.903 | 0.151 | -0.8 |
| R&D Ratio | 0.015 | 0.009 | -1.345* | 0.013 | 0.011 | -0.75 |
| Foreign sales- to- assets ratio | 0.141 | 0.058 | -1.28 | 2.803 | 0.137 | -0.708 |
| Tobin's Q Firm Value | 2.926 | 1.890 | -2.784*** | 4.261 | 5.138 | 0.413 |
| Leading Tobin's Q(t+1) | 2.723 | 1.714 | -2.472** | 5.538 | 5.092 | -0.368 |

Finally, in order to study the relationship between the derivative's use and firm value we have used five different models by using different combinations of control variables. Table 3 shows the results of regression analysis showing the impact of the use of derivatives on the value of the firm using

the full sample. It reveals that in all the first four models there is a positive and significant impact of the use of derivatives on the leading Tobin's Q. The coefficients state that the hedging contributes positively to firm value.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 3: Regression of derivatives use (dummy) on Leading Tobin's Q (t+1)

| | ruble 3. Regression of derivatives use (duminy) | | on Leading Tobin's Q (t+1) | | |
|---------------------------------|---|-----------|----------------------------|---------|----------|
| Variables | Model 1 | Model 2 | Model 3 | Model 4 | Model 5 |
| Return on Equity (ROE) | -0.047 | | .021 | | |
| | 0.165 | | .166 | | |
| Return on Assets (ROA) | 9.089*** | 8.993*** | 2.656* | 2.679* | |
| | 1.919 | 1.888 | 1.127 | 1.111 | |
| Size (Natural log of assets) | 0.180** | 0.179** | .228*** | .228*** | 007 |
| | 0.063 | 0.063 | .063 | .063 | .026 |
| Leverage | -1.811 | -1.757 | -2.737* | -2.761* | 2.157*** |
| | 1.168 | 1.152 | 1.165 | 1.148 | .034 |
| R&D Ratio | 13.548 | 13.688 | | | -7.940* |
| | 9.172 | 9.155 | | | 3.387 |
| Foreign sales- to- assets ratio | -1.564*** | -1.555*** | | | |
| | 0.335 | 0.333 | | | |
| Tobin's Q (Firm Value) | | | | | .930*** |
| | | | | | .012 |
| Dummy Derivatives Use | 0.537* | 0.536* | .640* | .641* | 011 |
| | 0.257 | 0.256 | .260 | .259 | .104 |
| Adjusted R ² | 0.129 | 0.130 | 0.102 | 0.102 | .854 |

The coefficients of some of the control variables are also significant. It is seen that the more profitable firms i.e., the firms with high ROA have a higher value of leading Tobin's Q; size also has a positive and significant coefficient with leading Tobin's Q stating that larger firms have a higher firm value; firms with more amount of leverage have a lower firm value due to the increase in the financial distress of firms; negative and significant coefficient of foreign sales ratio and firm value states that firms with more foreign exposures have lower firm value; current year's firm value is related to last year's firm value as seen from the coefficient of the last model 5. But only in case of R&D ratio, we have a very contrasting and opposite results i.e., the negative impact of R&D expenses on the firm value.

We conducted the same analysis again by undertaking the subsamples of large and small companies and also controlling the same set of control variables. The results of the analysis are reported in Table 4 and Table 5, respectively.

Table 4: Regression (Large Companies) of derivatives use (dummy) on Leading Tobin's Q (t+1)

| Variables | Model 1 | Model 2 | Model 3 | Model 4 | Model 5 |
|---------------------------------|------------|------------|-----------|-----------|--------------------------|
| Independent Variable | Tobin's Q | Tobin's Q | Tobin's Q | Tobin's Q | Tobin's Q _{t+1} |
| Return on Equity (ROE) | 204*** | | 170*** | | |
| | .044 | | .046 | | |
| Return on Assets (ROA) | 23.565*** | 22.497*** | 18.519*** | 17.908*** | |
| | 1.075 | 1.069 | .857 | .850 | |
| Leverage | 234 | .325 | -1.080 | 561 | 399 |
| | .695 | .696 | .716 | .710 | .511 |
| R&D Ratio | -24.715*** | -23.068*** | | | -9.465*** |
| | 3.349 | 3.390 | | | 2.129 |
| Foreign sales- to- assets ratio | .152 | .151 | | | .045 |
| | .146 | .149 | | | .110 |
| Tobin's Q Firm Value | | | | | .926*** |
| | | | | | .026 |
| Dummy Derivatives Use | .346*** | .330** | .417*** | .401*** | .099 |
| _ | .066 | .068 | .069 | .069 | .051 |
| Adjusted R ² | 0.618 | 0.604 | 0.582 | 0.573 | .783 |

The results of the subsample of large companies are somewhat similar to that of the full sample. It also reveals that large hedging firms using derivatives have a higher firm value as compared to large non-hedging companies. It is also found that large profitable companies with higher ROA have a higher firm

value; R&D ratio is again negatively and significantly related to the firm value. But there was a contradicting result stating a negative relationship between the ROE and firm value. The possible explanation for this is that ROE (control variable) and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

leading Tobin's Q (dependent variable) are arithmatically related, giving rise to co-linearity.

Table 5: Regression (Small Companies) of derivatives use (dummy) on Leading Tobin's Q (t+1)

| Variables | Model 1 | Model 2 | Model 3 | Model 4 | Model 5 |
|---------------------------------|-----------|-----------|-----------|-----------|--------------------------|
| Independent Variable | Tobin's Q | Tobin's Q | Tobin's Q | Tobin's Q | Tobin's Q _{t+1} |
| Return on Equity (ROE) | 3.924 | | 6.457* | | |
| | 3.111 | | 3.015 | | |
| Return on Assets (ROA) | 5.380 | 6.925 | 289 | .365 | |
| | 4.204 | 4.024 | 1.913 | 1.895 | |
| Leverage | .020 | 462 | .281 | 387 | 078 |
| | 1.999 | 1.964 | 1.977 | 1.959 | .616 |
| R&D Ratio | 44.398 | 43.218 | | | 5.067 |
| | 24.947 | 24.944 | | | 8.329 |
| Foreign sales- to- assets ratio | -1.155 | -1.384* | | | .464*** |
| | .719 | .696 | | | .128 |
| Tobin's Q Firm Value | | | | | .934*** |
| | | | | | .017 |
| Dummy Derivatives Use | 1.331*** | 1.533*** | 1.570*** | 1.945*** | .134 |
| | .337 | .297 | .330 | .281 | .118 |
| Adjusted R ² | 0.115 | 0.114 | 0.096 | 0.090 | 0.864 |

In case of small companies also we found that the use of derivatives has a positive impact on the value of the firm. Small profitable companies having higher ROE also have a higher firm value which is as expected initially in our study. The positive coefficient of Tobin's Q and leading Tobin's Q states that current year's Q is affected positively by the last year's Q. So the above stated results in all the various tests are consistent with the initial hypotheses that hedgers have a higher firm value as compared to the non-hedgers.

CONCLUSION AND POLICY IMPLICATIONS

This paper studies the relationship between the use of derivatives for hedging and the value of the firm of BSE500 listed Indian manufacturing firms. The study was conducted for a period ranging from 2016-2022. Using leading Tobin's Q as measure of firm value, we found a positive and significant impact of derivatives use on value of the firm. The results were also significant and consistent within the subsamples of large as well as small companies. We also found that small companies using derivatives have a higher firm value as compared to the large companies. As they are small and have manageable risk exposures, the use of derivatives ultimately adds value to the firm. The results are also robust to various control variables (profitability, size, foreign sales, leverage, and R&D expenses). Thus, the paper sheds light on the consistency of basic fundamental hedging theory and reveals the positive relationship between hedging and firm value.

According to the Companies Act, 1956 the risk management of enterprise was not mandatory. However as per the new law enacted in 2013, all the firms were required to comply with the specific requirements related to risk management. It also specified the framework and provided guidelines to define, measure, report, control and mitigate the identified risks. As the Companies Act mandates risk management and reporting, we investigate whether there is a need to prescribe hedging (risk

management) to companies, when investors themselves can take a hedge. In India firms are able to hedge over and above what the investors can. It may be partly due to the restrictions imposed on the use of contracts such as FCDs by entities and individuals not directly exposed to foreign currency risks. There is also a large amount of transaction costs involved in undertaking such contracts which again restricts the investors from hedging. The presence of information asymmetry among the investors also limits the ability of individual investors to hedge of their own. Until these asymmetries between investors and firms remain, it may be prudent to prescribe risk management through regulation such as Companies Act 2013.

FUTURE GUIDELINES

We plan to empirically investigate the explanations stated in the above section as well as a few other unanswered questions. We also want to explore more on auto regression of Tobin's Q and the possible methods of dealing with such issues. The reasons for completely conflicting results for various control variables such as R&D expenses, foreign sales ratio, etc. can also be studied. It can also be seen if the results are consistent with in other industries too.

EXPLORING THE ASSIMILATION OF SELF-LEARNING & INFORMATION AND COMMUNICATION TECHNOLOGY (ICT) IN HIGHER EDUCATION: COVID-19 PANDEMIC PERSPECTIVE IN INDIA

Dr. Ujjwal Paul*

*Assistant Professor (WBES) in Education, Government College of Education, Banipur, PIN Code-743233, W.B., India.

Article DOI: https://doi.org/10.36713/epra16959

DOI No: 10.36713/epra16959

ABSTRACT

This article delves into the evolving landscape of 'Self-learning' within the area of higher education in India. With the proliferation of technology and digital resources, 'Self-learning' has emerged as a prominent alternative or complement to traditional classroom-based education. The article reviewed and examines the drives behind the rise of self-learning, including the accessibility of online platforms, the demand for flexible learning opportunities, and the need for continuous skilling in a rapidly changing world. Furthermore, it explores the challenges and opportunities associated with self-learning in the Indian context, such as issues of digital divide, quality assurance, and recognition of self-taught skills. Now-a-days Distance mode of education (non formal education) in Higher Education is very much popular and effective in India and the Self-learning concept is very much essential for achieving the goal. This paper reviews the existing literature on the connection of self-learning and Information and Communication Technology (ICT). With the proliferation of digital tools and platforms, ICT has significantly influenced self-learning practices, enabling learners to access resources, collaborate with peers, and personalize their learning experiences. Reviewing previous empirical studies, theoretical frameworks, literatures this study is aimed on the impact of ICT on various aspects of self-learning, including accessibility, engagement, effectiveness and inclusivity. Additionally, it explores the barriers hindering effective implementation, including issues of accessibility, digital literacy, and privacy concerns. The COVID-19 pandemic has disrupted education systems worldwide, prompting a rapid shift towards remote and self-directed learning modalities. In India, where the pandemic has exacerbated existing educational inequities, self-learning has emerged as a critical strategy to ensure continuity of education. This paper also discussed the impact of the COVID-19 situation on self-learning in India, exploring the challenges faced by learners and educators, as well as the opportunities for innovation and suggestions for enhancement.

KEYWORDS: Self-learning, Higher Education, ICT, COVID-19, Online-Learning, Digital Resource, Digital divide, Distance Education

INTRODUCTION AND EMERGENCE

The traditional paradigm of higher education in India, articulated by classroom-based instruction and rigid curricular structures, is a profound transformation propelled undergoing advancements in digital technology. In recent years, the background of higher education in India has been a notable shift towards 'self-learning' methodologies facilitated by online platforms and digital resources. This shift is driven by a confluence of factors, including the escalating require for flexible learning options, the imperative of continuous skilling in a rapidly evolving job market and the widespread accessibility of digital learning resources. 'Self-Learning' as a Process by which self responsiveness, critical thinking of learning will be shaped in the 21st century skills. It helps one's deep strategic understanding in a concept or subject and builds insight in a fundamental concept. 'Self-Learning' as a concept is not new. Terms analogous with Self-learning include, self-directed learning, self-designed learning, self-regulated learning, lifelong learning, self-directed learning (SDL) has its roots in the concept of adult education, while self regulated learning (SRL) on the other hand, is mostly studied in the educational environment (Loyens, et. al., 2008). 'Higher education' in India refers to the education provided at colleges, universities, and other tertiary institutions beyond the secondary level. It encompasses undergraduate, postgraduate, and doctoral programs, as well as professional and vocational courses, aimed at preparing students for specialized careers and advanced research (University Grants Commission, 2008). Higher education institutions in India offer a diverse range of disciplines and fields of study, including arts, sciences, engineering, medicine, commerce, and humanities, catering to the diverse academic and career aspirations of students across the country. The dawn of 'Information and Communication Technology (ICT)' has revolutionized the way individuals engage in 'learning' activities, particularly through self-learning initiatives. ICT encompasses a wide range of digital tools and platforms,

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

including online courses, educational apps, social media, and collaborative learning environments. This introduction sets the stage for the review by highlighting the growing significance of ICT in self-learning contexts and outlining the objectives and scope of the paper.

Moreover, in the 'COVID-19', global pandemic and lockdown situation all over the world as well as in India had affected the 'formal education system'. Because of this 'COVID-19 pandemic situation', nearly all of the schools and colleges were closed to maintain 'social distancing' from the month of March, 2020 in India for a long time and 'formal Higher Education system' is affected and need for another remedy for the students in 'learning'. The COVID-19 pandemic has triggered the espousal of online learning, prompting educational institutions to embrace digital platforms to ensure stability of education. The shift towards online and hybrid learning models has not only reinforced the importance of self-learning but has also highlighted its potential to enhance learning outcomes and promote lifelong learning habits among students. In this study, analysed the various aspects of 'Self learning' its challenges faced by the students and teachers. As per the instructions of the Union Ministry of HRD (Human Resource Development) has made several arrangements for conducting classes for the students through the online portals and through the educational channels to continue the learning. In other hand through 'Self-learning' in 'distance Education' learning practices now are highly adapted for completion of people's further education after engaging in any profession or any other reason for incompletion of degrees and achieving the same after a duration of time. It outlines the objectives of the paper and highlights the importance of thoughtful the 'challenges and opportunities' associated with self-learning in the current context. The growing importance of self-learning and ICT assimilation in the education system is a crucial factor for now-a-days.

Aspects of Self-Learning

Self-learning, also known as self-directed learning or autonomous learning refers to the process by which individuals take responsibility for their own learning experiences, actively seeking out and engaging with educational resources, materials, and activities without direct supervision or guidance from traditional instructors (Knowles, 1975). In self-learning, learners set their own learning goals, manage their time and resources, and monitor their progress, thereby fostering autonomy, self-motivation, and lifelong learning habits (Siemens, 2005).

Self-learning is defined as "a method of garnering information and after processing and retaining it without taking the help of another individual. It is the responsibility of the learner to learn and hold on to the knowledge without the help of another human resource. It is a modern way of learning that helps a person to teach himself skills and knowledge that will prove relevant to his daily activities" (Skilling India, 2020). The theoretical framework of 'Self-learning' is the guides of review, drawing upon theories of self-regulated learning, Social Constructivism, and technology acceptance. The framework elucidates the mechanisms through

which ICT influences self-learning processes and outcomes, providing a conceptual lens for analyzing the literature. Any knowledge getting outside of a 'formal educational' setting, like through self-study or experience, is called 'self-driven learning'. This approach can be beneficial for people who prefer learning at their own pace or who don't have sufficient time to accomplish academic courses or programmes.

Drives of Self-Learning in Higher Education

The accessibility and affordability of digital technology have played a pivotal role in the proliferation of self-learning in India. Various 'Online platforms' offer a huge range of courses and resources across an assortment of disciplines, enabling learners to achieve education at their individual pace and expediency. Additionally, the advent of 'Massive Open Online Courses (MOOCs)' has vast access to higher education, allowing individuals from 'diverse socio-economic backgrounds' and in the higher education landscape, enabling 'millions of learners to engage in learning experiences offered by prestigious institutions worldwide to acquire knowledge and skills previously beyond their reach.

The proliferation of self-learning in India can be attributed to the accessibility and affordability of digital technology, which have empowered the learners democratically to achieve knowledge at their own pace and needs. The 'COVID-19 pandemic' has triggered the adoption of online learning and to clinch digital platforms to ensure stability of education.

OBJECTIVES OF THE PRESENT STUDY

- 1. To comprehend the 'concept of 'Self-Learning' in education system.
- To study the needs of 'Self-Learning' and 'information and communication technology (ICT)' in higher education.
- 3. To identify the issues, opportunities and challenges of Self-Learning and its assimilation with ICT in the educational institutions chiefly at time of COVID-19 pandemic situations.
- 4. To propose or suggests some measures for implementation of 'Self-Learning' assimilation with ICT in Higher education system in India.

METHODOLOGY

This is a descriptive qualitative study. For this study secondary data was composed. To assemble data for the study reports, books, periodicals, research papers, journals, and peer-reviewed articles were retrieved and reviewed for comprehensive and holistic analyses.

Challenges of Self-Learning and ICT assimilation in Higher Education during COVID-19

Despite its transformative potential, self-learning in the Indian context faces several challenges. The proliferation of unaccredited or substandard courses undermines the value of online education, raising concerns among posing challenges for

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

learners. The challenges faced by learners and educators in adopting self-learning modalities during the COVID-19 pandemic, including:

Digital Divide: One of the most significant challenges facing self-learning is the 'digital divide', which means to the disparities between individuals who have access to digital technologies and those who lack such access. This divide shows existing inequalities in access to technology and internet connectivity in education, hindering the participation of marginalized communities in self-learning initiatives (Warschauer, 2003 & UNESCO, 2020).

Lack of Structure and Guidance: Unlike traditional classroombased instruction, self-learning often lacks the structured guidance provided by educators. Without clear learning objectives and feedback mechanisms, learners may struggle to navigate the vast array of online resources effectively (Knowles, 1975).

Motivation and Self-Discipline: Self-learning requires a high degree of self-motivation and discipline. Learners must proactively set goals, manage their time effectively, and stay motivated to complete courses or projects independently (Deci & Ryan, 2000).

Quality Assurance and Credibility: Ensuring the quality and credibility of self-learning resources and credentials remains a challenge. With the proliferation of online courses and platforms, there is a lack of standardized quality assurance mechanisms, leading to concerns about the authenticity and recognition of self-taught skills (Daniel, 2012).

Isolation and Lack of Social Interaction: Self-learning can be isolating, as learners often study alone without the social interaction and peer support typically found in traditional classroom settings. This lack of social interaction can impact motivation and engagement, particularly for learners who thrive in collaborative environments (Garrison, Anderson, & Archer, 2000).

Digital Literacy: Lack of digital literacy skills among learners and educators hinders effective utilization of ICT tools and platforms for self-learning (Hargittai, 2010).

Privacy and Security Concerns: The collection and use of learner data by ICT platforms raise privacy and security concerns, necessitating robust policies and safeguards to protect sensitive information (Selwyn, 2010).

Lack of Infrastructure: Limited access to digital devices and inadequate infrastructure in rural and remote areas pose challenges for learners and educators attempting to engage in online self-learning (Kumar & Vigil, 2012).

Pedagogical Issues: The sudden transition to self-learning modalities has highlighted pedagogical challenges, including the need for effective instructional design, learner support mechanisms, and assessment strategies (Chen et al., 2020).

However, these challenges also present opportunities for innovation and collaboration, including the development of accessible and user-friendly technologies, the promotion of digital literacy initiatives, and the establishment of partnerships between educational institutions, governments, and technology providers (Pimmer et al., 2016).

Opportunities of Self-Learning with assimilation of ICT in Higher Education & Innovation

Despite the challenges, the COVID-19 situation various opportunities afforded by the incorporation of self-learning and ICT in education for innovation and improvement in self-learning practices including:

Convenience: Digital user-friendliness features make learning materials more reachable to learners with disabilities, ensuring inclusivity and equal access to educational opportunities (Burgstahler, 2003). Self-learning offers numerous opportunities for learners to enhance their educational experiences and achieve their academic and professional goals.

Personalised Learning Experiences: ICT tools enable learners to access personalised learning materials and resources tailored to their individual needs and preferences (Picciano, 2017). With the help of adaptive learning technologies self-learning platforms can modify learning experiences to individual learner preferences, abilities, and learning styles, enhancing engagement and retention (Brusilovsky, 2001).

Flexibility: 'Self-learning' provides learners with the flexibility to convert their learning experiences according to their interests, pace, and preferences (Singh & Thurman, 2019). Learners can choose from a wide range of online courses, resources, and learning pathways adapted to their individual needs (Siemens, 2005).

Lifelong Learning and Skill Development: Self-learning promotes 'lifelong learning' habits by empowering individuals to take possession of their learning drive beyond formal education. Learners can continuously acquire new skills, update their knowledge, and adapt to evolving industry trends and technologies (Kirkwood & Price, 2014). ICT provides opportunities for continuous skill development and lifelong learning, empowering individuals to stay abreast of industry trends and pursue personal and professional growth (Dennen et al., 2007). Self Learning provides that age is no bar for learning.

worldwide Access of Education: Online platforms and digital resources ease global access to education, facilitate collaboration allowing learners from diverse geographical locations to access quality educational content and interact with experts and peers worldwide (Ally, 2004). Through online forums, group projects and collaborative assignments, learners can engage in cross-

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

cultural dialogue, gain new perspectives and develop intercultural competence (Kanuka & Garrison, 2004).

Cost-effectiveness: Self-learning can be a cost-effective alternative to conventional classroom-based instruction, as learners can access many online resources for free or at a fraction of the cost of traditional tuition fees (Bonk & Graham, 2006).

Diverse Learning Resources: Self-learning platforms offer admittance to a diverse range of learning resources, including multimedia content, interactive simulations, and 'Open Educational Resources' (OERs). This variety of resources enhances learning engagement and caters to different learning preferences (Conole & Alevizou, 2010). By harnessing the collective expertise of educators and learners worldwide, self-learners can access a wealth of free, high-quality educational materials and contribute to the creation of new knowledge (Wiley & Hilton, 2009). In this day and age Distance mode of education i.e. non formal education in Higher Education is very much accepted and effective in India and the Self-learning concept is very much essential for continuing this aspiration.

Immediate Feedback and Assessment: Self-learning platforms often incorporate the process of receiving feedback on their progress in real-time. This timely feedback promotes reflection and facilitates continuous improvement (Narciss, 2008).

Employability and Career Advancement: Self-learning equips learners with in-demand skills and competencies valued by employers in the job market. By acquiring relevant knowledge and skills through self-learning, individuals can enhance their employability, advance their careers, and pursue new professional opportunities (Dennen, Darabi, & Smith, 2007). Self-learning fosters learners' autonomy and empowerment in their life.

Learning for Differently-abled Individuals: Self-learning platforms can be designed to accommodate the needs of differently-abled individuals, providing convenience features for content delivery. By ensuring inclusivity and accessibility, self-learning empowers individuals with disabilities to participate in educational experiences (Burgstahler, 2003).

Collaborative Learning Communities: Online self-learning platforms facilitate collaboration and knowledge-sharing among learners and educators, fostering a sense of community and peer support (Khan, 2020).

Impact of ICT on Self-Learning

The impacts of ICT on self-learning are as follows:

Accessibility: ICT has expanded access to learning resources and opportunities, particularly for marginalized and underserved populations (Warschauer, 2003).

Engagement: Digital tools and multimedia content enhance learner engagement and motivation by catering to diverse learning styles and preferences (Picciano, 2017).

Effectiveness: Empirical studies reveal the effectiveness of ICT-enhanced self-learning interventions in improving learning outcomes and retention rates (Means et al., 2009).

Inclusivity: ICT promotes inclusivity of intensive learning by accommodating of all individuals with diverse needs and facilitating collaboration among learners from diverse backgrounds (Ally, 2004).

Suggestions for Addressing Challenges and Enhancing Self-Learning

However, amidst these challenges lie opportunities for innovation and collaboration. Public-private partnerships can play a crucial role in expanding access to digital infrastructure and promoting digital literacy initiatives in underserved communities. Additionally, the integration of emerging technologies such as 'Artificial Intelligence (AI)' and 'virtual reality' holds promise for enhancing the efficiency and engagement of self-learning experiences.

Some recommendations for addressing the challenges identified for enhancing the effectiveness and inclusivity of self-learning initiatives during the COVID-19 pandemic, including:

- 1. Investing in digital infrastructure and internet connectivity to bridge the digital divide and ensure equitable access to technology (Hinrichsen & Coombs, 2014).
- 2. Introducing digital literacy training programs for learners and educators to enhance their digital skills and competencies (Koltay, 2011).
- 3. Developing clear guidelines and policies for data privacy and security in educational ICT environments, ensuring compliance with relevant regulations (Greenhow & Askari, 2017).
- 4. Implementing quality assurance mechanisms to evaluate the credibility and effectiveness of online learning resources and platforms (Conole & Alevizou, 2010).
- 5. Governments and educational institutions should come forward to develop digital infrastructure and connectivity to ensure reasonable access to 'self-learning' opportunities for all learners. 6. Providing teachers with training and professional development opportunities in online pedagogy and technology assimilation is essential for enhancing the quality of self-learning experiences (UNESCO, 2021).
- 7. Engaging parents, caregivers, and local communities in supporting learners' self-learning journeys can help bridge the gap between home and educational environments and promote holistic learning outcomes (Agarwal & Karpouzian, 2020).
- 8. 'SWAYAM', 'DIKSHA', 'e-Gyankosh' etc. online platforms should be encouraged more for proliferation and enhancing 'self-learning' to complete learners' desired courses and degrees in 'distance mode' or in 'non-formal' way of education in India.

DISCUSSION & CONCLUSION

'Self-learning' has emerged as a transformative force in higher education in India, reshaping traditional notions of teaching and

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

learning. While challenges such as the digital divide and quality assurance persist, the opportunities presented by self-learning are vast and promising. By harnessing the potential of digital technology and fostering collaboration among stakeholders, India can pave the way for a more inclusive, accessible, and innovative higher education. This review highlights the transformative potential of ICT in shaping self-learning practices and experiences. By expanding access to educational resources, enhancing engagement and effectiveness, and promoting inclusivity, ICT has the power to democratise learning and empower individuals to pursue their educational aspirations. However, addressing the challenges associated with ICT integration requires concerted efforts from stakeholders across sectors. To promote lifelong learning for all the assimilation of Self-learning and ICT is very much essential. Self-learning platforms leverage open educational resources (OER) and collaborative knowledge creation tools to promote the sharing and dissemination of knowledge (Wiley & Hilton, 2009). Selflearning, while offering numerous benefits, also presents several challenges, particularly within the context of higher education. Conceptualising and addressing these challenges are crucial for ensuring the effectiveness and inclusivity of self-learning initiatives.

In conclusion, it can be emphasised that, the assimilation of self-learning and ICT presents both opportunities and challenges for the education system. By implementing targeted interventions and policies, stakeholders can tie together the transformative power of ICT to enhance self-learning outcomes and uphold impartial admittance to education for all. The 'COVID-19 pandemic' has accelerated the adoption of self-learning modalities in India, presenting both challenges and opportunities for the education sector. By addressing the challenges of digital divide, infrastructure limitations and pedagogical issues India can construct a more resilient and 'inclusive education' system that empowers learners to thrive in the 'digital age' in the arena of 'self-learning' initiatives.

DOI No: 10.36713/epra16988

ABSTRACT

Polyherbal formulations are one of the most preferred forms due to their synergistic effects considering various health problems. This abstract mainly emphasizes the polyherbal gel containing Curcuma Longa (Turmeric), Zingiber Officinale (Ginger), Melaleuca Alternifolia (Tea Tree) oil, Sclerocarya Birrea (Marula) oil for the treatment of Hidradenitis Suppurativa. Turmeric and Ginger are well known for their anti-inflammatory as well as anti-oxidant properties which, provide soothing skin irritations, treating inflammations and promoting overall skin health inflammation, as well as that Marul oil prevents the formation of scar Tissue, provides intense hydration, nourishment and protection against environmental stresses. Gels are preferred over ointments because they avoid first pass metabolism, and gel absorbs quickly through the skin so it leaves no stain and is preferred over ointment because it results in the formation of film over the applied skin surface and causes staining of the clothes.

KEY WORDS: Hidradenitis Suppurativa, Curcuma Longa (Turmeric), Zingiber Officinale (Ginger), Melaleuca Alternifolia (Tea Tree) oil, Sclerocarya Birrea (Marula) oil.

INTRODUCTION

"A constant, provocative, repetitive, weakening skin sickness (of the terminal hair follicle), hidradenitis suppurativa normally shows itself after pubescence as firmly established, difficult, fiery sores in the body apocrine organ bearing locales, generally ordinarily the axillary, inguinal and anogenital regions".

Agonizing knots and abscesses, repeating sores, sinus parcels, scarring, and skin changes are indications of Hidradenitis suppurative [1].

Albeit the exact etiology of HS is obscure, various elements, including insusceptible framework glitch, hair follicle impediment, and hereditary qualities, are accepted to play a part. Normally starting after pubescence, HS influences ladies more frequently than guys. Another gamble factor for HS is heftiness. The gamble and seriousness of HS are expanded by smoking. The

An effective readiness comprised of a few different concentrates or parts is alluded to as polyherbal gel. The synergistic advantages of joining numerous herbs in a gel structure might improve the restorative characteristics of each plant alone.

condition's gamble of creating is expanded by family ancestry [1].

The progressions appearing in HS are coordinated to the pilosebaceous unit of apocrine rich regions. Shrinkage or potentially loss of sebaceous organs contributes altogether to the pathogenesis, disturbs the neighborhood endocrine homeostasis as well as influences nearby bacterial colonization. Infundibulofolliculitis is the resulting element of HS pathogenesis. Contracting of sebaceous organs and infundibulofolliculitis go before follicular stopping and ensuing dilatation of hair follicle. The epithelium coating of the enlarged follicle is penetrated, delivering keratin strands, hair parts and microbes to the encompassing tissue. Prompting solid unfamiliar body type-like irritation, with the inundation of histocytes and development of multinucleated monster cells, at last followed by canker arrangement with recuperating and scarring [2].

They have various applications including relief from discomfort, aggravation decrease, wound recuperating, quieting skin disturbances and saturating. One method for lessening probability of adverse consequences from

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

unreasonable dosages of single plant is to utilize a combination of herbs. Moreover, every herb might be utilized at lower fixation because of their synergistic properties, which further brings down the chance of negative responses [3].

Contrasted with customary measurement structures like table or cases, gel plan offers a reasonable for the conveyance of home grown removes and take into consideration more prominent ingestion through skin and increment the bioavailability of restorative substances [3].

The rhizomes or underground stem, of the plant Curcuma Longa, an individual from the Zingiberaceae family, is the natural wellspring of turmeric. Curcumin, a bioactive substance tracked down in turmeric, makes solid calming difference. Curcumin restrains body's incendiary arbiters and pathways including TNF-alpha, COX-2, and NFkappa. Turmeric can possibly lessen irritation which might help with side effects like agony, enlarging and redness to HS sores [4].

The rhizome, of the Zingiber officinale plant, an individual from the Zingiberaceae family, is the natural wellspring of ginger. Bioactive substances viewed as in ginger, for example, paradol, shogaol and gingerol have mitigating characteristics. By obstructing the combination of supportive of fiery cytokines and compounds including lipoxygenase and cyclooxygenase, reduce expanding and aggravation connected to HS injuries [5].

The Melaleuca alternifolia tree, additionally alluded as the tea tree, is the organic wellspring of tea tree oil. Melaleuca alternifolia is an individual from the Myrtaceous family and is local to Australia. Steam Refining is the technique used to get tea tree oil from the leaves of this tree. Tea tree oil's dynamic part terpinene-4-old answerable for is expansive range against bacterial characteristics. It has been exhibited that this substance represses development of numerous microorganisms, including Staphylococcus Aureus, a microbe that is much of the time connected to HS [6].

The bits or seeds of the marula natural product, officially known as Sclerocarya birrea, are the natural wellspring of marula oil. A few countries including South Africa, Namibia, Zimbabwe are home to marula tree. Cold squeezing is the technique used to remove marula oil from the organic product's portion. Marula oil's ability to energize tissues recovery and fix makes it valuable for wound mending. By advancing collagen creation,

angiogenesis and epithelialization in impacted regions, marula oil might help with mending cycle of HS [7].

MATERIAL AND METHODOLOGY

Preparation of aqueous extract of Turmeric and **Ginger:** Wash the fresh rhizomes of turmeric and ginger under running water to facilitate the removal of dust. Peel the outer skin of turmeric and ginger rhizomes. Chop the peeled rhizomes of ginger and turmeric into small pieces to enhance the extraction process. Transfer the chopped turmeric, ginger pieces into blender. Add small amount of distilled water to make the grinding process faster. Blend until smooth paste formed. Transfer the blended mixture into China dish add the remaining required amount of distilled water for efficient extraction of the active components and then the solvent evaporated till the dry powder is obtained.

Weighing and Measuring: The required amount of xanthum gum (1.7 gm), tea tree oil (5 drops), marula oil (3 drops), ginger powder (0.1gm), turmeric powder (0.4 gm) and aloe vera juice (68 ml).

Preparation of aloe vera gel: Take fresh aloe vera leaves and wash them under running water. Peel of the Aloe vera leaves and then isolate the gel by scrapping into a container.

Preparation of Slurry: Put the required amount of powdered xanthum gum (1.7 gm) in a measuring beaker. Pour in as much aloe juice which is required to dissolve the xanthum gum, cover and put away for thirty minutes.

Combining Aloe vera gel and Xanthum gum slurry: Add q.s. sodium benzoate to the gel of aloe vera. Add the prepared xanthum gum slurry, cover and put away for three to four hours.

Incorporation of the Drugs into the gel: Isolate the determined measure of glycerin (2 ml), peppermint oil (2 drops), marula, and tea tree oil in an alternate beaker. The previously measured ginger powder and turmeric powder then added progressively to ensure that the combination is uniformly conveyed all through the gel add the blend and mix completely.

Packaging: The formulated gel is then filled into the glass container which is previously washed and sterilized to avoid any microbial growth throughout the storage. Keep the glass container in cool place and away from direct sunlight to prevent oxidation of the active compounds.

Spreadability: For spreadability testing of a gel definition, the technique normally includes estimating the

measurement of the gel spread on a reasonable surface.

Result:

| Sr.no | Parameter | Observation |
|-------|---------------|-------------|
| 1. | Spreadability | 6.4 cm |

Solubility: To determine the solubility of a gel, you need to assess how well it dissolves or disperses in a particular

solvent or medium.

Result:

| Sr.no | Solvents | Solubility |
|-------|------------|--------------------|
| 1. | Water | Completely soluble |
| 2. | Ethanol | Partially soluble |
| 3. | Chloroform | Insoluble |
| 4 | Acetone | Insoluble |

Swelling Index: The enlarging list study is directed to decide the level of expanding or hydration displayed by a gel plan when presented to a particular dissolvable or medium.

Result:

$$SI = (V_2 - V_1) / V_1 \times 100$$

= (11 - 7) / 7 × 100
= 57.14 %
were,

SI = Swelling Index

 V_2 = Final Volume after Swelling

 V_1 = Initial Volume before Swelling

Zone of inhibition: The zone of inhibition test for tea tree oil includes putting of tea tree oil through plug drill onto an agar plate with microorganisms (S. Aureus) then, at that point, estimating the inhibited region around where microbes' development is repressed.

Result:

| Concentration of Tea Tree Oil | Zone of Inhibition(mm) |
|-------------------------------|------------------------|
| 3 drops | 11 |
| 5 drops | 14 |
| Control (No tea tree oil) | 0 |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Fig: Zone of Inhibition

pH: Estimating the pH of a gel plan is fundamental to guarantee its dependability, viability, and similarity with

the skin or mucous films.

Result:

| Sr.no | Parameter | Observation |
|-------|-----------|-------------|
| 1. | На | 5.55 |

Anti-Microbial activity: The sterile Petri dishes were filled up with Agar medium which was then immunized with the test living organisms (Staphylococcus aureus (ATCC-6538P). Four chamber or cups were made in the medium with the sterile cork borer in each plate. The formed polyherbal gel, standard circle and dissolvable control were ready. A uniform measure of 0.2 ml arrangement was added to the cup and incubated at 37C for 24 hrs. The well dispersion test was acted in sets of three and antimicrobial action was communicated as the mean of inhibition diameter in width (mm). The outcomes

were then correlated with the standard like Doxycycline, Minocycline and Antibiotic medication. From the outcome it was seen that there was no microbial growth noticed and it showed great zone of restraint however lesser when contrasted with standard.

Result:

The Mean Inhibition Zone Diameter after 24 hours of incubation of gram-positive S. Aureus is found to be 15 mm.

Fig: Diameter of Zone of Inhibition (mm²)

Anti-Inflammatory Activity

Egg albumin denaturation was used as a protein to measure the in vitro anti-inflammatory activity. Using the following formula, the percentage inhibition of protein denaturation was determined from the control: Percentage of inhibition = $100 \times (Abs_{control} - Abs_{test} / Abs$

control)

where, Abs = Absorbance

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

1. Anti – Inflammatory Activity by Protein Denaturation:

| Concentrations | % Inhibition of Diclofenac | %Inhibition of Gel Formulation |
|----------------|----------------------------|--------------------------------|
| μg/ml | Sodium | |
| 10 | 53.29% | 52.99% |
| 50 | 55.61% | 53.77% |
| 100 | 58.89% | 54.46% |

Result and Discussion

| Sr.No. | Parameter | Observation |
|--------|------------------------------|--|
| 1. | Physical Appearance | |
| | a) Color | warm yellow |
| | b) Odor | Invigorating smell with herbal freshness |
| | c) Texture | Smooth and light-weight |
| 2. | Spreadability | 6.4 cm |
| 3. | Irritancy | Non-irritant |
| 4. | Solubility | Soluble in water and partially soluble in ethanol. |
| 5. | Homogeneity | Uniformly homogenized |
| 6. | Grittiness | No grittiness |
| 7. | Swelling Index | 57.14% |
| 8. | Viscosity | 0.384 Poise |
| 9. | Ph | 5.55 |
| 10. | Anti- microbial activity | 15 mm (Mean inhibition zone diameter) |
| 11. | Zone of Inhibition | 5 drops of tea tree oil were found to be effective |
| 12. | Anti – Inflammatory activity | 53.74% protein denaturation |

CONCLUSIONS

Our current task involves creating an anti-inflammatory gel that uses tea tree oil, marula oil, ginger, turmeric and other ingredients to treat hidradenitis suppurativa. Thus, it contains an herbal substance without any adverse effects.

Thus, it can be concluded that a herbal gel with minimal side effects can provide the necessary amount to treat Hidradenitis Suppurativa.

KNOWLEDGE AND AWARENESS REGARDING MENSTRUAL HYGIENE AMONG MEN IN THE KANGRA DISTRICT OF HIMACHAL PRADESH, A COMPARATIVE STUDY

Rohit Nadda¹

¹Junior Resident, Department of Community Medicine, DRPGMC Kangra Himachal Pradesh, India

ABSTRACT

Introduction: Menstrual hygiene is a critical yet often overlooked aspect of women's health, particularly in rural areas where cultural taboos and limited education prevail. In patriarchal societies like India, men play a significant role in decision-making regarding women's health, yet their awareness of menstrual hygiene remains inadequate. This study aims to bridge this gap by assessing the awareness of menstrual hygiene among married and unmarried men aged 18-35 in selected rural areas of Himachal Pradesh. Objective: This study aims to assess and compare the knowledge and perceptions of menstrual hygiene among married and unmarried men in rural areas of Himachal Pradesh, India. Material and Methods: The study utilized an unmatched casecontrol design, involving 268 participants from selected villages in Nagrota Bagwan and Shahpur health blocks of Kangra district. Married men were considered as the case group, while unmarried men served as the comparator group. Data were collected through interviews, and statistical analysis was conducted to compare demographic characteristics, education, occupation, socioeconomic status, and knowledge about menstrual hygiene between the two groups. Results: Significant differences were observed between married and unmarried men regarding their awareness and knowledge of menstrual hygiene. Married men exhibited higher levels of awareness, possibly influenced by factors such as age, education, and exposure to household activities with female family members. Conclusion: The study underscores the need for targeted educational interventions focusing on unmarried men to promote positive attitudes and behaviors towards menstrual health. Implementing comprehensive educational programs, encouraging community dialogues, and integrating menstrual hygiene education into existing health services are essential steps toward improving women's reproductive and sexual health outcomes in rural regions.

KEYWORDS: Menstrual hygiene, Awareness, Men, Rural areas, Himachal Pradesh.

INTRODUCTION

WHO defined health as the state of complete physical, mental, and social well-being and not merely an absence of disease or infirmity, but it includes ability to lead socially and economically productive life. Being a man or women has a significant impact on health, as a result of both biological as well as gender related differences.

Menstruation is normal and healthy part of life in most of women. On an average a women usually menstruated for about 7 years during her lifetime. 1 Menstruation is considered unclean and dirty in many societies. Taboos, myths and restrictions associated with menstruation leave a negative impact on women life. Ignorance and inadequate menstrual hygiene leads to increased vulnerability to reproductive tract infections and even infertility in long term. Overall the menstrual hygiene has become important and neglected area affecting women health. As per NFHS-4, 84% of rural women use a hygienic method (sanitary napkins) of menstrual protection, compared with 90% of urban women. It shows major improvement focusing menstrual health.2 Menstrual hygiene remains a critical yet often overlooked aspect of women's health, particularly in rural areas where cultural taboos and limited access to education prevail. In patriarchal societies like India, men play a significant role in decision-making regarding women's health and wellbeing, yet their awareness of menstrual hygiene remains inadequate. This study aims to bridge this gap by assessing the

awareness of menstrual hygiene among married and unmarried men aged 18-35 in selected rural areas of Himachal Pradesh. By understanding the knowledge and perceptions of men regarding menstrual hygiene, this research seeks to inform targeted interventions and educational programs aimed at promoting positive attitudes and behaviors towards menstrual health, ultimately improving women's reproductive and sexual health outcomes in the region.

MATERIAL AND METHODS

The study was an unmatched case and control design where married men were considered as a case group and unmarried men as a comparator group. This study was carried out in selected villages of Nagrota Bagwan and Shahpur health blocks. From each health block a list of villages was obtained and 30 cluster were selected from each block. A village was considered as a cluster. The requisite sample size (married and unmarried men) was divided by number of clusters and same number of participants were recruited from each cluster. In a case, if requisite number of study participants could not be met from selected cluster, then sample size per cluster was met from adjoining village. The total of 268 participants involved in the study including 134 married men as case and 134 unmarried men as control. Ethical clearance for the study was obtained from Institutional Ethics Committee of Dr Rajendra Prasad Government Medical College Kangra at Tanda, Himachal Pradesh India [Registration No: IEC/24/2021]. Participation of

the subjects in the study was voluntary and written informed consents were obtained from all the participants.

RESULTS

The study regarding awareness of menstrual hygiene was conducted in two blocks of Kangra district. A total of 268 participants were interviewed in the study. The findings of the study are presented below.

The table-1 is showing demographic characteristics of respondents. The type of family among cases, majority (57.5%) belongs to joint family whereas among controls, the majority (65.0%) belongs to nuclear with statistically significant difference (P=0.000).

The majority among both groups (cases as well as controls) belongs to the OBC category with statistically significant difference. The statistical indifference was observed for religious association, as all the respondents in the case group while 97.0% respondents in control group practise Hindu religion. (Table:1)

| Characteristics | Case n=134, (%) | Control n=134, (%) | P value | | | |
|------------------|-----------------|--------------------|---------|--|--|--|
| | Type of family | | | | | |
| Joint | 77 (57.5) | 35 (26.0) | 0.000 | | | |
| Nuclear | 47 (35.1) | 87 (65.0) | 0.000 | | | |
| Three generation | 10 (7.5) | 12 (9.0) | 0.824 | | | |

| Hindu | 134 (100) | 130 (97.0) | 0.122 | | | |
| Sikh | 0 (0.0) | 4 (3.0) | 0.122 | | | |

Table-1 showing demographic characteristics of men from rural areas of Himachal Pradesh

The table-2 describes the study participants according to their education status. The table displays that the graduates were more 58 (43.3%) in cases and 59 (44.0%) in control group while none were illiterate in both cases as well as control group. The intermediate educational level was observed in 37 (27.6%) among cases and 59 (44.0%) among the comparator group which was statistically significant (P=0.007)

The part B of table-2 describes participants according to their self-reported occupation status. The majority (40.3%) among case group were businessman/ shop owners followed by skilled workers (26.1%). Among controls the majority (47.8%) were unemployed followed by skilled workers (22.4%). The differences across these occupations were observed to be statistically significant (P=0.000)

| Characteristics | Case n=134, (%) | Control n=134, (%) | P value |

The table-3 describes the study participants according to their socioeconomic status. Higher proportion of participants

belongs to middle class in case group (43.2%) and control group (52.2%) with no statistically significant differences.

| Characteristics | Case n=134, (%) | Control n=134, (%) | P value |
|--------------------|-----------------|--------------------|---------|
| Upper class | 8 (5.97) | 3 (2.2) | 0.216 |
| Upper middle class | 40 (29.8) | 25 (18.6) | 0.045 |
| Middle class | 58 (43.2) | 70 (52.2) | 0.178 |
| Lower middle class | 26 (19.4) | 33 (24.6) | 0.376 |
| Lower class | 2 (1.4) | 3 (2.2) | 1.000 |

The Table-3 is showing the socioeconomic status of participants in rural areas of Himachal Pradesh

The table-4 describes the study participant's social interaction with their sisters. The 66.4% among cases and 68.6% among controls were having sisters as their siblings only and rest of the participants were having none. 58 (65.1%) among cases and 66 (71.7%) among the comparator group were having one sister each only. Out of them, 7.86% among cases and 18.4% among

controls were educated from same school as their sisters. Both cases and controls group did not observe any statistically significant difference with respect to their interaction with sisters

| Characteristics | Case n=89, (%) | Control n=92, (%) | P value |
|---|----------------|-------------------|---------|
| Participants having 1 sibling sister | 58 (65.1) | 66 (71.7) | 0.423 |
| Participants having 2 sibling sisters | 24 (26.9) | 23 (25.0) | 0.865 |
| Participants having 3 sibling sisters | 6 (6.74) | 3 (3.26) | 0.324 |
| Participants having 4 sibling sisters | 1 (1.12) | 0 (0.0.) | 0.491 |
| Participants who were educated from same school in which his sister is studying | 51 (57.3) | 64 (69.5) | 0.092 |
| Participants who were in same class in which his sister is studying | 7 (7.86) | 16 (17.3) | 0.073 |
| Participants who play with his sister indoors | 78 (87.6) | 79 (85.8) | 0.872 |
| Participants who play with his sister outdoors | 75 (84.2) | 77 (83.69) | 1.000 |
| Participants who help his sister in doing school homework | 69 (77.5) | 75 (81.5) | 0.581 |
| Participants who help the sister in doing household activities | 74 (83.1) | 80 (86.9) | 0.534 |
| Participants who are helped by their sister for school homework | 73 (82.0) | 78 (84.7) | 0.691 |

The Table-4 is showing the social interaction of married and unmarried men with their sisters in selected rural areas of **Himachal Pradesh**

The table-5 describes the knowledge about women menstrual hygiene among study participants. All the participants in case group and 76.1% in control group are aware of menstrual hygiene and its health impacts (P<0.001).

All the participants in case group and 82.0% in control group knows that sanitary pads should be used during menstruation (P<0.001). Significant higher proportion of participants in case group reported that cloth can be reused during the menstruation (31.3% vs 8.2%, <0.001).

About 60.0% of the participants in case group and 25.0% in control group believe that sanitary pads should be disposed by pit burning or dumping in pit with statistically significant difference (P<0.001).

Majority of participants (36.5% vs 0.7%, <0.001) in case group reported that sexual activity should not be done during menstruation. (Tabl

The table-5 describes knowledge about women menstrual hygiene among married and unmarried men in selected rural areas of Himachal Pradesh

DISCUSSION

In pregnancy, women face greater risks, both because of physiological differences and gender inequities. Marriage is a partnership and women have a right to health but protecting that right often depends on a partner's support.3 Worldwide, only a few studies have been conducted to explore men awareness regarding menstrual hygiene among women. Most studies on awareness regarding menstrual health have been rightfully conducted on women subjects. The present study was aimed to measure the difference in awareness between married and unmarried men of 18-35 years of age towards menstrual hygiene among women in selected rural areas of a district in Himachal Pradesh. It is community-based unmatched case control study in which 268 participants- 134 cases (married participants) and 134 controls (unmarried participants) were recruited for assessment.

In present study among married participants majority belonged to joint family while among unmarried participants majority (64.9%) belonged to nuclear family. A hospital based crosssectional study was done by Narang H. et al⁴ at Lady Hardinge Medical College, New Delhi among 232 married participants. In this study as well, most (60.3%) of married participants were living in joint families. J. Suresh and P. Balram⁵ conducted a community based cross- sectional study among 385 married men in rural areas of Maharashtra in which majority (60.8%) of married participants belonged to nuclear families and 39.2% belonged to joint families. Char A. et al⁶ conducted a study in

which 51.6% of unmarried participants living innuclear families and 48.4% living in joint families.

India is a patriarchal society where men have greater power in decision-making. Women do not generally share information about menstruation with men. Most men do not know about the normal physiology of menstruation, such as the menstrual cycle. However, men are responsible for decision-making regarding facilities and services needed by women, including access to toilets and the availability of sanitary napkins, and women empowerment (education, occupation). In present study among married men, all (100.0%) were aware of menstrual hygiene and have knowledge about normal menstrual cycle. Among unmarried men, 76.1% were aware of menstrual hygiene and only 45.5% correctly know about normal menstrual cycle. Verma P. et al⁷ conducted a community based cross-sectional study among 6431 married men in urban areas of Uttar Pradesh. In this study the one-fifth of the men have the correct information about pregnancy risk during the menstrual cycle while the remaining four-fifth of them do not have the accurate information about this concept. Kothari B.8 conducted a community based crosssectional study among 45 married men in rural areas of Jaipur, Rajasthan. In this study the married men considered menstruation essential to make a woman complete but only about half (51.5%) of them correlate it with the process of conception. In the past few years, a growing body of research and practice-based knowledge has identified the key components of comprehensive menstrual

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

hygiene programming. However, there is little documented on how to effectively engage men in menstrual hygiene interventions. There is need of programs that also focus on boys and men regarding importance of menstrual hygiene.

There were significant differences in knowledge and perception among married and unmarried men regarding women reproductive and sexual health. Most of the married men were older, belongs to joint families and have higher education status in contrast to unmarried men. The difference in education status is due to the age differences among unmarried (mean age: 24 years) and married men (mean age: 32.4 years). The married men are more aware about menstrual hygiene as compared to unmarried men. The main reason could be the experience the married individuals have after being married as they are more aware of women problems and requirements as compared to unmarried men. Engagement for household activities with their sister along with high level of literacy explain the reason for high level of awareness among married and unmarried men. It is a good sign of high level of knowledge among men as they will be the future spouses and play an expectedly positive role in women health.

CONCLUSION

The article discusses a community-based study conducted in rural areas of a district in Himachal Pradesh, India, aiming to assess the awareness of married and unmarried men aged 18-35 regarding menstrual hygiene among women. It compares the knowledge and perceptions of menstrual hygiene between married and unmarried men, highlighting significant differences in awareness levels. Married men showed higher awareness compared to unmarried men, attributed to factors such as age, education, and exposure to household activities with female family members. The study underscores the need for programs focusing on educating men, particularly unmarried ones, about menstrual hygiene to promote women's reproductive and sexual health. Overall, it emphasizes the importance of engaging men in understanding and supporting menstrual hygiene practices for improved women's health outcomes.

Implementing the comprehensive educational programs targeting specially unmarried men in rural areas of Himachal Pradesh to increase awareness about menstrual hygiene. Encourage open community dialogues to challenge traditional gender norms and integrate menstrual hygiene education into existing health services. Launch media campaigns to disseminate accurate information and develop targeted interventions specifically tailored to unmarried men to address their lower awareness levels. These initiatives will contribute to promoting positive attitudes towards menstrual hygiene, ultimately improving women's reproductive and sexual health outcomes in the region.

ABSTRACT

This study aimed to formulate and evaluate herbal face wash containing coffee powder as a key ingredient. The formulation included ethanolic extracts of coffee powder, along with other herbal extracts and active ingredients known for their skin benefits. The face wash was prepared using a hot extraction method with a water condenser. Methyl paraben and sodium lauryl sulphate were added as preservatives and surfactants, respectively, to enhance stability and cleansing properties. Glycerin was included for its moisturizing effect, and rose oil was added for fragrance. The physical characteristics, pH, stability, microbiological safety, skin compatibility, and efficacy of the herbal face wash were evaluated through various tests. The results demonstrated that the face wash exhibited desirable physical characteristics, including color, odor, and texture. The pH was within the acceptable range for skincare products, ensuring compatibility with the skin's natural pH. Stability testing revealed no significant changes in appearance, odor, or texture over time under various storage conditions. Microbiological testing confirmed the safety of the product for consumer use. Skin compatibility tests showed no adverse reactions or sensitivities, indicating the face wash's suitability for different skin types. Efficacy testing demonstrated effective cleansing and moisturizing properties, with positive consumer feedback regarding fragrance and overall satisfaction. Overall, the formulated herbal face wash containing coffee powder offers a promising skincare solution with potential benefits for skin health and hygiene.

KEYWORDS: Herbal face wash, Coffee, Turmeric, Orange, Lemon, Aloevera, Antioxidant etc.

INTRODUCTION

A herbal face wash is a skincare product formulated with natural ingredients derived from plants, herbs, and botanical extracts. It is designed to cleanse the skin gently while providing additional benefits such as moisturizing, soothing, and rejuvenating properties. Herbal face washes are typically free from harsh chemicals, sulfates, parabens, and artificial fragrances, making them suitable for all skin types, including sensitive skin. These products offer a natural alternative to conventional face washes, utilizing the power of herbal ingredients to promote healthy and radiant skin.

Face wash refers to products that clean the face without drying it out. "Cleanser" is another name for face wash. Face wash has been determined to be suitable for all skin types. Face wash is particularly effective in removing dirt, oil, and moisture from dry skin. Face washes and cleansers are both used to remove grime, oil, and pollution from your face.

A cleanser removes excess oil, makeup, and filth from the skin. These are contaminants that are oil soluble. They can also be removed with a face wash, though this may not be completely successful. Ordinary soaps can dehydrate facial skin, which is quite fragile. Face wash is a gentle cleaner that gets the job done. Without causing irritation to the skin As a result, the skin seems youthful and active.

The objective of a face wash could be to provide cleansing, antiwrinkle, anti-acne, moisturising, and skin fairness. Skin whitening products are thought to affect the synthesis and metabolism of melanin in the skin by suppressing melanin production in melanocytes and thereby reducing the amount of melanin present. Coffee powder ,turmeric, aloe Vera, and glycerol are examples of agents that suppress melanin synthesis. The Indian herbal drug industry is considered to be one of the oldest systems of medical care in the world. Its roots can be traced back to ancient India, where the use of herbs form medicinal purposes was mentioned in the Vedas, an ancient religious text. Ayurveda and Unani, two ancient healing methods, utilized herbs and natural products to address various health conditions. Despite being perceived as a recent trend by Western medical practitioners, plant extracts are still commonly used in most prescribed medicines today. The

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

global community now recognizes the benefits of this traditional form of medicine, resulting in a significant rise in demand for Indian herbal drugs. This sector has experienced an annual growth rate of nearly thirty percent, with a surge in demand for herbal cures, skincare products, and cosmetics. This surge in demand for natural products has been observed in recent years. The skin is a vital and extensive organ of the body, and it plays a significant role in defining human personality, especially the skin on the face, which is sensitive and often considered are preservative parameter.

The condition of an individual's skin can also be an indicator of their overall health. The composition of the skin includes various materials such as carbohydrates, amino acids, and lipids. Cosmetics have been developed to address various skin concerns, such as reducing wrinkles, fighting acne, and controlling oil secretion. These products aim to improve the appearance and texture of the skin, leading to a more youthful and healthierlooking complexion. However, it is essential to choose cosmetics that are safe and effective, as some products may contain harmful chemicals that can damage the skin in the long. Face wash refers to products that clean the face without drying it out. "Cleanser" is another name for face wash. Face wash has been determined to be suitable for all skin types. The objective of a face wash could be to provide cleansing, anti-wrinkle, anti-acne, moisturising, and skin fairness.

Properties of Herbal Face wash

- 1. **Natural Ingredients:** Formulated with herbal extracts, plant oils, and botanicals known for their skincare benefits, such as aloe vera, green tea, chamomile, and neem. Avoid synthetic fragrances, parabens, sulfates, and other harsh chemicals.
- 2. **Gentle Cleansing:** Provides effective cleansing without stripping the skin of its natural oils or causing irritation. Gently removes dirt, oil, and impurities from the skin's surface without disrupting the skin barrier.
- 3. **Moisturizing and Hydrating:** Contains ingredients that hydrate and replenish the skin, such as glycerine, coconut oil, and hyaluronic acid. Helps to maintain the skin's moisture balance and prevent dryness or dehydration.
- 4. **Soothing and Calming:** Includes ingredients with antiinflammatory properties to soothe and calm irritated or sensitive skin. Helps to reduce redness, inflammation, and discomfort.
- 5. **Antibacterial and Antimicrobial:** Incorporates natural ingredients with antibacterial and antimicrobial properties,

- such as tea tree oil, neem, and turmeric. Helps to combat acne-causing bacteria and prevent breakouts.
- 6. Exfoliation: Contains gentle exfoliating agents, such as fruit enzymes or finely ground herbs, to remove dead skin cells and unclog pores. Promotes cell turnover and reveals smoother, brighter skin.

Advantages of Herbal Face wash containing coffee powder

- 1. **Exfoliation:** Coffee powder contains fine particles that act as a gentle exfoliant, helping to remove dead skin cells, dirt, and impurities from the skin's surface. Regular exfoliation can promote cell turnover, leaving the skin looking brighter, smoother, and more radiant.
- 2. **Antioxidant Protection:** Coffee powder is rich in antioxidants, such as chlorogenic acid and caffeine, which help neutralize free radicals and protect the skin from oxidative damage caused by environmental stressors like UV radiation and pollution. Antioxidants can help reduce the signs of aging, including wrinkles, fine lines, and hyperpigmentation.
- 3. **Anti-inflammatory Properties:** Coffee contains antiinflammatory compounds that can help reduce redness, inflammation, and irritation in the skin. This makes it beneficial for calming sensitive or inflamed skin conditions like acne, eczema, and rosacea.
- 4. **Improved Circulation:** The caffeine in coffee powder has vasoconstrictive properties, which can help improve blood circulation when applied topically to the skin. Enhanced blood flow can promote a healthy complexion and contribute to a more youthful appearance.
- 5. **Reduction of Puffiness:** Caffeine has diuretic properties that can help reduce swelling and puffiness, particularly around the eyes. Using a herbal face wash containing coffee powder may help minimize under-eye bags and dark circles, leaving the skin looking more refreshed and rejuvenated.
- 6. **Oil Control:** Coffee powder can help absorb excess oil and sebum from the skin's surface, making it beneficial for individuals with oily or acne-prone skin. By regulating oil production, coffee powder can help prevent clogged pores and breakouts.

MATERIAL AND METHODS

Collection and Authentication of Plant

Seeds of the plant were collected in large quantities from Amolak Botanical garden Kada, Beed, Maharashtra. The botanical identification and authentication of the plant material were conducted by Dr. Sayyad I.G., Head of the Department of Botany at Gandhi College, Kada, Ashti, Beed, Maharashtra, India.

Materials

In the formulation of herbal face wash, various materials are carefully selected to formulate a product that effectively cleanses, nourishes, and revitalizes the skin. Here's an introduction to some key materials commonly found in herbal face wash formulations.

Kingdom: PlantaeClade: Tracheophytes

• Clade: Angiosperms

• Clade: Monocots

Order: AsparagalesFamily: Asphodelaceae

Subfamily: Asphodeloideae

Genus: AloeSpecies: A. vera

• Binomial name : Aloe vera(L.) Burm.f.

• Synonyms : Aloe barbadensis Mill

Uses:

- Aloe vera can be applied topically to soothe skin irritations such as sunburns, insect bites.
- It can also be used as a natural moisturizer to hydrate and nourish the skin.

3. Turmeric

- Kingdom:Plantae
- Clade:Tracheophytes
- Clade:Angiosperms Clade:Monocots
- Clade:Commelinids
- Order:Zingiberales
- Family:Zingiberaceae
- Genus:Curcuma
- Species:C. longa
- Binomial name.Curcuma longaL.

Uses:

- Turmeric powder is utilized for its anti-inflammatory and antioxidant properties.
- It is used in traditional medicine and skincare products.

4. Lemon

• Kingdom: Plantae

Clade: Tracheophytes

Clade: Angiosperms

• Clade: Eudicots

Clade: Rosids

• Order: Sapindales

• Family: Rutaceae

Genus: Citrus

• Species: C. × limon

• Binomial name: Citrus × limon(L.) Osbeck

• Synonyms : Citrus × aurantium subsp. bergamia (Risso & Poit.) Engl.

• Citrus aurantium subsp. bergamia (Risso) Wight & Arn.

Uses:

- It plays a crucial role in supporting the immune system.
- It reduces the risk of infections such as the common cold and flu.

5. Orange Powder

Kingdom: Plantae

• Clade: Tracheophytes

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Clade: Angiosperms
Clade: Eudicots
Clade: Rosids
Order: Sapindales
Family: Rutaceae
Genus: Citrus
Species: C. Sinensis

• Binomial name: Citrus × sinensis(L.) Osbeck, Sweet

oranges

• Synonyms : Citrus × sinenesis (L.) Osbeck

Uses:

 Orange powder can be used as a natural food colouring or flavouring agent in culinary recipes. • It can also be incorporated into skincare products for its antioxidant properties and refreshing citrus scent.

PROCEDURE

The ground and roast coffee are treated with hot water and high pressure for extraction of the water-soluble material. The soluble material is then cooled, sometimes centrifuged, concentrated through heating and then dried through spray vaporizing, or freeze drying. The turmeric and extract of aloe Vera was prepared by hot extraction method using water condenser. The herbal plants including the orange Extract was added and small quantity of lemon juice added to it required quantity of methyl paraben dissolve in distilled water by heating on water bath. Then the solution should be cooled and required amount of sodium lauryl sulphate should be added.

Glycerine was added to the beaker and small quantity of glycerol was too added as it acts as Humectants. Then add rose oil drop wise for fragrance and made the gel with required quantity of water by adding Gum tragacanth.

Table 01: Formulation Ingredients with quantity

| Sr. No. | Name of Ingredients | Quantity | Uses |
|---------|------------------------|----------|---------------------------------|
| 1 | Aloe Vera | 2 ml | Soothing agent & Anti-bacterial |
| 2 | Coffee powder | 3 gm | Anti-acne |
| 3 | Turmeric | 0.5 gm | Anti-inflammatory |
| 4 | Lemon juice | 1 ml | Skin brightening |
| 5 | Orange powder | 1.5 gm | Anti-oxidant |
| 6 | Methyl paraben | 1.5 gm | Preservative |
| 7 | Glycerin | 0.5 ml | Humectant |
| 8 | Rose oil | 2-3 drop | Fragrance |
| 9 | Sodium lauryl sulphate | 2 gm | Foaming agent, surfactant |
| 10 | Glycerol | 0.6 ml | Moisturizer |
| 11 | Distilled water | Q.S | Vehicle |
| 12 | Gum tragacanth | 1.5 gm | Gelling agent, Thickner |

EVALUATION TEST OF HERBAL FACE WASH

1. Physical evaluation test

- Colour: The colour of the formulation was checked out against white background and was dark brown.
- **Odour:** the odour of face wash was checked manually & was rose fragrance due to rose oil.

2. Rheological Characteristic

We were studied for some physical properties colour, clogging, viscosity change and sensation test.

3. Determination of pH

The pH of formulations was determined using digital pH meter. One gram of face wash was dissolved in 100 ml of demineralised and stored for two hours. The measurements of pH of each formulation were done in triplicate. Instrument was calibrated before use with standard buffer solutions at pH 4.

4. Spread Ability

Spread ability determination of formulations was determined by an apparatus suggested by Mortimer et al. which was fabricated in laboratory & used for study. The apparatus consists of a wooden block with a fixed glass slide with one end tied to weight pan rolled on the pulley which was in horizontal level with fixed slide. An excess of whitening face wash sample 1.5 gm was placed between two glass slide and a 1000 gm weight was placed on slide for 5 minutes to between compress the sample to uniform thickness weight (60gm) was added to the pan. It was calculated using the formula; S= ml/t Where, s= spread ability in gm.cm/sec m= weight tied to upper slide 1= length of glass slide t= time in seconds Length of glass slide was 11.2 cm and weight tied to upper slide was (60gm) throughout the experiment.

5. Wash Ability

The product was applied on hand and was observed under running water.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

6. Stability Study

The instant whitening face wash were also subjected to the following condition of temperature and relative humidity during stability ages fit sediment temperature.

7. Grittiness

The product was checked for the presence of any gritty particles by applying it on the skin.

RESULT

The prepared formulation was evaluated for the various evaluation parameters. The result of evaluation was displayed in following Table 02:

Table 02: Formulation Table

| Sr. No | Ingredients | F1 (50 ml) | F2 (50 ml) |
|--------|---------------|------------|------------|
| 1. | Coffee powder | 3 gm | 3 gm |
| 2. | Aloe vera | 2 ml | 2 ml |
| 3. | Turmeric | 0.6 gm | 0.5 gm |
| 4. | Lemon Juice | 1 ml | 2 ml |
| 5. | Orange powder | 1.5 gm | 1 gm |

PHYSICAL PARAMETERS

The prepared acne face wash was evaluated for its clogging, colour, odour, consistency.

Table 03: Formulation and Evaluation of Physical Parameters.

| Formulation Code | Odour | Colour | Consistency | Clogging |
|---|----------|------------|-------------|----------|
| Marketed Himalaya aloe Vera face wash | pleasant | brown | Semi solid | Absent |
| F1 | pleasant | Dark brown | Semi solid | Absent |
| F2 | pleasant | Dark brown | Semi solid | Absent |

pH:

The pH of formulation was found to be satisfactory, and in the range of 5.5 to 5.8 which is near to the skin PH, in turn indicates

that the prepared formulation can be compactable with skin. Here comparing other formulations F3 formulation found to have better pH.

Table 04: Developed Formulation pH

| Formulation Code | pН |
|------------------|-----|
| Marketed | 5.5 |
| F1 | 5.3 |
| F2 | 5.2 |

WASHABILITY & SPREADABILITY

Prepared formulations were easily washed with water.

| Formulation Code | Washability | Spredability |
|------------------|-------------|--------------|
| Marketed | Good | Good |
| F1 | Good | Good |
| F2 | Good | Good |

SKIN IRRITABILITY TEST

Small amount of the formulation was applied on the skin and kept for few minutes and found to show no redness, oedema, inflammation and irritation during the studies. This formulation is safe to use for skin.

| Formulation Code | Irritability Test | Irritability Test |
|------------------|-------------------|-------------------|
| | 1hrs | 3hrs |
| Marketed | No | No |
| F1 | No | No |
| F2 | No | No |

CONCLUSION

In conclusion, the formulation of a herbal face wash containing coffee powder offers a promising skincare solution with multiple benefits for the skin. By harnessing the natural properties of coffee powder along with other herbal extracts, essential oils, and moisturizing agents, this face wash can effectively cleanse, exfoliate, and rejuvenate the skin while providing a refreshing and invigorating experience.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The exfoliating properties of coffee powder help remove dead skin cells and impurities, promoting cell turnover and revealing a brighter, smoother complexion. Additionally, the antioxidant-rich nature of coffee powder helps protect the skin from environmental damage, reducing the signs of aging and promoting overall skin health.

Furthermore, the anti-inflammatory and oil-controlling properties of coffee powder make it suitable for individuals with sensitive, oily, or acne-prone skin, helping to soothe irritation, reduce redness, and minimize breakouts.

By formulating herbal face wash with coffee powder, manufacturers can offer consumers a natural and effective skincare product that is gentle, safe, and environmentally friendly. With proper use and regular application, this face wash has the potential to improve the appearance and health of the skin, leaving it feeling refreshed, revitalized, and rejuvenated.

The formulation of a herbal face wash containing coffee powder offers a natural and effective solution for skincare. Coffee powder acts as an exfoliant, gently removing dead skin cells and impurities to reveal a brighter, smoother complexion. Its antioxidant properties help protect the skin from environmental damage, reducing signs of aging and promoting overall skin health. Additionally, coffee powder's anti-inflammatory and oil-controlling properties make it suitable for sensitive, oily, or acneprone skin, soothing irritation and minimizing breakouts. By combining coffee powder with other herbal extracts and moisturizing agents, this face wash provides a refreshing and invigorating experience, leaving the skin feeling refreshed, revitalized, and rejuvenated. Overall, a herbal face wash containing coffee powder offers a holistic approach to skincare, promoting a healthier and more radiant complexion naturally.

INFLUENCE OF OVERLOADED SCHOOL EVENTS ON STUDENTS' WELL-BEING

Mary Joy P. Cruz, RChE

College of Education, Nueva Ecija University of Science and Technology, Cabanatuan City, Philippines

Article DOI: https://doi.org/10.36713/epra16952

DOI No: 10.36713/epra16952

ABSTRACT

This study investigates the impact of overloaded school events on the overall well-being of students, focusing on physical, mental, and emotional aspects. With schools offering a myriad of extracurricular activities, clubs, and events, concerns arise about their potential effects on students' health and academic performance. Using a descriptive research method, 51 students from the College of Education at Nueva Ecija University of Science and Technology were surveyed during the 2nd Semester of the 2023-2024 school year. The study found that overloaded school events negatively affect students' physical health by causing exhaustion, disrupted sleep patterns, and increased stress. Mentally, students reported feelings of stress, frustration, and decreased confidence, impacting their academic focus and motivation. Emotionally, students experienced increased stress, emotional tension, and challenges in maintaining emotional resilience. Academically, students faced difficulties in focusing, missed lessons leading to educational gaps, and challenges in completing assignments and exams. The study highlights the need for schools to create a balanced learning environment that prioritizes students' well-being alongside academic achievement. Recommendations include revising school event calendars, implementing stress reduction programs, promoting self-care and balance, and fostering collaboration among stakeholders to address these issues effectively. Continuous evaluation of interventions is crucial to ensuring positive outcomes for students' well-being and academic success.

Subject Areas: Higher Education, Sociology

KEYWORDS: overloaded school events, students' well-being

1. INTRODUCTION

Schools strive to provide a well-rounded educational experience, often extending beyond academics with extracurricular activities, clubs, and special events. While these enrichments offer valuable opportunities for learning and development, concerns arise regarding their potential impact on students' well-being. According to Lombardi et.al. (2019), the effect of school climate on engagement is mediated by well-being experience. It has been established that school climate has a significant role in enhancing student participation in extracurricular activities, but its impact only becomes noticeable when it has the potential to change students' overall experiences with wellbeing.

This study aims to assess the influence of overloaded school events on students' overall well-being particularly on physical, mental and emotional aspects. An overscheduling issue may result from increased demands outside of primary academic studies. Students may experience stress, anxiety, and tiredness as a result of balancing their studies, extracurricular activities, social obligations, and personal downtime. The present study investigates the possible adverse effects of excessive school events, focusing on how they could impact the physical, emotional, and mental health of kids. The results can help parents, teachers, and administrators create a more balanced learning environment that supports students' health as well as their academic performance.

1.1 Purpose of the study

The purpose of this study to determine the influence of excessive school extracurricular activities and events on the overall wellbeing of students. Specifically, this study answered the specific questions below:

1.2 Research questions

1) How may the profile of the students be described in terms of:

- a) gender;
- b) age: and
- b) year level?
- 2) What are the effects of overloaded school activities and events on
 - a) Physical;
 - b) Mental; and
 - c) Emotional well-being of the students?
- 3) What are the effects of overloaded school activities and events on academic performance of the students?

2. METHODOLOGY

The study used descriptive research method. According to Calderon (2012), descriptive method or statistical research describes data and characteristics about a population or phenomenon being studied. This study used purposive sampling technique to constitute 51 students enrolled at the College of Education, Nueva Ecija University of Science and Technology for the 2nd Semester of School Year 2023-2024.

To gather information, the researcher formulated the survey questionnaire. To establish the validity of the survey questionnaire, the researcher consulted three experts to evaluate the content. Afterwards, a pilot testing was conducted to ensure the reliability of the questionnaires, resulting to a Cronbach alpha of 0.85 indicating the instrument appropriate for administration. The research questionnaire was distributed and administered via online survey system (Google Forms).

To statistically analyze the data, the researchers utilized the Frequency Count, Percentage and Weighted Mean. To measure the respondents' views or attitudes toward the questions in the questionnaires, Likert Scale was used.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

3. RESULTS AND DISCUSSION

Table 1. Gender of the respondents

| GENDER | FREQUENCY | PERCENTAGE (%) | |
|--------|-----------|----------------|--|
| Male | 8 | 15.69 | |
| Female | 43 | 84.31 | |
| Total | 51 | 100 | |

Table 1 shows the distribution of the respondents based on gender, with a total sample size of 51 respondents. There are 8 males in the sample, constituting approximately 15.69% while there are 43 females comprising approximately 84.31% of the total.

From this data, it is evident that females are more represented in the sample compared to males, with a significant majority of respondents being female.

Table 2. Age of the respondents

| AGE | FREQUENCY | PERCENTAGE (%) | |
|-------|-----------|----------------|--|
| 18 | 7 | 13.73 | |
| 19 | 15 | 15 29.41 | |
| 20 | 15 | 29.41 | |
| 21 | 9 | 17.65 | |
| 22 | 5 | 9.80 | |
| Total | 51 | 100 | |

Table 2 represents the distribution of the respondents based on their ages, with a total sample size of 51 respondents. There are 7 students aged 18, constituting approximately 13.73% of the total, 15 students aged 19 and 20, comprising approximately 29.41%, 9 students aged 21, making up approximately 17.65%. and 5

students aged 22 in the sample, constituting approximately 9.80% of the total. The largest groups are students aged 19 and 20, followed by those aged 21 and 18 respectively. The smallest group consists of individuals aged 22.

Table 3. Year level of the respondents

| YEAR LEVEL | FREQUENCY | PERCENTAGE (%) | |
|----------------------|-----------|----------------|--|
| 1 st year | 15 | 29.41 | |
| 2 nd year | 7 | 13.73 | |
| 3 rd year | 29 | 56.86 | |
| Total | 51 | 100 | |

Table 3 represents the distribution of the respondents based on their year levels in school, with a total sample size of 51 respondents. There are 15 students in first year level, constituting approximately 29.41% of the total. While 7 students in their second year, comprising approximately 13.73%, and 29 students

in their third year, making up approximately 56.86% of the total. The majority of respondents are in their third year, followed by those in their first year. The smallest group consists of students in their second year.

Table 4. Influence on Physical well-being

| No. | Item | Weighted Average | Description |
|-----|---|---------------------|-------------|
| 1 | Frequent disruptions in classes due to overloaded school events lead me to experience physical exhaustion or fatigue. | 3.04 | Agree |
| 2 | The irregular class schedules caused by school events affect my ability to maintain a consistent sleep pattern. | 2.92 | Agree |
| 3 | Disruptions in classes due to school events result in increased stress, anxiety, and reduced free time for relaxation and self-care which affects my physical health. | 2.94 | Agree |
| 4 | Disruptions in classes make it difficult for me to maintain a healthy lifestyle, such as regular exercise and nutrition. | 2.78 | Agree |
| 5 | I often experience physical discomfort or health issues as a result of frequent class disruptions for school events. | 2.75 | Agree |

Legend: 4.00-3.26 – Strongly Agree; 3.25–2.51- Agree; 2.50-1.76- Disagree; 1.75-1.00 – Strongly Disagree

For table 4, the weighted averages suggest that the respondents generally agree with the statements, indicating that overloaded school events have a noticeable impact on their physical well-being, including exhaustion, disrupted sleep patterns, increased stress, difficulty maintaining a healthy lifestyle, and physical discomfort or health issues. Previous research found an association between stress and physical health (Peer, Hillman, Van Hoet 2015). The higher perceived stress a student had, the worse their physical health seemed to be (Koch, A., 2018).

Overloaded school events and disruption of classes can lead to higher levels of stress among students. When students are faced with a barrage of school activities, such as exams, projects, extracurricular commitments, and events, they may feel overwhelmed and anxious about meeting deadlines and managing their responsibilities effectively. Similarly, disruptions to classes, such as unexpected cancellations, changes in schedules, or transitions to online learning, can add to the uncertainty and stress experienced by students. The heightened stress experienced by

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

students due to overloaded school events and disrupted classes can have adverse effects on their physical health. Chronic stress has been linked to a variety of physical health problems, including headaches, fatigue, muscle tension, gastrointestinal issues, weakened immune function, and sleep disturbances. Additionally, prolonged exposure to stress can increase the risk of developing more serious health conditions over time.

Table 5. Influence on Mental well-being

| No. | Item | Weighted | Description |
|-----|--|----------|-------------|
| | | Average | |
| 1 | Frequent disruptions in classes due to overloaded school events cause me stress and anxiety. | 2.76 | Agree |
| 2 | Disruptions in classes lead to feelings of frustration and overwhelm, impacting my mental health. | 2.90 | Agree |
| 3 | Lack of continuity in learning due to frequent class disruptions affects my confidence and motivation. | 2.92 | Agree |
| 4 | Disruptions in classes make it challenging for me to maintain a positive mindset and mental resilience. | 2.96 | Agree |
| 5 | I develop negative attitudes towards school or specific activities as I perceive disruptions as interfering with my academic progress or personal interests. | 2.67 | Agree |

Legend: 4.00-3.26 - Strongly Agree; 3.25-2.51- Agree; 2.50-1.76- Disagree; 1.75-1.00 - Strongly Disagree

Table 5 shows that the respondents generally agree that overloaded school events have a significant psychological impact, including stress, anxiety, frustration, reduced confidence and motivation, challenges in maintaining a positive mindset, and development of negative attitudes towards school or activities. Studies have shown sympathetic nervous system activation due to stressors in people's lives (Conley & Lehman, 2012). Mental Health has also been shown to decrease when stress is overwhelming in the lives of college students (Murff, 2005). Mental health is affected heavily by stress, and stress has shown the ability to prevent students from being successful in their respective educational goals (Murff, 2005). For example, poor mental health is associated with poor academic performance

(Murff, 2005). When school events and activities become overloaded, they can significantly impact students' mental health by increasing stress levels. This heightened stress can, in turn, hinder students' ability to succeed in their academic pursuits. As students juggle numerous commitments and responsibilities, their mental well-being becomes increasingly compromised, making it difficult for them to focus, retain information, and perform at their best. Therefore, it is essential for schools to prioritize students' mental health by ensuring that the schedule of events and activities is manageable and supportive of their overall well-being. By reducing stressors associated with overloaded schedules, schools can better facilitate students' success in achieving their educational goals.

Table 6. Influence on Emotional well-being

| No. | Item | Weighted Average | Description |
|-----|--|---------------------|-------------|
| 1 | Frequent disruptions in classes due to overloaded school events lead me to experience to emotional stress and tension. | 2.75 | Agree |
| 2 | Disruptions in classes cause feelings of frustration, irritability, or mood swings, impacting my emotional health. | 2.86 | Agree |
| 3 | Lack of continuity in learning due to frequent class disruptions affects my self-esteem and emotional stability. | 2.90 | Agree |
| 4 | Disruptions in classes make it challenging for me to maintain emotional resilience and well-being. | 2.98 | Agree |
| 5 | I often experience emotional distress or a fear of falling behind as a result of frequent class disruptions for school events. | 3.04 | Agree |

Legend: 4.00-3.26 – Strongly Agree; 3.25–2.51- Agree; 2.50-1.76- Disagree; 1.75-1.00 – Strongly Disagree

Table 6 shows that the respondents generally agree that overloaded school events have a significant emotional impact, including emotional stress, frustration, irritability, mood swings, challenges in maintaining emotional resilience and well-being, and emotional distress or fear of falling behind. Regulating emotional experiences in the classroom to achieve one's goals is likely important for learning (Boekaerts, 2011). This may involve decreasing negative emotions which impede learning but also increasing positive emotions to enhance learning (Martin & Ochsner, 2016). Indeed, negative emotions such as anxiety, anger, and shame can negatively impact academic performance, and positive emotions such as enjoyment and pride can positively impact performance (Forsblom et al., 2022; Pekrun et al., 2017).

Navigating the demands of school work often adds to the emotional experiences students face in the classroom. Regulating emotional experiences to achieve academic goals becomes crucial amidst the overwhelming workload students encounter. Managing emotions can significantly influence learning outcomes. This involves not only reducing negative emotions like anxiety, anger, and shame, which can hinder academic performance, but also fostering positive emotions such as enjoyment and pride to boost performance. Balancing these emotional states is essential for students to effectively handle the challenges of overloaded schoolwork while maintaining their academic performance.

Table 7. Influence on Academic Performance

| No. | Item | Weighted Average | Description |
|-----|--|---------------------|----------------|
| 1 | The inconsistency of class schedules due to school events makes it difficult for me to focus and concentrate on my studies. | 3.16 | Agree |
| 2 | Disruptions in classes lead to missed lessons and educational gaps, affecting my understanding of the subject matter. | 3.27 | Strongly agree |
| 3 | Lack of continuity in learning due to frequent class disruptions impacts my grades and academic achievements. | 2.98 | Agree |
| 4 | Disruptions in classes make it challenging for me to complete assignments and prepare for exams effectively. | 3.16 | Agree |
| 5 | I have sought support or tutoring to address academic concerns related to class disruptions. | 2.80 | Agree |
| 6 | The irregular class schedules due to school events make it challenging for me to maintain consistent study habits. | 2.96 | Agree |
| 7 | I perform poorly on assessments or exams due to gaps in my learning caused by missed or interrupted classes. | 3.06 | Agree |
| 8 | I find it difficult to catch up on missed class material when classes are disrupted for school events. | 3.10 | Agree |
| 9 | I find it hard to finish all my pending school works due to time constraint. | 3.37 | Strongly agree |
| 10 | Interruptions can break the flow of learning, making it challenging for me to fully comprehend complex topics or follow the sequence of lessons. | 3.27 | Strongly agree |

Legend: 4.00-3.26 - Strongly Agree; 3.25-2.51- Agree; 2.50-1.76- Disagree; 1.75-1.00 - Strongly Disagree

Table 7 shows that the respondents generally agree that overloaded school events have a significant impact on students' academic performance, including difficulties in focusing, missed lessons leading to educational gaps, impacts on grades and academic achievements, challenges in completing assignments and preparing for exams, seeking academic support, maintaining consistent study habits, catching up on missed material, and understanding complex topics due to interruptions. When students are continually bombarded with information and academic tasks by their teachers, the law of diminishing returns gradually set in (Eduwem, J. D., & Ezeonwumelu, V. U., 2020). Academic burnout, loss of motivation and attention related problems are some of the possible downside of exposing the learners to enormous academic tasks; beyond what they can realistically surmount (Yang HJ, 2014, Ogunmakin AO & Akomolate MJ., 2013). Overloaded school events and disruption of classes often result in an influx of academic tasks, such as assignments, projects, exams, and extracurricular commitments. When students are bombarded with excessive academic demands, they may feel overwhelmed and stretched beyond their capacity to manage effectively. This can lead to feelings of academic burnout, characterized by exhaustion, cynicism, and a reduced sense of accomplishment. Exposure to an excessive workload can also contribute to a loss of motivation among students. When students perceive academic tasks as unmanageable or unrealistic, they may become disengaged and demotivated to invest effort in their studies. This loss of motivation can manifest as procrastination, disinterest in learning, and a decline in academic performance.

4. CONCLUSION AND RECOMMENDATIONS

Schools can take proactive steps to mitigate the negative effects of overloaded school events on students' well-being and create a supportive and nurturing learning environment.

1. One approach is to carefully review and potentially modify the school event calendar to ensure a more balanced distribution of events throughout the academic year. This could involve spacing out events more evenly, reducing the frequency of events during particularly stressful periods, such as exam weeks, or eliminating fewer essential events to prioritize students' well-being. Schools should take proactive measures to foster a caring and supportive learning environment and lessen the detrimental effects that excessive school events have on

- students' wellbeing. To guarantee a more evenly distributed schedule of events throughout the academic year, one strategy is to thoroughly examine and possibly alter the school event calendar. To promote students' well-being, this could entail spreading out activities more evenly, minimizing the number of events during very stressful times (like test weeks), or removing fewer necessary events.
- 2. Programs for stress reduction that give students coping skills and resilience-building training can be implemented in schools. Time management seminars, mindfulness practices, relaxation exercises, and counseling services are a few examples of these programs. Schools can lessen the detrimental effects of hectic schedules by giving students the tools they need to manage stress.
- 3. In order to promote a society that values self-care and balance, schools are essential. Educators and administrators have the power to start conversations on mental health and wellbeing, to foster honest dialogue about the experiences and worries of their students, and to provide a good example for healthy behavior. Furthermore, teaching students about self-care techniques through extracurricular activities or the school curriculum might help them develop lasting self-care habits.
- 4. In order to create and carry out successful interventions, stakeholders, including educators, parents, students, and mental health professionals, must collaborate. Schools can make sure that interventions are designed to fit the unique requirements of their student body and are supported by the larger school community by including all pertinent parties in the decision-making process.
 - It is crucial to continuously evaluate the effectiveness of interventions in addressing the negative effects of overloaded school events on students' well-being.
- 5. Schools can collect feedback from students, teachers, and parents, monitor changes in well-being indicators over time, and make adjustments to interventions as needed. This iterative process allows schools to refine their approach and maximize positive outcomes for students.

STATUS AND CHALLENGES OF RANKED SECONDARY TEACHER APPLICANTS BASED ON HERZBERG'S MOTIVATION THEORY AS PRECEDENCE TO EMPLOYMENT IN DEP ED SCHOOLS DIVISION OFFICE OF LAGUNA

Keizel Camille Mhardie P. Salvador

Master in Public Administration, Laguna State Polytechnic University, Sta. Cruz, Laguna, Philippines

Article DOI: https://doi.org/10.36713/epra17014

DOI No: 10.36713/epra17014

ABSTRACT

The study investigates the status and challenges perceived by ranked secondary teacher applicants based on Herzberg's Motivation Theory as precedence to employment in the Department of Education, Schools Division Office of Laguna that affects their organizational commitment. In addition, this study aims to provide valuable insights that can inform the improvement on recruitment, selection, and placement of personnel. Descriptive research was the method used in the study; it is conducted among the 100 selected respondents who are secondary teacher applicants from the three consecutive ranking periods; the data was gathered using a self-administered survey and were analyzed with the use of statistical instruments such as mean, standard deviation, and Pearson r correlation. Result shows that the demographic profile of ranked secondary teacher applicants has no significant relationship with organizational commitment except for educational attainment. Furthermore, the study concludes that the issues and challenges in DepEd as perceived by the respondents, motivation factors, and hygiene factors of ranked secondary teacher applicants are significantly correlated with organizational commitment. Thus, it is recommended that the HRMPSB may reconsider the recalibration of score in ranking for Teacher I where in applicants who have previously undergone evaluation process will not be required to go through it again but only update their points if they wish so. The Personnel Unit may also establish a database of RQA applicants including the times they applied, and history volunteer works that may be use as consideration in their deployment. Addressing human resource distribution in DepEd and DBM should provide requisite support for increasing Plantilla positions.

KEYWORDS: Teacher Applicant, Human Resource Management, Recruitment Process, Herzberg's Two-Factor Theory of Motivation-Hygiene, Organizational Commitment

INTRODUCTION

Public school teachers are vital and invaluable to our society because they are the one responsible for shaping the minds and values of the young generations. They are considered as one of the noblest professions. Teachers are a vital component of the foundation that develops a child's abilities and thinking. The quality of teachers largely depends on the procedure of recruitment and selection during their hiring process. The journey of an aspiring teacher does not end after finishing a four-year degree program and passing the Licensure Exam for Teachers (LET). They need to undergo recruitment and selection process to be part of the Registry of Qualified Applicants (RQA) which will be the basis of deployment. However, after the intricate process of recruitment, having a spot in the RQA still does not assure them to get a teaching item in DepEd (DO 007, s.2023).

Having this scenario, this study seeks to find out the status and challenges in DepEd Schools Division of Laguna as perceived by the ranked teacher applicants that are on the shelf even after applying more than one time based on Herzberg's Two-Factor

Theory of Motivation-Hygiene and how it affects their organizational commitment. This study was anchored on Herzberg's Two-Factor Theory, which examines aspects that inspire professionals to complete high-quality work (Herzberg, 1968).

MATERIALS AND METHOD

Descriptive research was the method used in the researcher's study. It deals with gathering of data, putting theories to the test, and responding to inquiries about the current state of the research subject. Another characteristic of descriptive research is that data is gathered through observation, questionnaires, interviews, or direct questioning of those in the scenario (Kabir, 2016).

The study is conducted among the 100 selected respondents who are secondary teacher applicants from the three consecutive ranking periods (SY 2020-2021, SY 2021-2022 and SY 2023-2024). Purposive sampling is the method used by the researcher in the study. It is a type of sampling technique that chooses units

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

based on the qualities required in the sample (Nikolopoulou, 2022).

The researcher uses a self-administered questionnaire as the main tool for data gathering. Correlation matrix was done to test the causal relationship between Status and Challenges, Herzberg's motivation-hygiene theory, demographic profile, and the organizational commitment of on the shelf secondary teacher applicants in DepEd Schools Division Office of Laguna using Pearson r.

RESULTS AND DISCUSSION

Demographic Profile of Respondents in Terms of Age

The demographic profile of the respondents according to age shows that there are 23 respondents under 20-29 years old, which is 23%. 69 respondents fall under 30-39 years old, which is 69%. 8 respondents are under 40-49 years old, which is 8%. While there are no respondents or 0% under 50 years old and above.

Demographic Profile of Respondents in Terms of Gender

In terms of gender, majority are female with 79 respondents or 79%. 20 respondents or 20% are male. While there is 1 respondent or 1% under prefer not to say.

Demographic Profile of Respondents in Terms of Civil Status

In accordance with civil status, results show that the majority are single with 70 respondents which is 70% while 29 respondents or 29% are married. 1 respondent, which is 1% is widowed no respondents or 0% fall under separated and prefer not to say.

Demographic Profile of Respondents in Terms of Educational Attainment

In terms of educational attainment, the result shows that the majority of the sample finished a bachelor's degree which is 58 respondents or 58%. 37 respondents are with units in master's degree which is 37%. Respondents with master's degree have a frequency of 5 or 5% while there are no respondents or 0% with units in doctorate degree and doctorate degree.

Demographic Profile of Respondents in Terms of Subject Specialization

The demographic profile of the respondents in terms of subject specialization shows that there are 22 respondents or 22% under Araling Panlipunan, 8 respondents under English which is 8%. For Filipino, there are 12 respondents or 12%. MAPEH has 9 respondents or 9%. Mathematics has 13 respondents or 13%. Science has 14 respondents or 14% and TLE has 21 respondents or 21% while Values Education has the least which is 1 respondent or 1%.

Table 1. Level of Issues and Challenges in Terms of Recruitment Process

| Table 1. Level of issues and Chanenges in Terms of Rectulument Trocess | | | | | |
|--|------|------|--------------------|--|--|
| Indicator | M | SD | Interpretation | | |
| 1. The qualification standard for Teacher I in terms of education, | 3.17 | 0.88 | Challenging | | |
| eligibility, experience, and training is fair. | | | | | |
| 2. The assessment process of teacher applicants' competencies through | 3.57 | 0.71 | Highly Challenging | | |
| demonstration teaching is vital in the recruitment process. | | | | | |
| 3. The conduct of interviews assessing teacher applicants' potential, | 3.49 | 0.69 | Highly Challenging | | |
| characteristics or traits and fitness is vital in the recruitment process. | | | | | |
| 4. Open and transparent ranking of teachers are important in the | 3.66 | 0.76 | Highly Challenging | | |
| recruitment process. | | | | | |
| 5. The one (1) school year validity of the Registry of Qualified | 2.28 | 0.98 | Less Challenging | | |
| Applicants (RQA) is enough time to deploy the applicants in the | | | | | |
| registry. | | | | | |
| Overall for Recruitment Process | 3.23 | 0.58 | Challenging | | |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly challenging, 2.50–3.24=Challenging, 1.75–2.49=Less challenging, 1.00–1.74=Not challenging.

Table 1 presents the Level of Issues and Challenges in DepEd as perceived by the respondents in terms of Recruitment Process. From the statements, "Open and transparent ranking of teachers are important in the recruitment process." gets the highest mean score of 3.66, SD=0.76 and was remarked as "Highly Challenging". Conversely, "The one (1) school year validity of the Registry of Qualified Applicants (RQA) is enough time to

deploy the applicants in the registry." received the lowest mean score of 2.28, SD=0.98 and was remarked as "Less Challenging". Overall, the Level of Issues and Challenges in DepEd as perceived by the respondents in Terms of Recruitment Process attained a weighted mean score of 3.23, SD=0.58 and was remarked as Challenging among the respondents.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2. Level of Issues and Challenges in Terms of Organizational Culture

| | Indicator | M | SD | Interpretation |
|----|---|------|------|--------------------|
| 1. | DepEd upholds equal employment opportunity policy. | 2.95 | 0.95 | Challenging |
| 2. | There is no discrimination in the selection of employees. | 3.12 | 0.81 | Challenging |
| 3. | DepEd prohibits nepotic appointments or those made in favor of a relative of the appointing or recommending authority. | 2.96 | 0.88 | Challenging |
| 4. | DepEd demonstrates an ethical system of moral principles during the recruitment process. | 3.29 | 0.76 | Highly Challenging |
| 5. | DepEd does not tolerate "padrino system", a common Filipino culture where in someone in a position will intervene, support, or do favors for someone else because they are relative of friends. | 2.76 | 0.89 | Challenging |
| | Overall for Organizational Culture | 3.02 | 0.72 | Challenging |

Note. N=100. The mean is interpreted as follows: 3.25-4.00= Highly challenging, 2.50-3.24= Challenging, 1.75-2.49= Less challenging, 1.00-1.74= Not challenging.

Table 2 shows the Level of Issues and Challenges in DepEd as perceived by the respondents in terms of Organizational Culture. From the statements, "DepEd demonstrates an ethical system of moral principles during the recruitment process." gets the highest mean score of 3.29, SD=0.76 and was remarked as "Highly Challenging". While "DepEd does not tolerate "padrino system", a common Filipino culture where in someone in a position will

intervene, support, or do favors for someone else because they are relative of friends." received the lowest mean score of 2.76, SD=0.89 and was remarked as "Challenging". Overall, the level of Issues and Challenges in DepEd as perceived by the respondents in terms of Organizational Culture gathered a weighted mean score of 3.02, SD=0.72 and was Challenging among the respondents.

Table 3. Level of Issues and Challenges in Terms of Plantilla Item

| | Tuble of Devel of Debute und Changes in Terms of I | | | |
|----|--|------|------|--------------------|
| | Indicator | М | SD | Interpretation |
| 1. | The Department of Budget and Management (DBM) has made resources available for | 2.92 | 0.87 | Challenging |
| | the establishment of new teacher items. | | | |
| 2. | Current Plantilla items for teaching personnel is enough to deploy the applicants listed | 2.41 | 1.02 | Less Challenging |
| | in the RQA | | | |
| 3. | Increasing Plantilla positions to rationalized staffing patterns in DepEd attracts teacher | 3.34 | 0.78 | Highly Challenging |
| | applicants to pursue their teaching career. | | | |
| 4. | Plantilla items due to natural vacancies address human resource shortage in DepEd. | 3.09 | 0.68 | Challenging |
| 5. | Newly created Plantilla items help to aid teacher shortage in DepEd. | 3.34 | 0.76 | Highly Challenging |
| | Overall for Plantilla Item | 3.02 | 0.63 | Challenging |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly challenging, 2.50–3.24=Challenging, 1.75–2.49=Less challenging, 1.00–1.74=Not challenging.

Table 3 shows the Level of Issues and Challenges in DepEd as perceived by the respondents in terms of Plantilla items. From the statements, "Increasing Plantilla positions to rationalized staffing patterns in DepEd attracts teacher applicants to pursue their teaching career." and "Newly created Plantilla items help to aid teacher shortage in DepEd." yielded the highest mean score, 3.34, SD=0.78 and 3.34, SD=0.76 respectively and was remarked as

"Highly Challenging". On the other hand, "Current Plantilla items for teaching personnel is enough to deploy the applicants listed in the RQA." received the lowest mean score of 2.41, SD=1.02 and was remarked "Less Challenging". Overall, the level of Issues and Challenges in DepEd as perceived by the respondents in terms of Plantilla items got a weighted mean score of 3.02, SD=0.63 and was Challenging among the respondents.

Table 4. Level of Motivation Factors in Terms of Achievement

| | Indicator | M | SD | Interpretation |
|----|---|------|------|-------------------|
| 1. | Completing a difficult task on time provides a different level of fulfillment to teachers. | 3.27 | 0.81 | Highly Motivating |
| 2. | Teaching using collaborative practices is more innovative. | 3.58 | 0.75 | Highly Motivating |
| 3. | Seeing positive results of one's work keeps teachers motivated. | 3.68 | 0.72 | Highly Motivating |
| 4. | Teaching quality impacts students' achievement. | 3.70 | 0.72 | Highly Motivating |
| 5. | Classroom observation is a powerful tool for improving teachers' strategies and management. | 3.42 | 0.88 | Highly Motivating |
| | Overall for Achievement | 3.53 | 0.69 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00=Highly motivating, 2.50-3.24=Motivating, 1.75-2.49=Less motivating, 1.00-1.74=Not motivating.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 4 presents the Level of Motivation Factors in terms of Achievement. From the statement, "Teaching quality impacts students' achievement." yielded the highest mean score of 3.70, SD=0.72 and was remarked as "Highly Motivating". Conversely, "Completing a difficult task on time provides a different level of

fulfillment to teachers." received the lowest mean score of 3.27, SD=0.81 and was remarked "Highly Motivating". Overall, the level of Motivation Factors in terms of Achievement attained a got mean score of 3.53, SD=0.69 and was Highly Motivating among the respondents.

Table 5. Level of Motivation Factors in Terms of Recognition

| | Indicator | M | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | DepEd has a well-defined system of performance incentives that encourage | 3.16 | 0.76 | Motivating |
| | teachers to do well. | | | |
| 2. | Rewards and recognition are the primary motivators for teachers. | 3.23 | 0.79 | Motivating |
| 3. | Rewards and recognitions given to teachers are relevant compared to the | 3.19 | 0.84 | Motivating |
| | work they do. | | | |
| 4. | Rewards and recognitions are significant in shaping teachers' behavior and | 3.31 | 0.81 | Highly Motivating |
| | commitment to work. | | | |
| 5. | DepEd has a good established way of giving incentives and recognitions to | 3.15 | 0.74 | Motivating |
| | motivate its teachers. | | | |
| | Overall for Recognition | 3.21 | 0.66 | Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00=Highly motivating, 2.50-3.24=Motivating, 1.75-2.49=Less motivating, 1.00-1.74=Not motivating.

Table 5 shows the Level of Motivation Factors in terms of Recognition. From the statement, "Rewards and recognitions are significant in shaping teachers' behavior and commitment to work." got the highest mean score of 3.31, SD=0.81 and was remarked as "Highly Motivating". While "DepEd has a good

established way of giving incentives and recognitions to motivate its teachers." received the lowest mean score of 3.15, SD=0.74 and was remarked "Motivating". Overall, the level of Motivation Factors in terms of Recognition gathered a weighted mean score of 3.21, SD=0.66 and was "Motivating" among the respondents.

Table 6. Level of Motivation Factors in Terms of The Work Itself

| | Indicator | M | SD | Interpretation |
|----|--|------|------|--------------------------|
| 1. | Assigning duties and tasks consider teachers' interests and capabilities, thus | 3.33 | 0.77 | Highly Motivating |
| | creating competence-based trust in the teachers. | | | |
| 2. | Teachers play a very important role in society. | 3.73 | 0.68 | Highly Motivating |
| 3. | Teaching provides an opportunity to serve others. | 3.68 | 0.72 | Highly Motivating |
| 4. | Being a public school teacher is an interesting job. | 3.53 | 0.72 | Highly Motivating |
| 5. | Educating pupils to be lifelong students bears some relation to a better | 3.70 | 0.69 | Highly Motivating |
| | comprehension of how teaching affects learning. | | | |
| | Overall for The Work Itself | 3.59 | 0.65 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00=Highly motivating, 2.50-3.24=Motivating, 1.75-2.49=Less motivating, 1.00-1.74=Not motivating.

Table 6 shows the Level of Motivation Factors in terms of The Work Itself. From the statement, "Teachers play a very important role in society." gathered the highest mean score of 3.73, SD=0.68 and was remarked as "Highly Motivating". While "Assigning duties and tasks consider teachers' interests and capabilities, thus

creating competence-based trust in the teachers." received the lowest mean score of 3.33, SD=0.77) and was remarked "Highly Motivating". Overall, the level of Motivation Factors in terms of The Work Itself got a weighted mean score of 3.59, SD=0.65 and was Highly Motivating among the respondents.

Table 7. Level of Motivation Factors in Terms of Responsibility

| | Indicator | M | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | Teachers attend multiple trainings and seminars in a given year. | 3.43 | 0.69 | Highly Motivating |
| 2. | Teachers exchange information and expertise among teachers and others. | 3.59 | 0.68 | Highly Motivating |
| 3. | Teachers are accountable for students' performance. | 3.29 | 0.74 | Highly Motivating |
| 4. | Teachers find ways to have knowledge in light of recent advances. | 3.55 | 0.69 | Highly Motivating |
| 5. | Teacher shall continue studying to strengthen his competence, advance | 3.47 | 0.72 | Highly Motivating |
| | in his career, and increase his efficiency. | | | |
| | Overall for Responsibility | 3.47 | 0.63 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00= Highly motivating, 2.50-3.24= Motivating, 1.75-2.49= Less motivating, 1.00-1.74= Not motivating.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 7 presents the Level of Motivation Factors in terms of Responsibility. From the statement, "Teachers exchange information and expertise among teachers and others." got the highest mean score of 3.59, SD=0.68 and was remarked as "Highly Motivating". Conversely, "Teachers are accountable for

students' performance." received the lowest mean score of 3.29, SD=0.74 and was remarked "Highly Motivating". Overall, the level of Motivation Factors in terms of Responsibility gathered a weighted mean score of 3.47, SD=0.63 and was Highly Motivating among the respondents.

Table 8. Level of Motivation Factors in Terms of Advancement

| | Indicator | M | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | I do appreciate the way teachers are promoted. | 3.30 | 0.78 | Highly Motivating |
| 2. | The way promotions are given to teachers motivates me to work hard so that I can be hired. | 3.42 | 0.73 | Highly Motivating |
| 3. | DepEd has a good established way of promotion to motivate its teachers. | 3.22 | 0.75 | Motivating |
| 4. | Teachers must constantly adjust to the changes in the existing educational system to satisfy the needs and wants of students in the global market. | 3.52 | 0.70 | Highly Motivating |
| 5. | Improving teacher quality is a vital thing to student fulfillment. | 3.51 | 0.73 | Highly Motivating |
| | Overall for Advancement | 3.39 | 0.66 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly motivating, 2.50–3.24=Motivating, 1.75–2.49=Less motivating, 1.00–1.74=Not motivating.

Table 8 shows the Level of Motivation Factors in terms of Advancement. From the statement, "Teachers must constantly adjust to the changes in the existing educational system to satisfy the needs and wants of students in the global market." yielded the highest mean score of 3.52, SD=0.70 and was remarked as "Highly Motivating". While "DepEd has a good established way

of promotion to motivate its teachers." received the lowest mean score of 3.22, SD=0.75 and was remarked "Motivating". Overall, the level of Motivation Factors in terms of Advancement attained a weighted mean score of 3.39, SD=0.66 and was Highly Motivating among the respondents.

Table 9. Level of Motivation Factors in Terms of Growth

| | Indicator | М | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | Teaching provides opportunities for continuous learning. | 3.58 | 0.71 | Highly Motivating |
| 2. | Teaching will provide me with opportunities to grow professionally. | 3.62 | 0.72 | Highly Motivating |
| 3. | Teaching provides an opportunity to serve others. | 3.63 | 0.72 | Highly Motivating |
| 4. | DepEd prioritizes strengthening training and professional development of teachers. | 3.48 | 0.66 | Highly Motivating |
| 5. | Teachers receive support from DepEd for their professional growth. | 3.37 | 0.71 | Highly Motivating |
| - | Overall for Growth | 3.54 | 0.63 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly motivating, 2.50–3.24=Motivating, 1.75–2.49=Less motivating, 1.00–1.74=Not motivating.

Table 9 presents the Level of Motivation Factors in terms of Growth. From the statement, "Teaching provides an opportunity to serve others." got the highest mean score of 3.63, SD=0.72 and was remarked as "Highly Motivating". Conversely, "Teachers receive support from DepEd for their professional growth."

received the lowest mean score of 3.37, SD=0.71 and was remarked "Motivating". Overall, the level of Motivation Factors in terms of Growth gathered a weighted mean score of 3.54, SD=0.63 and was Highly Motivating among the respondents.

Table 10. Level of Hygiene Factors in Terms of Bureaucracy

| | Indicator | M | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | Teachers are given the authority to make decisions about their lessons instead of waiting for their superior to give them instructions. | 3.20 | 0.77 | Motivating |
| 2. | School supports and accepts ideas of new members of the school. | 3.36 | 0.70 | Highly Motivating |
| 3. | Teaching and non-teaching personnel are engaged in deciding about materials and resources. | 3.32 | 0.74 | Highly Motivating |
| 4. | School heads hold meetings to the involved personnel to address issues in order to enhance teachers' sense of professionalism and institutional belongingness. | 3.45 | 0.74 | Highly Motivating |
| 5. | Professional relationships that are helpful, cooperative, empowered, and transparent are characteristics of effective schools. | 3.51 | 0.73 | Highly Motivating |
| | Overall for Bureaucracy | 3.37 | 0.66 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00= Highly motivating, 2.50-3.24= Motivating, 1.75-2.49= Less motivating, 1.00-1.74= Not motivating.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 10 presents the Level of Hygiene Factors in terms of Bureaucracy. From the statement, "Professional relationships that are helpful, cooperative, empowered, and transparent are characteristics of effective schools." got the highest mean score of 3.51, SD=0.73 and was regarded as "Highly Motivating". While "Teachers are given the authority to make decisions about

their lessons instead of waiting for their superior to give them instructions." received the lowest mean score of 3.20, SD=0.77 and was regarded "Motivating". Overall, the level of Hygiene Factors in terms of Bureaucracy gathered a weighted mean score of 3.37, SD=0.66 and was Highly Motivating among the respondents.

Table 11. Level of Hygiene Factors in Terms of Relationships

| | Indicator | М | SD | Interpretation |
|----|---|------|------|-------------------|
| 1. | Teachers' schedules reflect frequent communication | 3.45 | 0.66 | Highly Motivating |
| | opportunities for co-teachers and staff. | | | |
| 2. | Teachers and school personnel spend time together outside the | 3.36 | 0.69 | Highly Motivating |
| | workplace to socialize with one another. | | | |
| 3. | Teachers and school personnel seek for the problem and find | 3.44 | 0.72 | Highly Motivating |
| | a solution rather than blaming others. | | | |
| 4. | 4. Teachers and school personnel are interdependent and value | | 0.66 | Highly Motivating |
| | each other. | | | |
| 5. | Schools create equal opportunities for the development and | 3.46 | 0.70 | Highly Motivating |
| | growth of their teachers. | | | |
| | Overall for Relationships | 3.44 | 0.62 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25-4.00= Highly motivating, 2.50-3.24= Motivating, 1.75-2.49= Less motivating, 1.00-1.74= Not motivating.

Table 11 presents the Level of Hygiene Factors in terms of Relationships. From the statement, "Teachers and school personnel are interdependent and value each other." received the highest mean score of 3.49, SD=0.66 and was regarded as "Highly Motivating". Conversely, "Teachers and school personnel spend time together outside the workplace to socialize

with one another." received the lowest mean score of 3.36, SD=0.69 and was regarded as "Highly Motivating". Overall, the level of Hygiene Factors in terms of Relationships received a weighted mean score of 3.44, SD=0.62 and was Highly Motivating among the respondents.

Table 12. Level of Hygiene Factors in Terms of Work Condition

| | Table 12. Level of Hygiene Factors in Terms of Work Condition | | | | | |
|----|---|------|------|-------------------|--|--|
| | Indicator | M | SD | Interpretation | | |
| 1. | School reflects a true sense of community. | 3.46 | 0.72 | Highly Motivating | | |
| 2. | Schools with a healthy environment, accomplish teamwork and everyone equally contributes to the success of students. | 3.57 | 0.71 | Highly Motivating | | |
| 3. | Commitment to the organization can be strengthened by making the school's structure more adaptable and fostering a collaborative culture. | 3.51 | 0.72 | Highly Motivating | | |
| 4. | Teachers exhibit more professional behaviors in a healthy school environment where there is cooperation and professional development. | 3.56 | 0.70 | Highly Motivating | | |
| 5. | Pupil and teacher ratio impacts teaching. | 3.58 | 0.71 | Highly Motivating | | |
| | Overall for Work Condition | 3.54 | 0.67 | Highly Motivating | | |

Note. N=100. The mean is interpreted as follows: 3.25-4.00=Highly motivating, 2.50-3.24=Motivating, 1.75-2.49=Less motivating, 1.00-1.74=Not motivating.

Table 12 presents the Level of Hygiene Factors in terms of Work Condition. From the statement, "Pupil and teacher ratio impacts teaching." received the highest mean score of 3.58, SD=0.71 and was regarded as "Highly Motivating". While "School reflects a true sense of community." received the lowest mean score of 3.46,

SD=0.72 and was regarded as "Highly Motivating". Overall, the level of Hygiene Factors in terms of Work Condition received a weighted mean score of 3.54, SD=0.67 and was Highly Motivating among the respondents.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 13: Level of Hygiene Factors in Terms of Status

| | Indicator | М | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | Employment status affects work performance. | 3.19 | 0.87 | Motivating |
| 2. | Teachers who feel respected and valued in their status tend to have a positive attitude towards their work. | 3.66 | 0.70 | Highly Motivating |
| 3. | Permanent teaching position attracts teacher applicants to pursue their teaching career. | 3.61 | 0.71 | Highly Motivating |
| 4. | Teacher applicants choose to enter public schools over private schools due to permanent positions. | 3.62 | 0.75 | Highly Motivating |
| 5. | Teachers are more likely to stay with the teaching profession for a long term because of the permanent status. | 3.57 | 0.74 | Highly Motivating |
| | Overall for Status | 3.53 | 0.66 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly motivating, 2.50–3.24=Motivating, 1.75–2.49=Less motivating, 1.00–1.74=Not motivating.

Table 13 presents the Level of Hygiene Factors in terms of Status. From the statement, "Teachers who feel respected and valued in their status tend to have a positive attitude towards their work." gathered the highest mean score of 3.66, SD=0.70 and was regarded as "Highly Motivating". While "Employment status affects work performance." received the lowest mean score of

3.19, SD=0.87 and was regarded as "Motivating". Overall, the level of Hygiene Factors in terms of Status gathered a weighted mean score of 3.53, SD=0.66 and was Highly Motivating among the respondents.

Table 14. Level of Hygiene Factors in Terms of Salary

| Tuble 14. Devel of Hygiene I detoil in Terms of Suidry | | | | |
|---|------|------|--------------------------|--|
| Indicator | M | SD | Interpretation | |
| 1. Salary is enough to cover a local cost of living. | 2.69 | 0.73 | Motivating | |
| 2. Teachers' salaries are enough to sustain family needs. | 2.59 | 0.73 | Motivating | |
| 3. Public school teachers are considered as well-waged workers. | 2.66 | 0.78 | Motivating | |
| 4. Teachers who earn higher wages tend to feel more motivated | 3.31 | 0.80 | Highly Motivating | |
| to give their best on doing their jobs. | | | | |
| 5. Job-seeking teachers consider salary when deciding to | 3.26 | 0.79 | Highly Motivating | |
| practice their profession. | | | | |
| Overall for Salary | 2.90 | 0.55 | Motivating | |
| | | | | |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly motivating, 2.50–3.24=Motivating, 1.75–2.49=Less motivating, 1.00–1.74=Not motivating.

Table 14 presents the Level of Hygiene Factors in terms of Salary. From the statement, "Teachers who earn higher wages tend to feel more motivated to give their best on doing their jobs." got the highest mean score of 3.31, SD=0.80 and was regarded as "Highly Motivating". While "Teachers' salaries are enough to

sustain family needs." received the lowest mean score of 2.59, SD=0.73 and was regarded as "Demotivating". Overall, the level of Hygiene Factors in terms of Salary got a weighted mean score of 2.90, SD=0.55 and was Demotivating among the respondents.

Table 15. Level of Hygiene Factors in Terms of Security

| | Indicator | M | SD | Interpretation |
|----|--|------|------|-------------------|
| 1. | Teaching in public school has job security. | 3.51 | 0.72 | Highly Motivating |
| 2. | 2. Teaching in public schools offers permanent positions. | | 0.77 | Highly Motivating |
| 3. | The attractiveness of the teaching profession depends on the terms of employment they are offered. | 3.37 | 0.72 | Highly Motivating |
| 4. | Tenure gives the teacher a sense of job security. | 3.40 | 0.67 | Highly Motivating |
| 5. | I decided to become a teacher because I am aware that there | 3.22 | 0.80 | Motivating |
| | would always be a need for educators. | | | |
| | Overall for Security | 3.40 | 0.64 | Highly Motivating |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly motivating, 2.50–3.24=Motivating, 1.75–2.49=Less motivating, 1.00–1.74=Not motivating.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 15 presents the Level of Hygiene Factors in terms of Security. From the statement, "Teaching in public school has job security." and "Teaching in public schools offers permanent positions." yielded the highest mean score of 3.51, SD=0.72 and 3.51, SD=0.77 respectively and was regarded as "Highly Motivating". Conversely, "I decided to become a teacher because

I am aware that there would always be a need for educators." received the lowest mean score of 3.22, SD=0.80 and was regarded as "Demotivating". Overall, the level of Hygiene Factors in terms of Security got a weighted mean score of 3.40, SD=0.64 and was Highly Motivating among the respondents.

Table 16. Level of Commitment to Organization in Terms of Affective Commitment

| Indicator | | | SD | Interpretation |
|---------------------------|---|------|------|----------------|
| DepEd | is a good organization to work with. | 3.33 | 0.70 | HC |
| 2. DepEd | motivates me to provide the best performance. | 3.34 | 0.71 | HC |
| 3. I will m | ake a great effort to help DepEd achieve its goals. | 3.53 | 0.69 | HC |
| 4. I am rea | dy to do any task that will be given to me in school. | 3.46 | 0.73 | HC |
| 5. I will pa | articipate in the school activities. | 3.56 | 0.69 | HC |
| | Overall for Affective Commitment | 3.44 | 0.64 | НС |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly committed (HC), 2.50–3.24=Committed (C), 1.75–2.49=Less committed (LC), 1.00–1.74=Not committed (NC).

Table 16 presents the Level of Commitment to Organization in terms of Affective Commitment. From the statement, "I will participate in the school activities." garnered the highest mean score of 3.56, SD=0.69 and was regarded as "Highly Committed". While "DepEd is a good organization to work with." received the

lowest mean score of 3.33, SD=0.70 and was regarded as "Highly Committed". Overall, the level of Commitment to Organization in terms of Affective Commitment got a weighted mean score of 3.44, SD=0.64 and was Highly Committed among the respondents.

Table 17. Level of Commitment to Organization in Terms of Normative Commitment

| Indicator | М | SD | Interpretation |
|--|-------------------------|------|------------------|
| 1. DepEd is the right organization for teachers. | 3.48 | 0.73 | Highly Committed |
| 2. I have the obligation to teach the Filipino you | th. 3.64 | 0.72 | Highly Committed |
| 3. I took the professional oath for teachers. | 3.63 | 0.75 | Highly Committed |
| 4. As a LET (Licensure Examination for Teacl | ner) passer, it is 3.50 | 0.76 | Highly Committed |
| just right to commit to a teaching career. | | | |
| 5. I have a sense of obligation to the education s | ector. 3.59 | 0.71 | Highly Committed |
| Overall for Normative Commitmen | at 3.57 | 0.68 | Highly Committed |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly committed, 2.50–3.24=Committed, 1.75–2.49=Less committed, 1.00–1.74=Not committed.

Table 17 presents the Level of Commitment to Organization in terms of Normative Commitment. From the statement, "I have the obligation to teach the Filipino youth." got the highest mean score of 3.64, SD=0.72 and was regarded as "Highly Committed". While "DepEd is the right organization for teachers." got the

lowest mean score of 3.48, SD=0.73 and was regarded "Highly Committed". Overall, the level of Commitment to Organization in terms of Normative Commitment got a weighted mean score of 3.57, SD=0.68 and was Highly Committed among the respondents.

Table 18. Level of Commitment to Organization in Terms of Continuance Commitment

| | Indicator | M | SD | Interpretation |
|----|---|------|------|------------------|
| 1. | I have already invested significant time and energy in my | 3.63 | 0.69 | Highly Committed |
| | application. | | | |
| 2. | A career shift will be costly. | 3.13 | 0.82 | Committed |
| 3. | I don't know any job aside from teaching. | 2.52 | 0.97 | Committed |
| 4. | Giving up would require me considerable personal sacrifice. | 2.98 | 0.89 | Committed |
| 5. | I would have to make too many changes and delays to my life | 2.98 | 0.85 | Committed |
| | if I gave up on my teaching career. | | | |
| | Overall for Continuance Commitment | 3.05 | 0.61 | Committed |

Note. N=100. The mean is interpreted as follows: 3.25–4.00=Highly committed, 2.50–3.24=Committed, 1.75–2.49=Less committed, 1.00–1.74=Not committed.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 18 presents the Level of Commitment to Organization in terms of Continuance Commitment. From the statement, "I have already invested significant time and energy in my application." got the highest mean score of 3.63, SD=0.69 and was regarded as "Highly Committed". While "I don't know any job aside from teaching." received the lowest mean score of 2.52, SD=0.97) and

was regarded as "Committed". Overall, the level of Commitment to Organization in terms of Continuance Commitment got a weighted mean score of 3.05, SD=0.61 and was Committed among the respondents.

Table 19. Relationships Among Five Profile Variables and Three Organizational Commitment Variables

| Profile variable | Organizational commitment variable | | | | |
|------------------------|------------------------------------|----------------------|------------------------|--|--|
| | Affective commitment | Normative commitment | Continuance commitment | | |
| Age | $r_s(98) =003$ | $r_s(98)=.076$ | $r_s(98)=.017$ | | |
| | p=.974 | p = .450 | p=.866 | | |
| Gender | F(1,97)=0.61 | $F(1,22.6)=1.61^{a}$ | F(1,97)=0.012 | | |
| | p=.438 | p=.218 | p=.913 | | |
| Civil status | F(1,97)=0.035 | F(1,97)=0.33 | F(1,97)=0.003 | | |
| | p=.853 | p=.565 | p=.954 | | |
| Educational attainment | $r_s(98)=.210^*$ | $r_s(98)=.270^{**}$ | $r_s(98)=.185$ | | |
| | p=.036 | p=.007 | p=.065 | | |
| Subject specialization | F(1,97)=0.398 | F(1,97)=0.473 | F(1,97)=1.42 | | |
| | p=.879 | p=.827 | p=.216 | | |

Note. Cell contains test statistics and its corresponding p value. For gender, one observation was excluded with "Prefer not to say" response. For civil status, one observation was excluded with "Prefer not to say" response. For subject specialization, one observation was excluded with "Values Education" response.

Table 19 reveals that Age, Gender, Civil Status, and Subject Specialization are not statistically significantly correlated with any of the Organizational Commitment variables with all F values not statistically significant at 0.05 level. Educational Attainment has statistically significant correlation with Affective Commitment, rs (98)=.210 and p=.036, Normative Commitment, rs (98)=.270, p=.007, and Continuance Commitment, rs (98)=.185, p=.065. Moreover, there appears to be significance because the p-values were below the significance alpha of 0.05. Referring to these results, the null hypothesis, which states that "There is no significant relationship between the demographic

profile of the respondents and the level of their organizational commitment," is partially accepted at the 0.05 level of significance except for Educational Attainment which has significant correlation with Organizational Commitment. Therefore, it is appropriate to partially reject the alternative hypothesis which implies that there is no significant difference between them. It means that there is no significant difference in Organizational Commitments of the ranked secondary teacher applicants when grouped according to profile except for Educational Attainment.

Table 20. Correlations Among Three Status and Challenges Variables and Three Organizational Commitment Variables

| Status and Challenges | Organizational commitment variable | | | |
|------------------------|------------------------------------|----------------------|------------------------|--|
| Variable | Affective commitment | Normative commitment | Continuance commitment | |
| Recruitment process | .684*** | .740*** | .419*** | |
| | moderate | high | moderate | |
| Organizational culture | .472*** | .354*** | .532*** | |
| | moderate | low | moderate | |
| Plantilla item | .523*** | .438*** | .465*** | |
| | moderate | moderate | moderate | |

Note. df=98. Cell contains Pearson r correlation coefficient and verbal interpretation of its strength.

The correlation is interpreted as follows: 0.80-1.00=Very strong, 0.60-0.79=Strong, 0.40-0.59=Moderate, 0.20-0.39=Weak, 0.00-0.19=Very weak

^aWelch's ANOVA was used due to violation of assumption of homogeneity of variance.

^{*}p<.05. **p<.01. ***p<.001.

^{*}*p*<.05. ***p*<.01. ****p*<.001.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 20 shows that all Status and Challenges in DepEd as perceived by the respondents' variables are statistically significantly correlated with all the Organizational Commitment variables with all p values less than 0.001. Recruitment Process and Affective Commitment have moderate correlation with each other, and this correlation is statistically significant, r=.684, p<.001. On the other hand, the Recruitment Process and Normative Commitment have a high correlation with each other, r=.740, p<.001. Finally, the Recruitment Process and Continuance Commitment have moderate correlation with each other, r=.419, p<.001. Organizational Culture and Affective Commitment are moderately correlated with each other, and this correlation is statistically significant, r=.472, p<.001. Organizational Culture and Normative Commitment have a low

correlation with each other, but this correlation is still statistically significant, r=.354, p<.001. Also, Organizational Culture and Continuance Commitment are moderately correlated with each other, and this correlation is statistically significant, r=.532, p<.001. Lastly, Plantilla item has moderate correlation with all the three Organizational Commitment and this correlation is statistically significant with r=.523, r=.438, and r=.465, at p<.001 respectively. According to these results, the null hypothesis, which states that "there is no significant relationship between the issues and challenges in DepEd as perceived by the respondents and the level of their organizational commitment," is partially rejected at the 0.05 level of significance. Hence, the alternative hypothesis, which shows that they have a significant relationship, should be partially accepted.

Table 21. Correlations Among Six Motivation Factors and Three Organizational Commitment Variables

| Motivation factors | Organizational commitment variable | | | | |
|--------------------|------------------------------------|------------|------------------------|--|--|
| | Affective | Normative | Continuance commitment | | |
| | commitment | commitment | | | |
| Achievement | .768*** | .827*** | .464*** | | |
| | high | high | moderate | | |
| Recognition | .686*** | .630*** | .476*** | | |
| | moderate | moderate | moderate | | |
| The work itself | .770*** | .861*** | .422*** | | |
| | high | high | moderate | | |
| Responsibility | $.79\overline{2}^{***}$ | .823*** | .823*** | | |
| | high | high | high | | |
| Advancement | .806*** | .772*** | .514*** | | |
| | high | high | moderate | | |
| Growth | .787*** | .835*** | .408*** | | |
| | high | high | moderate | | |

Note. df=98. Cell contains Pearson r correlation coefficient and verbal interpretation of its strength.

 $The\ correlation\ is\ interpreted\ as\ follows:\ 0.80\text{-}1.00\text{=}Very\ strong},\ 0.60\text{-}0.79\text{=}Strong},\ 0.40\text{-}0.59\text{=}Moderate},\ 0.20\text{-}0.39\text{=}Weak},\ 0.00\text{-}0.19\text{=}Very\ weak}$

The correlation coefficients in Table 21 indicate a moderate to strong positive association, ranging from 0.408 to 0.861. From these findings, we can assume that the null hypothesis "There is no significant relationship between the level of Motivation Factors of the respondents and their level of organizational

commitment" at 0.05 level of significance is partially rejected. Therefore, it is appropriate to partially accept the alternative hypothesis, which suggests that they have a significant relationship.

Table 22. Correlations Among Six Hygiene Factors and Three Organizational Commitment Variables

| Hygiene factors | | Organizational comm | itment variable |
|-----------------|----------------------|----------------------|------------------------|
| | Affective commitment | Normative commitment | Continuance commitment |
| Bureaucracy | .693*** | .681*** | .468*** |
| • | moderate | moderate | moderate |
| Relationships | .688*** | .718*** | .368*** |
| | moderate | high | low |
| Work conditions | .789*** | .843*** | .468*** |
| | high | high | moderate |
| Status | .779*** | .829*** | .375*** |
| | high | high | low |
| Salary | .462*** | .443*** | .399*** |
| • | moderate | moderate | low |
| Security | .789*** | .873*** | .445*** |

Note. df=98. Cell contains Pearson r correlation coefficient and verbal interpretation of its strength.

^{*}*p*<.05. ***p*<.01. ****p*<.001.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

*p<.05. **p<.01. ***p<.001.

The correlation is interpreted as follows: 0.80-1.00=Very strong, 0.60-0.79=Strong, 0.40-0.59=Moderate, 0.20-0.39=Weak, 0.00-0.19=Very weak

Table 22 shows a weak to strong positive relationship with correlation coefficients ranging from 0.368 to 0.873. From these findings, we can assume that the null hypothesis "There is no significant relationship between the level of Hygiene Factors of the respondents and their level of organizational commitment." is partially rejected at 0.05 level of significance. Hence, the alternative hypothesis which shows that there is a significant relationship between them should be partially accepted.

CONCLUSION AND RECOMMENDATION Conclusion

Considering the study's findings, the hypothesis which implies that the demographic profile of the respondents and the level of their organizational commitment has no significant correlation with each other is accepted. Furthermore, there is enough statistical evidence to reject the research hypotheses which state that there is no significant relationship between the issues and challenges in DepEd as perceived by the respondents and the level of their organizational commitment; there is no significant relationship between the level of Motivation Factors of the respondents and their level of organizational commitment; and there is no significant relationship between the level of Hygiene Factors of the respondents and their level of organizational commitment.

Recommendation

In view of the conclusion, the following recommendations were given. The HRMPSB of DepEd SDO Laguna may reconsider the recalibration of score in ranking for Teacher I where in teacher applicants who have already completed the review procedure in previous ranking will not be required to go through it again; just a recalibration or updating of points in compliance with the established rules of pointing system. The Personnel Unit may also establish a database of RQA applicants where in their employment history is indicated including the times they applied, their history of substitution, volunteer works, Local School Board (LSB), Learning Support Aide (LSA), and job order works in DepEd which may be use as consideration in their deployment. Lastly, address the allocation of personnel, in DepEd. In particular, DepEd must dive deeply into the shortage issue of human resources and collaborate with the Department of Budget and Management (DBM) to provide necessary support for increasing Plantilla positions.

MODERNIZED WORK ENVIRONMENT AND WORK PERFORMANCE OF THE DEPARTMENT OF PUBLIC WORKS AND HIGHWAYS PERSONNEL

Marie Jhonie D. Loremas

Master in Public Administration

ABSTRACT

The research concentrated on determining the effect of a modernized work environment on the work performance of Department of Public Works and Highways personnel. It utilized descriptive research; data gathered from the respondents was tabulated and computed to determine the level of work performance of the Department of Public Works and Highway personnel. 509 personnel from the Department of Public Works and Highways Laguna 1st, second and third - District Engineering Office were surveyed using a selfadministered questionnaire. Statistical tools such as regression were used to evaluate the data gathered. This study revealed a statistically significant modernized work environment in terms of technology integration and organization culture and the work performance of the Department of Public Works and Highways personnel. Based on the findings, it is recommended the conduct of intense research and discovering more information and new variables for a modernized work environment for personnel productivity to strengthen further findings of the study.

KEYWORDS: Modernized work environment, technology integration, organizational culture, work performance

INTRODUCTION

In modern times, organizations are experiencing difficulties due to the dynamic nature of the environment. A modernized work environment implies that technology integration, such as office layout, office equipment, internet access, video conference, organizational culture, organizational values, leadership style, and diversity, affects the employees' work performance or individual performance. Satisfying its workforce is one of the numerous problems an organization faces in fulfilling its mission in an ever-evolving and changing environment. To ensure the increase of the personnel's work performance in terms of quality and efficiency, the organization needs to meet the demands of its workers by offering a good, modernized work environment.

Gitahi et al. (2015) posit that organizations with a pleasant environment will probably have a competitive advantage since they can draw in and keep highly qualified workers. The modernized work environment, the working environment has a significant influence on the achievement and performance of employees in the organization. According to a case study, an employee's performance is greatly influenced by their working environment, which is interrelated with performance Naharuddin & Sadegi, (2018). In addition, Naharuddin says that their productivity can reflect the employee's performance level in terms of activity-based, performance-based and outcome-based.

An organization's work environment significantly impacts a modernized work environment. A modernized work environment is essential to employee performance and productivity (El-Zeiny, 2013). Modernized work environment factors like technology and culture affect the work performance of an employee's organization.

Employee performance is crucial for the organization to achieve its goals and objectives. Modernized work environments, such as technology and culture, also significantly impact employees' work performance. The modernized work environment dramatically contributes to the success of the work performance of the employees and the organization.

MATERIALS AND METHOD

The researcher used a descriptive method to determine the modernized work environment and the work performance of DPWH personnel at Laguna 1st, Laguna 2nd, and Laguna 3rd District Engineering Office.

The study's main goal was to figure out the effect of a modernized work environment in terms of technology integration and organizational culture on the work performance of DPWH personnel. Specifically, the study determined the level of technology integration in terms of office layout, office equipment, internet access and video conference and also the level of organizational culture in terms of organizational values, leadership style and diversity in terms of religion, belief and ethnicity and the work performance such as quality and efficiency—also, the significant effect of technology integration and organization culture on the work performance of DPWH personnel.

The primary instrument used for gathering the data for this study is a self-made questionnaire, which can help gather the information that will answer the problem. The researcher prepared seven (7) questions each for modernized work environments such as technology in terms of office layout, office equipment, internet access and video conference and culture in

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

terms of organization values, leadership style and five (5) questions for diversity which include religion, belief and ethnic of groups. Seven (7) questions were each for the dependent variable: quality and efficiency.

The questionnaire was used to measure the modernized work environment and the work performance of DPWH personnel at Laguna 1st, Laguna 2nd and Laguna 3rd District Engineering Office.

RESULTS AND DISCUSSION

The level of technology integration in terms of office layout is verbally interpreted as highly integrated for job orders and permanent personnel. The level of technology integration in terms of office equipment is verbally interpreted as highly integrated for job orders and permanent personnel. The level of technology integration regarding internet access is verbally interpreted as highly integrated for job orders and permanent personnel. For the level of technology integration in terms of video conference with the verbally interpreted as integrated for job orders personnel and high integrated for permanent personnel. The level of organizational culture in terms of organizational values is verbally interpreted as high participation for job orders and permanent personnel. The level of organizational culture in terms of leadership style is verbally interpreted as high participation for job orders and permanent personnel. The level of organizational

culture regarding diversity in religion is verbally interpreted as high participation for job orders and permanent personnel. The level of organizational culture in terms of diversity in beliefs is verbally interpreted as high participation for job orders and permanent personnel. The level of organizational culture in terms of diversity in ethnicity is verbally interpreted as high participation for job orders and permanent personnel. The level of work performance in terms of quality is verbally interpreted as excellence for job orders and permanent personnel. The level of work performance in terms of efficiency is verbally interpreted as very efficient for job orders and permanent personnel.

The significant effect of a modernized work environment in terms of technology integration and organizational culture on the quality of work performance of DPWH employees, as revealed by the data that the level of modernized work environment in terms of technology integration, which is the office layout, office equipment, internet access and video conference and in organizational culture in terms of organization values, leadership style and diversity in terms of religion, beliefs and ethnicity have a significant effect on the quality of work performance of DPWH employees. The null hypothesis is rejected since the significance level is at .05 and the computed p-value is <.001. Therefore, a modernized work environment significantly affects the quality of work performance of DPWH employees in terms of technology integration and organizational culture.

| Table 12 Model Fit Measures When Quality of Work Performance is Regressed on Modernized Work Environment Variables | | | | | | | |
|--|-----------|----------------|--------------------|--------|--------|-------|--|
| R | R R^2 | Adjusted R^2 | Overall model test | | | | |
| Λ | Λ | Aujusteu K | F | df_1 | df_2 | p | |
| .276 | .076 | .060 | 4.58 | 9 | 499 | <.001 | |

The technology integration and organizational culture variables were the predictors of quality of work performance at .05 level significant, statistically significant, F (9,499) = 4.58, p=<.001, which means that at least one of the predictors is statistically significant. The table also accounts for 7.6% of the total variation

in the quality of work performance. Based on the analyzed data, the interpretation of the modernized work environment in terms of technology integration and organizational culture significantly affects the quality of work performance for DPWH employees.

| Work Environment Variables Predictor B SE t p | | | | | | | |
|--|--------------------|-------|--------|-------------------|--|--|--|
| Intercept | 2.419 | 0.325 | 7.440 | p <.001 | | | |
| тистесрі | | | 7.440 | <.001 | | | |
| | Technology integra | | | | | | |
| Office Layout | 0.097 | 0.050 | 1.948 | .052 | | | |
| Office equipment | 0.076 | 0.049 | 1.552 | .121 | | | |
| Internet access | -0.052 | 0.054 | -0.967 | .334 | | | |
| Video conference | 0.079 | 0.053 | 1.489 | .137 | | | |
| | Organizational cui | lture | | | | | |
| Organizational values | 0.073 | 0.073 | 1.438 | .151 | | | |
| Leadership style | 0.090 | 0.090 | 1.810 | .071 | | | |
| | Diversity | | | | | | |
| Religion | 0.036 | 0.036 | 0.739 | .460 | | | |
| Beliefs | 0.025 | 0.025 | 0.452 | .651 | | | |
| Ethnicity | 0.091 | 2.235 | 2.235 | .026 | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The coefficients of the predictors and their significance shows that in technology integration in terms of the office layout (B=0.097, p=.052), office equipment (B=0.076, p=.121), internet access (B=-0.052, p=.334) and video conference (B=0.079, p=.137) in organizational culture in terms of organizational values (B=0.073, p=.151), leadership style (B=0.090, p=.071) and diversity in terms of region (B=0.036, p=.460), beliefs (B=0.025, p=.651) and ethnicity (B=0.091, p=.026).

Another research (Genzorová, 2017) is relevant to employee productivity.

A successful employee performs the desired outcomes individually and collectively within a specified time frame and satisfies standards, predetermined criteria, aims, objectives, and goals.

Table 14 Model Fit Measures When Quality of Work Performance is Regressed on Modernized Work Environment Variables

| D | D 2 | Adjusted R^2 | Overall model test | | | |
|------|------------|----------------|--------------------|--------|--------|-------|
| K | K- | | \overline{F} | df_1 | df_2 | p |
| .416 | .173 | .158 | 11.616 | 9 | 499 | <.001 |

Table 14 shows the significant effect of a modernized work environment in terms of technology integration and organizational culture on the efficiency of work performance of DPWH employees. It is evident from the data that the level of modernized work environment in terms of technology integration, which is the office layout, office equipment, internet access and video conference and in organizational culture in terms of organization values, leadership style and diversity in terms of religion, beliefs and ethnicity have a significant effect on the quality of work performance of DPWH employees. The null hypothesis is rejected since the significance level is at .05 and the computed p-value is <.001. Therefore, a modernized work environment significantly affects the quality of work performance of DPWH employees in terms of technology integration and organizational culture.

Table 14, where the modernized work environment in terms of technology integration and organizational culture variables were the predictors of quality of work performance, is at .05 level significant, statistically significant, F(9,499) = 11.616, p = <.001 me, and that at least one of the predictors is statistically significant. The table also accounts for 17.3% of the total variation in the efficiency of work performance. Based on the analyzed data, the interpretation of the modernized work environment in terms of technology integration and

organizational culture significantly affects the efficiency of work performance for DPWH employees.

Table 15 shows the coefficients of the predictors and their significance; it shows that in technology integration in terms of the office layout (B=0.076, p=.010), office equipment (B=0.130, p=.004), internet access (B=-0.053, p=.289) and video conference (B=0.086, p=.081) in organizational culture in terms of organizational values (B=0.084, p=.078), leadership style. (B=0.133, p=.004) and diversity in terms of region (B=0.041,

(B=0.133, p=.004) and diversity in terms of region (B=0.041, p=.371), beliefs (B=0.006, p=.912) and ethnicity (B=0.091, p=.026).

The study by Mohamad Shammout (2021) examines the connection between worker performance and the workplace and ascertains how the workplace affects workers' performance there. Employee benefits, support from managers and coworkers, training and development opportunities, a suitable workload, and the actual physical work environment were used to gauge the work environment. The findings demonstrate a substantial and favourable correlation between every variable and worker performance. Employee perks, which significantly impact Investor Global employees' work performance, were deemed the most important factor overall. The aforementioned connected research is highly relevant to the current investigation since it delineates the impact of the workplace environment on employee performance.

Table 15 Model Coefficients When Quality of Work Performance is Regressed on Modernized Work Environment Variables

| Predictor | В | SE | \overline{t} | p |
|-----------------------|------------------------|-------|----------------|--------|
| Intercept | 1.297 | 0.303 | 4.279 | < .001 |

| Organizational values | 0.084 | 0.047 | 1.766 | .078 |
| Leadership style | 0.133 Diversity | 0.046 | 2.884 | .004 |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Religion | 0.041 | 0.896 | 0.896 | .371 |
|-----------|-------|-------|-------|------|
| Beliefs | 0.006 | 0.111 | 0.111 | .912 |
| Ethnicity | 0.091 | 2.235 | 2.235 | .026 |

CONCLUSIONS

Since all the regression analysis results are at a .05 level of significance, the null hypothesis is rejected. It concludes that the research hypothesis confirmed that the modernized work environment in terms of technology integration and organizational culture significantly affects the work performance of DPWH personnel.

RECOMMENDATIONS

The following recommendations were made in light of the study's conclusion: Management should make every effort to create an environment at work that inspires, motivates, and keeps people engaged to improve productivity. Management should provide a positive work atmosphere to improve personnel morale and increase productivity. In order to confirm the substantial effect of the modernized work environment on employee performance, future researchers should conduct a similar study to support the current findings. To do this, they should find new variables and additional information about the modernized work environment for employees.

ABSTRACT

In this study the literature review focus on the available evidence for the physiotherapy intervention to prevent falls in among multiple sclerosis. Research involved a computerized data base pertaining to studies that include the physiotherapy among multiple sclerosis patients 15 articles that showed outcomes relative to falls, physiotherapy intervention to prevent falls among selected multiple sclerosis patients with multiple sclerosis are more likely to fall, especially when walking, due to their slower proactive equilibrium reactions, decreased ability to maintain balance when reaching, central integration impairment, slow somatosensory conduction, fatigue, delayed reaction, attention deficit, difficulty maintaining stability in the presence of external disturbances, and overload fatigue of the motor cortex. Stand-related trunk instability was observed in MS patients, a rise in trunk sway, and a rise in postural sway when performing two tasks at once. Minimal literature on falls prevention there is scarcity of study which intervention among Step square exercises and Wii board exercises.

AIM: The study aimed to find the effectiveness of Step square exercises to prevent falls in MS patients.

KEY WORDS: Multiple sclerosis, intervention, equilibrium reactions, integration impairment, somatosensory conduction, attention deficit, motor cortex, trunk stability, trunk sway,

SEARCH METHOD

By applying key words (Multiple sclerosis- definition, incidence, aetiology, pathophysiology, trunk disability, increase in sway, step square exercises, Wii board exercises on search bar in Google Scholar, PubMed, Scopus index.

SELECTION CRITERIA INTRODUCTION

Because of the demyelination of different distributions throughout central nervous system (CNS), multiple sclerosis (MS) patients frequently present with disorders of balance, sensation coordination, and strength¹ Because of the imbalance and frequent falls, these patients may experience fear of falling, which may have a negative impact on their quality of life².Sufficient balance depends on appropriate motor reactions and the integration. Even in individuals with limited clinical evaluation issues, Patients suffering from multiple sclerosis often report poor balance control, which is one of the primary risk factors for acquiring the disease^{3,4}. 200 new cases of the multiple sclerosis are reported each week⁵. In the United States, where an

estimated 2.5 million people have the disease [1.33/100000 persons in India received a multiple sclerosis diagnosis. Females are impacted more frequently than males by Mostly affecting young adults, MS between the ages of 20 and 406. Although people as young as 20 and as elderly as 75 have developed it, majority of instances are found between the ages of 20 and 50^{20} . Multiple sclerosis Patients are more likely to tumble, especially when walking, due to their slower proactive equilibrium reactions, decreased ability to maintain balance when reaching, central integration impairment, slow somatosensory conduction, fatigue, delayed reaction, attention deficit, difficulty maintaining stability in the presence of external disturbances, and overload fatigue of the motor cortex. Individuals with MS experienced a decrease in trunk stability when standing, an increase in trunk sway, and an increase in postural sway when performing two tasks at once^{7,9}. The risk of falling increases in MS because people with the disease frequently exhibit decreased capacity to move approach the limits of stability, swaying while standing, slowness in both gait and reactions to postural sway. Physical treatment for MS patients focuses mostly on improving balance 10. The Square Stepping Exercise (SSE) is therefore considered a form of deeply

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

explicit equilibrium training to prevent falls that primarily depends on the protective execution strategy to maintain balance in various activities and situations and also increases intellectual fall risk factors^{11,12}. The SSE contains a number of directional advance step pattern examples that are applied to a thin mat that is divided into squares and incorporate a progression of various modified and complex step patterns. As a result, the SSE can speed up reaction times by using restorative stepping patterns, which is in line with its goal of raising the bar for proactive and reactive reactions^{13,14}. There is minimal literature available currently to say whether step square exercises help elderly people with their balance and prevent risk of falls.

METHODOLOGY SEARCH METHOD AND ELIGIBILITY CRITERIA

PubMed, Google Scholar, Medline, and Pedro were utilized to conduct a comprehensive literature search. Papers that weren't released in English were eliminated. Here, the articles were searched with the keyword's multiple sclerosis, intervention, equilibrium reactions, integration impairment, somatosensory conduction, attention deficit, motor cortex, trunk stability, trunk sway. Inclusion and exclusion criteria are filtered and finally, 20 articles were obtained for the examine articles that weren't published in English were eliminated.

INCLUSION

Articles discussing about Multiple sclerosis Articles published most recent years. Full-text articles. Articles published in English.

EXCLUSION

Articles explaining surgical interventions.

DISCUSSION

Balance is a complicated process that involves both the planning and execution of movements and the receiving and integration of sensory inputs, it is thought to be among the most prevalent issues in MS patients. Accordingly, the current study demonstrated that there was a notable enhancement in fall risk reduction in the research group that took part in the Step Square workout regimen. Improving muscle power and joint flexibility, lowering environmental risk factors, or strengthening the base of support are typically the goals of MS patient rehabilitation programmes aimed at reducing the risk of falls, this study contributes to our understanding of the combined functions of feedback cues as somatosensory and proprioceptive stimulation during standing and walking on uneven surfaces over small obstacles.

Because the risk of fall prevention exercise programmes depends on the participant's capacity for a variety of movement amplitude, speed, complexity, and added cognitive load, stepping square exercise (SSE) training that incorporates these elements have a notable reduction in falls 16,17 because it enhances balance and eliminates fear of falling¹⁸. Improved lower limb fitness, functional ability, and fall avoidance in senior citizens are all facilitated by the SSE¹⁹. Therefore, SSE training for fall-prone patients who consistently have neuromuscular, sensory, and cardiopulmonary deficiencies may benefit from increased movement speed, which increases the demands on these systems and ultimately leads to improved outcomes.

Stepping exercises also improve functional result by making it easier to perform fall prevention activities in real life. Moreover, several high intensity stepping workouts increase walking speed and other aspects of walking kinematics in neurological patients²⁰. Sebastian and others¹⁸ reported that the SSE programme for MS was practicable and safe; as a result, the SSE training clearly improved MS patients' cognition, balance, gait, and ability to prevent falls. Due to improvements in reaction and response times, gait, and equilibrium performance, both voluntary and reactive stepping training reduced falls in older persons by almost half, according to the results of a prior study by Okubo et al. 18. Stepping training for fall prevention should include multidirectional steps as well as.

CONCLUSION

The study's conclusions indicated that step square exercises are regarded as a crucial component of MS rehabilitation programmes since they enhanced balance and decreased the chance of falling. As a result, they should be included in the programme for balance training in neurological conditions, particularly in MS patients undergoing rehabilitation.

THE ROLE OF INTEGRATED EDUCATION IN DEVELOPING SOCIAL-CREATIVE COMPETENCE OF FUTURE TEACHERS

Mahmudova Sumbula Abdumalikovna

Researcher of Fergana State University

ANNOTATION

The article discusses the importance of vocational education as a social protection tool, the process of self-realization in various stages of life, the guarantee of sustainability, and the integration of social-creative competencies in developing teaching methods. It also highlights the integration of educational content in various scientific literature based on the principles of integration into curriculum design. The purpose and methods of pedagogical diagnostics selected to ensure the optimal reliability of results in the experimental verification stage are explained, as well as indicators for assessing the social-creative competency of teachers.

KEY WORDS: integration, vocational education, social-creative competence, ability

INTRODUCTION

According to the demands of modern higher education, the priority is shifting from merely providing graduates with a large quantity of knowledge or a set of competencies to preparing specialists capable of working in a rapidly changing economic environment. These specialists should be able to meaningfully perceive and critically assess socio-economic processes, predict their development, and influence processes that ensure adaptability.

This certainly requires serious changes in ensuring the quality of specialist training. Today, high-quality vocational education is a means of social protection and a guarantee of an individual's self-awareness stability at various stages of life. Efforts are being made to organize integrated education that serves the purpose of jointly educating students through the globalization of education and the establishment of a healthy problematic educational environment. Integrated professions are emerging. Therefore, the role of integrated education in developing social-creative competencies in future teachers is particularly important. The integrative approach is the process of determining a single correct conclusion based on the inseparable interconnection of the countless small parts that make up information, their integrity, and unity. This approach involves having a didactic system of knowledge with deep content, a systematic approach to knowledge, and teaching students the most appropriate ways to master knowledge.

ANALYSIS AND METHODS OF LITERATURE

In academic literature, the main content of education integration in teaching programs is based on the principles of integration. A. Bloom[1] emphasizes that programs structured according to the level of integrating educational content are divided into the following types:

- 1. Integrated. It is based on the fact that knowledge in one field relies on knowledge in another field.
- 2. Interrelated. It connects various subjects or major blocks based on a wide range of related disciplines.

- 3. Comprehensive. It emphasizes the use of knowledge in various fields of life.
- A.I. Avazboev emphasizes the process of scientific integration, bringing together various groups and collections of subjects within the sciences. The content of the integration process is implemented in several stages:
- 1. Thematic integration (presentation of one topic content from several subject areas). This section can also be referred to as a graphic-visual section.
- 2. Problematic integration (students solve a problem using methods from different subjects).
- 3. Conceptual integration (conceptual understanding using methods and tools from different fields).
- 4. Theoretical integration (the mutual inclusion of various philosophical theories)[2].

The opinions of the scholars above are visible, and each opinion contains the social structural part of education. In this regard, S.S. Alimov defines it as follows: "The social competence of the teacher is an integral part of professional pedagogical competence, and it represents the integral characteristic of the specialist. It prepares the abilities and readiness to use social knowledge in their professional activities, and it provides the integration of national culture, language, religion education, and pedagogical science into their professional work"[3].

It is important to have a personal, civic, and professional lifestyle that is organized in organizational and technological terms while also achieving effective productivity through time management.[4]

In this, we utilized the criteria for identifying social qualities and creative abilities developed by the pedagogical scholar S.V. Goncharov. According to him, he brings up the general criteria for social competence. In his opinion, the criteria and empirical indicators of social-creative competence can be presented as follows:

1. An individual's valuable self-perception. This is expressed in their ability to articulate chosen values in concepts, justify them, assess events from a values

$EPRA\ International\ Journal\ of\ Multidisciplinary\ Research\ (IJMR)\ -\ Pe\underline{er}\ Reviewed\ Journal$

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

perspective, define the existence of a person, community, homeland, state, labor, and property on the basis of values; express their cultural and other similarities in concepts; set a formalized goal, social orientation of behavior, and dominant elements of lifestyle.

- 2. Specific social knowledge is manifested in methodological, categorical, reflexive, projective, and constructive (operational performance) thinking and gives the ability to understand the simple in the general, the general in the particular, to solve social issues in a general form and apply them in specific situations.
- 3. Subjective virtues are manifested in a person's thinking, will, beliefs, and emotions, in their ability to self-determine, in their moral, political, professional, and other relations; in independently choosing, making decisions, taking personal responsibility for accepted and performed actions, creatively modeling new socially significant options for action and communication; in self-management, amateur performances, and self-education. The final indicator of subjectivity is considered to be personal independence.
- 4. The praxeological component of social-creative competence is manifested in mastering the lifestyle in personal, civic, and professional areas, in organizational and technological constructiveness, in achieving effective productivity per unit of time[5].

Together with other researchers, the experiments of other scientists have also been revealed. In particular, Z.A. Aksyutina developed assessment tools for evaluating social competence, which demonstrate the broadening of social-economic relationships in educational activities, the integration of professional relationships in the field of education, and the integration of educational space. They include:

- The presence of theoretical knowledge complexes on the social aspects of their field and their professional social activities;
- Possession of practical knowledge about professional social communication and activity tools;
- Shaping the ability to adapt to new socio-economic conditions, developing students' abilities to understand social phenomena related to humanism and tolerance;
- Creativity in developing a communicative strategy that influences making social-pedagogical decisions and affects pedagogical activity results;
- Possession of modern pedagogical skills, ability to adapt to innovative pedagogical technologies, successful use of psychological-pedagogical principles in educational and socio-cultural teaching[6].

Another scientist O.V. Barkunova defines social competence in her approach as a systematic characterization of a person's activities, which is based on the system of professional competencies. This complex system and actions (skills) are aimed at performing professional function[7]. The author may appeal to professional social competencies in presenting the quality of the work:

- Appreciative-motivational competence is a competence in the field of education that is related to the

subject's (our current situation, history) and the role of the profession, the importance of work results, professional orientation, and reflective abilities;

- Cognitive competence is the ability to systematically deliver one's knowledge through self-education, analyze social relationships in an organized manner, formulate educational and social-cultural tasks, and identify acceptable ways to achieve them;
- Social-psychological competence includes the following: reflective skills, establishing relationships according to pedagogical goals, quick decision-making and finding the most effective means of pedagogical influence;
- Creative competence is the ability to select the most effective forms of social work with students based on individual characteristics in a personalized manner, demonstrate the final result of their activities in a predictive manner, and be capable of organizing social-cultural mutual influence situations.

RESULTS AND DISCUSSION

In order to ensure the optimal level of confidence in the results obtained during the experiment phase, the following were identified:

- Measures for selecting suitable methods for the purpose;
- Determination of measurement criteria (students' individual characteristics, their abilities, learning performance indicators, their efforts and creative outputs, etc.):
 - Utilization of methods of pedagogical diagnostics.

Based on the above, it is possible to formulate the following conclusions in assessing the social-creative competence of classroom teachers:

- The complex nature of evaluating students' attitudes and activities in various aspects, which allows for a comprehensive assessment and expansion of their abilities through the use of various sources of information and resources;
- Continuity in teaching, monitoring and evaluation of students' attitudes and activities;
- Analysis of classroom specialists' attitudes and activities based on suitability for their interests and preferences in various activity directions (involving youth in specially organized subject-game activities, attracting them to various thematic activities, etc.).

Our research identified social-creative competence houses. They consist of the following:

- Worldly: a significant component of personal and activity (structural part), the system of views on surrounding diversity, establishment of social, creative personality complexes and the personal experience and social experience's image as well as belonging to culture;
- Cognitive: presence of theoretical knowledge collection about professional educational activities, continuous filling of knowledge and social-creative portfolio, understanding and foundation of social events, ability to objectively evaluate them;
- Motivational-valuable: interest, attitude towards the subject, social events, curiosity, evaluation, acceptance and internalization of moral-ethical content of motivational values;

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- Activity-methodological: participation in own social-creative experiences and expanding them, description, explanation, utilizing appropriate technologies, ensuring knowledge social-creative management, managing information flow, evaluating social situations based on understanding and providing insights;
 - Practical pedagogical interview tools.

The indicators for developing social-creative competence among teachers were determined as follows:

Cognitive-intellectual: - developing analytical skills with social events; - integrity of the knowledge system in education; - problem-solving; - oppositional and alternative thinking; - questioning-and-changing style.

Motivational: - interest, curiosity; - goal-orientedness; motivational persistence; - orientation towards social (practical, moral) values.

Emotional-valuable: - emotional attitude towards facts, events, situations and societal influences; - emphasizing important values; - transcending the positive aspects in incidents.

Creative (innovative): - creative thinking; - innovation readiness; - independence; - research ability; - creating new ideas.

Communicative: - objective understanding various ideas and views in a team setting; - respecting others' opinions; teamwork skills; - communication and debate etiquette.

One direction for improving teachers' social-creative competence was using the "Competitive Environment" during lessons. The term "competitive" refers to selecting one or more versions from author's options. In our work we focused on two aspects in class sessions: first – analyzing competitive situations that arise in society; second - analyzing how different authors' works evaluate significant historical figures'

In our study material acquisition and systematization during student learning activities is considered crucial. Analyzing the "Competitive Environment" requires teacher assistance because students are not always prepared for analysis of societal publications but often give daily life or habitual evaluations.

Based on these characteristics we utilized the following technology for using "competitive environment" during lessons:

- creation of a competitive environment;
- clarification by students about learning tasks;
- identification of suitable competitive environments;
- analysis and evaluation according to selected environments;
- fundamental proposals by teachers based on student issues;
 - -analysis by teachers regarding student work results.

In our experience-based work, the following pedagogical methods were used to stimulate students' research activity:

- 1. The teacher does not declare or dictate their knowledge and activities, but directs students towards independent acquisition of various concepts and goals.
- 2. The teacher does not express their point of view as the most correct answer, but creates situations where students get acquainted with different ideas and historical events evaluations.
- 3. When getting acquainted with social events and processes, opposite (even conflicting) viewpoints are taken
- 4. In choosing the method of working on the material being studied, the main role is given to students themselves.
- 5. Working with sources of information allows students to explore new goals and topics for discussion, which are then elaborated on during class discussions.

CONCLUSION

In conclusion, it has been determined that developing socialcreative competencies, which embody social activity skills and creativity abilities in future educators, requires systematicity, principledness, and consistency based on integrative education. It is clear that teaching pedagogical sciences and establishing a pedagogical process demand an approach that stems from the requirements and possibilities of integrative education.

ANALYSIS OF THE ARTISTIC-AESTHETIC CHARACTERISTICS OF MAKOM ART

Nurullaeva Zulhumor Sidamatovna

PhD, Associate Professor of the Department of Social and Humanities University of Business And Science

ABSTRACT

In this article, the author revealed the genesis of status art, its aspects related to philosophical-aesthetic, cultural and spiritual-spiritual factors. Proposals and recommendations have been developed regarding the aesthetic knowledge and experience in the perception of the art of status, aesthetic feelings, indirect practical and aesthetic forms of artistic-aesthetic assimilation of the objective being.

KEYWORDS: status art, aesthetic knowledge, experience, aesthetic feelings, objective existence, cultural institutions

The emergence of statuses is the result of long-term research of human thinking. The formation of the status system is closely related to the development of world science. Music was seen as a field of physiological influence on a person from the point of view of natural sciences, while philosophy was considered a science of thought that includes knowledge. Today, music art is one of the traditional art forms that share aesthetic pleasure with people, regardless of their faith, race, or nationality. It is known from the history of Makam art that the genesis of this direction has artistic and aesthetic foundations. Art fields are complementary, that is, a syncretic phenomenon. In this sense, it is important to evaluate the fields of art based on the principle of equality, to express reality philosophically and aesthetically, to scientifically recognize the priority of one type over others. Therefore, it is correct to analyze status as an audible art form.

The art of makam stands out among the cultural and spiritual values that the peoples of the East have given to the treasure of world civilization. This unique, elite and rich musical art spread from the Strait of Gibraltar to the Indian subcontinent. In this way, the content and spirit of philosophy underwent a certain evolution. Makams are a genre of classical music that has existed in the peoples of the East since ancient times.

A person's ability to understand the art of status is somewhat limited compared to fiction. Because it expresses the reality with special tenderness and sensitivity, the divine feelings of a person in uniquely delicate melodies. Therefore, the reality is understood more fully and attractively through the artistic and aesthetic feelings of the listener. Man is the main subject of status art, like philosophy. Through the art of makam, a person searches for the meaning that is important to him from natural phenomena and thereby purifies his soul. That is why this art form is important for all-round development of a person.

Rhythm and harmony in the art of makam has a great influence on the aesthetic world of people, their spiritual and moral education. Music, which forms the basis of status art,

plays an important role in the creation of new knowledge, ideas, and artistic works. In it, we can see the dialectical relation of individuality to the generality. Each example of creativity in the art of status is independent, unique and unique, and directly reflects a certain aspect of reality.

Judging the evolution of makam from a philosophical point of view, makam songs came from a higher civilization or the absent (arshi ala). It represents the "hal" in Sufism, that is, the Sufi reached the state of "jazwa" precisely through these melodies and aspired to spiritual perfection. Perhaps, it is precisely because of this factor that the development of makam tunes spans a long period of time. In addition, the status helps clarify the human thinking, in addition to its emotional and aesthetic function, epistemologically.

Makam is primarily a religious-philosophical concept, at the heart of which lies the idea of spiritual perfection, and it is related to the teachings of Sufism. It is expressed through the way (method) of tarigat, status music is a philosophy perceived in sounds. In it, the ideas of Sufism, the laws of tajalliyot (unity of diversity) are artistically reflected along the melody part of makam (horizontal) and the series of makam (vertical). The concept of "maqom" is the manifestation of the stages of tariqat in a musical form, and it is a method of developing the initial melody structure (theme) from the bottom up based on certain veils and methods, rhythms. In this case, the melody develops based on the principle of simplicity to complexity. "Principle of status" is a special phrase used as an expression of this process. The principle of makam can be implemented in different forms and genres of music (instrumental tunes and chants).

If we pay attention to the genesis of makam tunes, we can observe that two different views have been formed on this issue among musicologists. According to a group of scientists, the basis of status art is based on the intuitive knowledge of people. In contrast, some scholars argue that status is a product of pure thought. In particular, O. Ibrohimov paid

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

attention to the theological-intuitive foundations of the art of status and connected it with the science of Sufism. In his opinion, the role of prophets is great in the formation and emergence of statuses. For example, the status of Rost is attributed to Hazrat Adam Alaihissalam, the status of Ushshaq is attributed to Nuh Alaihissalam, and the status of Rahavi is attributed to Muhammad s.a.v.

It is recognized by A. Djumaev and several scholars that the makam tunes are based on pure mathematical knowledge and that the first seven parts of the makam were created by Borbad, who served in the court of the Iranian king Khisrav Parvez. According to the scientist, divinity has nothing to do with the creation of makam melodies, it is a product of pure thinking. They appeared over the centuries as a result of the evolution of the seven veils founded by Barbad. In the article on music by the English scientist G. Farmer, it was noted that there was a special theory of music in the peoples of Central Asia and Khorasan before the Arab invasion. In this kind of music theory, it is possible that only professional music genres that have a theoretical basis such as status will find their expression.

According to Yu. Plakhov, professional music genres in the East began to form before the emergence of Sufism. The laws of their pitch (lad), rhythm, and tone structure were established long before the formation of the doctrine of Sufism.

Uzbek musical heritage is not limited to folklore works, but includes our professional and oral traditional heritage, as well as professional performance, professional music and professional genres.

However, some scholars have emphasized in their works that the formation of the musical civilization of the Eastern peoples is connected with the musical culture of the Arab peoples. The musical civilization emerged from a mixture of Syrian, Byzantine, Egyptian, Iranian, Turkish, Arab-Bedouin musical traditions. In this ethnic mixture, the musical ethnostructure of the Turkic, Iranian and Arab peoples took the main place. According to ancient sources, it is recognized that the foundations of makam go back to the Bedouins. Bedouins lived a nomadic lifestyle, and in the pre-Islamic period, Bedouins worshiped various stone idols. During worship, they recited songs praising their god. E. Wilson-Dixon in his study "History of Christian Music" gives an example of an episode that occurred during a visit to a Bedouin tribe in the Arabian desert. Before setting out on a long journey, the Bedouins began to shout loudly and sing something similar to a hymn. Later, E. Wilson-Dixon writes: "Bedouins began and ended their journeys with the characteristic cries of the Bedouin - different for each tribe, with musical exclamations such as "Hand on the throne of our Lord". In this place, it can be assumed that the first samples of makam tunes were created in this way. The Bedouins who converted to Islam later had no spiritual need for prayers in this way, which began to turn into an art form of music. This is how Arabic music began to emerge. In our opinion, the

current status of melody forms was created on the basis of Arabic melodies.

In his work "Uzbek classical music and its history", Fitrat stated that "even after the creation of our "classical" music under Iranian-Arabic influences...".

Therefore, the status art and its development evolution took a special place in the development of the aesthetic thinking of the Turkic peoples. Changed some trends in the art of music. Three philosophical hypotheses can be put forward in the evolution of status. First, makam melodies are a product of intuitive knowledge, second, makam melodies are pure human thinking, in musical terms, a product of composition, and third, makam melodies are adapted from the musical form of the Arab peoples to the current form and region. When revealing the philosophical-aesthetic essence of status, one should avoid excessive idealization, as well as the tendency to interpret it from an excessively materialistic point of view. Because status expresses both the spiritual and spiritual world of a person and aspects that are in harmony with nature. This harmony is the basis of status philosophy. Makam is not a simple musical genre, but a product of great philosophical thinking. The emergence of status contributed to the development of not only Eastern, but also Western philosophical thinking in a new direction. Because since ancient times, both in the West and in the East, music has not only educated people, but has been an important means of management. It developed as a unique art form, especially in the East. The need to observe traditions in the field of rational use of musical instruments is recognized by the entire Muslim world as the most important component of aesthetic culture.

The status art characteristic of the peoples of the East in a certain area testifies to the existence of certain foundations of statehood and political, cultural, economic, social-spiritual status in those regions. The existence of maqam art served to develop not only a person, but also society. Historically, status art has served human thinking and cultural development of society.

When researching the philosophical-aesthetic nature of status, it is necessary to avoid the tendency to over-idealize it and interpret it from a materialistic point of view. Because status expresses both the spiritual and spiritual world of a person and harmony with nature. This harmony is the basis of status philosophy.

If the subject area of philosophy is nature, society, human system, then aesthetically this system covers art as well. In this dialectical process, not only human, nature and society relations, but also art, especially music has a special place. In this sense, status directly affects the aesthetic consciousness of a person, it is manifested in society as a universal aesthetic value.

Status art is accepted by the Uzbek people as one of the cultural values that form the basis of national identity and self-identification. In the dissertation, the role of status art as an aesthetic object, hermeneutic features are composed of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

components such as interpretation, understanding and empathy.

Any knowledge consists of two cognitive abilities of a person: rational (mental), abstract-logical (abstract-logical) and feeling, figurative-emotional (figurative-emotional), which are of great importance in the art of status. Maqam art directs a person to self-awareness and philosophical thinking through music, enlightens (catharsis) and spiritually beautifies (kalokagatiya) based on its rational and emotional effects.

The aesthetics of status art - expresses the issues of idealism, nationalism, artistry, their social significance, historical and national traditions, freedom and individuality, style and genre innovations. Also, status art embodies the ways and forms of depicting the reality of life, the nature and essence of musical images, the categories of beauty and grandeur in music, content and form, objectivity and subjectivity, typicality and independence, logic and emotionality, expressiveness and imagery.

In illuminating the historical and modern trends of status in raising human spirituality, its main goal is to teach a person to understand and appreciate beauty, to form his aesthetic attitude to reality, to develop the creative potential and ability of a person, to improve the skill of artistic imagination and aesthetic observation, to develop aesthetic taste, aesthetic ideal and aesthetic consists of formation and development of values.

Status is a unique phenomenon in spiritual and aesthetic education of people. It embodies the psyche, feelings, mentality, outlook, culture and values of the people, and occupies a high place in the harmonious development of a person in all aspects. Also, status art serves as one of the important factors in the spiritual and educational development of Uzbekistan.

ILLUMINATION OF THE CONCEPT OF "FAITH" (IMAN) IN THE SOURCES OF MATURIDIYYA SCHOOL WRITTEN IN THE XII-XIII CENTURIES

Abdullatif Alloqulov, PhD

Head of the Department for Research on Maturidiyya Doctrine, Imam Maturidi International Scientific Research Center

ABSTRAK

Iman dan isu-isu yang berkaitan dengannya diterangkan dalam al-Quran dan hadis dengan cara yang mudah dan difahami. Pada zaman sahabat, konsep ini tidak mempunyai sifat yang rumit. Walau bagaimanapun, dalam tempoh berikut, akibat kemunculan mazhab yang berbeza, penukaran wakil agama yang berbeza kepada Islam, dan penembusan Islam ke wilayah di mana falsafah Yunani tersebar, semua isu berkaitan, bermula dari definisi perkataan "iman", mula dianalisis. Ini seterusnya mewujudkan asas kepada isu takfir.

Dalam artikel tersebut, definisi akidah yang diberikan oleh imam Ahl al-Sunnah, tafsiran golongan Khawarij dan Mu'tazilitah, ciri-ciri khusus definisi akidah yang diberikan oleh Ahl al-Hadith dan Syafi'i dikaji secara analitikal. . Selain itu, kalimat yang ditambahkan pada teks "Al-Fiqh al-Akbar" tentang masalah akidah dibandingkan dengan sumber primer. Maklumat yang berkaitan dengan isu iman yang terkandung dalam buku-buku perwakilan Maturidiyya, yang bekerja pada abad XII-XIII, dibentangkan berdasarkan analisis perbandingan bersama. Juga, artikel tersebut mengkaji persamaan dan perbezaan antara definisi akidah yang diberikan oleh ulama Maturidiyya dengan definisi yang diberikan oleh Murjii. Persamaan dan perbezaan antara definisi akidah yang diberikan oleh Ahl al-Hadith dengan definisi akidah Syafi'i telah dianalisis.

Isu-isu seperti "peningkatan iman" dan "sama ada tindakan adalah komponen iman atau tidak" dibandingkan antara ajaran Muturidiyya dan Asy'ariyya, dan aspek sejarah isu-isu ini dipelajari. Secara umum, dalam artikel itu, pandangan pelbagai mazhab yang muncul hari ini mengenai isu akidah didedahkan secara munasabah dengan akar sejarah mereka. Ia juga menganalisis metodologi dan peringkat perkembangan sumber Maturidi dalam merangkumi topik akidah.

KEYWORDS: *faith, creed, kalam, exception in faith, increase and decrease of faith.*

آمن [iman] "confirm" is an infinitive from the verb المناز [āmana] "confirmed", which can be transitive to one or two complements in the fourth chapter. For example, the sentence "I confirmed Zayd" would be منت زيدا [āmantu Zaydan] in Arabic. The sentence "I confirmed Zayd and Amr" is expressed in Arabic as المنت زيدا عمروا [āmantu Zaydan Amran].

Abul Mu'in Nasafi (d. 508/1114), Abuth Thana Mahmud ibn Zayd Lamishi (d. VI/first half of the 12th century), Alauddin Muhammad ibn Abdulhamid Usmandi (d. 552/1157), Jalaluddin Umar ibn Muhammad Khabbazi (d. 691/1291), Shamsuddin Samarkandi (d. 705/1305), Abul Barakat Nasafi (d. 710/1310), and Husamuddin Husayn ibn Ali Sighnaqi (d. 714/1314) argued the lexicological meaning of the word "iman" (faith). However, Saffar Bukhari (d. 534/1139), Ali ibn Usman Ushi (d. 575/1179), Abu Bakr Kasani (d. 587/1191),

Nuruddin Sabuni (d. 580/1184), and Abu Muhammad Ruknuddin Ubaydullah ibn Muhammad Samarkandi (d. 701/1301) did not mention the lexicological meaning of the word "iman" in their works on the science of kalam.¹

It is clear from this that some of the scholars, in their works dedicated to the field of belief, by focusing on the lexicological meaning of the word "iman" managed to show the aspect of connection with its terminological meaning, while other scholars limited themselves to saying only its terminological meaning.

This verb can be transitive on its own or with prepositions. For example, the verb "āmana" is an independent transitive in the verse وعامنهم من خوف [wa āmanahum min khawf] "and made them secure against fear" (Surah Quraish, verse). It is also

transitive with the letters "ba" and "lam". The following verse can be used as an example of transitive with the letter "ba":

آمَنَ الرَّسُولُ بِمَا أُنْزِلَ إِلَيْهِ مِنْ رَبِّهِ وَالْمُؤْمِثُونَ

"The Messenger 'firmly' believes in what has been revealed to him from his Lord, and so do the believers" (Surah al-Baqarah, verse 285).

When the verb "āmana" is transitive with the letter "lam", it means "to confirm":

"O Moses! We will never believe you until we see Allah with our own eyes" (Surah al-Baqara, verse 55).

Historically, different views have been put forward regarding the terminological definition of the word "iman" (faith). Among faqihs Imam Malik (d. 179/795), Imam Shafi'i (d. 204/820), Imam Awzai (d. 157/774), and among muhaddiths Ahmad ibn Hanbal (d. 241/855), Ishaq ibn Rahawayh (d. 238/853), Sufyan Thawri (d. 161/778), Dawud ibn Ali Isfahani (d. 270/884), one of the mutakallims, Harith ibn Asad Muhasibi (d. 243/857), Abul Abbas Qalanisi (d. the beginning of the 9th century), Ibn Ali Thaqafi (d. 328/940), and Ibn Hazm Andalusi (d. 406/1064) said: "Faith is the knowing of the heart, confession of the tongue, and adherence to the pillars."2 Abul Barakat Nasafi used the term "affirmation of the heart" instead of the phrase "knowing of the heart" in the definitions given by these scholars to faith.³ However, the predecessors in their time interpreted "knowing of the heart" and "affirmation of the heart" as synonyms. By the later period, the difference between these two phrases and terms arose. For example, it is necessary to take into account this difference in the definitions given by Jahmis to faith. This is the view of a group of scholars belonging to the Ahl al-Sunnah wal-Jama'ah.

Kharijites and Mu'tazilites, one of the first sects that separated from the Ahl al-Sunnah wal-Jama'ah, said: "Faith is the confirmation of the heart, the confession of the tongue, and adherence to the rules." There is a slight difference in the definition of faith between these sects. In particular, the Kharijites consider all obedience to be faith, and all disobedience to be disbelief. It is said that if an adult commits both obedience and disobedience, he becomes a disbeliever and not a believer. Most of the Mu'tazilites said: "Faith is a combination of voluntary and obligatory prayers." Some of them argued that faith only includes obligatory prayers.⁴ In

general, the Kharijites say that a person who commits a major sin is a kafir, while the Mu'tazilites say that he remains in "bayna al-manzilatain".

Representatives of Murjiah sects such as Shamriyya⁵, Najjariyya⁶, and Ghaylaniyya⁷ said: "Faith is the knowing of the heart and the affirmation of the tongue". At this point, it is necessary to clarify the words "knowing" (ma'rifah) and "affirmation" (tasdiq). The antonym of "knowing" is ignorance. The antonym of the word "affirmation" is "denial". A person can believe without having knowledge about faith and its related things. Such people are called taqlidi mu'min. It will be discussed later. A person can be enlightened about Islam and not be a believer. The meaning of this is reflected in the following verse:

"Those We have given the Scripture recognize this 'Prophet' as they recognize their own children" (Surah al-Baqara, verse 146).

Abu Hanifa (d. 150/767) said in "al-Fiqh al-Akbar": "Faith consists of confession and affirmation." In the book "Wasiyyatu Abi Hanifa" the scholar says: "Faith consists of the confession of the tongue and the affirmation of the heart." Confession alone is not faith. Otherwise, all the hypocrites would be believers. Also, ma'rifah, that is, affirmation, is not faith itself. Otherwise, all the People of the Book would be believers." This is the most famous saying from Abu Hanifa regarding the definition of faith. Some of his followers said: "Faith is the knowing of the heart and the confession of the tongue."11 However, they may have interpreted the phrase "knowing of the heart" to mean "affirmation of the heart." For example, Nuruddin Sabuni said: "Most of our companions said: "Faith consists of the affirmation of the heart and the confession of the tongue."12 Abu Bakr Kasani says: "Among the Hanafi scholars, Shamsul-Aimma Sarakhsi (d. 490/1097) in "Usul al-Sarakhsi" and Fakhrul Islam Bazdawi (d. 482/1089) in "Usul" included the confession of the tongue in the pillar of faith. They considered it as the second pillar of faith, like the affirmation of

the heart"¹³. However, both scholars said that the confession of the tongue fails in certain places and considered it as "hasanun li ghayrih". In one respect, this supports the view of Imam Maturidi (d. 333/945) regarding the definition of "faith".

Lamishi said about this: "All of the people of the Sunnah say: "Faith is the confession of the tongue and the affirmation of the heart. This is explained by the fact that the heart confirms the tongue. After all, the affirmation of the heart is also necessary for the realization of the truth of faith... In addition, confession is necessary for the implementation of Shariah rulings." ¹⁴

Mulla Ali Qari wrote the following about this: "If a person is able to express the faith in his heart and then says the opposite, this is a proof that his faith has changed. Confession is a pillar of faith that expresses the presence or absence of faith. For example, Shamsul-Aimma Sarakhsi said this openly. But the author of "al-Umda" Abul Barakat Nasafi said: "Confession is a condition for execution of judgments." This is also the belief of the Ash'arites. Also, Abu Mansur Maturidi was of the same belief." 15

Bishr ibn Marisi (d. 217/733) and Ibn Rawandi (d. 298/911) from the Mu'tazilites said: "Iman in the dictionary means "confirmation", and without confirmation, faith does not appear. Therefore, in order to become a believer, the confirmation of the heart and tongue is necessary." ¹⁶

Poet of Basra Fadl ibn Abdussamad Raqqashi (d. 200/815) and one of the Sunni imams Abdullah ibn Sa'id Qattan Kullabi ¹⁷ (ваф. 240/855), and Karramites say: "Faith is formed only by the tongue." However, there is a disagreement between them. For example, Raqqashi said that in order to become a believer, the confession of the tongue and the knowing of the heart are necessary. Abdullah bin Sa'id, unlike him, said that "faith emerges with the knowing of the heart, the confirmation of the heart, and the confession of the tongue." The Karramites said

that faith consists only of the confession of the tongue. In their interpretation, a person who denies in his heart the things that are believed in, and confesses them with his tongue, becomes a Muslim. That is why the Karramites considered the hypocrites of the time of the Companions to be believers ¹⁹. In order to justify their opinion, they cited the hadith, "I was ordered to fight against people until they say: "Laa ilaha illallah." ²⁰

Jahm ibn Safwan, the founder of the doctrine of Jahmiyyah (d. 128/746), and Abul Husayn Salihi, one of the leaders of the Qadaris²¹ said: "Faith is the knowing of the soul"²².

Imam Abu Hanifa (Baф. 150/767) in one of his two sentences, Abu Mansur Maturidi, the commentator Husayn ibn Fadl Bajali (d. 282/896), Abul Hasan Ash'ari (d. 333/945) said: "Faith is the confirmation of the heart". Another of Abul Hasan Ash'ari's definitions of faith is similar to Abul Husayn Salihi's interpretation, but it is an unpopular view in Ash'ari school. Abul Hasan Ash'ari and his followers said: "If a person is able, it is obligatory to say the shahadah."

Abu Bakr Kasani wrote: "The scholars disagreed about whether the affirmation of the heart is a pillar of faith or the confession of the tongue. Most of the Mashaikhs said that if one is not dumb, the pillar of faith is to confess with the tongue. Some people said that affirmation of the heart is a pillar of faith, and confession is a sign of it. The same view was narrated from Abu Hanifa. Abu Mansur Maturidi considered it acceptable" 26.

Abu Hanifa said in his work "Al-Alim wal-Muta'allim": "People become believers with their knowing and affirmation of Allah." In another place, it is said: "Faith is affirmation, knowing, certainty (Yaqin), confession, and Islam." ²⁸

Abul Barakat Nasafi in "Sharh al-Umda" said: "According to Abu Hanifa and Abu Mansur, confession of the tongue is

necessary for the introduction of Islamic rules."²⁹ Nuruddin Sabuni said about this: "Our muhaqqiq companions said: "In order to introduce judgments in the world, confession of the tongue is necessary."³⁰ In addition to citing the literal meaning of the word "faith" as evidence for this, they rely on these two verses: "But you will not believe us, no matter how truthful we are" (Surah Yusuf, verse 17) and "Pharaoh threatened, "How dare you believe in him before I give you permission?" (Surah Taha, verse 71). They also cite the answer in the hadith of Jibril (to the question, "What is faith?") as a basis for this. Lamishi says that just as disbelief has its place in the heart, the place of belief is also in the heart. Just as the pillar of disbelief is related to the heart, the pillar of faith is also related to the heart."³¹

Mulla Ali Qari (d. 1381/1961) analyzed the following narration from "Wasiyyatu Abi Hanifa" about the definition of faith: "Faith is confession with the tongue and confirmation with the heart. Confession alone cannot be faith. Because if confession itself was faith, all the hypocrites would have become believers. Also, knowing alone cannot be faith. Because if knowing, that is, confirmation itself, was faith, all the People of the Book would have become believers."

Affirmation, as opposed to confession, is a hasan li 'aynihi³² pillar, which can never be cancelled. Confession is a condition or a part of faith and is "hasan li ghairih". Therefore, it is sometimes canceled under compulsion and excuses. Because the tongue is the translator of the heart. Therefore, tongue is evidence for the presence or absence of affirmation. If a person has the opportunity to say the word of faith and says another word with his tongue, he is considered a disbeliever. If it is not possible to show faith due to compulsion, he will not be a disbeliever in such a situation. Because danger to one's life is a document of confirmation in the heart. What prompts him to this change is not a change of belief, but a need to avert destruction from himself."³³

Shamsuddin Samarkandi said in the terminological definition given to "faith": "Muhaqqiq scholars say: "Faith is confirmation of what the Messenger of God brought." Therefore, a person who denies the judgments issued by ijtihad does not leave the religion³⁴.

The conclusion of the above views is that faith has a secular and a divine aspect. In the secular aspect, it is enough to confess the word of faith with the tongue. According to the divine aspect, it has seven different interpretations. Five of them are false teachings, and the other two belong to the Ahl al-Sunnah wal-Jama'ah:

The first. According to the teachings of the Kharijites, "Faith is the confirmation of the heart, confession of the tongue, and adherence to the pillars." According to their teachings, a believer leaves Islam with doing a major sin and becomes an infidel. This is completely against the teachings of Islam. Because the Companions, Followers, Salafi Salih and all Muslims agreed that "he who has a small amount of faith in his heart will not stay in hell forever." And again, they said that the intercession of our Prophet belongs to believers who have committed serious sins. After all, it is said in the hadith, "My intercession is for those (believers-Muslims) who have committed great sins." In another hadith, it is said: "He who has even an iota of faith in his heart will not stay in hell." In a narration narrated from Abu Dharr Ghafiri, it is said: "A muslim will enter paradise even if he commits theft or adultery". This indicates that the person who commits a major sin, even if he is not a perfect believer, will definitely come out of hell after receiving the prescribed punishment.

The second. Although the Mu'tazilites have given the same definition of faith as the Kharijites, but in Mu'tazilism, a person who commits a great sin is between two destinations until he repents. In their view, there is a level between the two levels of hell, just as there are two destinations between faith and disbelief. Neither a true disbeliever nor a true believer can take a place in it. On the contrary, it is the destination of those who have sinned greatly.

The third. According to Jahmi's teachings, the knowing of the heart is enough for a person to become a believer. In their eyes, there is no need to the confession of the tongue and to follow the pillars in order to become a believer. According to Jahmi teaching, People of the Book, Hiraql, and Abu Talib also have to be believers.

The fourth. They are the Murjiis, and they say: "Faith consists only of confirmation, and sin does not harm faith, just as obedience does not affect disbelief."

The fifth. According to the doctrine of Karramiyya, faith is only confession with the tongue. According to their definition of faith, hypocrites are also believers.

The sixth. According to the definitions of faith given by Abu Hanifa, Imam Maturidi, Abul Hasan Ash'ari, and the majority of mutakallims, faith consists only of the affirmation of the heart. That is, the confession of tongue is a condition for the introduction of judgments. Action is a condition of perfect faith. However, these two are not components of faith. According to this view, faith is a whole thing that is not made up of anything.

²⁹ Abul Barakat Nasafi. Sharh al-Umda fi Aqida Ahl as-Sunna // Edited by Abdullah Muhammad and Abdullah Ismail. – Cairo: al-Maktaba al-Azhariyya lit-Turath, 2011. – P. 370.

³⁴ Shamsuddin Samarqandi. Al-Ma'arif fi Sharh as-Sahaif // Edited by Abdurrahman Sulayman, PhD thesis. – Amman, 2021. – P. 322.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The seventh. According to imams of three madhhabs and muhaddith scholars, the definition of faith is as follows: "Faith is confirmation of the heart, confession of the tongue, and adherence to the rules." The representatives of this and the previous views are called Ahl as-Sunna wal-Jama'ah. This difference between them is not real, but verbal. In general, one group of Ahl al-Sunnah says that faith is made up of nothing, while the other says that faith is made up of three things. That is, while the Hanafis and the majority of mutakallims say that faith is not complex, the mmams of the three schools of thought and the majority of muhaddiths say that faith is composed of three things. For example, Imam Bukhari, may God bless him and grant him peace, in his "Sahih al-Bukhari", collected many proofs that faith consists of three things.

Although the definitions given by the imams of the three sects and the jumhur muhaddiths are outwardly similar to the definitions of the Mu'tazilites and Kharijites, this is only a outward similarity. However, in essence, the view of the Shafi'is is fundamentally different from the view of the Mu'tazilites and the Kharijites. Because in Mu'tazilites and Kharijites, if one of these three elements of faith is not found, a person is not a believer. To be more specific, according to their teachings, the person who abandons deeds will remain in hell forever. Also, although the definition of faith given by the Hanafis and majority of mutakallims is outwardly similar to the interpretation of the Murjiis, there is only a outward similarity. Because the words of the representatives of the two views are fundamentally different from each other. The Hanafis and majority of mutakallims consider the deed to be necessary and call the person who abandons it a sinner. The Murjiis believe: "A believer is not affected by his deeds."

Based on the outward similarity of the definition given to faith, it is impossible to compare the imams of the three sects and majority of muhaddiths to the Mu'tazilites and the Kharijites. Similarly, based on the definition given by the Hanafis and majority of mutakallims to faith, it is not possible to compare them to the Murjiis.

In general, the Hanafis say that faith consists of the confirmation of the heart, and they say that it is a whole thing, that is, something that is not complicated. The Hanafis cite the following verses as their evidence: إِنَّ الَّذِينَ آمَنُوا وَعَمِلُوا الصَّالِحَاتِ كَانَتُ لَهُمْ جَنَّاتُ الْفِرُدُوسِ نُزُلًا.

"Indeed, those who believe and do good will have the Gardens of Paradise as an accommodation" (Surah Al-Kahf, verse 107). In some places of the Qur'an, faith is connected with the letter of atf. According to the rules of the Arabic language, atf requires mughayarat, that is, atif and matuf are different from each other. Therefore, faith and action are different things.

"Whoever does good, whether male or female, and is a believer, We will surely bless them with a good life" (Surah an-Nahl, verse 97).

In all these verses, faith is a condition for the acceptance of deeds. So, if faith is a shart (condition), action is mashrut (conditional). According to the rule of the Arabic language, shart and mashrut are considered separate things.

One of the issues to be studied and researched under the topic of faith is "Is it obligatory to believe on the basis of reason or by nagl?". For example, Nuriddin Sabuni, in his work "al-Bidaya", says: "Belief in Allah is obligatory, and disbelief is haram." Scholars differed on whether faith is obligatory based on reason or nagl. In particular, there are different views among scholars regarding the fate of a person who died in areas where the call of Islam did not reach. Also, are the people who grew up in uncivilized areas and died without converting to Islam, sorry or not? The same is the case with the people who lived in the period of Fatra."35

Batinis, Rafidhis, Mushabbiha, and Kharijites said: "Nothing is wajib through the reason." Through it, the goodness of faith and the evil of disbelief will not be known. On the contrary, all this will be known through Shariah."36

The Mu'tazilites said: "Reason requires faith and gratitude to the benefactor." Judgments are set with the reason itself."37 Ash'arites say: "With the reason, something does not become wajib or haram." However, it is known through it that some things are good or bad. According to Imam Ash'ari, all rulings that are imposed on the mukallaf are obtained through narration. He cited the verse "And We would never punish 'a people' until We have sent a messenger 'to warn them'" (Surah Al-Isra, verse 15) as evidence³⁸.

According to Imam Abu Hanifa and Imam Maturidi, the reason is the means of understanding what is perceived, just as the ear is the means of knowing what is heard. With it, it is known whether certain things are good or bad, obligatory or forbidden. Mu'tazilites say that the reason is an independent judge. The Hanafis say that the reason actually reveals that God is the one who introduces judgments. According to their interpretation, just as the Messenger identifies wajib and the one who determines the wajib, the reason identifies the wajib and the one who determines the wajib. The Hanafis do not see reason as an independent judge or as a guide to mankind. On the contrary, they interpret it only as a tool.

Hakim Shahid in his book "Muntaqah" quoted the following narration from Abu Hanifa: "It is not an excuse for a person not to recognize his Creator because he sees the creation of the heavens and the Earth, himself, and others." In shar'i matters, he is considered excused until the document arrives. Abu Hanifa said: "Even if Allah had not sent a prophet, it would

³⁸ Abul Barakat Nasafi. Sharh al-Umda fi Aqida Ahl as-Sunna // Edited by Abdullah Muhammad and Abdullah Ismail. - Cairo: al-Maktaba al-Azhariyya lit-Turath, 2011. – P. 366.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

have been obligatory for the creatures to know Allah through their minds." This view was supported by the scholars of Ahl Sunna wal-Jama'ah.³⁹ We can see that Abu Hanifa and Imam Maturidi differentiate between jurisprudential issues and religious issues at this point. They argued that all intelligent people are equally responsible in the matter of "Knowing Allah the Exalted". However, they did not raise this topic in other creedal and jurisprudential issues.

According to the hadith "The pen has been lifted from three", some representatives of the Maturidiyya doctrine noted that before reaching the age of puberty, a child is not mukallaf (responsible) for any of the creedal and jurisprudential issues. However, the second group of scholars interpreted this hadith by focusing on the issues of figh.

In the 12th and 13th centuries, the topic of "the increase and decrease of faith" was the cause of intense debates and discussions among religious sects and groups.

Abu Hanifa in "Al-Fiqh al-Akbar" says: "The Iman [essence of faith] of those in heavens and on earth does not increase or decrease with respect to the content of [essential] faith, but [is vulnerable to increase and decrease with respect to the [level] of conviction and affirmation. All believers are equal in Iman [essence of faith] and Tawheed [monotheism], but they vary in their deeds."40 The phrase in this text "but [is vulnerable to] increase and decrease with respect to the [level] of conviction and affirmation" is redundant and has been added to the text. Because it doesn't exist in the original copy of the book⁴¹. In the work "Wasiyyatu Abi Hanifa", it is said: "Faith does not increase and decrease." Because its decrease is imagined with the increase of disbelief, and its increase with the decrease of disbelief. How can a person be a believer and an unbeliever at the same time? A believer is a true believer, a disbeliever is a true disbeliever. Just as there is no doubt in disbelief, there is no doubt in faith. Allah Almighty said about this: "It is they who are the true believers. They will have elevated ranks, forgiveness, and an honourable provision from their Lord." (Surah al-Anfal, verse 4). It is said in another verse: "They are indeed the true disbelievers. And We have prepared for the disbelievers a humiliating punishment." (Surah al-Nisa, verse 151)⁴².

Lamishi says about this: "As we explained above, if faith consists of confession and confirmation, it does not increase or decrease. Because confession and affirmation do not create the possibility of increase or decrease. Whoever interprets

righteous deeds as a part of faith, they said: "Faith increases and decreases." Ghaznavi confirmed this view in his work "Usul ad-Din": "There are several interpretations of the verses in the Holy Qur'an about the increase of faith: First, the Companions believed and affirmed in a general way (ijmali). Then, gradually, as the duties (fardhs) increased, they also believed in the duties. As a result, their faith increased from the attention of detailed (tafsili) faith; second, to be persistent and steadfast in faith every hour is an increase in faith; and thirdly, the belief and sincerity (ikhlas) of the believers increases every hour. When a miracle was shown to the Companions, their faith in the Messenger of Allah, his message, and the religion of Islam increased even more 45.

Sighnaqi said about this in his work "at-Tasdid fi Sharh at-Tamhid": "Faith itself does not increase or decrease independently. Only by apostasy does it become defective. The increase in faith is realized by the addition of the same thing as faith. Therefore, faith does not increase with obedience, because obedience is not the same as faith... Faith is eternal confirmation of what God has announced. Therefore, no increase or deficiency can be imagined in it."

Shamsuddin Samarqandi in his work "as-Sahaif al-Ilahiyya" quotes the words of the scholars of the predecessors and successors about the increase and decrease of faith one by one and says: "Actually, faith increases and decreases. It doesn't matter if obedience is included in it or not. After all, the confirmation of the heart is a firm belief. It embraces strength and weakness. Because religious issues start from simplicity and become more complicated."⁴⁷ He said in his work

"Al-Ma'arif fi Sharh al-Sahaif": "Whoever looks at the truth of this matter will admit that there is a change in faith and that it increases and decreases. This is the secret of this subject." 48

Abul Muin Nasafi⁴⁹, Khabbazi⁵⁰, Kasani⁵¹, and Usmandi also talked about the increase and decrease of faith and said that faith never increases or decreases.⁵²

It is noteworthy that in the sources related to the teaching of Maturidiyya in the 12th-13th centuries, the phrase "against the Ash'arites" was not used in the topics of "increase and decrease of faith". However, we can see that the authors repeatedly cited the phrase "Khilafan to the Shafi'is" (against the Shafi'is) in this topic. It is clear from this that the true Ash'arites did not say that faith increases and decreases. Because in their definitions of faith, they did not consider action as a component

of faith. According to the creedal rule, "Whoever says that faith is complicated", his faith is increasing or decreasing in his eyes. Those who say that faith is a simple thing, in their eyes, the state of faith is always the same.

Imam Radhi, Imam al-Haramayn and Imam Ghazzali from the Ash'arites said: "Faith is neither increased nor decreased." Imam Radhi and many scholars did not accept that faith can be increased or decreased. Because they said that there will be no change in confirmation. Husayn ibn Shihabuddin Kiilani (d. 889) said that the affirmation itself accepts increase and decrease⁵⁴.

Shaykh Muhyiddin Nawawi says: "The muhaqqiq scholars of our companions said: "The confirmation itself does not increase and decrease. Shar'i (legal) faith increases and decreases, that is, faith increases due to good deeds, and on the contrary, it decreases." 55

It is appropriate to consider the following hadiths related to faith:

It is narrated from Anas, may Allah be pleased with him: "When the Messenger of Allah (pbuh) delivered his sermon, he said: "A person who is not trustworthy has no faith and whoever breaches his pledge has no religion." (Narrated by Imam Bayhaqi in his work "Shu'ab al-Iman").

In another hadith narrated from Abu Umama, the Messenger of Allah, may God bless him and grant him peace, said: "Whoever loves for the sake of Allah and hates for the sake of Allah, gives for the sake of Allah and withholds for the sake of Allah, he will have perfected his faith" (Narrated by Abu Dawud and Imam Tirmidhi).

Anas ibn Malik reported: The Messenger of Allah, peace and blessings be upon him, said: "The faith of a servant is not upright until his heart is upright, and his heart is not upright until his tongue is upright. A man will not enter Paradise if his neighbor is not secure from his evil". (Narrated by Imam Ahmad)

All these hadiths are talking about perfect faith, that is, these hadiths mean that "one who does not have trustworthiness does not have perfect faith." For example, in another hadith it is said that the prayer of the neighbor of the mosque is performed only in the mosque. It does not mean that if the neighbor of the mosque prays in his house, his prayer will not be a prayer. Perhaps it is understood that if the neighbor of the mosque does not pray in the mosque, but prays at home, his prayer will not be perfect. Likewise, we should interpret these hadiths as "a person without a deposit does not have perfect faith." Otherwise, a person who harms his neighbor or betrays a deposit must be a disbeliever.

Among the hadiths related to faith, there are hadiths which apparently support the view of the Murjiis, that is, which apparently express the meaning that "the believer is not affected

by sin." For example, the Messenger of God (PBUH) said this in a hadith told to Mu'az ibn Jabal: "Whoever proclaims with a sincere heart $\mathring{\mathcal{U}}$ [there is no god but Allah] and $\mathring{\mathcal{U}}$ [and Muhammad is His Messenger], Allah the Almighty will forbid the fire for them."

'Ubadah ibn al-Samit reported: The Messenger of Allah, peace and blessings be upon him, said, "Whoever testifies that there is no God but Allah alone without any partners, that Muhammad is His servant and His messenger, that Jesus is the servant of Allah and His messenger, His word which He bestowed upon Mary and a spirit from Him, and that Paradise is the truth and Hellfire is the truth, then Allah will admit him into Paradise by whatever good deeds he had done." (Narrated by Imam Muslim)

In another narration from Imam Muslim, it is said: "The Messenger of Allah, peace and blessings be upon him, said: "Whoever testified that there is no God but Allah and Muhammad is the Messenger of Allah, then Allah will forbid him from the Hellfire."

Many hadiths with the same meaning as these hadiths may appear to mean that there is no need for action to the believer. However, after studying other hadiths in its alternative, one can come to the conclusion that "a person who is a sincere believer will definitely enter heaven after receiving the punishment for his sins, he will never stay in hell forever".

ENSURING PEDIATRIC MEDICATION SAFETY: STRATEGIES FOR PREVENTING ERRORS AND ADVERSE DRUG REACTIONS

Gayathri N.S¹

¹Vice Principal, Child Health Nursing Department, Sri Shanmugha College of Nursing for Women, Pullipalayam, Morour.PO. Sankari. T.K.Salem.Dt.

ABSTRACT

Pediatric medication safety is paramount in healthcare due to children's vulnerability to medication errors and adverse drug reactions. This review delves into the multifaceted nature of pediatric medication safety, exploring factors contributing to errors and proposing strategies for prevention. It emphasizes the importance of standardized dosing, medication reconciliation, and interprofessional collaboration in enhancing pediatric medication safety.

KEYWORDS: pediatric medication safety, medication errors, adverse drug reactions, medication dosing, medication administration, healthcare quality improvement.

INTRODUCTION

Ensuring the safety of medication administration in pediatric patients is a critical aspect of healthcare delivery. Children, with their unique physiological characteristics and developmental stages, require specialized attention to prevent medication errors and adverse drug reactions. This review aims to examine the complexities of pediatric medication safety, identify contributing factors to errors, and propose evidence-based strategies for prevention. By addressing these challenges, healthcare providers can optimize medication safety practices and improve patient outcomes in pediatric populations.

Factors Contributing to Pediatric Medication Errors: Pediatric medication errors result from a combination of factors, including inaccurate dosing calculations, lack of standardized dosing guidelines, challenges in medication formulation, communication barriers, and insufficient pediatric-specific training among healthcare providers. Understanding these factors is crucial for identifying vulnerabilities in the medication administration process and implementing targeted interventions to mitigate risks. For instance, inaccurate dosing calculations can lead to under- or overdosing, posing serious risks to pediatric patients. Lack of standardized dosing guidelines exacerbates this problem, as healthcare providers may resort to ad-hoc dosing practices, increasing the likelihood of errors. Additionally, challenges in medication formulation, such as limited availability of pediatric-friendly formulations, further complicate medication administration in children. Communication barriers between healthcare providers, caregivers, and patients also contribute to medication errors, highlighting the importance of clear and effective communication in pediatric medication safety. Moreover, inadequate pediatric-specific training among healthcare providers can hinder their ability to accurately assess dosing requirements and identify potential risks, underscoring the need for ongoing education and training in pediatric pharmacotherapy.

Pediatric medication errors represent a significant challenge in healthcare, with various factors contributing to their occurrence. Understanding these factors is crucial for identifying vulnerabilities in the medication administration process and implementing targeted interventions to mitigate risks

- 1. Inaccurate Dosing Calculations: One of the primary factors contributing to pediatric medication errors is inaccurate dosing calculations. Unlike adults, pediatric patients require individualized dosing based on factors such as weight, age, body surface area, and developmental stage. Healthcare providers must perform precise calculations to determine the appropriate medication dosage for each child. However, miscalculations or misinterpretation of dosing guidelines can lead to underdosing, resulting in ineffective treatment, or overdosing, posing serious risks of adverse effects and toxicity.
- 2. Lack of Standardized Dosing Guidelines: The absence of standardized dosing guidelines for pediatric medications exacerbates the risk of medication errors. Unlike adult medications, which often have established dosing regimens based on standardized criteria, pediatric dosing may vary significantly depending on the child's age, weight, and clinical condition. Without clear and consistent dosing guidelines, healthcare providers may resort to ad-hoc dosing practices, increasing the likelihood of errors. Standardizing pediatric dosing guidelines based on evidence-based practices and age-appropriate considerations can mitigate this risk and improve medication safety.
- **3.** Challenges in Medication Formulation: Medication formulation poses another challenge in pediatric medication safety. Many medications are formulated for adults and may not be available in age-appropriate formulations suitable for pediatric patients, such as liquid suspensions or chewable

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

tablets. As a result, healthcare providers may need to manipulate adult formulations to administer accurate doses to children, increasing the risk of dosing errors. Additionally, differences in medication concentrations and strengths among formulations can further complicate dosing calculations and administration.

- **4. Communication Barriers:** Effective communication is essential for safe medication administration in pediatric patients. However, communication barriers between healthcare providers, caregivers, and patients can contribute to medication errors. Poor communication of medication orders, dosing instructions, or patient-specific information increases the likelihood of misinterpretation and misunderstanding, leading to errors in prescribing, dispensing, or administering medications. Language barriers, cultural differences, and health literacy limitations may also hinder effective communication, highlighting the need for clear and concise communication strategies tailored to the needs of pediatric patients and their families.
- 5. Insufficient Pediatric-Specific Training: A lack of specialized training in pediatric pharmacotherapy among healthcare providers can also contribute to medication errors. Pediatric patients present unique challenges due to their developmental differences, physiological characteristics, and susceptibility to medication-related adverse effects. Healthcare providers must possess the knowledge and skills necessary to accurately assess dosing requirements, calculate medication doses, and monitor for potential adverse reactions in pediatric patients. Insufficient training in pediatric pharmacology and therapeutics may compromise providers' ability to safely prescribe, dispense, and administer medications, increasing the risk of errors and adverse drug events.

Strategies for Preventing Medication Errors: Effective prevention of pediatric medication errors requires a multifaceted approach encompassing standardized dosing guidelines, medication reconciliation processes, medication dosing calculations, medication administration techniques, barcode medication administration (BCMA) systems, and interprofessional collaboration. Standardization of pediatric dosing guidelines based on weight, age, and body surface area is essential to ensure accurate medication dosing and minimize dosing errors. Moreover, the availability of age-appropriate medication formulations, such as liquid suspensions and chewable tablets, facilitates accurate dosing and administration in pediatric patients. Utilization of weight-based dosing calculations and standardized medication dosing tools further reduces the risk of dosing errors and enhances medication safety. Implementation of robust medication reconciliation processes during transitions of care helps identify discrepancies in medication regimens and prevents medication errors. Barcode medication administration (BCMA) systems enhance medication safety by verifying patient identity, medication accuracy, and administration routes at the point of care. Interprofessional collaboration among healthcare team members, including pediatricians, nurses, pharmacists, and caregivers, fosters a culture of safety and facilitates comprehensive medication management. By adopting these

strategies, healthcare organizations can mitigate the risk of pediatric medication errors and enhance patient safety.

Preventing medication errors in pediatric patients requires a multifaceted approach that addresses various aspects of the medication use process. Healthcare organizations and providers can implement several evidence-based strategies to mitigate the risk of medication errors and enhance pediatric medication safety.

1. Standardization of Pediatric Dosing Guidelines

Standardizing pediatric dosing guidelines based on weight, age, and body surface area is essential to ensure accurate medication dosing and minimize dosing errors. These guidelines provide clear recommendations for dosing calculations and administration, reducing variability in prescribing practices and enhancing medication safety. By adhering to standardized dosing protocols, healthcare providers can minimize the risk of under- or overdosing, especially in vulnerable pediatric populations.

2. Utilization of Pediatric-Friendly Medication Formulations

Availability of age-appropriate medication formulations, such as liquid suspensions, chewable tablets, and oral dissolvable tablets, facilitates accurate dosing and administration in pediatric patients. Pediatric-friendly formulations are easier to administer and are more palatable to children, increasing medication compliance and reducing the likelihood of dosing errors. Healthcare organizations should prioritize the availability of pediatric-specific formulations to meet the unique needs of pediatric patients and enhance medication safety.

3. Medication Dosing Calculations

Utilization of weight-based dosing calculations and standardized medication dosing tools helps healthcare providers accurately calculate pediatric medication doses. Weight-based dosing accounts for variations in pediatric patients' body weight and ensures that medications are dosed appropriately to achieve therapeutic effects while minimizing the risk of adverse reactions. Standardized dosing tools, such as pediatric dosing calculators and reference guides, assist healthcare providers in making informed dosing decisions, reducing the likelihood of dosing errors and enhancing medication safety.

4. Medication Reconciliation Processes

Implementing robust medication reconciliation processes during transitions of care, such as admission, transfer, and discharge, helps identify discrepancies in medication regimens and prevent medication errors. Healthcare providers should systematically review patients' medication histories, reconcile medication lists, and communicate changes in medication regimens to ensure continuity of care and medication safety. Effective medication reconciliation processes reduce the risk of prescribing errors, duplicate therapies, and adverse drug reactions, enhancing patient safety in pediatric settings.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

5. Barcode Medication Administration (BCMA) Systems

Adoption of barcode medication administration (BCMA) systems enhances medication safety by verifying patient identity, medication accuracy, and administration routes at the point of care. BCMA systems use barcode technology to scan medication labels, patient wristbands, and healthcare provider badges, ensuring that the right medication is administered to the right patient via the right route at the right time. By reducing the risk of medication administration errors, BCMA systems enhance pediatric medication safety and improve patient outcomes.

6. Interprofessional Collaboration

Promoting collaboration among healthcare team members, including pediatricians, nurses, pharmacists, and caregivers, fosters a culture of safety and facilitates comprehensive medication management. Interprofessional collaboration enables healthcare providers to share knowledge, expertise, and resources, leading to more informed medication decisions and enhanced patient safety. By working together to identify potential risks, implement preventive strategies, and monitor patient outcomes, interprofessional teams can optimize medication safety practices and improve patient outcomes in pediatric populations.

In summary, implementing these strategies, including standardizing dosing guidelines, utilizing pediatric-friendly formulations, conducting accurate dosing calculations, implementing medication reconciliation processes, adopting BCMA systems, and fostering interprofessional collaboration, is essential for preventing medication errors and enhancing pediatric medication safety. By addressing various aspects of the medication use process and promoting a culture of safety, healthcare organizations can optimize medication safety practices and improve patient outcomes in pediatric populations.

Preventing Adverse Drug Reactions: In addition to preventing medication errors, healthcare providers must also focus on preventing adverse drug reactions (ADRs) in pediatric patients. Comprehensive medication review, patient and family education, and monitoring and surveillance are key strategies for preventing ADRs. Conducting thorough medication reviews helps identify potential drug-drug interactions, allergies, and adverse drug reactions, enabling healthcare providers to adjust treatment regimens accordingly. Providing education to patients and families about medication indications, dosing instructions, potential side effects, and adherence strategies empowers them to actively participate in medication management and recognize signs of adverse reactions. Robust monitoring and surveillance systems track medication-related adverse events, including near misses and ADRs, enabling timely intervention and quality improvement initiatives. By implementing these strategies, healthcare organizations can enhance pediatric medication safety and improve patient outcomes.

In addition to addressing medication errors, healthcare providers must prioritize efforts to prevent adverse drug reactions (ADRs) in pediatric patients. Adverse drug reactions are unintended and harmful responses to medications, which

can range from mild to severe and may occur due to various factors, including patient characteristics, medication interactions, and dosing errors. Preventing ADRs in pediatric populations requires a comprehensive approach encompassing medication review, patient and family education, and monitoring and surveillance.

Comprehensive Medication Review

A critical step in preventing adverse drug reactions is conducting thorough medication reviews for pediatric patients. Healthcare providers must carefully evaluate each medication prescribed to pediatric patients, considering factors such as drug-drug interactions, patient allergies, and potential side effects. This comprehensive review process helps identify medications that may pose a risk of adverse reactions and allows healthcare providers to make informed decisions regarding medication therapy. Additionally, healthcare organizations can implement protocols for regular medication review to ensure ongoing monitoring of pediatric patients' medication regimens and timely intervention when necessary.

Patient and Family Education

Educating pediatric patients and their families about medication use is essential for preventing adverse drug reactions. Healthcare providers should provide clear and comprehensive information regarding medication indications, dosing instructions, potential side effects, and strategies for medication adherence. Empowering patients and families with knowledge about their medications enables them to actively participate in medication management and recognize signs of adverse reactions. Furthermore, healthcare providers can offer guidance on how to respond to adverse reactions, such as contacting healthcare professionals or seeking medical attention promptly. By fostering effective communication and education, healthcare providers can enhance medication safety and reduce the risk of adverse drug reactions in pediatric patients.

Monitoring and Surveillance

Robust monitoring and surveillance systems are essential for detecting adverse drug reactions in pediatric patients and implementing timely interventions. Healthcare organizations can implement protocols for monitoring medication-related adverse events, including near misses and ADRs, through methods such as medication incident reporting systems and medication error tracking systems. Additionally, healthcare providers should conduct regular assessments of pediatric patients for signs and symptoms of adverse reactions, such as allergic reactions, gastrointestinal disturbances, and changes in vital signs. Early recognition of adverse reactions allows healthcare providers to intervene promptly, adjust medication regimens as needed, and prevent further harm to pediatric patients.

CONCLUSION

Pediatric medication safety is a complex yet essential aspect of healthcare delivery, requiring collaborative efforts from healthcare providers, patients, families, and healthcare organizations. By addressing factors contributing to medication errors and adverse drug reactions, and implementing evidence-

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

based strategies for prevention, healthcare organizations can optimize medication safety practices and improve patient outcomes in pediatric populations. Embracing a culture of safety, continuous quality improvement, and interprofessional collaboration is paramount to ensuring the safety and wellbeing of pediatric patients receiving medication therapy.

FACTORS INFLUENCING LSPU - MASTER IN PUBLIC ADMINISTRATION GRADUATES ON THEIR JOB PERFORMANCE

Katrina Joanne L. Villacorta

Laguna State Polytechnic University - Santa Cruz Main Campus, Philippines

ABSTRACT

The main objective of the study is to determine the employment status of the LSPU-MPA 2018-2023 and perform an assessment of various factors influencing their job performance and career progression. Moreover, this research will provide valuable insights for both academic institution and employers. The data collected would consist of the responses and demographic profiles gathered using a standardized and self-designed questionnaire via Google Form, where 104 respondents, including 52 MPA 2018-2023 graduates and 52 supervisors, responded. The data gathered was analyzed through statistical treatment the following; Descriptive statistics e.g. mean, standard deviation, frequency, and correlational analysis and regression analysis, as well as, to test the hypotheses and the significance and strength of the relationship. The result reveals that there is no significant difference in the job performance on the level of LSPU-MPA graduates when the respondent is grouped by age, gender, educational attainment, work experience, and employment status, p-value>0.05. At the same time, there is a significant difference in job performance in competence, commitment, and teamwork in LSPU-MPA graduates the respondent is grouped by job level or position after MPA graduation, p-value < 0.05. Also, there is no significant difference in the level of credibility of the LSPU-MPA graduate when the respondent is grouped by job level or position before the employer. However, there is also a significant difference in job performance when the respondent is grouped by the performance rating, p-value < 0.05. There is no significant difference in job performance on LSPU – MPA when the respondent is grouped by promotions received and by the length of service, p-value > 0.05. Furthermore, there was a statistically significant monotonous relationship between the job performance of the LSPU-MPA graduates and the influential factors. The strength of relationships is weak to strong, connoting changes in the influential factor lead to changes in competence, commitment, teamwork, and credibility of the respondents. Thus, there is a term for a relative change in job performance.

KEYWORDS: Job Performance, Personal Attributes, Leadership Abilities, Organizational support, Competence, Commitment, Teamwork, Credibility

INTRODUCTION

Pursuing higher education is one of a person's commitments and opportunities as well, especially to create space for the person to have higher career prospects and thus perform at the Lifelong learning commitments provide opportunities for personal development advancement for graduate students. Therefore, higher education is not just a status symbol but rather an obligation that builds greater responsibility to improve performance. Higher education's goal is to produce quality graduates who are versatile to diverse the environment, most zealous to learn more knowledge to improve skills and after employment to use such learned knowledge for new knowledge hence apply it in interpreting problems (Doe, 2015). The Master of Public Administration program at Laguna State Polytechnic University is designed to provide students with the requisite competencies and knowledge to practice in the public administration discipline. Furthermore, the program is intended to enable graduates to serve in various leadership or managerial positions within the government agencies, non-government organizations, and other public service sector. Based on this, the current research is aims to identify the employment status of LSPU-MPA graduates between 2018-2023 and examine the

varied factors that influence the individual's job performance and professional growth.

MATERIALS AND METHODS

This study will utilize a quantitative research design to investigate the factors that affect the job performance of MPA graduates from LSPU. Since the target respondents for this study are the MPA graduates and their immediate supervisors, the study provides a directed inquiry into the job performance of these people. The selection of the quantitative research design offers a disciplined, numerically data-driven way to gather and analyze information. According to Siedlecki (2020), descriptive research design is a research process that accumulates data conveying information about a population in the natural environment being studied. The respondent populations are then randomly selected from the population, and a specific survey questionnaire serves as the primary data gathering instrument. In the methodology, the survey instrument's consistency played a significant impact factor. The consistency of survey instrument reliability was checked using Cronbach's Alpha. The survey questionnaire was formulated to collect information about IV and DV. Independent variables for consideration include demographic profile, personal attributes, leadership abilities, and organizational support. The dependent

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

variables in this analysis are competence, commitment, teamwork, and credibility in job performance. Survey method is the most fitting method in this research since surveys, according to Babbie (2015), can be seen as vehicles to sample attitudes in populations.

RESULT AND DISCUSSION

Demographic Profile of the Respondents in Terms of Age

The majority of the respondents fall within the age groups of 29-34 and 23-28, with 26.92% and 23.08% of the total, respectively. The percentage of graduates decreases as their age goes beyond 34 years old, and older groups have a smaller proportion. The age group of 59-63 years old has the smallest, with only 1.92% in total.

Demographic Profile of the Respondents in Terms of Gender In terms of gender, most of LSPU-MPA graduates are female, comprising 73.08% of the total, while male respondents make up the minority, with 26.92% of the total. Percentage of females is markedly high than males.

Demographic Profile of the Respondents in Terms of Educational Attainment

The results show that the majority of the graduates hold a Master's Degree, representing 96.15% of the total. Only small portion have achieved a Doctorate Degree, with 3.85% of the total respondents. There is a significantly higher representation of individuals with Master's Degrees among the surveyed LSPU-MPA graduates.

Demographic Profile of the Respondents in Terms of Year Graduated in MPA Program

In terms of the year of graduations of MPA graduates, year 2023 has the largest percentage of MPA graduates, comprising 40.38% of the total, followed by the year 2022, with 15.38%. The year 2018 and 2020 have the same percentage of graduates, with 13.46% while 2021 have 9.62% of the total graduates. The year 2019 has the smallest number of graduates, accounting for 7.69% of the total.

Demographic Profile of the Respondents in Terms of Work Experience

The majority of the respondents have work experience in the Government sector, comprising 71.15% of the total. The other types of work experience, such as Administrative, Private, Office Staff/Clerical, Research, Accounting, and Others, have smaller percentages, ranging from 1.92% to 11.54%.

Demographic Profile of the Respondents in Terms of Employment Status

In terms of employment status, majority of the respondents before enrolling in the MPA were in Regular/Permanent employment, accounting for 57.69% of the total respondents. After completing the MPA program, there was a significant increase in the number of individuals in Regular/Permanent employment, with the percentage increasing to 88.46%. This indicates a positive impact of the MPA program on securing permanent employment. The results illustrate the changes in employment status among individuals before and after completing the MPA program.

Demographic Profile of the Respondents in Terms of Job Level Position

The majority of the respondents before enrolling in the MPA were in Clerical positions, which accounted 50.00% of the total. After completing the MPA program, there was a significant increase in the number of graduates in Professional/Supervisor positions, with the percentage of 59.62%. This indicates a positive impact of the MPA program on career advancement to supervisory roles.

Demographic Profile of the Respondents in Terms of Performance Rating

Most of the respondents before enrolling in the MPA program received a performance rating of Very Satisfactory, accounting for 69.23% of the total. After completing the MPA program, there was a slight increase in the number of individuals with a Very Satisfactory performance rating, with the percentage increasing to 78.85%. Conversely, there were decreases in the number of individuals with Satisfactory and Excellent performance ratings after completing the MPA program. Overall, there is an improvement in performance ratings.

Demographic Profile of the Respondents in Terms of Number of Promotions After Graduation

In terms of number of promotions, most of the graduates, with 51.9% had 1 promotion. This implies that there is an impact when it comes to promotion after graduation of LSPU-MPA graduates. Next is 15.9% which had 2 promotions, followed by 11.54% and 9.62% for 0 and none promotions.

Demographic Profile of the Respondents in Terms of Years in Service

In terms of number of years in service, the MPA graduates from LSPU were mostly in 5-8 years in service, comprising, 42.31% of the total respondents of the study. This is followed by the 9-12 years in service, with 26.92% of the total. For 1-4 and 29-32 years in service have similar percentages of graduates, that is, 9.62% while other years have smallest percentage, accounting for 3.85% of the total.

Table 11
Level of LSPU-MPA Graduates' Influential Factors in terms of Personal Attributes

| | Statements | | | A Graduates | , | | ervisor |
|----|--|------|------|----------------|------|------|----------------|
| | Statements | WM | SD | Interpretation | WM | SD | Interpretation |
| 1. | The level of self-motivation I possess enhances my job performance. | 4.73 | 0.45 | Excellent | 4.75 | 0.44 | Excellent |
| 2. | My ability to work well independently significantly contributes to my job performance. | 4.69 | 0.58 | Excellent | 4.77 | 0.43 | Excellent |
| 3. | I effectively manage my time and prioritize tasks, leading to improved job performance. | 4.63 | 0.53 | Excellent | 4.75 | 0.44 | Excellent |
| 4. | My communication skills positively impact my job performance. | 4.69 | 0.47 | Excellent | 4.75 | 0.44 | Excellent |
| 5. | The level of professionalism and ethical behavior I exhibit significantly influences my job performance. | 4.79 | 0.41 | Excellent | 4.81 | 0.40 | Excellent |
| Co | mposite Mean | 4.71 | | Excellent | 4.77 | | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79= Poor.

Based on these results, it can be concluded that LSPU-MPA graduates possess strong personal attributes, especially professionalism, ethical behavior, and self-motivation which are equally important in the workplace, and have a positive impact on job performance. However, time management and task prioritization field are seen weak. There may be a need to further enhance the time management, and a training intervention program could be organized to addressed gap. Also, the positive perceptions of supervisors underscore the

importance of support and development opportunities to sustain the LSPU-MPA output. According to Beaumont-Oates (2023) study, personality attributes have a significant impact on job work output, coworkers' relationships, and the overall work ambiance. It is essential to understand human characteristics at work to create a harmonious environment, and influence work output.

Table 12
Level of LSPU-MPA Graduates' Influential Factors in terms of Leadership Abilities

| | Level of LSPU-MPA Grad | auates' 11 | ıjıuennaı | Factors in terms of | j Leaaers | nıp Abili | nes |
|-------|---|------------|-----------|---------------------|-----------|-----------|----------------|

| | Statements | WM | SD | Interpretation | WM | SD | Interpretation |
| 1. | My ability to take initiative and be proactive positively affects my job performance. | 4.62 | 0.49 | Excellent | 4.77 | 0.47 | Excellent |
| 2. | The level of influence I have in my team positively impacts my job performance. | 4.63 | 0.49 | Excellent | 4.73 | 0.49 | Excellent |
| 3. | My ability to motivate and inspire others contributes to improved job performance. | 4.75 | 0.44 | Excellent | 4.79 | 0.46 | Excellent |
| 4. | My problem-solving and decision-making skills enhance my job performance. | 4.71 | 0.46 | Excellent | 4.79 | 0.41 | Excellent |
| 5. | The level of adaptability and resilience I demonstrate influences my job performance. | 4.69 | 0.47 | Excellent | 4.79 | 0.41 | Excellent |
| Compo | Composite Mean | | 0.39 | Excellent | 4.77 | 0.39 | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79= Poor.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The perception of LSPU graduates and supervisors on the leadership abilities of LSPU MPA graduates is significant. If both group of respondents uphold MPA graduates' strong leadership abilities, it is an indication that they are capable of leading in professional situations. This is consistent with the demands in the field of public administration that require effective leaders to foster success and meet organizational objectives. However, the difference in the perception of the graduates' effect on the influence to their respective teams in comparison to their strengths in the areas of leadership attributes is an area of concern. This margin implies that although MPA graduates have strong leadership attributes, they may not be fully using them to have a positive influence on their

teams or job performance as perceived by supervisors. This area can be improved by offering more leadership-oriented opportunities or mentoring LSPU MPA graduates on how to influence and inspire their teams. The same can be actualized by facilitating a conducive organizational climate that supports the role of MPA graduates by recognizing their input as leaders. Furthermore, training on leadership attributes can help to bridge the perception gap regarding the graduates' influence to their teams by graduates and supervisors. According to Al-Malki et al., (2018) graduates who have strong leadership attributes meet their task-related objectives towards organizations' success. Leadership skills development can enhance graduates' job performance.

Table 13

evel of LSPU-MPA Graduates' Influential Factors in terms of Organizational Support

| | Level of LSPU-MPA Graduates' Influential Factors in terms of Organizational Support | | | | | | | | | | |
|-------|---|------|---------|----------------|------|------|----------------|--|--|--|--|
| | Ctatamanta | LS | SPU-MP. | A Graduates | | Supe | ervisor | | | | |
| | Statements | WM | SD | Interpretation | WM | SD | Interpretation | | | | |
| 1. | The resources and tools provided by the organization significantly contribute to my job performance. | 4.62 | 0.49 | Excellent | 4.67 | 0.51 | Excellent | | | | |
| 2. | The level of support and guidance received from my supervisor positively impacts my job performance. | 4.63 | 0.53 | Excellent | 4.71 | 0.46 | Excellent | | | | |
| 3. | The training and development opportunities offered by the organization enhance my job performance. | 4.63 | 0.56 | Excellent | 4.71 | 0.46 | Excellent | | | | |
| 4. | The clarity and effectiveness of organizational policies and procedures facilitate my job performance. | 4.63 | 0.56 | Excellent | 4.75 | 0.44 | Excellent | | | | |
| 5. | The level of teamwork and collaboration within the organization positively influences my job performance. | 4.73 | 0.45 | Excellent | 4.77 | 0.43 | Excellent | | | | |
| Compo | performance. Composite Mean | | | Excellent | 4.72 | | Excellent | | | | |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79= Poor.

On the other hand, the supervisor's perception of the level of teamwork and collaboration within the organization and their assessment of the provision of tools and resources in as much the same way the high level of perception of the MPA graduates on the level of organizational support they are getting. With this kind of perception, the supervisors' level of perception on this aspect is a little bit higher than the MPA graduates. However, the slight discrepancy in perception indicates the potential for supervisors to further advocate for and ensure the provision of necessary resources, tools and support to optimize the job performance of LSPU-MPA graduates. Personal attributes, leadership abilities, and organizational support as perceived by

the LSPU-MPA graduates and supervisors are very important in developing job performance. Through the understanding of the performance influencers, graduates and supervisors can pursue as well as efforts towards the right course and develop their job performance. Abou-Moghli (2015) study indicates that the provision of job support is likely to increase job satisfaction and job commitment are fulfilled which results in an improvement in job performance. Therefore, organizational support remains an essential part in the improvement of the graduates' job performance.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 14 Level of LSPU-MPA Graduates' Job Performance in terms of Competence

| | Statements | LS | SPU-MP | A Graduates | Supervisor | | |
|-------|---|------|--------|----------------|------------|------|----------------|
| | Statements | WM | SD | Interpretation | WM | SD | Interpretation |
| 1. | I possess the necessary knowledge and skills to perform my job effectively. | 4.77 | 0.47 | Excellent | 4.77 | 0.43 | Excellent |
| 2. | My job performance demonstrates a high level of competence. | 4.73 | 0.45 | Excellent | 4.75 | 0.44 | Excellent |
| 3. | I consistently meet or exceed the expectations and requirements of my role. | 4.69 | 0.47 | Excellent | 4.81 | 0.40 | Excellent |
| 4. | I continuously seek opportunities to improve my professional competence. | 4.71 | 0.50 | Excellent | 4.73 | 0.49 | Excellent |
| 5. | The level of expertise I bring to my job positively impacts my performance. | 4.77 | 0.43 | Excellent | 4.81 | 0.40 | Excellent |
| Compo | site Mean | 4.73 | | Excellent | 4.77 | | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59=Fair, 1.00-1.79 = Poor.

LSPU-MPA graduates generally show a high level of job performance competence in their self-assessment and rating by supervisors. It means that there is a positive alignment between the perception of graduates and supervisors on graduate's expertise, knowledge, and fit in the job. However, from the results, there is a slight difference in general perspective between graduates and supervisors that graduates looking forward to continuous professional performance improvement. If addressed accordingly, this can improve the overall

professional competence of graduates and also ensure further growth and development in their careers. Competence is a matter of cognitive ability that is task-specific, more or less specialized system and domain-specific skills, proficiencies or traits that enable one to learn how to accomplish an objective and do it well, for employers, they require graduates should have a wide-ranging skill in terms of employability, and utilize them efficiently to improve job performance (Abas et al 2016).

Level of LSPU-MPA Graduates' Job Performance in terms of Commitment

| | Statements | I | SPU-MP | A Graduates | | Supe | ervisor |
|----------------|--|------|--------|----------------|------|------|----------------|
| | Statements | WM | SD | Interpretation | WM | SD | Interpretation |
| 1. | I am dedicated and committed to my work and responsibilities. | 4.85 | 0.41 | Excellent | 4.73 | 0.45 | Excellent |
| 2. | I consistently demonstrate a strong work ethic and a willingness to go the extra mile. | 4.81 | 0.40 | Excellent | 4.75 | 0.44 | Excellent |
| 3. | I am committed to achieving the goals and objectives of the organization. | 4.87 | 0.34 | Excellent | 4.67 | 0.55 | Excellent |
| 4. | My commitment to professional growth and development positively influences my job performance. | 4.79 | 0.41 | Excellent | 4.71 | 0.46 | Excellent |
| 5. | The level of dedication I show towards my work significantly contributes to my performance. | 4.83 | 0.38 | Excellent | 4.75 | 0.44 | Excellent |
| Composite Mean | | | | Excellent | 4.72 | | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79 = Poor.

Based on the results above, it may be concluded that the LSPU-MPA graduates perceptions of their job performance that related to commitment is generally excellent. This implies that they are highly committed to work and dedicated to helping in achieving organizational goals. This commitment has a positive

impact to their overall performance despite being slightly below their own general expectations. However, when it comes to their supervisors about their performance, it is also excellent especially in those that are dedicated and committed to work. The only issue is that supervisors' ratings regarding the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

graduates' commitment to organizational goals are also slightly lower than graduates' own general expectations. However, the fact that the graduates are highly committed is generally valid if both evaluate perceive the actions in a positive way. This implies that the graduates have a strong work ethics and are very proactive in their responsibilities. According to Cobbinah

et al., (2020) employees that demonstrate high levels of commitment are generally committed to investing time effort and energy to their task and measures and it is likely that such employees are to behave in ways that leads to high level of job performance and to the achievement of the organizational goal.

Table 16
Level of LSPU-MPA Graduates' Job Performance in terms of Teamwork

| | Level of LSI U-MI 2 | | | A Graduates | ims of ic | | ervisor |
|-------|---|------|----------------|----------------|-----------|------|----------------|
| | Statements | WM | SD | Interpretation | WM | SD | Interpretation |

| 2. | I contribute positively to team dynamics and foster a cooperative work atmosphere. | 4.75 | 0.44 | Excellent | 4.81 | 0.40 | Excellent |
| 3. | I actively engage in team discussions and contribute valuable ideas and insights. | 4.67 | 0.51 | Excellent | 4.77 | 0.43 | Excellent |
| 4. | I readily offer assistance and support to team members when needed. | 4.75 | 0.48 | Excellent | 4.71 | 0.46 | Excellent |
| 5. | The level of teamwork and collaboration I exhibit significantly impacts my job performance. | 4.71 | 0.50 | Excellent | 4.75 | 0.44 | Excellent |
| Compo | Composite Mean | | 4.71 Excellent | | 4.75 | | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79= Poor.

The results indicate that MPA graduates have high self-perception on their job performance in terms of teamwork, consisting contributing positively to team dynamics. Supervisors accord MPA graduates an excellent teamwork rating. However, while graduates excel in teamwork overall, their level of engagement in team discussions and contribution of valuable ideas and insights falls slightly below their general perception. Additionally, supervisors' diverging perceptions

highlight the importance of clear communication and mutual understanding between graduates and supervisors to maximize team effectiveness and performance. Therefore, supervisors should invest time and resources in improving teamwork among their employees to benefit more among staff in order to raise productivity and creativity (Subbalakshmi and Sirisha, 2020).

Table 17
Level of LSPU-MPA Graduates' Job Performance in terms of Credibility

| | Statements | L | SPU-MPA | Graduates | | Supervisor | | | |
|----|---|-------|---------|----------------|------|------------|----------------|--|--|
| | Statements | WM SD | | Interpretation | WM | SD | Interpretation | | |
| 1. | I consistently demonstrate a high level of professionalism and integrity in my work. | 4.79 | 0.41 | Excellent | 4.83 | 0.38 | Excellent | | |
| 2. | I am regarded as credible and reliable by colleagues and superiors. | 4.69 | 0.47 | Excellent | 4.85 | 0.36 | Excellent | | |
| 3. | I consistently deliver on my commitments and follow through on tasks. | 4.73 | 0.45 | Excellent | 4.79 | 0.41 | Excellent | | |
| 4. | My words and actions align with organizational values and goals. | 4.73 | 0.49 | Excellent | 4.79 | 0.41 | Excellent | | |

| Composite Mean | 4.75 | | Excellent | 4.82 | | Excellent |
|---|------|------|-----------|------|------|-----------|
| 5. The level of trust and confidence bestowed upon me positively influences my job performance. | 4.79 | 0.41 | Excellent | 4.83 | 0.38 | Excellent |

Note. The mean is interpreted using the following: 4.20-5.00=Excellent, 3.40-4.19=Very Good, 2.60-3.39=Good, 1.80-2.59= Fair, 1.00-1.79= Poor.

Graduates and supervisors generally rate credibility at a real high level which indicates how consistent one is in behavior and professionalism. Although on graduates' side, there is a slight discrepancy in how they perceive their credibility to colleagues and superiors. Thus, these results generally show the need for a

train on how much one sees the other, and excellent performance calls for train and continuous growing. Research by Dewi et al., (2020) Credibility is also a vital factor that the quality of the graduate's work is likely to be accepted based on how much the parties one works with getting convinced.

Note. p - value < 0.05 is significant.

As can be seen in Table 18-23, there is no significant difference in the levels of job performance of LSPU-MPA graduates when grouped according to age, gender, educational attainment, year graduated in MPA program, work experience, and employment status, *p-values* > 0.05. The result implies that the

MPA values everyone's abilities and contributions equally in the organization and rather than factors like age, gender, or job title. This result can help build a culture of fairness in a work environment to develop professionally.

Table 24

| Credibility | Clerical | 4.48 | 5.886 | | | | |
| | Manager/Executive | 5.00 | | | | | |

Note. p - value < 0.05 is significant.

There is a significant difference in the job performance as to competence, commitment, and teamwork of MPA graduate when grouped according to job level position after their graduation, p-values < 0.05. However, there is no significant

difference in the level of credibility of MPA graduates when grouped according to job level position. This suggests that the level of credibility of MPA graduates remains consistent regardless of their job level position.

Note: x1 - Manager/Executive; x2- Clerical

The post-hoc analyses in Tables 25-27 indicate the following findings: MPA graduates on professional/supervisory and managerial/executive positions demonstrate significantly higher levels of competence than those on clerical positions. They also exhibit significantly higher levels of commitment

than clerical job MPA graduates. Finally, the MPA graduates on managerial/executive positions show significantly higher teamwork than their clerical level counterparts.

Table 28

| Competence | Very Satisfactory Excellent Satisfactory | 4.74 4.84 4.20 | 3.635 | 0.162 | Fail to reject Ho | Not Significant |
| Commitment | Very Satisfactory Excellent Satisfactory | 4.81 4.96 4.50 | 5.772 | 0.056 | Fail to reject Ho | Not Significant |
| Teamwork | Very Satisfactory Excellent Satisfactory | 4.71 4.87 4.00 | 4.136 | 0.126 | Fail to reject Ho | Not Significant |
| Credibility | Very Satisfactory Excellent Satisfactory | 4.74 4.93 4.00 | 6.672 | 0.036 | Reject Ho | Significant |

Note. p - value < 0.05 is significant.

Findings resulted that there is a significant difference in job performance of MPA graduates when grouped according to their performance rating, p-value < 0.05. From the post hoc analysis in Table 29, MPA graduates with excellent performance rating have a significantly different level of

credibility compared to those with a satisfactory performance rating. On the other hand, their level of competence, commitment, and team is not different irrespective of the performance rating.

Table 29
Post-Hoc Analysis of the Significant Difference in Job Performance of MPA Graduates when Grouped According to Performance Rating

DSCF Pairwise comparisons - Credibility

| | | | | W | р |
|-----------|----|--------------|-------|--------|-------|
| Excellent | | Satisfa | ctory | -3.475 | 0.037 |
| τ . | -1 | 0.05 : : :6: | | | |

Note. p – value < 0.05 is significant.

This outcome suggests that, depending on the performance rating, credibility can differ, but other important attributes such

as competence, commitment, and teamwork do not, reflecting the importance of these traits in professional setting.

Table 30

Difference in Job Performance of MPA Graduates when Grouped According to Number of Promotions After Graduation

| Job Performance | Number of Promotions | Mean | χ^2 | p-value | Decision on Ho | Interpretation |
|--------------------|-------------------------|------|----------|---------|----------------------|-----------------|
| 1 CHOITHANCE | 0 | 4.80 | | | 110 | |

| | 2 | 4.83 | | | | |
| a ., , | 3 | 5.00 | 5.319 | 0.621 | | |
| Commitment | 4 | 4.80 | | 0.621 | | |
| | None | 4.80 | | | | |
| | N/A | 4.47 | | | | |
| | Confidential | 5.00 | | | | |
| | 0 | 4.87 | | 0.140 | Fail to reject Ho | Not Significant |
| | 1 | 4.80 | | | | |
| | 2 | 4.68 | | | | |
| Teamwork | 3 | 5.00 | 10.961 | | | |
| Teamwork | 4 | 4.80 | 10.901 | 0.140 | | |
| | None | 4.32 | | | | |
| | N/A | 4.13 | | | | |
| | Confidential | 5.00 | | | | |
| | 0 | 4.80 | | | | |
| | 1 | 4.81 | | | | |
| | 2 | 4.73 | | | | |
| Cnadibility | 3 | 5.00 | 8.043 | 0.329 | Fail to reject | Not Significant |
| Credibility | 4 | 4.60 | | 0.329 | Но | Not Significant |
| | None | 4.56 | | | | |
| | N/A | 4.27 | | | | |
| | Confidential | 5.00 | | | | |

Note. p – value < 0.05 is significant.

There were no significant differences in job performance based on the number of promotions attained by LSPU-MPA graduates, p-values > 0.05. This suggests similar levels of competence, commitment, teamwork, and credibility, regardless of the number of promotions MPA graduates have received in their

profession. In other words, a graduate's performance and dedication to their work remained steady despite career progress. This may be seen as an evidence of the efficacy of the LSPU MPA program in preparing graduates for each stage of their careers.

Table 31
Difference in Job Performance of MPA Graduates when Grouped According to Years in Service

| Job Performance | Years in Service | Mean | χ^2 | p-value | Decision on Ho | Interpretation |
|-----------------|---------------------|------|----------|---------|-------------------|-----------------|
| | 1-4 | 4.68 | | | | |
| | 5-8 | 4.78 | | | | |
| | 9-12 | 4.70 | | | | |
| Competence | 13-16 | 5.00 | 3.280 | 0.773 | Fail to reject Ho | Not Significant |
| | 17-20 | 4.50 | | | | |
| | 21-24 | 4.40 | | | | |
| | 29-32 | 4.80 | | | | |
| | 1-4 | 4.92 | | | | |
| | 5-8 | 4.86 | | | | |
| Commitment | 9-12 | 4.71 | 4.683 | 0.585 | Fail to reject Ho | Not Significant |
| | 13-16 | 5.00 | | | | |
| | 17-20 | 4.70 | | | | |
| | | | | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Teamwork | 21-24 29-32 1-4 5-8 9-12 13-16 17-20 21-24 29-32 | 4.60 4.96 4.80 4.80 4.53 5.00 4.60 4.50 4.76 | 6.162 | 0.405 | Fail to reject Ho | Not Significant |
|-------------|--|--|-------|-------|-------------------|-----------------|
| Credibility | 1-4 5-8 9-12 13-16 17-20 21-24 29-32 | 4.76 4.80 4.67 5.00 4.50 4.50 4.80 | 2.420 | 0.877 | Fail to reject Ho | Not Significant |

Note. p - value < 0.05 is significant.

There is no significant difference in the job performance of LSPU-MPA graduates when grouped according to their length of service, p-values > 0.05. This implies that regardless of the length of service of MPA graduates in their profession, their level of competence, commitment, teamwork and credibility in their profession remains the same. This is an indicator of the

effectiveness of MPA programs enabling their graduates to perform their work as expected regardless of the time they have offered their service to the profession. Professional development programs are therefore effective in maintaining and improving one's professional performance.

Table 32 Relationship between Job Performance and Influential Factors

| Influential Factors | Spearman's | n-value | Decision on | Interpretation | |
|------------------------|---|--|---|---|--|
| initidential Lactors | rho | p-varue | Но | | |
| Personal Attributes | 0.63 | < .00001 | Reject Ho | Significant | |
| Leadership Abilities | 0.55 | 0.00003 | Reject Ho | Significant | |
| Organizational Support | 0.38 | 0.00517 | Reject Ho | Significant | |
| Personal Attributes | 0.54 | 0.00004 | Reject Ho | Significant | |
| Leadership Abilities | 0.71 | < .00001 | Reject Ho | Significant | |
| Organizational Support | 0.58 | < .00001 | Reject Ho | Significant | |
| Personal Attributes | 0.74 | < .00001 | Reject Ho | Significant | |
| Leadership Abilities | 0.70 | < .00001 | Reject Ho | Significant | |
| Organizational Support | 0.58 | < .00001 | Reject Ho | Significant | |
| Personal Attributes | 0.61 | < .00001 | Reject Ho | Significant | |

Note. p – value < 0.05 is significant. The strength of r is interpreted as follows. [0, .2) – very weak; [0.2, 0.4) – weak; [0.4, 0.6) – moderate; [0.6,0.8) - strong; [,0.8,1) - very strong

There is a statistically significant monotonic relationship between LSPU-MPA graduates' job performance and the influential factors, *p-values* < 0.05. It shows the strength of the relationship which ranges from weak to strong. If the graduates' personal attributes, leadership abilities and organizational support increases, their competence levels, levels of commitment, teamwork and credibility will also increase. Therefore, positive changes in influential factors leads to positive changes in job performance.

CONCLUSIONS

In conclusion, the factors influencing LSPU Master in Public Administration (MPA) graduates on their job performance contributed to the development of professional effectiveness in public administration. Based on the results, personal attributes, leadership abilities, and organizational support mattered the most, while the latter had a somewhat more powerful effect. Thus, the areas identified for improvement were time management and task prioritization in the personal context and some of the aspects of leadership skills. On the other hand, MPA graduates were effective in their jobs, in terms of competence, commitment, teamwork, and credibility. Focusing on the efforts in aligning graduates and supervisors' expectations, concentrating on the identified areas of improvement, and promoting interests that can enhance in an overall professional effectiveness and organizational performance The equality factor is also manifested in evaluating the job performance indicators against individual characteristics, and not for age, gender, and job title. Credibility remains high, whereas the difference in performance is possible

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

for different job levels. The credibility measure shows a connection with performance rates, proving the value of feedback and recognition. The job length does not affect job performance, which means the MPA grad preparation works regardless of experience. At the same, the positive effect of the improvements in personal attributes, leadership abilities, and organizational support resulting in the improved job performance was evident, indicating the high importance of these factors for graduates' success in public administration.

RECOMMENDATIONS

The following are some recommendations drawn from the findings.

- Develop and enhance training programs, the institution might create short courses or organize workshops or seminars that bring together MPA Graduates and industry supervisors to discuss expectations, challenges and strategies to show success. These sessions can assist graduates to match their abilities with organizational goals. Alternatively, such sessions could be incorporated into the present curriculum or provided as additional development opportunities.
- 2. Launch leadership development programs like mentorship programs. Graduates might have the opportunity to learn from successful alumni or professionals in their field
- 3. Implement structures feedback mechanisms where graduates can share what they have experienced This input can help the institution determining areas that may require further support and how well its graduates applying their skills in the real world based on evidence and feedback.
- 4. Offer the graduates continuous learning and professional development opportunities tailored to their needs. These opportunities must also be extended to graduates throughout the working and career journey.
- Future researchers should continue research on significant interventions concerning the measurements of job performance and career progress from MPA graduates.

ABSTRACT

COVID-19 is a new virus that infects the respiratory tract of the upper respiratory system and organs. Based on the worldwide epidemic, the number of illnesses and deaths was growing every day. Chest X-ray (CXR) pictures are beneficial for monitoring lung diseases, especially COVID-19. Deep learning (DL) is a popular computing concept that has been widely used in medical applications. Efforts to automatically diagnose COVID-19 have been beneficial. This study used convolution neural networks (CNN) models to develop a DL technology for binary classification of COVID-19 using CXR pictures. By reducing the number of layers and tweaking parameters, training time was reduced. The suggested model for training loss of 0.0444 and accuracy of 98.53%. In validation it demonstrates even higher proficiency attaining a loss of 0.0181 and accuracy of 99.17%. These findings highlight the need of using deep learning (DL) for early COVID-19 diagnosis and screening.

KEYWORDS—CNN, COVID-19, X-ray, Model, Deep convolutional neural networks.

I. INTRODUCTION

Coronavirus has emerged as a global medical issue. Pursuant to current World Health Organization statistics, the number of ill people and fatalities is steadily growing. As of this writing, the illness has claimed the lives of nearly 1.26 million people. Several Artificial Intelligence experts have offered frameworks and tactics to predict the progress of the virus and identify the condition. Chest X-ray pictures can be analyzed to determine a patient's COVID-19 infection status. In hospitals, traditionally processing large numbers of X-ray images can be time-consuming and complex.

COVID-19 is mostly spread by personal contact with infected individuals, Commonly utilized for managing this ailment are antibiotics, antimalarial drugs, antipyretics, cough suppressants, and analgesics, whether through inhalation, tactile contact, or mucosal interaction. The decision to hospitalize the infected patient is based on their illness status, symptoms, and severity [2]. The COVID-19 virus continues to spread globally. The World Health Organization (WHO) reported 3,128,962 fatalities till April 28, 2021. Early detection and treatment are crucial for preventing or minimizing the impact of pandemics on the health system.

The real-time RT-PCR method is often used to detect COVID-19. Chest radiology Early stages of COVID-19 are best diagnosed utilising techniques for imaging that involve CT and X-ray. Computed tomography provides comprehensive pictures that includes our bones, organs, soft tissue, and blood vessels.

This allows doctors to distinguish interior structures, their forms, sizes, densities, and textures, as well as any damage that has occurred. CT pictures provide a precise slice of a specific body location, whereas conventional X-Rays encompass the complete body structure. The resulting body slice provides a thorough perspective of the patient's condition.

We pre-processed and trained X-ray scans from the Kaggle data pool for categorization, including Normal and COVID-19 images. X-ray imaging is a low-cost way to diagnose lung infections and identify coronaviruses. X-ray scans of COVID-19 patients show patchy infiltration or opacities similar to viral pneumonia symptoms'-rays during the early stages of COVID-19 showed no abnormalities. COVID-19 causes unilateral patchy infiltration in the middle, upper, or lower zone of the lungs, with occasional consolidation as the illness advances.[4]. Deep CNN has been utilized to address a variety of issues, including skin cancer, pneumonia, brain tumors, arrhythmia, Covid-19, image classification, lung segmentation, and breast cancer. Abbas and Abdeslam [10] employed a deep neural network dubbed Transfer, Decompose, and Compose in their study, aiming to classify COVID-19 cases according to a chest X-ray imagery. The authors recommended incorporating a class segmentation layer into previously trained models from the picture database. This layer separated every category into several sub-classes.

Deep learning (DL) stands out as a branch of machine learning, empowering computers to independently undergo training and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

assimilate pertinent data. Extracting traits from extensive amounts of unstructured data [8], recent advancements in medical imaging have witnessed remarkable expansion in the application of Deep Neural Network techniques. Deep convolutional neural networks (CNN) automate feature extraction from data, allowing for this breakthrough [9].

This study uses a binary classification technique To discern the presence of abnormalities in a chest X-ray picture COVID-19 either negative or positive? The suggested architecture is trained and evaluated using the COVID-19 chest CT-scan database. Experiments demonstrate the suggested architecture's great accuracy in COVID-19 detection.

II. RELATED WORKS

Soares et al. [6] used deep learning approaches such as DNN, Resent, Google Net, VGG16, Alex Net, Decision Tree, and AdaBoost to predict Covid-19 cases. The dataset undergoes an 80:20 partitioning for examination and instruction, respectively. According to the research findings, the DNN deep learning model attained a peak accuracy of 97.38%. Endeavored to identify Cifci [7] COVID-19 utilizing the Inception-V4 and Alex Net models. The training dataset comprised 4640 (80%) CT images, while the testing set consisted of 1160 (20%) CT scans. Experimental findings showed that Alex Net outperformed Inceptionv4. Alex Net obtained a accuracy 94.74%.

Wang et al. [2] analyzed 1,119 CT images from pathogen-They discovered verified COVID-19 instances with an accuracy of 89.5%, using the Inception model and deep learning approaches. Nefoussi et al. [9] compared classic histogram equalization, constrained adaptive histogram equalization, and transfer learning models for COVID-19 detection with DL approaches. The VGG19 model combined using a customized histogram equalization that is constrained by contrast outperformed the other models in the CT scan dataset, obtaining an accuracy of 95.75%.

Kumar, S. P., et al. [10] carried out research focused on COVID-19 identification in Iran, leveraging a novel database comprising 48,260 CT scan images. Employing ResNet50V2, a 50-layer network pre-trained on the ImageNet database, the research achieved an impressive accuracy of 98.49% for CT scanning. Diallo et al. [11] used deep transfer learning to detect COVID-19 in computed tomography images. The model demonstrates training of 96.22% and testing of 93.01% accuracies respectively.

Naresh, P. V et al. [12] attempted for the identification of Covid-19, deep learning methodologies were employed such as ResNet50, VGG16, and SVM. The dataset is split 80:20 for training and testing. The 1985 training test had 496 data points.

During training, the application of a 5-fold cross-validation approach was implemented.

ResNet50 achieved the best accuracy (95.16%). Avcı, I et al. [13] used the ResNet50 approach to classify the COVID-19 in X-ray pictures. The diagnosis method yielded 98.18% accuracy, 98.14% precision, 98.24% recall, and 98.19% F1-Score.

Güngör, S et al. [14] employed DenseNet201, ResNet152V2, VGG16, and Inception Resent models from deep learning to identify Covid-19. The investigations resulted in a test validation rate of 96.25% for DenseNet201. Raheem et al. [15] conducted cross-dataset analysis using CT scan and Covid CT datasets, unlike previous studies. The study employed Efficient Net, a deep learning model, and achieved the maximum accuracy of 87.68.

III. METHODLOGY

Training a convolutional neural network to classify covid is the goal of the proposed study model. processed and managed beforehand before receiving CNN architecture training. In this instance, the most effective feature extraction techniques are convolution neural networks. Kaggle provided the X-Ray scans that were used as input. The methodological flow of the suggested technique is depicted in Figure 1.

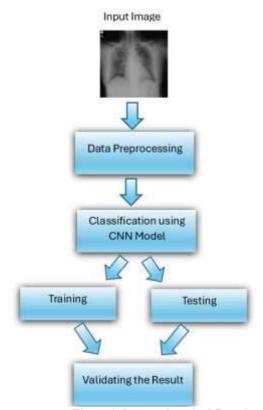

Figure 1. Proposed method flow chart.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

A. Data Set

The first step in this inquiry is to get a publicly available dataset from Kaggle within this dataset, two categories of chest X-ray images are encompassed: Covid Positive and Covid Negative (normal). This study included 1191 photos, including 821 for training, 184 for testing, and 186 for validation. It involves the following activities: Collect chest X-ray images, preprocess them, then divide them into three halves.

Figure 2 Images of Covid Classes

Figure 3 Images of Normal Classes

B. Preprocessing

Convolutional neural networks (CNNs) need all of their input pictures to be a fixed size, and in the dataset that was chosen, that size was changed to 128x128, which is the optimal size for preserving the information in the input images. In each dataset, if a fixed size There is ample variety, feature It's not required to shrink, preserving the characteristics of an input picture and improving prediction classification accuracy. A suitable size of 128x128 is chosen for resizing in this proposed approach because if the picture size is too large, it would lead to time and space complexity.

C. CNN Model

The CNN model design includes an attention mechanism that considers the key elements in the input images [8]. The input pictures are initially sent through a 32-filter convolutional layer with a 3x3 dimension that employs the ReLU activation function [5]. To increase stability, normalize the output from the preceding layer, and speed up training [16], batch normalization is used to this layer's output. This is followed by a dropout layer that randomly removes 25% of the neurons, a convolutional layer with 64 filters, a second convolutional layer, and a layer with a maximum pooling size of 2x2. The

next layers employ convolutional layers with 128 and 256 filters [9], followed by max pooling and dropout.

The Activation function that generates attention maps for the predicted features. That maps are then multiplied with the feature maps to get the important regions of the input images. Finally, a flattened layer and fully linked layers with 512 neurons and the ReLU activation function receive the outcome of the CNN. At the end batch normalization, dropout, and

Figure 5 CNN Model Summary

This model is intended to categorize images of 2 classes Normal and Covid based on images of Chest X-ray. Multiple layers are present in the proposed CNN architecture for image classification. Convolutional layers and input layers come first, then batch normalization and max pooling. Overfitting is avoided by dropout regularization. max pooling is applied to the network after the convolutional and batch normalizations layers. The element-wise multiplication is done in a lambda layer, which is present in a final convolutional layer with a 1x1 kernel. The output is flattened and then fed through thick layers following another round of max pooling. Before the final dense layer, which comprises 2 units representing different categories, batch normalizations and dropout are performed with 21,29,250 trainable parameters.

The following layers make up the model architecture:

a. Input layer:

It accepts input pictures with a resolution of 128x128 and three RGB channels.

b. Convolutional layers:

These layers learn features from the input images using convolutional filters. There are two sets of Convolutional layers with 32 and 64 filters respectively[1], followed by Batch

Normalization to normalize the convolutional layer and a ReLU activation function, a Max Pooling layer with a pool size of 2x2 is employed to diminish the dimensionality of the output feature maps [2]. Additionally, to mitigate overfitting, a Dropout layer with the rate of 0.25 is incorporated.

c. Set of Convolutional layers:

A Max Pooling layer is introduced with a pool size of 2x2, Batch Normalization, ReLU activation function[7], and a convolutional layer with 128 and 256 filter respectively are used. Once more to mitigate overfitting, a Dropout layer is introduced with a rate of 0.25.

d. Fully Connected Layer:

Two Dense layers are then added after . The first dense layer consists of 512 units and used L2 regularization with a 0.001 penalty and a ReLU activation function. to avoid overfitting, To enhance training stability and further mitigate overfitting, Batch Normalization is introduced along with a Dropout layer featuring a rate of 0.5. To anticipate the probability distribution between 2 classes a SoftMax activation function is introduced to the final 2 class dense layer.

e. Output

The final layer is the dense layer to anticipated probability distribution of 2 classes

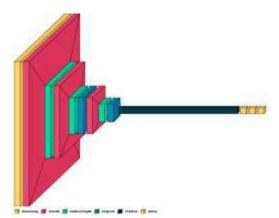

Figure 6 CNN Model Architecture 3D

IV. RESULT

We evaluate the efficacy of our approach using the matrix presented in Figure 7 and 8. The variables consist of False Positives (FP), True Negatives (TN), True Positives (TP), and False Negatives (FN). The term "TP" indicates that the patient has diabetes, as determined by the models. FP indicates that the patient does not have covid, but the models incorrectly identified it as such. Patients with normal cases are referred to as TN, whereas models are categorized as Normal. According to FN, the patient had Covid, but the models wrongly recognized them as not having it.

The classifier's dependability defines the fraction of right positive items among genuine. Recall is the proportion of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

properly identified circumstances compared to the overall count of anticipated situations, While accuracy is the percentage of precisely classified instances compared to the total number of occurrences. The F1-score is calculated by taking the harmonic average of accuracy and recall. A model with a score closer to 1 is considered more effective. The following formulas are used to calculate all metrics [14].

- Accuracy A = (TP+TN)/(TP+FN+FP+TN)
- Precision P = TP/(TP+FP)
- Recall R = TP/(TP+FN)
- F1-score F1 = 2P*R/(P+R)

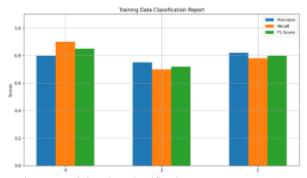

Figure 7 Training data classification report.

Figure 6 and 7 classification reports for both the training and test data shows robust model performance, with high precision and recall scores. In the training set the model demonstrates exceptional accuracy achieving 98.53% it effectively distinguishes between the two classes with a precision of 96% for class 0 and 100% for class 1 albeit with a slightly lower recall for class 1 at 88%. Similarly on the test set the model maintains its high accuracy at 99.17% showcasing its generalization capability. Although there's a slight decrease in recall for class 1 compared to the training set, it remains at a commendable 89%. Overall, the model exhibits consistent and reliable performance, demonstrating its effectiveness in classifying instances accurately and efficiently.

Figure 9 depicts the Confusion Matrix of the Training data.

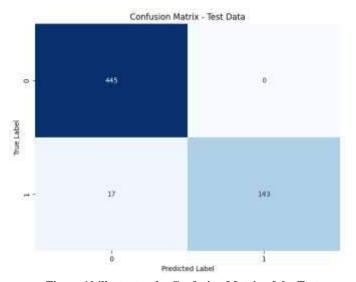

Figure 10 illustrates the Confusion Matrix of the Test data.

Figure 8 and 9 represent the confusion matrices illustrate the model classification performance on both the training and test datasets. Within the training set, The representation is correct identifies 1778 instances of class 0 and 561 instances of class 1.it misclassifies 79 instance of class 0 and 17 instances of class 1. Similarly on the test set the model accurately predicts 445 instances of class 0 and 143 instances of class 1 while misclassifying 17 instances of class 1. These matrices provide a clear visual representation of the model's ability to correctly classify instances as well as its tendency for misclassification thereby offering valuable insights into its performance characteristics.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

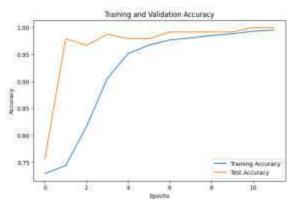

Figure 11 CNN model training and validation accuracy.

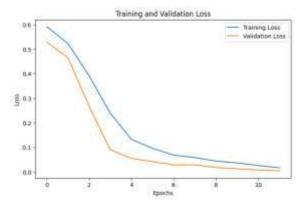

Figure 12 CNN model training and validation accuracy.

The Convolutional Neural Network model achieves remarkable performance with a training loss of 0.0444 and accuracy of 98.53%. In validation it demonstrates even higher proficiency attaining a loss of 0.0181 and accuracy of 99.17%. These results underscore the effectiveness of the CNN architecture in accurately classifying data particularly in distinguishing between different classes with high precision.

Tabel I. Accuracy report of training and testing.

| | Class | Precision | Recall | F1-Score |
|----------|--------|-----------|--------|----------|
| | Normal | 0.96 | 1.00 | 0.98 |
| Training | Covid | 1.00 | 0.88 | 0.93 |
| Togting | Normal | 0.96 | 1.00 | 0.98 |
| Testing | Covid | 1.00 | 0.89 | 0.94 |

Tabel 1 represent the training and testing stages, the CNN model scores between 0.96 and 1.00, indicating great accuracy for both normal and COVID situations. The recall shows a modest drop, especially in testing, indicating that some COVID instances were missed, even if accuracy for COVID cases is flawless. Even so, the total performance is still good, suggesting that the CNN model can effectively detect COVID.

V. CONCLUSION

The present study uses a deep learning strategy to distinguish between covid-19 afflicted and unaffected individuals in mammography X-ray pictures. We propose deep model comparisons to determine which models perform better in illness categorization. Deep models demonstrated higher accuracy and lower loss rates during training and validation for covid-19 illness detection. Our findings show that deep learning-based CNNs can accurately and efficiently recognize and diagnose covid-19 disease. Modality processing leads to significant improvements in accuracy measures.

ABSTRACT

In this study the literature review focus on the available evidence for physiotherapy intervention to improve the balance among elderly people. Research involved a computerized data base pertaining to studies that include the physiotherapy among elderly people seven articles that showed outcome relative to improve balance, physiotherapy intervention to improve the balance among elderly patient, in among elderly people are at an impaired balance especially when walking, due to age related changes reduce in sensory perception, muscle strength coordination vestibular system and proprioception. In this literature review explained physiotherapy intervention core stability exercises improve balance among elderly people, affect balance leads to difficult of walking and difficult functional activity minimal literatures on improve balance there is scarcity of study which intervention among core stability exercises and Cawthorne Cooksey exercises.

AIM – The Study Aimed to Find the Effectiveness of Core Stability Exercises to Improve the Balance Among Elderly People **KEY WORDS:** Balance, Elderly People, Intervention, Sensory Perception, Proprioception.

SEARCH METHOD: Balance On Elderly Population (Definition, Incidence, Prevalence, Etiology, Pathophysiology) Core Stability Exercises, Cawthorn Cooksey Exercises on Search Bar in Google Schooler, PubMed, Scopus Index.

SELECTION CRITERIA INTRODUCTION

Impairments to the sensory, motorcentral nervous systems can also result in instability in the elderly. Pathologies that target specific parts of these systems or the overall progressive loss of function brought on by aging in a healthy way can both lead to impairments. Regardless of the reason, balance control becomes more difficult, and there is a greater dependence on the remaining components when a sensory, motor, or central processing system component is compromised [1]. The ability to keep the body's center of gravity within the stability parameters set by the base of support is the simplest definition of balance. Age-related balance issues are most common among the elderly. The elderly are most likely to experience age-related balance problems; each year, one-third of people 65 years of age or older fall. Seniors' mental and physical health may suffer greatly due to the psychological fallout from poor balance. These ramifications include low self-esteem, concern about falling again, feelings of vulnerability, and decreased confidence in one's ability to perform physical tasks.^[2]

Ageing is a physiological process that is dynamic, progressive, and accompanied by changes in morphology, biochemistry, psychology, and function. India, the world's second-most populated nation, has experienced a notable surge in the number

of senior people, with projections indicating that by 2050, the number will reach approximately 324 million [3] When assessing an elderly subject's health, balance and gait are crucial factors to take into account. For those 65 to 69 years old, the projected percentage of self-report imbalance is 13%; for those 85 years and older, the proportion rises to 46%. [4] The muscles of the core act as a bridge between both the lower and upper limbs and force is transferred from the core, often called the powerhouse, to the limbs [5]. The core is important in providing local strength and balance and is central to almost all kinetic chains of daily activities. Core stability exercises refer to exercises that activate specific motor patterns of the muscles in the trunk by challenging spinal stability and trunk postural control. [6] The core is considered an integral link in the kinetic chain [7].

Exercises for core physical fitness may help lower the likelihood of developing other musculoskeletal diseases. [8] Core stability training is a form of training that challenges the spine's stability while training muscle activity patterns and postures that ensure sufficient stability without unnecessarily overloading tissue. [9]

The abdominals are in the front, the paraspinals and gluteals are in the back, the diaphragm is the roof, and the pelvic floor and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

hip girdle musculature are the bottom of the muscular box that represents the core. [10] The dynamic function of muscle components is principally in responsible for maintaining core stability Lower extremity movement is clearly correlated with activation in the trunk muscles. Research indicates that improving one's core strength can help with functional abilities. decreased ability to move around in the musculoskeletal system is the main manifestation of the systemic deterioration of aging. Age-related deficiencies have traditionally been reduced through lower limb resistance training and or balance. Nevertheless, There is not much evidence that resistance exercise enhances balance, functional skills, daily living activities, or fall rates. Therefore, in order to combat age-related deficiencies, it is imperative that new intervention programs be created and carefully designed.[11] NEED OF THE STUDY

Balance and gait are important considerations in the health of elderly subjects. It is estimated that 13% of adults self-report imbalance from ages 65 to 69, and this proportion increases to 46% in those aged 85 and older. [4] Many studies have been conducted. on the elderly to improve balance, but limitation studies on the Cawthorne Cooksey exercises and core stability exercises on improving balance require more further studies. Therefore, I sought to be a comparative study of the Cawthorne

Cooksey exercises and core stability exercises to improve balance among the elderly.

METHODOLOGY

SEARCH METHOD AND ELIGIBILITY CRITERIA

PubMed, Google Scholar, Medline, and Pedro were utilized to conduct a comprehensive literature search. English-language publications of the articles were excluded. Here, the articles were searched with the keywords. Criteria for inclusion and exclusion.are filtered and finally, twenty three articles were obtained for the examine articles that weren't published in English were eliminated.

INCLUSION CRITERIA

- 1. Articles Discussing About Elderly People
- 2. Articles published most recent years.
- 3.Full-text articles.
- 4. Articles published in English.

EXCLUSION CRITERIA

- 1. Articles explaining surgical interventions.
- 2. Articles published in English language only

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

DISCUSSION

In this discussion on core stability exercises among people The exercises showed significant improvement in balance. Balance improvements may result from core stability workouts that focus on the deep spine stabilizers, which are necessary to build a strong foundation for the limb muscles to move on The result of the lumbopelvic-hip complex's muscular capacity and motor control is the core stability system. Cathy Arnold, Joel Lanovaz conducted that The impact of adding core stability training to a standard balance exercise program on Older seniors' performance from sit to stand a pilot study In conclusion training for core stabilityadded to SB did not result in STS reps improvement compliance may modify these result s and future larger sample studies should evaluate the impact of training for core stability on sts biomechanics [12]

Ketki Ponde1, Ronika Agrawal2, Nazneen Khalil Chikte3 et al conducted study on Impact of the Core Stabilization Exercises on The ability to balance in older adults According to statistical analysis, The Experimental group demonstrated a notable enhancement in BBS, Y-Balance Test and Functional Reach Test scores with (p<0.05) post six weeks of intervention. Control group showed not much of an improvement in the Scores Core stabilization exercises had significant improvement on balance variable in Comparing the external group to the control group $^{[13]}$

Hassan Sadeghi1, Seyed Sadredin Shojaedin2, Elham Alijanpour et al conducted study on The benefits of walking and core stability exercises in older fallers with mild cognitiveImpairment a randomized control trial Strengthening the muscles in the central region of the body appears to help older people maintain their balance during daily activities. As independence is necessary for people who havea history of falling, doing these exercises at home can increase their independence and level of participation. They are also easy, affordable, and suitable for people with a history of falling. [14] Nishad abdul latheef majida* 1, nizar abdul majeed kutty2 et conducted study on Randomized controlled trial of core strength training in older adults: effects on functional mobility Together, our findings show thata core strength training regimen improved functional mobility in older persons living in communities. Other senior independent living facilities could effectively implement the CST program to enhance mobility and balance while possibly lowering the risk of falls. Additional core strength exercise is inexpensive and safe to perform both inside and outside.[15]

Mehrdad bastani, gholamalighasemi et al conducted study on Based on the results, the therapist recommended core stability exercises as a safe and practical way to help patients receiving hemodialysis with their balance and muscle endurance. This could lead to a decrease in the risk of falling because of poor balance and a rise in the patients' independence of movement. [16] chatwalai Sonthikul, M.Sc.1, Nurulhuda Hadhoh, B.Sc.2 et al conducted study on Active video gaming has the potential to enhance not only lower limb muscular strength and reaction time, but also dynamic balance, it is highly recommended that using active video gaming in elderly in

addition they should provide significant information of improvement s of muscle power and balance which may be beneficial for geriatric rehabilitation program [17]

Italo sannicandro et al conducted study on Effects of integrative core stability training on Balance And walking speed in healthy elderly people The results revealed a change in test score across the two time periods for csg in the mcgill sit up test (p<0.01), in the trunk extention (p<0.01) $^{[18]}$

Muslimainia*Dita Mirawatib; Asita Rohmah Mutnawasitohc et al conducted study on Differences in the effect of the combination of square stepping and gaze stabilization with square stepping and core stability on dynamic balance in the elderly. The study comes to the conclusion that the impact of exercise treatments on dynamic balance varies significantly among the elderly. [19]

Urs granacher andre lacroix b et al conducted study on Impact of Core Instability Strength Training on Spinal Mobility, Dynamic Balance, Functional Mobility, and Trunk Muscle Strength in Elderly Adults With a strong adherence rate, CIT has shown to be a workable workout regimen for seniors. CIT can help to reduce age-related losses in measures of spinal mobility, dynamic balance, trunk muscular strength, and functional mobility. Conventional resistance training and/or balance methods could be supplemented, if not replaced, with this training schedule. [20] Xu Y et al conducted study on Impact of core fitness affecting elderly people's ability to balance Core training can improve the elderly s functional physical ability and static balance capacity. Evidence level II; Therapeutic Studies - Investigating the results. [21]

Kang KY, Choi JH, Lee SB et al conducted study on This study sought to apply the activities for strengthening the core to enhance the balance ability for elderly in a bid to study an effective exercise method to prevent getting a bruise from a fall. In conclusion, the core strengthening exercise was proven that it was effective in improving balance ability of elderly and in preventing getting a bruise from a fall. The subjects for this group was comparatively healthy. For a better research, it is considered that a study with elderly who have experience of getting a bruise from a fall is necessary [22]

Kwon-Young Kang, PhD, PT1)et al conducted study on consequences of core muscle stability instruction in the weight distribution and consistency of the elderly conclusion Core muscle stability training ought to be taken into account as a therapeutic method for the elderly to increase their WDI, and SI, and as a fall prevention measure. [23]

Amin Farzaneh Hesari 1, Solmaz Mahdavi 2 et al conducted study on Berg balance scale comparisons in older women after core stability training Programs for core stability Exercise is beneficial for senior citizens. with their postural control. Thus, Exercises for core stability can improve dynamic balance in addition to bolstering the central muscles, thereby reducing the aged population's risk of falls. Lastly, it is strongly advised that older adults who use core stabilization training enhance their daily living activities and reduce their chance of falling.^[24]

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Kyung Koh1,3, Yang Sun Park et al conducted study on Development of core strength training equipment and its effect on the Performance as well as the steadiness of the elderly in regular living activities Using the apparatus created for this study, the elderly's both efficiency and stability during daily living tasks were enhanced through the strengthening of the core exercise.^[25]

Hajarjahadian Sarvestani, hosseinberenjeian Tabrizi, et al conducted research The Impact of Eight Weeks of Core Stabilization and Aquatic Balance Training on Dynamic Balance in Elderly Males Who Are Not Active It is possible to use both ABT and CST training methods. Furthermore, The geriatric society can benefit from this kind of training as it is more suited, even though both kinds of training had an equal impact on enhancing equilibrium in the sedentary elderly males. This is also because ABT is linked with greater safety and subject satisfaction. [26]

Fateme Pourshian NajafabadiReza Mahdavi Nejad2, et al conducted study on Effect of 6 week six of Core stability and functional training on equilibrium and standard of living in older women In summary This research showed how a functional core stabilization exercise program can enhance older women's quality of life as well as their static and dynamic balance. Therefore, it seems that a functional training and core stabilization program is a helpful exercise to enhance standard of living and balance, lower the chance of falling, and lower medical expenses.^[27]

Zohreh Naderi Tehrani 1 , Khosro Jalali Dehkordi et al conducted study on The Effect of 8 Weeks of Core Stability and Pilates Trainings on Ankle Proprioception, Postural Control, Walking Performance, Self-efficacy and Fear of Falling in Elderly Women It seems that Pilates and core stability trainings utilised in medical centers as a complementary rehabilitation method to raise the ankle proprioception, balance, walking performance and decreasing the fall of old ladies.^[28]

Agris Liepa, Undine Gudina et al conducted study on The Results of cognition and functional performance on old people's core stability population: a cross-sectional study conclusion The fundamental stability is significantly affected by cognition as well as static equilibrium identifying the presence of neural circuits between them which when challenged may play a crucial role during the locomotor tasks. [29]

Dr. Naina Aggarwal1, Dr. Mukesh Sharma2 et al conducted study on To contrast the impact of modified pilates and balance exercises using the core stabilization, core muscle endurance and lumbopelvic flexibility in elderly women The research shows that both the interventions are effective and can be applied in clinical setup to improve balance and endurance of the central muscles and lumbopelvic flexibility in elderly women.[30]

Kadek Dio Agus Bagiartana 1Titih Huriah et al conducted study on The effects of core stability exercise in improving back muscle Strength, limb muscles and dynamic balance in the elderly in Singaraja, Indonesia This study proved that core

stability exercise for four weeks Effectively increased back strength and leg muscles and Dynamic balance in the old age compared to controls. Core Stability exercises can be performed at home to maintain and Improve muscle strength in the legs, back, and dynamic balance [31]

Linda Sahru Ramadani1, Dwi Kurniawati2,et al conducted study on Differences in The Impact of Core Stability and Balance Training Training on The Elderly's Risk of Falling Core stability has more influence on reducing the elderly's danger of falling than balance training Group. [32]

Sairag Saadprai1, Supattra Silapabanleng2 Design and development of a core strengthening exercise and rehabilitation machine for elderly The developed machine offers a safe and reliable solution for elderly individuals to improve core muscular power and overall health. Future studies could test the machine with elderly participants to further validate its effectiveness.[33] Seong Hun Yu, PhD, PT1) et al conducted study on The impact of myofascial release and abdominal drawing-in exercises on older women's discomfort, flexibility, and balance According to the above research, myofascial release had an impact on the discomfort and flexibility of senior ladies who engaged in abdominal drawing-in exercise. [34]

CONCLUSION

All the above-reviewed strategies for enhancing elderly people's balance population are effective; hence, the above interventions are recommended. Core stability exercises offer promising benefits for improving balance, functional mobility, and muscle endurance in older adults. These exercises should be considered an integral component of comprehensive geriatric rehabilitation programs aimed at promoting healthy aging and preventing falls in elderly populations.

DOI No: 10.36713/epra17049

ABSTRACT

The intent of this systematically reviewed literature was to assess the connection between students' listening skills and their academic achievements. The researcher gathered previously conducted articles from Scopus data base. He examined papers that were released in the years from 2000-2022. To guide the review, the researcher performed six actions; systematic literature review using PRISMA method (Mihret, G. et al., 2024). Among 39 scrutinized articles, the researcher retained 12 articles. The researcher used key words: academic achievement, skill, academic performance, listening skill, listening comprehension and academic achievements to run his study. The retrieval date for articles was 16 of May 2024. The publication stage that the researcher used was final articles not article in press and the document type was articles which were published in English language. Predominantly, the subject areas he used were Social Sciences, Psychology and Arts and Humanities. The findings seem to suggest students learn instructions more successfully when they are quiet, concentrated, and not twitching. As a result, teachers may not need to repeat instructions as often. This means, students' listening skill and their academic achievements have direct or positive relationships. Future research on the area indicated that when learners are eager and keen on listening, they will achieve their educational goals easily.

1. INTRODUCTION

Students' academic success is directly correlated with their listening comprehension. In light of this, the targeted sixth and eighth grade pupils have subpar listening skills that impede their ability to succeed academically. Personal documentation that show discipline referrals to the administration and teacher observations of pupils disobeying written and oral instructions are indications that the issue exists. More precisely, these noticed behaviors occur in labs where particular instructions must be followed, during homework assignments that are turned in incomplete or erroneous, and during cooperative learning activities that take place in the classroom.

This literature's goal was delineating the association between pupils' academic success and the skill of listening comprehension. Teacher assessments that showed poor academic performance, anecdotal notes from teacher observations that described poor listening practices, learners, parent, and educators surveys, learner journals, teacher checklists, student work samples, and grade reports that showed a gap between performance and ability were all evidence of their correlation issues. The failure to use listening as an effective learning tool, insufficient exposure to formal listening instruction, difficulty focusing on and differentiating between essential and nonessential auditory input,

and a lack of knowledge about the intricate processes involved in effective listening were among the likely causes. Weak concept imagery, a lack of internal desire, and a lack of the necessary social and physical abilities were other culprits.

One of the most important abilities for learning in an academic setting is listening. Concentrating and listening comprehension can be enhanced by using the right listening techniques. They could score better on the listening test if they examined the cognitive process during the listening activity from the standpoint of metacognitive awareness. That is being said, and when learning English as a second language or as a foreign language, listening is the skill that is least practiced and sometimes overlooked. In order to improve students' proficiency, it is necessary to tackle inattention and do research on listening techniques (Anneliza et al., 2020).

Age is just one of many factors that may have an impact on the intricate process of developing listening comprehension in a foreign language. It is also linked to the advancement of other language skills. The relationship between students' academic progress and their listening comprehension is examined by the students in this study. While age is widely acknowledged as a critical component in language learning, there is a paucity of

research demonstrating the connection between age and adult learners' achievement in listening comprehension in a foreign language (Stankova et al., 2022).

The pupils' academic progress was measured using the grades from the courses using English as the medium of instruction. The findings demonstrated a strong and positive relationship between learners' self-perceptions of the four competencies and their subjective or objective assessments of their vocabulary knowledge. Furthermore, it was discovered that the largest correlation between language proficiency and academic success was self-perception, trailed by language proficiency. It's noteworthy to see that vocabulary knowledge provided the most unique explanation for the students' academic success. Even though it was projected as an additional value to the model of academic achievement, vocabulary knowledge explained a larger portion of the contribution from students' perceptions of their own second language usage (Masrai et al., 2022).

2. OBJECTIVE

Conduct a thorough assessment of the literature about the connections between the students' listening skills and their academic achievements.

3. RESEARCH QUESTION

How does students' listening skill relate to their academic achievement?

4. SYSTEMATIC LITERATURE REVIEW

The research focused to determine the academic buoyancy of the Iraqi students studying English as a foreign language in terms of their reading and listening skills, as well as the distinctions between the two. The following is demonstrated by the variations between each scale's five predictors: In reading, kids exhibit high levels of academic performance and low levels of control; conversely, in listening, they have high levels of relationship buoyancy with their teachers and low levels of anxiety. Thus, it is possible to draw the conclusion that in order for the kids to become more buoyant readers and listeners, they require new reading and listening practices (Robertson, 2020).

The lexical quality hypothesis was supported by latent profile analyses done independently for English language learning and English as a first languages, which revealed the formation of two profiles: Insufficient language skills (linguistic perceptions and, to a lesser extent, auditory understanding) and word-reading abilities (phonologically related understanding and an orthographic thinking) were linked to a low comprehension profile. Great auditory and an orthographic analyzing skills, paired with strong conceptual and listening comprehension skills, all lead to high sensing comprehension. A good listening profile is associated via standard or above-average results on each of the skills. For both the English language learning and the English as a first language groups, the good and poor comprehension

qualities were comparatively similar. On the other hand, low comprehension had trouble with these same constituent abilities. (Connor & Geva, 2018).

Impaired phonological processing is linked to dyslexia and is connected to left temporal lobe activities. Dichotic listening is a commonly used activity to evaluate left temporal lobe functions. In the dichotomy listening exercise, a right ear advantage represents the left hemisphere's greater ability to comprehend the right ear signal, which is explained by the preponderance of contralateral neural networks. However, the results of earlier research utilizing dichotic listening in dyslexia are inconsistent and may indicate the severity of the condition (Helland et al., 2008).

The constructive listening gives students a tool for processing difficult new information and developing emotional literacy by helping them to examine their own experiences, feelings, and knowledge. It can be used in teaching settings and in discussions regarding race. These methods can assist students in developing the interpersonal and conceptual abilities necessary for effective scientific listening practice (Chew, 2014).

5. METHODOLOGY

Systematic literature review using PRISMA method (Mihret, G., et al., 2024). Extraction of data: in the data extraction stage, 19 papers were retrieved and limited to the following requirements.

- Articles must be either original, review papers or published reports.
- 2. The reviewed article must be in English and from the fields of social sciences, arts and humanities and psychology.
- 3. Systematically reviewed articles were published between the ranges of 2000-2022.
- 4. The extracted paper was from all countries.
- 5. The database used to extract the articles was "Scopus database".
- 6. Keywords used to extract the articles are academic achievement, skill, academic performance, listening skill, listening comprehension and academic achievements

6. DATA COLLECTION TOOLS

The researcher took the data for this study in textual form; in other words, he used the secondary data. On 16 May 2024, data from the Scopus academic search engine

(https://www.scopus.com) were obtained. Additionally, 'Advance' search terms were used through TITLE-ABS-KEY (relationship AND listening AND skill AND academic AND achievem ent) AND (LIMIT-TO (EXACTKEYWORD, "Academic Achievement") OR LIMIT-TO (EXACTKEYWORD, "Skill") OR LIMIT-TO (EXACTKEYWORD, "Academic Performance") OR LIMIT-TO (EXACTKEYWORD, "Listening Skill") OR LIMIT-TO

(EXACTKEYWORD, "Listening Comprehension") OR LIMIT-TO (EXACTKEYWORD, "Academic Achievements")) AND (LIMIT-TO (SUBJAREA, "SOCI") OR LIMIT-TO

(SUBJAREA, "PSYC") OR LIMIT-TO (SUBJAREA, "ARTS")) AND (LIMIT-TO (DOCTYPE, "ar")) AND (LIMIT-TO (PUBSTAGE, "final")) AND (LIMIT-TO (LANGUAGE, "English"))

7. ANALYSIS

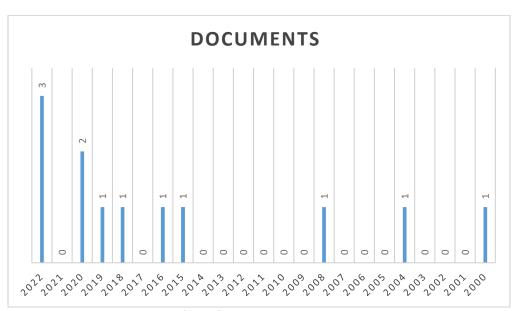

Figure 2: Documents by Year

(Source: Scopus database academic search engine (https://www.scopus.com. (Specifically, Advanced Search through TITLE-ABS-KEY)

The graph above presents a distribution of documents over the years from 2000-2022. As data vividly displays in the histogram graph above, researchers conducted 12 papers during these ranged years of span. In these years, researchers conducted 12 papers in total. The year 2000, 2004, 2008, 2015, 2016, 2018 and 2019 contributed one article each for publication. The year 2020 was witnessed by 2 published papers. The last year (2022)

witnessed a substantial increase with 3 documents published. Within these years, the number of published papers were varied. However, there were majority of years contributed nothing for publication as displayed in the above histogram graph. This histogram offers a visual representation of the annual publication trends, highlighting fluctuations and patterns in the number of documents.

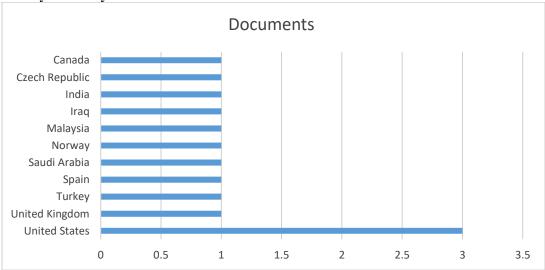

Figure 3: Document by Country/ Territory

(Source: Scopus database academic search engine (https://www.scopus.com.

(Specifically, Advanced Search through TITLE-ABS-KEY)

The figure shows the distribution of documents across different countries or territories. United States leads with three published documents as presented in a data sheet. The rest countries: UK, Turkey, Spain, Saudi Arabia, Norway, Malaysia, Iraq, India, Czech Republic and Canada each contributed one article for

publication. This distribution suggests variations in the level of attention or emphasis on different regions within the dataset. The graph gives a brief summary of the distribution of documents among different nations and shed light on the geographic concentration of the related content.

Documents by Subject Area

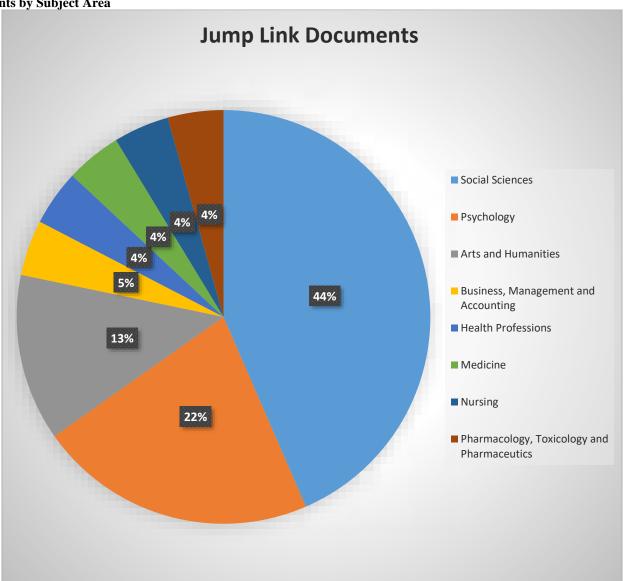

Figure 4: Document Analysis by Subject Area

(Source: Scopus database academic search engine (https://www.scopus.com. (Specifically, Advanced Search through TITLE-ABS-KEY)

The figure provides a breakdown of documents across different subject areas, offering insights into the distribution of content within the dataset. Social Sciences dominate with the highest representation, comprising 44% of documents, indicating a significant focus on topics within this field. Psychology follows with 22% of documents, highlighting a substantial but comparatively lesser emphasis than social sciences. Arts and

Humanities, holds 13%. Business, Management and Accounting represented 5% of published documents. The rests: Medicine, Nursing, Pharmacology, Toxicology and Pharmaceutics comprised 4% each. This distribution provides a clear overview of the subject areas covered, with a notable concentration of Social Sciences, followed by Psychology, Arts and Humanities and Business, Management and Accounting, while the remaining disciplines exhibit a more balanced and equal representation. The

data suggests that the documents' themes are diverse, which is indicative of the multidisciplinary character of the content within the designated subject areas.

Documents by Source

The reviewed articles were those published on the publishers as shown in the figure below. Each publisher published one article as vividly displayed in the graph. Those 12 articles were published by different publishers. All these listed publishers were for Scopus indexed journals. Therefore, these systematically reviewed articles were sourced and published in reputed and trusted journals.

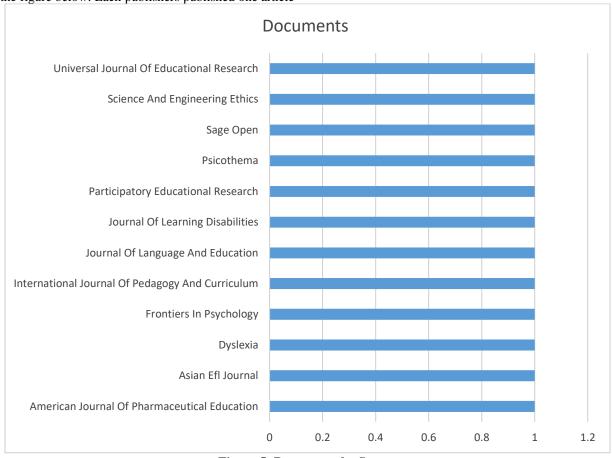

Figure 5: Documents by Source

(Source: Scopus database academic search engine (https://www.scopus.com. (Specifically, Advanced Search through TITLE-ABS-KEY)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

8. Word Cloud

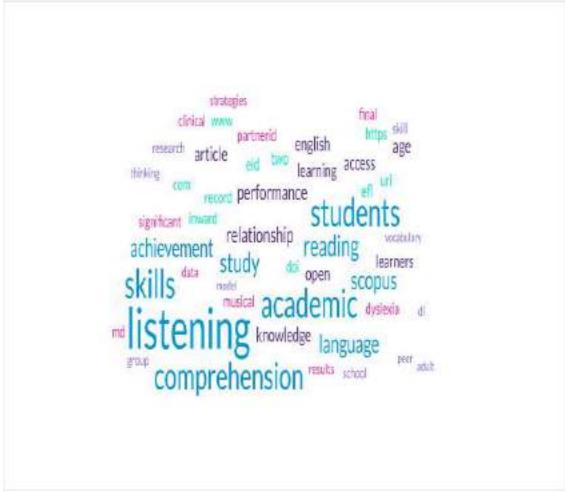

Figure 6: Word Cloud

(Source: online word cloud generator by using csv files)

The word cloud analysis, focusing on the topic "The relationship between students' listening skills and their academic achievement," reveals key thematic elements. Words such as "listening," "comprehension," "academic," "skills," "achievement," "students," "reading" "study", "language" and "Scopus" prominently stand out largely in the word cloud figure above. The prevalence of these terms underscores the central focus on "The relationship between students' listening skills and their academic achievement". The word cloud highlights the significance of topics related to the title of this study.

9. FINDINGS AND CONCLUSIONS

The aim of this systematical literature review was to delineate the association between students' listening skills and their academic achievement. It is obvious that listening skill is the root for all other language skills. It is also a tough and challenging skill in comparison to other language skills. In fact, so as to achieve a good grade or academic mark, the students must listen their

teachers' lectures and thoughts in the classrooms and outside of classrooms. Pupils who are good listeners typically get better scores and exhibit increased academic achievement in general. Therefore, as the reviews of all articles implied, the findings vividly displayed a direct or positive relationships. Deservedly, in order to score a good academic achievement in their school subjects, the students have to attend their lectures, tape-records, cassettes or any others which require their careful and attentive listening.

HEALTH SERVICE DELIVERY OF SELECTED MUNICIPAL HEALTH CENTER IN IV DISTRICT PROVINCE OF LAGUNA

Renchelle A. Palasin

Laguna State Polytechnic University, Sta. Cruz, Laguna, Philippines

ABSTRACT

The purpose of this study was to evaluate the current state of health service provision at a particular municipal health center located in District IV, Province of Laguna. 93 healthcare professionals and 253 patients from various local health institutions participated in our self-administered survey. The research design used in the study was descriptive-correlational, and statistical measures including mean, standard deviation, and Pearson Correlation Coefficient (r) were utilize. Results showed that the correlations of quality of health service of health workers to the provided services of municipal health center are statistically significant at .05 level of significant. On the other hand, the relationship between the respondent's profile and their provided services such as outpatient consultation, minor surgery, blood donation, vaccination, cervical cancer screening, drugs screening and intervention, dental care found that there is a slight but statistically significant correlate.

Furthermore, result showed that the relationship between respondent demographic profile age, sex, marital status is statistically significantly correlate with the four quality of health services variable while, position and length of service is not statistically significantly correlate with the four quality of health service variable such as timeliness, compassion, competency and patient-centeredness. The test of significance of differences between Health Workers and Constituents in the Quality of Health Services Delivered result shows that there's no statistically significant difference found any of four quality of services variables between health workers. This could mean that a respondent will rate the quality of service regardless of whether they are a health worker or a constituent.

KEYWORDS: Municipal Health Center, Health Workers, Ouality of health services, Patient-Centeredness

INTRODUCTION

The provision of health services in Municipal Health Centers is crucial in the fast-paced world of today. Workers are essential to making sure that these services are deliver successfully and efficiently. The study intends to assist the Municipal Health Center in Laguna's IV District that has choose to receive health services.

The Municipal health office is charge with the delivery of basic health services, which are primitive, preventive, curative and rehabilitative in nature. It also promotes, protects and maintain the health of the citizenry. A methodical, long-term strategy for improving patient outcomes and service delivery is continuous improvement. Developing a continuous improvement culture is a journey that requires dedication, perseverance, and commitment rather than a turnaround project or a fast fix. Republic Act 11223 This Act shall be refer to as the "Universal Health Care Act" (Sowell, 2020). People-centered, culturally sensitive, and diversity-aware approach to health care delivery that emphasizes on the demands and wellbeing of individuals. Republic Act 1082, "An act strengthening health and dental services in the rural areas, and providing funds accordingly," is another relevant piece of government. Example of quality improvement initiatives are when healthcare professionals employ data-driven strategies to reduce the average length of hospital stays or examine patient data to create a plan to lower postoperative infections. One of the main functions of health systems is service delivery, which is influence by governance, financing, and resource development. The accomplishment of intermediate health system goals and, eventually, the ultimate health system goals are directly impact by service delivery.

The research seeks to identify the most effective and efficient health services delivery of Municipal Health Center employees and explore how it will affect them and to the constituents they serve. The researchers intend to offer insightful analysis and helpful suggestions to enhance the overall quality of health care provided through the study's findings. The results of this study will also help municipal health centers understand the caliber of healthcare provided. All things consider, this study will offer insightful information about the ongoing quality care municipal health center staff provide to the community or clients they serve.

MATERIALS AND METHOD

A fact-finding study using a sufficient and accurate interpretation of the results is a descriptive approach of research. It highlights the events, activities, and phenomena of the present. It makes a significant contribution to the development of quality standards and norms for the delivery of healthcare services at a particular municipal health center in Laguna's IV District. Given that this study will focus on the provision of healthcare services in a particular municipal health center, the descriptive method will be the most suitable approach to employ. In particular, the correlational research approach was utilize in this study to

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

examine the health services provided by a chosen municipal health center in Laguna's IV district.

The questionnaires that will be given to research participants will provide the data that this investigation will use. The demographic profile of the respondents—including age, sex, marital status, position, and length of service—is provided in Part I of the questionnaire. The status of services like consultation, dental care, cervical cancer screening, minor surgery, blood donation, drug screening and intervention, and vaccination is reported in the Part II questionnaire. A five-point rating system was used to assess each of the services mentioned above, which each had five questions. The likert scale for provided services is, 5 – Always, 4 - Often, 3 - Sometimes, 2 - Rarely, 1 - Never. Part III is a researcher-made survey instrument based on RA 1082 that will be utilize to determine the act of strengthening health services in the rural areas of the respondents in terms of health services delivery which are timeliness, compassion, competency and patient-centered. Each of the aforementioned health services delivery consisted of five questions and this will be measure using a five-point scale. The likert scale for quality of health service delivery is, 5 – Excellent, 4 – Very Satisfactory, 3 – Satisfactory, 2 – Needs Improvement, 1 – Poor. Questions on performance were also a researcher-made survey instrument based on the Validation Sheet and Cronbach alpha of nonrespondent. It will measure the health services delivery of the health workers in terms of timeliness, compassionate, competency and patient-centered

RESULT AND DISCUSSION

The demographic profile of the respondents according to age reflected out of 349 respondents mostly were in the range of 18 – 30 years old a total of 173 (49.60 %) then 31 - 40 years old total of 89 (25.5%) third were 61 - 70 years old total of 35 (10%) fourth were 41 - 50 years old total of 32 (9.2%) and lastly, 51 - 60 years old total of 20 (5.7%) fall on this age. Moreover, 199 (57%) were female while 150 (43%) were male. On marital status, 187 (53.6%) or majority of the respondents were single while 117 (33.5%) were married then 25 (7.2%) were widowed Lastly 20 (5.7%) were separated. According to the study 256 or 73.4% of the respondents who took part in the research were constituents, next were administrative aide which comprises 30 or 8.60% of the total respondents, third were nurse which comprises 25 or 7.16%, fourth were midwife which comprises 16 or 4.58%, fifth were health officer which comprises 12 or 3.44% and lastly were physician which comprises 10 or 2.87% of the total respondents. Additional fall under 1 year below of service which were 66 in total (44.0%). Second largest group was 54 in total (36.0%) who had 1 - 10 years in service, third group was 20 (13.3%) who had 11 - 20 years in service while only small percentage or 0.7% fall under 21 years above in service.

Table 1. Reliability Analysis

| - | twore it itemwonity rinking bis | |
|-------------------------------|---------------------------------|-------------------|
| LATENT CONSTRUCT | CRONBACH'S | RECOMMENDED VALUE |
| Outpatient Consultation | 0.87 | >0.7 |
| Dental Care | 0.88 | >0.7 |
| Cervical Cancer Screening | 0.84 | >0.7 |
| Minor Surgery | 0.81 | >0.7 |
| Blood Donation | 0.93 | >0.7 |
| Drug Screening & Intervention | 0.85 | >0.7 |
| Vaccination | 0.87 | >0.7 |
| Timeliness | 0.77 | >0.7 |
| Competency | 0.83 | >0.7 |
| Compassionate | 0.79 | >0.7 |
| Patient-Centered | 0.72 | >0.7 |

Reliability coefficients measured by Cronbach Alpha for each of item is 0.9 and above therefore it will be considered as "excellent", whereas if it is 0.8 will be considered as "good", if it is 0.7 will be considered as "acceptable", if it is 0.6 will be

considered as "questionable" and if it is less the 0.5 it will be considered as "poor". This study, reliability test was conducted by 10 number of samples.

Table 2. Relationships between Five Demographic Profile and Seven Provided Services

| PROFILE | | | ICES VARI | | | | Tovided Scr vices |
|----------------------|---|--|--|---|---|--|--|
| VARIABL E | Outpat ient consult ation | Dental care services | Cervical cancer screening | Minor surgery services | Blood donation | Drug screening and interventi on | Vaccination |
| Age | rs=- .090 Slight corr. p=.094 | rs=- .104 Slight corr. p=.052 | rs=- .109* Slight corr. p=.041 | rs=.030 Slight corr. p=.577 | rs=- .203*** Low corr. p<.001 | rs=115* Slight corr. p=.031 | rs=096 Slight corr. p=.073 |
| Sex | t(337) =0.64a p=.523 | t(347)= 0.73 p=.465 | t(347)=1. 18 p=.240 | t(347)=- 1.27 p=.205 | t(347)=1. 30 p=.195 | t(347)=1.1 1 p=.276 | t(288)=-1.57a p=.117 |
| Marital Status | F(3,34 5)=1.0 4 p=.374 | F(3,345)=3.33* p=.020 | F(3,61.1) =8.10b** * p<.001 | F(3,54.9) =0.41b p=.744 | F(3,345) =14.27** * p<.001 | F(3,559) =16.49** * p<.001 | F(3,345)=9.29*** p<.001 |
| Position | t(147) =- 2.82a* * p=.006 | t(347)= 0.29 p=.770 | t(347)=- 2.16* p=.031 | t(347)=0. 78 p=.434 | t(347)=- 5.14*** p<.001 | t(347)=- 5.88*** p<.001 | t(347)=-4.31*** p<.001 |
| Length of Service | $r_s= .15^{**}$ Slight corr. $p=.007$ | r _s =.04 Slight corr. p=.498 | r_s =12* Slight corr. p =.023 | <i>r</i> _s =.06 Slight corr. <i>p</i> =.239 | r _s =- .26*** Low corr. p<.001 | r _s =30*** Low corr. p<.001 | r _s =22*** Low corr. p<.001 |

Table 2 show that is a statistically significant linear relationship between Position and level of Outpatient Consultation, t(147)=-2.82, p=.006. This means that health workers and constituents have different perceptions on the levels of services provided in

terms of outpatient consultation. Compared to their single coworkers, married employees are happier in their jobs.

Table 3. Relationships Between Five Profile Variables and Four Quality of Health Services Variables

| PROFILE | QUALITY OF | F HEALTH SERVICES | S VARIABLE | |
|----------|-------------|-------------------|-------------------|----------------------|
| VARIABLE | Timeliness | Competency | Compassion | Patient-centeredness |
| Age | rs=31*** | rs=19*** | rs=35*** | rs=25*** |
| | Low corr. | Slight corr. | Low corr. | Low corr. |
| | p< .001 | p< .001 | p<.001 | p<.001 |
| Sex | t(347)=1.53 | t(284.63)=2.52a* | t(289.13)=3.37a** | t(347)=2.53* |
| | p=.026 | p=.012 | p<.001 | p=.012 |

| Marital Status | F(3,58.55)=4. 36b** p=.008 | F(3,60.33)=4.62b** p=.006 | F(3,59.26)=5.02b ** p=.004 | F(3,61.77)=3.13b* p=.032 |
|----------------------|----------------------------------|----------------------------------|----------------------------------|---------------------------------|
| Position | t(347)=-0.98 p=.330 | t(144.45)=1.56a p=.121 | t(347)=-0.31 p=.755 | t(347)=-0.03 p=.980 |
| Length of Service | rs=06 Slight corr. p=.245 | rs=.05 Slight corr. p=.334 | rs=04 Slight corr. p=.478 | rs=03 Slight corr. p=.546 |

Table 3 shows that the Age, sex marital status is statistically significantly correlate with the four quality to health services variable with all p value of less than .05 level of significance. Hence, position and length of service is not statistically significantly correlate with the four quality of health service variable.

In line with Robards' (2018) research, a person's health and mortality might be affected by changes in their living arrangements and marital status as they age and reach middle age. The body of research on the relationship between marital status

and mortality has repeatedly shown that single people generally report worse health and a higher risk of dying than married people, with men being disproportionately affected. Given the increasing evidence of alterations in living arrangements and partnerships among older adults, along with the counterbalancing effect of rising divorce rates among younger generations on the likelihood of widowhood, it is crucial to take into account the potential health consequences of these changes in later life in order to minimize the need for hospital visits.

Table 4. Correlations between Seven Provided Services Variables and Four Quality of Health Services Variables

| PROVIDED SERVICE | QUALITY OF HEALTH SERVICES VARIABLE | | | | | |
|---------------------------------|-------------------------------------|----------------------|---------------------------|------------------------------|--|--|
| | Timeliness | Competency | Compassion | Patient- centeredness | | |
| Outpatient consultation | 0.21*** | 0.21*** | 0.11* | 0.10 | | |
| | Low corr. | Low corr. | Slight corr. | Slight corr. | | |
| Dental care services | 0.23*** | 0.14* | 0.27*** | 0.25*** | | |
| | Low corr. | Slight corr. | Low corr. | Low corr. | | |
| Cervical cancer screening | 0.54*** Moderate corr. | 0.32*** Low corr. | 0.45*** Moderate corr. | 0.53*** Moderate corr. | | |
| Minor surgery services | 0.39*** | 0.19*** | 0.26*** | 0.34*** | | |
| | Low corr. | Slight corr. | Low c0orr. | Low corr. | | |
| Blood donation | 0.44*** | 0.32*** | 0.36*** | 0.36*** | | |
| | Moderate corr. | Low corr. | Low corr. | Low corr. | | |
| Drug screening and intervention | 0.30*** | 0.29*** | 0.28*** | 0.34*** | | |
| | Low corr. | Low corr. | Low corr. | Low corr. | | |
| Vaccination | 0.36*** | 0.20*** | 0.28*** | 0.27*** | | |
| | Low corr. | Low corr. | Low corr. | Low corr. | | |

Table 4 shows that all correlation coefficients are statistically significant. A moderate and statistically significant correlation in between cervical cancer screening and timeliness, r=.54, p<.001, cervical cancer screening and compassion r=.45, p<.001, patient centeredness of r=.53, p<.001 Hence, the positive correlation

coefficient indicates that the higher the services provided in terms of cervical cancer screening, the higher the quality of service in terms of timeliness, compassion and patient centeredness.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 5. Test of Significance of Differences between Health Workers and Constituents in the Quality of Health Services Delivered

| Quality of service | Type of respondent and their perceived level of quality of s | | | vice | t | p |
|-----------------------|--|------|------------------------------|------|------------|------|
| | Health work (n=93) | er | Constituent (<i>n</i> =256) | | | |
| | M | SD | M | SD | | |
| Timeliness | 3.98 | 0.52 | 4.03 | 0.48 | -0.98 | .330 |
| Competency | 4.07 | 0.50 | 3.98 | 0.43 | 1.56^{a} | .121 |
| Compassion | 3.96 | 0.54 | 3.98 | 0.48 | -0.31 | .755 |
| Patient- centeredness | 4.04 | 0.47 | 4.04 | 0.42 | -0.03 | .980 |

Table 5 shows there's no statistically significant difference found any of four quality of services variables between health workers and constituents (all p values are greater than .05). This could mean that a respondent will rate the quality of service regardless of whether they are a health worker or a constituent.

According to Blizzard's (2019) research, there are notable differences in the patient treatment needs between men and women from a clinical standpoint. However, there is no discernible difference between hospitals and their staff in terms of their capacity to meet the demands of patients, regardless of gender, according to Gallup's patient satisfaction survey on the quality of healthcare services and loyalty scores of performance. The one significant difference is that women are generally more trusting of inpatient care than male. Hospitals should take heart from this discovery, as female staff members frequently make healthcare decisions for their families. Xiao & Barber (2018) discovered in another study that an individual's own characteristics had an impact on patient satisfaction.

CONCLUSIONS

The study concluded that clinical worker performance in areas such as punctuality, compassion, competence, and patientcenteredness were significantly predicted by the quality of care provided in our owned municipal health clinics. This emphasizes how crucial it is to support high-quality healthcare in certain of the municipal health center's services, since doing so can enhance the delivery of healthcare services and boost public confidence in public hospitals and government agencies.

RECOMMENDATIONS

The following are some recommendations drawn from the findings.

1. The municipal health center should prioritize the development and implementation of training programs and workshops that aim to enhance the skills of their employees. The training should focus on improving the employees' timeliness, competency, compassionate and patient centeredness. Furthermore, to be aware of the

- potential for outbreaks and pandemics and to remain alert.
- 2. Regular monitoring and evaluation of the quality of health workers' delivery of services should be conduct by the municipal health center. By doing so, the local health center will be able to pinpoint areas that require improvement and offer the assistance and treatments that are required.
- 3. Future researcher should continue research the impact of health service delivery on provided services in other industries and sectors. This will assist in identifying tactics and best practices that work well in various situations.

THE LIFE SKILLS OF OUTSTANDING INDEPENDENT READERS IN SECONDARY SCHOOLS: A MULTIPLE CASE STUDY

Jobell B. Jajalla, MAEd¹, Dr. Gloria P. Gempes²

¹(Corresponding Author), College Instructor, Kapalong College of Agriculture, Sciences and Technology ²Full-Time Professor, University of Mindanao, Part-Time Professor, University of the Immaculate Conception

Article DOI: https://doi.org/10.36713/epra17032

DOI No: 10.36713/epra17032

ABSTRACT

The purpose of this multiple case study was to describe the five different cases of outstanding independent readers in the public secondary schools in Davao del Norte in terms of their life skills. The unique cases revolved around a campus journalist, a volleyball athlete, a student leader, a consistent honor student, and a student with autism spectrum. The cases were identified using maximum variation sampling, and in-depth interviews were employed to explore and gather data in this research. Salient findings were noted as to the experiences of outstanding independent readers which include early reading opportunities and support, sharing of reading abilities to other students, allocation of time for reading, and utilization of gadgets for reading. More so, their coping strategies were summarized in the following themes: enrichment of vocabulary, adoption of reading tactics, development of set of values for reading, and application of leadership skills. In the cross-case analysis of research data, all cases were generally similar. Notably, the only difference is that the student with autism preferred reading by himself unlike the other cases of students who viewed reading as a collaborative experience. It was realized that while cognitive capacities are essential in learning reading, socio-emotional aspects of outstanding readers such as their life skills must also be considered in schools.

KEYWORDS: independent reading, life skills, public secondary schools, multiple case study, Philippines

INTRODUCTION

Learning reading enables adolescent students to navigate their academic life successfully. Being able to read enables one to acquire more knowledge and learn more skills as they go through one grade level and proceed onwards (Lalicic & Dubravac, 2021). However, in the realm of secondary education, the challenge of cultivating strong reading skills and holistic development among students is a significant concern, with various factors impeding the success of students to develop such (Toste et al., 2020; Ramadhani et al., 2023). Pressing issues such as limited critical thinking, poor comprehension as well as socio-emotional skills, and inadequate communication abilities contribute to the complexity of this challenge (Rani & Neeraj, 2020). Recognizing that these mentioned components are subsumed under the life skills that high school students must typically have, there exists a potential avenue for developing the reading skills of struggling students by capitalizing on the improvement of their life skills as individuals.

In Indonesia, it was recently found that high school students ranked third from the bottom in the Programme for International Student Assessment (PISA) which aimed to assess high school students across numerous countries globally in terms of reading, mathematics, and natural science (Fenanlampir, 2019). Another study concluded that this poor performance in reading in international assessments such as PISA is grounded on the major

misconceptions of Indonesian teachers in the aspect of teaching reading. High school teachers viewed such endeavor as a shallow task which only focused on the pronunciation of words and literal meaning of texts (Fauzan et al., 2023). In contrary, Ahmed et al. (2021) posited that teaching reading among students is beyond the surface level, as it must involve the complex stimulation of different life skills such as critical thinking skills, socio-emotional empathy, and cultural awareness in order to aid students to effectively understand human emotions and cultural connotations in texts, obtain information, master knowledge, utilize this information to overcome any challenges, and construct new substantial ideas.

In the meantime, developing the reading skills of Filipino students have been a challenge for educators and policymakers alike. Despite government efforts to improve literacy rates in the Philippines, recent studies have shown that many students need help with reading comprehension, vocabulary development, and critical thinking skills. Aside from dwelling only on the surface meaning of texts, they could not also evaluate the factual information and infer meaning from certain texts (Idulog et al., 2023; Gulo & Deloy, 2022). The evidence of this phenomenon was further reinforced in the previous results of PISA Report in 2019 which illustrated that Philippines ranked lower than majority of its Southeast Asian counterparts, let alone in the global setting. In fact, it concluded that 80 percent of the students

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

around the age of 15 did not meet the minimum proficiency in reading (Manlapig, 2020). By extension, it was determined in the articles of the Philippine Exporters Confederation (2023) and Elmouhtarim (2018) that Filipino students lagged behind in terms of critical thinking and problem-solving, leading to the conclusion that these are few of the factors which make students struggle extensively in adapting to and overcoming reading challenges and in life in view of the information explosion in the 21st century.

Locally, the pervasiveness of reading skill problems in secondary schools is no less serious compared to international and national data. In fact, there exists a constant surge of non-readers and struggling readers in secondary level, which causes an alarm to teachers and educational leaders in the locality. In a public secondary school in Asuncion, Davao del Norte, it was reported in the study of Tan et al. (2019) that there were as many as 10 students under the frustration level. This one was already an improvement from the previous years which had at least 32 students under the frustration level. This study was extended by Magallanes (2021) in the same locale which claimed that there were as many as 34 students under the frustration level. Such situation led to many social-related problems, particularly because struggling students felt demotivated at school and they do not want to be engaged with the lesson and their classmates. These problems also call for concerned teachers and agencies to look for possible solutions to improve the reading skills of many high school students.

There was an evident explorable research gap in terms of the life skills and its relevance or intersection with the reading skills of high school students. Previous pieces of literature mostly concentrated on the topics of reading, struggling readers, phenomenon of non-readers in secondary schools, reading disabilities, and factors that are contributory to reading achievement in the international settings (Ziegler, 2020; Lllego & Decano, 2018; Barshay et al., 2021; MS & Rachmadtullah, 2018; Ardhian et al., 2020; Liu et al., 2022). More so, studies focusing on independent readers were likewise limited and underexplored, as most of the available studies only focused on the other side of the coin – the dilemmas and problems associated with the macro skill of reading and the toils of struggling readers (Nanda & Azmy, 2020; Albano, 2020; Sison & Tecson, 2019). Hence, a gap in literature was identified, and an opportunity to probe the life skills of outstanding independent readers was apparent in the case of this paper.

Grounded on this, I expressed my desire to conduct a study relative to this topic. Studying the experiences and best practices of outstanding independent readers could potentially help struggling readers, teachers, parents, reading coordinators, school administrators, officials of the Department of Education, and stakeholders in joining hands together to combat the phenomenon of struggles in reading. The findings of this study may be used as a baseline data in ideating programs and policies which can optimize the student learning outcomes, educational practices,

student development, assistance, and instruction extended to the struggling readers. There was also the urgency to conduct the study due to the fact that there was an increasing number of struggling readers and non-readers even in secondary level, which was supposed to be addressed already in the elementary level because this one was where the foundation for basic literacy is being strengthened. The fear of having more struggling readers in secondary level called for urgent research attention among the ranks of researchers.

LITERATURE REVIEW

Demands in Reading

Reading as illustrated by Banditvilai (2020) is a sophisticated cognitive process that demands for a wide range of abilities and proficiencies from its users. One must have a clear reading goal to read nowadays. One must find out why they are reading a given material, be it academic inquiry, amusement, or simply for information collection. As proposed by Grindle et al. (2020), a well-defined goal allows readers to follow the content while also increasing comprehension by providing a foundation for comprehension and identifying main points.

Moreover, Halim et al. (2020) found that one of the fundamental prerequisites for reading is comprehension, and that refers to the ability to understand and interpret written material. Proficient readers employ critical thinking to unlock clues and implications buried inside the text instead of merely absorbing what is being said. Besides, Hashim and Yunum (2018) emphasized fluency as essential to reading because readers must master the ability to read rapidly and effortlessly. Fluent individuals may read at a quicker pace and speed, which boosts comprehension and enables them to engage with more material overall.

In addition, in accordance to Jamal and Dehraj (2018), reading also requires a range of analytical skills beyond basic decoding. Experts in reading can enhance their general understanding by analyzing, evaluating, and synthesizing information from various texts and other sources. The mentioned above kind of reading comprehension described by Karasu (2020) implies text interpretation. This involves the reader in activities to understand the relationship between concepts, draw inferences, and make judgments based on the data obtained. Fulfilling these reading requirements helps people succeed academically as well as develop critical thinking abilities, which help people navigate and comprehend the complexity of the world.

Life Skills

Life skills are a wide range of competencies that allow people to deal effectively with the challenges of everyday life and contribute to the well-being of a person as well as the society, as mentioned by World Health Organisation (2020). As per Saravanakumar (2020), the skills are vital for success in different aspects of life and personal development and interactions with others, such as empathy and self-awareness, problems and critical thinking, talking and relating to others, and stress and emotions.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In consonance, interpersonal and communication skills are components of life skills that are vital and must be acquired. This is because, as per UNICEF (2019), life skills enable us to listen actively, communicate effectively, and meet and interact with other people in social contexts. Saravanakumar and Padmini (2020) also argued that these skills are beneficial for establishing and maintaining healthy relationships, both on a personal and professional level. Effective communication is also necessary to address any disputes that might arise and to cooperate which fosters peace and collaboration in the society due to the ability to help each other.

Further, Nair and Fahimirad (2019) introduced problem-solving and critical thinking as another crucial life skills that allow individuals to evaluate situations, analyze information, and make informed decisions. In the article by Lakshmana (2020), it is mentioned that such skills are essential for facing problems, adapting to changes, and developing creative solutions to difficult problems. The ability to think critically and solve problems is a critical factor in success in personal and professional life in a changing society.

Furthermore, empathy and self-awareness are another key element of life skills. Chung et al. (2020) define selfconsciousness as self-awareness, including social skills and compassion. From the article by Purwanti et al. (2022), it is understood that self-conscious people understand their feelings, abilities, and lack of competence; therefore, they are able to make informed decisions and cope with life's difficulties. By contrast, empathy is the share and understanding of another person's feelings; thus, people can create a socially just world devoid of discrimination.

Meanwhile, Ozer et al. (2020) disclosed that the ability to cope with stress and emotions is a vital life skill that helps individuals successfully manage stressors and emotion regulation. To add, Koyuncu (2018) developed this notion that life skills include an ability to grow emotional intelligence and coping strategies and cultivate resilience against life's intended failures and obstacles. In fact, the success in many life spheres, personal growth, and life experience are determined by life skills and their components.

Regarding the relationship between life skills and reading, Ismail (2022) noted one significant aspect. Reading is the basis for acquiring life skills, as it develops critical thinking, knowledgegathering skills, and effective communication. As shown by research, in particular by Klass (2023), reading skills help people access information at high speed and understand it, allowing them to make competent decisions quickly. At the same time, reading develops empathy, helping understand other people, or a different point of view. As one can see, life skills and reading are closely related since literacy ensures that people quickly master the necessary knowledge in various fields of life and easily navigate through life's difficulties.

PURPOSE OF THE STUDY

This qualitative study multiple case study aimed to describe the challenges, life skills, and coping strategies of outstanding independent readers in the secondary schools in Davao del Norte. At this stage in research, the life skills of outstanding independent readers were defined as the adaptive and positive behaviors in an ever-demanding world of those outstanding students who passed the Group Screening Test (GST) of the Revised Philippine Informal Reading Inventory (Phil-IRI) and were identified as successful readers.

RESEARCH QUESTIONS

- 1. What are the experiences of outstanding independent readers in terms of their life skills in reading?
- What are the coping strategies of outstanding independent readers in terms of their life skills in reading?
- 3. What explains the similarities and differences of each case?

METHODS

Research Design

This qualitative study utilized the multiple case study approach. Creswell and Creswell (2018) defined multiple case study as a tradition of qualitative research which seeks to delve deeper into the varying realities of a specific phenomenon from the lens and different angles of the unique cases of the participants. The entire endeavor highlights the similarities and differences of all unique cases enjoined in the study, making the in-depth study of the research topic more comprehensive and insightful. Using multiple case study approach in this study granted me the lens to view the unique cases of the participants and gain understanding of the research topic which is the life skills of outstanding independent readers in public secondary schools.

Participants

The participants of this study were the five different cases of outstanding independent readers in three public secondary schools in the Division of Davao del Norte. They were selected as the participants of this study because they hold invaluable information about the life skills which can possibly contribute to their success in mastering the macro skill of reading. Moreover, each case differed in terms of the circumstances or fields wherein each participant excelled. The outstanding cases specifically include a Grade 7 student journalist, a Grade 8 volleyball athlete, a Grade 9 student leader, a Grade 10 consistent student achiever, and a Grade 9 student with autism spectrum.

Given that there was urgency to guarantee that the participants of the study must legitimately hold rich, valuable information of the phenomenon in question, purposive sampling, particularly maximum variation sampling, as espoused by Patton (2002) was utilized to select the participants of this study. In looking for my participants, I tapped the reading coordinators as reference persons.

(3)

In general, I had the following inclusion criteria. My participants must be outstanding junior high school students who excelled in academics and/or extra-curricular activities and who were identified by the reading coordinator of the public school as independent readers by using Group Screening Test (GST) in the Revised Philippine Informal Reading Inventory (Phil-IRI), a discrete-point reading assessment tool officially utilized by the Department of Education for the purpose of identifying nonreaders, struggling readers, and independent readers in basic education. In almost all regions, GST was only utilized until Grade 8. However, the Division of Davao del Norte was an exception wherein the same tool was utilized in all grade levels until senior high school. For the exclusion criteria, this study did not include students from elementary, senior high school, and college departments. Private school students did not also take part in this study.

Procedure

Human participants were party to in this study, since they were the sources of data in this dissertation. Standard protocols were conformed to in this study. The first step was the obtainment of permission to implement the study. This document was gleaned from the Research Ethics Committee (REC) of the University of the Immaculate Conception in consonance with that of the Dean of the Graduate Studies. Simultaneously, the self-made interview guide was subjected to validation procedure which was spearheaded by the panel members who also functioned as expert validators. After this one, an endorsement letter was requested from my dissertation adviser.

The second step was to seek the permission of the Schools Division Superintendent (SDS) of the Department of Education (DepEd) – Division of Davao del Norte using the documents I obtained in the earlier process. Once I was granted permission by the aforementioned department, I also sought the permission of the concerned Public Schools Division Superintendent and school heads to give due courtesy to the authorities.

Three schools within the Division of Davao del Norte were randomly selected, and I contacted in advance the school head and the reading coordinators thereof to help me look for the study participants that fit my inclusion criteria. The unit of this study involved people, particularly the outstanding independent readers, who potentially had experiences and insights on how their life skills became integral in ensuring their success in developing and sharpening their reading skills. This one was important due to the fact that many struggling readers need support and intervention to improve their inferior skills in reading, and untangling the life skills of outstanding independent readers may facilitate another avenue for these poor performing students to be supported or scaffolded in reading.

As to the sampling method that was employed in this research, maximum variation sampling was applied, given that I looked for heterogeneous information-rich cases of outstanding independent readers for my study. Once I shortlisted the prospect participants for my study, I proceeded to the next step.

For the third step, the participants together with their parents or guardians were given a comprehensive orientation about my study in person. Individual orientation was done for confidentiality purposes. I introduced myself to my participants and I was frank with my purpose of inviting each of them. I explained to them the purpose and details of my study. Then, I invited them to take part in this study, having met all the criteria that I was looking for among my prospect participants. Once they initially responded affirmatively to the invitation, the junior high school students, teachers, and parent signed the informed consent form as attestation to their voluntary participation. Meanwhile, the differently abled participant signed the informed assent form and his mother was provided with informed consent form for her to sign as attestation of the same. Of course, the young students and their parents or guardians were given the option to refuse in doing so as well as the options to ask questions. Giving them these options further enhanced the ethical criterion of voluntary participation in this study.

The interviews were scheduled at a time that was mostly convenient for the participants. Face-to-face interviews were done with the participants while adhering to health and safety standards. Still, they were afforded with utmost care and freedom to withdraw participation or ask questions while the interview was happening. This one was done to uphold the entitlements of the participants for ethical consideration. Coercion was avoided at all costs, and questions during the interview only focused on the life skills of outstanding independent readers. Their permission was also asked before the interview was recorded. I explained that the purpose of recording such was to help me recall the vital answers of the participants during the interviews. Moreover, the interviews were kept confidential in consideration to their safety and well-being.

After the interviews, I manually transcribed the responses of my participants during the interviews. Before I subjected the transcribed responses to thematic analysis, I proceeded first to the verification process wherein I went back to the participants and asked their aid to verify the accuracy of the transcripts against the responses that they made in the interview. Once they testified to the accuracy of the transcripts by signing the member checking certificate, the transcripts were subjected to data analysis with the supervision of my designated qualitative data analyst.

DATA ANALYSIS

The data from the interviews was subjected to thorough transcription, translation, and data analysis to enable the researcher to understand the complexities of the phenomenon in question. In consonance, Maguire and Delahunt (2017) espoused that one of the methods in analyzing qualitative research data is thematic analysis. This is summarized as the endeavor of identifying, analyzing, and presenting patterns that exist within a large amount of data. The thick, rich, and detailed descriptions of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the phenomenon will be unlocked through undergoing this process.

In applying the thematic analysis in this dissertation, the proposed model of Braun and Clarke (2006) was emulated in this context. This one indicated that I adhered to the intricate processes of thematic analysis which include the familiarizing of the data, formulating the initial codes, identifying the potential themes, double-checking the themes that were generated, deciding on theme labels, and completing the report.

Ethical Considerations

This paper was evaluated thoroughly by the Research Ethics Committee of the University of the Immaculate Conception based on the ten ethical tenets of research: social value; informed consent; vulnerability of the research participants; risks, benefits, and safety; privacy and confidentiality; justice; transparency, qualifications of the researcher; adequacy of facilities; and community involvement. As such, the study was subjected to careful scrutiny to affirm that the ethical principles were strictly applied in the research process at all times to protect human participants, most particularly those who belong in the vulnerable sectors.

RESULTS AND DISCUSSION

Participants' Profile

As depicted in the Table 1, the five cases of outstanding independent readers were differentiated in terms of their demographics and unique aspects. The first case consists of a campus journalist who is a timid Grade 7 student who bagged a win in the National Schools Press Conference (NSPC) in the category of Science and Technology Writing, while the second case involves a Grade 8 student who has been part of a team of women volleyball players who conquered numerous competitions including those that are in national level. She is also a timid girl who has an evident passion for doing volleyball. The third case is a Grade 9 student who has a strong personality and excellent communication skills, certain manifestations of a student leader since elementary grades, while the fourth case centers on a bubbly and eloquent Grade 10 student who has been a consistent top 1 student since her kindergarten days. She shared with me her passion for watching Korean dramas and anime as well as her drive for excellence and competition, whether in curricular or extracurricular activities. The fifth case is a Grade 9 student who has an autism spectrum. While he has certain manifestations of such as his tendency to avoid eye contact, he speaks his immense love for reading and thirst for knowledge, particularly in politics and economy.

Table 1. Profile of the Participants in In-depth Interviews

| | GRADE 7 CAMPUS JOURNALIST (Case A) | GRADE 8 VOLLEYBA LL ATHLETE (Case B) | GRADE 9 STUDENT LEADER (Case C) | GRADE 10 ACADEMIC ACHIEVER (Case-D) | GRADE 9 STUDENT WITH SPECIAL NEEDS (Case-E) |
|---------------------|--|--|---|--|--|
| AGE | 13 | 14 | 15 | 16 | 16 |
| SEX | Female | Female | Female | Female | Male |
| SCHOOL | School A | School B | School B | School C | School A |
| GRADE LEVEL | Grade 7 | Grade 8 | Grade 9 | Grade 10 | Grade 9 |
| UNIQUE ASPECTS | Winner in the National Schools Press Conference | Winner in Various National Women's Volleyball Competitions | Consistent Classroom Leader and Student Government Official | Consistent Honor Student since Kindergarten | Voracious Reader with Autism Spectrum |
| PARTICIPANT CODE | P01 | P02 | P03 | P04 | P05 |

Presentation of Findings

Experiences. Using Braun and Clarke's (2006) model of thematic analysis: four themes emerged which explained the experiences of outstanding independent readers in relation to their

life skills in reading. As shown in Table 2, these themes are: *early* reading support and opportunities; sharing of reading abilities to other students; allocation of time for reading; and utilization of gadgets for reading.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2. Experiences of Outstanding Independent Readers in Secondary Schools

| • | Outstanding independent Readers in Secondary Schools |
|---|--|
| Essential Theme | Core Ideas |
| Early Reading Opportunities and Support | being provided by parents with various reading materials being taught and assisted by parents on how to read parents teaching reading at home using books and other reading gadgets enjoyably receiving overwhelming support of the family in terms of reading being exposed to school events that develops reading receiving rewards and recognition for accomplishing something attributed to reading learning to read together with siblings |
| Sharing of Reading Abilities to Other Students | sharing strategies in reading with friends helping students with difficulty in reading sharing one's understanding of the text happily developing a sense of accomplishment by helping others read teaching classmates on how to analyze using context clues |
| Allocation of Time for Reading | making reading a habit setting time for reading at home considering reading as a bonding moment with family and peers making reading a part of home-routine creating alone time for reading |
| Utilization of Gadgets for Reading | accessing the internet to read using reading apps and e-books using e-dictionaries for word meanings gathering new ideas from the social media researching summaries and meaning of a text in the internet |

Early Reading Opportunities. The participants recognized that their journey towards reading began when they were reared by their parents to become readers early on at home. This journey also had its kick-off when the participants were taught by their siblings and exposed them to various reading materials provided by their parents at a young age. For all of the cases of outstanding independent readers, they had adequate opportunities to establish their firm foundation in reading. Pertinent to this idea, here is the statement of Case A:

> It is how my mama and papa taught me how to read since I was 3 years old. They taught me how to read before I started going to school. They also taught me and even disciplined me to help me learn it. (P01_CQ1.S1)

Sharing of Reading Abilities to Other Students. Majority of the participants relayed that they also impart what they knew and learned about reading. In other words, majority of the participants attested that they share whatever tips and knowledge that they have about reading to their classmates and friends. This means that the case participants derive a sense of accomplishment and fulfillment in helping others on how to read. In connection, a pertinent statement of this idea was made by Case C below:

Perhaps, it is when I help my teacher teach reading or help my classmates read. As a leader in the classroom, I do not only focus on my own needs but I also see the needs of my classmates. I also ensure that my classmates succeed, especially those struggling with reading because I genuinely feel for them, Sir. I am not selfish, not boastful. It is just that I cannot stand idly by when I see them having difficulty. That is why I also assist our English teacher in teaching them. (P03_CQ1.S3)

Allocation of Time for Reading. One of the typical practices of outstanding independent readers is the allocation of time for reading. This only means that all case participants already made reading as part of their routine and habits. They even set a schedule to read wherein they do this either by themselves or with their family. In consonance, here is a statement of Case E who has an autism spectrum that is relevant to the idea discussed above:

> For me, I cannot get enough of reading because I love it. There are days when I just want to read and skip eating for the entire day because I enjoy it. I get upset if my parents disturb me while I am reading because I get absorbed in my reading. I enjoy reading because it brings me joy knowing that I learn a lot from it. (P05 CQ1.S9)

Utilization of Gadgets for Reading. All case participants have already utilized the power of internet to expand their respective horizons in reading. Being able to access various reading materials and resources online, all participants opened up that they read certain texts online. They were also able to accumulate vast amounts of information from different websites as well as search for summaries and meanings of text to aid them in their reading activities. In connection, Case D made a statement about this one:

> On social media, it may not have a significant influence because it is not really about academics, but it is more

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

about fun. I spend a lot of time on apps like comics, manga, and watching K-dramas, where reading subtitles helps improve my vocabulary. While multitasking by listening and watching, it also greatly contributes to my learning. (P04_CQ1.S4)

Coping Strategies. Meanwhile, the coping strategies of outstanding independent readers in association to their life skills were also unveiled in this study. As shown in Table 3, four emerging themes were presented: *enrichment of vocabulary;* adoption of reading tactics; development of set of values for reading; and application of leadership skills.

Table 3. Coping Strategies of Outstanding Independent Readers in Secondary Schools

| Essential Theme | Core Ideas on Coping |
|------------------------|---|
| | -using the dictionary on how to pronounce word |
| | -observing correct pronunciation of words |
| | -seeking guidance from teachers |
| Enrichment of | -gathering information from other people |
| Vocabulary | -humbly accepting help from others |
| | -using newly learned words and ideas in writing |
| | -applying ideas in the classroom |
| | -becoming updated with the trends in reading using technology |
| | -relating what has been read to real-life, to another text or experience |
| | -developing questions while reading |
| Adoption of Reading | -exposing oneself to different reading genres |
| Tactics | -looking back for keywords and rereading in order to clarify or answer questions |
| | -dividing text into sections for understanding |
| | -highlighting important words or ideas |
| | -becoming diligent in comprehending the text |
| Development of Set of | -motivating oneself to improve reading skills |
| Values for Reading | -gaining eagerness to learn from what has been read |
| values for Reading | -being humble in receiving feedbacks |
| | -having the willingness to help others |
| Application of | -developing good communication skills, open-mindedness, sound organizational skills |
| Leadership Skills | -leading the class or the group |
| Leadership Skins | -developing the ability to discern and decide for others |

Enrichment of Vocabulary. The participants were able to devise the coping strategy of enriching their vocabulary to effectively read different texts. As such, they adopted various means to add more items in their vocabulary such as seeking guidance from one's teachers, using the dictionary to unravel the meaning of the words, and being humble enough to accept help from others, to name a few. Pertinent to this idea, Case A stated that:

I guess the practice which I alone have is that, I do not think that it is bad to ask questions if you cannot understand what you are reading. I do not pretend that I know everything because I know that there are people who can help me, such as my English teachers. That is why I really wonder why others are ashamed of asking questions. It is because for me, it is perfectly okay to ask. (P01_CQ2.S8)

Adoption of Reading Tactics. Another coping strategy that was attained by the participants is the adoption of different reading tactics. This in response the challenges about difficulty in understanding on what they are reading which they also mention in the interviews. Certain tactics such as relating what one has read to real-life experience, looking for keywords or rereading

texts to clarify or answer certain questions, or developing questions about the text that one is reading, to name a few, were noted among the responses of the participants. In relation to this idea, Case D has something to say:

I am also a critical thinker, capable of comprehending and evaluating things based on the information provided in what I read. I can organize my ideas and thoughts to better understand the story or literature I am reading. (P04_CQ2.S7)

Development of Set of Values for Reading. In response to the challenges presented by the endeavor of reading itself, outstanding independent readers were able to develop their own values which amplify their eagerness and willingness to see through the end of the reading process. All participants mentioned that they exercised due diligence in reading texts, in order for them to understand its meaning completely. They were also able to motivate themselves to read in the process so that they would find the journey to be fun and worthwhile. With regards to this idea, Case B cited that:

I found ways to learn how to read, Sir. If I have difficulty understanding a story. I always make an effort to find ways

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

to help myself. I do not give up immediately because I believe there is always a way. (P02_CQ2.S2)

Application of Leadership Skills. Majority of the participants mentioned that they enhanced their reading skills in various ways. One of which is through using one's leadership skills to influence and teach others how to read. By organizing one's class section and helping them grasp the dynamics of reading using one's leadership skills as a leverage, majority of the outstanding independent readers would not only develop their reading skills. In return, they are also honing the reading skills of their classmates and friends. Case C claimed that:

I can also utilize my leadership skills in reading because I teach my classmates who are not very knowledgeable. In this way, I have helped them and myself. Perhaps, that

strategy or practice that I have is what made me unique. (P03_CQ2.S8)

Similarities and Differences. As part of the cross-case analysis, similarities and differences among cases are analyzed in the context of the life skills of outstanding independent readers. It can be generally inferred that most of the cases were similar, and only few differences were noted in this multiple case study. Only Case E who has an autism spectrum manifested a difference, given the fact that he preferred reading on his own, rather than associate closely with his peers during reading activities. These inferences can be better understood in Table 4, where the check mark (\checkmark) indicates presence of the theme in a case and an X-mark (X) which indicates absence of the same.

Table 4. Similarities and Differences of Experiences and Coping Strategies of Outstanding Independent Readers in Secondary Schools

| Themes on Experiences | GRADE 7 CAMPUS JOURNALIST (Case A) | GRADE 8 VOLLEYBALL ATHLETE (Case B) | GRADE 9 STUDENT LEADER (Case C) | GRADE 10 ACADEMIC ACHIEVER (Case-D) |
|--|--|--|---------------------------------------|--|
| Early Reading Opportunities and Support | ✓ | ✓ | ✓ | ✓ |
| Sharing of Reading Abilities to Other Students | ✓ | ✓ | ✓ | X |
| Allocation of Time for Reading | ~ | ✓ | ~ | ~ |

| Application of Leadership Skills | ✓ | ✓ | ✓ | X |

IMPLICATIONS

The study has been regarded as a treasure trove of lessons that secondary school students, parents, language teachers, reading coordinators, head teachers, master teachers, and future researchers can use in resolving the problems that were part of the premise of this study. Thus, this section is dedicated to discuss the implications that can be derived by different authorities and agencies from this study to combat the phenomenon of the prevalence of struggling readers in public schools.

Students may find this study meaningful, as they can emulate the examples of the outstanding independent readers who were interviewed in this study. They may allocate more time for reading, enrich their vocabulary, as well as adopt productive and

positive socioemotional values to cultivate their love for reading and learning. Parents are also enjoined in this study, as they are the partners of teachers in providing early reading opportunities and support to the learners. As per the findings of this research, early reading support is crucial to develop the foundation of students in reading, which they can use in the long run to navigate the complexities and uncertainties of life in the future.

Moreover, the faculty composed of language teachers, reading coordinators, head teachers, and master teachers, may also find invaluable insights in this study, as they can use this one to devise programs, activities, and initiatives which are targeted to augment the life skills of students. Teachers may direct their focus in providing activities that are geared to enhance the vocabulary,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

love for reading, and adaptive learning strategies to increase the odds of reading success among learners. The findings also deliver the fact that equal and adequate opportunities for reading must be provided to all students with no exception, in order to make a community inhabited by literate learners a reality. This may be challenging for teachers of today to realize, but this is a vision that is worth persevering for.

Also, the scholarly endeavor has managed to unveil the significant aspects of the life skills of outstanding independent readers, specifically the experiences and coping strategies adopted by the participants in the study. Findings were derived from the analysis which bore comprehensive accounts that describe the research topic in detail. Albeit, the study has not managed to cover all aspects of the investigated phenomenon, which merits further research by other interested scholars and researchers in the field of applied linguistics.

Given that the limitations of research participants and study sites were cited after this study is conducted, future research may be devoted to conducting more studies about the life skills of outstanding independent readers in different study sites and including different or more diverse cases of participants. College students or senior high school students may also be considered in the succeeding studies to be pursued. Moreover, future research may also be directed to conducting quantitative studies employing higher statistical methods such as structural equation modeling or path analysis to discover in what way does life skills significantly influence the reading skills of outstanding independent readers. Experimental studies on enhancing the life skills may be tested as well to determine which can affect the reading skills of students.

CONCLUSIONS

The study is concluded on a positive note, as this research was successful in unearthing the significant practices of outstanding independent readers which shaped them into who they are as students and as individuals. Thus, it is hoped that the scholars who received the information stipulated in this manuscript will be used by proper agencies, authorities, and professionals to solve the menace of reading difficulties among Filipino students in public schools.

One striking insight which caught my attention is the values that outstanding independent readers possess and apply in their reading and study pursuits. One can even tell that this aspect sets them apart from other Filipino readers, and it is, indeed, worthy of emulation among the students in the country. As it takes an entire village to raise a child properly, the community comprising of the parents, teachers, leaders, and stakeholders are urged to take action in proliferating the Filipino values to cultivate the students' love for study, which is now dying due to the emergence of globalization, information explosion, and the digital era.

As I close the page of this chapter, it is aspired that the life skills of students will be considered by the Department of Education, as another avenue to solve the plague of being unable to read. Future perspectives may be directed to exploring more innovations in

teaching reading, and one of which is on capitalizing on the socioemotional aspects of students to enhance their reading capacities.

FACTORS INFLUENCING JOB PERFORMANCE AMONG EMPLOYEES OF THE NATIONAL IRRIGATION ADMINISTRATION (NIA) REGION IV: BASIS FOR INTERVENTION ENHANCEMENT FORMULATION

Precious Leirae E. Palacol

Laguna State Polytechnic University - Santa Cruz Main Campus, Philippines

ABSTRACT

This study aimed to determine and assess the factors influencing job performance among the National Irrigation Administration (NIA) Region IV-A (CALABARZON) employees. A total of sixty (60) employees from the different Field Offices of NIA Region IV-A (CALABARZON) were surveyed using a self-determined questionnaire. By analyzing various variables, the researcher aims to identify the critical areas for intervention and enhancement. The study entails determining the factors that influence the employees' job performance, such as work motivation, satisfaction, organizational culture, leadership style, and physical work environment. The study used a mixed method using qualitative and quantitative approaches and statistical tools such as mean, standard deviation, One-way ANOVA and Pearson's correlation coefficient to analyze the data gathered.

Based on the results, the relationship between the demographic profile of the respondents and the level of performance of the employees of NIA Region IV-A has no significant effect on job performance. On the other hand, the results on the relationship of the influential factors of work motivation, work satisfaction, leadership style, organizational culture, and physical work environment significantly affect the employees' work quality, work productivity, and managerial efficiency, which implies job performance.

Thus, it is recommended that the National Irrigation Administration (NIA) Region IV-A (CALABRZON) review and assess the factors that affect the employees' job performance. The influential factors such as the incentives, the workload distribution, the physical environment, and the organizational culture may delve deeper into the possible enhancement of the interventions for employees to be more motivated and satisfied in the organization and produce a better work output and job performance. This study provides valuable insights for NIA Region IV-A (CALABARZON) in intensifying their employees' job performance through the development of the influential factors that impact job performance.

KEYWORDS: NIA Region IV-A (CALABARZON), Job Performance, Influential Factors

INTRODUCTION

Organizations constantly seek ways to enhance performance and gain a competitive edge in the competitive and changing business environment. Numerous factors influence the success of an organization; one of the most critical is the performance of its employees. Job performance encompasses various dimensions, such as productivity, quality of work, efficiency, and overall job satisfaction. The effectiveness and efficiency of an organization heavily rely on the employees' performance in delivering their services. Therefore, to compete in the global market and achieve organizational goals, the organization should do more for an employee than the job requires, which could lead to higher job performance, as stated by Munisamy, S. (2013).

Understanding the factors that influence job performance is paramount for employers and employees. For employers, improved job performance leads to increased productivity, higher customer satisfaction, and greater profitability. On the other hand, employees who exhibit high job performance are more likely to experience job satisfaction, career advancement, and financial rewards.

Numerous studies have been conducted to explore the factors influencing job performance, and it has been found that a combination of individual, organizational, and environmental factors plays a significant role in shaping employee performance. Personal factors include the employee's Age, length of service, job position, and job status. Organizational factors encompass leadership style and organizational culture, while environmental factors involve the physical work environment.

Extensive research shows a need to delve deeper into the specific factors that affect job performance. This study seeks to expand current understanding by conducting a thorough analysis of the factors that influence the job performance of National Irrigation Administration (NIA) Region IV-A (CALABARZON) employees.

The research objectives of this study are to identify and examine the individual, organization, and environmental factors that influence job performance, to understand the interrelationships between these factors, and to be a basis for developing interventions to enhance job performance and create a conducive work environment.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

By understanding the factors that influence job performance, the organization can implement effective strategies to optimize employee performance, improve job satisfaction, and ultimately achieve their organizational goals. Furthermore, this research will provide valuable insights for employees to enhance their job performance and career development. This research aims to clarify job performance's intricate and varied nature and offer useful recommendations for both employers and employees.

By examining the variables that significantly impact job performance, this study will add to the body of information already in existence and lay the groundwork for further research in this area.

MATERIALS AND METHODS

The research design for this study will involve a mixed—methods approach, combining qualitative and quantitative methods to gain a comprehensive understanding of the factors influencing job performance. By employing a mixed-methods approach, this research design will provide a holistic understanding of the factors influencing job performance, combining statistical analysis of quantitative and qualitative data. This approach will enhance the validity and reliability of the findings and provide a rich and nuanced understanding of the complex dynamics involved in job performance.

The population for this study will consist of employees from the Regional and Field Offices of NIA Region IV-A

(CALABARZON). It will include individuals from the Engineering and Operations Division and Administrative and Finance Division with various job roles, levels of experience, and job status. The size of the population will depend on the scope and resources available for the study.

A research instrument to collect data is needed to conduct the study on the factors influencing employees' job performance. A mixed questionnaire and interview for the population will be used as the research instrument. Developing a questionnaire to gather self—reported data from the employees will include items related to job performance and the factors that may influence it. A Likert scale questionnaire (5-Strongly Disagree; 4-Disagree; 3-Neither Agree nor Disagree; 2-Agree; 1-Strongly Agree) will be used to measure the extent to which employees perceive the influence of various factors on their job performance. Also, an interview with the respondents will be conducted to gather indepth qualitative data. It can provide a deeper understanding of job performance factors and allow employees to provide detailed insights and examples.

These research instruments will be aligned with the research objectives, questions, and data collection needs. It will also ensure that the instruments have been validated and are reliable to ensure the accuracy and validity of the collected data.

RESULTS AND DISCUSSION

Demographic Profile of the Respondents

| Table 1. Age | Tabl | le 1 | l. A | ge |
|--------------|------|------|------|----|
|--------------|------|------|------|----|

| Age Group | Frequency | Percentage |
|-----------|-----------|------------|
| 22-25 | 6 | 10.34 |
| 26-29 | 25 | 43.10 |
| 30-33 | 8 | 13.79 |
| 34-37 | 10 | 17.24 |
| 38-41 | 6 | 10.34 |
| 42-45 | 2 | 3.45 |
| 46-49 | 1 | 1.72 |
| Total | 58 | 100.00 |

Note: Two respondents did not provide their Age

As reflected in the table above, 25 out of 60 respondents were mainly 26-29 years old, which is 43% of the respondents. Most respondents are in their middle to late twenties, which may

imply that they are establishing their careers, navigating career experiences, and having a clearer sense of self.

Table 2. Gender

| Gender | Frequency | Percentage |
|--------|-----------|------------|
| Male | 34 | 56.67% |
| Female | 26 | 43.33% |
| TOTAL | 60 | 100% |

The table above shows that 57% of the respondents are female. It suggests a slightly higher representation of female employees in NIA Region IVA (CALABARZON).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 3. Educational Attainment

| Educational Attainment | Frequency | Percentage |
|-------------------------------|-----------|------------|
| High School Graduate | 1 | 1.67% |
| College Graduate | 55 | 91.67% |
| Master's Degree | 3 | 5.00% |
| Doctorate Degree | 1 | 1.67% |
| TOTAL | 60 | 100% |

The findings of Table 3 show that out of the 60 respondents among the employees of NIA Region – IVA (CALABARZON), 55 or 91.67% of the respondents participated in the research. It

means that college graduates are the most common employees of NIA Region IV-A (CALABARZON).

Table 4. Length of Service

| Length Of Service | Frequency | Percentage |
|---------------------|-----------|------------|
| One month – 5 years | 30 | 50.00% |
| 6-10 years | 19 | 31.67% |
| 11 - 15 years | 10 | 16.67% |
| 21 years – higher | 1 | 1.67% |
| TOTAL | 60 | 100% |

Table 4 displays the distribution of the respondents in terms of the length of service. The largest group of employees have a length of service ranging from 1 month to 5 years, comprising 50% of the population. It implies that most employees are relatively young in their profession because of the shorter length of service.

Table 5. Employment Status

| Employment Status | Frequency | Percentage |
|--------------------------|-----------|------------|
| Casual | 42 | 70.00% |
| Permanent | 15 | 25.00% |
| Job Order | 2 | 3.33% |
| Contract of Service | 1 | 1.67% |
| TOTAL | 60 | 100% |

Based on the data shown in Table 5, the majority of the respondents are classified as casual workers, which is 70%.

Various other employment statuses indicate various employment arrangements within the organization.

Table 6. Employment Position

| Employment Position | Frequency | Percentage | |
|----------------------------|-----------|------------|--|
| Engineering and Technical | 38 | 67.86% | |
| Administrative and Support | 18 | 32.14% | |
| TOTAL | 56 | 100% | |

Note: Four respondents did not provide employment position Based on the data shown in Table 5, the majority of the respondents are classified as casual workers, which is 70%.

Various other employment statuses indicate various employment arrangements within the organization.

Table 7. Status of the influential factors in terms of Work Motivation

| Statement | Weighted Mean (WM) | SD | Verbal Interpretation |
|--|-----------------------|------|--------------------------|
| 1. The incentives provided by the organization are satisfying. | 2.15 | 1.13 | Agree |
| 2. Encouragement from the organization is experienced to develop new and better ideas for improving work output. | 2.53 | 1.17 | Agree |
| 1. The work output is recognized by the organization, which becomes an inspiration for doing excellent work. | 2.53 | 1.05 | Agree |
| 2. The job duties and responsibilities given are exciting. | 2.44 | 1.07 | Agree |
| COMPOSITE MEAN | 2.42 | | · |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Overall, the high mean score of 2.53 indicates that Organizational support and acknowledgment of their accomplishments should be strengthened to increase employees' motivation. Employees find the work incentive to be fulfilling as well. A study by M.C. Manalo et al. (2021) focused on the motivational factors and their impact on the job

performance of non-academic staff in a university. It showed a positive and significant relationship between the motivational factors. Hence, this study shows that the influential factors identified in the study affect the job performance among the employees of NIA Region – IV-A (CALABARZON).

Table 8. Status of the influential factors in terms of Work Satisfaction

| | Statement | Mean | SD | Verbal Interpretation |
|-----|---|------|------|--------------------------|
| 5. | The task given is a fulfilment to carry out the responsibility. | 2.38 | 1.11 | High |
| 6. | The work output done is meaningful and valued. | 2.45 | 1.14 | High |
| 7. | The workload is reasonable. | 2.65 | 0.97 | Moderate |
| 8. | The distribution of work is satisfying. | 2.71 | 1.07 | Moderate |
| 9. | The match between the job description and the current roles is | 2.67 | 1.05 | Moderate |
| sat | isfactory. | | | |
| • | COMPOSITE MEAN | 2.57 | | High |

Job satisfaction refers to a worker's positive feelings and attitude towards their job based on the evaluation of job characteristics (A. Askolani et al., 2019). The data presented provides that with a composite mean of 2.57, the employees

generally agree with satisfaction at work. However, with a mean of 2.71, the distribution of work could be improved to enhance overall employee satisfaction and productivity.

Table 9. Status of the influential factors in terms of Leadership Style

| Tuble > Stutus of the influential factors in terms of | Deudei siii | p Style | |
|--|-------------|---------|--------------------------|
| Statement | Mean | SD | Verbal Interpretation |
| 10. Management involves the opinions and suggestions of the | 2.47 | 1.22 | Good |
| employees when making decisions. | | | |
| 11. The management gives orders and procedures. | 2.28 | 1.08 | Good |
| 12. The management directs most of the activities with minimal | 2.55 | 0.91 | Good |
| employee input. | | | |
| 13. Management gives the employees the authority to make | | | |
| decisions and makes them accountable for their decisions. | | | |
| 14. The management spends time to mentor and teach his | 2.57 | 1.01 | Good |
| subordinates. | | | |
| 15. The management makes the decisions that promote the | 2.33 | 0.99 | Good |
| organization's performance and productivity. | | | |
| COMPOSITE MEAN | 2.47 | | Good |

The data presented in Table 9 reveals the status of influential factors related to leadership style among employees of NIA – Region IV-A (CALABARZON). Overall, the findings suggest a generally positive perception of the organization's leadership style, with a Composite Mean of 2.47. Employees perceive management to give orders and procedures, WM = 2.28, SD = 1.08, and to make decisions

that promote the organization's performance and productivity, WM = 2.33, SD=0.99. According to J.Y. Akparep et. Al (2019), leadership is crucial for improving organizational performance. Hence, the influential factors mentioned in the questionnaire about leadership style could be examined for a more productive and efficient job performance.

Table 10. Status of the influential factors in terms of Organizational Culture

| Statement | Mean | SD | Verbal Interpretation |
|--|------|------|--------------------------|
| 16. The organization set forth a standard that employees followed | 2.33 | 0.97 | Good |
| the same. | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Nneji et. Al (2021), for an organization's culture to contribute to or enhance performance, it must be strong and possess distinctive traits. As shown in the results of Table 10, NIA – Region IV-A (CALABARZON) exhibits a positive organizational culture, with a Composite Mean of 2.45. It suggests that employees perceive an organization where employees work together to solve issues, WM = 2.27, SD = 1.00

1.12, and where standards are set forth and followed by employees, WM = 2.33, SD = 0.97. However, the assessment of maintaining a healthy work-life balance in the current role is not as high as in the previous statements, WM = 2.63, SD = 1.09. These factors can be used to strengthen and enhance job performance.

Table 11. Status of the influential factors in terms of Physical Work Environment

| Statement | Mean | SD | Verbal Interpretation |
|---|------|------|--------------------------|
| 21. The design and layout of the workspace is satisfying. | 2.38 | 1.11 | Good |
| 22. The workplace is free from any noise disturbances. | 2.30 | 1.05 | Good |
| That affects concentration/productivity. | | | |
| 23. There is sufficient storage space for personal | 2.47 | 1.08 | Good |
| belongings and work materials. | | | |
| 24. The supply of materials needed for work is enough. | 2.48 | 1.11 | Good |
| 25. The space to move and work around is sufficient. | 2.38 | 1.14 | Good |
| COMPOSITE MEAN | 2.40 | | Good |

A. Alemu (2022) aimed to assess the impact of workplace environmental factors on employee performance. The findings indicated a significant relationship between the employees' performance at Wollo University and their workplace environment factors, with a 5% significance level.

The results presented in Table 11 indicate that employees in NIA – Region IV-A (CALABARZON) perceive their physical work environment positively, with a Composite Mean of 2.40. suggests that overall, the physical work environment is considered good. Specifically, employees observed a workplace free from noise disturbances affecting concentration and productivity, WM = 2.30, SD = 1.05.

Table 12. Status of the Influential Factors in terms of Work Quality

| Statement | Mean | SD | Verbal Interpretation |
|--|------|------|-----------------------|
| 1. The necessary resources and tools are used to complete the work tasks effectively. | 2.37 | 1.06 | Good |
| 2. The expected quantity of work that can be produced in a given timeframe is carried out. | 2.48 | 0.95 | Good |
| 3. The expectations and requirements of the role are met or exceeded. | 2.53 | 1.10 | Good |
| 4. areas in the work output could be improved. | 2.39 | 1.20 | Good |
| 5. Achieving the needed result of the work output is observed. | 2.38 | 1.06 | Good |
| COMPOSITE MEAN | 2.44 | | Good |

The status of job performance of NIA – Region IV-A (CALABARZON) employees in terms of work quality is presented in Table 12. Overall, the employees demonstrate good work quality, as indicated by a Composite Mean of 2.44. Employees perceive that the necessary resources and tools are

used to complete their work tasks effectively, WM = 2.37, SD = 1.06. They are achieving the needed result of the work output, WM = 2.38, SD = 1.06 and recognize areas where improvements in work output are possible, WM = 2.39, SD = 1.20.

Table 13. Status of the Influential Factors in terms of Work Productivity

| Statement | Mean | SD | Verbal Interpretation |
|---|------|------|-----------------------|
| 6. The deadlines for the work tasks are | 2.35 | 0.94 | Good |
| consistently being met. | | | |
| 7. There are no distractions or interruptions that | 2.73 | 1.01 | Average |
| affect focus and productivity. | | | |
| 8. Prioritization is being set to finish assigned | 2.38 | 1.17 | Good |
| tasks. | | | |
| 9. Collaboration with others was very productive. | 2.37 | 1.26 | Good |
| 10. Effective time management practices or techniques | | | Good |
| are practised to enhance productivity. | | | |
| COMPOSITE MEAN | 2.32 | 1.10 | Good |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Referring to Table 13, NIA – Region IV-A (CALABARZON) employees demonstrate good work productivity, with a Composite Mean of 2.43. They exhibit effective time management practices or techniques to enhance productivity, WM = 2.32, SD = 1.10. However, their productivity is moderately affected by distractions or

interruptions that hinder focus and productivity, WM = 2.73, SD = 1.01.

Effective time management practices indicate a positive approach to enhancing productivity. However, distractions or interruptions suggest that measures should be taken to minimize these factors.

Table 14. Status of the Influential Factors in terms of Organizational Efficiency

| Statement | Mean | SD | Verbal Interpretation |
|--|------|------|--------------------------|
| 11. The organizational goals and objectives are communicated to me. | 2.32 | 1.17 | Good |
| 12. Efficient communication channels in place to facilitate smooth information flow | 2.40 | 1.12 | Good |
| within the organization. | 2.10 | 1.12 | 3004 |
| 13. The roles and responsibilities assigned are clear to avoid duplication of efforts and ensure | 2.37 | 1.06 | Good |
| efficiency. 14. A system is in place to prioritize tasks | 2.43 | 1.17 | Good |
| based on importance and urgency. | 2.13 | 1.17 | 3004 |
| 15. There are regular performance evaluations or assessments to identify and address the inefficiencies or areas for | 2.27 | 1.13 | Good |
| improvement. | | | |
| COMPOSITE MEAN | 2.36 | | Good |

The results presented in Table 14 depict the status of job performance among employees of NIA – Region IV-A (CALABARZON), specifically in terms of organizational efficiency. A composite mean of 2.36 suggests a generally good level of managerial efficiency within the organization. It is notably reflected in regular performance evaluations or

assessments to identify and address inefficiencies or areas for improvement, WM = 2.27, SD = 1.13. However, assessing a system prioritizing tasks based on importance and urgency, WM = 2.43, SD = 1.17, does not reflect as positively as the performance evaluations.

Table 15. The difference in the NIA – Region IV-A (CALABARZON) employees' job performance when grouped according to Age

| | Age | Mean | χ^2 | p-value | Decision on | Interpretation |
|-------------------|-------|------|----------|---------|-------------|----------------|
| | Ö | | | • | Ho | • |
| Work Quality | 22-25 | 2.73 | 4.611 | 0.203 | Fail to | Not |
| | 26-29 | 2.19 | | | reject Ho | Significant |
| | 30-33 | 2.28 | | | | |
| | 34-37 | 2.73 | | | | |
| | 38-41 | 2.73 | | | | |
| | 42-45 | 2.10 | | | | |
| | 46-49 | 2.60 | | | | |
| Work Productivity | 22-25 | 2.50 | 3.224 | 0.358 | Fail to | Not |
| | 26-29 | 2.17 | | | reject Ho | Significant |
| | 30-33 | 2.25 | | | | |
| | 34-37 | 2.64 | | | | |
| | 38-41 | 2.77 | | | | |
| | 42-45 | 2.40 | | | | |
| | 46-49 | 2.80 | | | | |
| Organizational | 22-25 | 2.43 | 6.415 | 0.093 | Fail to | Not |

| | 30-33 | 2.10 | | | | |
| | 34-37 | 2.70 | | | | |
| | 38-41 | 2.70 | | | | |
| | 42-45 | 2.00 | | | | |
| | 46-49 | 2.60 | | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Based on the results presented in Table 15, there is no significant difference in the job performance of NIA – Region IV-A (CALABARZON) employees when grouped according to their Age, as indicated by p-values greater than 0.05. It suggests that employees' job performance remains consistent regardless of their Age. It appears that employees demonstrate a consistent level of job performance in terms of work quality, work productivity, and organizational efficiency, irrespective

of Age. Therefore, Age may not significantly influence their consistent job performance across these dimensions.

Table 16. Assumptions of Normality for the Analysis of the Difference in the NIA – Region – IV-A (CALABARZON) employees' job performance when grouped according to Gender

| | Gender | Mean | Mann- Whitney U Statistic | p- value | Decision on Ho | Interpretation |
|-------------------|--------|------|---------------------------------|-------------|-------------------|-----------------|
| Wards Ovality | Male | 2.40 | 406 | 0.774 | | Not Cionificant |
| Work Quality | | | 400 | 0.774 | | Not Significant |
| | Female | 2.49 | | | reject Ho | |
| Work Productivity | Male | 2.42 | 432.5 | 0.893 | Fail to | Not Significant |
| • | Female | 2.45 | | | reject Ho | C |
| Organizational | Male | 2.32 | 422 | 0.769 | Fail to | Not Significant |
| Efficiency | Female | 2.40 | | | reject Ho | - |

According to the results presented in Table 16, there is no significant difference in the job performance of NIA – Region IV-A (CALABARZON) employees when grouped according to their sex, as evidenced by p-values greater than 0.05. It suggests that employees' job performance remains consistent regardless of their Gender. Employees demonstrate consistent

job performance regarding work quality, productivity, and organizational efficiency, irrespective of sex. It suggests that the employees' sex may not be a factor in their consistent job performance regarding work quality, productivity, and organizational efficiency.

Table 17. Difference in the NIA – Region 4A, Pila, Laguna employees' job performance when grouped according to Highest Educational Attainment

| | Highest Educational | Mean | χ² | p- value | Decision on Ho | Interpretation |

| | Degree | | | | | |

Based on the results presented in Table 17, there is no significant difference in the job performance of NIA – Region IV-A (CALABARZON) employees when grouped according to their highest educational attainment, as evidenced by p-values greater than 0.05. It says that employees' job performance remains consistent regardless of their level of

education. It appears that employees demonstrate a consistent level of job performance in terms of work quality, productivity, and organizational efficiency, irrespective of their educational background.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 18. Difference in the NIA – Region 4A, Pila, Laguna employees' job performance when grouped according to Length of Service

| of Service | | | | | | |
|-------------------|----------------------|------|----------|-------------|-------------------|-------------------|
| | Length of Service | Mean | χ^2 | p- value | Decision on Ho | Interpretation |
| | One month - 5 | 2.46 | | | | |

| | 11 - 15 years | 2.70 | | | | |
| | 21 years or | 2.80 | | | | |
| | higher | | | | | |
| Organizational | One month - 5 | 2.39 | | | | |
| Efficiency | years | | | | | |
| | 6 - 10 years | 2.24 | 1.102 | 0.778 | Fail to | Not Significant |
| | 0 10) 5412 | | 11102 | 0.,,0 | reject Ho | Ties Significants |
| | 11 - 15 years | 2.44 | | | 15,150 110 | |
| | 21 years or | 2.60 | | | | |
| | higher | 2.00 | | | | |
| | ingilei | | | | | |

According to the results shown in Table 18, there is no significant difference in the job performance of NIA – Region IV-A (CALABARZON) employees when grouped according to their length of service, as indicated by p-values greater than 0.05. Implies that employees' job performance is the same

regardless of service length. It appeared that the employees showed a consistent level of job performance in terms of work quality, work productivity and organizational efficiency, irrespective of their tenure in the organization.

Table 19. Difference in the NIA – Region 4A, Pila, Laguna employees' job performance when grouped according to **Employment Status**

| | Employment Status | Mean | χ^2 | p- value | Decision on Ho | Interpretation |
|------------------------------|----------------------|------|----------|-------------|-------------------|-----------------|
| | Casual | 2.21 | | varac | 110 | |
| | Permanent | 2.55 | | | | |
| | Job Order | 4.00 | | | | |
| Work Quality | Contract of service | 3.80 | 11.204 | 0.082 | Fail to reject Ho | Not Significant |
| | Permanent | 2.66 | | | | |
| | Job Order | 3.50 | | | | |
| Work Productivity | Contract of service | 3.60 | 11.436 | 0.076 | Fail to reject Ho | Not Significant |
| | Casual | 2.15 | | | 3 | |
| | Permanent | 2.45 | | | | |
| | Job Order | 3.80 | | | | |
| Organizational Efficiency | Contract of service | 4.00 | 10.247 | 0.115 | Fail to reject Ho | Not Significant |

According to the results shown in Table 19, there is no significant difference in the job performance of NIA - Region IV-A (CALABARZON) employees when grouped according to their employment status, as indicated by p-values greater than 0.05. It suggests that employees' job performance remains consistent regardless of employment status.

In NIA – Region IV-A (CALABRZON), the job performance of its employees does not vary significantly based on employment status. It suggests that factors influencing job performance may not be strongly connected to whether an employee is permanent, contractual, or casual. As a result, management may need to focus on implementing programs to improve overall job performance for all employees, irrespective of their employment status.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 20. Difference in the NIA – Region 4A, Pila, Laguna employees' job performance when grouped according to Employment Position

In Table 20, which presents the analysis of the difference in job performance among employees of NIA – Region IV-A (CALABARZON) Laguna when grouped according to their employment position, the results indicate that there is no significant difference in job performance based on job position, with p-values greater than 0.05. Suggests that employees' job performance in NIA – Region IV-A (CALABARZON) remains

consistent regardless of their position.

Overall, the analysis revealed that job performance among employees of NIA – Region IV-A (CALABARZON) remained consistent across various demographic and employment-related factors. It suggests that factors other than those analyzed may significantly impact job performance within the organization.

Table 21. Relationship between Influential Factors and Job Performance of Employees of NIA – Region IV-A (CALABARZON)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The relationship between influential factors and employees' job performance in NIA – Region IV-A (CALABARZON) is presented in Table 21. According to the results displayed in the table, a positive and significant relationship exists between the influential factors and the job performance of employees in NIA – Region IV-A (CALABARZON). The strength of these critical relationships ranges from strong to very strong. These findings suggest that enhancements of influential factors such as work motivation, work satisfaction, leadership style, organizational culture, and physical work environment would lead to improvements in job performance, specifically in terms of work quality, work productivity, and organizational efficiency among employees in NIA – Region IV-A (CALABARZON).

CONCLUSIONS

In conclusion, a combination of motivation, satisfaction, leadership, culture, and environment contributes to the employee's and organization's overall job performance. Organizations prioritizing these factors tend to have more successful and productive teams. Work motivation, satisfaction, leadership style, organizational culture, and physical work environment significantly influence organizational efficiency. Motivated employees tend to be more productive and efficient. When intrinsic or extrinsic factors drive individuals, they channel their energy toward tasks, leading to streamlined processes and improved overall efficiency. Satisfied employees contribute to organizational efficiency. A study that provided evidence in favour of this research found that job satisfaction significantly and positively affects employee performance. Lastly, a good and considerable impact on employee performance is simultaneously had by leadership style, work motivation, and job satisfaction (Rismayadi, B. (2024)).

RECOMMENDATIONS

The results suggest that as part of the influential factor in work motivation, the encouragement and recognition by the organization to the employees can be enhanced to boost better work output and performance. Also, the recognition of the work output done by the employees can be reviewed and enhanced to improve job performance. For work motivation, leaders must seek to understand employees' intrinsic and extrinsic motivation. Recognition, rewards, and career growth must be considered. Also, clearly defining the goals as individuals and as an organization may help enhance job performance. Employees perform better when they know what's expected of them.

By implementing these recommendations, the organization and its employees can contribute to improving and upholding high standards of employee development and job performance. A holistic approach that combines these elements contributes to sustained job performance and employee satisfaction.

ABSTRACT

Tracer studies are crucial for gauging the effectiveness and applicability of programs provided by higher education institutions and their alignment with the job market. Hence, the aim of this quantitative research is to track the career paths of graduates from Kapalong College of Agriculture, Sciences, and Technology (KCAST). Particularly, the study successfully contacted 97% of the graduates from the BSOA Department, with 299 out of 308 graduates participating covering the A.Y. 2018, 2019, 2022, and 2023. Among the total respondents, 34 (44.82%) graduated in 2023, while 85 (28.643%) graduated in 2022, 56 (18.73%) graduated in 2019, and 24 (8.03%) graduated in 2018. The majority of respondents were female, comprising 268 (89.63%) who were single. The most common age group among participants was 24 years old. Notably, 30 (10.03%) respondents acquired vocational education and/or TESDA National Competency certification, and 5 (2%) pursued higher education after completing their bachelor's degree. Regarding employment status, 211 individuals (70.57%) are presently employed, with the majority, 189 (89.70%), holding full-time positions. Notably, nearly 93 (43%) of the employed graduates earn monthly salaries ranging between 11,000.00 and 15,000.00, having secured their current positions within 1 to 3 months after graduation. Interestingly, the majority of respondents, totaling 259 (86%), expressed a neutral opinion when asked about the relevance of their degree to their current job. Furthermore, among the respondents, 51 work as office clerks and/or encoders, 48 hold administrative positions across various offices, 30 serves as accounting staff, and 24 are engaged in roles related to customer relations. The BSOA graduates consistently demonstrate a high level of attitude towards work, appreciation for the quality education provided by the institution, and the development of skills and abilities. This descriptive rating indicates that these attributes are consistently observed in BSOA graduates. Therefore, it is advised that the BSOA Department of KCAST continues to uphold and enhance the current programs and activities aimed at improving the employability skills of its students.

KEYWORDS: BSOA Graduates, Philippines, quantitative descriptive method, tracer study

INTRODUCTION

The main aim of tracing graduates is to develop a clear picture of the situation of graduates after completion of studies. Consequently, undertaking this study will be able to assist stakeholders in the decision-making process regarding the responsiveness of education, on the supply side, to the situation of labor market, on the demand side. Thus, education providers play an equally important role in training graduates for a wide range of skills that are needed for success in life in general, and in employment in particular. Furthermore, flexible pathways and modes of study in Further and Higher Education are important to allow students to enter, leave and re-enter education and to reconcile studies with other commitments they may have (Cassar, 2016).

Every academic institution's goal is to produce competent and highly qualified graduates that can eventually be competitive in a local and global arena. A graduate tracer study is a very powerful tool that can provide valuable information for evaluating the whereabouts and performance of the graduates in the workplace. To enrich the existing degree programs, the institution has to focus on student mobility, credit transfers, quality assurance and research clusters as the four main priorities to harmonize with the ASEAN higher education system (Cuadra et al., 2019).

Internationally, tracing graduates is essential for evaluating the quality and relevance of educational programs, fostering alumni engagement, and meeting accreditation requirements. For individuals, education promotes employment, earnings, health, and poverty reduction. Globally, there is a 9% increase in hourly earnings for every extra year of schooling. For societies, it drives long-term economic growth, spurs innovation, strengthens institutions, and fosters social cohesion. Making smart and effective investments in people's education is critical for developing the human capital that will end extreme poverty. At the core of this strategy is the need to tackle the learning crisis,

put an end to Learning Poverty, and help youth acquire the advanced cognitive, socioemotional, technical and digital skills they need to succeed in today's world (The World Bank, 2024).

In Camarines Sur, a tracer study of the Bachelor of Science in Office Administration (BSOA) Graduates of Camarines Sur Polytechnic Colleges from 2009 to 2013 was conducted. Specifically, it sought to determine the personal, professional and employment profile, and the attributes that contribute to employability. It also identified reasons with regards to staying in the job, accepting jobs not related to the course and unemployment. Likewise, the study looks at the expectations met by the program that contributed in meeting the demands of the job and the assessment of the employer on the job performance of the graduates. The majority of the graduates are gainfully employed locally, in private organizations, with regular/permanent status, and holding clerical positions. Attributes such as socio-economic, academic and school factors contributed to their employability. Salaries and benefits play a big role in staying in the job and accepting jobs not related to course, while family concern is the main reason why people are not employed. The BSOA program has met the expectation of the graduates but needs to take necessary measures to address the issue of skills that was found out to be fairly met (Jintalan, 2020).

The BSOA Department of Kapalong College of Agriculture, Sciences and Technology (KCAST) carried out research among 87 graduates covering the Academic Years 2018-2019. The researchers found out that majority of the course contents of their program are relevant to their career requirements. In terms of employability rate of the graduates, more than half of them got employed one (1) to three months after the graduation. 43.6% of the respondents are currently working as full-time in their job. With the data gathered, the researchers concluded that through their competent communication and interpersonal skills, graduates were more likely to land on the jobs connected to the degree they have studied. Therefore, the researchers recommend that the institution, particularly the department, should hold various job fairs and extensive seminars, as well as training and lectures for the graduating office administration students which are designed based on the specific needs of the industry (Lopez et.al.,2024).

Hence, this research determined the contribution of BSOA graduates to the development of various skills, the satisfaction with the delivery of the institution program and services, and the practice of graduate attributes of KCAST BSOA graduates covering the Academic Year 2018, 2019,2022, & 2023. Consequently, continuity in conducting graduate tracer studies in an Office Administration program fosters a culture of lifelong learning, excellence in teaching, and continuous improvement, all of which contribute to the program's success and the success of its students.

Likewise, it explored deeper insights on the quantitative data to generate a broader perspective on the graduates' experiences to the development of their skills. The findings may serve as baseline data in formulating a proposed strategic plan for the continuous improvement of the BSOA Department's delivery of the programs and services. As such, conducting graduate tracer studies enhances institutional accountability, supports program improvement efforts, informs career services, strengthens alumni relationships, and contributes to the institution's reputation and impact.

Objectives of the Study

This study aimed to conduct a comprehensive graduate tracer research to track the professional paths and current employment

status of BSOA major in Office Management graduates covering the Academic Years 2018, 2019 – 2022, and 2023 from KCAST. By examining the post-graduation experiences of KCAST BSOA alumni, this research seeks to provide valuable insights into the relevance and impact of the college's educational programs.

To achieve this aim, the study has the following specific objectives:

- 1. What is the profile of the BSOA graduates in terms of the following:
 - 1.1. sex;
 - 1.2. civil status;
 - 1.3. age;

and

- 1.4. year graduated;
- 1.5. educational attainment and personal development;
- 1.6. relevance of the degree to their present job.
- 2. What is the employment profile of the BSOA graduates in terms of the following aspects:
 - 2.1. employment rate;
 - 2.2. present employment status;
 - 2.3. initial gross earning;
 - 2.4. time of employment after graduation;
 - 2.4. reasons for staying on the job; and
 - 2.5. relatedness of job to the course/program taken.
- 3. What is the work attitude of BSOA graduates?
- 4. What is the perception of the BSOA graduates with the quality of education provision of the institution?
- 5. What are the competencies learned in college that are useful in the current job of the graduates?

Review of Related Literature

This section presents a foundation upon which the current research is built and contextualizes the study within the broader academic and research landscape. It helps to establish the context and background, identify gaps, provide a theoretical foundation, offer methodological insights, clarify concepts, enhance credibility, and support the analysis of findings relevant to graduate tracer study.

Graduates Tracer Study

A tracer study or graduate survey is a standardized survey of graduates from education institutions, which takes place sometime after graduation or the end of the training. The subjects of a tracer study can be diverse, but common topics include questions on study progress, the transition to work, work entrance, job career, use of learned competencies, current occupation and bonds to the education institution (International Training Center 2024).

Through tracer study, an institution is able to evaluate the quality of education given to their graduates by knowing the graduates' placements and positions in the society which later can be used as a benchmark in producing more qualified and competitive graduates. Hence, tracer surveys are studies that gather feedback from graduates of an educational institution to monitor their achievements and progress in their careers and give policy bodies vital information on key issues (Reyes, 2021).

Moreover, Graduate Tracer Studies (GTS) are tools that allow understanding better the connection between education and the world of work. The use of these studies has been expanding across countries mainly due to the increasing complexity of the relationship between education and work in times when the educational offer is diversifying, participation in education is growing, and economies and labor markets are rapidly changing (World Bank, 2019).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Consequently, every academic institution's goal is to produce competent and highly qualified graduates that can eventually be competitive in a local and global arena (Gonzaga, 2019). Thus, the development of tracer studies can be implemented in several stages, such as system design development, data design, and interface design. With the development of the tracer study system design, it is hoped that it can become the basis for developing an integrated tracer study information system with the institution (Hapsari, 2024).

Graduate Outcomes

In practice, Graduate Outcomes is a validation to understand whether a graduate is in employment, have continued with further study or are doing something else and to what extent his or her qualification played a part after graduation. The process of validation will focus on student experience from learning to potential employment perspective (Higher Education Statistics Agency, 2022).

Furthermore, a Graduate Outcomes Survey conducted by Higher Education Authority (HEA) is a national survey distributed to all graduates of Higher Education Institutions (HEIs) which highlight the current opportunities and challenges for new graduates. Moreover, factors explored in the report include employment outcomes, source of employment, location of employment, graduate salaries, relevance of studies to employment, enrolment in further studies, among others (Higher Education Authority, 2024).

However, to make a claim about a graduate outcome is to offer a causal explanation of how some aspect of higher education tends to promote a particular graduate capability (e.g. social capital), which then in turn leads to a particular graduate functioning (e.g. high skilled employment). More than this, there is a need to understand how these causal processes vary for different students in different institutions. This complex assessment of graduate outcomes, will not only consider comparisons between Higher Education Institutions (HEIs), but eventually understands the accurate picture of the actual transformations promoted by higher education (Fryer, 2021).

Notably, there is a lack of focus on staff experiences regarding the process of preparing students for employment. The review also demonstrates the need for more research on career processes and outcomes in transnational higher education (Schueller, 2023).

Nonetheless, during the second State of the Nation Address (SONA), President Ferdinand R. Marcos Jr. noted how the administration, through the Commission on Higher Education (CHED), responded to improve the country's education to ensure global competency...CHED chairperson J. Prospero de Vera III, said the Philippine HEIs would produce more globally-ready graduates through partnerships spurring sharing and exchanges of curriculum, programs, and training between local and international universities in various fields of studies (Sevillano, 2023).

Employer Perspectives

Fresh graduates need to understand that their prospective employers are perceiving gaps in their expectations versus reality. Being cognizant of this gap and working for self-improvement is imperative not only for improving the probability of employment with the favorite employer but also to fuel their career growth. The employers would be aware of the gap and thus, design suitable bridge programs to adapt the new graduates to their and the industry needs (Sangeetha, 2022).

Furthermore, employers typically expect recent graduates to have a strong foundation in the theoretical and practical aspects of their field of study. This includes a good understanding of relevant concepts, skills, and industry trends. They also look for graduates who demonstrate strong communication, problem-solving, teamwork, and critical thinking skills. Additionally, employers often value candidates who show a willingness to learn, adapt, and take initiative in their professional development. Graduates who have gained practical experience through internships, co-op programs, or relevant part-time work may also have an advantage in the job market (Poe, 2023).

Nevertheless, research into employability issues is currently receiving considerable attention. In Morocco, a significant number of employers are satisfied with the skills of their newly hired employees. However, other employers express their dissatisfaction with the newly hired workers and believe that they lack some of the most basic skills needed for successful employment... It aims to research the gap between employers' requirements of graduates and their actual skills with particular focus on employers' perception (Tejan, 2019).

Moreover, U.S. employers have reported that many college graduates are underprepared in written communication when hired and that lack of preparedness hinders these graduates' employment success. Higher education institution (HEI) administrators need information regarding which writing skills should be taught across the curriculum to improve student outcomes...Improvements in these areas may contribute to positive social change by improving employment outcomes for college graduates, which is particularly important given the time and money that learners invest in education (Minnaugh, 2023). Consequently, mismatch between the graduate's skills and attributes with the industry needs has been a challenge for colleges and universities. Thus, HEIs constantly review the curricula to respond to the relevant human resource needs. Conversely, the least preferred by the employers were found to be formal accounting qualification, technology skills and capacity for innovation. Whereas, leadership, communication and interpersonal skills are preferred by the employers (Briones, 2021).

Challenges on Tracer Study

Graduate tracer studies may be an appropriate research method for responding to various problems in the South African higher education context, including difficulties associated with higher education transformation and graduate employability. However, there is little context relevant literature on the implementation of the various methodologies that may be used, and no assessment of the relevance of these methods for the South African context (Senekal, 2019).

Notably, conducting a tracer study faces several challenges. One challenge is the limited response from alumni and stakeholders, which hinders the distribution and collection of questionnaires. Another challenge is the accessibility of software, photocopier and internet for administrative works, which affects the use of ICTs in school administration. Additionally, the COVID-19 pandemic has imposed social limitations, making it necessary to shift to digital modes of tracer study implementation using ITbased applications like Google Forms, Facebook Groups, and WhatsApp Groups. Furthermore, monitoring alumni who are located outside the city poses a challenge, as the current data collection method is not effective in keeping track of them. These challenges highlight the need for improved strategies and tools to enhance the effectiveness and efficiency of tracer studies (SciSpace, 2023).

As such, tracer study is a mandatory aspect of accreditation assessment in Indonesia as it is also needed by the university in evaluating the success of learning that has been applied to the curriculum (Abdulloh et.al., 2022).

Indeed, graduate tracer studies may be an appropriate research method for responding to various problems in the South African higher education context, including difficulties associated with higher education transformation and graduate employability. However, there is little context relevant literature on the implementation of the various methodologies that may be used, and no assessment of the relevance of these methods for the South African context (Munro et.al., 2019).

With this in mind, Graduate Tracer Study should be done regularly in order to know their whereabouts, evaluate existing programs, assess study provisions and conditions, and design improvements to strengthen them or to come up with new relevant programs in the future. Finally, to improve the content and construct of the graduate tracer study questionnaire, the study recommends the conduct of reliability index (Cuadra et.al., 2019).

Policy Implications

Improving the quality of graduate education is the HEI's main objective. One way of knowing the quality is determining the graduates' appropriateness and the graduates' work competencies in the workplace. It will help the higher education institutions to get feedback and to know their position in terms of efficiency in providing knowledge to students. It will be used for curriculum development and reform to determine the education curriculum appropriateness to enhance graduates' work performance (Guiamalon, 2021).

As such, conducting tracer studies regularly will identify areas of strength and progress, collect feedback on graduates' readiness for professional jobs, and provide improvements in the curriculum (Aranda et.al., 2024). Therefore, the government would acquire valuable cues to formulate suitable policies to achieve the nation's strategic goals. (Sangeetha, 2022).

Consequently, GTS allows us to illuminate the relationship between college experience and labor market outcomes, and to formulate course of actions for the higher education sector (Tutor et.al., 2020). With this in mind, It is anticipated that the findings will allow the University to make better and informed-decisions when developing policies dealing with academic issues (learning and teaching) and student welfare in order to better prepare graduates for the job market (Semos et.al., 2020).

Finally, there is an urgent need for all stakeholders to develop... a service-oriented architecture to assure the quality of higher education with mandatory elements, for example, student survey results, student ratings, university teachers' rating, educational programs, results of uniqueness verification for scientific research and qualifying papers, review of educational programs for higher education applicants etc. (Kobets et.al., 2021).

Theoretical Framework

Understanding the dynamics of sustainable academic practices requires a comprehensive theoretical approach. This study is grounded in several interrelated theories that provide a substantial framework for analyzing the various dimensions of a graduate tracer studies.

Firstly, the Stufflebeam's CIPP Model (Context, Input, Process, Product) developed by Daniel Stufflebeam, is a comprehensive framework for educational evaluation. It emphasizes systematic

collection and analysis of information to make informed decisions and improve educational practices (Tunk, 2010).

Secondly, comprehensive frameworks for conducting tracer studies developed by Ulrich Teichler emphasize the importance of considering various factors such as socio-economic background, field of study, and labor market conditions. Teichler argues that the insights gained from these studies can help improve curriculum design, enhance employability skills training, and strengthen university-industry linkages. These comparative studies provide valuable insights into how different contexts influence graduate outcomes and help identify best practices that can be adapted across various settings. Thus, acquiring work experience is more important ... also students from disadvantaged backgrounds are primarily motivated to seek employment by the prospect of short-term income. It is a significant finding that even if the students' jobs are not related to their studies, they still have the goal of gaining professional experience and increasing their capital, which implies that they consider many of these jobs to be an investment in human capital (Fenyes, 2021).

Thirdly, Yorke and Knight's employability theory, developed by Mantz Yorke and Peter Knight, is a well-regarded framework in the field of higher education that focuses on understanding and enhancing graduate employability. By focusing on a broad range of attributes—skills, self-efficacy, meta-cognition, and personal qualities—the theory emphasizes the importance of a holistic approach to education that prepares students not just for their first job, but for a sustainable and adaptable career. Institutions that integrate these concepts into their programs can better equip their graduates to thrive in the dynamic and often unpredictable job market. Accordingly, increase in students' psychological capital had a positive and direct effect on the increase in the level of competence shown in employability skills (Calvo et al., 2020).

Furthermore, the study incorporates the JD-R Model, developed by Arnold Bakker and Evangelia Demerouti, posits that job performance is influenced by the interaction between job demands and job resources. The model can be applied to a variety of work environments and is flexible enough to account for different types of jobs and industries and can integrate individual perspectives within occupational wellbeing (Boyd et.al., 2010).

By integrating these theoretical perspectives, the study aims to provide a multi-dimensional analysis of sustainable employability skills practices in KCAST. This theoretical framework not only guides the research design and methodology but also facilitates a deeper interpretation of the findings, ultimately contributing to the development of effective strategies for promoting sustainable academic programs.

METHODS

Research Design

This study employed the descriptive research method because it involved gathering quantitative data, which were organized numerically, aligning with the essence of descriptive studies. Additionally, this approach was utilized to detail the characteristics of the population or phenomenon under investigation. The primary objective of this research method is to depict the nature of a demographic segment without delving into the reasons behind the occurrence of specific phenomena. Thus, this type of research provides a detailed and accurate picture of the characteristics and behaviors of a particular population or subject. By observing and collecting data on a given topic, descriptive research helps researchers gain a deeper understanding of a specific issue and provides valuable insights that can inform future studies (Sirisilla, 2023). Also, this method ascertains prevailing conditions of facts in a group under study

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

that gives either qualitative or quantitative, or both, descriptions of the general characteristics of the group as results (Rillo, et.al., 2018)

In the context of the present study, a descriptive research method was employed to detail the demographic characteristics, employment profile, work attitude, quality education provisions, and skills and abilities development of BSOA graduates from KCAST.

TALADADO ASINCIDA BEW CINCILA SANTO TOMAS BANANIO E. BOLINAS CARMEN TOMASO

Research Locale

This tracer study was conducted in Kapalong College of Agriculture, Sciences and Technology (Figure 1), an educational institution situated in the Municipality of Kapalong province of Davao del Norte, which is part of the Davao Region in Mindanao. This area is known for its agricultural activities, making it an ideal setting for a college specializing in agricultural education. It is the first local

Figure 1. Geographical Location of the Research Locale

college in Region XI accredited Level 1 by the Association of Local Colleges and Universities –Commission on Accreditation (ALCUCOA). The institution started its operation in the year 2005. KCAST is a pivotal institution dedicated to advancing

agricultural education and technology. It provides a comprehensive learning environment that integrates theoretical and practical knowledge, supports research and community service, and fosters industry partnerships.

Research Respondents

Table 1. Population and Sample of the Study

| Bachelor of Science in O | office Administration maj | or in Office Management | |
|--------------------------|---------------------------|-------------------------|-----------|
| A.Y. | Male | Female | Sub-total |
| 2018 | 7 | 17 | 24 |
| 2019 | 14 | 42 | 53 |
| 2022 | 22 | 63 | 85 |
| 2023 | 27 | 107 | 134 |
| Total | 70 | 229 | 299 |

*Data collected is sourced out from KCAST Registrar's Office Essentially, the focus of this tracer study was on graduates from the BSOA Department at KCAST, spanning the Academic Years 2018, 2019, 2022, and 2023. Consequently, the study employed complete enumeration random sampling, given its objective to meticulously track and trace graduates regarding their employment profiles. In particular, in 2018, there were a total of 24 graduates, comprising 7 males and 17 females. In 2019, there were 56 graduates, with 14 males and 42 females. In 2022, the number rose to 85 graduates, including 22 males and 63 females. Lastly, in 2023, there were 134 graduates, consisting of 27 males and 107 females, resulting in a total of 299 BSOA graduates over the specified years.

Research Instrument

This study employed a custom-made tracer survey questionnaire adapted from the work of Escandallo (2024), validated by a panel of experts and examiners. The validation process ensured that the

survey's constructs and contents accurately measured the study's intended outcomes, assessing both content validity and reliability. Experts evaluated the clarity of instructions and items, the organization and presentation of the items, their suitability and adequacy in each category, the achievement of the survey's purpose, the objectivity, and the rating system's scale evaluation.

Additionally, the primary objective of the tracer survey questionnaire was to track the employment history and current status of the graduates, monitor their educational achievements and progress, gauge their attitude towards their work, assess their perception of the quality of education provided by the institution, and determine the extent to which the institution contributed to the development and enhancement of their diverse skills and abilities during their time at KCAST.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

At the same time, graduate surveys have the advantage of securing a systematic information input by standardization and representative determination of the output without having to rely on the construction of a permanent information system (Schomburg, 2003). To ensure clear comprehension and interpretation of the results and data collected in this tracer study, specific parameter limits were employed. The limits below were utilized to interpret the degree of attitude towards work, assess the quality of education provided, and evaluate the skills and abilities of the BSOA major in Office Management graduates from KCAST:

| Range of Percentage | Descriptive Equivalent | Description |
|------------------------|---------------------------|---|
| 4.20-5.00 | Very High | If the measure described in the item or construct is always manifested. |
| 3.40-4.19 | High | If the measure described in the item or construct is always manifested. |
| 3.00-3.39 | Average | If the measure described in the item or construct is always manifested. |
| 1.80-2.99 | Low | If the measure described in the item or construct is always manifested. |
| 1.00-1.79 | Very Low | If the measure described in the item or construct is always manifested. |

Furthermore, the specified parameter limit below was employed to interpret the quality of education provision for BSOA graduates from KCAST:

| Range of Percentage | Descriptive Equivalent | Description |
|------------------------|---------------------------|---|
| 4.20-5.00 | Very High | If the measure described in the item or construct is always manifested. |
| 3.40-4.19 | High | If the measure described in the item or construct is always manifested. |
| 3.00-3.39 | Average | If the measure described in the item or construct is always manifested. |
| 1.80-2.99 | Low | If the measure described in the item or construct is always manifested. |
| 1.00-1.79 | Very Low | If the measure described in the item or construct is always manifested. |

Finally, the predetermined parameter limit below served as a guiding framework for evaluating the standard of education offered to BSOA graduates from KCAST:

| Range of Percentage | Descriptive Equivalent | Description |
|------------------------|---------------------------|---|
| 4.20-5.00 | Very High | If the measure described in the item or construct is always manifested. |
| 3.40-4.19 | High | If the measure described in the item or construct is always manifested. |
| 3.00-3.39 | Average | If the measure described in the item or construct is always manifested. |
| 1.80-2.99 | Low | If the measure described in the item or construct is always manifested. |
| 1.00-1.79 | Very Low | If the measure described in the item or construct is always manifested. |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Data Gathering Procedure

One of the main stages in a research study is data collection that enables the researcher to find answers to research questions. Data collection is the process of collecting data aiming to gain insights regarding the research topic (Taherdoost,2022). Therefore, the subsequent key measures were conscientiously implemented to collect the requisite data for the study:

Initially, as the study's population and sample encompassed BSOA graduates from KCAST, the researchers obtained precise data on the total number of graduates from the Academic Years 2018, 2019, 2022, and 2023 from the college registrar to ensure the inclusion of exact and reliable data.

Next, subsequent to acquiring the total count of graduates, the researchers devised and formulated the survey tracer questionnaire. This questionnaire was designed to assess various aspects including the demographic characteristics, employment profile, work attitude, quality education provisions, and skills and abilities development of the respondents.

Subsequently, after the creation of the survey questionnaire, the researchers commenced the process of tracing the graduates regarding their employment profile, educational achievements and progress, work attitude, quality of education provision, and the development of skills and abilities. This tracing process was facilitated using Google Forms.

As such, once the respondent had fully answered to the questionnaire, the researchers collected the completed surveys and began tallying the responses in readiness for data analysis.

Finally, the data underwent analysis and interpretation by the institution's designated statistician. They prepared the retrieved

data for presentation in tables and graphs, enhancing the clarity and comprehension of the results.

Statistical Tool

Mean was utilized to calculate the average score, assessing the level of attitude towards work, evaluating the quality of education provision, and measuring the development of various skills and abilities among BSOA Office Management graduates.

Percentage was employed to determine the total proportion of BSOA Office Management graduates' demographic characteristics and employment profiles.

RESULTS AND DISCUSSION

Demographic Characteristics of the BSOA Graduates

One primary goal of this tracer study is to outline the demographic attributes of the BSOA graduates, encompassing gender, marital status, age, year of graduation, and educational attainment and development.

Figure 2 shows the gender profile of the respondents. Among the 299 respondents of the study, 229 (76.59%) were female and 70 (23.41%) were male. On the other hand, the respondents who answered to the tracer study is primarily composed of females at 76.59% while males only constituted 23.41% of the total BSOA graduates. This distribution may be attributed to the higher willingness of females to participate in research due to factors such as social norms, cultural expectations, or personal motivations. This may also be indicative that women have been underrepresented in research, leading to a concerted effort in recent years to include more women in studies to address biases and ensure that research findings are applicable to both genders.

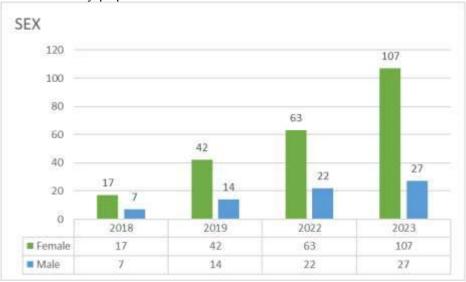

Figure 2 Gender Profile of Respondents

The respondents' profile in terms of civil status as shown in Figure 3 indicates that among the 299 respondents of the study, 268 (89.63%) were single and 31 (10.37%) were married. Specifically, the single respondents from the BSOA is 89.63%. This trend is primarily attributed in prioritizing and establishing the graduates' careers before committing to a serious relationship.

They may want to concentrate on building their professional lives and achieving financial stability first. Likewise, individuals have different priorities and timelines for starting relationships and settling down. Some may prioritize personal growth, travel, or other experiences before committing to a serious relationship.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

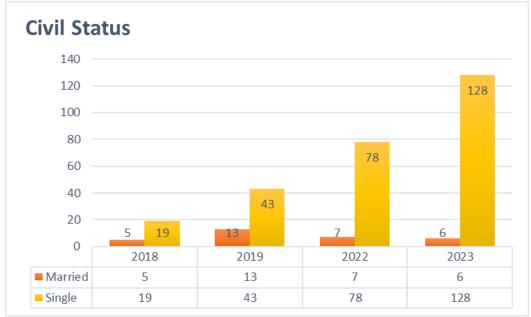

Figure 3 Civil Status Profile of Respondents

Figure 4 presents the age of the respondents where 78 (26.09%) of the respondents are 24 years old, 67 (22.41%) are 23 years old, 48 (16.05%) are 25 years old, 33 (11.04%) are 26 years old, 28 (9.37%) are 27 years old, 12 (4.01%) are 28 years old, 9 (3.01%) are 29 years old, 4 (1.04%) are 30 years old, 3 (1%) are 33 years

old, 2 (0.67%) are 31 and 34 years old, and lastly, 1 (0.33%) is a 32 years old. The majority of respondents fall within this age range since most of them completed their education in their twenties.

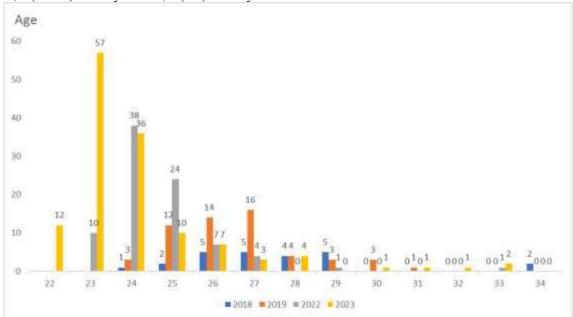

Figure 4 Age of Profile of Respondents

Figure 5 depicts the respondents year graduated, there was a total of 299 respondents where 134 (44.82%) graduated on 2023 while

85 (28.643%) graduated on 2022, 56 (18.73%) graduated on 2019, and finally, 24 (8.03%) graduated on 2018.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

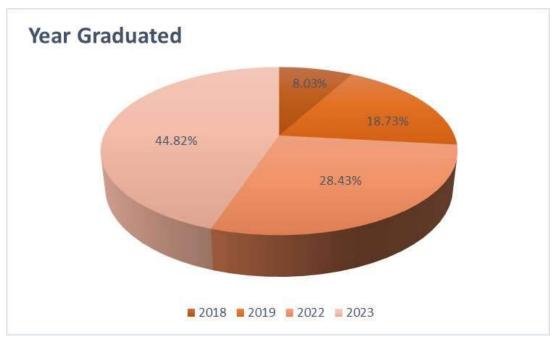

Figure 5 Profile of Respondents According to Year of Graduation

Educational Attainment and Development

Revealed in Figure 6 the 30 (10.03%) of the respondents obtained a vocational education and or TESDA National Competency

certification of which majority of them is in the field of Computer Systems and Servicing during their Senior High School years.

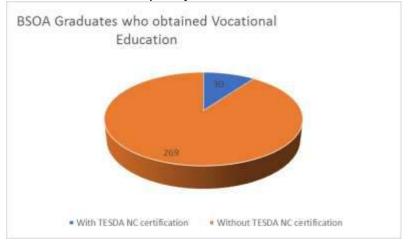

Figure 6 Profile of Respondents who Obtained Vocational Education

Figure 7 revealed that only 5 (2%) of the respondents only pursued higher education after finishing their baccalaureate degree. This may be due to the fact that majority of the respondents have not pursued a Master's degree because some graduates may prioritize entering the workforce immediately to

gain practical experience and start earning income rather than pursuing further education or simply not have a strong interest in further academic study and prefer to focus on other aspects of their lives, such as personal hobbies, travel, or social activities.

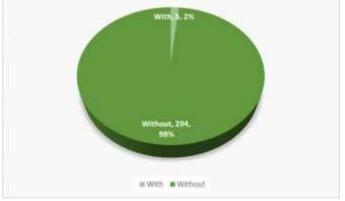

Figure 7 Educational Attainments and Development

Employment Profile and Features of BSOA Graduates

The second aim of this tracer study is to ascertain the employment profile of the BSOA graduates, covering aspects such as

employment rate, employment status, income level, duration of job searches post-graduation, alignment of college degree with current employment, and job mismatch.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In Figure 8, the employment rate of the participants is depicted, with a significant portion, 211 (70.57%), reported as employed, while 88 (29.43%) indicated being unemployed. This suggests

that the graduates are making meaningful contributions to both the national and local economies.

Employment Rate

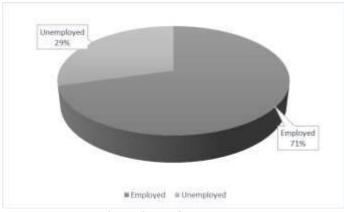

Figure 8 Employment Rate

Figure 9 illustrates the distribution of employment statuses among the respondents. The data reveals that a majority, 189 (89.70%), are employed full-time. Additionally, 19 (8.72%) are working

part-time but actively seeking full-time employment, while a smaller portion, 10 (4.59%), are working part-time and not actively seeking full-time work.

Employment Status

Figure 9 Respondents Current Employment Status

Figure 10 displays the monthly salary distribution of respondents in their initial job. Nearly 93 (43%) of employed graduates earn between 11,000.00 and 15,000.00 a month, with 53 (24%)

receiving 6,000.00 to 10,000.00. Conversely, the smallest cohort of graduates, totaling 20 (9%), earn 21,000.00 and above.

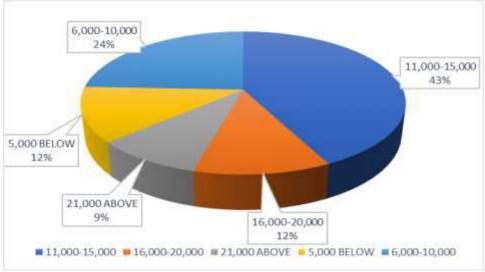

Figure 10 Respondents Present Monthly Salary

Figure 11 illustrates the timeline for securing their first job, with the majority of respondents, totaling 161 (54%), obtaining their current position within 1 to 3 months after graduation. This is

followed by 85 (29%) who found employment within 4 to 8 months. A smaller proportion, 22 (7%), took 9 months to 1 year, while 31 (10%) required 1 year or more to secure their initial job.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

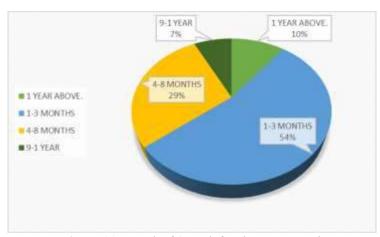

Figure 11 Length of Search for the Present Job

Figure 12 displays the correlation between the respondents' degree and their current job. The majority, comprising 259 (86%), expressed a neutral stance, while 29 (10%) considered their

degree to be highly relevant. Conversely, the smallest subset of graduates, totaling 3 (1%), indicated that their degree had no relevance to their current job.

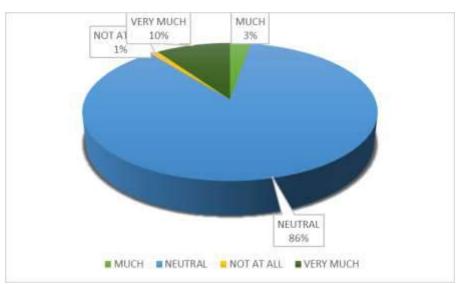

Figure 12 Relevance of the Degree to their present job

Reflected in Figure 13 is the nature of present job of the respondents. Results of the survey showed that 51 of the respondents work as office clerk and or encoder, 48 are administrative staff from different offices, another 30 are accounting staff and 24 of them are aligned with customer

relations-related works, 20 are cashiers, , 15 business proprietors, 10 are Content Moderators, 9 Office Supervisors and or Managers, 6 College Instructors, 4 Virtual Assistants, the remaining 1 is a caregiver.

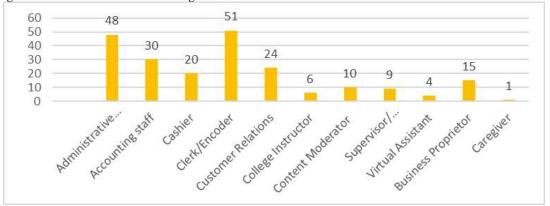

Figure 13 Respondents Nature of Present Job

Figure 14 illustrates the issue of job mismatching or job fit. The results indicate that among the employed respondents, 158 (73%) are working in a field related to their profession, 51 (23%) are in

unrelated professions, and 9 (4%) are employed in academic positions.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

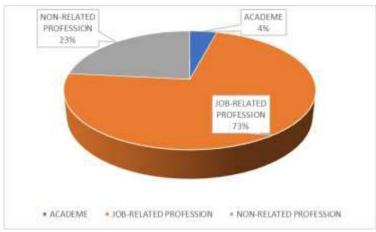

Figure 14 Job Mismatching

Level of the BSOA Graduates' self-rated evaluation in terms of Attitude to Work

The results presented in Table 2 were the mean scores of the respondents' response on the level of the respondents self-rated evaluation in terms of Attitude to Work. The data revealed that the highest mean score was obtained by Item No. 4, *I arrived on time to prepare my work and extend working hours if necessary*.

with a mean of 4.44 and had the descriptive equivalent of Very High. This means that the item was always manifested. On the other hand, Item No. 6, *I participated in all activities and events inside my workplace*, got the lowest mean of 4.32 and had the descriptive equivalent of Very High. This means that the item was always manifested.

Table 2. Level of BSOA Graduates' Attitude to Work

| Attit | ude to Work | Mean | Description |
|-------|---|------|-------------|
| 1. | I am very interested, happy and satisfied with my work and it is very important for me. | 4.38 | Very High |
| 2. | I like the kind of job and work I am doing. | 4.33 | Very High |
| 3. | I accepted assignments and tasks given to me at work without complaints. | 4.43 | Very High |
| 4. | I arrived on time to prepare my work and extend working hours if necessary. | 4.44 | Very High |
| 5. | I can work better and functional under different working environment and situations. | 4.36 | Very High |
| 6. | I participated in all activities and events inside my workplace. | 4.32 | Very High |
| 7. | I have a good relationship with my colleagues and co-employees. | 4.43 | Very High |
| 8. | I submitted necessary documents and papers on time and beat deadlines. | 4.38 | Very High |
| 9. | I performed my task and job with excellence and outstanding quality. | 4.35 | Very High |
| 10. | I seek assistance and help from others whenever I have clarifications and queries. | 4.43 | Very High |
| | Overall | 4.38 | Very High |

Level of BSOA Graduates' self-rated evaluation in terms of Quality Education Provisions

The results presented in Table 3 were the mean scores of the respondents' response on the level of the respondents self-rated evaluation in terms of Quality Education Provisions. The data revealed that the highest mean score was obtained both by Item No. 9, Different trainings, seminars and workshops that prepare students for employment, and Item No. 10, Varied learning

assessments and instructions which assess students' progress and learning fairly and equally, with a mean of 4.56 respectively and had the descriptive equivalent of Very High. This means that the item was always manifested. However, item No. 1, Availability of course materials and different learning resources needed for our studies, got the lowest mean of 4.36 and had the descriptive equivalent of Very High. This means that the item was always manifested.

Table 3. Level of the respondents self-rated evaluation in terms of Quality of Education Provision

| Qual | lity Education Provision | Mean | Description |
|------|--|------|-------------|
| 1. | Availability of course materials and different learning resources needed for our studies. | 4.36 | Very High |
| 2. | Quality of course contents from courses offered as well as the teaching and learning process. | 4.46 | Very High |
| 3. | Conduciveness of the learning environment and atmosphere. | 4.43 | Very High |
| 4. | Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.51 | Very High |
| 5. | Quality of learning facilities for first-hand and direct experiences like of different laboratories. | 4.39 | Very High |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 6. Quality of different courses offered in the program that develops the total sum of the student skills. | 4.41 | Very High |
|---|------|-----------|
| 7. Level of optimum interaction and contact with my fellow students through different in-campus activities. | 4.43 | Very High |
| 8. Well-trained and self-renewing Faculty members and staffs. | 4.48 | Very High |
| 9. Different trainings, seminars and workshops that prepare students for employment. | 4.56 | Very High |
| 10. Varied learning assessments and instructions which assess students' progress and learning fairly and equally. | 4.56 | Very High |
| Overall | 4.46 | Very High |

Level of BSOA Graduates' self-rated evaluation in terms of **Skills and Abilities Development**

The results presented in Table 4 were the mean scores of the respondents' response on their skills and abilities. The data revealed that the highest mean score was from Item No. 3, Ability to work independently as well as team work and team play, garnering 4.54 and had the descriptive equivalent of Very High. It means that the item was always manifested. Nevertheless, Item No. 14, Expertise about multidisciplinary research that is essential for understanding students' needs and interests, got the lowest mean score of 4.03 and had the equivalent of High. This implied that the item was often manifested.

Table 4. Level of the graduates-respondent self-rated evaluation in terms of Skills and Abilities Development

| Skills and Abilities Development Skills and Abilities Development | Mean | Description |
|--|------|-------------|
| 1. Organizational and leadership skill. | 4.46 | Very High |
| | | |
| 2. Problem solving and critical thinking skills. | 4.38 | Very High |
| 3. Ability to work independently as well as team work and team play. | 4.54 | Very High |
| 4. Creative thinking and creativity, initiative and taking a risk, if necessary. | 4.49 | Very High |
| 5. Time Management and decision-making skills. | 4.53 | Very High |
| 6. Writing competence and skills including technical writing. | 4.35 | Very High |
| 7. Communication and interpersonal skills. | 4.46 | Very High |
| 8. Computer and ICT Skills. | 4.33 | Very High |
| 9. Technical and Entrepreneurial Skills | 4.32 | Very High |
| 10. Ability to work under pressure. | 4.49 | Very High |
| 11. Ability to write the essentials and basics of effective lesson planning. | 4.39 | Very High |
| 12. Code of ethics applied to my teaching profession. | 4.52 | Very High |
| 13. Knowledge with the different teaching methodologies, techniques and approaches through seminars and workshops. | 4.43 | Very High |
| 14. Expertise about multidisciplinary research that is essential for understanding students' needs and interests. | 4.34 | Very High |
| 15. Trainings, seminars and workshops about the preparation and evaluation of different instructional materials. | 4.49 | Very High |
| Overall | 4.44 | Very High |

CONCLUSIONS

In conclusion, the graduate tracer study result indicates that the graduates from the BSOA Department of KCAST have exhibited exceptional outcomes in terms of their employment status, educational attainment, and the relevance of their degrees to their current positions. The high mean score reflects the effectiveness of the program in preparing graduates for successful careers and highlights the strong alignment between the education provided and the demands of the job market.

Graduates considered most of the course content in their program to be pertinent to their career needs. This suggests that BSOA graduates are successfully integrating into the labor market, a crucial element of the economy. Additionally, the study concludes that BSOA graduates are eager to continue learning and are open to development opportunities that can enhance their professional careers and make them more valuable members of their organizations.

Recommendation

Based on the findings and discussions presented, the following recommendations are proposed:

- a) Regarding job awareness and employment, the Career and Counseling Office, in collaboration with the institution's Job Placement Office, should continue organizing job fairs as well as comprehensive seminars, training sessions, and lectures for graduating BSOA students. It is also recommended to invite more companies to participate in these job fairs, as suggested by the graduates.
- b) Follow-up studies should be undertaken to examine the workplace performance of BSOA graduates. Specifically, research involving the graduates' current employers can be conducted to evaluate the skills required by their employees. This can assist the institution in aligning the course design with the specific needs of the industry and further reinforce the findings of this research.
- It is widely acknowledged that work placements and internships significantly enhance employability skills. Many higher education institutions have created graduate employability programs; however, these programs often rely too heavily on overburdened career service staff and receive insufficient support from academic staff. Therefore, it is recommended that the

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- government and the CHED seriously consider using future funding mechanisms as a tool to encourage increased investment in students' employability skills.
- d) Given the employability rates of BSOA graduates, the academic institution should contemplate integrating instructional activities aimed at bolstering students' leadership and interpersonal skills. Diverse initiatives should be implemented to enhance students' communication abilities, encompassing both written and oral forms. Additionally, extracurricular activities like community service and team-building exercises should be prioritized. Ultimately, a systematic review of the program curriculum should incorporate study findings to develop and refine graduate attributes.

ABSTRACT

This study focuses primarily on the lived experiences of secondary education teachers who work with students exhibiting disruptive behavior. The research employs a qualitative phenomenological approach, utilizing semi-structured in-depth interviews with a sample of five teachers from a secondary school in Barangay Sigaboy who are responsible for managing students with disruptive conduct. The selection of participants was done through purposive sampling. Thematic analysis was employed to evaluate the data, which facilitated the identification of key statements pertaining to the challenges, coping methods, and insights of secondary teachers in managing disruptive conduct exhibited by their students. Upon deliberation, 2 general themes surfaced breaking into 2 subthemes of each result. The results have shown that the first theme: learner's background have described the types of learners and the reason for disruptions. It is evident that secondary teachers experience varied learners that disrupts the learning process and carries different reason of disruptions. The second theme: academic background exposed the teachers' emotional attachments and strategies in the disruptive behavior. This study describes the lived experiences of 5 secondary teachers in the journey of educating young adults.

KEYWORDS: Secondary Teachers, Disruptive Behavior, Lived Experience

INTRODUCTION

Most teachers today are now challenged with problems in behavioral issues among students. One of the most significant behavioral issues most teachers are facing is disruptive classroom behaviors. According to Peras, Castro and Mantog (2023), the educational system in the Philippines faces several problems in dealing with students with disruptive behavior. Amado & Guerra (2018) also cited that the behavioral problems of the students became the most challenging and difficult hurdle the teachers encountered inside the classroom. Additionally, in the study of Dulay (2020), it is observed that students' misbehavior in class disrupts the smooth flow of the lesson and interferes with learning.

Disruptive behavior can be characterized by minor disruptions such as inattentiveness, speaking out of turns, leaving assigned seats, and making unnecessary noises during class, to major disruptions such as persistent and intentional disruption during class activity, physical aggression, bullying, and repeated disobedience to teachers. This disruptive behavior causes interruptions and distractions in the learning process, making it more difficult for the students to engage in class and absorb the lesson leading to poor academic performance.

Classroom behavior of students is one of the concerns teachers face on a global scale today (Dulay, 2020). These increasing frequencies of disruptive behavior in classrooms are linked with

behaviors that impede and interfere with the teaching-learning process (Martino, Hernandez, et al., 2016). Additionally, disruptive behavior typically leads to low academic performance, which influences the student's risk of failure at school in some way or another (Granero-Gallegos, Antonio et al., 2019). Furthermore, according to Parsonson (2012), behavioral issues increase the stress levels of both the teacher and the students in the classroom, disrupt the continuity of lessons, and interfere with both learning objectives and learning processes.

Furthermore, the study will be conducted in the secondary public schools in Governor Generoso North District, Davao Oriental. It is observed by most teachers that disruptive behavior is a growing problem in the schools of Governor Generoso North District and is one of the most serious concerns of teachers.

Lastly, many studies in the field of classroom management tend to rely heavily on quantitative research methods, such as surveys and experimental designs. There may be a gap in the literature regarding in-depth qualitative investigations that explore the experiences, perspectives and coping mechanism of teachers handling learners with disruptive behavior. This research gap emphasizes the importance of conducting in-depth qualitative studies that capture the different lived experiences of teachers handling learners with disruptive behavior while

also exploring their perspectives and insights. Addressing this gap is critical for informing the development of evidence-based policies and interventions that help educators create inclusive and welcoming learning environments for all children.

Research Objectives

Due to the growing concerns regarding the observable disruptive behavior of students in the classroom, there is a pressing need to explore the lived experiences of teachers handling learners with disruptive behavior inside the classroom. The purpose of this research is to understand teachers' experiences in managing students with disruptive behavior. Moreover, three objectives were sought to use as a guide for this study:

- 1. Identify experiences of secondary teachers in handling learners with disruptive behavior;
- 2. Enumerate the coping mechanisms of the secondary teachers in handling learners with disruptive behavior;
- 3. Uncover the insights of secondary teachers in handling learners with disruptive behavior.

Review of Related Literature

This section contains a compilation of several studies in the education area that investigate the experiences and challenges faced by secondary teachers who work with students with disruptive behavior in a general education classroom. These studies also examine the factors that contribute to this issue.

Pedagogical Resilience

Resilience as a domain of discipline has acquired multiple definitions through the process of time. However, there seems to be agreement that resilience refers to the process of coping with disruptive, stressful, or challenging life events in a way that provides the individual with protection mechanisms and coping skills before the disruption that results from the event (Segalo, 2021). Research has proposed that resilience, as an individual attribute, reduces the impact of the particular challenges faced in the teaching profession (Pretsch, Flunger & Schmitt, 2012). In the study of Brouskeli, Kaltsi, and Loumakou (2018) have mentioned that the professional wellbeing of teachers may exert influence, to some extent. Research has proposed that resilience, as an individual attribute, reduces the impact of the challenges faced in the teaching profession. Nevertheless, the professional well-being of teachers may exert influence, to some extent

The advancement of dynamic resilience. It is important to acknowledge that there are certain individuals and communities who experience a high level of well-being but have a low level of resilience. A study conducted in Higher Education by Clum et al (2022) in the mode of online teaching, alongside assisting HEIs in better adjusting to online teaching in the face of a crisis, institutional and instructional resilience will enhance the quality of instruction and delivery of online courses under all conditions, resulting in meaningful and long-lasting online learning now.

The material within explores research-based approaches and practices that prioritize the well-being of learners as well as teachers, leading to excellent learning results. By integrating strategy, flexibility, and empathy into our teaching, we can unlock new possibilities (Thurston, et al., 2021) Teachers who exhibit high levels of resilience are often adept at utilizing coping strategies, problem-solving skills, and social support networks to overcome obstacles and maintain effectiveness in their teaching practices hence a study in Eastern Samar of Lacaba, Lacaba, and Caliwan Jr. (2020) for the teachers who are assigned to an island have shown that Their significant successes clearly demonstrate their enhanced abilities dedication and efficacy in the realm of education. While exchanging their personal anecdotes of while teaching on the island, they firmly believe in their significant progress in their career.

Classroom Management

Maureal & Villalojos (2000) underscored the significance of classroom management in fostering student improvement. Effective learning environments enhance academic achievements and facilitate smooth student learning. As cited in the study of Bektiningsih et al (2023), schools play a significant role in molding the personalities and actions of pupils. Schools should impart comprehension to students to prevent disruptive conduct. Disruptive behavior refers to student conduct that affects the educational process inside the classroom and is consistently exhibited in various manifestations, depending upon the prevailing conditions of the class. Furthermore, disruptive behavior is defined as any activity that obstructs classroom instruction and thus causes psychological and physical instability.

He also supplied that there are numerous internal and external elements that contribute to disruptive conduct. Negligent behavior, jail time, and upsetting friends are examples of internal influences. External factors contribute to the lack of effectiveness of teacher teaching materials, such as teachers who conduct learning non a monotonous manner or a lack of resources. Because teachers must manage these issues, which takes up less time for them to deliver teachings, disruptive behavior poses a risk to students' academic performance in the classroom. Given the presence of this disruptive conduct, an effective teaching technique is required to lessen it. Numerous prior studies have examined how teachers handle disruptive behavior in the classroom. One such study's noted that teachers employ three different approaches to address disruptive behavior: behavioristic, cognitive, and humanistic.

According to Maureal & Villajos (2023) research, there exists a correlation between classroom management style and the way teachers interact with their students, as well as the level of control they exercise over them. Therefore, it is necessary to set physical, emotional, mental, and intellectual limits to properly manage a classroom. In the study of Bojos & Oclinaria (2023) the teacher, who holds the position of power in the classroom, is the only one who can watch over the kids. Yet it can be challenging for teachers to maintain order in the classroom, especially when there are a variety of children who are present. Even while most kids are able to follow instructions, there will occasionally be one who struggles with appropriate behavior. These situations in the classroom could be limiting better teaching and learning. Furthermore, studies show that many teachers lack the necessary preparation for the kinds of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

behaviors that their students may bring to the classroom, which creates challenges for both teaching and learning. Effective classroom management is critical to any academic pursuit. a term used by educators to characterize the process of ensuring that instruction occurs in the classroom uninterrupted. It is the cornerstone of a safe and supportive learning environment. Classroom management is a talent that may be learnt through training and years of real-world experience, even though some teachers are naturally adept at it.

In conclusion, the disruptive behavior can possibly be caused by the factor of classroom management as it influenced the learners learning. Without implementing the management could encourage chaos.

Theoretical Lens

The process of teaching and learning comprises various essential components that a learning environment should possess. Classroom disruption is a significant element that might impact the learning process in the classroom. The teacher prefers to utilize a trial-and-error approach when implementing measures to address superfluous conduct inside the classroom. Bektiningsih et al (2023) asserted that inadequate management of disruptive conduct is a significant challenge in the educational process. Behaviourism, as postulated by B.F. Skinner, promotes the notion that teachers employ rewards and punishments as a means of classroom management. According to Niwaz, Khan & Naz (2021), it has a significant role in the effectiveness of planned interventions aimed at promoting effective classroom management. According to the findings of Ngan'du et al (2013), it has been determined that the use of suitable behavioral management techniques is vital for teachers to establish an optimal learning environment. Successful learning can be achieved through the utilization of appropriate behavioristic techniques. Finally, Al-Shammari, Faulkner, & Forlin (2019) proposed that the application of behavioral approaches is particularly relevant when supporting learners

with social and behavioral difficulties and even more so when these applications co-exist with learning difficulties.

This study seeks to investigate the lived experiences of five secondary education instructors in teaching pupils with disruptive behavior, based on their personal experiences and viewpoints. Through the utilization of in-depth interviews, the researcher can determine the experiences, coping mechanisms, and insights associated with educating a student exhibiting disruptive behavior.

METHOD

This study aims to be guided based on the three (3) research objectives (1) identify experiences of secondary teachers in handling learners with disruptive behavior; (2) enumerate the coping mechanisms of the secondary teachers in handling learners with disruptive behavior; (3) uncover the insights of secondary teachers in handling learners with disruptive behavior. Semi-structured interviews will be conducted with teachers who have experience dealing with disruptive behaviors in the classroom. The interviews is tailored to examine teachers' perceptions, challenges faced, and the management strategies they find most effective.

Hence, to answer the three objectives above, thematic analysis of the qualitative data will be utilized. In this thematic analysis, the researcher delves into the qualitative data collected and focuses on the lived experiences of secondary teachers handling students with disruptive behavior. The analysis draws upon observations, and interviews conducted with teachers.

RESULTS AND DISCUSSION

This section presents what came out of the experiences, coping mechanisms, and insights of secondary teachers who are managing students with disruptive behavior. Two (2) general themes were analyzed from the results of the study; the academic environment and the learner's background.

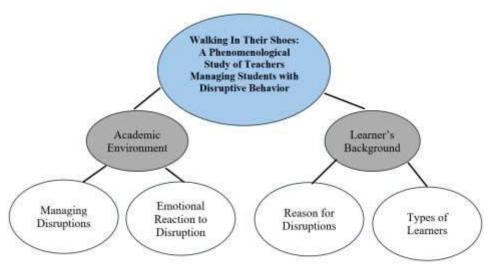

Figure 1. Conceptual Map of the Lived Experiences of Secondary Teachers Managing Students with Disruptive Behavior

Today students anticipate being immersed while acquiring knowledge, and it is possible that they may exhibit resistance,

disruption, or overt hostility when required to participate more actively in the learning experience as mentioned in the study of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Ali and Gracey (2013). In the teaching profession, learners' disruptive behavior is one of the biggest challenges that teachers face (Okeke, Thomas & Botha, 2023). According to Ali and Gracey (2013), some people associate disruptive behavior in the classroom to the teacher, suggesting that their approach to resolving conflicts can contribute to the spread and intensification of these disruptions.

Learner's Background Type of Learners

Krishnansamy, Mohammed, and Argellan (2019) asserted that teachers reported that certain kids exhibit disruptive behaviors to garner greater attention from both the teacher and their peers compared to other students. Dealing with disruptive learners can often hinder the teaching-learning process. All participants have indicated that managing learners with disruptive behavior disrupts classes and disregards the act of teaching.

"Some of the few to mention were not giving their full attention to you" (Teacher 1)

"They interrupt the class and not following instructions," (Teacher 2)

"They are defiant of task or to the teachers" (Teacher 4) "They were troublemakers, lacked attention (KSP), wanted control and power in the classroom" (Teacher 5)

Simmons et al (2015) conducted a data analysis which revealed that seating arrangements have a significant impact on the behavior of second grade learners. The incidence of disruptive behavior has been reduced, resulting in less chaos and fewer off-task kids, particularly in rows of seating. Although the interview from Teachers' 1,3, and 4 have answered that learners wander around the classroom that would cause disruptions in class.

"They roam around the classroom transferring from one chair to another" (Teacher 1)
"They just roam around, pick a fight" (Teacher 3)

"They move around" (Teacher 4)

The research of Ali (2018) has established a strong connection between the utilization of mobile technology and the behavior of pupils. Undoubtedly, the utilization of mobile applications and technology has a significant impact on students' behavior, academic achievement, and teaching methodologies. In their study, Navaja & Ombaogan, (2023) have examined the impact of excessive and unregulated gadget use on pupils. The findings revealed that one of the main problems associated with this behavior is distraction. This implies that the interference created by electronic devices during educational tasks can have an adverse impact on pupils' academic achievements. Utilizing electronic devices for non-academic purposes in class or while studying can disturb students' concentration, leading to a negative impact on their understanding, attentiveness, and involvement in academic activities. Teacher 2 has indicated that the classes are being disrupted because of the use of electronic devices and excessive noise.

"During my class disruptive behavior is quite common such as using gadgets/cellphone, untimely talking/laughing, making a noise." (Teacher 2) At the same time, numerous schools face a severe form of peer bullying that often remains undetected by adults. However, this problem may play a significant role in school violence and create a negative school atmosphere (Allen, 2010). One participant also highlighted that this contributes to a disruptive learning environment. Moreover, the involvement of Jalon and Arias (2013) in the most intense instances of disturbance and coercion aligns with the behavior of bullies, particularly those who are both victims and bullies, and exhibit higher levels of disruption. Teacher 1 answered that bullying occurs as a disruption in class that often take place during the teaching-learning process.

"Bullying of classmates when one answers incorrectly or says things instead of the words expected" (Teacher 1)

These subtheme have shown the complications of a learner's behaviour inside the classroom that influences the teachers' performance. Teachers as the main instructional material, teachers experience these excessive activities when inside the classroom. The learner's behavior contributes to the factor of handling learners with disruptive behavior.

Reason for Disruptions

Vongvilay, Fauziati, and Ratih (2021) identified several factors that contribute to pupils engaging in disruptive activities, including their surrounding environment, poor learning experiences, and psychological needs. Teachers 2, 3, and 4 also acknowledged that love and a sense of belonging are influential variables in a learner's disruptive conduct.

"Attention-seeking behavior, they may feel ignored at home." (Teacher 2)

"I interviewed most of them and it usually rooted from broken family, or sometimes from a home where their voices are not heard, or their emotions are invalidated., I learn that they are behaving that way because they have unhealed trauma from home." (Teacher 3)

"Students are not given enough attention at home" (Teacher 4)

The family, as a significant force in shaping a child's development and acting as a main agent of socialization, undoubtedly has the potential to either enhance or hinder the child's academic accomplishment, depending on the social environment inside the family, as highlighted by Felisilda and Torreon (2020). Evidently, the study's findings demonstrate that the feelings of belongingness and affection mostly originate from the family, despite the presence of certain discrepancies in that domain. Over the course of 10 months, teachers have observed that their interactions with the learner have uncovered the underlying causes of family issues, which in turn have led to disturbances in the learning environment.

"Influence from the social media and society in which they belong to." (Teacher 2)

"There are many factors that causes of the student's disruptive behavior such as, lack of engagement and influenced by environment" (Teacher 4)

"I think the causes of disruptive behavior are often a symptom of deeper issues, such as boredom, lack of engagement, social or emotional difficulties." (Teacher 5)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Varied reasons for disruptive behavior emerge as a subtheme of the learner's background as it influences the experience of a teacher handling learners with disruptive behavior. Psychological and physiological effects have been an issue navigating the reason for the occurring disruptive behavior which occurs as a significant result in this study.

Academic Environment Emotional Reaction to Disruption

Okeke, Thomas & Botha (2023) found strong confirmation that disruptive behaviors exhibited by learners had negative impacts on the cognitive, psychological, physical, and social well-being of teachers. An inference that may be drawn from this study is that the well-being of teachers is strongly linked to their experiences of disruptive behavior in the classroom. The participants have also agreed with the prior research that suggests a lack of confidence in teachers' self-efficacy and an increase in stress levels when talking about their feelings of handling learners with disruptive behavior.

"At first, I felt disappointed, it felt like I am not a good teacher as they were students who behave like them. I get angry easily towards this behavior" (Teacher 1)

"Honestly, I feel stressed and despair with those behaviors that implicate or hurdles the teaching and learning process" (Teacher 2)

"When I was just new in the teaching industry, I easily find myself frustrated in these kind of students" (Teacher 3)

"It is really aggravating and frustrating when you don't have the expertise on how to deal with this kind of behavior" (Teacher 4)

"Initially, I may feel frustrated or exasperated, especially if the disruption interrupts the flow of the lesson or negatively impacts the learning environment for other students." (Teacher 5)

Student disruptive behaviors elevate stress levels, causing dissatisfaction, impairing focus, obstructing communication, and negatively impacting the relationship between the teacher and other classmates (Krishnansamy, Mohammed, & Argellan, 2019). These factors have significantly impacted the experiences of secondary instructors in conveying knowledge to students.

Managing Disruptions

According to Blank and Shavit's (2016) study, certain scholars propose that disruptions have an adverse impact on students' confidence and trust in teachers and can also result in negative attitudes of teachers towards the classroom. The findings also indicate that educators and academics should consider addressing disruptive behaviors as a crucial aspect of both effective classroom management and effective teaching. For this study, a total of three teachers have used varied strategies in addressing disruptive behavior.

"I use different strategies in handling these behaviors" (Teacher 1)

"All children can feel valued, respected, and empowered to flourish in settings where educators embrace diversity, promote inclusivity, and offer individualized support." (Teacher 4) "Setting a clear rule inside the classroom and be consistent. Reinforce this regularly and let them know what is expected so they will comply". (Teacher 1)

"As teachers we must be consistent in discipline, enforce rules and consequences fairly and consistently to maintain a structured and orderly classroom environment." (Teacher 2)

"Be consistent with the rules you established" (Teacher 4)

"Establish clear expectations, build positive relationships, and maintain control" (Teacher 5)

Furthermore, teachers must establish relationships with each student that are marked by warmth, compassion, and particular demands connected to standards. Additionally, teachers must prove their authority when students fail to meet these criteria. Teachers must possess the ability to foster positive interactions among students (Vaaland, 2017). Meanwhile, Mutua's (2022) research findings demonstrate that utilizing diverse positive reinforcement tactics effectively decreases instances of students being out of their seats in the classroom, that was also the strategy used by 4 teachers.

"Listen and be calm. This will avoid the situation to escalate the situation. Use positive language." (Teacher 1) "I need to stay calm and do not become defensive. Be positive rather than negative." (Teacher 2)

"I also integrate in my class rewards and recognition as positive reinforcement". (Teacher 3)

"Use positive reinforcement". (Teacher 4)

"Remain calm, Teachers emphasize the importance of focusing on positive reinforcement and acknowledging students' strengths and achievements to promote positive behavior and motivation." (Teacher 5)

The reinforcement was approved to be successful for these teachers that experiences disruptions inside the class. Moreover, teachers need to expand their professionalism as they learn throughout their journey of teaching, in Ali and Gracey's (2013) study, it is advantageous to involve someone who is impartial in order to gain an objective perspective on the conflict, identify the underlying problems accurately, and receive recommendations on how to effectively resolve the issue. By collaborating with the faculty to coordinate resolution efforts, they might potentially engage the student in a more efficient manner. A notable finding from Abele's (2020) study is the recurring pattern of fostering reliable and strong professional connections with employees, students, and external organizations, which emerged as the second persistent theme. Additionally, three teachers have responded in a similar manner. Notwithstanding the difficulties, teachers have demonstrated resilience in providing education to these young adults. 3 teachers have claimed to accept support and guidance from colleagues to ensure quality standards of teaching while handling learners with disruptive behavior.

"Seek support; reach out to colleagues, mentors or professionals for guidance and support". (Teacher 1)

"The teacher must seek support from school admin/guidance counselors". (Teacher 2)

"One must combine proactive preventive measures, efficient intervention methods, and continuous assistance from colleagues and school". (Teacher 4)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

"I realized having collaboration with colleagues, administrators, support staff, and parents is crucial for effectively managing disruptive behavior." (Teacher 5)

The two general themes: Learner's Background and Academic Environment submerged during the process of analyzing the results. The first objective talked about the participants experienced challenges in handling learners with disruptive behavior. Teachers are distracted to the learners' unruly behavior inside the classroom. The teachers described specific disruptive behaviors that influences the teaching-learning process. They react negatively to the issue of disruptive behavior. In the study of Catton (2016), one proctor was assigned to a classroom to participate in a survey to share your thoughts on the efficacy of the teacher and the conduct of the class. The proctor's results were largely favorable, and he believed that the disturbance was an essential component of the educational process. The statements coincide with Teacher 5 as she shared that despite the stress, it is also a learning opportunity on both the teacher and student. Moreover, the study of Ejiagu (2022) found that disruptive behavior by students had an impact on teachers' capacity to create many techniques for primarily detecting appropriate behavior.

In the study of Ali (2018), if disruptive or uncivil behavior is ignored, it will have an effect on the entire classroom. For this reason, prompt intervention is necessary. More "misbehavior may escalate to intolerable levels," they said. The participants used varied strategies to cope with the challenges to overcome the urgent need in addressing the disruptive behavior. Being resilient as teachers and using reinforcements for the unruly behavior have become a common response for the participants. Also, the help of colleagues and superior have become a frequent response. The guidance of other colleagues helped to widen the view of the participants, the support was utilized in addressing the disruptive behaviors. Teachers cope with the challenges of handling disruptive behavior with different level of intensity and manner, although common responds are using behavior reinforcements and seeking help from colleagues.

The third objective discussed about the insights the teachers gained in handling learners with disruptive behaviors. The participants admitted that these behaviors contribute to the stress levels they carry, however, each of the participants accepted the challenge of receiving these learners in a different point of view. Teacher 1 confessed the causes of the occurring behavior can highly contribute to the experience. Teacher 2 just needs to stretch patience in dealing with this behavior while Teacher 3 will just accept the learner believing that every learner is different from the other in which, Teacher 4 have mentioned the insights gained from the previous participants, this have proved that teachers have different strategies but they could come up with the same realizations, not to mention the inclusive mindset of most teachers. Teacher 5 answered that these classroom challenges have shaped her approach in teaching and classroom management. During the last moments of interview, the participants were asked if they are still willing to accept learners with disruptive behavior, all of them have accepted the challenge, as one of the participants supplied that "Accepting students with disruptive behavior may present challenges, it also offers valuable opportunities for growth,

support, and positive change". The result was also the same with Crudup's (2020) study that even though teachers discussed their experiences with stress and burnout and considered quitting after each year of teaching, they were driven to return to the classroom and keep working toward improving the lives of the students who displayed difficult behaviors.

Trial and error could possibly work in every behavior, there is no single fitted theory that could solve the classroom disruptions, however, the theory of Skinner, Behaviorism have greatly impacted to the context of classroom management especially in addressing the problems of behavior. The use of positive reinforcements is a key to gaining success in the teaching-learning process.

CONCLUSIONS AND RECOMMENDATIONS

There is no perfect class a teacher could get, nor a perfect learner we can compile. Disruptions occur anywhere on various occasions during the teaching-learning process. Disruptions causes distraction in the learning environment that hinders the ability to contribute to the teaching-learning process. The teachers' experiences struggle in handling disruptive behavior but teachers also find resources to improve the learning environment as well as the learners of the class. This experience has proved that teaching is indeed a noble profession. The profession that requires enormous patience in every aspect of the job. Yet, they managed to cope with the stress and struggles in a calm manner.

Further studies are required on the perception of learners who manifest disruptive behavior. The researchers have also noted an inquiry about the impact of parental involvement in managing learners with disruptive behavior. It is a good analysis to revolve research around disruptive behavior and the issues around it and how it produces a learner that becomes disruptive.

Acknowledgements

The researchers would like to express boundless recognition to the Almighty God for the strength and faith in accomplishing this study. Moreover, we would like to extend our heartfelt gratitude to Professor Wenefredo Cagape for his unwavering support and invaluable assistance throughout the course of this research. His expertise, guidance, and feedback have been indispensable in shaping the direction and outcomes of this study.

Also, the researchers show appreciation, respect and value to the secondary teachers who took sacrifices and effort in imparting knowledge to learners with disruptive behavior as well as the selected participants who rendered time and energy to express their experiences, coping mechanisms and insights that made possible in conducting this study. Finally, we would like to recognize the support of our families, friends, to Khrys for his unwavering support and assistance during the conduct of this study and the chosen school for the support and assistance in making all of these possible.

THE RICH HERITAGE OF DEVANGA WEAVERS COMMUNITY IN RAMDRUG TALUK, BELAGAVI DISTRICT, KARNATAKA

Arati S. Hattiholi¹, Sadanand B. Sugandhi

¹Research Scholar; Department of Studies in Anthropology Karnatak University Dharwad ²Assistant Professor Department of Studies in Anthropology Karnatak University Dharwad

ABSTRACT

This article delves into the vibrant world of saree weaving in Karnataka, exploring the heritage, craftmanship, and challenges faced by Ilkal saree weavers in the Ramdurg taluk of Belagavi district. Through a combination of historical perspective, insightful research, and on the ground research of weaver's community, this article aims to provide a comprehensive understanding of the traditional skill, socio economic condition and traditional significance of the Ilkal saree in Karnataka. By putting light in the experience and ambitions of these weavers this article highlights the need of weavers for support, preservation, and empowerment of Ilkal saree weavers.

KEYWORDS: Devanga community, history, culture, challenges, problems.

INTRODUCATION

The weaver's community, known for its rich tradition of weaving saree, has played a significant role in the cultural of Karnataka, with a history dating back, the Devanga weaver's community is recognised an oldest weaver's community in South India, they have preserved and enriched the art of weaving from old days. And their contribution to the state's vibrant textile heritage. This article explores the historical background, traditional weaving techniques, and the status of the Devanga community in Belgaum district, Ramdrug taluk, Karnataka.

The Devanga caste traces its historical roots back to Hindu mythology, where Devala Maharshi, believed to be the ancestor of the Devanga people, is credited with introducing cotton weaving to humanity. According to legend, Devala Maharshi received threads from Lord Vishnu and was attacked by demons on his return. Seeking protection, he prayed to Devi Sakthi, who vanquished the demons, allowing Devala to weave clothes from their blood-soaked threads. Devi Sakthi, also known as Chowdeswari or Sowdeswari, instructed Devala to worship her regularly. Today, the Devanga community, predominantly found in South Indian states like Karnataka, Kerala, Odisha, Tamil Nadu, and Andhra Pradesh, continues the tradition of weaving. Despite being considered the oldest weaving community, they share similar weaving cultures and traditions with other communities like Padmasali, Kurvishetty, Namdevshimpi, Jadar, as well as Muslim, Scheduled Tribes (ST), Scheduled Castes (SC), and other Other Backward Classes (OBC) weavers in Ramdurg taluk. This article delves into the traditional weaving techniques, challenges, and societal status of the Devanga weaver's community in Ramdurg taluk, highlighting the rich tapestry of weaving traditions in the region.

Mahesh Tippashetti, (2000): He tried to analyse the historical context and enduring appeal of the Ilkal saree in his book, "Ilkal Saree." He has seen that sarees are woven in a traditional and revered method using local water and natural dyes. He has determined that the primary occupation of castes like Devanga, Swakulisali, Padmasali, etc is weaving.

Shaik Faruk Najir (2012): Malegaon's power loom industry struggles with frequent closures due to various issues. These closures, while necessary, lead to lost production and financial strain as wages for permanent workers continue. Additionally, workers often lack training on modern machinery, hindering overall productivity. Despite these challenges, opportunities exist, such as reducing downtime and improving worker skills through training incentives. By addressing these issues, the industry can move towards a more sustainable future.

Somnath Kolgiri (2018): examines occupational health risks for power loom workers in Solapur, India. The research investigates the specific hazards faced by these workers in terms of their health and safety. The study focuses on workers in Solapur City, Maharashtra, highlighting potential risks associated with their profession.

OBJECTIVES

- To explore the historic and cultural significance of the Devanga weaving community.
- To study the challenges faced by the Devanga community in the modern world.

METHODOLOGY

This study is based on the primary data. The data of 300 weaver's was collected through interviews, schedules, in-depth interviews, and case studies of power loom weavers among the five villages of Ramdurg taluk. To study Devanga caste historic

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

background and challenges faced by weavers in the Ramdurg taluk of Belgaum district.

SCOPE AND PROFILE OF THE STUDY AREA

Ramdurg is a taluk in Belgaum district of Karnataka state. The royal state of Ramdurg, founded in 1799, was one of the non-salute princely states of British India under the Bombay Presidency and later the Deccan States Agency. Ramdurg is known for its hills, sugar factories, river, and trekking. There are many important places near Ramdurg, such as Shabari Kolla, Godachi, Navilu Teerth, Big Shiva Statue, Hoovina Kolla, Sunnal Hanumappa, Megundappan Kolla, Ramdurg Forts, and Toragal Forts. Almost all villages that come under Ramdurg taluk are historic places.

HISTORICAL BACKGROUND OF DEVANGA COMMUNITY

The Devanga community, primarily engaged in weaving, holds a unique position in the socio-cultural fabric of Karnataka. Historical records suggest that the Devanga community has been involved in the weaving profession for several centuries, passing down their skills from generation to generation. Their expertise in the intricate art of power-loom weaving has been crucial in shaping the traditional attire and fabrics of Karnataka.

The Devanga weavers are known for their proficiency in various weaving techniques, creating exquisite fabrics that reflect the rich cultural heritage of Karnataka. Sarees, dhotis, and other traditional garments produced by the Devanga weavers often feature intricate designs and vibrant colors. They use a variety of materials such as cotton, silk, and blends to craft their textiles. One of the distinctive features of Devanga weaving is the use of traditional power-loom. This requires skilful manipulation, and the weavers demonstrate a deep understanding of the craft to produce high-quality textiles. The community is renowned for its mastery of tie-and-dye techniques, intricate patterns, and motifs that are passed down through generations.

As Weaving is an art of looping several threads together to weave a beautiful saree, these weavers are the artists of this art. To weave a saree there are many pre preparation's like, buying raw materials, making a raw material capable yarn for weaving a saree, then rolling the beem, then drafting work is done (joining each thread of beem to heddles in the beater), then inserting pirn in shuttle (weft thread), when these both warp and weft yarns start interlacing, this process starts weaving a pattern by which the weaved lines starts forming and as a process goes on the than the saree is weaved.

In power loom weaver can weave one saree in 2-3 hours, as in a day he can weave 2-3 saree, without any power cuts, if there is a power cut it makes him difficult to even weave a single saree in a whole day. Despite this the weavers face several challenges in the modern era. Such as Industrialization, globalization, and the influx of machine-made textiles have impacted the traditional weaving industry. The younger generation, influenced by changing economic trends, often

finds it challenging to sustain the traditional weaving practices, leading to a decline in the number of skilled artisans. As this article focus on the challenges on weaver's community few challenges are stated below.

CHALLENGES FACED

Modernization and competition: developing of the textile mills and influences of western cultural in the modern society, is a competition for these power loom and handloom saree weavers with the old tradition, culture, and design.

Lack of market access: less exposure of modern market and limited access of world market, has made the old tradition and products to lack back by being exposed in the current market due to unaware of modern market system and online marketing.

Skilled labour problem: younger generation of weaver's community are drawn to other profession has the reason is, no proper recognition of the product in the market, no benefits for the products, as it is leading to a shortage of skilled weavers in the profession.

GOVERNMENT INITIATIVES AND REVIVAL EFFORTS

Recognizing the importance of preserving the unique heritage of the weavers, the governments of Karnataka and India has initiated various schemes and programs. These initiatives aim to provide financial assistance, skill development training, and market exposure to the weavers. By promoting the use of handloom and power loom products and creating awareness about the cultural significance of weavers weaving, these efforts aim to revitalize the community and ensure the continuity of their craft.

CONCLUSION

In conclusion, the article sheds light on the vibrant world of saree weaving in Karnataka, particularly focusing on the heritage, craftsmanship, and challenges faced by Ilkal saree weavers in the Ramdurg taluk of Belagavi district. Through a blend of historical insights and on-the-ground research, it delves into the traditional significance of the Devanga weaving community, highlighting their pivotal role in Karnataka's textile heritage. The study underscores the rich cultural legacy of the Devanga community, whose intricate weaving techniques and traditional practices have been passed down through generations. However, it also illuminates the modern challenges faced by these artisans, such as industrialization, globalization, and a shortage of skilled labour. Despite these obstacles, the article points towards government initiatives aimed at preserving and revitalizing the weaving tradition. By providing financial support, skill development training, and market exposure, these efforts strive to empower weavers and ensure the continuity of their craft. In essence, the article advocates for the support, preservation, and empowerment of Ilkal saree weavers, emphasizing the need for collective action to safeguard Karnataka's rich textile heritage for future generations.

AN ANALYSIS OF THE DETERMINANTS OF PUBLIC AND PRIVATE INVESTMENTS IN INDONESIA

Muhammad Saleh Mire

Mulawarman University

ABSTRACT

This study aims to determine and examine the influence of the BI rate, government debt, private debt, population, inflation, and MSMEs on economic growth and domestic investment, and foreign direct investment (FDI) using panel data in 34 provinces in Indonesia in the 2017-2022 period. This research uses a Path Analysis model with dummy variables, grouping the system into 2 groups, namely domestic investment called Group 1 and foreign direct investment called Group 2. The results of the study show that private foreign debt (PFD) has a positive influence on economic growth, while government foreign debt (GFD) has a negative influence on economic growth. Furthermore, it was found that the BI rate and inflation showed an increase if economic growth increased, while MSMEs and the population had no influence on economic growth. PFD has no influence on domestic investment but has a positive influence on foreign investment. While economic growth has a positive effect on domestic investment, it has no effect on foreign investment. MSMEs have a significant positive influence on domestic investment and foreign investment. Meanwhile, population growth and inflation have no influence on investment, whether domestic investment or foreign direct investment.

KEYWORDS: BI-rate, PFD, GFD, MSMEs, inflation, population, economic growth, and investment

INTRODUCTION

Economic growth is a very important indicator in analyzing economic development that occurs in a country. Economic growth shows the extent to which economic activity will generate additional community income in a certain period. Basically, economic activity is a process of using production factors to produce output, which is measured using product indicators. Economic growth can increase a country's national income and production from year to year, thereby causing a country's population to experience an increase in its standard of living. To measure economic growth in a country, it can be seen from the level of that country's gross domestic product (GDP). Economic growth is an indicator of the success of a country's development. Recently, many countries have tried to increase their country's economic growth rate by increasing output continuously through the availability of capital goods, technology, and human resources. In economic terms and an economic perspective, inflation is a monetary phenomenon of ups and downs in economic volatility and interest rates. Economic growth is still used as an indicator of aggregate economic progress. Economic growth is expected to provide encouragement in all sectors so that people's lives improve through investment resulting from economic growth. Economic growth can attract foreign investment, both direct and indirect so that capital is available for domestic investment. Apart from that, economic growth can attract workers, so that the demand for labor increases, which results in the creation of job opportunities, so that development goals can be achieved, namely high growth along with adequate labor absorption.

Indonesia as a developing country requires large funds for development, but these funds are not enough if they only come from within the country, so funds are needed from abroad due

to globalization where a country cannot stand alone, including in financing development. In conditions like this, Indonesia finally has to follow the current, namely trying to open itself up by collaborating with other countries for the sake of implementing national development. Like other developing countries, Indonesia also relies on domestic financing. also relies on Foreign Debt (FD) to finance development. Limited domestic savings to finance development is the reason for using FD. Thus, Indonesia has experienced, since the beginning of independence, that it has inherited a debt from the Dutch colonial government amounting to USD 4 billion, in accordance with the results of the Round Table Conference (KMB) and this condition continues until now. This debt is needed to overcome domestic capital shortages like other developing countries. It is understood that government debt is at a safe level if it can be managed well. The solution and/or policy taken by the government and its supporting economists is to regulate the flow of debt burden so that it is optimal (optimal borrowing).

Whether we realize it or not, debt is closely related to economic growth because debt can be used as a real sector investment which is expected to trigger and encourage economic growth. In the implementation of development, high economic growth is the main target for developing countries. This is because economic growth is closely related to the increase in goods and services produced in society, so that as more goods and services are produced, the welfare of society will increase (Mankiw, 2012). Furthermore, foreign debt can be a substitute for low savings rates, thereby being able to encourage economic growth both directly and through domestic savings channels and population growth. The fact is that almost all countries in the world, both developing and developed countries, are not free

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

from debt. The emergence of pros and cons regarding the implementation of foreign debt policy makes the issue of foreign debt an interesting issue to discuss. Foreign debt in a reasonable amount and used to carry out productive investment or development either now or in the future will have a positive impact and contribute to development and economic growth. However, on the other hand, excessive foreign debt will hamper economic growth through reducing total factor productivity (Pattillo, Poirson, & Ricci, 2004)

Foreign debt plays an important role in financing Indonesia's economic growth. This can be seen in 1999. The Indonesian government's foreign debt reached 148,097 million US\$ with economic growth of 0.79 percent after experiencing a very sharp decline in 1998, namely -13.13 percent. However, demand for foreign debt decreased in 2000, namely 141,693 million US\$ due to the budget deficit which decreased to 105.5 trillion rupiah with economic growth increasing to 4.92 percent. Jumping in 2022, foreign debt will reach 515,533 million US\$ with economic growth reaching 5.15% percent (BPS, 2023). This data shows that the increase in Indonesia's foreign debt was also followed by an increase in domestic economic growth. Meanwhile, the high level of domestic savings is an obstacle to economic growth, as well as population growth which turns out to be an obstacle to economic growth (Satria Prasetyo and Kurnia, 2021). However, on the other hand, a low savings rate actually makes it difficult to invest, because investment is the same as savings, which results in low economic growth that can be achieved (Branson, 1992).

Population plays a very large role in economic growth because labor is part of the workforce that is ready to enter the labor market. Adam Smith stated that population growth is seen as a factor that can encourage economic growth because labor originating from the population is an important production factor to produce economic growth. So it depends on efforts to utilize the population so that it can become a productive production factor to achieve the expected growth. The United States, which is known to have a high population, achieved economic growth that was not low at 5.2% in the third quarter of 2023, although it experienced a decline in the following quarter, as did China, which achieved growth of 5.2% in 2023, as well as Indonesia. which can achieve economic growth above an average of 5% per year (BPS, 2023) even though it experienced minus growth in 2020 due to COVID-19, Figure 1.

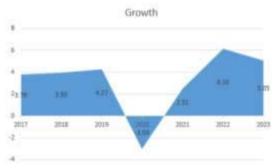

Figure 1. Development of Economic Growth Source: Processed Data

From a macro perspective, the source of economic growth is national income which is equal to consumption expenditure plus investment and government expenditure and net exports. So investment and consumption are the main sources of economic growth. However, investment is in the opposite direction to consumption, because if investment is high automatically household consumption is low, and the opposite will happen. In this way, the government arranges the APBN budget in such a way so that both are running, but because investment is seen as capital investment, more is needed to achieve the growth that will be achieved. The development of investment from 2017-2012 consisting of domestic investment or investment from abroad which is called direct foreign investment, Figure 2.

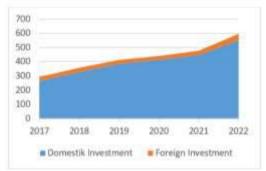

Figure 2. Development of Domestic Investment and FDI Source: Processed Data, 2024.

The interest rate is one of the government's instruments to achieve the expected economic growth. Low interest rates can provide opportunities for entrepreneurs both domestically and abroad to make and increase investment, thereby encouraging higher economic growth. High interest rates should not occur in a developing country because it makes it difficult for entrepreneurs to invest which results in reduced production levels both locally and nationally. Thus, low interest rates should be maintained so as to attract all elements of entrepreneurs, including MSME entrepreneurs, to develop their businesses.

One of the economic sectors that can encourage investment is MSMEs because they have a large quantity. This sector has a strategic role in improving the country's economy. This can be seen from the large number of workers working in this sector, the high contribution to the formation of the national economy's gross domestic product (GDP), and helping to reduce public unemployment. This sector has proven its resilience in facing the economic crisis that hit the Indonesian economy when many large companies went bankrupt. Furthermore, MSME problems slowed the SME growth in Asia including i) lack of finance, ii) lack of comprehensive databases, iii) low-level of R&D expenditures, and iv) insufficient use of information technology and providing remedies for mitigating them (Naoyuki Yoshino and Farhad Taghizadeh-Hesary, 2016).

The role of MSMEs in economic development is very strategic because they provide the largest contribution, as stated by the research team said that the majority or 99% of businesses in Indonesia are at the MSME level. MSMEs themselves contribute 61.9% to the total gross domestic product (GDP) and absorb approximately 97% of the local workforce so that they

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

can be used as a means of alleviating poverty. High economic growth can be achieved by paying attention to the factors that cause it. In this study there are six factors that can cause the expected economic growth, these factors are BI-rate, private debt, government debt, MSMEs, population and inflation. Furthermore, these six factors plus economic growth are expected to have a positive impact in increasing the level of domestic investment and FDI. Figure 3. Thus this research aims to analyze and examine the relationship between influencing

factors that influence economic growth and investment. In detail the objectives of this study:

- 1. Know and assess the influence of PFD, GFD, BI-rate, MSMEs, population and inflation on economic growth
- Know and assess the influence of PFD, GFD, BI-rate, MSMEs, population, inflation and economic growth on investment
- 3. Compare the influence of determinate factors on domestic investment and foreign investment

REVERENCE REVIEW

Economic Growth

Economic growth is a very important indicator in analyzing economic development that occurs in a country. Economic growth shows the extent to which economic activity will generate additional community income in a certain period. Because basically economic activity is a process of using production factors to produce output, which is measured using the Gross Domestic Product (GDP) indicator. According to Todaro (2000) there are three factors in the economic growth of every country, namely: 1) Capital accumulation, which includes all types of new investments invested in land, physical equipment, and capital or human resources; 2) Population growth, which will affect the number of workers in the future; and 3) Technological progress, this is considered the most important source of economic growth so it can be classified into three types, namely: (a) neutral technological progress; (b) labor-saving technological advances; (c) capital-saving technological advances.

Adam Smith explained that economic growth is a process of combining population growth with technological progress. In

line with David Ricardo, he stated that economic growth is a process of attraction between two forces, namely "the law of diminishing returns" and technological progress. Apart from that, proponents of classical economic growth theory really prioritize liberal or laissez faire principles, where all economic activities are expected to be free without any government interference, in this case supporting economic openness, both trade openness and financial openness. The linear growth theory stages of growth theory developed by Rostow, also formulates development patterns through 5 stages including 1) Modern economic stage; 2) Take-off precondition stage; 3) Takeoff stage; 4) stage towards maturity and 5) stage towards high consumption. Furthermore, the economic growth theory according to Harrod - Domar also explains the same thing, to achieve a steady level of economic growth in a country's economy lies in the active role of investment. Harrod-Domar stated that the level of investment in a country can make a major contribution in encouraging economic growth, especially. On the basis that investment has two major objectives in the economy, namely as a source of income and capital to increase production capacity. Furthermore, investment macroeconomics is determined by Keynes to determine interest

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

rates negatively (Case at all., 2020), so that low interest rates will encourage economic growth. Not only that, investment besides encouraging economic growth directly can also create job opportunities both directly and indirectly through growth.

Debt is closely related to economic growth because debt can be used or function as an investment in various development needs. Debt is usually withdrawn from abroad or from within the country which is used to cover the government's budget deficit. Apart from the government, the private sector can also take debt both domestically, especially from banks, and from abroad to make investments which ultimately also encourage growth. Furthermore, inflation results entrepreneurs getting bigger profits, because the value of assets and getting fresh funds from increased profits, so they can make new investments which clearly encourage growth. However, high inflation can become the main enemy for the government and the private sector. Inflation caused by cost push inflation can worsen a country's economy, the economy can even become chaotic, because it reduces people's purchasing power and entrepreneurs cannot sell their goods according to plan, so that the rate of economic growth is hampered.

Investment

Harror-Domar views that capital formation is considered as expenditure that will increase the ability of an economy to produce goods and services, as well as expenditure that will increase the effective demand of the whole society. In connection with economic growth, Harrod-Domar put forward the incremental capital output ratio (ICOR) which is expressed as where growth is expressed: Gr= s/k where Gr is growth, s is the saving tendency or MPS and k= . Thus the relationship between investment and economic growth is determined by the saving tendency and ICOR, while s=S/Y and I=S which are the basic assumptions of the theory, where I represents investment, S is saving, K is capital and Y is output .

Investment is the expenditure of society as a whole to obtain new capital equipment. Expenditures on new capital equipment are aimed at replacing capital equipment that is no longer economical and some are in the form of purchasing new capital equipment to expand the capital stock. Investment includes spending money which causes changes in the supply of capital goods. Investments made in the business sector are based on the profit motive. Investment itself can be divided into two groups,

namely foreign investment which can be divided into direct investment (Foreign Direct Investment) and indirect investment (Foreign Indirect Investment) and Domestic Investment which can be carried out by the government or private sector. Marginal efficiency of capital (MEC) is a concept that underlies Keynes' theory, representing investment demand. The relationship between investment demand and the interest rate (r) with a certain MEC is negative, expressed by I=f(r), where I is investment and r is the interest rate (Branson, William H. 1992). Interest rates can have a negative or positive effect (Alvarez and Koskef, 2004) conducting an analysis of irreversible investment under the changing rates showed that the change in rate had a positive or negative effect on the demand for investment. There are also some scholars believe that the rates may have no impact on the investment. The VAR model was used to test the causal relationship between interest rates and investment, and found that investment depended on the level of demand in the macroeconomic, rather than interest rates (Mohammed Dore, 2013). Apart from that, analysis of three rate hikes from 1960 to 1978 in West Germany, it turned out that the effect of interest rate on investment was different in two periods due to the different policy (R. T. Baillie and P. C. McMahon, 1981).

THE METHOD

This type of research is quantitative, taking the type of study of comparative causality that processes numerical data that can be calculated using statistical formulas. The data analysis technique used in this study is path analysis which estimates the direct and indirect influence of exogenous variables on endogenous variables although in this study we only look at and discuss the direct effect, both effects are available in the statistical program used for estimation in this study. This study uses secondary data, namely data that is already available and collected by other parties and it was panel data. The data was taken from the Indonesia Central Statistics Agency (BPS) and Coordinating Ministry for Maritime Affairs and Investment of the Republic of Indonesia. which covers 34 provinces in Indonesia, where since the end of 2022 there have been 38 provinces, but the necessary data is not yet available. The data used which is divided into two groups, Group 1 and Group 2. The statistical analysis technique used is path analysis using the Amos 18 statistical application program.

Based on the conceptual relationship in the framework of thinking, mathematically functional relationships can be written as $Y_1 = f(X_1, X_2, X_3, X_4, X_5, X_6) \dots (3.1)$

 $Y_2 = f(X_1, X_2, X_3, Y_1, X_4, X_5, X_6, D, DX_1, DX_2, DX_3, DX_4, DX_5, DX_6) \dots (3.2)$

Whereas:

X1= BI-Rate (interest rate determined by Bank Indonesia)

X2 = PFD (private foreign debt, amount of private debt, rupiah)

X3 = GFD (government foreign debt, amount of government debt, rupiah)

X4 = MSMEs (number of small and medium businesses)

X5 = Population (population of provinces in Indonesia)

X6 = Inflation (inflation of provincial capitals in Indonesia)

Y1= Economic growth (provincial economic growth)

 Y_2 = Investment (domestic investment, rupiah, and foreign investment, US dollars)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

D = Dummy variable, D = 0, domestic investment (Group 1); D=1, foreign direct investment (Group 2)

Equations (3.1) and (3.2) can be written in mathematical equation form as

$$Y_1 = \alpha_0 + \alpha_1 X_1 + \alpha_2 \ln X_2 + \alpha_3 \ln X_3 + \alpha_4 \ln X_4 + \alpha_5 \ln X_5 + \alpha_6 X_6 + \mu_1 \dots (3.3)$$
and

$$\ln Y_2 = \beta_0 + \beta_1 X_1 + \beta_2 \ln X_2 + \beta_3 \ln X_3 + \beta_4 \ln X_4 + \beta_5 \ln X_5 + \beta_6 X_6 + \beta_7 D + \beta_6 D \ln X_1 + \beta_7 D \ln X_2 + \beta_8 \ln X_3 + \dots + \beta_{11} D \ln X_6 + \beta_{12} Y_1 + \mu_2 \dots (3.4)$$

Substituting the value of the dummy variable, D=0 in the equation (3.4), a new equation is obtained

$$Y_{11} = \alpha_0 + \alpha_1 X_1 + \alpha_2 \ln X_2 + \alpha_3 \ln X_3 + \alpha_4 \ln X_4 + \alpha_5 \ln X_5 + \alpha_6 X_6 + \mu_3 ...(3.5)$$

Regression Equation for Group 2, D=1, a new equation is also obtained

$$\ln Y_{12} = (\beta_0 + \beta_7) + (\beta_1 + \beta_8)X + (\beta_2 + \beta_9) \ln X_2 + \dots + (\beta_4 + \beta_{11})X_6 + \beta_{11}Y_2 + \mu_4 \dots (3.6)$$

RESULTS AND DISCUSSIONS

Model fit test

Chi-square statistic, as stated earlier, is the most fundamental test to measure overall fit, it is very sensitive to the size of the sample used and the relation of exogenous variables, almost the same as the model Regresi Linear Berganda. The model is considered good if the Chi-square value is small. The smaller the value, the more feasible the research, meaning that the more it describes the match between the variance of the sample taken and the research population. The results of data processing that have been carried out using the AMOS 18 program are shown in Table 1.

Tabel 1. Goodness of Fit Index

Research findings

As is known, this research divides Indonesia's provinces into 2 Groups, the first group is Domestic investment and the second group is foreign direct investment (FDI) so the estimation results consist of two components. The estimation results for

Group 1, which is called Domestic Investment, D=0, can be seen in Figure 4.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

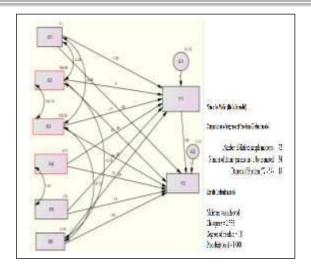

Figure 4: Variable Coefficients for Group 1 and Result of Default Model

Recourse: Amos 18 data processing results.

As can be seen in Figure 2, where there is no level of confidence or probability for each coefficient or path, the estimation results

are also displayed as a scalar estimate for Group 1 (Group 1), which describes the level of significance of each path, Figure 5.

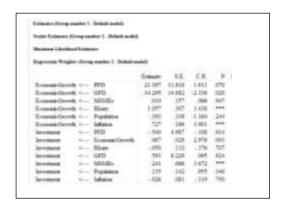

Figure 5. Scalar Estimates Group1

Resource: Amos 18 data processing results.

Further illustrating the estimation results for Group 2, foreign direct investment, D=1 or Group 2, as carried out in Group 1, can be seen in Figure 6.

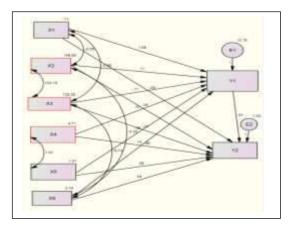

Figure 6. Variabel Coefficients in Group 2

Resource: Amos 18 data processing results

Next, in Group 2, the estimation results are presented, variable coefficients with confidence level or probability (P), Regression Weights for Group 2, can be seen in Figure 7.

Resource: Amos 18 data processing results

The results of the analysis show the influence of one variable on another variable according to the research objectives so based on Figure 3 and Figure 4, a summary of the influence of independent variables on dependent variables can be represented in Table 2. The table also shows that Group 1 and Group 2 each have a coefficient and probability according to the relationship between variables.

RESULTS AND DICUSSIONS

Factors influencing economic growth

Based on Table 2, it shows that private foreign debt has a positive influence at α =0.10 on economic growth, both foreign investment and government investment in Indonesia. If private foreign debt increases by 1% it will cause an increase in economic growth of 0.10%. This fact is in accordance with research conducted by (Toktas at al., 2019) which states that the empirical results of this study indicate that there is a causality relationship, including both positive and negative aspects, between net foreign debt stock and economic growth. Likewise

(Amaoateng & Amoako 1996)) states that foreign debt encourages economic growth through additional capital production factors. The two researchers used Granger causality to determine the two-way relationship between external debt and economic growth. The research results show that there is a positive causal relationship between GDP growth and external debt payments. On the other hand, the results of empirical research show results in the opposite direction, namely that external debt has a negative influence on economic growth (Geiger 1990, Cunningham 1993). Large external debt payments become a burden on the government budget which will ultimately reduce investment levels. In fact, excessive external debt will cause a debt overhang (Sawada 1993), namely an excessive amount of external debt so it will become a heavy burden when paying back the external debt. The heavy burden of paying external debt will reduce investment levels, reduce capital inflows, and in turn will affect a country's economic growth. Basically, debt overhang will result in a reduction in output growth through reduced productivity.

Table 2. Coefficients of the variables in Group 1 and Group 2,

Source: Data processed from Figures 5 and 7.

Furthermore, government foreign debt has a negative influence on economic growth which is significant at α =0.05 with a regression coefficient of -0.169. This means that if government foreign debt increases by 1%, economic growth will decrease by 0.17%. this finding

According to research (Senadza at al., 2018) in 39 African countries, it shows the negative impact of government foreign debt on economic growth because it causes a crowding out effect. Meanwhile, research (Akram, 2017) in Sri Lanka shows

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

a positive impact. Research conducted (Guei, 2019) in emerging market countries shows that government foreign debt has no effect on economic growth because the budget deficit policy is nothing more than delayed taxes and has no effect on aggregate consumption. Likewise, research results (Rafikhalif & Nirmalawati, 2021) show that economic growth is positively and significantly influenced by government foreign debt variables in Indonesia.

As it is known that MSMEs play a very large role in the economy, because their contribution to GDP will reach 61% in 2023, unfortunately this research shows that MSMEs do not have an influence on economic growth. This is because small industry is included in work, so it does not have a big influence in increasing economic growth, which is usually based on being capital intensive. This fact contradicts research conducted (Dewi & Suprapto, 2022) which states that MSMEs have a positive influence on economic growth in East Java.

The interest rate as measured by the BI-rate shows a significant positive influence on economic growth at a confidence level of α =0.01 with a regression coefficient of 1,055, meaning that if the BI rate rises by 1% then economic growth will increase by 1.1%. This fact is in accordance with research (Sri Wigati. 2022) which states that interest rates have a positive effect on economic growth in Indonesia, although not significantly. Likewise, research (Ambarwati at al., 2018) states that BI-rete has a positive influence on economic growth. This means that the higher the BI-rate, the higher economic growth. This fact actually contradicts logic which is known from Keynes' theory which states that there is a negative relationship between interest rates and investment which has a negative influence on growth. This is confirmed by research (Luthfiana at al., 2022) which states that low interest rates will encourage investment levels which will have an impact on increasing economic growth.

The estimation results show that population shows a positive relationship with economic growth, but this effect is not significant at the confidence level α =0.10. In fact, this fact has been discussed since Classical times, Adam Smith stated the importance of population as a workforce to produce output or economic growth. The results of empirical research are further clarified, (Rahmattullah, 2015) states that the productive age population has a positive and significant influence on Indonesia's economic growth. Population includes labor as one of the production factors that causes output or economic growth. Then the Neoclassical economic growth theory pioneered by Solow-Swam in 1956, which is referred to as exogenous growth and also endogenous growth pioneered by Romer (1986), Lucas (1988), and Grossman-Helpman. (1991), states that economic growth is caused by internal factors in the form of research and development of human resources. The consequences caused by inflation can be positive or negative. The positive consequence (controlled inflation) is that economic growth can be created with controlled inflation. This study shows that inflation has a positive and significant influence on the confidence level α =0.01 with a coefficient of 0.73, meaning that if inflation rises by 1%, there will be an increase in economic growth of 0.73% or the higher the

inflation, the higher the economic growth. This finding was clarified by (Baharumshah at al., 2011) who found in his research 2 points, First, we confirmed that the inflation uncertainty has a significant and negative effect on economic growth. Second, inflation is also an important variable and it is detrimental to economic prospects in the fast-growing Association of Southeast Asian Nations (ASEAN) economies.

As has been mentioned, inflation does not always have a positive influence on economic growth. This is in line with research conducted (Sequeira at al., 2021) which states that as a result of this new mechanism in an endogenous growth model, inflation is no longer superneutral. In the model, inflation can decrease economic growth in a non-linear way, a sudden upward shock on inflation can severely hurt economic growth and an inflation cut can be responsible for a take-off. These effects are illustrated quantitatively. Inflation is a continuous increase in goods over a certain period of time. In this research, it was found that inflation had a significant positive influence on economic growth at the confidence level α =0.01 with a path coefficient of 0.730. So if inflation rises by one percent, economic growth will increase by 0.73%. Next (Bahrumshah at al., 2011) discusses in depth the results of combining the panel data and least absolute deviation autoregressive conditional heteroscedastic (ARCH) (L 1-ARCH) model to infer on the relationship between inflation uncertainty and economic growth in five emerging markets economies. Two interesting findings emerged from the analysis; first, we confirmed that the inflation uncertainty has a significant and negative effect on economic growth. Second, inflation is also an important variable and it is detrimental to economic prospects in the fastgrowing Association of Southeast Asian Nations (ASEAN) economies. All in all, the empirical findings suggest that greater stability in the economy may be desirable in order to stimulate economic growth in the region. Meanwhile (Tiwari at al., 2019) who conducted research in India found three important things: (a) high and increasing dependence between inflation and economic growth, particularly after mid-2002; (b) highfrequency components of economic growth Granger-cause low-frequency components of CPI-based inflation and viceversa, and at all scales economic growth Granger-cause inflation at scales of 4-6 and no evidence of causality was detected from WPI-based inflation to economic growth; (c) results indicate that there is no long-run causal link between inflation and economic growth. This study presents new insights for policymakers to sustain economic development by using inflation as an economic tool in India

Factors affecting investment

Based on Table 2, it is known that the PFD does not have a significant influence on domestic investment at the confidence level, but it does have a significant influence at the confidence level α =0.10 on foreign investment with a path coefficient of 6.96. So if inflation rises by 1% then foreign investment will increase by 6.96%. However, it can still be said that the higher the PFD, the higher the investment that can arise. Furthermore, the influence of investment on economic growth has been widely studied, so this research tries to examine the opposite condition. The research results show that economic growth influences foreign investment positively at the confidence level

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

 α =0.10 with a path coefficient of 0.083, which means that if economic growth increases by 1% then foreign direct investment will increase by 0.08%. This fact is in accordance with research conducted (Putu Kartika Dewi & Nyoman Triaryati, 2015) which states that economic growth has a significant positive effect on foreign direct investment. Likewise, research (Juliansyah at al., 2021) states in more detail that economic growth in the short term has no effect on investment but in the long term it does not have a positive influence. Furthermore, domestic investment is not significantly influenced by economic growth. This fact is supported by research (Yevi Dwitayanti at al., 2024) which states that economic growth and the percentage of formal labor do not have a significant impact on investment value. Likewise, the BI-rate and government debt do not have an influence on foreign investment or government investment. The BI-rate may be prevented from having an impact on investment because the applicable interest rates still vary which are applied in determining interest rates by government banks and private banks, even though they are based on the interest rates set by BI. However, research (Wuhan & Khurshid, 2015) using vector error correction model (VECM) analysis found that the relationship between interest rates and investment is negative in the long term, but negative in the short term. It has a negative relationship in the long run but positive in the short run. So the research also produces suggestions that will help in terms of interest rate policy as well as improving investment that promotes economic growth in Jiangsu Province.

Furthermore, MSMEs have a significant positive influence at the confidence level α =0.01 on foreign investment and government investment with path coefficients of 0.25 for foreign investment and 0.36 for domestic investment, respectively. This means that if the number of UNKM increases by 1%, it will have an impact on increasing investment by 0.25% for foreign investment and 0.36% for domestic investment. By increasing the number of MSMEs, investment will attract due to the use of raw materials and the results or output of the MSMEs themselves, because in the industrial sector linkages, an MSME can provide forward linkages and backward linkages. Backward linkages mean that the industrial sector or MSMEs use the output of other sectors as input, while backward linkages mean that the output of an MSME is used by other sectors (Muryani & Swastika, 2018).

Meanwhile, government debt cannot affect investment, whether foreign investment or domestic investment. Government debt is largely determined by policies to coordinate and regulate the real sector and the monetary sector on the one hand and on the other hand the debt itself must be paid on time with interest, so it does not follow a certain pattern. The government can make and sell bonds to both foreigners and domestic people who are not directly related to investment. One of the benefits of debt is to cover the development budget deficit, which can be saved and taken from BI to pay development costs and repay debt, so it may not have a positive impact on investment.

Population size has no effect on investment, whether foreign investment or domestic investment. A large population requires

a large amount of output or goods, thus attracting investors to invest their capital, especially foreign investment. Population growth means an increase in the workforce ready to enter the labor market. Furthermore, additional labor can cause wages to decrease. This situation attracts investors to invest because they will get higher profits. So population can have a positive influence on investment. However, due to wage rigidity caused by wage policies such as the UMP, demand and supply do not reach balance, ultimately causing unemployment and inhibiting investors' interest in investing. Furthermore, high inflation will prevent investors from consuming their capital because of the high input costs of the company, so that investment can be hampered by inflation or inflation can cause a negative influence on investment.

CONCLUSION AND RECOMMENDATION

Conclusions

Based on the analysis and the results of the previous discussion, the following conclusions are drawn:

- 1. PFD has a positive influence on economic growth, while GFD has a negative influence on economic growth.
- 2. Apart from that, the research results also show that the BI rate and inflation show a positive influence on economic growth, while MSMEs and the population have no influence on economic growth.
- 3. PFD has no influence on domestic investment, but has a positive influence on foreign investment.
- 4. Economic growth has a positive effect on domestic investment but has no effect on foreign investment
- 5. MSMEs have a significant positive influence on domestic investment and foreign investment
- 6. Population growth and inflation have no influence on investment, whether domestic investment or foreign investment.

Recommendations

The suggestions to be put forward based on the discussion and conclusions that have been stated, among others:

- Regarding the negative and insignificant relationship between interest rates and investment, it is recommended that future researchers use other analyzes or manipulate data such as adding observations, so that the relationship between interest rates and investment is clear as stated by Keynes. In this way, the government is still expected to increase investment in all economic sectors, especially the industrial sector, both large, medium and small scale.
- 2. Government debt should be handled with great care because it is very open to unsuccessful use and can worsen the economy. Foreign debt, which always increases from year to year, needs to be studied in depth regarding its need and utilization, although in this study it was found that foreign debt has a very significant influence on economic growth.
- The research results show that MSMEs have a significant influence on investment. MSMEs must still receive priority development through training and research, by providing capital at low interest rates and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

mentoring staff, because it is known that the majority of GDP contributions come from MSMEs

ABSTRACT

The purpose of this study was to find out the effects of emotional exhaustion have on delivery of professional functions among university lecturers in Uasin Gishu County, kenya. The study adopted the Multidimensional Theory of burnout by Christina Maslach (1946). The study used embedded research design in the mixed method and phenomenological approach. The target population included all universities, all lecturers, and all counselors. Simple random sampling was used to select 2 public universities and Purposive sampling was used to sample 178 lecturers. Three counselors were sampled using purposive sampling from the sampled universities. Qualitative research was analyzed in theme derived from the research questions while quantitative data was coded and analyzed using the Statistical Package for Social Science Version 26.0.using descriptive statistics and presented using frequencies and percentages. The hypotheses were tested using linear and multiple regressions. Findings on the hypotheses established that emotional exhaustion, F (1, 95) = 4.435, p = 0.038, had statistically significant relationship with the delivery of professional functions. The study will be beneficial to the Ministry of Education, university lecturers and the counsellors. The study recommends that university administrations regularize the workload and working schedules to ensure that lecturers are not overwhelmed by workload to reduce work burnout.

KEYWORDS: Emotional Exhaustion, Delivery, Professional Functions, Phenomenological Approach

INTRODUCTION

Psychological burnout is a condition that mostly affects people working in human-service fields (Togia, 2005). Burnout is a longlasting reaction to ongoing emotional and interpersonal pressures that arises from an individual's sense of a mismatch between demands and available resources. It is usually characterized by apathy, detachment and indifference in inter personal relationships (Ozdemir, 2006). It has been established that high levels of occupational stress often lead to job dissatisfaction, absenteeism, turnover and burnout (Schaufeli et al., 2009). Burnout is a pathological syndrome in which emotional depletion and maladaptive detachment develop in response to prolonged occupational stress (Niku, 2004). Feelings of energy depletion are also a common phenomenon characterizing psychological burnout. An individual is motivated by the desire to realize selfactualization to work towards achieving goals in life (Lichtenstein, 2019). However, the desire to realize selfactualization is usually as a result of depleted energy leaving an individual in a state of helplessness and no longer active at work. Psyching a person to continue with work can help an individual avert situations where they feel exhausted as a result of depleted energy. Feelings of negativism related to one's job have also remained a significant challenge yet to be conquered in a bid to preventing burnouts (Choi et al., 2019).

Emotional exhaustion is one of the dimensions of psychological burnout which this study examined in relation to delivery of professional functions among university lecturers. Due to feelings that emotional resources were used up, lecturers with psychological burnout were emotionally drained, overwhelmed by work, exhausted, stressed and even hit rock bottom. People with emotional exhaustion experience feelings of extreme fatigue, apathy, pessimism, cynism and helplessness (American Psychological Association, 2021). They may also have difficulty concentrating and experience increased illness such as headaches, stomach problems and insomnia. Additionally, they struggle with relationships and have difficulty connecting with others.

A recent study by Chen et al. (2022) investigated the relationship between emotional exhaustion and the delivery of professional functions among university lecturers. The study aimed to examine how emotional exhaustion, as a dimension of psychological burnout, impacts lecturers' ability to fulfill their professional roles effectively. Quantitative analysis revealed a significant correlation between emotional exhaustion and various indicators of professional dysfunction, including decreased job satisfaction, reduced engagement in teaching activities, and diminished interpersonal relationships with students and colleagues. Lecturers experiencing higher levels of emotional exhaustion reported feeling emotionally drained, overwhelmed by work

demands, and lacking the emotional resources needed to effectively carry out their duties. The study's findings underscore the detrimental impact of emotional exhaustion on lecturers' well-being and professional functioning. It highlights the importance of addressing burnout symptoms proactively and implementing strategies to support lecturers in managing their emotional resources effectively.

The University Academic Staff Union (UASU) showed that Kenyan universities are facing a crisis in staffing due to inadequate funding and the lack of a clear career progression structure for academic staff. The University Academic Staff Union has called for improved payment of staff, improved working conditions, and greater recognition of their role in university administration (UASU, 2019). In most cases the university lecturers become disillusioned, frustrated and unproductive at the workplace due to high levels of stress. The pressures include the teaching and research workload, paper writing for conferences, seminar and workshops, marking of scripts, meeting deadlines, supervising students' projects and other practical work, attending and making meaningful contributions at post graduate thesis and dissertation defense, emergency meetings at departmental and faculty levels as well as membership of various personnel committees (Anazodo et al, 2012). This means that the lecturer is always on the move. A Lecturer in a university serve as a registrar, a teacher, administrator and counselor roles which call for dedication, transparency and lots of commitment (Bada & Falana, 2012).

The ratio of student to lecturers is high and especially in Kenyan public universities, where a lecturer can teach up to 500 students. In some of the universities there is no public address system which makes the lecturer to strain and therefore compromise the quality of teaching. The lecturer is supposed to mark the work within a specified period of time. Due to the numbers and time constrains, she /he was not able to be 100% accurate and this compromises the outcome of exam results and the health of the lecturer owing to working long hours. The nature of lecturer's job seems to complicate the problem and this study intends to investigate this. Kwambai et al. (2020) carried a study on the impact of high student enrolment to existing resources in selected public universities in Kenya. The findings revealed that student enrolment and instructional resources correlated negatively. The increasing population had affected the quality of teaching, instructional methods and the administration of examinations. This implied that lecturers experienced stress due to the problems the study found.

STATEMENT OF THE PROBLEM

The demand for university Education in Kenya is overwhelming. The demand put on lecturers to meet crazy deadlines while dealing with a large number of students could have them stressed and even burned out which in turn affects their delivery of professional functions (Njoroge et al., 2020). Apart from workload, lecturers are involved in other functions which include mentorship, supervision of postgraduate students, research,

publishing, setting, moderating and administering exams, administrative work and coordinating university programs (Anazodo et al., 2012). All these functions have timelines and therefore the lecturer is always under pressure in the process of carrying out these duties. This may have led to ineffective delivery of these functions by the lecturers. The World Health Organization posits that when this happens, the individual is affected psychologically and may lead to poor health which includes high blood pressure, constant headaches and general body weakness (WHO, 2021).

A research was carried out at the University of Malaga in Spain by Fernández-Suárez et.al. (2021) which looked at the impact of psychological burnout on the delivery of professional functions among university lecturers. The findings indicated that burnout was significantly associated with a decrease in professional functions and found that burnout was significantly associated with a decrease in professional functions. The research also found that psychological burnout was significantly associated with lower job satisfaction, higher levels of fatigue, and reduced commitment to professional activities. Furthermore, the study found that exhaustion was associated with an increase in the perception of difficulty in completing professional tasks. The findings of the aforementioned research suggest that psychological burnout can have a detrimental effect on the delivery of professional functions among university lecturers, and can lead to decreased job satisfaction, fatigue, and reduced commitment to professional activities. These findings emphasize the importance of addressing psychological burnout among university lecturers to ensure the delivery of quality professional functions (Fernández-Suárez et. al., 2021).

A study conducted in Kenya by Ochieng et al. (2020) found that psychological burnout was associated with a decrease in the delivery of professional functions of lecturers. The study further found that workload, lack of administrative support, and lack of job satisfaction were the main predictors of psychological burnout for the lecturers in the sample. Therefore, it is for this reason that this current study sought to find out the effects of psychological burnout on delivery of professional functions among lecturers in Uasin-Gishu County.

PURPOSE OF THE STUDY

The aim of this research was to investigate on the effects of emotional exhaustion and delivery of professional functions among university lecturers in Uasin Gishu County. By examining this relationship, the study sought to identify how psychological burnout influenced lecturers' capacity to effectively perform their professional duties. It is not clear whether psychological burnout has an effect on delivery of professional functions which include teaching, research and community and how they influence delivery of professional functions among university lecturers.

RESEARCH HYPOTHESIS

 H_01 . There is no significant relationship between emotional exhaustion and delivery of professional functions among University lecturers in Uasin-Gishu County.

METHODS

The study employed embedded design in the mixed methods approach. The mixed methods approach involved philosophical assumptions that guides the direction of the collection, analysis, and the mixture of qualitative and quantitative approaches in many phases of the research process. Its central premise is that the use of quantitative and qualitative approaches, in combination, provided a better understanding of research problem than either approach alone (Creswell & Clark, 2007). The current study used mixed method research approach. Quantitative research approach is driven by the researcher with the need to quantify data (Creswell, 2003). In a quantitative approach, the study employed Ex Post Facto research design. Ex-post facto was employed because the researcher did not manipulate the independent variable which in this current study is psychological burnout. This study was undertaken in Uasin Gishu County which is one of the 47 counties in Kenya. Uasin Gishu County was chosen for this study because it attracts a large number of students and lecturers given the Universities and many tertiary institutions in the county. The target population included all counselors and all lecturers in both public and private universities in Uasin Gishu County. The total population of lecturers in both public and private universities in Uasin Gishu County is 1,700 (Commission for University Education, 2019). The researcher adopted simple random sampling procedure to select the lecturers and purposive sampling to obtain the counselors from the sampled public and private universities. To determine the actual sample size for the lecturers, Nassiuma formula by Nassiuma (2000) was used as follows:

n = Nc2/(c2 + (N-1) e2)

Where: n = sample size,

N= Target population (1700)

c= Coefficient of Variance (0.3)

e= standard error (0.02)

Therefore: $1700 \times (0.3)^2$

 $0.3^2 + (1700-1)0.02^2$

= 178

The sample size used was 178 lecturers.

The study employed questionnaires for lecturers and in-depth interview guide for counselors. The data was analyzed using both qualitative and quantitative data analysis processes. Qualitative data was transcribed and analyzed through themes, for quantitative data analysis, the researcher first defined variables and assign numeric values and labels to the variables. SPSS version 26 was used to key in the variables. Data was presented by use of tables.

REVIEW OF RELATED LITERATURE

García-Arroyo and Segovia (2019) analyzed the relationship between work overload, coping styles and emotional exhaustion

in a sample of 202 university lecturers in Ecuador. The study employed a hierarchical regression model analysis and the results showed that work overload and evasive coping are positively related to emotional exhaustion, while active coping was negatively linked to emotional exhaustion in the study of university lecturers in Ecuador. The findings also showed that evasive coping mediated the connection between work overload and emotional exhaustion so that lecturers who use more evasive coping in situations of high work overload experience less burnout than lecturers who use this coping style less.

Sarah et al. (2020) carried out a study aimed to explore the effects of emotional exhaustion on university lecturers in the United States. The study involved 10 lecturers and used a qualitative research design and data were collected through semi-structured interviews with ten university lecturers. The results revealed that university lecturers experienced emotional exhaustion due to a variety of factors, such as heavy workloads, perceived lack of control over their work, and feeling disconnected from their students. The study also found that emotional exhaustion had negative effects on lecturers, such as decreased motivation and productivity, as well as physical and mental health problems.

This research used a quantitative survey method to investigate the effects of emotional exhaustion on university lecturers in Brazil. 150 university lecturers in Brazil were invited to take part in the survey and the data was collected through an online questionnaire. The questionnaire contained closed questions to measure the respondents' levels of emotional exhaustion and open-ended questions to assess the sources of their exhaustion. The data was analyzed using descriptive and inferential statistics to explore the effects of emotional exhaustion on the participants. The findings of the research showed that emotional exhaustion had a negative impact on the participants' quality of teaching, job satisfaction and performance. The findings also revealed that the main sources of emotional exhaustion for the participants were workload and stress (Moura et al., 2020).

A study conducted in China on the impacts of work-life balance on the emotional exhaustion and well-being of college teachers (Wei & Ye, 2022). An online survey was conducted. The valid subjects included 586 college teachers (367 females, 62.6%). The findings revealed that among the Chinese college teachers, worklife balance was negatively correlated with EE, but positively correlated with work balance; EE was negatively correlated with work balance, EE partially mediated the relationship between work-life balance and work balance; and College teachers who are male, class tutors, and in public colleges scored higher on EE and lower on work-life balance and work balance than those who are female, non-class tutors, and in private colleges, respectively. The authors concluded that the negative impacts of emotional exhaustion on psychological health cannot be neglected and suggest that lecturers should be encouraged to manage their emotions in order to improve job satisfaction and psychological health.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Ngalagou, et al., (2019) evaluated the epidemiology of burnout syndrome among university teaching staff in Cameroon. The study also aimed to establish whether the practice of physical activities and leisure could have preventive impact. The study employed a cross-sectional study using a self-administered questionnaire on socio-demographic characteristics, socioprofessional conditions, Maslach Burnout Inventory-Educator Survey (MBI-ES) to evaluate burnout syndrome, and Ricci-Gagnon metrics to assess rates of physical activities practice among grades of teaching staff, in the various faculties of the University of in Douala, Cameroon. The findings indicated that burnout affected 55.4% of lecturers, 38.3% senior lecturers and 6.3% professors. Burnout was significantly associated with poor working conditions, unsatisfactory salary, part time teaching in private university institutions, sensation of strenuous job, conflict with colleagues, sedentariness. Sport and physical activities showed significant protective effects against burnout the same with leisure.

Mwenda et al. (2019) assessed the relationship between job stressors and faculty performance at private universities in Kenya. The researchers collected data from a sample of 384 full time and part time lecturers. Job stressors were broken down into three sub categories; work load, job security and career progression while lecturer performance was evaluated as a component of research, teaching and service. Findings showed an inverse relationship between job stressors and faculty performance. The null hypothesis was rejected, revealing a statistically significant relationship between job stressors and faculty performance. The research findings implied that universities should have strategies to maintain low levels of stress for better lecturer performance.

Ogolla and Aomo (2018) investigated the relationship between Type B personality trait and stress management among secondary school principals in Kenya. The study adopted a Convergent Parallel research method within the mixed method approach. The study population was 295 principals and the study sample size was 169 principals obtained using stratified random sampling. The quantitative data was analyzed using Statistical Package for Social Sciences (SPSS) windows version 22 as well as Pearson's Product Moment Correlation Coefficient while qualitative data was analyzed using thematic analysis. The study established a positive relationship between Type B personality trait and stress management. Qualitative findings showed that most principals used multi-tasking to manage and accomplish their tasks thus reducing their stress. The above literature has revealed that psychological burnout and other kinds of burnouts affect the performance of teachers both in universities and other levels of teaching across the globe. However, the various studies do not clearly indicate how psychological burnouts influence specific functions of lecturers. In Kenya particularly this aspect has not been well researched and documented and this research intended to cover the study gap.

RESULTS AND DISCUSSIONS

This section presents the descriptive analysis of each item of the sub-scale. The researcher wanted to assess the frequency of emotional exhaustion using the following key: 0 (never), 1 (a few times per year), 2 (once a month), 3 (a few times per month), 4 (once a week), 5 (a few times per week), and 6 (every day). The results of the descriptive statistics are presented in Table 1.

Table 1. Effect of Emotional Exhaustion on Delivery of Professional Functions

| Items | A few times | Once a | A few times per | Once a week | A few times |
|---|-------------|------------|-----------------|-------------|-------------|
| | per year | month | month | | per week |
| I feel emotionally drained by my work | 1 (1.0%) | 23 (23.7%) | 30 (30.9%) | 25 (25.8%) | 18 (18.6%) |
| Working with people all day long | 1 (1.0%) | 7 (7.2%) | 21 (21.6%) | 43 (44.3%) | 19 (19.6%) |
| requires a deal of effort | | | | | |
| I feel like my work is breaking me down | 1 (1.0%) | 20 (20.6%) | 41 (42.3%) | 28 (28.9%) | 7 (7.2%) |
| I feel frustrated by my work | 1 (1.0%) | 8 (8.2%) | 28 (28.9%) | 22 (22.7%) | 30 (30.9%) |
| I feel I work too hard at my job | 1 (1.0%) | 13 (13.4%) | 19 (19.6%) | 27 (27.8%) | 31 (32.0%) |
| It stresses me too much to work in direct | 4 (4.1%) | 5 (5.2%) | 8 (8.2%) | 45 (46.4%) | 32 (33.0%) |
| contact with people | | | | | |
| I feel like I am at the end of my rope | 1 (1.0%) | 9 (9.3%) | 27 (27.8%) | 38 (39.2%) | 15 (15.5%) |

The study sought to investigate is the lecturers felt emotionally drained majority of the lecturers 30 (30.9%) report experiencing emotional exhaustion as a result of work-related variables on a weekly basis. The finding implies that on a weekly basis lecturers were emotionally drained. Table 16, indicates that most of the respondents 25 (25.8%) encounter this phenomenon many times per week, 23 (23.7%) reported experiencing this phenomenon intermittently during the month; while a considerable number 18 (18.6%) reported experiencing it on a daily basis, and multiple times per week. Based on this finding, it can be inferred that a

significant proportion (30.9%) of individual's experience emotional exhaustion as a consequence of their work, indicating a susceptibility to burnout. The aforementioned statistics align with the prevalence of emotional exhaustion documented in various regions globally. For instance, in the United States, self-reported rates ranged from 13 percent to 45 percent (Jackson-Jordan, 2013). Similarly, research conducted in Europe revealed that 27 percent of pastors from different denominations in New Zealand, England, and Australia

From the findings working with people all day long requires a deal of effort with 43 (44.3%) expressing this feeling once a week 21 (21.6%), report exerting effort multiple times each month highlights the recurring nature of interpersonal obligations, 19 (19.6%) of the sample, reported the occurrence of effort requirements multiple times per week while only 6 lecturer's (6.2%) who recognize the necessity of daily effort underscores the presence of a distinct subgroup that experiences an ongoing demand for emotional work, which may ultimately contribute to the development of burnout. This assertion is consistent with the research reports across the globe that suggests that teachers were likely to suffer burnout (Cocklin, 2013; Currier, 2016; Miles & Proeschold-Bell, 2013). Francis and Crea (2015) found a significant correlation between emotional exhaustion and low mental health in a study on the psychological health in Italy.

The frequency distribution of the responses of 41 (42.3%) of lecturers who experienced break down a few times per month, 28 (28.9%) of the individuals who experience such sentiments "a few times per week" indicate a persistent challenge in coping with work-related demands, 20 (20.6%) of the lecturer's experience a sense of their employment causing emotional distress "once a month" suggests the presence of ongoing psychological pressure, 7 (7.2%), indicates a significant population contending with enduring emotional strain while only (1.0%) of the lecturer's acknowledge having this sentiment "a few times per year." This finding underscores the presence of a minority group that encounters sporadic yet significant episodes of distress related to their employment. This finding aligns with the research conducted by Sonnentag and Fritz (2015), which highlights the notable influence of occasional but intense stressors on an individual's psychological well-being.

Majority of the lecturers felt frustrated by their work most of the lecturer's as 30 (30.9%) of participants acknowledged experiencing regular frustration in their employment, a few times per week, (28.9%) lecturers occurring on a regular basis of "a few times per month," 22 (22.7%) of lecturer's experience frustration on a weekly basis provides insight into the recurring difficulties encountered by lecturers in their professional capacities. On a monthly basis 8 (8.2%) and the occurrence of frustration on a daily basis 8 (8.2%) and 1 (1.0%) felt frustrated a few times a year. Most of the respondents agreed that they felt frustrated by work. This implies lecturers felt frustrated a few times a week for majority of lecturers within Uasin Gishu County. The statement aligns with existing scholarly literature on faculty stress, which highlights workload and limited autonomy in particular elements of academic work as significant contributors to feelings of frustration (Kinman et al., 2019).

Table 1 shows that the highest proportion 31 (32.0%) of respondents expressed feeling overworked "a few times per week", 27 (27.8%) expressing this sensation on a weekly basis, 19 (19.6%) of respondents reported feeling that they work excessively on a regular basis, specifically "a few times per month", while 13 (13.4%) of respondents reported experiencing

this sensation on a monthly basis. The percentage of lecturers who report experiencing this sensation "every day" at 6 (6.2%) is significant, indicating a noteworthy proportion of individuals in this profession who continuously face the high level of obligations associated with their employment. Finally, the indication of 1 (1.0%) representing the sentiment "a few times per year" denotes a minority of occurrences in which occasional perceptions of excessive effort are observed, possibly linked to particular situations characterized by high demands. The findings show that most of the lecturers felt they were overworked on a weekly basis may be due to the nature of lecturers' assessments of their workload, which underscores the persistent difficulties in effectively managing several academic obligations. This observation is consistent with the research conducted by Maslach and Leiter (2008), whereby they explore the relationship between workload and burnout experienced by faculty members.

Findings of if the lecturers felt like they were stressed too much when working in direct contact with peoples, results shows that lecturers 45 (46.4%) experience stress on a weekly basis when engaging in direct interpersonal contacts. This indicates that most of the respondents were not too stressed to work in direct contact with people, suggesting that they were probably at their element when working with people. Thirty three (33.0%) who reported experiencing stress "a few times per week", 8 (8.2%) indicates a recurring but relatively infrequent occurrence of stress, once a month" by 5 (5.2%) of individuals underscores the occurrence of sporadic yet significant stressors in face-to-face encounters, 4 (4.1%) of the lecturer's report experiencing stress "a few times per year", while 3 (3.1%), represents a relatively smaller subset of the population that consistently encounters elevated levels of stress in their day-to-day interactions. This pertains to intermittent presentations, workshops, or other public activities that elicit sensations of tension. This observation is consistent with previous research on the impact of work-related stressors and emotional tiredness, highlighting the significant burden imposed by frequent interpersonal demands (Bianchi et al., 2018).

On whether respondents felt like they were at the end of their rope most 39 (39.2%) of the lecturer's expressing "once a week". This resonates with the concept of burnout, where individuals can feel emotionally exhausted and overwhelmed due to prolonged stressors (Maslach & Jackson, 1981). Following this, the 27 (27.8%) indicating this sentiment "a few times per month" suggests a recurring sense of emotional exhaustion. The 15 (15.5%) noting this feeling "a few times per week" highlights frequent emotional distress among lecturers. Moreover, the 9 (9.3%) experiencing this sentiment "once a month" reflects intermittent but impactful feelings of being overwhelmed. This might align with cyclically demanding periods in academia, such as grading periods or peak research times. A total of 7 (7.2%) lecturers indicated that feeling at the end of their rope "every day" reflects a subset of lecturers consistently grappling with emotional distress. Lastly, the 1 (1.0%) facing this sentiment "a few times per year" signifies a small minority experiencing infrequent but impactful emotional distress. The results imply that

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

on average, lecturers felt that they were at the end of their rope. The findings align with the concept of burnout and the cumulative effects of ongoing stressors on emotional well-being. Addressing these challenges through support systems, resources for managing stress, and fostering a positive work environment can contribute to the overall mental health and job satisfaction of lecturers within the academic setting. This pattern aligns with studies on work-related stress and its impact on emotional well-being (Bianchi et al., 2018). These findings align with previous research conducted by Afsar, et al. (2015), which also highlighted the negative impact of administrative pressures on teachers' productivity, leading to burnout.

TEST OF HYPOTHESIS

H_01 There is no significant difference between emotional exhaustion on delivery of professional functions among university lecturers in Uasin-Gishu County

The study sought to find out the effect of emotional exhaustion of delivery of professional functions of lecturers. The null hypothesis which stated that there is no significant difference between emotional exhaustion on delivery of professional functions among university lecturers in Uasin-Gishu County. To test the research hypothesis, a simple linear regression was conducted. A simple linear regression uses the presence of a linear relationship to determine how much variation in the dependent variable can be attributed to the independent variable. The summary of findings is presented in Tables 2, 3 and 4.

Table 2 Regression Model Summary^b on Emotional Exhaustion and Delivery of Professions Functions

| Model | R | R Square | Adjusted R Square | Std. Error of the Estimate | Durbin-Watson |
|-------|-------|----------|-------------------|----------------------------|----------------------|
| 1 | .328a | .108 | .098 | 7.036 | 1.659 |

a. Predictors: (Constant), Emotional exhaustionb. Dependent Variable: Professional functions

From Table 2 emotional exhaustion accounted for 9.8% of the variation in delivery of professional functions as shown by the adjusted R square value, with the remaining variation in teaching

functions being accounted by other factors beyond emotional exhaustion.

Table 3 Regression ANOVA^a on Emotional Exhaustion and Delivery of Professional Functions

| Model | | Sum of Squares | Df | Mean Square | F | Sig. | |
|-------|------------|----------------|----|-------------|-------|-------------------|--|
| 1 | Regression | 4.28 | 1 | 4.282 | 4.435 | .038 ^b | |
| | Residual | 91.718 | 95 | .965 | | | |
| | Total | 96.000 | 96 | | | | |

- a. Dependent Variable: Professional functions
- b. Predictors: (Constant), Emotional exhaustion

From Table 3, the regression model was a good predictor for delivery of teaching functions from emotional exhaustion, F(1, 95) = 4.435, p < 0.05. This implies that linear regression was best

suited to determine the effect of emotional exhaustion on delivery of professional functions.

Table 4. Regression Coefficients a on Emotional Exhaustion and Delivery of Professional Functions

| _ | Unstanda | | Standardized | | | | _ |
|----------------------|------------------|------------|--------------|--------|------|---------------|--------------------|
| | <u>Coefficie</u> | ents | Coefficients | | | 95.0% Confide | nce Interval for B |
| Model | В | Std. Error | Beta | T | Sig. | Lower Bound | Upper Bound |
| 1 (Constant) | 47.023 | 3.862 | | 12.177 | .000 | 39.357 | 54.689 |
| Emotional exhaustion | .211 | .454 | .134 | 3.387 | .001 | .188 | .720 |

a. Dependent Variable: Professional functions

From Table 4, emotional exhaustion had a statistically significant effect on delivery of professional functions, p<0.05. The relationship was considered significant since the p-value was less than the selected level of significance (0.05). Based on the findings, the null hypothesis indicating that emotional exhaustion has no significant effect on delivery of professional functions was rejected in favor of the alternate hypothesis. These means that emotional exhaustion significantly affected the delivery of professional functions among university lecturers in Uasin Gishu

County. These findings concur with past researchers; For instance, Sarah et al., (2020) explored the effects of emotional exhaustion on university lecturers in the United States and found that emotional exhaustion had negative effects on lecturers, such as decreased motivation to teach and the overall teaching outcomes. Moreover, Moura et al., (2020) explored the effects of emotional exhaustion on university lecturers in Brazil and discovered that emotional exhaustion had a negative impact on the participants' quality of teaching, job satisfaction and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

performance. Another study by García-Arroyo and Segovia (2019) examined the impact of emotional exhaustion on lecturers and revealed that emotional exhaustion was significantly related to lecturers' burnout and negatively correlated to their teaching satisfaction and general psychological health. These findings agreed with the Maslach theory of burnout that suggest that workplace burnout can affect the well-being and the functioning of workers just as it has been proven in this study.

CONCLUSION

The findings concluded that emotional exhaustion had a statistically significant effect on professional functions. This suggests that lecturers experiencing higher levels of burnout are likely to encounter difficulties in fulfilling their professional responsibilities effectively. Addressing these aspects of burnout is crucial for safeguarding the well-being of lecturers and ensuring the quality of education provided to students. Implementing targeted interventions to mitigate burnout and support lecturers in managing stress and maintaining job satisfaction is essential for promoting a positive and productive academic environment. Based on the conclusion of the study, future research on the effects of emotional exhaustion on the delivery of professional functions among lecturers could consider conducting longitudinal studies to examine how emotional exhaustion evolves over time and its long-term impact on the delivery of professional functions among lecturers. This would provide insights into the trajectory of psychological burnout and its implications for job performance and job satisfaction. Employing qualitative research methods to gain a deeper understanding of the subjective experiences of lecturers regarding emotional exhaustion and its effects on their professional functions. This could uncover nuanced aspects of burnout that quantitative measures may not capture fully.

Sri Dharmasthala Manjunatheshwara College of Ayurveda & Hospital, Hassan-573201, Karnataka, India

ABSTRACT

INTRODUCTION: The primary objective of Ayurveda is to maintain health of a healthy person and to cure the diseases of sick people. As per Ayurveda, a healthy person will be having equilibrium of Dosha, Agni, Dhatu and regular excretion of Mala. The derangement of Agni in any case will hamper the proper conversion of Ahara rasa into Prasada (sara) and Kitta (mala) parts. This improper metabolism leads to the accumulation of undigested waste products called Ama in the body. A Free radical can be defined as any molecular species capable of independent existence that contain unpaired electrons in the atomic orbital. They are highly reactive species that are capable of damaging DNA, proteins, carbohydrates and lipids.

AIMS AND OBJECTIVES: To understand the concept of Ama with special reference to free radicals.

MATERIALS AND METHODS: Modern texts, review articles, and authenticated sources were scrutinized for understanding the concept of free radicals and Ayurvedic texts were referred for further understanding.

DISCUSSION AND CONCLUSION: As per Ayurveda there are 13 types of Agni (Jatharagni, Bhutagni, Dhatwagni). Its improper functioning can lead to production of various dimensions of Ama. At the present era, free radicals which are responsible for various diseases, can be identified as Ama at the level of Bhutagni i.e at the molecular level. Therefore understanding the concept of Ama and free radicals leads to the scope of using Ayurvedic remedies which may be helpful in prevention and care of free radical medicated diseases.

KEYWORDS: Ama, Free radicals, Agni

INTRODUCTION

Agni is one of the important factors which helps in the maintenance of health of an individual and in prevention of diseases. Ordinarily 'Ama' means unripe, uncooked, undigested substance. Ama is that which arises as a result of derangement in Agni, mainly by Agnimandya. The hypo functioning of Agni causes the accumulation of undigested or waste products called *Ama* in the body. It is the root cause of various diseases. For the management of this, knowledge of Ama is essential. Free radicals are highly reactive atoms or molecules with unpaired electrons in the outermost orbit. These free radicals can cause damage to cell and tissue leading to various diseases. In the contemporary science Ama can be compared with free radicals that are formed in the body. Understanding the relationship between Ama and free radicals is crucial for maintaining the overall health and wellbeing.

AIMS AND OBJECTIVES

- To review the concept of Ama as per Ayurvedic literatures.
- To review the concept of Free radical in relation with Ama.

MATERIALS AND METHODS

Modern texts, review articles, and authenticated sources were scrutinized for understanding the concept of free radicals and Ayurvedic texts were referred for further understanding.

CONCEPT OF AMA

Due to *Alpa bala* of *Agni*, the first *Dhathu* (*rasa*) is not properly digested, instead the Annarasa undergoes fermentation being retained in the Amashaya leading to the formation of Ama¹. It is also said as the matter which has not undergone Vipaka, leading to Durgandha (bad smell), which is in large quantity, which is Pichila(sticky) and that which leads to Gatrasadana is called as Ama^2 .

The factors which cause Mandagni are responsible for the production of Ama. Ama and Agnimandhya are interdependent to each other.

$EPRA\ International\ Journal\ of\ Multidisciplinary\ Research\ (IJMR)\ -\ Pe\underline{er}\ Reviewed\ Journal$

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Disease formation due to Ama:

Agni dushti (Kayagni, Bhutagni, Dhatwagni)

Ama (mixed with Dosha, Dushya and Mala)

Circulates in all Srotas and Kha Vaigunya at particular site

(Samavastha)

Vyadhi (Shakhaghata, Koshtagata, Marmasthisandhi)

Symptoms produced due to *Ama* includes, Srotorodha (obstruction in channels), *Balabhramsha*(lowering of immunity), *Gaurava*(feeling heaviness), *Alasya*(unwillingness to perform duty in spite of capability), *Apakthi*(indigestion), *Nishtiva*(accumulation of excessive saliva in mouth), *Mala sangha*(constipation), *Aruchi*(tastelessness), *Klama*, *Vitmutra Nakha Chakshupitata/rakthatha/krishnatha*, *Shiroruk*(headache), *Mukhavairasya*, *Jwara*(fever), *Atisara*(loose motion), *Romaharsha*³.

FREE RADICALS

Free radicals are atoms or molecules which are highly reactive due to the presence of unpaired electron in its outermost orbit. It has a constant tendency to become stable by acquiring electron from nearby stable atom leading to free radical chain reaction which inturn leads to increase in the formation of new free radicals⁴.

Free radicals are always present and formed in the body but excess of production than normal limit causes various ill effects in the body. In the body they are produced either by normal cell metabolism (lysosomes, peroxisomes, nuclear endoplasmic reticulum, plasma membrane, phagocytic cells) or from external sources (pollution, cigarette smoking, radiation, medication)⁵. Most of the free radicals present in the body are reactive oxygen species (ROS) and reactive nitrogen species (RNS). They include superoxide anion, hydrogen peroxide, hydroxyl radical, peroxyl radical, pernitrous acid, nitric oxide, nitrous oxide, nitroxyl anion. They are highly reactive as it has the potential to oxidise biological molecules like proteins, lipids, nucleic acids etc⁶.

Endogeneous and exogeneous antioxidants act as 'free radical scavengers' by preventing and repairing the damage caused by the accumulated free radicals thereby increasing the immune defense. Endogeneous antioxidants include superoxide dismutase (SOD), catalase (CAT), glutathione peroxidase (GPx), glutathione reductase (GRx). Superoxide dismutase is the first line defense against free radicals. Exogeneous antioxidants includes vitamin E, vitamin C, flavonoids, omega 3 fatty acids, omega 6 fatty acids etc.

The imbalance between the production and accumulation of free radicals and the body's ability to neutralise them leads to a phenomenon called oxidative stress. Oxidative stress persisting for a long term causes various diseases (free radical mediated disorders) like cancer, Alzheimer's disease, Parkinson's disease, multiple sclerosis, memory loss, depression, arthritis, asthma, glomerular nephritis, IUGR, cataract, cardiomyopathy, ischemia, inflammation, atherosclerosis etc⁷.

DISCUSSION

It is already known that *Ama* is formed due to the impairment of *Agni*. This can be at *Jataragni* level (gastrointestinal level), *Bhutagni* level (molecular level), *Dhatwagni* level (tissue level), so the formation of Ama can also take place at these levels. The Ama formed at *Jataragni* level i.e. molecular level can be considered as free radicals.

According to Acharya Susruta, there is a six-step process for disease development: Sanchaya, Prakopa, Prasara, Sthanasamsrya, Vyakti, and Bhedavastha. In the case of diseases caused by Ama, the initial step is the accumulation of Ama (Sanchaya) due to impaired Agni function. Similarly, free radicals accumulate when the action of free radical scavengers is impaired at a specific site, leading to increased production. Initially, this accumulation may not cause harm, but without treatment, it can surpass a threshold, leading to minimal symptoms (Prakopa). Subsequently, Ama or free radicals enter circulation, helping the progression of the disease.

Ama requires a specific site with Khavaigunya (sthanasamsraya), to initiate disease by affecting weak body tissues where it may accumulate or adhere. Similarly, free radicals seek out weak sites for electron exchange. Consequently, diseases manifest differently depending on the location of Khavaigunya, arising from the same root cause of Ama or free radicals. This marks the stage of Sthanasamsrya, where disease symptoms become evident. Following Sthanasamsrya, pathology becomes visibly apparent at a macroscopic level (Vyakthavastha). If even in this stage treatment is not given, it will lead to the occurrence of Upadrava (Bhedaavstha)⁸.

From the above discussion, it can be considered that the process of formation of disease is described is similar manner in Ayurveda and modern.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

While considering the treatment part, the treatment of *Ama* includes 3 procedure- *Langana*, *Deepana*, *Pachana*. Similarly antioxidant therapy also works in three ways- first by inhibiting the formation of free radical species which can be achieved by removing causative factors and this can be taken as *Langana* therapy. Secondly by increasing the action of antioxidant like SOD or catalase which is achieved by providing certain drugs. This can be taken as *Deepana* therapy. Thirdly by action of certain substances (vitamin E, vitamin C) which can neutralize free radical by donating or accepting electrons. This can be considered as *Pachana*. Hence in treatment aspect also there is

CONCLUSION

similarity between Ama and free radicals.

From the above explanation, it can be concluded that the main factor responsible for the formation of *Ama* is *Mandagni*. *Ama* is produced by the accumulation of byproducts of metabolism as well as metabolic waste that are not eliminated from the body. *Ama* can be considered as free radical which are also byproducts of metabolism having tendency to block the microchannel in different locations leading to various diseases. Increase in normal value of blood sugar, urea, uric acid, etc can be understood as Ama. The whole discussion concludes the various similarities between Ama and free radicals. By understanding these similiarity, there starts a new scope for Ayurveda in the management of free radical mediated diseases.

ABSTRACT

Exploring machine learning approaches to enhance the effectiveness and precision of procedures related to bank loan approval. This investigation encompasses various methods such as logistic regression, decision trees, linear regression, as well as GaussianNB, Random Forest, and SVM. Utilizing a substantial dataset containing past loan applications and diverse applicant attributes like demographics, credit scores, income levels, and employment histories. The research endeavors to evaluate the recall, accuracy, precision, and F1-score metrics of various algorithms. Additionally, it investigates the interpretability and transparency of machine learning models to offer further insight into the variables affecting decisions on loan acceptance. The study emphasizes the efficacy of logistic regression, which outperformed SVM (77%), GaussianNB (78%), random forests (78%), and decision trees (69%), achieving the highest accuracy of 80% in loan approval. By implementing this model, we can enhance ML-driven loan approval processes within the banking industry, thereby elevating decision-making standards and enhancing consumer satisfaction.

KEYWORDS— Machine Learning Algorithms, Loan Approval, LogisticRegression, DecisionTree, Linear Regression, GaussianNB, RandomForest, SupportVectorMachine (SVM), Decision-Making,

I. INTRODUCTION

The loan approval process holds significance for both lenders and applicants. Traditional evaluation methods, while somewhat effective in specific scenarios, often fall short in meeting the rapid and accurate demands of the contemporary market. This is where predictive modeling powered by machine learning stands out as an innovative solution. The foremost priority for any bank is to guarantee the security of its assets [1]. In the digital era, the banking industry heavily relies on advanced technologies. Debt is widely regarded as the primary service provided by financial institutions and a significant revenue stream for companies. The assessment of credit risk emerges as a critical factor demanding meticulous attention [2]. Daily a considerable number of individuals apply for personal loans with many receiving them from different institutions. Interest-free loans constitute the primary revenue stream for banks [3]. Machine learning (ML), a subset of artificial intelligence (AI) investigates statistical models and techniques enabling computers to learn from data, thereby making predictions or assessments without explicit programming. This process is often termed as teaching computers to perform tasks more autonomously relies on data or expertise. It encompasses analyzing data using statistical models and algorithms to recognize patterns and draw conclusions or predictions. Machine learning methods are essential for constructing models that reliably categorize loan applicants according to their ability to repay loans [4].

Data mining techniques prove invaluable in this domain involving the extraction of valuable insights from vast and unorganized datasets. These insights aid decision-making processes by executing crucial operations. In the realm of loan approval prediction numerous conventional data mining techniques exist alongside machine learning algorithms designed to automate the prediction of loan statuses. These algorithms effectively and quickly determine loan eligibility. Among them are decision trees, logistic regression, random forests, and gradient boosting. This study aims to mitigate the risk linked to loan approval by predicting the loan status through analysis of various loan attributes or characteristics. The Loan Prediction System assigns weight to each attribute involved in loan processing automatically. These weights are then applied to newly acquired test data during processing [5]. Loan prediction offers significant advantages for banks, employees, and applicants alike. The primary goal of this work is to offer a practical and effective approach for selecting the optimal course of action. With the loan prediction system's ability to automatically assess the importance of each parameter, users can make optimal decisions. We can schedule appointments to review customer status and ascertain their eligibility. The system efficiently prioritizes specific applications for assessment. The target audience for this study report is the governing authority of banks or financial institutions. It's important to note that the process remains confidential with no ability for any involved parties to alter it.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

II.LITERATURE REVIEW

To determine the likelihood of approval for a bank loan Vandana Sharma et al [6] investigates the feasibility of employing ML techniques for credit risk assessment amidst persistent worries regarding loan defaults. It scrutinizes existing methodologies and underscores the significance of precise credit evaluation, particularly given the rising prominence of peer-to-peer lending platforms. To enhance predictive efficacy, the proposed model incorporates logistic regression, feature engineering, and data refinement. Nevertheless, it acknowledges various potential limitations such as issues concerning data integrity, logistic regression's limitations in detecting complex relationships, and the model's dependence on specific datasets and credit scoring mechanisms.

Mohammad Ahmad Sheikh et al [7] study report underscores the importance of accurate predictions for maximizing profits in the banking industry through the application of logistic regression. It leverages Kaggle data and focuses on customer attribute beyond mere account validation. The proposed methodology mitigates default risks and enhances operational efficiency and customer contentment by automating loan approval procedures. Apart from feature engineering and preprocessing missing variable imputation is employed. Logistic regression is selected as the model due to its commendable accuracy of 0.811 on the test dataset and its effectiveness in classification endeavours. Nancy Deborah R et al [8] delves into the potential uses of machine learning methods, such as Support Vector Classifiers (SVM), in predicting loan approval status. SVM exhibited an 83% accuracy rate in this context. The research underscores the importance of employing dependable prediction models when addressing the obstacles banks encounter in evaluating loan applications and mitigating credit risk. It underscores the significance of considering various factors to achieve precise forecasts of loan status, including data quality, hyperparameter tuning, and potential biases in both data and models. Furthermore, it illustrates how SVM serves as a valuable tool that can be enhanced over time by incorporating new features and data sources to enhance prediction accuracy and adaptability to evolving market dynamics.

Sk. Sharmila et al [9] study delves into utilizing a Decision Tree Classifier for bank loan approval, presenting a fresh perspective on loan prediction. It underscores the growing inclination towards employing machine learning models in loan assessment and the demand for more effective decisionmaking algorithms. The research advocates for the Decision Tree method citing its clarity and effectiveness, while scrutinizing conventional techniques such as linear regression and Gaussian Naive Bayes. Following training on past loan data, the suggested model exhibits significant promise in expediting loan approval procedures, boasting an impressive accuracy rate of 95% and minimal loss at 0.09%. Anshika Gupta et al [10] utilizes machine learning methods to tackle the increasing need for streamlined loan approval procedures within the banking sector. It focuses on forecasting the likelihood of loan approval through

supervised learning techniques, specifically random forest, and logistic regression algorithms, leveraging application data. The report underscores the indispensability of artificial intelligence (AI) in expediting banking operations and mitigating risks linked to manual assessments. Through feature engineering and data preprocessing, the study constructs a dataset encompassing credit history, income, and educational background. It underscores the significance of predictive analytics in augmenting decision-making processes and curbing fraudulent activities, advocating for the advancement and integration of such systems in forthcoming endeavors.

Praveen Tumuluru et al [11] Analyzes the application of machine learning methods for predicting loan defaults, a critical issue affecting the overall financial stability and success of banks. The research evaluates various techniques including Random Forest, Support Vector Machine, K-Nearest Neighbor, and Logistic Regression to evaluate the risk involved in loan approval decisions. Its central premise is that automating the process reduces bank risk and losses. Random Forest emerges as the top performer, achieving an accuracy of 81% in predicting loan approval, suggesting its potential for future loan forecasting. The research recommends exploring additional machine learning approaches to enhance prediction accuracy further. Krishna Mridha et al [12] delves into the utilization of machine learning algorithms by financial institutions to streamline the loan approval process, thereby mitigating risks associated with customer behavior. It examines various classification techniques, such as logistic regression, and assesses the accuracy of each model using data sourced from Kaggle. Future investigations will focus on crafting a hybrid model that integrates deep learning methodologies to enhance prediction accuracy while emphasizing crucial features related to loan repayment capacity.

Trishita Saha et al [13] delves into the utilization of machine learning algorithms by financial institutions to streamline the loan approval process, thereby mitigating risks associated with customer behavior. It examines various classification techniques, such as logistic regression, and assesses the accuracy of each model using data sourced from Kaggle. Future investigations will focus on crafting a hybrid model that integrates deep learning methodologies to enhance prediction accuracy while emphasizing crucial features related to loan repayment capacity. Ch. Naveen kumar et al [14] the importance of loan management within the banking sector, particularly examining the impact of defaults on bank profitability. It underscores the vital nature of accurately predicting loan defaulters and emphasizes the growing role of machine learning techniques in addressing this challenge. Additionally, it underscores the necessity for innovative approaches to enhance the precision of loan eligibility prediction, alongside outlining several existing industry practices. Gaurav Parmar et al [15] the specific study article, previous research on data rebalancing methods aimed at mitigating bias in sensitive categories such as age, gender,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and race would certainly be referenced. This review would scrutinize the limitations of existing techniques and underscore the risks associated with both overfitting and underfitting machine learning models.

III. METHODOLOGY

The loan approval prediction strategy utilizes statistical methods and historical data to forecast the outcome of loan approval. Algorithms that we are going to use in the paper is Logistic Regression, Linear Regression, Decision Tree, SVM, Random Forest and GaussionNB. All these algorithms are trained on historical data to learn the relationships between the different factors that affect loan approval. The loan approval prediction methodology can be a valuable tool forbanks. Banks can enhance their evaluation of loan applications and lower the chances of loan defaults by implementing this measure.

A. Model Planning

The first step involves importing the necessary libraries as shown in "fig.1" for machine learning tasks. These packages encompass NumPy for numerical computations, pandas for data processing, and scikit-learn for machine learning techniques. The next step is the data cleaning process which involves addressing concerns and ensuring data quality by performing dataset cleaning. Data often contains errors, omissions, and inconsistencies that need to be resolved. Following this the subsequent stage is label encoding aims to convert categorical variables into numerical values making them compatible with models for processing. Our objective is to encode the categorical variables within the dataset. The next stage divides the dataset into two categories: training and testing. The training set is utilized to train the model while the testing set is used to assess its performance on unseen data. The training set contains 0.65% of the dataset, whereas the testing set contains 0.35%. The training data is then used to develop various machine learning models which include linear regression, logistic regression, decision trees, random forests, support vector machines, or Naive Bayes. After the training phase, these models are assessed on a testing set to determine their effectiveness with new data.

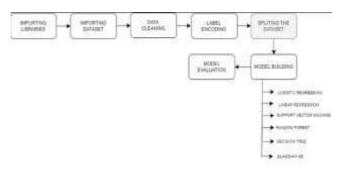

Fig. 1. Model planning of the models

B. Dataset

For all the machine learning models we need to build models by using the dataset divide them into train and test data. We need to train the model by using train data and then applying the model on the test data. In this Dataset we have 12 columns and 614 customer records. All these records are in the csv format. We can use panda's library for reading the file and by using python we can apply all the algorithms. In that dataset Status is the target variable and the other variables- "Gender", "Married", "Dependents", "Education", "Self-Employed", "Applicant Income", "Coapplicant Income", "Loan Amount", "Term", "Credit History", "Area".

TABLE I. DATASET DESCRIPTION VARIABLES AND TYPES.

| VARIABLE NAME | DESCRIPTION | TYPE |
|---------------------|---------------------------------|-----------|
| Gender | Male / Female | Character |
| Married | Applicant married (Y/N) | Character |
| Dependents | Number of dependents | Integer |
| Education | Educated/ Not Education | String |
| Self Employed | Self Employed(Y/N) | Character |
| Application Income | Applicant income | Integer |
| Co-Applicant Income | Coapplicant income | Integer |
| Loan Amount | Loan amount in thousands | Integer |
| Term | Term of loan in months | Integer |
| Credit History | Credit history of the applicant | Integer |
| Area | Urban/Semi Urban/Rural | String |
| Status | Loan Approved(Y/N) | Character |

From the above Table I, we can know the features of the variables which are present in the data set. The next step is to handle the null values. This is done by different methods, but we have enough data, so we are removing the null values. All the records of the applicants are in the form of categorical and numerical data. The dataset has missing values and null values. Before the analysis we need to normalize the dataset by removing the null values.

C. Data preprocessing

Before removing the null values, the value count of every variable that present in the data set is shown in Table II.

TABLE II. DATASET WITH NULL VALUES

| Gender | 601 |
|---------------------|-----|
| Married | 611 |
| Dependents | 599 |
| Education | 614 |
| Self Employed | 582 |
| Application Income | 614 |
| Co-Applicant Income | 614 |
| Loan Amount | 614 |
| Term | 600 |
| Credit History | 564 |
| Area | 614 |
| Status | 614 |
| Dtype: int64 | |

We can't handle imbalance data and we can't apply machine learning algorithms also to the imbalance records, so we need to normalize this data by removing the null values. After removing the null values, the value count of every variable is shown in Table III.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

TABLE III. DATASET WITHOUT NULL VALUES

| Gender | 499 |
|---------------------|-----|
| Married | 499 |
| Dependents | 499 |
| Education | 499 |
| Self Employed | 499 |
| Application Income | 499 |
| Co-Applicant Income | 499 |
| Loan Amount | 499 |
| Term | 499 |
| Credit History | 499 |
| Area | 499 |
| Status | 499 |
| Dtype: int64 | |

Normalizing the dataset is done. The dataset contains both training and testing segments. By using the train data, we need to train the model and test the model by using the test data.

As shown in the "fig.2" y-axis depicts the count of dependents, while the x-axis indicates the number of dependents. Individuals without dependents exhibited the highest loan approval rate, hovering around 92%. The approval rate notably declines for applicants with one dependent, dropping to approximately 66%. Candidates with two or three dependents consistently experience a lower acceptance rate (approximately 55%). For applicants with more than three dependents, the loan approval rate is the lowest, standing at around 28%.

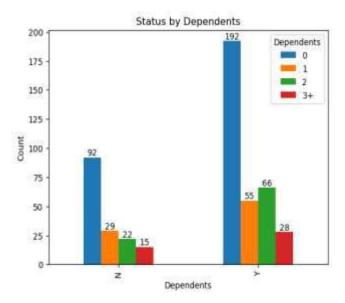

Fig. 2. Status by Dependents

As shown in "fig.3" the graph illustrates self-employment status, with the x-axis depicting two options: "Yes" and "No". It indicates a decline in self-employment, with fewer individuals opting for it. The blue bars represent the non-self-employed, with a maximum count of 24. The orange line denotes the self-employed, peaking at 134 individuals. Model planning of the models.

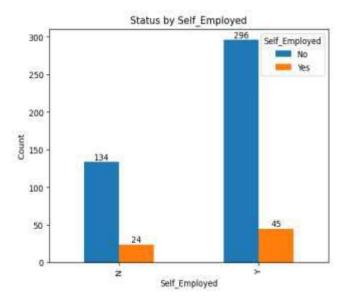

Fig. 3. Status by Self employment

The heatmap correlations between each variable in the dataset are shown in "Fig.4" below. So that we can easily do further analysis.

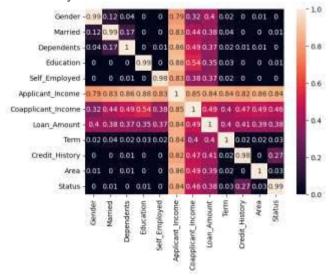

Fig. 4. Representing the correlation between attributes using the heatmap

D. Logistic Regression

Supervised machine learning methods like logistic regression are utilized to address binary classification tasks by evaluating the likelihood of an event, outcome, or observation. Equation 1 is the mathematical representation of logistic regression. This results in a dichotomous output, typically represented as true/false, 0/1, yes/no. Logistic regression examines the association between independent variables to categorize data into various groups. Commonly employed in predictive modelling, this approach employs mathematical techniques to ascertain the probability of an event belonging to a specific category.

$$f(x) = \frac{1}{1 + e^{-x}} \tag{1}$$

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

E. Decision Tree

Decision trees serve as a supervised learning technique commonly employed for classification tasks, but they can also address regression problems. Structurally resembling a tree, they feature leaf nodes representing individual outcomes, decision nodes for branching decision rules, and root nodes for dataset attributes. Comprising two types of nodes Decision and Leaf decision trees utilize decision nodes for making choices and leaf nodes to display decision outcomes. Dataset attributes guide the testing and decision-making process. Graphical representation of decision tree is shown in "Fig .5".

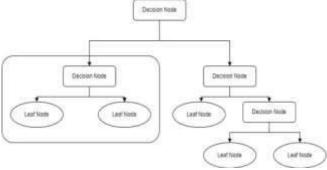

Fig. 5. Decision Tree

F. Linear Regression

Linear regression, a statistical technique commonly employed in machine learning and data science predictive analysis, establishes a direct relationship between an independent variable, which remains constant amidst changing factors, and a dependent variable, whose value is influenced by changes in the independent variable. In essence, this method utilizes mathematical modelling to predict the values of continuous or numerical variables such as age, income, sales, and product price, employing supervised learning techniques to forecast outcomes.

$$y = \beta_0 + \beta_1 X + \beta_2 X + \dots + \beta_n X$$
 (2)

Where in a linear regression model Equation 2, Y represents the dependent variable, and the independent variables are represented by X1, X2, ..., Xp. The intercept is symbolized by β 0, and the slopes by β 1, β 2, ..., β n.

G. Random Forest

The Random Forest algorithm stands as one of the most effective machine learning techniques for tree-based learning. During the training phase, it generates multiple Decision Trees as shown in "Fig. 6". To mitigate overfitting and foster diversity, every tree is built by randomly selecting features and data samples. This approach fosters greater variation among the trees, leading to improved prediction performance. In regression tasks, the algorithm computes the average output of all trees, while in classification problems, it aggregates the average votes from each tree. By integrating insights from multiple trees, Random Forest facilitates robust and precise decision-making, ensuring reliable outcomes [16].

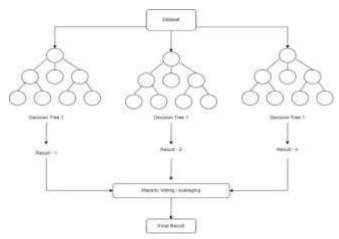

Fig. 6. Random Forest

H. Navie Bayes model GaussionNB

Gaussian Naive Bayes applies the Naive Bayes algorithm specifically to data that follows a normal (Gaussian) distribution. In this approach, it assumes that the probability of each x_i within y_k aligns with the Gaussian Distribution, expressed in Equation 3.

$$e^{-\frac{(x-\mu)^2}{2\sigma^2}} \quad 1/(\sigma\sqrt{2\pi}) = P(x_i/y) \tag{3}$$

This approach calculates the posterior probability for each class and then assigns the data point to the class with the highest likelihood to classify new data points.

H. Support Vector Machine (SVM)

Support vector machines (SVMs) play a vital role in various machine learning tasks like regression, linear or nonlinear classification, and outlier detection. They are indispensable in applications such as text and image classification, facial and handwriting recognition, anomaly detection, gene expression analysis, and spam detection. SVMs excel in handling high-dimensional data and capturing nonlinear relationships, making them versatile and robust. These methods aim to identify the hyperplane in the feature space that optimally separates classes, thus reducing the distance between them effectively.

IV. MODEL EVALUATION

The model assesses an applicant's risk of defaulting on a loan by considering various factors, such as their historical loan information. Some key metrics used to evaluate how effectively the model categorizes loan applicants into accepted or denied groups include recall, accuracy, precision, and F1-score.

A. Confusion Matrix

A confusion matrix is a useful tool in machine learning for assessing the performance of a classification model by providing insights into its accuracy. As shown in the "fig.7" It helps differentiate between true positives, true negatives, false positives, and false negatives, offering a clear evaluation of the model's effectiveness.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

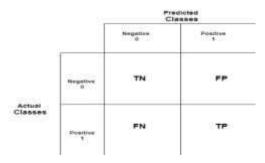

Fig. 7. Confusion Mtrix

B. Accuracy

The accuracy of the model has been evaluated using predetermined measures. While a balanced class model exhibits outstanding accuracy, an imbalanced class model shows significant inaccuracies. The mathematical representation of accuracy is represented as Equation 4.

$$Accuracy = \frac{TP + TN}{TP + TN + FP + FN} \tag{4}$$

C. Precision:

The forecast accuracy level of an optimistic model is determined by Equation 5. By dividing the total number of correctly predicted positive outcomes by the total number of positive outcomes incorrectly forecasted.

$$Precision = \frac{TP}{TP + FP}$$
 (5)

D. Recall:

Recall value, also known as sensitivity, measures the proportion of correctly identified positive events compared to all actual positive cases. In Formula 6, the denominator, (TP+FN), signifies the total number of positive instances. This metric enhances identification accuracy and influences the probability of the model overlooking positive occurrences.

$$Recall(Sensitivity) = \frac{TP}{TP + FN}$$
 (6)

E. F1 Score:

The F1 Score serves as a key indicator of a model's optimal performance level, being a harmonic mean of recall and accuracy. Attaining the highest F1 Score necessitates high values for both recall and accuracy. Any declines in either recall or accuracy can lead to a notable decrease in the final F1 score. Equation 7 for the F1 Score employs the sum of recall and accuracy as its numerator. Consequently, a model that effectively predicts positive events and avoids underestimating positives by predicting negatives can achieve a high F1 score (accuracy + recall).

$$F1 - Score = \frac{2TP}{2TP + FP + FN} \tag{7}$$

V. RESULTS

Below Table IV displays the accuracies achieved by the decision tree, random forest, logistic regression, support vector machine, and Gaussian Naive Bayes models.

TABLE IV. COMPARING THE PERFORMANCE OF EACH MODEL

| Algorithms | Accuracy |
|---------------------|----------|
| Logistic Regression | 80% |
| Decision Tree | 69% |
| Random Forest | 78% |
| GaussianNB | 78% |
| SVM | 77% |

TABLE V. LINEAR REGRESSION MODEL METRICS RESULTS

| MSE | 0.154 |
|-----------------|-------|
| RMSE | 0.392 |
| Train Set Score | 0.27 |
| Test Set Score | 0.32 |

Among various machine learning techniques evaluated, logistic regression exhibited the highest accuracy at 80%, surpassing SVM (77%), GaussianNB (78%), random forests (78%), and decision trees (69%). Notably, linear regression displayed inferior performance based on metrics like MSE, RMSE, and scores. Particularly in predicting loan approvals, logistic regression emerged as the most accurate model.

VI. CONCLUSION

In the loan approval project, several machine learning models were evaluated, and logistic regression emerged as the most accurate model with an accuracy of 80%. The regression model demonstrated logistic superior performance compared to the SVM, Decision Tree, Random Forest, GaussianNB, and Linear Regression models in accurately predicting loan approval. There are several reasons why the logistic regression model has achieved higher accuracy. Originally, logistic regression was frequently and consistently employed to address binary classification problems. It serves as an effective tool for determining whether to accept or reject something, as it is specifically designed to estimate the probability of an event occurring. Logistic regression tends to exhibit lower overfitting compared to more complex models such as decision trees and random forests. When a model learns the training dataset too well, it is said to be overfitting and has poor generalization to new data. Logistic regression is efficient and somewhat understandable compared to other models like support vector machines (SVM) or random forests. If the relationship between the input variables and the loan approval decision is relatively linear, logistic regression can effectively capture this pattern and make accurate predictions. In conclusion, the loan approval project found that logistic regression outperformed other models, achieving the highest accuracy with 80%. From the proper view of analysis this system can be used perfectly for detection of clients who are eligible for approval of loan. In the future, there may be opportunities to expand upon this research further, leading to improved software upgrades that enhance correctness, security, and reliability.

EFFECTS OF AEROBIC TRAINING ON SELECTED PHYSICAL FITNESS VARIABLES AMONG COLLEGE LEVEL CRICKET PLAYERS

Dr. V. Vallimurugan¹, M. Pavithra², R. Rajesh Kannan³

¹Assistant Professor, Department of Physical Education, Bharathiar University, Coimbatore, Tamilnadu. ²MPhil Research Scholar, Department of Physical Education, Bharathiar University, Coimbatore, Tamilnadu. ³Master of Physical Education, Department of Physical Education, Bharathiar University, Coimbatore, Tamilnadu.

ABSTRACT

Objective: This study was intended to examine the effects of aerobic training on selected physical fitness variables among college level cricket players.

Study design: Experimental research.

Setting: Various affiliated colleges in the Bharathiar University in Coimbatore, Tamil Nadu.

Participation: Thirty (N=30) college level cricket player age range between 18 and 24 were randomly assigned into two group, aerobic training group (n=15) and control group (n=15). The aerobic training group underwent the aerobic training for a period of 8 weeks, while the control group continued with their regular routine.

Main Outcomes Measures: The participants performed 8 weeks training sessions involving the aerobic training integrated with certain physical fitness variables namely muscular endurance, cardiovascular endurance.

Results: The results assume that the certain physical fitness variables namely muscular endurance, cardiovascular endurance among college level cricket players have improved significantly due to the aerobic training with the limitations.

Conclusion: In 8-weeks of aerobic training program can be a practical and beneficial approach for college level cricket players seeking to improve their physical fitness variables namely muscular endurance, cardiovascular endurance.

KEYWORDS: Aerobic training, Physical fitness variables and Cricket players.

INTRODUCTION

Cricket, a sport known for its dynamic nature and demands on physical endurance, requires athletes to maintain optimal physical fitness to excel on the field. Among the various training methods available, aerobic training has emerged as a fundamental component in enhancing the performance of cricket players, particularly at the college level. This introduction serves to explore the effects of aerobic training on selected physical fitness variables among college-level cricket players. Understanding the significance of physical fitness in cricket is paramount. As the sport evolves, so do the fitness standards required to compete at higher levels. Physical fitness plays a crucial role in cricket performance, impacting aspects such as endurance, agility, and muscular strength. Of particular importance is aerobic capacity, which enables players to sustain high-intensity efforts over prolonged periods, a necessity in the endurance-based format of cricket matches.

STATEMENT OF THE PROBLEM

The statement of the problem was stated to find out effects of aerobic training on selected physical fitness variables among college level cricket players.

METHODOLOGY

Thirty participants were selected from the various affiliated colleges at Bharathiar University in Coimbatore, Tamil Nadu. The participants ranged in age from 18 to 24 years old, and were divided into two equal groups of 15 each, the aerobic training group and the control group. The aerobic training group was exposed to aerobic training, while the control group was not given any additional training beyond their daily routine. Muscular endurance was measured by the push up test, cardiovascular endurance fitness was measured by the 20-meter shuttle run test. The aerobic training period lasted 8 weeks, with each workout lasting 40 to 50 minutes. The data collected from the two groups before and after the aerobic training period was statistically examined using a dependent 't' test to determine any significant improvement. In all cases 0.05 level of significance was fixed to the test.

Criterion Measures: It is evaluating physical fitness variables were chosen as the criterion measures to this study for testing.

STATISCAL TECHNIQUE

The collected data on Muscular Endurance and Cardiovascular Endurance due to the effects of aerobic training on selected physical fitness variables among college level cricket players, it will be analyzed by using paired' test.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

TABLE-I CRITERION MEASURES

| S.NO | VARIABLES | TEST ITEMS | UNITS OF MEASURES |
|------|--------------------------|-------------------------------------|-------------------|
| 1. | Muscular Endurance | Push- Up Test | Seconds |
| 2. | Cardiovascular Endurance | 20-Meter Shuttle Run (Beep Test) | Seconds |

TABLE -II THE t- RATIO FOR COLLEGE LEVEL CRICKET PLAYERS ON MUSCULAR ENDURANCE

| Variable | Groups | Pre mean | Post mean | SD | SEM | t |
|-----------------------|------------------------|-------------|--------------|------|------|-------|
| Muscular Endurance | Aerobic training group | 31.40 | 32.33 | 0.79 | 0.20 | 4.52* |
| | Control group | 28.26 | 28.40 | 0.35 | 0.09 | 1.46 |

(Significance at 0.05 level of confidence for df of 14 is 2.14) Table II reveals that the computation of 't' ratio between mean of pre and post-test on muscular endurance of experimental group and control group. The mean values of pre and post-test of experimental group and control group were 31.40, 32.33 seconds and 28.26, 28.40 seconds respectively. Since, the

obtained 't' ratio 4.52 was higher than the required table value 2.145, it was found to be statistically significant for the degree of freedom 1 and 14 at 0.05 level of confidence. The results clearly indicated that the Muscular endurance of the experimental group improved due to effect of aerobic training.

FIGURE-I THE BAR DIAGRAM SHOWS THE MEAN VALUE OF PRE-TEST AND POST-TEST OF CARDIO VASCULAR ENDURANCE OF EXPERIMENTAL GROUP AND CONTROL GROUP (Seconds)

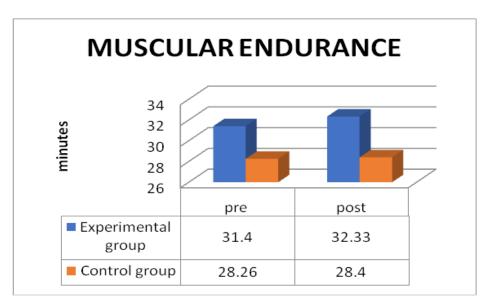

TABLE III COMPUTATION OF 't' RATIO BETWEEN PRE AND POST TEST MEANS OF EXPERIMENTAL GROUP AND CONTROL GROUP ON CARDIO VASCULAR ENDURANCE (Seconds)

| | | (, | occorras) | | | |
|-----------------------------|------------------------|-------------|--------------|------|------|-------|
| Variable | Groups | Pre mean | Post mean | SD | SEM | t |
| Cardiovascular endurance | Aerobic training group | 14.97 | 15.96 | 0.52 | 0.13 | 7.23* |
| | Control group | 15.99 | 16.05 | 0.80 | 0.20 | 0.27 |

^{*}Significant at 0.05 level of confidence (2.145), 1 & 14.

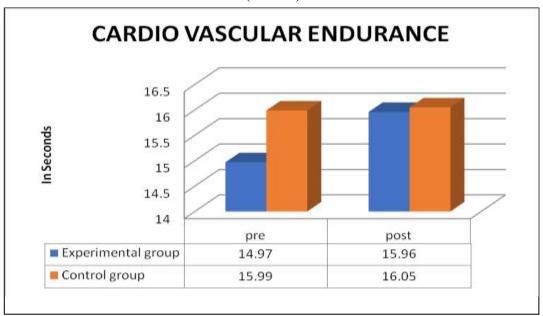

Table III reveals that the computation of 't' ratio between mean of pre and post-test on muscular endurance of experimental group and control group. The mean values of pre and post-test of experimental group and control group were

14.97, 15.96 seconds and 15.99, 16.05 seconds respectively. Since, the obtained 't' ratio 7.32* was higher than the required table value 2.145, it was found to be statistically significant for the degree of freedom 1 and 14 at 0.05 level of confidence.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The results clearly indicated that the cardiovascular endurance of the experimental group improved due to effect of aerobic training.

FIGURE-II THE BAR DIAGRAM SHOWS THE MEAN VALUE OF PRE-TEST AND POST-TEST OF CARDIO VASCULAR ENDURANCE OF EXPERIMENTAL GROUP AND CONTROL GROUP (Seconds)

DISCUSSION ON FINDINGS

The results of the study indicate that the aerobic training group significantly improved their physical fitness variables, such as muscular endurance, cardiovascular endurance. Furthermore, it was observed that the improvement caused by the aerobic training was greater than that of the control group. This suggests that the aerobic training was an effective method for improving physical fitness variables. The obtained result proved positively the aerobic training and selected physical fitness group significantly improved. The result of the present study showed that the effects of aerobic training on selected physical fitness variables have significant improvement on college level male cricket players. The following studies was revealed that Dar, U.R (2016) examined the impact of aerobic training on the physical fitness of 40 University of Kashmir cricket players, revealing a significant improvement in their cardio-vascular efficiency, as measured by the Harvard Step Test. The result of the study supports the result of the present study. **B. D.** Paul (2022) concluded a study on the impact of aerobic training on the physical fitness of cricket players. The result of the study supports the result of the present study. These finding had not been previously replicated for a sample of college students. The result of the study showed that the control group was not significantly improved.

CONCLUSIONS

The results of effects lead to conclude that the effects of aerobic training on selected physical fitness group had better significant improvement on physical fitness variables (muscular endurance and cardiovascular endurance) of college level male cricket players.

ABSTRACT

In order to evaluate the real facts the detective made a challenge to examine the impact of six weeks game specific field training with mental practice strategy of physiological, psychological and skill performance variables of football players. Their aged of the subject ranged from 14 to 17 years selected from Ragavendra Vidyalaya Matriculation School, Coimbatore. Selected subjects was randomly assigned to two equal groups (n=20), group I underwent game specific field training with mental practice (GSMP) and group II acted as control group (CG). The game specific field training with mental practice was given to the experimental group for 3days per week for the period of 8 weeks. The control group did not practice in any training except their routine work. The following variables were measured with standard test items: Vo2 max, self confidence and kicking. Pre and post test was conducted on separate days with warm up. The vo2 max measured by cooper vo2 max test in ml/kg, self-confidence was measured by questionnaire in points and kicking was measured by warner soccer skill test in meters. To find out the individual effect 't' test was applied at 0.05level of significant. Further, the findings confirmed the game specific field training with mental practice is suitable protocol to bring out the desirable changes over the vital capacity and resting heart rate of school boys.

KEY WORD: Vo2 max, Self-Confidence, Kicking, Game Specific Field Training with Mental Practice, School Football Players.

INTRODUCTION

Football requires peak physical conditioning of its player to be played at the highest level. The only way to achieve this level of conditioning training, specifically football and the amount of running done in a match. Also, the better conditioned a player is the more likely perform with the same amount of skill necessary when passing, dribbling, kicking and shooting at the end of the game as the beginning. At any level above a school level, football limits the amount of substitutions a team can make. This game dramatically demands the manifestation of the physical factor determined by the content of the effort. Increasing the driving density in every unit of time is explained by a high number of gaming actions. A player of the world's elite football teams performs in 1-2 minutes or even 3, speeds, a jump, an air duel or an individual technical action. In general, all the minutes of the game are active, and even if some effort can stagnate, it is done with the intent of amplifying it in the next stages.

Game Specific Skill Training

Football, in its global evolution, has in its current stage, as a standard feature in all high-performance teams, the increasing effort throughout the game to win. The game has become perfectly balanced, with very offensive, very collective, with a full rhythm, with complete athletic training with total physical commitment. This game dramatically demands the manifestation of the physical factor determined by the content of the effort. Increasing the driving density in every unit of time is explained by a high number of gaming actions. A player of the world's elite football teams performs in 1-2 minutes or even 3, speeds, a jump, an air duel or an individual technical action. In general, all the minutes of the game are active, and even if some effort can stagnate, it is done with the intent of amplifying it in the next stages. As for the motoring qualities, there is a predominance of velocity manifested in its forms of movement, execution, reaction; as well as the placement, movement, and handling of the ball. Speed is correlated with other driving qualities and is carried out in a resistance and force regime with

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the decisive role of skill in achieving technical-tactical combinations. Effort increment is represented primarily by the large number of official or preparatory meetings, their peculiarities, and stake. Physical demands made in the running at a total distance of 6-9 km from the majority of players in 80-140 speed actions maximum on a distance ranging from 700 - 2500 - 3000 m, in 40-80 direct physical contact with opponents, 80-120 jumping and other physical actions - turns, changes in direction, falls, jumping. In this paper, the issue of developing motor skills with the help of the specific means of football was pursued. The paper aims to bring the experts a methodical material, with scientific and systematized content, which is the basis of the training process, especially during the precompetitive and competitive period.

Mental Practice Strategy

The psychological factors involved in athletic performance have long been of interest to athletes, coaches, sport psychologists and sports scientists. Empirical studies have largely focused on individual psychological factors and their influence on performance which includes confidence, motivation, attention, visualization, and psychosomatic skills (Gucciardi, Gordon, & Dimmock, 2009). Similarly, some studies indicated that the use of mental skills such as goal setting, imagery, relaxation, and selftalk are important areas in the field of sport psychology (Vealey, 2007; Williams & Harris, 2001). They also asserted that goal setting as attaining a specific standard of proficiency on a task, usually within a specified time limit can increase performance during competition. Speed, skill, and specific strength are the most critical driving qualities in the football game. Their specific means of development, as well as technical and tactical training, require dosing and management of training appropriate to age and competitive level. Moreover, imagery as using all the senses to re-create or create an experience in the mind helps athletes to perform better and increase self-confidence (Rattanakoses et al., 2009)

TABLE-ICharacteristics of training groups (N=20) at pre training mean

| Variable | GSFT |
|-------------|--------|
| Age (Y) | 14-17 |
| Height (cm) | 150.30 |
| Weight (kg) | 51 |

METHODOLOGY

The impression of the study was to find out the game specific skill training on physiological, psychological and skill performance variables among school level football players. Five Physical active and interested school level football players were randomly selected as subjects and their age ranged between 14 and 17 years. Single group design was used. Game specific skill

training pilot study group (n =20) would be undergone for a period of four weeks.

CRITERION MEASURES

The subjects of forwarders specific skill training pilot study would be assessed on the selected variables by the standardized test items before and after the training period of four weeks.

TABLE - II

| S.No | Criterion Variables | Test items | Unit of measurements |
|------|---------------------|----------------------------------|----------------------|
| 1. | Vo ₂ max | Coopers Vo ₂ Max Test | MI/kg/min |
| 2. | Self- confidence | Questionnaires | In Points |
| 3. | Kicking | McDonald Soccer Skill Test | In Counts |

TRAINING PROGRAMME

The forwarders specific skill training group underwent the experimental treatment for 4 weeks, 5 days and a session on each day with 60min duration. The training programme was lasted for 60 minutes for a session in a day, 5 days in a week for a period of 4 weeks duration. These 60 minutes included position wise

specific skill training for 40 to 50 minutes and 5 minutes warmup, and 5 minutes warm down. Four weeks of specific skill training was given to the selected subjects. Their training days and hours every week were from Monday to Friday from 6.00 to 7.30 am.

STATISTICAL ANALYSIS

The means and standard deviations of forwarders specific skill training groups were calculated for physical, functional and performance variables for the pre as well as posttests. Statistical significance was set to a priority at p< 0.05. All statistical tests were calculated using the statistical package for the social science

TABLE - I COMPUTATION OF 'T' RATIO ON VO2MAX ON EXPERIMENTAL GROUP AND CONTROL GROUP (Scores in Numbers)

| GROUPS | PRE TEST | POST TEST | NUMBERS | SD | "T" RATIO |
|-----------------------|----------|-----------|---------|------|-----------|
| Experimental Group | 42.38 | 45.64 | 20 | 1.45 | 15.43 |
| Control group | 42.44 | 42.32 | 20 | 0.89 | 0.96 |

^{*}significant level 0.05 level (degree of freedom 2.09, 1 and 19)

Table I reveals the computation of mean, standard deviation and't' ratio on selected variable are vo2 max of experimental group. The obtained't' ratio on vo2 max were 15.43 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained't' values were greater than the table value it was found to be statistically significant.

Further the computation of mean, standard deviation and 't' ratio on selected variable for vo2 max of control group. The obtained't' ratio on vo2 max were 0.96 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained't' values were lesser than the table value it was found to be statistically not significant.

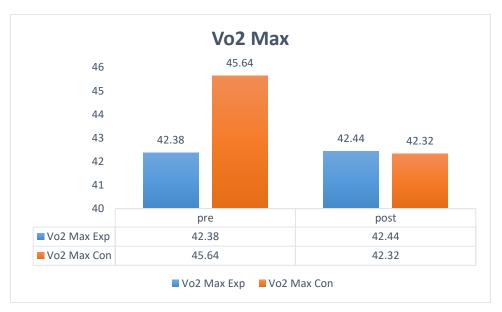

FIGURE – I BAR DIAGRAM SHOWING THE MEAN VALUE ON VO2 MAX OF SOCCER PLAYERS ON EXPERIMENTAL AND CONTROL GROUP

TABLE - II COMPUTATION OF 'T' RATIO ON SELF CONFIDENCE ON EXPERIMENTAL GROUP AND CONTROL GROUP (Scores in Numbers)

| GROUPS | PRE TEST | POST TEST | NUMBERS | SD | "T" RATIO |
|--------------------|----------|-----------|---------|------|-----------|
| Experimental Group | 27.26 | 30.18 | 20 | 0.89 | 13.74* |
| Control group | 27.13 | 27.20 | 20 | 0.64 | 1.36 |

^{*}significant level 0.05 level (degree of freedom 2.09, 1 and 19)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table I reveals the computation of mean, standard deviation and 't' ratio on selected variable for self confidence of experimental group. The obtained 't' ratio on self confidence were 13.74 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained 't' values were greater than the table value it was found to be statistically significant.

Further the computation of mean, standard deviation and 't' ratio on selected variable for self confidence of control group. The obtained 't' ratio on self confidence were 1.36 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained 't' values were lesser than the table value it was found to be statistically not significant.

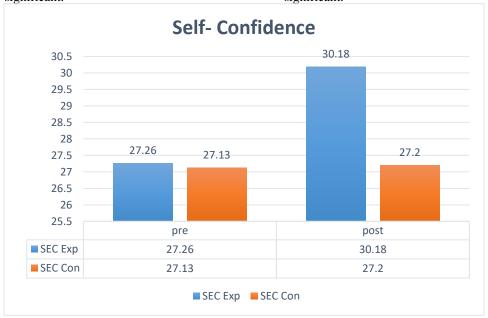

FIGURE- II
BAR DIAGRAM SHOWING THE MEAN VALUE ON SELF CONFIDENCE OF SOCCER PLAYERS ON
EXPERIMENTAL AND CONTROL GROUP

TABLE - II
COMPUTATION OF 'T' RATIO ON KICKING ON EXPERIMENTAL GROUP AND CONTROL GROUP
(Scores in Numbers)

| GROUPS | PRE TEST | POST TEST | NUMBERS | SD | "T" RATIO |
|--------------------|----------|-----------|---------|------|-----------|
| Experimental Group | | | 20 | 1.99 | 14.79* |
| Experimental Group | 41.05 | 45.35 | | | |
| Control group | 41.45 | 41.85 | 20 | 1.61 | 1.93 |

^{*}significant level 0.05 level (degree of freedom 2.09, 1 and 19)

Table I reveals the computation of mean, standard deviation and 't' ratio on selected variable for kicking of experimental group. The obtained't' ratio on kicking were 14.79 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained't' values were greater than the table value it was found to be statistically significant.

Further the computation of mean, standard deviation and 't' ratio on selected variable for kicking of control group. The obtained 't' ratio on kicking were 1.93 respectively. The required table value was 2.09 for the degrees of freedom 1 and 19 at the 0.05 level of significance. Since the obtained 't' values were lesser than the table value it was found to be statistically not significant.

DISCUSSION ON FINDINGS

The present-day study considered the influence of eight weeks of game specific field training on selected physiological, psychological and skill performance variables of footballers. The results of this study designated that game specific field training is more efficient to bring out desirable changes over the physiological, psychological and skill performance variables of the footballers. Investigators have extended their interest to consider the Vo2 max, self- confidence and kicking commencement from the way a footballers approaches the game specific field training.

Venbilsen et al., (2023) results showed that the use of a specific strategy made the STG participants respond faster to the trained contrast level task, but not on the contour exercises task. Furthermore, both STG and NSTG showed pre- and posttransfers, however no significant differences were found when comparing the groups, for both behaviour and ERP responses. In conclusion, we believe these preliminary results provide evidence for the importance of strategy choice in cognitive training protocols.

Griva et al., (2017) results indicated no statistically significant effects for the mental skills training on any of the domains of competitive anxiety, apart from statistically significant group and time main effects for somatic anxiety intensity.

Araslan et al., (2021) inclusion of core strength training to a SSG periodization is greatly effective to improve speed and strengthbased conditioning in young soccer players.

Asrul et al., (2021) significant difference in the effect of the small sided games training method with the drill on improving soccer passing accuracy. There is a significant difference in the effect of the small sided games training method and the drill training method on increasing VO2Max.

Hammami et al., (2018) represent an effective strategy of multicomponent training that can induce greater positive effects on specific skills tasks when compared with interval or agility training and moderate to large improvements in team sportrelated physical fitness.

The twelve weeks training of game specific field training with mental strategy have been significantly improved Vo 2 max, self-confidence and kicking ability of football players.

CONCLUSIONS

Based on the findings and within the limitation of the study it is noticed that practice of game specific field training helped to improve physiological, psychological and skill performance variables of football players at school level. It was also seen that there is progressive improvement in the selected criterion variables of game specific field training group of football players after eight weeks of training programme.

From the results of the present study, it is very clear that school level football players significantly difference in game specific field training of vo2max, self-confidence and kicking.

A STUDY OF HUMAN RESOURCE PRACTICES AND ITS IMPACT ON ORGANIZATIONAL PRODUCTIVITY OF ORGANIZED SECTOR OF MADHYA PRADESH

Richa Guru¹, Dr. B D Pandey²

¹Research Scholar Barkatullah University Bhopal ²Professor Sadhu Vaswani College Bhopal

ABSTRACT

Purpose of the research is to explore the impact of HRM Practices on the organizational productivity. In this process three different HRM practices has been identified such as performance appraisal, career planning and compensation management. The study was based on primary data which has been taken from the employee of selected organized organization. The sample has been taken from 134 employees. The ANOVA test has been applied to test the hypothesis at 5% level of significance. The findings of the study indicate that all the selected HRM Practices is significantly and positively related with organizational productivity.

KEY WORDS: performance appraisal, career planning, compensation management

INTRODUCTION

Human resource management practices and procedure is playing most important roles in order to achieve organizational goals and maintaining the competitive advantages. Human resource practices also refer the various activities related with human resource planning and insuring the resources are employed to the fulfillment of organizational goals. However, HRM practices is the management of peoples working in the organization, policies and practices related to planning, developing and utilizing resources and retaining the employee to fulfill the organization objectives. On the other hand best human resource practices have an advantage for both employee as well as organization. The present study related with human resource management practices and its impact on organizational productivity towards organized sector. In this process research deals with various HR Practices such as Performance appraisal, career planning and compensation management. The study is based on primary data which has been taken among the employees of selected organized organization by using the questionnaire method, however, in this process a well-structured sects of questionnaire has been prepared on the basis of various human resource management practices such as Performance appraisal, career planning and compensation management

REVIEW OF LITERATURE

Sukhadeve Versha et.al.,(2023), Conducted a research study on the effectiveness of human resource accounting and auditing and its impact on employees in higher education. The purpose of this research study is to examine human resource accounting and auditing practices in order to identify challenges and issues faced by the employee. The study was based on primary data which has been collected among the employees of different higher education institutions. Findings of the study based on HR policy which is related to accounting and auditing. Furthermore it has been explore by the author that policy has positive impact on employees on higher education. In the conclusive remark it has been point out by the author that audit

helps to control various decisions regarding to monitor existing policy.

Ingrid Konomi et.al. (2023), conducted a research study on human resource audit in Albania. The purpose of this research is to measure the effectiveness of human resource audit and organisational efficiency. The study explore that human resource audit is one of the most important process of the each and every organization. Furthermore it has been explore by the study that human resource audit is related with profit maximization of the company.

Lydia Sylvia Danku (2016)., Conducted a research study to explore the role of human resource audit in the organization. The purpose of the research study is to explore the role of audit to examine human resources practices in the organization. The study was based on primary data which has been obtained by using structure interview and questionnaire. The findings of the study explore that majority of respondent agrees that the organization is developed a well-defined strategy to utilize modern HR practices to help the organization to achieve the target. Furthermore study concludes that an effective HR audit helps organization to examine and improve entire HR activities of the organization.

Devera .S. Shinivash et. at.(2022)., has been conducted a research study on impact on human resource audit in Indian SMES. The study was based on primary data which has been collected by the observation and survey method. Sample for the study was taken from the 100 peoples. The findings of the study not only explore the impact of HR audit on Indian SMES but also found the elements for the success of the organization. Furthermore in the conclusive remark it has been point out by the author that human resource audit in SMES is helps to examine strength of HR practices.

OBJECTIVES OF THE STUDY

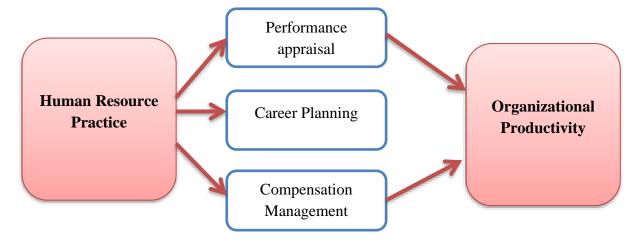

The various objectives of the study are as under

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- 1. To study the relationship between Human resource management practice and its impact on organizational productivity towards performance appraisal
- 2. To study the relationship between Human resource management practice and its impact on organizational productivity towards Career Planning
- 3. To study the relationship between Human resource management practice and its impact on organizational productivity towards Compensation Management

RESEARCH FRAMEWORK

FORMULATION OF HYPOTHESIS

The various hypothesis of the study are as under

 \mathbf{H}_{01} : There is no significant relationship between Human resource management practice and organizational productivity with respect to Performance appraisal

 $\mathbf{H_{a1}}$: There is no significant relationship between Human resource management practice and organizational productivity with respect to Performance appraisal

 \mathbf{H}_{02} : There is no significant relationship between Human resource management practice and organizational productivity with respect to Career Planning

 H_{a2} : There is no significant relationship between Human resource management practice and organizational productivity with respect to Career Planning

 H_{03} : There is no significant relationship between Human resource management practice and organizational productivity with respect to Compensation Management

 H_{a3} : There is no significant relationship between Human resource management practice and organizational productivity with respect to Compensation Management

RESEARCH METHODOLOGY

Descriptive method of research has been adopted to explore the impact of Human resource management practices on organizational productivity. This section deals with sampling design, size, area methods and measurement tools. In order to explore the relationship between independent and dependent variables the primary data has been used. The primary data for the study has been collected by using questionnaire methods.

SAMPLE DESIGN

Sample for the present study has been design on the basis of relationship between HR Practices of organised sector and its impact on organizational productivity. The sample has been taken by using random stratified methods. In order to maintain the accuracy in the data the sample has been taken from different locations of the employees. Sample has been taken by using questionnaire methods which has been prepared in Hindi and English both language.

The entire sampling technique has been adopted three steps

- ❖ Sampling Size: the sample has been taken by using questionnaire method. In this process the final questionnaire has been distributed among the 150 employees of selected organized organization and 134 employees has been positively reported. However the final sample size is 134.
- ❖ Sample Method: Random stratified methods have been adopted to collect the sample among the entire populations.
- ❖ Sample Area: Sample area for the present study is limited up-to various selected organized organizations located in different locations of Bhopal.

MEASUREMENT TOOLS

Five points Likert scale has been used as measurement tool in order to scaling of data such as 1 strongly disagree to 05 strongly agree.

TOOLS FOR DATA ANALYSIS

ANOVA Test has been used to analyse the data and testing of hypothesis at 5% level of significance and 95% level of confidence.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

TESTING OF HYPOTHESIS

Table 1: (Relationship between HRM Practices of organization and organizational productivity)

| Hypothesis | Independent variables | df | F | p-Value | Result |
|--|--------------------------|----|--------|---------|-------------|
| H ₀₁ / H _{a1} | Performance Appraisal | 5 | 8.472 | 0.027 | Significant |
| H ₀₂ / H _{a2} | Career Planning | 5 | 11.214 | 0.039 | Significant |
| H ₀₃ / H _a 3 | Compensation Management | 5 | 6.904 | 0.001 | Significant |
| Dependent Variables: Organizational Productivity | | | | | |

FINDINGS

Findings of the study are as under

- 1. **Table 1** explores the relationship between HRM Practices of organized sector organization and organizational productivity with respect to Performance appraisal. It can be seen in the table that calculated value of F is **8.472** and **p value** is **0.027**. The calculated value of **F** is significant at 5% level of significance and 95% level of confidence. The above result is evident to reject the null hypothesis and accept the alternative hypothesis. On the other hand it may be said that performance appraisal system significantly and positively related with organizational productivity
- 2. Table 1 explores the relationship between HRM Practices of organized sector organization and organizational productivity with respect to career planning. It can be seen in the table that calculated value of F is 11.214 and p value is 0.039. The calculated value of F is significant at 5% level of significance and 95% level of confidence. The above result is evident to reject the null hypothesis and accept the alternative hypothesis. On the other hand it may be said that career planning significantly and positively related with organizational productivity
- 3. **Table 1** explores the relationship between HRM Practices of organized sector organization and organizational productivity with respect to Compensation Management. It can be seen in the table that calculated value of **F** is **6.904** and **p value** is **0.001**. The calculated value of **F** is significant at 5% level of significance and 95% level of confidence. The above result is evident to reject the null hypothesis and accept the alternative hypothesis. On the other hand it may be said that compensation management significantly and positively related with organizational productivity

CONCLUSIONS

The purpose of the study is to explore the impact of human resource practices on organizational productivity. In order to explore the impact different HRM Practice has been discussed with respect to selected organized organizations. The findings of the study clearly indicated that all the selected HRM practices such as performance appraisal, career planning, and compensation management played a most important role to improve the organizational productivity. However, on the other hand it may be explore that there is a significant a positive relationship between HRM practices of organized organization and their productivity with respect to performance appraisal, career planning, and compensation management

Article DOI: https://doi.org/10.36713/epra17088
DOI No: 10.36713/epra17088

ABSTRACT

This qualitative study employs discourse analysis aimed at unveiling the speech acts, linguistic persuasion strategies and linguistic features employed in e-commerce live streaming. More so, this study utilizing thematic analysis aimed at exploring the emerging themes focused on the insights of e-commerce live streaming viewers on the linguistic persuasive strategies employed by streamers in e-commerce live streaming. Through purposive sampling, 15 videos of e-commerce live streaming served as the corpora of the study. Consequently, the study revealed that e-commerce live streamers employed different speech acts such as directive, assertive, commissive, expressive and declarative. The key findings of this qualitative study opened the door to a new line of inquiry into the persuasive strategies employed in e-commerce live streaming.

KEYWORDS: Education, speech acts, linguistic persuasion strategies e-commerce live streaming, linguistic features, pragmatic, Philippines

INTRODUCTION

Learning The growth of e-commerce live-streaming has led to diverse marketing and consumption patterns globally, presenting challenges for online sellers to boost sales. The persuasiveness of linguistic styles used by sellers significantly influences customers' purchasing behavior during live streams. Challenges related to language arise in various countries, including China, India, and European nations, where misleading language, high-pressure sales tactics, and vague product descriptions affect consumer trust and decision-making processes. Additionally, cultural and language barriers faced by Filipino sellers hinder effective communication, resulting in reduced message effectiveness and revenue decline (Flosi et al., 2021; Pfeiffer, 2022; Druckman, 2021; Fu, 2021; Hofstede, 2016; Bovee, 2021).

While existing research explores persuasive marketing strategies in e-commerce, there's a scarcity of studies analyzing the persuasive expressions and linguistic styles of online sellers in live streaming. This study, proposed by [Author Name], aims to fill this gap by focusing on the linguistic persuasive style of hosts in social e-commerce, incorporating pragmatic analysis with an emphasis on perlocutionary acts. Understanding these linguistic nuances is crucial in the evolving dynamics of online commerce, where accessibility and convenience are vital for customer interaction and business success.

The proposed research holds implications not only for business and marketing domains but also for language education. By examining contemporary language usage in live selling, this study can inform language educators on effective teaching methods in business communication courses, enriching the learning experiences of students. Furthermore, disseminating the results internationally and among live streamers contributes to advancing language education methodologies and enhancing consumer empowerment, industry practices, and ethical communication in the digital marketing landscape.

Purpose of the Study

The purpose of this study is to unveil and understand the persuasive expressions among online sellers in e-commerce live streaming as well as the perlocutionary acts embedded in the response of the viewers. At this stage of research, persuasive expression is generally defined as the skills and strategies to influence a person's behavior through language use. In the context of e-commerce live streaming, it is a linguistic technique that can guide the consumers' attitude and behavior towards the sellers' intended direction.

Research Questions

- 1. What speech acts are used by sellers in e-commerce live streaming?
- 2. What are the linguistic persuasion strategies utilized by sellers in e-commerce live streaming?
- 3. What are the linguistic features found in these persuasive linguistic strategies?

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

METHODS

Research Design

This qualitative study utilized discourse analysis to explore how individuals interpret and derive meaning from their experiences, aligning with Creswell and Creswell's definition. Grounded in qualitative research tradition, it employed diverse methods such as content analysis of visual and textual resources, oral history, diaries, and open-ended questionnaires to comprehensively collect and interpret data. The research focused on understanding how e-commerce live streamers strategically used linguistic persuasion tactics to engage potential buyers. Through discourse analysis, the study aimed to identify these persuasion strategies and their impact on prospective buyers' perceptions and decisions, enriching the depth and scope of the findings.

Research Material

This study analyzed ten (10) e-commerce livestream videos from Facebook and TikTok in the Philippines, each lasting at least one hour, focusing on how online sellers used language to persuade customers. The videos, sourced from accounts with over 10,000 followers and posted between 2020 and the present, underwent content analysis to reveal rhetorical strategies present in the discourse

Procedure

As a researcher, I systematically and ethically conducted a study analyzing 10 e-commerce livestream videos from Facebook and TikTok, focusing on linguistic marketing strategies. The qualitative research design utilized discourse analysis, applying theoretical frameworks such as Searle's Speech Acts and Lamb's persuasive techniques. Ethical protocols included obtaining approvals from the Research Ethics Committee and the Dean, validating the interview guide, and securing an endorsement from the dissertation adviser. Participants were selected through maximum variation sampling, and their voluntary participation

was ensured via informed consent. Interviews were conducted ethically, with confidentiality and health standards maintained. Transcriptions underwent thematic analysis, and accuracy was verified by participants, ensuring credible and rigorous data analysis.

Data Analysis

The study examined e-commerce livestreams on Facebook and TikTok to understand the linguistic and communicative strategies used by live streamers to promote products and engage audiences. Using qualitative discourse analysis and theoretical frameworks such as Speech Acts, persuasive techniques, and Social Judgement Theory, it analyzed speech categories, persuasive techniques, and linguistic elements in the livestreams. This revealed the complex strategies live streamers use and their effects on audience perception and behavior in online retail. Additionally, interviews with a diverse group of viewers explored their perceptions, attitudes, and purchase intentions influenced by the livestreams. This comprehensive approach provided valuable insights into how persuasive techniques shape consumer behavior and offered practical implications for marketers in online retail and social media marketing.

Ethical Considerations

This paper was evaluated thoroughly by the Research Ethics Committee of the University of the Immaculate Conception based on the ten ethical tenets of research: social value; informed consent; vulnerability of the research participants; risks, benefits, and safety; privacy and confidentiality; justice; transparency, qualifications of the researcher; adequacy of facilities; and community involvement. As such, the study was subjected to careful scrutiny to affirm that the ethical principles were strictly applied in the research process at all times to protect human participants, most particularly those who belong in the vulnerable sectors.

RESULTS AND DISCUSSION

Speech acts used by e-commerce live streamers.

| Speech Acts | Sample Statement |
|-------------|---|
| Directives | • ""Let's share our live selling video to our six viewers. Please share the video online so we can attract more viewers. Also, don't forget to hit the like button below, give it a click." (EL01) |
| | • "There it is, it's very hot, let's have a jackpot, ma'am, it's first come, first served here! So, what are you waiting for, come on!" (EL02) |
| Assertive | "It really looks gorgeous. What brand is it, dear? (Target Collection). It's a US brand from the Target collection, right? Because it's US bail, as we mentioned earlier, my dear friends, US Bail. I'm not kidding, this is truly US Bail, I promise." (EL04) "We have many beautiful bags here, all from other countries. That means our items are original." (EL05) |
| Commissive | "Please mention and invite your friends, guys, because we will give a free plant to those who mention and share our live stream a lot." (EL07) "Even though we bought it cheaply, we could sell it to you for 945 pesos, but we won't do that. You know us, as a couple, we are very honest, and that's our commitment to you." (EL08) |

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Expressive | "Well, this is just a try, my dear customers. If it doesn't sell, at least I tried. /laughs/ But if many people buy it, then that's happiness." (EL10) "Smile okay, hello to my 12 beautiful viewers Alright, hold on, let's not get too excited" (EL11) |
|-------------|---|
| Declarative | "This product is crafted from high-quality materials to ensure durability and longevity." (EL13) "Oh, someone commented 'mine.' It's yours now, Ma'am Daisy! This item is all yours, ma'am |

The excerpts placed in the table discusses various speech acts within John Searle's theory, focusing on directives, assertive, commissive, expressive, and declarative speech acts. It begins by analyzing directives, highlighting how seemingly inclusive statements function as commands, urging specific actions from the audience to increase visibility and viewership. The assertive speech acts are characterized by the speaker confidently asserting opinions and beliefs about the product's appearance, brand, and origin. Commissive speech acts involve the speaker committing to future actions, such as providing rewards to engaged viewers, fostering trust and accountability.

Expressive speech acts convey the speaker's psychological state and attitudes towards the situation, exhibiting cautious optimism, light-heartedness, and satisfaction or joy. Finally, declarative speech acts assert the quality and attributes of the product authoritatively, shaping consumers' perceptions and expectations. Overall, the summary encapsulates how each type of speech act functions within the context provided, demonstrating their roles in guiding audience behavior, establishing trust, and shaping perceptions.

 Table 2

 Linguistic persuasion strategies utilized by sellers in e-commerce live streaming.

| Persuasive | Sample Statements |
|------------------------|---|
| Techniques | |
| Repetition | Share the live. Share, share, share! Let's share the live! Let's share." (EL01) "We have an available Marble Congo, okay, Marble Congo guys, you might like it for only 1,800 pesos, guys." (EL07) |
| Inclusive Words | "Rachel, please send me the details, our shipping is through Flash Express." (EL01) "We're just selling off our Morayta clothes, they're cheap, so please share our live." (EL10 |
| Emotive Words | "It's really beautiful, guys, and it's big." (EL07) "Hello, sir Kris, I'm excited. Wait a moment for the number Let's proceed to number four, how much was the price before? The previous price was 24,400, ma'am" (EL11) |
| Generalization | "It came from abroad. That means our items are original." (EL05) "So, LCC Essentials is one of the most trusted stores, and everything we sell here is 100% original." (EL08) |
| Alliteration | "There it is, sad and smile." (EL01) "Peace be upon you, sisters and friends! Hello Everyone!" (EL12) |
| Pun | "We have another one, Miralyn Quibo Alburoto. Alright, don't be Miralyn Alburoto." (EL01) "It's yours now, ma'am Terry, don't Terry me, Terry Calderon." (EL02) |
| Rhetorical Question | • "You don't want it to be expensive, but you also don't want it to be cheap. How should we price this then? Do you like bags?" (EL04) |
| Jargons | "I'm asking for mine here, again, mine are EF46 and EF47." (EL06) "Let's be the second miner, maybe Misshie is the joy miner." (EL11) |
| Anecdote | "I know a lot of people cried, got hurt from the breakup of Kathniel, so let's just mine to move on, right? For all the Kathniel fans out there, you really know, they were greatly affected by their breakup, so just mine now." (EL06) "Before, we used to sell a lot here, probably around 300 in one posting, when it's on hand it gets sold out so quickly." (EL09) |
| Appeal | "Our product will bring back cherished memories and create new ones for generations to come." (EL01) |

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| | • "Even though it's stressful here in selling, I still want to sell because of those wh support us." (EL10) |
|------------------------|---|
| Hyperbole | "If you buy this, it's like you've been to Disneyland or your kids."(EL01) "Next, hey, you're all so beautiful, mamsh, very beautiful, from medium to semi-large, from medium to semi-large, you're really sexy, just right, you'll see." (EL04) |
| Colloquial Language | "It's embarrassing just kidding shy later, I'll do a fortune-telling, but no on will answer you" (EL13) "Here, sisters, just take these for free, they're free, sisters, just take these as freebies (EL14) |
| Analogies | "It's hassle-free now, and this is antibacterial, so it can kill a lot of germs, 99.9% Like Safeguard, just kidding!" (EL06) "Here are the details of her leaves, guys, oh there they are, so beautiful. Its colowill be even more beautiful and vibrant when it's with the right person, hahaha! (EL07) |
| Simile | • "I'll just give this to you, ma'am, for only 200 pesos. Here, ma'am, for only 200, it beautiful, it's made of wood, so this item is considered good as new." (EL02) |
| Imagery | "It's made of leather, brown in color, like chocolate brown but not too dark. It beautiful and small, just enough to put money, phones, chargers. When you go to the mall, it's like that!" (EL05) "Okay, this one, medium to semi-large, I still use this size. Its color is like a park |
| | citrus, just like heading towards that orange color. Medium to semi, I'll add a sli It's long, suitable for formal, classy events, it's a long dress, sisters." (EL04) |
| Assonance | "Ma'am, please include mine number nine, mine number nine, sold for ma'am Tinay (EL11) "Convertible piece, medium to large, guys, it's a jumpsuit too, suitable for us, cut hahaha, just a bit wrinkled, guys, just a bit wrinkled." (EL13) |
| Attacks | "It's beautiful, oh, it's Silver Frost, it's quite big, for others, ma'am, it's already 1000 1200 pesos for something this big, ma'am." (EL06) "It's a Philodendron Melaloni, round form. It's really beautiful, guys, and it's quibig. That's how big it is." (EL07) |
| Logic/Reason | "And it has gold hardware, mommy, it's gold hardware, and some have film coating on top, others are all with film intact, here, and here, see, it's still covered with film meaning, it's still in plastic and flapped, that's what we should look at, even if you ask bag collectors." (EL03) "This is the shower gel, the full size is 250 ml and the minis are 100 ml. This is not liniment, it's a massage cream, the beauty of this is even if you're meters away, |
| Expert Opinion | won't have any smell, it's odorless and it's a cream." (EL09) "So, this is the HERMES Kelly 25 Togo leather and look at the corners, we won talk about that anymore, mommies, compare the details of this to the HERMES show or search it on Google, come on. All my products are proven original, check it on in the reviews." (EL03) "Okay, this kind of Aglo guys this kind of Aglo, the mother plant of this is from Thailand, if you search it on Google, you won't find it in the Philippines" (EL08) |
| Evidence | "Here's something nice, brand new, only 400 pesos, it's aluminum. Ma'am, you can use the stoneware for storing food, the stoneware, chemical-free. We already have many repeat buyers of this because of its quality." (EL02) "Okay, for this one, we have anti-bacterial hand soap with apple, and it's buy 1 tall 1, 500ml. It's hassle-free now and this is tested anti-bacterial, so it can kill a lot a germs, 99.9%."(EL06) |
| Euphemism | "It can be used for ponytails for your little girls, for braiding." (EL02) "It's an economical alternative and it's made by someone skilled, they're from the pharmaceutical field." (EL09) |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The excerpt explores various persuasive strategies employed in ecommerce livestreams, ranging from repetition and inclusive language to emotive words and appeals to logic. Repetition is highlighted to emphasize key points and encourage audience engagement, while inclusive words foster a sense of belonging and unity among viewers. Emotive words are used to evoke strong emotional responses and create connections with the audience, enhancing persuasion. Generalization and alliteration add rhythm and emphasis to messages, making them more memorable and impactful.

Additionally, the excerpt discusses the use of rhetorical questions, jargon, anecdotes, appeals, hyperbole, colloquial language, analogy, simile, imagery, assonance, attacks, logic/reason, expert opinion, evidence, and euphemism in persuasive communication within the e-commerce context. Each technique serves a distinct purpose, from engaging the audience and simplifying complex ideas to bolstering credibility and softening unpleasant messages. By employing these persuasive strategies effectively, sellers aim to capture attention, build rapport, and ultimately persuade viewers to take desired actions, such as making a purchase or sharing the livestream.

Implications

Future research in the field of linguistic persuasion strategies in e-commerce live streaming should focus on several key areas. Firstly, expanding the breadth and depth of understanding regarding speech acts through larger and more diverse datasets could provide a comprehensive overview of linguistic interactions. Secondly, employing mixed-methods approaches could offer insights into the impact of linguistic variables on consumer perceptions and behaviors. Additionally, leveraging advanced analytical techniques such as corpus linguistics and computational linguistics could uncover nuanced patterns in persuasive language use. Lastly, adopting larger-scale participant recruitment strategies and longitudinal studies could enhance the generalizability and robustness of findings. Overall, future research should aim to deepen our understanding of persuasive communication dynamics in e-commerce settings, contributing to the advancement of knowledge in digital marketing communication.

CONCLUSIONS

Embarking on the exploration of linguistic persuasion strategies employed by e-commerce live streamers has been an enlightening journey. This endeavor has not only provided valuable insights into digital marketing discourse but has also created an opportunity to establish a new academic niche. The availability of materials for this study has been instrumental in carving out this niche and contributing to our understanding of linguistic persuasion in the context of e-commerce live streaming.

The absence of prior research in this area presented an exciting opportunity to pioneer new insights, driving the researcher's motivation to shed light on this uncharted territory. Throughout the journey, challenges such as time constraints, financial

limitations, and the complexities of analyzing persuasive strategies were viewed as opportunities for growth. Collaboration with advisers, consultation with peers, and strategic planning were crucial in overcoming these obstacles and ensuring the successful completion of the study.

Navigating the intricacies of linguistic persuasion strategies in ecommerce live streaming posed significant challenges, yet these obstacles served as pivotal points in the researcher's quest for understanding. Despite the hurdles encountered, the journey has been immensely rewarding, fostering the development of critical thinking skills and a deeper comprehension of digital marketing discourse in the e-commerce sphere. This pioneering study sets the stage for future research, inspiring scholars to delve further into this dynamic field of study.

DOI No: 10.36713/epra17062

ABSTRACT

This qualitative multiple case study aimed to unveil the lived experiences, and coping strategies of five middle-aged learners from local colleges in Davao del Norte: single-male, married working-male, single-parent female, married working-female, and married full-time student female, which were chosen through maximum variation sampling. Their experiences and coping strategies were examined using in-depth Interviews. Data triangulation was done by interviewing each case's family members, colleagues, and friends. Thematic analysis resulted six emergent themes on the experiences: linguistic barriers in communication, strong resolve towards linguistic resilience and growth, aspiration for personal and professional growth, varied ESL engagements, multifaceted support network, and learning challenges. The emergent themes for coping mechanism included reliance on reputable sources, self-directed learning strategies, social support system, optimal use of technology, English language immersion, and stress management technique. The five cases were generally similar in their experiences and challenges, but three cases manifested variation in linguistic barriers, and two for strong resolves towards linguistic resilience and growth. As for coping strategies, five cases adopted varied approaches in time management and prioritization, and three cases differ on self-directed strategies. All cases shared the same coping schemes from the rest of the strategies in dealing language learning challenges.

KEYWORDS: middle-aged learners, English language, local college, multiple case study, Philippines

INTRODUCTION

Age has been considered a crucial factor in language learning and acquisition (Prianka, 2018). Adult learners often experience a decline in these abilities, especially after age 25, as they were influenced by linguistic distinction between their first language and the new language, which impacts their speaking proficiency significantly (Vieira, 2022). Despite exposure to the language in educational settings, this linguistic challenge is particularly pronounced among middle-aged learners which affects their confidence and communication skills due to fear of ridicule, lack of self-esteem, and fossilization in morphosyntax and pronunciation (Castañeda, 2017). Nevertheless, Narantuya (2022) still underscores a noteworthy trend in adult education, noting a significant increase of enrollments among individuals aged 40 and above studying foreign languages due to globalization and personal development needs. This surge in admission signals a growing commitment among L2 learners to overcome linguistic barriers and actively engage in language learning within the dynamic landscape of adult education.

Middle-aged English language learners (MELLs) embark on a distinctive educational journey, fraught with a multitude of linguistic, cognitive, and socio-cultural challenges (Zammit, 2022). This endeavor among adult learners to learn and refine their language skills, for King (2020), presents a unique set of issues as they often confront the need to simultaneously manage work responsibilities, family obligations, and other life commitments.

Middle-aged learners in Africa often hurdled difficulties in learning English. Learners in Kenya have pronunciation errors due to differences in phonetic features, impacting intelligibility and requiring exposure to proficient English speakers (Ombati and Kirigia, 2020). Middle-aged learners in Ghana have struggled in expanding their English vocabulary and are challenged with vocabulary due to L1 interference, impacting phonemes, morphemes, words, sentences, and discourse structures (Dansieh, 2018). Grammatical mistakes in essay writing English are common among adult EFL learners in Nigeria due to lack of motivation and topic relevance awareness, hindering their ability to write acceptable essays (Okpe & Onjewu, 2017), while in

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

China, pronunciation issues such as adding rhotic sounds, misplaced stress, speaking fast, and ignoring vowels due to dialect influence (Huang, 2023); and speaking difficulties due to anxiety and fear of making mistakes are apparent (Amoah & Yeboah, 2021). Further, Wu (2023) supplemented that Chinese adult learners of English face challenges in producing the voiceless interdental fricative sound // due to tongue placement errors, with an average correct pronunciation rate of only 37%.

In the Philippines, middle-aged students often grapple with communicative tasks due to a lack of linguistic competence and psycho-social fears associated with speaking in different contexts (Separa et al., 2020). English language anxiety is indeed common among adult learners, particularly those in college, because of skill deficiencies, personal insecurities, and fear of judgment (Giray, 2022). Similarly, adult Filipino learners face obstacles in English writing, including insufficient guidance, comprehension issues, and text construction challenges, which was exacerbated by schools' transition to modular learning integrating writing learning as compromising strategy in the pedagogy (Aradillos et al., 2023). In addition, middle-aged learners experience reading challenges due to limited mastery, risk factors, and a lack of reading culture, resulting in frustration (Tomas et al., 2021). In view of these linguistic perplexities, targeted strategies and resources within educational programs are crucial to effectively support Filipino adult learners in their pursuit of English language proficiency.

At one local college in Region XI, English Bridging Program (EBP) was institutionalized as the central initiative to address the prevalent language challenges faced by middle-aged learners in the community. In fact, in 2022, 17 middle-aged students voluntarily participated in the program on their desire to pursue college. However, due to certain factors like inhibition, in fear of possible intimidation, age gap, and the like, only two of them pursued. This reveals a concerning number of students who disregarded their education and pursue their dreams despite their age and personal obligations.

Several research have delved into the distinct aspects on middle-aged learners, including investigations into learning experiences of Korean middle-aged women (Ha, Lee & Heo, 2022), stress response and learning needs (Tsai, 2020), and learning topics and life adaptation (Liangqiu and Zhengqiu, 2019). Only few has ventured on studies that focus on the experiences, challenges, and coping strategies of middle-aged learners in a more in-depth form of exploration. There is an urgency to conduct this research because the researcher found a scarce number of study that explores the perks and perils of adult students who continue to enroll and finish degrees particularly in a local community college, with a hope that the results of this study may awaken the educational agency/authorities to design a program that can facilitate the adult learners to learn English language.

Finally, through a comprehensive exploration of the distinctive challenges faced by middle-aged language learners in college, this research may contribute to the advancement of tailored language education programs and support mechanisms, thereby enhancing the linguistic proficiency, personal growth, and socioeconomic prospects of this important and growing group.

LITERATURE REVIEW

Middle-aged Learners

Middle-aged learners, typically aged 45 to 60, pursue continuing education and English language acquisition to adapt to life changes and plan for the future. These learners employ cognitive, meta-cognitive, and social learning strategies informed by their age and life experiences (Liangqiu and Zhengqiu, 2019). With the increasing demand for English learning among middle-aged and elderly individuals, systematic studies on their language acquisition have become essential (Ma, 2022; Soataliyevna, 2023). Understanding the motivations of middle-aged learners, who often prioritize self-improvement and personal reasons over work-related incentives, is crucial for successful language learning (Naumčiuk, 2023; Fu et al., 2022).

The COVID-19 pandemic accelerated the shift to online learning, providing an opportunity to examine the experiences and motivations of adult English language learners in this context (Chukwuma, 2020). Searby's (2023) study explored the lived experiences of adult learners during the pandemic, shedding light on their needs, challenges, and persistence motivations in online learning environments. Educators should address learners' psychological needs for autonomy, competence, and relatedness to foster motivation, considering their unique cultural backgrounds (Searby, 2023).

Middle-aged language learners navigate a complex process influenced by various factors, including exposure to comprehensible input, self-directed learning, and socio-cultural contexts (Krashen, 1982; Knowles, 1980; Macaro, 2021). Sociocultural factors such as acculturation and identity negotiations also shape their language learning experiences (Souri & Merc, 2021). Motivations for learning English among middle-aged learners are often multifaceted, combining instrumental and integrative motivations (Hang & Nung, 2023). Effective intervention programs and teaching approaches must consider these diverse factors and tailor instruction to learners' unique needs and contexts (Brown, 2019; Brookfield, 2015). Thus, a learner-centered approach, incorporating real-life contexts and relevant topics, is essential for supporting adult language learners in achieving their language goals.

English Language Learning

Middle-aged learners face a multitude of experiences, challenges and coping schemes in their pursuit of learning English as a Second Language in college. Domysheva and Kopylove's (2021) study investigated the linguistic barriers of adult learners in the development of their writing and speaking skills, which they need in applying for jobs, particularly workplace tasks which involve oral interactions with international partners and clients. In addition, Anh and Nga (2023) discovered that adult learners encounter difficulties with challenging vocabulary words,

particularly technical terms, due to their complexity and unfamiliarity. These challenges stem from various factors, including a poor sound system, a lack of communicative context, a limited vocabulary, insufficient cultural understanding, and a fear of making communication errors, as indicated in the study on English language difficulties.

Ariyan and Vadeeva (2019) stressed that middle-aged language learners strive to develop communicative competence while also pursuing personal development through building self-esteem, confidence, amiability, and emotional intelligence, which ultimately strengthen their stern connections with the world. Additionally, Souri and Merc (2021) added that middle-aged EFL learners in private language schools study English for both career-related goals, such as job opportunities, and personal interests, such as forming friendships, reflecting a blend of instrumental and integrative motivation.

Meanwhile, many authors and researchers such as Kallinikou and Nicolaidou (2019); Sadasivan et. al (2021); Nurani & Rosyada (2015); Bake (2018); and Abello (2015), conducted relevant exploration and investigation on the significance of speakers and reading engagement in the development of the communicative skills of middle-aged teacher learners in English. As a result, the exposure of adult learners in speaking and reading activities enhances the communication skills they possess. In particular, the activities do not only upgrade their speaking proficiency, but also help in developing their pronunciation, conversational strategies, and their vocabulary acquisition. In addition, integration of reading activities tailored to learners' needs and fosters collaborative and dynamic learning environments can empower adult learners to think critically and communicate effectively. In essence, a comprehensive approach that links speaking and reading engagements is vital for adult learners to master communication skills effectively.

Adult learners face various challenges in language acquisition, as highlighted in recent literature. Pronunciation hurdles, encompassing confidence issues, teacher proficiency, time constraints, and resource scarcity, hinder effective learning (Jazrawi, 2023). Online English learning exacerbates difficulties with internet accessibility, comprehension of complex materials, and task submission (Assapari, 2021). Malhotra (2022) identifies additional hurdles such as age-related concerns, fear of ridicule, limited oral practice, and motivation issues leading to high dropout rates. Moreover, middle-aged learners contend with time management complexities due to juggling multiple roles (Arnesen, 2019) and may experience memory and cognitive challenges (Berggren et al., 2020; Stebber & Rossi, 2021). Language anxiety, stemming from self-image threats and perceived incompetency, further impedes progress (Brovarska, 2022).

Technology integration, while offering solutions, introduces new obstacles for adult learners, particularly those unfamiliar with digital tools (Helsper & Enyon, 2017). Memory and cognitive decline associated with aging exacerbate learning difficulties

(Park et al., 2022; Craik & Bialystok, 2016). Language anxiety, driven by fear of mistakes, inhibits participation and proficiency (Horwitz & Cope, 1986; Mizuno et al., 2020). Perfectionistic tendencies exacerbate reluctance to err, hindering language acquisition (Liu & Huang, 2021). Mindset towards mistakes impacts willingness to communicate (Rahimi & Abedini, 2021), underscoring the complex interplay between anxiety, mindset, and language proficiency (Gkonou et al., 2017; Juntune & Evans, 2019). These challenges necessitate tailored approaches and supportive environments to foster effective language learning among adult and middle-aged learners.

Coping strategies are vital for middle-aged language learners grappling with the challenges of acquiring a new language in a college setting. Research by Kalwar et al. (2022) indicates that regular practice, instructor guidance, and code-switching from L2 to L1 are employed by students to overcome difficulties. Martinez (2019) underscores the importance of anxiety-reducing strategies and self-concept management in mitigating language anxiety. Yasuda and Nabei (2018) found preparation, relaxation, positive thinking, peer support, and resignation as effective strategies, with preparation and positive thinking significantly reducing speaking anxiety. Middle-aged learners facing lexical hurdles often turn to various credible sources for support, accessing online materials and seeking help from peers and teachers (Jose, 2016; Shirley, 2019). Furthermore, collaborative efforts between learners and educators, along with the utilization of multiple resources, are crucial for addressing linguistic challenges in adult education (Alharthi, 2016; Arnesen, 2019).

Time management and prioritization prove indispensable for middle-aged learners, enabling efficient task completion amidst numerous responsibilities (Hoo et al., 2022; Rodriguez, 2019). Additionally, self-directed learning strategies empower learners to take charge of their educational journey, setting personal goals, assessing resources, and monitoring progress (Pete, 2016; Margaret, 2020). Moreover, the optimal use of technology, including platforms like YouTube and Google, enhances language learning outcomes (Wang et al., 2020; Ashikin et al., 2022). English language immersion, facilitated by interactions with native speakers and exposure to English media, fosters fluency and confidence (Cochi, 2020; Yusup et al., 2020). Stress management techniques, such as mindfulness exercises and social support, aid in alleviating stress and promoting well-being among learners (Son, 2023; Domingo, 2016). These strategies collectively provide middle-aged learners with the tools and support necessary to navigate the complexities of language acquisition effectively.

Purpose of the Study

This qualitative study multiple case study aimed to describe the experiences, challenges, and coping strategies of middle-aged learners as regards to their learning of English in the local colleges in Davao del Norte. At this stage in research, the language learning of middle-aged learners was defined as the specific process of acquiring, developing, and mastering English language skills among middle-aged learners enrolled in a local community

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

college. This encompasses various aspects of language acquisition, including listening, speaking, reading, and writing, with a focus on English proficiency.

Research Questions

- 1. How do the middle-aged learners describe their experiences in learning English as a Second Language in a local college?
- 2. How do they cope with the challenges of their experience in learning English in local college at 40's?
- 3. What explains the similarities and differences of each case?

METHODS

Research Design

This qualitative study utilized the multiple case study approach. According to Alblooshi (2023), multiple case study approach is very significant in enhancing or ensuring generalizability of the findings, as through this, the researcher can closely study and investigate how the phenomenon is vary or similar across different contexts, settings, situations, or locations. Further, Creswell and Poth (2018) defined multiple case study as a tradition of qualitative research which seeks to delve deeper into the varying realities of a specific phenomenon from the lens and different angles of the unique cases of the participants. The entire endeavor highlights the similarities and differences of all unique cases enjoined in the study, making the in-depth study of the research topic more comprehensive and insightful. Using multiple case study approach in this study granted me the lens to view the unique cases of the participants and gain understanding of the research topic which is the bid for English language learning of middle-aged learners in local college/

Participants

The participants of this study were the five different cases of middle-aged learners in five local colleges in Region XI. They were selected using maximum variation sampling, as it would result in high-quality, detailed descriptions of each case, which are useful for documenting uniqueness and produce important shared patterns that cut across cases and derive their significance from having emerged out of heterogeneity (Patton, 2022). Each case differed in terms of the age, status, and local college institution. The first case is 40-year-old male and single college student. He is a fourth year returning student taking up Bachelor of Agricultural Technology (BAT). The second case is a 47-yearold male and married college student. He is a second-year student taking up Public Administration (BPA). The third one is a 41year-old female college student, still single with no romantic affair or relationship, but is already a mother of three (3). She is a second-year student taking up Bachelor of Science in Agriculture (BSA). The fourth case is a 47-year-old female college student, married and working at the same time. She is a fourth-year student taking up a Bachelor of Science in Business Administration major in Financial Management. And lastly, is a 42-year-old female, married and not-working college student. She is a third-year student taking up Bachelor of Science in Agribusiness (BSAb)

In general, I had the following inclusion criteria. My participants must be a student in a local college in Region XI. They must be at their 40s (aged 40-49). Further, they should be enrolled in a four-year degree courses during the Second Semester of the Academic Year 2023-2024. For the exclusion criteria, this study did not include college students enrolled in a Private, and State Universities and Colleges. Students enrolled in local colleges outside Region XI, and aged below 40 and beyond 49 did not partake in this study.

Procedure

Human participants were party to in this study, since they were the sources of data in this dissertation. Standard protocols were conformed to in this study. The first step was the obtainment of permission to implement the study. This document was gleaned from the Research Ethics Committee (REC) of the University of the Immaculate Conception in consonance with that of the Dean of the Graduate Studies. Simultaneously, the self-made interview guide was subjected to validation procedure which was spearheaded by the panel members who also functioned as expert validators. After this one, an endorsement letter was requested from my dissertation adviser.

The second step was to seek the permission of the concerned Presidents and Administrators of the five local colleges to give due courtesy to the authorities. Five local colleges within the region were randomly selected, and I contacted in advance the VP for Research and the research coordinators thereof to help me look for the study participants that fit my inclusion criteria. The unit of this study involved people, particularly the middle-aged learners, who potentially had experiences and insights on how their challenges and coping strategies became integral in ensuring their success in developing their English skills.

As to the sampling method that was employed in this research, maximum variation sampling was applied, given that I looked for heterogeneous information-rich cases of middle-aged learners for my study. Once I shortlisted the prospect participants for my study, I proceeded to the next step.

For the third step, the participants were given a comprehensive orientation about my study in person and online. Individual orientation was done for confidentiality purposes. I introduced myself to my participants and I was frank with my purpose of inviting each of them. I explained to them the purpose and details of my study. Then, I invited them to take part in this study, having met all the criteria that I was looking for among my prospect participants. Once they initially responded affirmatively to the invitation, the middle-aged college students, their family members, friends and classmates signed the informed consent form as attestation to their voluntary participation. Of course, the participants and informants were given the option to refuse in doing so as well as the options to ask questions. Giving them these options further enhanced the ethical criterion of voluntary participation in this study.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The interviews were scheduled at a time that was mostly convenient for the participants. Face-to-face and online interviews were done with the participants while adhering to health and safety standards. Still, they were afforded with utmost care and freedom to withdraw participation or ask questions while the interview was happening. This one was done to uphold the entitlements of the participants for ethical consideration. Coercion was avoided at all costs, and questions during the interview only focused on the English language learning experiences of the middle-aged learners. Their permission was also asked before the interview was recorded. I explained that the purpose of recording such was to help me recall the vital answers of the participants during the interviews. Moreover, the interviews were kept confidential in consideration to their safety and well-being.

After the interviews, I manually transcribed the responses of my participants during the interviews. Before I subjected the transcribed responses to thematic analysis, I proceeded first to the verification process wherein I went back to the participants and asked their aid to verify the accuracy of the transcripts against the responses that they made in the interview. Once they testified to the accuracy of the transcripts by signing the member checking certificate, the transcripts were subjected to data analysis with the supervision of my designated qualitative data analyst.

Data Analysis

The data from the interviews was subjected to thorough transcription, translation, and data analysis to enable the researcher to understand the complexities of the phenomenon in question. In consonance, Maguire and Delahunt (2017) espoused that one of the methods in analyzing qualitative research data is thematic analysis. This is summarized as the endeavor of identifying, analyzing, and presenting patterns that exist within a large amount of data. The thick, rich, and detailed descriptions of the phenomenon will be unlocked through undergoing this process.

In applying the thematic analysis in this dissertation, the proposed model of Braun and Clarke (2006) was emulated in this context. This one indicated that I adhered to the intricate processes of thematic analysis which include the familiarizing of the data,

formulating the initial codes, identifying the potential themes, double-checking the themes that were generated, deciding on theme labels, and completing the report.

Ethical Considerations

This paper was evaluated thoroughly by the Research Ethics Committee of the University of the Immaculate Conception based on the ten ethical tenets of research: social value; informed consent; vulnerability of the research participants; risks, benefits, and safety; privacy and confidentiality; justice; transparency, qualifications of the researcher; adequacy of facilities; and community involvement. As such, the study was subjected to careful scrutiny to affirm that the ethical principles were strictly applied in the research process at all times to protect human participants, most particularly those who belong in the vulnerable sectors.

RESULTS AND DISCUSSION

Participants' Profile

As depicted in the Table 1, the five cases of outstanding independent readers were differentiated in terms of their demographics and unique aspects. Case-A is a single male in his 40s pursuing a Bachelor of Agricultural Technology. He has no children and is in his 4th year as a returnee student. Case-B, on the other hand, is a married male in his late 40s studying Bachelor of Public Administration. He has a large family with seven children and is a 2nd-year regular student. Case-C is a single parent female in her early 40s enrolled in Bachelor of Science in Agriculture. She juggles her studies with the responsibility of raising three children while in her 2nd year as a regular student. Case-D is a married, working female in her mid-40s pursuing Bachelor of Science in Business Administration - Financial Management. With two children, she manages her education alongside her career and is currently in her 4th year as a regular student. Lastly, Case-E is a married, non-working female in her early 40s studying Bachelor of Science in Agribusiness. With four children, she balances her studies as a 3rd-year regular student. Each individual's unique personality is shaped by their life circumstances, educational goals, and familial responsibilities, reflecting their diverse backgrounds and experiences.

Table 1. Profile of the Participants in In-depth Interviews

| POINT OF SIMILARITIES AND DIFFERENCES | MIDDLE-AGED LEARNER SINGLE MALE (Case-A) | MIDDLE-AGED LEARNER MARRIED MALE (Case-B) | MIDDLE-AGED LEARNER SINGLE PARENT FEMALE (Case-C) | MIDDLE-AGED LEARNER MARRIED WORKING FEMALE (Case-D) | MIDDLE-AGED LEARNER MARRIED NOT WORKING FEMALE (Case-E) |

Presentation of Findings

Experiences. Using Braun and Clarke's (2006) model of thematic analysis: four themes emerged which explained the experiences of outstanding independent readers in relation to their life skills in reading. As shown in Table 2, these themes are:

linguistic barriers in communication, strong resolve towards communicative goals, aspiration for personal and professional growth, speaking and reading engagements, conducive learning environment, and learning challenges.

Table 2. Experiences of Middle-aged Language Learners in Local College

| Table 2. Experiences of Middle-aged Language Learners in Local College | | | |
|--|--|--|--|
| Essential Theme | Core Ideas | | |
| | catching off guard with unfamiliar and obscure words | | |
| | finding it difficult to construct sentences properly | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Learning Challenges

- lacking focus and time due to life responsibilities like balancing time between family, work and school
- having weak memory and thought process as compared during younger years
- struggling with technology, especially in power point presentations
- struggling with using cellphone due to age-related vision problems
- feeling anxious when answering questions in class
- expecting to get embarrassed when reporting, sharing insights, reciting orally, among others.
- having inferiority complex with intelligent classmates in the classroom

Linguistic Barriers in Communication. The participants presented more than one statement connected with linguistic obstacles they encountered in expressing themselves both in written and oral form. Cases A, B, C, D, E had their own stories to tell as to the difficulties they face or experience when using English across diverse communication context. In fact, Case B had this to say:

> I struggled when I enrolled again after graduating in 1993 and returning to college in 2021. I felt like I didn't have any stock knowledge left. However, I tried my best with my studies, even though I was busy. I have dreams for the future; I know I need to keep growing. (P02 RQ1.S1)

Strong Resolves toward Linguistic Resilience and Growth. All five participants revealed that what keep them stimulated in learning English despite their age in college are their perceived attitude, characteristics, and beliefs. Common among them is their determination, positive outlook, and will to exert efforts to learn English. In other words, they have their respective strong resolve towards their communicative goals - that is to improve English skills. Case D gladly remarked that she strives communicative goals by being courageous to face criticisms and comments of others. In detail she said:

> Many people may comment or say things about why I chose to go to school, but I simply don't pay attention to them. I just strive hard because I really need to finish my studies and develop my English skills. If I don't go to school, I won't know anything, I'll fall behind, and I'll feel very helpless. (P04_RQ1.S2)

Aspiration for Personal and Professional Growth. The participants have common motivations and inspirations that encourage them to learn English at this stage of their life. Accordingly, they are making efforts and sacrifices to learn English because they wanted to achieve significant change and development in the personal and professional aspects of their life. Case E confirmed this by emphasizing:

It's really important. I was motivated to learn English because it's extensively used in job applications, understanding instructions, and answering questions. (P05_RQ1.S3)

Varied ESL Engagements. All participants value this as an essential opportunity to engage to learn English especially on the development of vocabulary and oral communication skills. Accordingly, joining and participating in classroom and school activities like oral recitation, reporting, literary contests such as oration and extemporaneous, and seminars and training help improve speaking skills. Meanwhile, having wide exposure to English reading materials like books and modules, and dictionaries develop to enrich vocabulary and unfamiliar words. Case B demonstrated his exposure by engaging into oral reporting, and shared:

> I'll never forget that time during the reporting. It was a great opportunity for me to practice my speaking skills. Using a laptop to prepare for my reports was crucial. We needed to answer questions about our reports, study them, and then immediately develop our comprehension and understanding in English. I also asked for help from my classmates since they had laptops. Additionally, the method used by our teacher to require us to report in English also helped in developing our English-speaking skills. (P02_RQ1.S4)

Multifaceted Support System. With no hesitations, the participants shared their respective experiences as regards to the impact of their environment on their bid for language learning. All of them have similar responses and revealed that the school through its competent teachers, facility, and classmates, home, and exposure to technology help them a lot in their pursuit of communication skills. Combination of these elements constitutes a conducive learning environment for middle-aged learners in college. Case A, for instance, conveyed:

The school has been a great help to me, especially with their English learning system. The teachers effectively implement the curriculum, ensuring students understand the lessons well. School activities such as intramurals and organizational events like literary competitions also contribute significantly. As a leader in our organization, even though we may not be participants, we still learn because we supervise them during practice and rehearsals. We observe and apply the techniques they use to deliver presentations effectively in English. Additionally, the school facilities have also been immensely helpful. (P01_RQ1.S6)

Learning Challenges. These five middle-aged learners in local colleges have experienced challenges and drawbacks that tested their will and determination to pursue learning English. They have encountered a multitude of challenges when it comes to balancing their time between home and school obligations. Juggling household tasks alongside academic responsibilities proved to be a daunting task for them. Furthermore, they all grappled with cognitive and memory issues, making it

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

challenging to comprehend intricate English concepts and retain the information provided in their studies. This struggle often resulted in frustration and feelings of inadequacy. Moreover, the fear of committing linguistic errors added an additional layer of anxiety for them. They worried about not being able to articulate their thoughts effectively or convey their ideas accurately due to language barriers, which hindered their confidence in participating in class discussions or expressing their opinions freely. This language anxiety further exacerbated their learning experience, making it even more challenging to overcome their academic hurdles. Case C emotionally stated her struggles and said:

> Balancing my time between my children and my studies is a significant challenge. I struggle with providing for my children's needs as a single parent. Although I receive income from our farm on weekends, making a living is still incredibly difficult. Another challenge is the ease of forgetting things, especially as one gets older. The sacrifices I make are truly significant. On weekdays, I stay in a boarding house for school, and then on Fridays, I return home to take care of my sibling's child as a sideline to earn money, which I then use to provide for my children's school expenses. Usually, I spend my

Sundays doing laundry for my children's clothes because I study during weekdays. Life is challenging, and managing time effectively is crucial. I also struggle with making PowerPoint presentations for reports and research. It's a challenge, especially considering our age. Finally, there are times when I feel afraid to speak in case my English gets mixed up or I make mistakes. I get embarrassed or anxious in front of my classmates, especially those who are really good at English. I worry that they might bully me or laugh at me if I make mistakes in my responses or if my grammar is wrong. (P03 RQ1.S7)

Coping Strategies. Meanwhile, the coping strategies of middleaged learners in association to their learning of English in Local Community Colleges were also unveiled in this study. As shown in Table 3, four emerging themes were presented: reliance on reputable sources; time management and prioritization; selfdirected learning strategies; social support system, optimal use of technology, English language immersion, and stress management techniques.

Table 3. Coping Strategies on the Challenges of Middle-aged Learners in Local Colleges

| Essential | Core Ideas on Coping | Challenges |
|---|--|--|
| Theme | | |
| Reliance on | brainstorming with classmates asking questions to smart and fast learners' classmates searching and optimizing internet connection to identify and understand meanings looking up in the dictionary | Linguistic Perplexities |
| Reputable Sources | conducting research in the library consulting an expert co-worker to clarify teachers' inputs internalizing in oneself to understand difficult concept asking for clarification to instructors | Instructor's ambiguous inputs |
| Self-directed Learning Strategies | going to the library to search for meaning practicing to gain confidence in expressing ideas listening attentively to the teacher's explanation reading a lot to understand deeply what has been read, and for retention Self-directed Learning inquiring from classmates to catch up missed lessons and reminders | |
| | having supportive friends and classmates when struggling with school tasks | Hefty academic workloads |
| Social Support System | having immediate family for encouragement, moral and financial support seeking help from expert relatives, and co-workers, having competent and approachable instructors when struggling with | Stressful moments and frustration Communication |
| | speech, written outputs, in grammar, pronunciation • seeking assistance from daughter in college on techniques and methods to present report in English | Oversights |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Optimal Use of | watching commercials, TV shows, and news to update and enhance vocabulary following educational vlogs in Facebook to cultivate English skills using Grammarly to check grammatical errors using ChatGPT to gather information and explanation searching in Google, YouTube for English topics and lessons | | |
|-----------------------------------|--|---|--|
| Technology | • using social media for communication with friends and classmates to catch up missed lessons | Absence in class | |
| | observing and learning to make PowerPoint presentations from classmates seeking assistance from family to use LMS like google meet and google classroom | Lack of technology literacy skills | |
| English Language Immersion | exposure to public, such as hosting events using English in conversation at home using English in daily life practices like going other places having friends and classmates to practice communication skills communicating constantly with foreigners to develop speaking and writing skills conducting interviews using English in Agricultural extension subject | Lack of communicative competence | |
| | taking a rest and sleep setting mind to relax participating in leisure activities from the office to unwind | Excessive paper works | |
| Stress Management Technique | seeking Divine Providence through prayer bonding with my friends remaining steadfast to overcome challenges surpassing moment of downfall through positive mindset joking and employing entertaining technique to ease nervousness | Frustrations, self-doubts, and language anxiety | |

Reliance on Reputable Sources. In some circumstances, the participants offered many statements related to coping with a linguistic perplexity, and their instructors' ambiguous inputs. Cases A, B, C, D, and E each used their unique coping mechanisms to overcome this obstacle while still pursuing their studies as middle-aged learners in College. Case D, for instance, stated:

> I felt stressed during the explanation by the teacher, and no matter how hard I tried, I couldn't understand. So, what I did was I researched at home. Then, when I was assigned to create a letter by my colleague at work, I felt overwhelmed, and my head was spinning. It took me half a day to complete the letter because I didn't know where to start. What I did was, I read through it and searched on Google. Finally, I had it checked by my expert co-worker especially when I need clarification on the teachers' inputs in English. (P04_RQ2.S1)

Self-directed Learning Strategies. When dealing with cognitive setbacks like being confronted with difficult lessons, topics, and concepts in English, they resorted to their specific self-directed strategies such as going to library to search for meaning, listening attentively to teachers' explanation, reading a lot, listing down unfamiliar words, making further inquiry on classmates, and gaining confidence before speaking through practice. Case A illustrates this by putting emphasis on the following:

I found ways to learn how to read. If I have difficulty understanding a story. I always make an effort to find ways to help myself. I do not give up immediately because I believe there is always a way. (P02_CQ2.S2)

Social Support System. All the participants considered this to be an important takeaway that they use in handling hefty academic workloads, stressful moments, frustration, and communication oversights. As can be seen in the table, there are five core ideas developed in relation to the social support system as theme of the coping strategy that each participant used in hurdling these challenges in language learning journey. As disclosed in the result, these five cases have established common support network such as having supportive friends and classmates, competent instructors, and immediate family who provided the much-needed support when they are confronted with psychological issues, overloaded works, difficulties in both oral and written communication. Case C passionately stated the following in this resource regarding his coping schemes employed to communication problems, as well as anxiety and frustration:

My instructors, even though they're younger than me, have been incredibly supportive. They really push me, especially during moments when I feel hopeless about learning or when I struggle with English. They encourage me to keep fighting. I truly see the help from my relatives, classmates, and friends because of them. They give me the confidence

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and motivation to learn. Whenever I encounter difficulties in storytelling, writing, grammar, or pronunciation, they are always there to help and guide me. (P03 RQ2.S2)

Optimal Use of Technology. They learn to take advantage on the benefits of technology to their language learning journey in the most optimum way. As coping to deal with grammatical deficiencies, they watch commercials, TV shows and news, follow and obtain relevant inputs from Vlogs, and search in Google and YouTube for English topics. What resonated me most is their disclosure on their usage of Artificial Intelligence like Grammarly and ChatGPT to organize sentence structure and gather significant and immediate information and explanation on ambiguous or complicated linguistic inputs emanated from the class. Further, due to overlapping schedules and family emergencies, they could not attend classes, and to catch up on missed lessons, they communicated with their classmates through their group chat in messenger. Case A elaborated:

> Commercials, TV shows, and news have also helped update and enhance my vocabulary. In terms of technology. I use apps like Grammarly to check my grammar, and I also use ChatGPT. It's very easy to use just one instruction and the information or explanation is provided right away. However, I don't just copy and paste; I still read through the responses. I simply use it to get ideas. (P01_RQ2.S6)

English Language Immersion. As presented in the table, the participants extensively engage in public events, enhancing their language skills and cultural exposure. This immersion extends to home environments, where English conversations become commonplace, fostering proficiency and a supportive learning atmosphere. Additionally, individuals integrate English seamlessly into daily life practices, such as navigating various settings and interacting with English-speaking communities, promoting practical language application and fluency. Social interactions with friends and classmates serve as pivotal platforms for honing communication skills and language proficiency in diverse contexts. Moreover, constant communication with foreigners proves invaluable in refining speaking and writing abilities, contributing significantly to their overall language development. Lastly, one participant gains practical experience by conducting interviews in English for agricultural extension subjects, reinforcing language learning within vocational settings. Case D shared her experience and how she took her daily communication with foreigner shapes her communication progress. She said:

I also use English, especially when I go to different places. The things I've learned from school really come in handy when interacting with people. Also, continuously communicating with foreigners has significantly helped in developing my English speaking and writing skills. (P03_RQ2.S8)

Stress Management Techniques. This theme was explored through a study with several core ideas emerging as effective

strategies for dealing with excessive paper works, frustrations, self-doubts, and language anxiety. One participant reported utilizing a variety of techniques to manage excessive workloads, including taking breaks and prioritizing rest and sleep, found solace in setting minds to relax, and engaging in leisure activities outside the office to unwind. In addition, seeking Divine Providence through prayer was also a prevalent coping mechanism among participants, spanning across multiple cases. Social support proved invaluable, with bonding activities with friends identified as a source of comfort and relief. Remaining steadfast in the face of challenges and maintaining a positive mindset were highlighted as crucial factors in overcoming moments of downfall and self-doubt of the two participants. Lastly, employing humor and entertaining techniques to ease nervousness emerged as effective strategies to alleviate language anxiety. Case D, in detail shared that:

I balanced my time between my child, our household chores, and school. It was really exhausting, and there were moments when my body felt like giving up. When I was too tired, I just lay down. I set my mind to relax. Sometimes, we would go out for leisure at the office. Of course, managing my work, school, and household responsibilities remained a priority. (P04_RQ2.S2)

Similarities and Differences. As part of the cross-case analysis, similarities and differences among cases are analyzed in the context of English language learning of middle-aged learners. It can be generally inferred that although most of the cases were similar, there are also notable differences of their experiences and challenges identified in this study. As depicted in Table 4, Cases A, C, and D struggle in understanding unfamiliar and technical words; B and E struggle in pronunciation; case B has grammar difficulties; case D was challenged on writing communication letters due to technical terminologies; and case E is problematic in spelling. Cases A, B, and E manifested strong determination to learn English; Case C communicates English to build interpersonal relationships; and Case D strives for communicative goals by facing comments and criticisms courageously. Further, Case B, C, and E learn English for personal growth, while A and D learn English for professional development. It is also noted that all participants shared the same reading and speaking engagements and deemed a conducive learning environment as factor in learning and developing English skills. They also shared the same learning challenges, however, case D has never experienced trouble in technology adaptation due to her exposure at it at her workplace.

In the aspect of coping schemes, although all cases seek clarification through the internet, dictionary and teachers, case A, C, D, and E used to brainstorm with classmates when faced with linguistic perplexities. D and E ask questions with smart classmates, cases A and D do internalization, and D consults expert colleague to clarify ambiguities. It is also revealed that all cases have distinct ways of dealing conflicting schedules and overlapping responsibilities. Meanwhile, case A, B and go to the library to quench ambiguous English concepts; case C reads a lot

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

to deal cognitive setbacks; case D listens attentively to teacher's inputs; and case E practices her materials to gain confidence in expression ideas. Additionally, all participants converged in deeming friends and family as their social support system in learning English. However, differences are apparent in the use of technology, although all of them search in Google and YouTube to address grammar issues, case A used Grammarly and watches commercials, TV shows and news to enhance vocabulary; case B maximizes social media to catch up lessons; case C observes classmates and learns to make PPT presentation; case D follow educational vlogs; and case E seeks family's assistance to navigate LMS. It is also evident that all participants immersed themselves in English thru practice and use of English at home. Lastly, case C, D, and E pray to ease stress; while case A bonds with friends, case C jokes and employ entertaining techniques, and case D takes rest and relaxation to ease stress, frustrations and anxiety.

Table 4. Similarities and Differences of Experiences and Coping Strategies of Outstanding Independent Readers in Secondary Schools

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Implications

The experiences and coping strategies shared by the middle-aged language learners in Local Community Colleges in Davao del Norte offer a balanced and intricate view of implications for the teaching practice. This sheds light on how educators, academicians, and the institutions at large can effectively extend support to this demographic. By adopting strategies such as reliance on reputable sources, time management and prioritization, self-directed learning, etc., middle-aged learners can effectively navigate the challenges prevailing in the process of learning and acquiring English as a second language, while balancing other responsibilities and commitments as family member and worker. These strategies will help learners to stay focused and abreast on their goals and manage their studies alongside their personal and professional obligations and aspirations.

One of the vital approaches to sustaining learners of middle age is providing access to relevant resources and boosting technology skills. This appears necessary because not only do the valuable materials need to be sorted but also the use of electronic devices require guidance on navigating them for language learning and practice. Overall, raising awareness with reference to the significance of digital skills can assist learners in making full use of the range of their options. As a result, they will feel more capable and effective in pursuing language goals.

Further, the role of a supportive social network cannot be disregarded and understated L2 journey, as it offers middle-aged learners with a relevant opportunity for encouragement and meaningful practice. Whether through teachers, peers, family members, or language communities, this linkage fosters a collaborative learning environment that promotes language builds confidence proficiency and in multicultural communication setting. Engaging also with others facilitates middle-aged learners to gain insights into cultural nuances and context and tailor one's communication that demonstrates utmost respect and understanding towards each other's diverse nature and culture.

Stress management techniques, as evident in the study, are essential tools for middle-aged learners to maintain and sustain focus and productivity amidst the complexities of overlapping responsibilities and conflicting schedules. As such, educators must provide authentic resources and necessary guidance on managing learners' stress so that they will be able to maintain a healthy disposition as anxiety associated with language learning is significantly reduced or lessened. By prioritizing well-being, these types of learners are better equipped to succeed in their respective studies.

The relevant findings and results of this study suggest the need for a quantitative research approaches to explore and look into further details the various themes, which can serve as variables in a survey questionnaire instrument to better understand the learning experiences and coping strategies of middle-aged learners. With the specific emerging themes, future research could assess how these coping strategies vary across different settings and contexts, such as in online language courses, community-based programs, or in workplace-based learning. This would surely help uncover how situational and environmental factors may impact the experiences and coping strategies of this demographic. Furthermore, this study paves way for opportunities to expand the scope of research participants and include other groups of middle-aged learners across diverse cultural and linguistic frame of references and backgrounds. This larger perspective could possibly lead to valuable insights into the universal and context-specific factors that significantly influence the learning experiences and coping strategies of middle-aged learners pursuing learning in English as Second language.

CONCLUSIONS

The experiences and coping mechanisms of middle-aged learners in local community colleges present both the challenges and successes of their English language learning journey. While facing setbacks, many of them have adopted specific measures that are appropriate to their respective characteristics and preferences. This study allowed me to gain a fuller insight into their experiences, leading to a deeper understanding of the complexity of language acquisition process for individuals aged 40s. This type of research is challenging; however, it was rewarding as it has revealed significant experiences, challenges and coping schemes that everyone across ages must reflect and leverage to navigate English language learning journey successfully. I realized that strong will and determination, coupled with the initiatives to utilize available resources effectively, supportive social system, and above all the providence of God as potent stress technique to manage frustrations and anxieties, nothing is impossible to achieve. Learning English knows no age and boundaries. We just have to pursue what we aspire for so we can achieve our communicative goals and savor the benefits it could offer us wherever we are, and whoever interlocutors we are dealing with the use of English for various purposes.

ABSTRACT

Toothpaste is a widely used product for oral hygiene, commonly employed for teeth and mouth cleaning, as well as for treating various dental disorders. Dentists often recommend toothpaste for addressing issues like sensitivity and chronic gingivitis. Herbal toothpastes harness the antibacterial and antimicrobial properties of different herbal extracts from crude drugs. These formulations utilize a variety of herbs and bark, among others. Evaluation of herbal toothpastes involves multiple tests including physical examination, relative density, abrasiveness, spreadability determination, pH determination, homogeneity, foaming, stability, moisture and volatile matter determination, moisture content, foaming character, and organoleptic evaluation, among others. This research aims to consolidate on herbal toothpaste, covering its introduction, various formulations, and evaluation parameters, facilitating researchers interested in exploring this area further.

KEYWORDS: *Neem, Toothpaste, Clove, Herbal Toothpaste etc.*

INTRODUCTION

Toothpaste is the most common preventive measure in oral health care, serving as a vital component in maintaining oral hygiene. Many commercially available dentifrices claim to have antimicrobial properties, but there is limited research to validate these claims. This study aimed to evaluate the efficacy of different toothpaste formulations in reducing oral microbial load. The findings indicated that the selected toothpaste formulations were effective in controlling microbial load, thereby contributing to good oral hygiene. However, practicing appropriate oral hygiene measures and brushing techniques is crucial for maintaining oral health, potentially more so than the specific ingredients in the toothpaste.

Chronic gingivitis, one of the most prevalent oral diseases globally, is primarily caused by dental plaque. While mechanical methods, such as brushing and flossing, are essential for plaque removal, their limitations necessitate supplementary measures. The inclusion of safe and effective antimicrobial agents in toothpaste is considered a beneficial adjunct to mechanical plaque control. Research has demonstrated that certain chemicals, such as chlorhexidine and triclosan, can be added to toothpaste to inhibit plaque formation directly.

Various chemical agents have been incorporated into toothpastes and mouth rinses, with some showing efficacy in reducing dental plaque formation. With increasing awareness of indigenous medical practices, there has been a growing interest in herbal medicine and alternative therapies for health care promotion. Herbal toothpastes, which do not contain synthetic agents like triclosan or fluoride, often use natural

ingredients such as mineral salts (e.g., sodium fluoride and sodium chloride) and plant extracts like lemon, eucalyptus, rosemary, chamomile, sage, and myrrh.

The primary purpose of toothpaste is to reduce oral bacterial flora and deliver fluoride to the teeth, as fluoride is proven to protect teeth against bacterial attacks. Fluoride occurs naturally in many foods and drinking water. Effective toothpastes that reduce oral bacterial flora significantly contribute to dental health. For instance, triclosan is frequently used in toothpaste for its antibacterial properties to prevent gum disease, while sodium fluoride also possesses antibacterial qualities.

Natural toothpastes, which exclude synthetic ingredients like triclosan and fluoride, aim to offer similar benefits through natural compounds. They typically contain minerals and plant extracts that have antibacterial and anti-inflammatory properties.

Despite the benefits of chemical agents, self-performed mechanical plaque removal remains the most widely accepted method of controlling plaque and gingivitis. Mechanical plaque control is time-consuming, and many individuals may lack the motivation for these procedures. Therefore, integrating effective chemical agents in toothpastes can enhance plaque control and support overall oral health.

Plants with therapeutic effects have been beneficial to oral health for thousands of years across the world. Traditional medicine often has more advantages and fewer side effects, such as allergies, compared to modern treatments. Neem is one of the most widely researched tropical trees for its therapeutic properties. Approximately 20 years ago, the components of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

neem extract were analyzed for their medicinal value. Chewing sticks, including those made from neem, have been used in the Indian subcontinent, the Middle East, and Africa since ancient times.

Dental caries is steadily increasing in underdeveloped and developing countries, creating an urgent need to promote traditional preventive measures that are accessible, readily available, and cost-effective. Neem has been recognized for its antibacterial activity since ancient times. It has been used for various purposes, including as an astringent, antiseptic, insecticidal agent, anti-ulcer treatment, and for cleaning teeth affected by pyorrhea and other dental diseases. Neem leaf extract has demonstrated superior antiviral and antihyperglycemic activity in vitro and in vivo on animals. It also shows broad-spectrum antibacterial activity in vitro.

Nanotechnology, which involves creating materials, drugs, and devices that manipulate matter at specific sizes to enhance drug targeting, is being explored to improve the efficacy of herbal medicines. Developing nano-materials from herbal extracts can enhance their action and benefits.

In this comparative study, the focus is on the difference between food debris and dental plaque. Food debris consists of small white particles on teeth that can be easily rinsed off, while dental plaque is a thin, yellowish film of bacteria that adheres to teeth and cannot be rinsed off. There is a close relationship between tartar, calculus, and periodontal disease. Various natural extracts are used in different categories, such as neem for antibacterial purposes, guava for anti-inflammatory effects, babul as an astringent, kalmi as a flavoring agent, and other ingredients like camphor (antiseptic), honey (sweetening agent), glycerine (humectant), calcium carbonate (abrasive), SLS (detergent), sodium chloride, and distilled water. This has led to increased attention on using natural ingredients in herbal dentifrices.

Toothpaste is the most common preventive approach in oral health care. Many commercially available dentifrices claim to have antimicrobial properties, but little research has been conducted to investigate these claims. It is well understood that more than 2000 years ago, dentifrices were used for cleaning teeth, and the use of toothpicks and brushes dates back even further. Today's dentifrices follow many of the same concepts developed centuries ago. The use of natural or Ayurvedic medicines for general and oral health is an integral part of Indian tradition. Many Ayurvedic toothpastes available in the market claim to have excellent antimicrobial properties.

While toothpastes are used almost universally in the developed world, some groups and cultures still practice traditional tooth brushing without dentifrice, using items like miswak or salt. Although dentifrices have been used since antiquity, recent formulations aim to deliver active compounds that prevent and/or treat oral diseases. The history of toothpastes is extensively reviewed elsewhere.

Neem possesses antibacterial, anti-inflammatory, and anticaries properties. Its antimicrobial effects have been reported against Streptococcus mutans and Streptococcus faecalis. Dried neem chewing sticks show significant antibacterial activity against S. mutans. However, limited research is available regarding the efficacy of natural dentifrices. Therefore, this study was undertaken to evaluate their impact on oral hygiene and gingival bleeding.

Toothpaste not only protects, cleans, and polishes teeth but also enhances oral hygiene efficiency. It has a pleasant flavor and smell and freshens breath. Brushing twice a day with toothpaste is crucial for maintaining a healthy mouth. The major goal of this research is to formulate and evaluate herbal toothpaste. Toothpaste is typically used by all individuals for cleaning teeth and mouth and is also used to treat many dental issues.

IDEAL PROPERTIES OF TOOTHPASTE

Non-Harmful to Oral Tissues

The toothpaste should be gentle on the gums, tongue, and other oral tissues, preventing irritation or damage.

Non-Staining

It should not cause any discoloration of the teeth, ensuring the natural whiteness is maintained.

Non-Abrasive to Enamel

The formulation should be non-scratching and safe for the enamel surface of the teeth, preventing erosion and sensitivity.

Safe if Ingested

If accidentally swallowed, the toothpaste should not cause harm to the gastrointestinal tract (GIT).

Pleasant Odor and Taste

- It should have a pleasant flavor and smell, making the brushing experience enjoyable.
- Free from Unnatural Chemicals
- Ideally, the toothpaste should not contain artificial chemicals, dyes, flavors, or preservatives, reducing the risk of adverse reactions.

Natural Ingredients Only

The formulation should be made exclusively with natural ingredients to ensure safety and environmental friendliness.

No Growth Hormones, Chemicals, or Pesticides

Ingredients should be free from growth hormones, chemicals, or pesticides to ensure purity and health safety.

Benefits of Toothpaste

Combat Dental Issues

Toothpaste helps prevent dental caries, gum disease, bad breath, calculus buildup, erosion, and dentin hypersensitivity.

Abrasives for Cleaning and Whitening

Contains mild abrasives to effectively clean teeth and remove surface stains, resulting in whiter teeth.

Flavour for Fresh Breath

Includes flavors that help freshen breath, providing a pleasant aftertaste.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Visual Appeal

- Dyes are used to give the toothpaste a visually appealing color, enhancing user experience.
- Enamel Strengthening.
- Helps to remineralize and strengthen enamel that has been weakened by acids, protecting against decay.

Germ-Killing Properties

Contains antibacterial agents to kill germs and prevent infections, promoting overall oral health.

Active Ingredient Delivery

Delivers active ingredients effectively to help prevent various dental diseases, ensuring targeted oral care.

Relieves Toothache

Certain formulations can provide relief from toothache, reducing discomfort.

Cavity Prevention and Fresh Breath

- Fights against cavities and maintains fresh breath, essential for daily oral hygiene.
- Intrinsic Stain Removal
- Helps in removing intrinsic stains from teeth, restoring natural color.

Bacteria Removal

Effective in removing harmful bacteria from the oral cavity, reducing the risk of infections.

Anti-Inflammatory Effects

Shows anti-inflammatory effects on gums, reducing swelling and redness.

Advantages of Using Toothpaste Ensures Safe Teeth Cleaning

Provides effective cleaning of teeth without causing harm to the oral tissues or enamel, ensuring a thorough yet gentle cleaning experience.

Calms Throbbing Pain in Gums

Contains soothing agents that can alleviate gum pain and inflammation, providing relief from discomfort.

Removes Stains Without Damaging Enamel

Formulated with mild abrasives that effectively remove surface stains while preserving the integrity of the enamel, helping to maintain a bright smile.

Freshens Your Breath

Includes ingredients that neutralize bad odors, leaving the mouth feeling fresh and clean.

Safe for Children

Specially designed to be safe if ingested, making it an excellent choice for young children who might accidentally swallow toothpaste.

Stronger Enamel and Better Protection Against Tooth Decay

Enriched with fluoride and other minerals that strengthen enamel, providing enhanced protection against cavities and tooth decay.

No Risk to Children's Health if Swallowed

Represents a safe alternative to ordinary toothpaste for children, reducing concerns about accidental ingestion.

Disadvantages of Using Toothpaste

- Ineffective at Removing Major Stains
- While it can handle minor discoloration, toothpaste alone is not sufficient for major stains; professional whitening services may be required for more significant results.

Increased Salivation

Some formulations may stimulate increased salivation, which can be uncomfortable for some users.

Potential Enamel Erosion

Overuse of certain abrasive toothpastes can gradually wear down the enamel, leading to enamel erosion over time.

Dentin Abrasion and Increased Tooth Sensitivity

If the toothpaste is too abrasive, it can cause dentin abrasion, which exposes the sensitive inner layers of the teeth, leading to increased sensitivity and discomfort.

Applications of Toothpaste

Perfume Your Palms

Eliminate Strong Odors: Cutting onions, cleaning fish, or handling garlic can leave strong odors on your hands. Wash them with toothpaste to effectively remove these smells.

Clean you're Jewellery

Polish Metal Jewellery: Use a soft toothbrush with a small amount of toothpaste to brush dull metal jewellery. Rinse and polish it with a soft cloth to restore its shine. For more tarnished pieces, soak the metal in a cup of water with dissolved toothpaste.

Caution for Pearls: Avoid using toothpaste on pearls as it can damage their delicate surface.

Remove Crayon Marks from Painted Walls

Wipe with Toothpaste: Put a dab of toothpaste on a damp sponge and gently wipe crayon marks off painted walls without damaging the paint.

Defog Goggles

Prevent Fogging: The mild abrasives in toothpaste can help prevent goggles and masks from fogging up. Lightly rub toothpaste inside a diving mask, motorcycle goggles, or a hockey helmet face guard. Wipe and rinse the surface clean.

Caution for Coatings: Be aware that toothpaste may remove special coatings like anti-glare treatments, so use it cautiously.

Clear Pimples

Overnight Treatment: Dab a small amount of toothpaste on pimples before bed. In the morning, wash your face clean. This

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

method can also work for bug bites and bee stings—just ensure you remove the stinger first. The toothpaste will dry out and reduce the size of the blemishes.

MATERIAL AND METHODS

The materials utilized in the experiment were of pharmaceutical grade or the highest quality laboratory reagents, directly obtained from the manufacturer. Throughout the experiment, double-distilled water served as the solvent. The list of materials used included various substances categorized according to their respective functions. Firstly, Neem, recognized as the active ingredient, played a pivotal role in the experiment's formulation. Clove, serving as a flavouring agent, added a distinct taste to the final product. Dicalcium phosphate functioned as a leavening agent, contributing to the texture and consistency of the formulation. Calcium carbonate acted as an oxidation agent, influencing the chemical reactions within the experiment. Glycerine served as a moisturizing agent, ensuring the product's smooth and hydrating properties. Gum Tragacanth was utilized as an emulsifier, aiding in the uniform distribution of ingredients. Saccharin, a sweetening agent, provided a pleasant taste without adding calories. Finally, sodium lauryl sulphate functioned as an additional emulsifier, enhancing the stability and consistency of the formulation throughout the experiment. Each material played a crucial role in achieving the desired characteristics and properties of the final product.

Neem and Clove were acquired from the local market for the experiment. Additionally, a range of chemical reagents were employed in the study, including Dicalcium Phosphate, Calcium Carbonate, Glycerine, Gum Tragacanth, Saccharin, and Sodium Lauryl Sulphate.

DRUG PROFILES

Neem Powder (Azadirachta indica)

Neem's health-promoting effects are largely attributed to its rich antioxidant content, making it a valuable resource in traditional medicinal practices such as Chinese, Ayurvedic, and Unani medicine, particularly prevalent in the Indian subcontinent. Neem has been extensively utilized for the treatment and prevention of various diseases. Previous research has confirmed that both Neem and its constituents play a crucial role in scavenging free radicals and inhibiting disease pathogens.

Studies conducted on animal models have further demonstrated the pivotal role of Neem and its primary constituents in anticancer management. Through the modulation of various molecular pathways, Neem exhibits promising potential in combating cancer. Importantly, Neem is considered a safe medicinal plant that modulates numerous biological processes without adverse effects.

Furthermore, Neem showcases a wide array of biological and pharmacological activities, including antibacterial, antifungal, and anti-inflammatory properties. Its versatility in targeting multiple biological pathways underscores its significance as a therapeutic agent in traditional medicine systems and highlights its potential for modern medical applications.

On the other hand, Neem powder, derived from the Azadirachta indica tree, offers remarkable benefits for oral health. Despite its bitter taste, Neem is highly regarded for its antibacterial and anti-inflammatory properties. These properties make it an excellent aid in oral hygiene, as it can effectively clean teeth and reduce plaque buildup over time. By targeting harmful bacteria and reducing inflammation in the oral cavity, Neem powder contributes to maintaining overall dental health. Its natural composition makes it a preferred choice for individuals seeking alternative and holistic approaches to oral care.

Clove oil (SyzygiumAromaticum)

Clove oil, derived from the *Syzygium aromaticum* plant, holds significant pharmacological importance beyond its culinary and aromatic applications. This essential oil contains eugenol, a potent phytochemical renowned for its analgesic properties. In South Korea and India, eugenol extracted from clove oil is traditionally utilized to alleviate toothaches. When applied topically to a cavity in a decayed tooth or a post-extraction socket, clove oil or eugenol can provide temporary relief from dental pain. However, in the United States, the FDA (Food and Drug Administration) has questioned the effectiveness of eugenol in treating dental pain, leading to the downgrading of clove oil's status as an analgesic due to insufficient evidence supporting its efficacy.

Clove oil contains several important phytochemicals, with eugenyl acetate, eugenol, and β -caryophyllene being the most significant. These compounds are not only responsible for the distinct aroma and flavor of clove oil but also possess notable pharmacological properties. Pharmacologically, Syzygium aromaticum, the plant from which clove oil is derived, has been extensively studied for its effects on various pathogenic parasites and microorganisms. These include pathogenic bacteria, Plasmodium, Babesia, and Theileria parasites, as well as viruses such as Herpes simplex and hepatitis C.

Eugenyl acetate, eugenol, and β -caryophyllene exhibit diverse pharmacological activities, including antimicrobial, antiparasitic, and antiviral effects. They have been investigated for their potential therapeutic applications in combating infectious diseases caused by bacteria, parasites, and viruses. Additionally, studies have explored their mechanisms of action and interactions with target pathogens.

Moreover, the physicochemical properties of clove oil, such as color, specific gravity, refractive index, optical rotation, and solubility in ethanol, are also important considerations in pharmacological research. Understanding these properties aids in the characterization and standardization of clove oil formulations for medicinal use. Specifically, the concentrations of eugenol and β -caryophyllene in clove oil are crucial factors determining its pharmacological potency and effectiveness against various pathogens.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Figure 1: Clove

Dicalcium phosphate (DCP)

Dicalcium phosphate (DCP) is a widely used calcium supplement in the food and pharmaceutical sectors, boasting a range of properties and applications. Comprised of calcium ions and phosphate ions, DCP is minimally soluble in water and typically displays a neutral to slightly basic pH. Its appearance as a fine white powder underscores its versatility in various formulations. Serving as a concentrated calcium source, DCP offers high bioavailability, supporting bone health and other physiological functions. Its stability and compatibility with other ingredients make it suitable for diverse applications, including as a food additive to fortify dairy, baked goods, and beverages, as well as a pharmaceutical excipient in tablet formulations. Additionally, DCP is integral to dietary supplements, animal feed for livestock and poultry, and industrial processes such as water treatment and ceramics manufacturing, showcasing its multifaceted role in promoting nutrition, health, and industrial efficiency.

Calcium carbonate (CaCO₃)

Calcium carbonate (CaCO₃) is a compound comprising calcium, carbon, and oxygen. It appears as a white powder or colourless crystals and is sparingly soluble in water. With a pH greater than 7, it is basic in nature. Calcium carbonate serves as a significant source of calcium ions, crucial for various physiological functions. Its applications span across multiple industries: in pharmaceuticals, it acts as an antacid; in food and beverages, it fortifies products and serves as a colouring agent; in construction, it enhances the strength of materials; in papermaking, it improves paper quality; in cosmetics, it functions as a bulking agent; and in agriculture, it amends soil and promotes plant growth. Overall, calcium carbonate's versatility and broad applications make it indispensable across numerous sectors.

Sodium lauryl sulfate (SLS)

Sodium lauryl sulfate (SLS) is a versatile synthetic detergent and surfactant widely employed in personal care and household products for its multifaceted properties. It acts as a surfactant, reducing liquid surface tension, making it efficient in removing dirt and grease. With its foaming capabilities, it's a common ingredient in soaps and shampoos, aiding in ingredient dispersion. SLS's emulsifying function stabilizes water and oil

mixtures in cosmetic products. Additionally, it serves as a penetration enhancer in skincare items, allowing active ingredients to penetrate the skin more effectively. Its mild antimicrobial properties extend the shelf life of personal care products. SLS is utilized in various sectors, from personal care products to household cleaners and industrial processes, owing to its versatility. However, it's crucial to be mindful of potential skin irritation, particularly in high concentrations. Therefore, moderation is advised, especially in sensitive areas.

Gum Tragacanth

Gum Tragacanth, derived from the dried sap of Astragalus species, is a complex polysaccharide mixture, primarily composed of tragacanthin and bassorin. Its hydrocolloid nature enables it to absorb and retain water, forming a gel-like consistency, while its high viscosity and thixotropic behavior make it an effective thickening agent. With good stability across temperatures and pH levels, Gum Tragacanth is used in diverse formulations. It also exhibits film-forming and emulsifying properties, making it valuable in industries ranging from food and pharmaceuticals to cosmetics and textiles. Recognized as safe for consumption and biodegradable, it finds applications in art conservation, veterinary medicine, and traditional medicine for gastrointestinal discomfort relief. Overall, Gum Tragacanth's versatility enhances the texture, stability, and performance of various products across industries.

Method of Formulation for Toothpaste Dry Gum Method:

Preparation of Base:

- Solid ingredients such as dicalcium phosphate, calcium carbonate, SLS (Sodium Lauryl Sulfate), sodium saccharine and Gum Tragacanth are accurately weighed as per the formula requirements.
- These ingredients are then sieved with a No. 80 sieve to ensure uniform particle size.
- The sieved chemicals are mixed in a mortar and pestle, and triturated with accurately weighed sorbitol until a semisolid mass is formed.

Addition of Herbal Ingredients

- Herbal extracts in powdered form, accurately weighed, are sieved and added to the base mixture.
- Neem known for their therapeutic properties, are incorporated into the formulation.
- Clove is added at the end to provide flavouring, enhancing the overall sensory experience of the toothpaste.

Wet Gum Method Preparation of Base

- In this method, the solid ingredients are mixed with water or glycerin to form a paste-like consistency.
- The mixture is then heated and stirred until a smooth base is obtained.

Addition of Herbal Ingredients

• Similar to the dry gum method, accurately weighed herbal extracts and essential oils are added to the base mixture.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

• The formulation is thoroughly mixed to ensure uniform distribution of all ingredients.

Adjustment of Consistency

- The consistency of the toothpaste is adjusted by adding additional water or glycerin if necessary.
- The final product is then homogenized to achieve a smooth texture before packaging.

Both methods have their advantages and are used based on the specific requirements of the formulation and manufacturing process. The choice between the dry gum method and the wet gum method depends on factors such as the desired texture, stability, and compatibility of the ingredients.

EVALUATION OF TOOTHPASTE

Physical Examination

Colour: The formulated toothpaste is evaluated for its color through visual inspection.

Odour: The odour of the toothpaste is determined by smelling the product.

Taste: The taste of the toothpaste is manually checked by tasting the formulation.

Relative Density

The relative density of the toothpaste is determined by weighing the formulation in grams taken in 10 ml of the formulation and 10 ml of distilled water using a relative density (RD) bottle.

Abrasiveness

Toothpaste samples are extruded onto butter paper, and the presence of sharp or hard-edged abrasive particles is examined by pressing the contents with fingertips. Toothpaste should not contain such particles.

Spreadability Determination

The slip and drag characteristics of the toothpaste are evaluated. A specified amount of formulated paste is placed between glass slides, and the time taken for the upper slide to cover a distance of 7.5 cm under a specified weight is noted. Spreadability is calculated using a formula.

pH Determination

- The pH of the formulated herbal toothpaste is determined using a pH meter. Toothpaste is suspended in water, and the pH is measured.

Homogeneity

The toothpaste's homogeneity is assessed by extruding a homogeneous mass from the collapsible tube or container and rolling it gradually to ensure bulk extrusion from the crimp.

Foaming

The foamability of the toothpaste is evaluated by measuring the initial and final volumes of foam formed after shaking the formulation with water in a measuring cylinder. The foaming power is determined by the difference in volumes.

Stability

Stability studies are conducted according to ICH guidelines. The formulated paste is stored under different temperature and humidity conditions for three months and examined for appearance, pH, and spreadability.

Determination of Moisture and Volatile Matter

Moisture and volatile matter content of the toothpaste are determined by drying a specified amount of formulation in an oven and calculating the loss of mass.

Moisture Content

Toothpaste is weighed before and after drying in an oven at 105°C to determine the percentage moisture content.

Foaming Character

Two methods are employed to assess the foaming character of the toothpaste using stoppered test tubes and graduated cylinders.

Organoleptic Evaluation

Colour and taste of the toothpaste are evaluated through sensory and visual inspection.

ACKNOWLEDGMENT

Author take it as a privilege to sincerely express my gratitude to Dr.Swati Deshmukh, Principle Shraddha Institute of Pharmacy, Kondala Zambre, Washim, for providing project amenities and permission to carry out this work. This author is also thankful to respected Mr. Sunil S. Bhagat for his valuable guidance, support and encouragement.

CONFLICT OF INTEREST

We declare that we have no conflict of interest.

ABSTRACT

Objective: The purpose of this literature review is to determine the role of virtual reality as a therapeutic approach in stroke survivors.

Method: The articles were selected from various authentic platforms like Google Scholar, PubMed and Science Direct. The articles were selected from the year 2012-2023. The total articles selected were around 72 and only 16 articles were included in the study according to the criteria of the study.

Results: According to study stroke is a serious worldwide health issue that contributes significantly to death and morbidity in industrialised nations as well as a rising number of low- and middle-income nations. Virtual Reality conjunction with traditional physiotherapy shows significant result in upper and lower limb function after stroke

Conclusion: The effect of virtual reality as therapeutic approach in post stroke survivor was evaluated in this review. This study concluded that virtual reality compared to conventional therapy shows the effect in post stroke survivors.

KEYWORDS: Stroke, Virtual Reality, Therapeutic approach, Review, Stroke Rehabilitation, Post stroke.

INTRODUCTION

An abrupt, localised loss of brain function triggered by vascular damage (haemorrhage, infarction) to the central nervous system is recognised as a stroke, a form of neurological condition. In the world, stroke ranks as the second most common cause of death and disability. Stroke is a result of multiple risk factors, illness processes, and disease mechanisms rather than a single illness.(1) Considering stroke has neurological repercussions which influence the motor, cognitive, and sensory systems, it has been deemed the leading cause of disability globally.(2)

The two primary forms of strokes are haemorrhagic and ischemic, with several subtypes providing classification. Haemorrhagic strokes are caused by bleeding into the cerebral cavity from a ruptured blood artery in the brain, whereas ischemic strokes are caused by limited blood flow to the brain as a consequence of an obstructed blood artery. Face numbness and weakness, vision issues, unilateral upper or lower limb weakness, poor balance, nausea, abrupt, strong headaches without a known reason, and trouble speaking are the most common signs of a stroke. According to reports, men and women experience these basic symptoms of stroke equally, but women are inclined to experience non-traditional symptoms such as unconsciousness and dizziness.(3)

Stroke-related disability and mortality have important ramifications for individuals as well as society. Stroke constitutes between 2% to 4% of global health care expenses, with industrialised nations demonstrating that stroke accounts for more than 4% of direct health care costs(4). In order to improve patients' quality of life, rehabilitation is an essential part of addressing post-stroke problems. A multidisciplinary strategy is used in rehabilitation with the goal of improving and restoring normal physiological processes in different body parts(5).

The ultimate result of a stroke is mainly determined by its complications. Complications encompass long-term functional disability and cognitive impairment frequently accompany patients. After a stroke, the fatal outcome rate is roughly 15% at one month and 50% after five years. Worldwide, stroke is the primary cause of long-term impairment, and the most prevalent post-stroke damage is dyskinesia, which affects 85% individuals who have had an acute stroke. An estimated 55% to 75% of stroke survivors experience functional restrictions in their upper and lower extremities. Despite a stroke, 50% to 60% of individuals have distinct levels of motor impairment. Two thirds of stroke patients experience a deterioration in their cognitive abilities, such as memory, attention, and executive function. Post-stroke patients have limited daily activities and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

functional tasks due to their cognitive and functional disability; this can end up in an overall decline in health-related quality of life(6).

One of the most popular advanced neurorehabilitation technologies for improving stroke patients' physical and cognitive abilities is virtual reality (VR). With the use of computer-based technology, virtual reality (VR) developers may produce interactive simulations that submerge users in multisensory, simulated environments and offer real-time performance feedback. It provides a distinctive and immersive rehabilitation experience by enabling stroke victims to participate in activities that mimic real-world objects and events. Virtual reality has been shown to have potential advantages in neurorehabilitation, especially in stroke rehabilitation(7). A virtual reality system replicates the intricacies of the actual world within a regulated setting. Additionally, VR can offer a therapeutic setting that enables users to execute several exercises with sufficient motivation and assessments, all of which are acknowledged as crucial elements in rehabilitation(8).

Three essential components-duplication, feedback, and motivation—are involved in the scientific underpinnings and benefits of using VR technology in rehabilitation therapy. Practicing is the first step towards learning a motor skill. However, constant practice alone is insufficient. Patients need to gradually receive feedback and success stories(9). Because of its many well-known advantages, virtual reality is a great tool for rehabilitation interventions. These advantages include the chance for hands-on, active learning as well as the capacity

to measure behaviour objectively in demanding, secure, and ecologically sound settings while upholding stringent experimental control over the distribution and measurement of stimuli. Additionally, VR allows for the customisation of treatment plans while progressively raising task complexity and lowering clinician support(10).

METHODOLOGY

Materials and method

An extensive search was carried out across electronic databases, such as PubMed and Google Scholar.

Keywords such as Stroke, Virtual Reality, Therapeutic approach, Review, Stroke Rehabilitation, Post stroke.

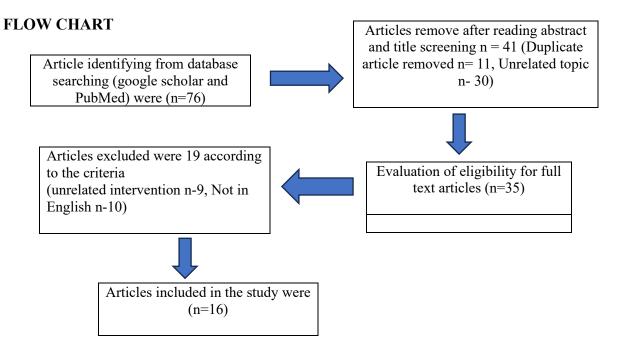

Research examining the potential of virtual reality as a therapeutic intervention for stroke survivors. All of the articles were collected together. Only 16 of the 76 publications that were compiled are used in this research study.

Study Selection Inclusion Criteria

- The included articles ranged from 2012 to 2023.
- Articles include the effect of virtual reality in stroke survivors.

Exclusion Criteria:

- Articles published prior to 2012 are not included.
- Person's inability to speak and any other neurological disorders are excluded.
- Articles which is not in English.

REVIEW OF LITREATURE

| Sr. No | Author & year | Methods | Conclusion | | |
|-----------|---|---|---|--|--|
| 1. | Carlos luque- Moreno et al, 2021 | The study involved 20 patients in total, split into 2 groups: VR + CP and CP. Result were measured by Fugel Meyer scale, Functional ambulatory categoery and Functional independence measurement. | in conjunction with a CP programme has been show | | |
| 2. | Jinlong Wu et al, 2021 | 10 studies totalling nearly 550 stroke patients were obtained after adjusting for overlap. The impact of virtual reality instruction on stroke sufferers' motor abilities | an analysis of the latest information, virtual reality (VR) has a medium to significant impact size and helps stroke patients with their balance and motor function, particularly with their upper extremities(12). | | |
| 3. | Roxana steliana miclaus et al, 2021 | Of the 76 inpatients that were initially identified, fifty-nine were enrolled in the study. While the control group (n = 28) received normal physiotherapy, the experimental group (n = 31) received both MT and VR therapy. For 10 days, each group received therapy for seventy minutes each day. | The outcomes of our investigation demonstrate that VR rehabilitation technology, when coupled with MT exercises, optimises the environment for chronic stroke patients' lower extremity rehabilitation by including diverse feedback sources with a greater influence on neuroplasticity.(13) | | |
| 4. | Roxana miclaus et al, 2020 | A total of fifty-five inpatients were assigned at random to control and experimental groups. Subacute groups were created from the two groups. At baseline and two weeks into treatment, the following standardised tests were administered: | When addressing success metrics, the duration of virtual reality therapy, and other peculiar features of the post-stroke population, such as moderate impairments, aphasia, or cognitive impairment, it may be advantageous to use certain NVIRs for upper extremity rehabilitation in post-stroke patients. (14). | | |
| 5. | Pawel kyper et al, 2020 | 59 stroke inpatients in all, whose average age is 60.3 years and 14 months, were divided into two groups: subacute and chronic. Before and after treatment, a variety of clinical scales were used. | When VR therapy is used with conventional physiotherapy following a stroke, at the subacute and chronic stages, it can assist enhance functional outcomes(15). | | |
| 6. | Mohd azzuan ahmed et al, 2019 | In this study, 36 volunteers with mean ages of 57 and 63 years, respectively, were split up into two groups, with 18 people in the control group and 18 people in the experimental group. | It has been proved that using virtual reality games in conjunction to conventional physiotherapy is equally advantageous for the recovery from upper limb strokes as using standard physiotherapy alone. Our study's utilisation of VR games was not meant to take the place of the existing therapy strategy(16). | | |
| 7. | Jigna patel et al, 2019 | Along with their inpatient rehabilitation, seven individuals underwent eight to one hour sessions of upper limb virtual reality and robotic training. The only therapy given to the six participants was inpatient care. | When compared to standard care alone, an additional 8 hours of intense VR/robotic based upper limb training started within the first month after a stroke may yield greater gains in impairment. Importantly, it was possible to address behavioural, neurophysiological, and disability issues in the early phases after a stroke.(17) | | |
| 8. | Albero luiz aramai et al, 2019 | This was a mixed-methods study. For forty minutes a day, three days a week, ten stroke patients—both subacute and chronic—participated in a 12-week rehabilitation programme through non-immersive virtual reality games. | Virtual reality (VR) presents a promising avenue for improving the functional outcomes of stroke patients, particularly in terms of job satisfaction and occupational performance(18). | | |

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 0 | T CC 3.5 | T | |
|-----|---|---|--|
| 9. | Jeffrey M rogers et al, 2019 | Twenty-one persons (aged 42–94) who had subacute strokes were randomised to receive treatment as usual alone or to get four weeks of virtual rehabilitation from Elements in addition to their regular care. Before and after inpatient training, as well as a month later. | Following a stroke, both motor and cognitive recovery are aided by an Elements virtual rehabilitation programme that uses goal-directed and exploratory upper-limb movement tasks(19). |
| 10. | Kynan Eng, et al.2018 | In a multi-center, parallel-group, randomised controlled study, patients who had suffered a stroke at least six months prior were randomly assigned to either the experimental group or the control group, which had standard therapy (16 sessions of 45 minutes per week for four weeks). The virtual reality-based training system replicated the movements of the patients' upper limbs in real-time, enabling them to manipulate virtual objects. | The majority of the advantages occurred in the first two weeks and continued into the two-month follow-up period, with identical results for patients in the experimental and control groups. At admission, the study cohort's motor function was moderately to severely deteriorated. Less impaired patients exhibited better improvement relative to the experimental group(20). |
| 11. | Jeannine Bergmann et al. 2018 | VR-enhanced RAGT (group under intervention) or conventional RAGT (control group) for twelve sessions spanned over four weeks. Individual mean walking time, patients' motivation as estimated by the Intrinsic Motivation Inventory [IMI], the acceptability of the therapies (drop-out rate, questionnaire), and the viability of prospective outcome measures (completion rate, reaction to interventions) were all analysed. | VR-augmented RAGT produced longer training times, a lower drop-out rate, and higher levels of acknowledgment and motivation than standard RAGT. This pilot study outlines guidelines for an imminent RCT on the effectiveness of VR-augmented RAGT. (21) |
| 12. | Erika pedreira da Fonseca et al. 2017 | The treatment group and the control group were randomly assigned in this blinded clinical experiment comprising post-stroke patients. The Dynamic Gait Index was applied to determine the treatment group's balance, and falls were recorded prior to and after the 20 intervention sessions. | The reduction in falls can be influenced by the use of virtual reality in stroke survivors' rehabilitation of gait and balance(22). |
| 13. | Zhen L et al. 2015 | The databases MEDLINE, CINAHL, EMBASE, Web of Science, and CENTRAL were searched in order to find studies. A couple of reviewers selected which studies to include, gathered data, and evaluated the trials' quality. | The use of virtual reality to improve balance after a stroke is validated by this meta-analysis of randomised controlled studies(4). |
| 14. | Davide Corbetta et al. 2015 | A meta-analysis in conjunction with a systematic review of randomised trials. Adults diagnosed with stroke clinically are the participants. Intervention: One of the following comparisons required to be present in eligible trials: VRBR utilised in addition to or in place of regular therapy. | When VRBR is implemented in place of some or all of a standard rehabilitation programme, stroke survivors have greater improvements in walking speed, balance, and mobility(23). |
| 15. | Keith R lohse et al, 2014 | The Cochrane Central Register of Controlled Trials, Cochrane Database of Systematic Reviews, DARE, PEDro, EMBASE, ERIC, PSYCInfo, CINAHL, and MEDLINE were all used in a thorough search. Controlled trials comparing VR to conventional therapy were among them. | Virtual reality therapy exhibits a noteworthy modest effect in terms of outcomes related to bodily activity and function in relation to CT. Even while involvement effects are not well studied, early results show that VR therapy is superior to CT(24). |

DISCUSSION

There were 16 articles selected in study one systemic review, prospective controlled trial, randomized clinical trial, ranadomized control pilot study, Cohort randomized trial and control trial, three systemic review and meta analysis and comparative study, two ranadomized control trial and feasibility study. This study investigate the impact of virtual reality on stroke survivors.

A chronic experimental group and a chronic control group were distributed to patients in Roxana Miclaus et al.'s small cohort randomised control study. The investigation carried out over a period of nine months. The outcomes of the study indicate that, relative to regular physiotherapy, NIVR boosts upper extremity functional recovery in individuals with stroke, both acute and chronic.(26) For a period of nine months, Roxana Steliana Miclaus et al. conducted a prospective randomised trial in which fifty-nine patients were split into two groups: an experimental group and a control group. Each of the two groups experienced lower extremity rehabilitation lasting seventy minutes every ten days. The experimental group exercised on an ergometer, a bike, and a treadmill for 20 minutes, and they also received virtual reality therapy for 27 to 37 minutes. The finding of the study indicates that VR therapy in conjunction with MT may potentially substitute traditional physical therapy in the post-stroke rehabilitation of the lower extremities (27).

For the second research, a pilot randomised control trial, twenty patients were selected and separated into two groups, an experimental group and a control group. The experimental group underwent twelve sessions of VR-augmented RAGT, whereas the control group underwent standard RAGT. The author came to the conclusion that VR-augmented RAGT had a longer training period and a lower drop-out rate than normal RAGT, and that it was also more motivating and acceptable. Suggestions for a future RCT on the efficacy of VR-augmented RAGT have been provided by this pilot study(28). Keith R. Lohse et al.'s systemic review and meta-analysis included 26 papers that met the inclusion criteria. The chosen research demonstrates how virtual reality therapy compares to conventional therapy for adults who have had a stroke. The findings indicate that VR rehabilitation for adult stroke victims somewhat improves results when compared to standard therapy. It is not possible to assess the potential positive effects of CG given the quantity and scope of existing CG treatments. Further research in this area should define the phrases "conventional therapy," record metrics related to participation,

consider the factors that motivate therapy, and investigate commercially available technologies in larger RCTs(24).

Ten stroke patients, both subacute and chronic, participated in a 12-week rehabilitation programme by playing games in nonimmersive virtual reality for forty minutes a day, three days a week, according to a feasibility study conducted by Alberto Luiz Aramaki et al. The outcome variables that were part of the sociodemographic data collection were the Participation Scale and the Canadian Occupational Performance Measure (COPM). At the end of the programme, an interview with the participants was conducted, and their frequency of attendance and adherence were recorded in a field journal. The conclusion demonstrates that virtual reality (VR) offers a potentially effective treatment option for stroke patients' functional rehabilitation, especially in terms of job satisfaction and occupational performance(29).

Use of virtual reality shown in various studies shows that virtual reality compared to convectional physiotherapy also virtual reality combine with augment robotic training shows the positive results in patient with post stroke.

CONCLUSION

As known stroke is a significant worldwide public health issue, due to which individuals upper and lower limb functional capacity is affected which lead to difficulty in doing activity of daily living. The effect of virtual reality as therapeutic approach in post stroke survivor was evaluated in this review. This study concluded that virtual reality compared to convectional therapy shows the effect in post stroke surviours in there upper and lower limb functional capacities.

STRIDE: STRUGGLING READERS' INTERVENTION TOWARDS DEVELOPMENT IN WORD READING, COMPREHENSION AND READING SPEED OF GRADE 7 NON-READERS IN KAPAYAPAAN INTEGRATED SCHOOL SY 2022-2023

Mercado, Mario Jr. M.

DepEd Calamba City, Calamba City, Laguna, Philippines

Article DOI: https://doi.org/10.36713/epra17116

DOI No: 10.36713/epra17116

ABSTRACT

Reading is a fundamental skill that enables learners to access the essential knowledge needed to accomplish learning tasks and achieve desired learning outcomes. The rationale of the study is to determine the impact of Project STRIDE Reading Intervention Program to the non-readers in grade 7 of Kapayapaan Integrated School SY 2022-2023 based on Phil IRI reading assessment results and responses to the interview questions that described their generally positive experience in the intervention. The study used a mixed method research design. The reading levels of the participants were determined using the pretest and posttest followed by t-test to analyze significant difference in word reading, comprehension, and reading speed after the reading intervention program. The results show that from a non-reader status, the participants gained improvements corresponding to instructional level in word reading and independent level in comprehension. Individuals reading at an instructional level can still comprehend written material. The instructional level is a reading level at which an individual can read with assistance or guidance to understand and interpret the content. The study implied the importance of having capacitated reading teachers as facilitators of the reading intervention, consistent and responsive participants and structured learning sessions with technology-based instructions and periodic assessments in reading until learners can read at their grade level.

INTRODUCTION

Reading is a fundamental skill that enables learners to access the essential knowledge needed to accomplish learning tasks and achieve desired learning outcomes. Likewise, reading is integral in various subjects and grade levels. Thus, the students must read and understand texts related to all learning areas. Moreover, when students take part in constant reading, it does not only improve their vocabulary but also contributes to their comprehension of concepts (Duru and Koklu, 2011). However, many Filipino children struggle with reading; this leads to low achievement results especially in the public schools (Abocejo et al., 2022). In the actual learning context, the struggling readers will not understand the concepts, and they will fail to attain the learning competencies expected of them because of a lack of skill in reading (Esposa, 2021). Inadvertently, the impact of the pandemic on education is also substantial in the learning loss among learners. The past two pandemic years hindered the teaching-learning opportunity to further develop the reading skills of the students.

The school year 2022-2023 remarkably resumed the in-person classes in Kapayapaan Integrated School. Anchored on Calamba City Division DREAM Learning Recovery and Continuity Framework under Area 4: Assess Learners' Literacy and Numeracy Level as stipulated in Division Memorandum No. 185, s. 2022, Guidelines on the Implementation of Project DREAM as a Banner Initiative under the Basic Education-Learning Recovery and Continuity Plan (BE-LRCP) for SY 2022-2023, Kapayapaan Integrated School's Project DREAM:

RISE necessitates the development of a reading intervention program that aims to close the gap in the reading proficiency of struggling readers and reduce the number of non-readers to zero. Moreover, KIS commits to helping learners develop their reading skills as a response to the 3Bs Initiative known as Hamon: Bawat Bata Bumabasa mandated in DepEd Memorandum No. 173, s. 2019, to make every learner a proficient reader.

The conduct of PHIL IRI assessment was the first step to determine the reading profile of the students. Kapayapaan Integrated School held a year-round reading assessment using the DepEd-prescribed Phil IRI Manual, which is a tool for measuring and describing reading performance. The result of the pre assessment revealed difficulties in decoding, fluency and accuracy, and understanding the text. Further, the result led to the identification of 10 non-readers in grade 7 who scored the lowest in oral reading and comprehension. Their utterance did not match the text they were reading and personally admitted to the teachers that they cannot read.

Abocejo, et al., 2022 asserts that despite the implementation of reading programs, substantial elementary graduates were still assessed as slow or non-readers. On the other hand, reading proficiency lies in the hand of teachers based upon the successful implementation of reading programs in schools (Cabalo and Cabalo, 2019).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Grounded on this premise, a structured reading intervention program is necessary for the non-readers to address their difficulties and help them acquire essential reading skills. This study aims to determine the grade 7 non-readers' reading level and the significant difference thereof before and after the implementation of a reading intervention program.

Research Questions

This study aims to determine the impact of a reading intervention in enabling the non-readers to read at the grade 7 level by gradually teaching them the components of reading and regularly monitoring their reading progress. Specifically, it aims to answer the following questions:

- 1. What is the reading level of the participants in Project STRIDE in terms of a.1 oral reading, b. comprehension, and c. reading speed?
- 2. Is there a significant difference between the reading level of the participants before and after receiving the intervention in terms of a. oral reading, b. reading comprehension and c. reading speed?
- 3. How do the participants describe their experiences in the reading intervention?

Scope and Limitation of the Study

This study was conducted in the school year 2022-2023 when DepEd officially announced the safe reopening of in-person classes in schools after two pandemic years.

The researcher only included the identified non-readers with no manifestation of learning disability in grade 7 of Kapayapaan Integrated School. The reading intervention program utilized in the study comprised a series of learning sessions which ran for 12 weeks in between pre and post assessments with reading progress monitoring during the intervention period. The conduct of sessions was facilitated by three language teachers who had participated in SLAC session on teaching the basics of reading and writing.

The pre and post assessments were administered using the Phil IRI graded passages while a questionnaire was constructed and administered by means of interview to all the sample students to obtain their perception and reflection on their experiences in the reading intervention program.

The conduct of activities included in the study was monitored by the head teacher of English department and the school head based on the school's M&E tool for programs, projects and activities.

The researcher limited the study on the impact of Project STRIDE: Struggling Reader's Intervention towards Development in Oral Reading and Comprehension of the grade 7 non-readers.

Framework

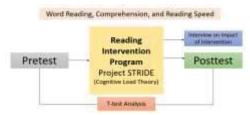

Figure 1. Conceptual Framework of the Study

The framework shows how a reading intervention program can contribute to the development of oral reading and comprehension among the students who are non-readers. Also, conducting an interview after the assessment can provide a vivid description of the participants' experiences in the reading intervention program that would inform the impact of the intervention to the non-readers.

II. METHODOLOGY

This chapter describes the research design, description of participants, sampling and procedure on collecting information on the impact of a reading intervention program to help develop the oral reading and comprehension. This is followed by a discussion about how the data was analyzed.

Research Design

This research employed mixed-method design. The integration of both quantitative and qualitative data in the study is valuable in seeking comprehensive understanding of the results and impact of the intervention to the participants.

The design involved one group of respondents, the non-readers. A pretest was administered to these students to determine their word reading, reading comprehension and reading speed. Then, a reading intervention program was conducted by the language teachers who attended the SLAC session on teaching the basics of reading and writing. After the series of reading intervention, the respondents were given the posttest and were interviewed to describe their experiences in the reading program.

Respondents of the Study

The participants of the study are 8 non-readers in grade 7 of Kapayapaan Integrated School, officially enrolled for School Year 2022-2023.

The participants were chosen through purposive sampling method. The selection was based on the results of PHIL IRI pretest. The non-readers had been identified based on high record of miscues made in oral reading and low to zero scores in reading comprehension. Furthermore, those students who demonstrated utterance that did not match most of the words, as well as those who personally admit they cannot read were included. They were selected to participate in Project STRIDE Reading Intervention Program.

Research Instrument

This study adopted the DepEd's Phil IRI Manual of 2018 which provided the assessment tools and graded passages used in

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

pretest and posttest and reading progress monitoring during the reading intervention program. The research instrument included Phil IRI Form 3B which shows data on word reading score, comprehension score, and words per minute for reading speed.

A one-on-one interview with the participants was conducted to describe the participants' experiences in the reading Intervention, following the reflexive thematic analysis

The study also integrated technology through Microsoft's Reading Progress Tool that record and automatically produce results in word reading and speed measured in words per minute (WPM). This was used only during progress monitoring during sessions in the intervention.

Data Gathering

This study employs mixed methods approach whereby the researcher collects and analyzes both quantitative and qualitative data within the study.

The baseline data were collected through the conduct of preassessment in word reading and comprehension in September 2022. The result from pre-assessment indicated that there were non-readers among grade 7 students. Word reading was assessed through having the students read orally the Phil-IRI 7th grade passage entitled "Sneezing". The text consists of 153 words with 8 items to test comprehension. As the student reads, the teacher marks the errors and notes the total miscues. The Phil-IRI Form 3 is the Grade Level Passage Rating Sheet that is used to record reading time and miscues and responses to the comprehension questions while Phil-IRI Form 4 is the Oral Reading Observation List that indicates the behaviors while reading. Both forms are used in the pre-assessment of initial reading level of the grade 7 students at the before the reading intervention program was implemented in the school year 2022-2023.

The same process was observed in the conduct of posttest after the reading intervention program. Then, a reflexive thematic analysis was employed to gather qualitative data on the experiences of the participants in the reading intervention.

Statistical Treatment

The participants' reading levels in terms of word reading, reading comprehension and reading speed were analyzed through obtaining the mean scores to answer research question 1 while the significant difference between the reading levels of the respondents was analyzed through a paired t-test to answer research question 2.

Research Ethics

This study adheres to the ethical principles by obtaining informed consent through orientation of the participants and their parents or guardians as they were subjected to the reading intervention program that only had interest in helping them develop their reading skills. On the other hand, the teachers who facilitated the reading intervention participated in a SLAC session on teaching the basics of reading and writing before the

implementation of the intervention. The information collected from the participants remained confidential and used only according to the purpose as indicated in the research.

III. RESULTS

This section discusses the study results in determining whether the Project STRIDE Reading Program Intervention could help increase the reading level of non-readers in Grade 7 students in Kapayapaan Integrated School, Calamba City Division.

Table 1. Participants' pre-test reading level in terms of word reading, reading speed, and comprehension.

| Variables | bles Word Compre- | | Reading |
|----------------|-------------------|---------|---------|
| | reading | hension | Speed |
| | score | Score | (wpm) |
| STUDENT 1 | 2 | 0% | 3 |
| STUDENT 2 | 7 | 25% | 14 |
| STUDENT 3 | 3 | 13% | 5 |
| STUDENT 4 | 0 | 0% | 0 |
| STUDENT 5 | 21 | 13% | 25 |
| STUDENT 6 | 2 | 13% | 3 |
| STUDENT 7 | 0 | 25% | 0 |
| STUDENT 8 | 18 | 13% | 22 |
| Mean Score | 6.625% | 13% | 9 |
| Interpretation | Non- | Non- | Slow |
| | reader | reader | |

The participants' mean score in word reading is 6.625% which is far below in reference to the 89% for frustration reading level. Similarly, The mean score in comprehension is 13% which is far below the 58% for frustration reading level. The participants read at a rate of 9 words per minute in pretest.

Table 2. Participants' post-test reading level in terms of word reading, reading speed, and comprehension

| Variables | Word reading | Compre- | Reading |
|----------------|---------------|---------------|---------|
| | score | hension Score | Speed |
| | | | (wpm) |
| STUDENT 1 | 85 | 63% | 78 |
| STUDENT 2 | 96 | 88% | 95 |
| STUDENT 3 | 92 | 75% | 90 |
| STUDENT 4 | 84 | 75% | 74 |
| STUDENT 5 | 95 | 88% | 105 |
| STUDENT 6 | 92 | 75% | 88 |
| STUDENT 7 | 83 | 88% | 71 |
| STUDENT 8 | 93 | 88% | 104 |
| Mean Score | 90% | 80% | 88 |
| | | | |
| Interpretation | INSTRUCTIONAL | INDEPENDENT | SLOW |

The participants' mean score in word reading is 90%; they read at instructional level. The mean score in comprehension is 80% which corresponds to independent level. The participants read at a rate of 88 words per minute in the posttest.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 3. Test of Significant Difference of the pre-test and post-test scores in reading level.

| Variables | t- computed | t-critical | p- value | Deci sion on Ho | Remarks |
|------------------|----------------|------------|-------------|--------------------------|-------------|
| Word Reading | -42.858 | 2.364 | .000 | Reje ct | Significant |
| Reading Speed | -38.264 | 2.364 | .000 | Reje ct | Significant |
| Comprehen sion | -29.375 | 2.364 | .000 | Reje ct | Significant |

The results of t-test for the word reading, comprehension and reading speed at .000 p-value reveal significant difference in the reading levels of the respondents before and after the reading intervention program.

Table 4. Participants' responses to the interview on their experience in the reading intervention program

Student 1: "Mabuti nalang po may ganitong turuan ng pagbabasa habang first grading kase kung wala po baka bagsak na ko agad sa card."

Student 4: "Naintindihan ko naman po na kasama ako sa reading program kase hindi ko po talaga kaya bumasa lalo na 'pag nasa klase, e first quarter palang."

Student 7: "Ang hirap lang po na may isa pa pala kong subject na reading pero ok lang po kase nakabukod naman po kame para kameng grade 1, hahaha. Kala ko nga po 'gang 4th grading e"

The responses above indicate that the reading intervention program was held at the right time of the school year.

Student 1: "Yung naintindihan ko po yung isa-sound pala ang letter tapos parang ididikit mo yung sound para makabasa."

Student 3: "Kaya ko na bumasa kase paulit-ulit kami sa pagbabasa."

Student 7: "Dun sa isahang-basa po, yung pinapakinggan ako ng teacher habang nagbabasa ng pang grade 1 tapos grade 2 tapos hanggang grade 7, ginagalingan ko na."

The responses above indicate that the participants' believed the STRIDE reading intervention program helped improved their oral reading and comprehension skills.

Student 2: "Masaya kami naging kaibigan ko na yung iba kase lagi ko sila kasama sa reading center."

Student 5: "Ok naman po kase hindi po magagalitin yung nagtuturo samin, hindi po masungit kahit mabagal magbasa."

Student 6: "Nagpapasalamat po na tinuturuan kami bumasa tsaka may mga papel naman binigay para ipraktis sa bahay.

The responses above indicate a generally positive experience among participants of the reading intervention program.

Student 1: "Yung pagbabasa po na simula sa parang bata ABC sounds tapos pang grade 1 hanggang pang grade 7 na reading na test, maganda po."

Student 6: "The best po yung nagbabasa kami sa computer tapos narerecord kami tapos may score na din."

Student 8: "Yung Microsoft ba yon sir, yung nagvivideo habang nagbabasa, ayun yung natuwa akong activities."

The responses above indicate that the testing included in the intervention was fair and relevant.

IV. DISCUSSION

Addressing the needs of the identified non-readers in grade 7 necessitates that the students relearn the key components of reading that they may have missed in their formative and elementary years. The students must be able to sound out letters of the alphabet, blend sounds to form words, develop vocabulary, and practice oral reading regularly through reading exercises that will lead to the development of their reading skills and enable them to read at a grade level standard.

Following Cognitive Load Theory as the guiding principle in teaching the non-readers or individuals with limited reading abilities, the learning sessions in the reading intervention program were conducted by presenting one idea or concept at a time, ensuring that the non-readers can focus on and process each piece of information without feeling overwhelmed. The participants were offered with structured practice and guidance as they engage with the material. The reading teachers scaffold the learning process by providing support that gradually fades as the participants progress.

The results indicate that participants in the STRIDE reading intervention program showed progress in oral reading, comprehension and reading speed. This implies confidence in performing the learning tasks that involve reading among the participants.

Furthermore, the participants described their experience in the reading intervention program to be timely and relevant. The intervention was conducted from first to second quarter of SY 2022-2023. It was necessary to take immediate action to capacitate the struggling readers so that they could catch up learning the MELCs. The intervention also paved the way to build relationship among participants and their reading teachers. Maintaining harmonious relationship during the intervention was vital to establishing the discipline and meeting the goals of the reading program.

The integration of Microsoft Reading Progress tool was an innovation that kept the learners interested and engaged in reading assessments done gradually during the intervention.

This study affirms that reading proficiency lies in the hand of teachers based upon the successful implementation of reading programs in schools (Cabalo and Cabalo, 2019).

PERFORMANCE OF LEGACY PROPRIETARY BILLING AND COLLECTION SYSTEM IN SAN PABLO CITY WATER DISTRICT: A BASIS FOR EFFICIENT IN-HOUSE SYSTEM DEVELOPMENT OF BILLING AND COLLECTION SYSTEM

Marnie U. Garbo

San Pablo City Water District (Government-Owned and Controlled Corporation)

Article DOI: https://doi.org/10.36713/epra17103

DOI No: 10.36713/epra17103

ABSTRACT

This study on the Performance of Legacy Proprietary Billing and Collection System in San Pablo City Water District was conducted using a descriptive method approach. This study hypothesized that there is no significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for In-House System Development in the San Pablo City Water District. Using the descriptive research design, twenty (20) personnel of SPCWD, of which ten (10) from the Billing and Accounts Division of the Commercial Services Department as the authorized users of Billing Module, five (5) from the Treasury and Budget Division of Financial Management Department as authorized users of Collection Module, and five (5) from Information and Communication Technology Section of Office of the General Manager as the in-house system developers served as the respondents of the study. After the validity test of the experts, a self-constructed questionnaire was used as the main instrument to gather adequate data and information in this study to ensure they adequately represented the construct and administered the instrument to the selected respondents. The 4-Point Likert Scale and its Verbal Interpretation for Level of Performance were utilized to determine the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of user satisfaction, technical support, and scalability and the Level of Capability in terms of peopleware, hardware, software, and financial resources. Data were analyzed using descriptive and inferential statistical treatments such as weighted mean, standard deviation, and Pearson Product Movement Correlation Coefficient (r). Among the three indicators measuring the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD regarding user satisfaction, technical support and scalability was interpreted as "needs improvement." Four indicators measuring the Level of Capability of SPCWD for in-house System Development were found to be "very capable." These were peopleware, software, hardware, and financial resources. Therefore, the hypothesis stating that "there is no significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for In-House System Development in San Pablo City Water District" was rejected. The following conclusions were drawn based on the findings: It suggests the necessity for refining user experience, enhancing technical support mechanisms, and ensuring scalability to accommodate future growth and demand. By addressing these areas, SPCWD can strive towards optimizing the performance of its billing and collection system, ultimately leading to higher levels of satisfaction and efficiency. Capability bodes well for SPCWD's ability to innovate, customize solutions, and address specific organizational needs through internal development efforts, fostering greater independence and flexibility in managing its technological infrastructure.; in-house system development allows SPCWD to create customized solutions tailored to its unique needs and operational requirements. This capability ensures that the software and hardware systems developed align closely with the organization's processes and workflows, potentially leading to improved efficiency and effectiveness.

OBJECTIVES

This study aimed to determine the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD as a basis for in-house development of the Billing and Collection System of SPCWD.

Specifically, it sought to answer the following questions:

- 1. What is the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of;
- 1.1. User Satisfaction
- 1.2. Technical Support
- 1.3. Scalability
- 2. What is the level of capability of SPCWD for in-house system development in terms of;
 - 2.1. Peopleware
 - 2.2. Software
 - 2.3. Hardware
 - 2.4. Financial Resources

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- 3. Is there a significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for in-house system development?
- 4. In view of the findings, what in-house system for billing and collection should be developed?

BACKGROUND

With its mission, "The San Pablo City Water District, A Corporation duly organized under PD 198 as amended, is tasked to contribute to the improvement of the quality of life of the residents of the San Pablo City by providing potable, adequate and affordable water supply in the entire city while remaining to be self-reliant and financially viable water district." Committed to delivering quality public service, the SPCWD acquired and implemented a computerized Billing and Collection System on 1995 from a private system provider.

The San Pablo City Water District is a government-owned utility responsible for providing water services to the residents of San Pablo City. Over the years, the Water District has used a legacy proprietary billing and collection system to manage its concessionaire accounts, meter readings, bill generation, and payment processing.

However, the legacy system has started to exhibit limitations and challenges that hinder the Water District's billing and collection process. These limitations include insufficient technical support, lack of scalability, insufficient integration capabilities, and difficulty accommodating regulatory requirements that affects user satisfaction. Specifically, pursuant to Executive Order (EO) No. 170 dated 12 May 2022, "ADOPTION OF DIGITAL PAYMENTS FOR GOVERNMENT DISBURSEMENTS AND COLLECTIONS," SPCWD is obliged to implement online payment of water bills through various online payment platforms without integrating the billing and collection system directly to the system of third-party online payment platforms, causing for manual encoding of all online payment transactions to the billing and collection system that become additional task to the user of billing and collection system.

In 2019, the private system provider of the legacy billing and collection system informed SPCWD that limited technical support could only be accommodated through phone or online support due to health reasons and the unavailability of personnel. All system enhancements and new requirements may take time to accomplish.

Given the exhibited limitations of the billing and collection system and conditions of the private system provider, SPCWD is considering the possibility of developing an in-house system. The in-house development offers the potential to overcome the limitations of the legacy system and achieve greater operational efficiency, accuracy, and user satisfaction.

To embark on developing an in-house billing and collection system, it is crucial to conduct a comprehensive study that assesses the current legacy system, identifies its limitations, and determines the feasibility and benefits of developing an in-house system. The study aims to serve as the basis for decision-making and guide development.

By conducting this study, the SPCWD can gather valuable insights into the existing system, understand the requirements and objectives for the new system, assess the feasibility of in-house development, and identify potential benefits and challenges associated with the implementation. The findings of the study will provide a solid foundation for the development of an effective, customized, and scalable billing and collection system that caters to the unique needs of the Water District and supports its mission to contribute to the improvement of the quality of life of the residents of the San Pablo City by providing potable, adequate and affordable water supply in the entire city while remaining to be self-reliant and financially viable water district.

RESEARCH DESIGN

The study used a descriptive research method to describe the procedures and data flow of the Legacy Proprietary Billing and Collection System of SPCWD. Also, the descriptive method was used to evaluate the performance regarding user satisfaction, technical support, and scalability of the legacy billing and collection system. Furthermore, the descriptive method was used to evaluate the capability of SPCWD in terms of peopleware, software, hardware, and financial resources for in-house system development.

POPULATION AND SAMPLING

Purposive sampling, also known as judgmental, selective, or subjective sampling, is a form of non-probability sampling in which researchers rely on their judgment when choosing members of the population to participate in their surveys, Alchemer (2021). Specifically, expert sampling was used in the study, which involves selecting individuals with expertise using the legacy proprietary billing and collection system of SPCWD. Expert sampling was chosen to collect data from the knowledgeable personnel of SPCWD currently using the billing ang collection system. Also, SPCWD personnel involved in system development and maintenance were selected as respondents for the study.

The twenty (20) personnel of SPCWD, of which ten (10) are from the Billing and Accounts Division of the Commercial Services Department as the authorized users of the Billing Module, five (5) from the Treasury and Budget Division of the Financial Management Department as authorized users of Collection Module, and five (5) from Information and Communication Technology Section of Office of the General Manager as the in-house system developers will be utilized as respondents for the study.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

LEVEL OF PERFORMANCE OF THE LEGACY PROPRIETARY BILLING AND COLLECTION SYSTEM OF SPCWD

Table 3 presents the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD regarding user satisfaction.

Table 3. Level of Performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of User Satisfaction

| Sa | Sausiacuon | | | | | | |
|---|------------|------|-----------------------|--|--|--|--|
| Statements | Mean | SD | Verbal Interpretation | | | | |
| 1. It has an overall positive performance rating. | 2.55 | 0.67 | Satisfactory | | | | |
| 2. It provides the system's speed and efficiency. | 2.40 | 0.80 | Needs Improvement | | | | |
| 3. It has met your expectations regarding accuracy in billing and collection processes. | 2.35 | 0.79 | Needs Improvement | | | | |
| 4. It is user-friendly. | 2.55 | 1.02 | Satisfactory | | | | |
| 5. It has navigation and menu options that are intuitive and easy to understand. | 2.50 | 1.07 | Needs Improvement | | | | |
| Overall Mean | 2.47 | 0.83 | Needs Improvement | | | | |

The average weighted mean value of 2.47 with a standard deviation of 0.83 revealed that the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD regarding user satisfaction was interpreted as "needs improvement."

This implies room for enhancement or modification in the Legacy Proprietary Billing and Collection System to meet users' needs and expectations better. This could involve addressing specific issues highlighted in the assessment or implementing changes to enhance user experience.

It indicates that user satisfaction is integral to the success of billing and collection system as it directly influences overall organizational impact, as it is integral to the success of billing and collection system as it directly influences productivity, cost efficiency, employee morale, and overall organizational impact. In addition, there are likely issues or deficiencies in the system that negatively impact user satisfaction, such as user navigation, efficiency, and accuracy in billing and collection processes.

This comprehensive approach highlights the interconnectedness of various elements in creating a satisfactory user experience, underscoring the importance of a holistic design approach. It offered a comprehensive exploration of the multifaceted factors impacting user satisfaction. Their research encompassed system performance, usability, user experience design, and customer support. Doll and Torkzadeh (2018).

Table 4 presents the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of technical support.

Table 4. Level of Performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of Technical Support

| | Տ սբբ ն ւ | | |
|---|-------------------------|------|-----------------------|
| Statements | Mean | SD | Verbal Interpretation |
| 1. It shows the responsiveness of service provider technical support. | 2.30 | 0.90 | Needs Improvement |
| It provides accessibility to technical support channels (e.g., helpdesk, email, phone). | 2.30 | 0.78 | Needs Improvement |
| 3. It has the overall quality of technical support provided for the Legacy System. | 2.35 | 0.85 | Needs Improvement |
| Overall Mean | 2.32 | 0.83 | Needs Improvement |

The average weighted mean value of 2.32 with a standard deviation of 0.83 revealed that the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD

regarding technical support was interpreted as "needs improvement."

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

This implies that technical support for the billing and collection system is insufficient. This can result in delays or ineffective resolution of issues reported by users.

Users may be facing challenges or issues related to technical assistance, which could impact their overall experience with the system.

It indicates that technical support is essential for maintaining the integrity, security, and functionality of billing and collection system. It shows that the overall quality of technical support provided for the Legacy System needs improvement.

Competent technical support can greatly improve customer satisfaction by resolving issues promptly and providing users with the assistance they need. It ensures the continuity of an efficient and effective billing and collection system.

It helps maintain positive relationships with system users and ensures the continuing enhancement of the system.

Thus, based on the study conducted by Limoncelli et al. (2016), this guidance is extended by providing a thorough guide to system and network administration, which encompasses vital aspects of technical support. Their work emphasizes essential practices, troubleshooting techniques, customer service skills, and effective team management. This holistic perspective ensures that technical support professionals are well-rounded in their expertise and capable of handling a wide array of challenges.

It is essential for maintaining the integrity, security, and functionality of billing and collection system, ultimately contributing to the overall success of SPCWD.

Table 5 presents the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of scalability.

Table 5. Level of Performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of Scalability

| Statements | Mean | SD | Verbal Interpretation |
|--|------|------|-----------------------|
| Handling of increased data volume without significant performance degradation. | 2.75 | 1.04 | Satisfactory |
| 2. Adding new features or modules to the system without major disruptions. | 2.35 | 0.96 | Needs Improvement |
| 3. System customization to meet evolving business requirements (ex., Online Payment such as Gcash and Maya). | 1.80 | 1.03 | Needs Improvement |
| 4. Integrating with other applications or systems (ex., Accounting System, Geographical Information System (GIS)). | 1.80 | 1.03 | Needs Improvement |
| Overall Mean | 2.18 | 0.95 | Needs Improvement |

The average mean value of 2.18 with a standard deviation of 0.95 revealed that the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD regarding scalability was interpreted as "needs improvement."

It implies that the current scalability of the billing and collection system is considered insufficient or below expectations. This suggests that users may have concerns about the system's ability to handle new requirements or increased demands effectively.

It shows that scalability is a strategic aspect of a system that allows to adapt to changing requirements and conditions. In this connection, Kozuch and Satyanarayanan (2013) emphasize the prescient wisdom of considering scalability right from the inception of system design. They advocate for the integration of components like load balancers, distributed databases, and microservices, which are integral to the architecture of scalable systems. Their approach reinforces the idea that scalability is not merely an afterthought but a fundamental aspect of system architecture.

Level of Capability of SPCWD for an In-house System **Development**

Table 6 presents the SPCWD's level of capability for in-house system development in terms of peopleware.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 6. Level of Capability of SPCWD for an In-house System Development in terms of Peopleware

| Statements | Mean | SD | Verbal Interpretation |
|---|------|------|-----------------------|
| The IT team at SPCWD possesses the necessary technical skills and knowledge for system development. | 3.70 | 0.46 | Very Capable |
| 2. There is a dedicated team responsible for software development and maintenance. | 3.75 | 0.43 | Very Capable |
| 3. SPCWD provides ongoing training opportunities for staff to enhance their technical skills. | 3.60 | 0.49 | Very Capable |
| 4. Communication channels within the organization facilitates effective information sharing. | 3.75 | 0.43 | Very Capable |
| 5. SPCWD demonstrates a willingness to adopt and adapt to new technologies. | 3.95 | 0.22 | Very Capable |
| Weighted Mean | 3.75 | 0.34 | Very Capable |

The average weighted mean value of 3.75 with a standard deviation of 0.34 revealed that the level of capability of SPCWD for in-house system development in terms of peopleware was interpreted as "very capable."

It implies that SPCWD may have a highly skilled and experienced team of developers who possess the necessary technical expertise and domain knowledge to develop and implement the billing and collection system effectively.

Also, it suggests that personnel of SPCWD can led to high-performing

teams capable of delivering successful software solutions that meet the organizational needs.

SPCWD employs effective project management practices to plan, execute, and monitor development. This includes setting realistic goals, allocating resources efficiently, managing timelines and budgets, and addressing potential risks proactively.

SPCWD system development personnel possess the necessary technical skills and knowledge for system development.

SPCWD has a dedicated team responsible for software development and maintenance.

SPCWD provides ongoing training opportunities for staff to enhance their technical skills.

SPCWD has a communication channel within the organization to facilitate effective information sharing.

SPCWD are willing to adopt and adapt to new technologies. It boosts a culture of innovation by nurturing an environment where personnel empowered to experiment, take risks, and think outside the box without fear of failure.

This has been stressed by the research findings of Maag (2019), which address the integration of peopleware practices and tools in the software development process. This research discusses strategies for aligning human aspects with technical practices. It emphasizes the importance of harmonizing human and technical factors for optimal development outcomes.

Table 7 presents the SPCWD's level of capability for in-house system development in terms of software.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 7. Level of Capability of SPCWD for an in-house System Development in terms of Software

| Statements | Mean | SD | Verbal Interpretation |
|---|------|------|--------------------------|
| SPCWD employs modern and appropriate development tools and platforms for system development. | 3.70 | 0.46 | Very Capable |
| 2. The development team follows established coding standards and best practices. | 3.65 | 0.48 | Very Capable |
| Code reviews and quality assurance processes are in place to ensure adherence to best practices. | 3.45 | 0.50 | Very Capable |
| SPCWD uses version control systems to manage code changes and revisions. | 3.50 | 0.50 | Very Capable |
| Comprehensive documentation is maintained for software projects, including code, architecture, and user guides. | 3.50 | 0.50 | Very Capable |
| SPCWD has robust testing processes, including unit testing, integration testing, and user acceptance testing. | 3.70 | 0.46 | Very Capable |
| 7. SPCWD implements security best practices in software development to protect against vulnerabilities and breaches. | 3.60 | 0.49 | Very Capable |
| Weighted Mean | 3.59 | 0.42 | Very Capable |

The average weighted mean value of 3.59 with a standard deviation of 0.42 revealed that the level of capability of SPCWD for in-house system development in terms of software was interpreted as "very capable."

It implies that the in-house development team can tailor the software precisely to the unique needs and requirements of SPCWD. This customization ensures that the software aligns perfectly with the organization's workflows and processes, maximizing efficiency and effectiveness.

By developing software in-house, SPCWD has full control over the development process, allowing them to prioritize tasks, manage resources, and adapt quickly to changing requirements. In-house development can be cost-effective in the long run compared to purchasing off-the-shelf solutions or outsourcing development to external vendors. While initial development costs may be higher, SPCWD can save money on licensing fees and ongoing support costs over time.

It was pointed out that the findings of Perry and Wolf (2014) present a roadmap for software architecture research, outlining key areas of focus and emerging trends in the field. This provides a structured approach to advancing research in software architecture, guiding future developments in the discipline.

Table 8 presents the level of capability of SPCWD for in-house system development in terms of hardware.

Table 8. Level of Capability of SPCWD for an in-house System Development in terms of Hardware

| Statements | Mean | SD | Verbal Interpretation |
|--|------|------|-----------------------|
| 1. SPCWD has hardware infrastructure to support in-house system development. | 3.95 | 0.22 | Very Capable |
| Hardware resources (e.g., servers and workstations) are regularly updated and maintained. | 3.60 | 0.49 | Very Capable |
| The hardware components are compatible with the software and applications used for development. | 3.60 | 0.49 | Very Capable |
| SPCWD conducts capacity planning to ensure that hardware resources meet the demands of system development. | 3.85 | 0.36 | Very Capable |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Weighted Mean | 3.73 | 0.34 | Very Capable |
|---|------|------|--------------|
| from unauthorized access or damage. | | | |
| measures to protect hardware resources | 3.70 | 0.46 | Very Capable |
| 6. SPCWD implements physical security | | | |
| hardware infrastructure. | | | |
| prevent single points of failure in the | 3.65 | 0.48 | Very Capable |
| 5. SPCWD has redundancy measures to | | | |

The average weighted mean value of 3.73 with a standard deviation of 0.34 revealed that the level of capability of SPCWD for in-house system development in terms of hardware was interpreted as "very capable."

This implies that SPCWD's in-house hardware capability allows it to scale its infrastructure according to changing demands and growth requirements. The organization can adapt hardware configurations to accommodate increased workloads, new software features, or evolving technologies, ensuring scalability and flexibility.

SPCWD can maintain stringent quality control standards throughout the hardware development process. This includes rigorous testing, validation, and performance optimization to ensure that hardware components meet reliability, security, and efficiency criteria.

Also, SPCWD implements physical security measures to protect hardware resources from unauthorized access or damage, redundancy measures to prevent single points of failure, and hardware resources are regularly updated and maintained to support in-house system development.

Koushanfar and Devadas (2014) delve into using hardware-based data representations for security purposes. They explore the potential benefits and challenges of employing specialized hardware for data protection, providing insights into a promising approach to enhance security measures.

Overall, SPCWD's capability in in-house hardware development enables the organization to optimize its infrastructure, integrate seamlessly with software systems, achieve cost efficiency, leverage technical expertise, ensure scalability and flexibility, maintain quality assurance, and manage risks effectively. These factors contribute to successfully deploying and operating hardware solutions that support SPCWD's mission and objectives.

Table 9 presents the SPCWD's level of capability for in-house system development in terms of financial resources.

Table 9. Level of Capability of SPCWD for an in-house System Development in terms of Financial Resources

| Statements | Mean | | |
|--|------|------|--------------|
| 1. The organization allocates a sufficient budget for in-house system development projects. | 3.60 | 0.58 | Very Capable |
| SPCWD invests in technology resources (e.g., software licenses and hardware upgrades) to support system development. | 3.55 | 0.59 | Very Capable |
| Financial resources are allocated for staff training and development in the context of system development. | 3.60 | 0.58 | Very Capable |
| Weighted Mean | 3.58 | 0.55 | Very Capable |

The average weighted mean value of 3.58 with a standard deviation of 0. revealed that the level of capability of SPCWD for in-house system development in terms of financial resources was interpreted as "very capable."

It implies that SPCWD allocates financial resources strategically, prioritizing investments in technology and system development

to support its core business objectives. This ensures that adequate funding is available for in-house development projects.

SPCWD allocates financial resources for staff training and development in the context of system development.

Developing systems in-house can be cost-effective in the long run compared to purchasing off-the-shelf solutions or outsourcing development to external vendors. By leveraging

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

internal resources and expertise, SPCWD can avoid licensing fees, vendor lock-in, and ongoing support costs associated with third-party solutions.

SPCWD views in-house system development as a long-term investment in the organization's future. By building custom solutions tailored to its specific needs, SPCWD can realize significant returns on investment over time, including increased operational efficiency, improved customer satisfaction, and competitive advantage.

In this regard, Oluseye and Diugwu (2020) analyze how internal and external financial resources influence innovative performance, considering the moderating effects of firm size and age. This research offers a nuanced understanding of how financial resources interact with organizational characteristics to drive innovation.

SPCWD's capability in in-house system development in terms of financial resources stems from its strategic budget allocation, cost savings, efficient resource utilization, risk management practices, long-term investment perspective, strategic partnerships, financial stability, and rigorous cost-benefit analysis. These factors enable SPCWD to fund and sustain in-house development efforts that effectively support its mission and strategic objectives.

Table 10 presents the significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD as the basis for the in-house development of the Billing and Collection System of SPCWD

Table 10. Significant Relationship of the Level of Performance of the Legacy Proprietary Billing and Collection System and the Level of Capability for In-House System Development of SPCWD

| Variables | Overall Mean | df | Computed r-value | Remarks |
|--|-----------------|----|---------------------|-------------|
| Performance of the Legacy Proprietary Billing and Collection System | 2.43 | 18 | -0.54 | Significant |
| Capability of SPCWD for in-house Development | 3.66 | | | |

The table further revealed that the computed r-value -0.54 is beyond the critical r- r-value ± 0.44 , at a 0.05 significance level with 18 degrees of freedom. Therefore, the hypothesis stating that "there is no significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for In-House System Development in San Pablo City Water District" is rejected.

It can be concluded that there is a negative correlation between the performance of the legacy proprietary billing and collection system and the capability for in-house system development at SPCWD. The legacy proprietary system performance in user satisfaction, technical support, and scalability required improvement. In contrast, the level of capability for SPCWD's inhouse system development is perceived to be very high. There is a greater impetus for SPCWD to develop an in-house billing and collection system to address shortcomings and innovate solutions internally.

With an In-house System Development, SPCWD will retain full control over the entire development process, from conception to implementation. This control enables the organization to prioritize development efforts based on its strategic goals and address critical areas for improvement more effectively.

In-house system development offers SPCWD the flexibility to adapt quickly to changing requirements, emerging technologies,

and evolving industry standards. This agility allows the organization to respond promptly to user feedback, incorporate new features, and make necessary adjustments to enhance system performance and usability.

By leveraging internal resources and expertise, SPCWD can avoid ongoing licensing fees, vendor lock-in, and other hidden expenses associated with external solutions.

In-house system development fosters knowledge retention and skill development among SPCWD staff. By actively participating in the development process, employees gain valuable experience, deepen their understanding of system architecture and functionality, and enhance their technical competencies, ultimately contributing to improved system performance and support capabilities. It ensures system development efforts align closely with SPCWD's organizational goals, mission, and values.

In the study of Da Silva (2014), where he systematically reviews and comprehensively explores various facets of software development sourcing by examining the factors that influence sourcing decisions and evaluating the impact of different sourcing strategies on project outcomes, the findings provide valuable guidance for organizations navigating software development projects.

In-house system development is crucial in driving performance improvement for SPCWD by providing tailored solutions, control over the development process, flexibility and adaptability, cost-efficiency, knowledge control and continuous improvement, and strategic differentiation.

Leveraging its existing capability in in-house development, SPCWD can effectively address performance gaps and deliver solutions that meet its stakeholders' evolving needs while remaining a self-reliant and financially viable water district.

Further, this study recommends the In-house System Development program as a basis for an efficient billing and collection system for SPCWD.

SUMMARY

This study was conducted to examine the existing Legacy Proprietary Billing and Collection System in SPCWD and propose an innovative solution. This study aimed to enhance the billing and collection processes' operational efficiency and user satisfaction levels.

Specifically, it sought to answer the following research questions.

1. What is the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD in terms of 1.1. User Satisfaction, 1.2. Technical Support, and 1.3. Scalability. 2. What is the level of capability of SPCWD for in-house system development in terms of 2.1. Peopleware, 2.2. Software, 2.3. Hardware, and 2.4. Financial Resources. 3. Is there a significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for in-house system development?

The study used descriptive research methods to describe the procedures and data flow of the Legacy Proprietary Billing and Collection System of SPCWD. Descriptive methods were also used to evaluate the performance regarding user satisfaction, technical support, and scalability of the legacy billing and collection system. Furthermore, descriptive methods were used to evaluate the capability of SPCWD in terms of peopleware, software, hardware, and financial resources for in-house system development.

The average weighted mean value of 2.32 with a standard deviation of 0.87 revealed that the level of performance of the Legacy Proprietary Billing and Collection System of SPCWD regarding user satisfaction, technical support and scalability was interpreted as "needs improvement."

The average weighted mean value of 3.63 with a standard deviation of 0.41 revealed that the level of capability of SPCWD for in-house system development in terms of peopleware, software, hardware and financial resources was interpreted as "very capable."

The results further revealed that the computed r-value -0.54 is beyond the critical r- r-value ± 0.44 , at a 0.05 level of significance with 18 degrees of freedom.

Therefore, the hypothesis stating that "there is no significant relationship between the level of performance of the Legacy Proprietary Billing and Collection System and the level of capability of SPCWD for In-House System Development in San Pablo City Water District" was rejected.

CONCLUSIONS

Based on the findings of the study, the following conclusions are

- 1. The researcher found out there are areas within the system that require attention and enhancement to meet users' expectations and requirements better. It suggests the necessity for refining user experience, enhancing technical support mechanisms, and ensuring scalability to accommodate future growth and demand. By addressing these areas, SPCWD can strive towards optimizing the performance of its billing and collection system, ultimately leading to higher levels levels of satisfaction and efficiency.
- 2. The researcher discovered that SPCWD possesses the necessary human resources, software tools, hardware infrastructure, and financial resources to develop in-house systems effectively. The high score indicates the organization's strong foundation and readiness to undertake and successfully execute system development projects. This capability bodes well for SPCWD's ability to innovate, customize solutions, and address specific organizational needs through internal development efforts, fostering greater independence and flexibility in managing its technological infrastructure.
- 3. It can be concluded that in-house system development allows SPCWD to create customized solutions tailored to its unique needs and operational requirements. This capability ensures that the software and hardware systems developed align closely with the organization's processes and workflows, potentially leading to improved efficiency and effectiveness.

RECOMMENDATIONS

Based on the findings made and conclusions drawn, the following recommendations were implied:

1. Foster open communication channels with stakeholders, including end-users, management, and IT personnel. Solicit feedback and input from stakeholders throughout the enhancement process to ensure alignment with their needs and expectations. Implement a ticketing system to manage technical support queries efficiently. Document system architecture and technical support procedures. Regularly conduct performance testing and capacity planning to anticipate scalability needs.

By implementing these recommendations, SPCWD can effectively address the identified areas for improvement within the billing and collection system, leading to enhanced user satisfaction, operational efficiency, and long-term sustainability.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

2. Regularly update IT personnel training through formal and informal training programs. Also, the budget for future systems development and enhancements should continue to be aligned with evolving needs.

Through this, SPCWD can further enhance its capability for inhouse system development, enabling the organization to customize solutions and address specific organizational needs effectively. This will ultimately contribute to greater independence, flexibility, and efficiency in managing the organization's technological infrastructure.

3. Establish processes for system maintenance, support, and enhancement of in-house systems post-deployment. Monitor system performance and user feedback to identify areas for optimization and improvement.

Aligning with this recommendation, SPCWD can leverage its capability for in-house system development to create tailored solutions that enhance operational efficiency, effectiveness, and user satisfaction. This approach ensures that software and hardware systems closely align with organizational processes and workflows, ultimately driving improvements in overall performance and outcomes as future researchers can carry out.

DOI No: 10.36713/epra17099

ABSTRACT

Objective: The main goal of this investigation is to analyze the effects of primary dysmenorrhea on academic performance, quality of life, and psychological well-being among university students.

Method: The articles were chosen from a range of authentic platform like Google Scholar, Pub Med and Science direct. The articles span the years 2010–2023.only twenty of the approximately thirty-five articles matched the inclusion criteria of the study.

Results: Primary dysmenorrhea is a major problem among university students worldwide. It has an impact on various groups of these people, with the highest prevalence in female students between the ages of 18 and 25. Additionally, those experiencing primary dysmenorrhea often report its impact on academic and social aspects of university life.

Conclusion:

Our initial finding from this study is that adolescent females, particularly those attending universities, demonstrated the highest prevalence. Primary dysmenorrhea is more likely to develop in Adolescent girls. The majority of factors associated with primary dysmenorrhea in college students include age, the duration of the menstrual cycle, and the strength of the menstrual flow. These students' primary dysmenorrhea has a substantial impact on their learning, exam performance, absenteeism, quality of life, and ability to focus in different pain levels. The second conclusion is that primary dysmenorrhea has a detrimental effect on female young adult students' productivity and overall psychological health.

KEYWORDS: *Primary dysmenorrhea, university students, Prevalence rate.*

INTRODUCTION

A person's general well-being, which encompasses their social, emotional, and mechanical components, is essential to preserving and advancing their health.

This holistic approach to health reflects an individual's capability to handle life's challenges and sustain optimal functioning(1). Gynecological disorders, a prominent health issue globally, significantly impact the standard of living of those affected. Among these conditions, primary dysmenorrhea stands out as a prevalent issue, particularly affecting young adult women during menstruation.

The main feature of primary dysmenorrhea is the presence of excruciating lower abdominal cramps that either precede or coincide with menstruation (2). Research indicates varying prevalence rates across different populations, with studies from Croatia suggesting a prevalence of up to 91.8% among university students(1). Comparably, research from Saudi Arabia and Ethiopia revealed incidence rates between 54.8% and 75% (3)(4).

The consequences of primary dysmenorrhea extends beyond physical discomfort, affecting academic performance, social participation, and overall quality of lifeStudies have shown that it has a negative impact on Educational attainment in Results from academic institutions indicate absences improve with education, decreases participation in cultural and athletic activities, and impairs focus and concentration (5)-(7). Furthermore, there is evidence linking primary dysmenorrhea to emotional problems like depression, stress, and a decline in overall wellbeing (8)-(9). The correlation between primary dysmenorrhea and decreased exercise, social engagement, and occupational productivity highlights the substantial effect this illness had on a person's quality of life. To lessen primary dysmenorrhea's negative effects, aimed actions and interventions are necessary due to its high incidence in college students. As primary dysmenorrhea predominantly affects individuals during their reproductive stage, it can disrupt academic and career activities, limiting their participation in social and work-related tasks(10). Given the significant burden of primary dysmenorrhea on the well-being and functionality of young women, By understanding the multifaceted impact of primary dysmenorrhea on physical, mental, and social dimensions of well-being, effective interventions can be developed to enhance the overall quality of life for those affected.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013|| SJIF Impact Factor 2024: 8.402|| ISI Value: 1.188

METHODOLOGY

Materials and Methods

Online search engine that are used to collect journals are Google scholar, Pub Med and Science Direct. Using the keyboards, the authors were able to identify the articles. The articles were collected in full text. Out of the 24 articles that were gathered, only 20 are utilized in this research study.

Study Selection

Inclusion Criteria

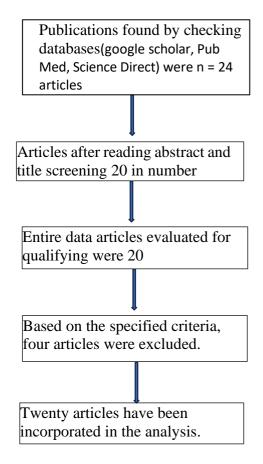

- Articles were included from year 2010 to 2023.
- Articles include the primary dysmenorrhea in university students.

Exclusion Criteria

- Articles before the year 2010 not be included.
- No pathological disorders
- condition were included which caused Primary dysmenorrhea.

-722

FLOW CHART

REVIEW OF LITERATURE

| S NO | TITTLE OF THE ARTICLE | NAME OF THE AUTHOR | YEAR OF PUBLICATION | TYPE OF STUDY | MODE OF INTERVENTION | RESULTS |
|---------|---|---|---------------------------|--------------------|---|--|
| 1. | Primary Dysmenorrhea the prevalence and Its Effects on Academic Performance among Croatian Students during the COVID- 19 Pandemic | Marta Horvat, Doroteja Pavan Jukić, Lovro Marinović, Dina Bursać, Rosana Ribić, Marijana Neuberg, and Danijel Bursać | 2023 | Cross sectional | Web based questionnaire | The prevalence of initial dysmenorrhea had been 90.1%. - Menstrual pain severity: Mild in 7.4%, Moderate in 28.8%, Severe in 63.8%. - 94.1% of female students reported reduced concentration in class due to dysmenorrhea. - 94.0% reported difficulty in doing homework and learning due to dysmenorrhea. - There is a connection between the severity of discomfort during periods and how it impacts academic achievement. |
| 2. | An evaluation of university students' primary dysmenorrhea prevalence | Meena Shamrao Deogade | 2020 | Questionnaire | Survey based | Dysmenorrhea prevalence in college students:90.68% (409 out of 451 students). Out of those affected, 74.08% liked to eat spicy/junk food and 49.87% were suffering from anxiety/depression. Food habits and stress were identified as potential causes.more thorough research using a Larger numbers of samples are necessary for evaluaton. |
| 3. | Primary dysmenorrhea in female students: prevalence ,severity, effects, and related variables at Northwest Ethiopia's Gondar City Preparation Academy,Northwest Ethiopia | Abere Woretaw Azagew, Destaye Guadie Kassie, & Tarkie Abebe Walle | 2020 | Cross sectional | Self administrated structured questionnaire | Prevalence of primary dysmenorrhea: 64.7% (95% CI; 60.2–69.2%) 61% reported moderate intensity of menstrual pain. complained about lower abdominal pain. from school due to menstrual pain. scho- Factors associated with primary dysmenorrhea: irregular monthly menstrual cycle (AOR = 1.70, 95% CI; 1.02, 2.84) as well as a favorable ancestral record of menstrual cramps (AOR = 5.19, 95% CI: 3.21, 8.37). |
| 4. | The prevalence of primary dysmenorrhea and its impact upon life satisfaction in female medical students in the University of King Saudi Arabia. A cross-sectional investigation | Refan T Hashim, Sara S Alkhalifah, Alanoud A Alsalman, Demah M Alfaris, Munira A Alhussaini, Raghda S Qasim, Shaffi A Shaik | 2020 | Cross sectional | None specified | Prevalence of primary dysmenorrhea between female medical students was 80.1%. Most participants (n=134) reported moderate pain (49.8%). Caffeine consumption has been strongly related to dysmenorrhea (p < 0.05). Among the SF-36 domains, physical health (p < 0.001) and emotional health (p=0.01) were significantly affected by dysmenorrhea. The effect of dysmenorrhea on academic performance was also substantial. |
| 5. | A comprehensive review and meta-analysis of the prevalence and effects of dysmenorrhea on academic performance in 21,573 young women | Mike Armour, Kelly Parry, Narendar Manohar, Kathryn Holmes, Tania Ferfolja, Christina Curry, Freya | 2019 | Meta analysis | Systematic review and meta analysis | Prevalence of dysmenorrhea among young women: 71.1% (95% CI 66.6-75.2). 20.1% recorded leave from educational institutions or university due to dysmenorrhea (95% CI 14.9-26.7). 40.9% reported negative impact on classroom performance or concentration (95% CI 28.3-54.9). |

| 7. | Teenager dysmenorrhea in Sweden: the prevalence and consequences | Lisa Söderman et al. | 2019 | Cross sectional | Web-based questionnaire | 89% (95% CI 87-90) stated they had dysmenorrhea. dysmenorrhea (scores 8-10 on the numeric rating scale for pain) was reported by 36% (95% CI 34-39). Fatigue reported by 83% (95% CI 81-85). br - Headache reported by 82% (95% CI 80-84). cy5% CI 80-84). cy5% CI 34-39). - Dyschezia reported by 35% (95% CI 33-38). br - 10% used hormonal therapy for pain. cy5 - Healthcare facilities visited by 33% (95% CI 31-36). cy5 - Doctors consulted by 7% (95% CI 6-9). |
| 8. | Students' experiences with dysmenorrhea, related symptoms, and treatment at King Khalid University in Saudi Arabia | Mohammed Abadi Alsaleem | 2018 | Cross sectional | Self administrated questionnaire | The average rate of dysmenorrhea in female students at King Khalid College is 70.6% (KKC). Severe pain reported by 35.2% of those with dysmenorrhea. dysmenorrhea. Herbal medications for pain relief. Herbal medicine use: 69.1%. The majority of symptoms were related to the digestive system. dysmenorrhea, while most consulted with friends and family. |

 $EPRA\ International\ Journal\ of\ Multidisciplinary\ Research\ (IJMR)\ -\ Peer\ Reviewed\ Journal\ Volume:\ 10|\ Issue:\ 5|\ May\ 2024|\ |\ Journal\ DOI:\ 10.36713/epra2013\ |\ |\ SJIF\ Impact\ Factor\ 2024:\ 8.402\ |\ |\ ISI\ Value:\ 1.188$

| 9. | The impact of painful periods on academic achievement, athletic participation, and interpersonal relationships in Turkish college students suffering from primary dysmenorrhea | Serap Özgül 1, Esra Üzelpasacı 1, Türkan Akbayrak 1, Ceren Orhan 1, Şeyda Toprak Çelenay 2, Funda Demirtürk 3, | 2018 | Cross sectional | Investigated pain characteristics, academic performance and participation in sports and social interactions between students who have both primary dysmenorrhea (PD) and different forms of pain | In comparison to the no-pain, mild, and moderate pain groups, there was an important rise in university absence, decreased concentrate in class, and the impact on athletics and social interactions in the extremely painful group (P less than 0.001). For the mild, moderate, and substantial pain individuals, there were notable variations in the duration, structure, and levels of the day of greatest sensation of pain (P < 0.05). |
|-----|--|--|------|--------------------|--|---|
| 10. | Some of Palestinian female university students, the high incidence of dysmenorrhea and factors influencing the severity of its pain | Heba A Abu Helwa et al. | 2018 | Cross sectional | Questionnaire & Visual Analogue Scale | Prevalence of dysmenorrhea (85.1%; 95% CI), Significant association with age at menarche, mean pain score 6.79 ± 2.64, predictors of moderate/severe pain: irregular cycle, skipping breakfast, academic specialization, high stress level, living in dormitories. |
| 11. | Relationship between physiological and economic variables and primary dysmenorrhea in Polish university students | Martyna Zurawiecka, Iwona Wronka | 2018 | Cross sectional | Questionnaire & Measurements | In the group under research, the incidence of primary dysmenorrhea (PD) was 64.85%. 30.40% of respondents reported moderate to severe pain, while 69.60% reported mild pain. Women with both excess and insufficient abdominal adiposity felt more likely to have PD.PD was more common in women who reached menarche earlier. The incidence of PD rose and fell with the educational attainment of the mother and father, respectively. Women along with wider families are prone to experience painful menstruation. The consequences of abnormal body mass, abnormal gastrointestinal weight gain, and age at menarche on the incidence of painful periods were all confirmed by logistic regression. Women with longer fourth fingers compared to second fingers were more likely to develop Parkinson's disease. Obesity of the abdomen and an adequate body mass index were proposed as ways to lower the risk of primary dysmenorrhea. |
| 12. | A cross-sectional investigation was conducted to determine the prevalence ,effects, and management practices of dysmenorrhea in academic Gondar, Ethiopia students | Minaleshewa Biruk Gebeyehu et al. | 2017 | Cross sectional | Survey and analysis | Prevalence of dysmenorrhea was 77.6%. Majority used home remedies (63.8%) and medications like Ibuprofen and diclofenac. Symptoms included abdominal spasm (70.4%), back pain (69.7%), fatigue, and weakness (63.5%). Social withdrawal (63%) and decreased academic performance (51.4%) were alsoreported. |

|-----|--|---|------|--------------------|---|---|
| 13. | The prevalence of dysmenorrhea and its complications in medical graduates at an educational institution in Malaysia | Heethal Jaiprakash et al. | 2016 | Cross | Interview and clinical examination | Out of the females who claimed to have dysmenorrhea,52% had moderate symptoms. (br> - Students with dysmenorrhea are 21.4±2.2 years old on average. (br> The average menstrual cycle age was 12.2±2 years. (br> - Of them, 59% seemed Indian, 17.1% were Malay, 16.6% were Chinese, and 7.1% were other. (br> - 92.2% of people regularly ate fast food, and 61.7% of people worked out twice a week on average. (br> - 9.% felt obese, while 58.1% were regular a body mass index. (br> Sixty-four percent weren't taking any kind of drug to treat dysmenorrhea After adjusting for examination decade, premenstrual syndrome, and number of pads, factors significantly linked to dysmenorrhea were Malay race, disruption in social activities and family history of the condition (p-value<0.05) |
| 14. | The severity of primary dysmenorrhea, related indicators, and its impact on educational achievement: information collected from Ethiopian female college students. | S Hailemeskel, A Demissie, N Assefa | 2016 | Cross sectional | Self- administered questionnaires, weight and height measurements | - Prevalence of PD was 85.4% (368 out of 440 students). Severity of PD: 28.5% mild, 38.1% moderate, 18.8% severe. |
| 15. | A cross-sectional investigation measuring the prevalance of primary dysmenorrhea across college students and the variables related to its quantity | Sayyed Morteza Safavi, Wan Ying Gan, Rejali Zulida, Nahal Habibi, and Mary Soo Lee Huang | 2015 | Cross sectional | Interviews with pretested questionnaire | 89.1% of people had primary dysmenorrhea. There was an important connection found between the higher primary dysmenorrhea intensity and the following elements: residing in the home, younger age, maternal time in formal education, a previous history of dysmenorrhea, greater frequency of bleeding, and less menstrual cycle. |

DISCUSSION

Menstrual pain, or dysmenorrhea, is a common problem that affects college students' daily activities, academic performance, and general well-being. An outline of the studies and publications that have been presented on dysmenorrhea in college students will be given in the following paragraphs.

A research investigation by Marta Horvat et al. (2023) looked into the prevalence of primary dysmenorrhea in addition how it affected Croatian female students' educational achievement during the COVID-19 pandemic. In the findings of the research, 63.8% of the subjects revealed severe discomfort, while there was an elevated prevalence of primary dysmenorrhea (90.1%) in them. The study discovered a strong link between the extent of cramping during periods while it affected a variety of academic tasks, including learning, test results, assignments, attendance at school, and focus. In particular, the research found that dysmenorrhea impairs exam performance in 87.1% of students, homework completion and comprehension in 93.3% of students, and focus in class in 93.6% of young people. In comparison to certain other international studies, the prevalence rate reported by Horvat et al., 2023, is noticeably higher.

Similarly, Deogade (2020) evaluated the prevalence of primary dysmenorrhea in college students and discovered that 90.68% of female students experienced this condition. Out of that, 74.08% are females liked to eat spicy/junk food and 49.87% suffered from anxiety/depression. The high incidence of dysmenorrhea in college students might be correlated to certain lifestyle and psychological variables. A literature review and meta-analysis were carried out by Armour et al. (2019) to ascertain the frequency and Educational consequences for dysmenorrhea regarding young women, including university students. The study discovered Dysmenorrhea is extremely common in a variety of populations using a large number of participants of over 21,000 young women. This investigation additionally

showed that dysmenorrhea was significantly affected academic performance, with many students reporting absenteeism and reduced concentration due to menstrual pain. This emphasizes how critically dysmenorrhea must be treated as a serious health issue affecting college students.

To examine the impact of menstrual pain on educational achievement, participation in athletics, and interactions with peers among university students with primary dysmenorrhea, In Turkey, Orhan et al. (2018) conducted a case-control study. According to the research, students who had dysmenorrhea performed significantly less proficient than their peers in the classroom without menstrual pain, and They also had a lower chance to engage in extracurricular activities and athletics. This suggests that dysmenorrhea may have a significant effect on college students' general well-being and standard of living. A study by Chia et al. (2013) was carried out in Hong Kong to evaluate the administration, effect, and prevalence of dysmenorrhea in college students. They discovered that dysmenorrhea impacted a sizable proportion of an individual's body and was very common. The study highlighted adverse effects of dysmenorrhea on daily life, including reduced academic performance and disruptions in social activities. Additionally, the study emphasized the importance of effective management strategies to alleviate the symptoms and enhance the living conditions of the impacted students.

CONCLUSION

Our preliminary results from this investigation indicate that female adolescents, particularly those enrolled in universities, had the greatest prevalence. Primary dysmenorrhea is more common in young adolescent females. Age, duration of the menstrual cycle, and the heaviness of the cycle of menses are

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

some of the variables linked to the primary dysmenorrhea across university attendees . Primary dysmenorrhea has an important effect on several educational domains for these students, especially regarding focus, general well-being life, and different levels of pain exertion. It also affects absences, education, and achievement on tests .The second conclusion is that primary dysmenorrhea has a detrimental effect on female young adult students' productivity and overall psychological health.

Article DOI: https://doi.org/10.36713/epra17115

DOI No: 10.36713/epra17115

ABSTRACT

The purpose of this study was to assess the causal association of the writing proficiency of students as viewed from the context of writing strategies' utilization and writing motivation among first-year English major students of Teacher Education Institutions in Region XI. The study used an explanatory sequential mixed methods design. The quantitative strand utilized an adopted survey questionnaire distributed to 300 respondents while the qualitative approach employed 17 informants from among the 300 respondents through purposive sampling. Ten were subjected to IDI and seven to FGD among the 17 participants. The study revealed that writing strategies' utilization of respondents indicated high level in metacognitive, effort regulation, cognitive, social and affective strategy. Moreover, students perceived a high level of writing motivation in terms of intrinsic, extrinsic and self-regulatory. Also, students have high level of writing proficiency in terms of attitudes towards writing, generating, revising, feedback, and awareness and control of the writing process. All variables were found to have a significant influence on writing proficiency. The participants of the qualitative strand agreed with the quantitative results. Hence, the nature of data integration was revealed to be connecting-confirmation.

KEYWORDS: Applied linguistic, education, writing, strategies, motivation, proficiency, first-year English major students, Region XI, Philippines

INTRODUCTION

Writing proficiency involves the ability of an individual to communicate through written word and use knowledge of syntax to write a sophisticated and high-quality sentence. This denotes also the individual's proficiency in vocabulary selection and organization of writing contents to be able to come up with a wellwritten output (Redrico et al., 2019). Hassab and Mohammed (2019) pointed out too that the process of learning to write was said to be crucial in the development of an efficient and effective composing process. However, students' main struggled to enhance their writing proficiency even after completing their education it is because of lack of exposure to variety of writing activities. In a study by Coloquit et. al. (2020), the factors which caused the problem in the students writing proficiency are attributed by the following factors: limited vocabulary, insufficient writing practice, weak argumentation, ineffective structuring of ideas, and challenges in grammar and syntax skills among peers.

In the global context, students in the United States, spanning from elementary to high school seniors, struggle to attain proficiency in writing. In the assessment conducted, it was revealed that only approximately 27% of students demonstrated low proficiency in writing from grades four through twelve. These individuals often exhibit numerous grammatical and spelling errors and encounter difficulties in organizing their thoughts on paper thus scuffled in maintaining attention, experiencing distractions, fatigue, or experienced difficulty initiating writing assignments (National Report Card from the National Center for Education Statistics, 2020). Also, in the study of Alamri and Al-Tunisi (2019) as cited by Ahmed (2019), it was indicated that Saudi undergraduate students frequently commit errors related to unity and coherence in their writing. Their written proficiency is characterized by ineffective organization of ideas, a lack of transitional markers, and misuse of cohesive elements which attributed by several factors such as inadequate knowledge of paragraph writing techniques, lack of motivation, interference from their mother tongue, and inappropriate use of writing strategies.

In the Philippines, as indicated by findings from the Southeast Asia-wide study called "Southeast Asia Primary Learning Metrics" (SEA-PLM), reported by Felipe (2020), a significant proportion of Filipino students lack the necessary proficiency in reading, writing, and math to progress to secondary school.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Senator Gatchalian disclosed that merely 10 percent of Filipino learners have attained proficiency in reading, 17 percent in mathematics, and a mere one percent in writing. This signifies that only one percent of Filipino students possess the ability to compose coherent texts with detailed ideas and a broad range of appropriate vocabulary. The absence of these abilities lead was caused by the lack of strategies and low motivation of students during the writing tasks which leads into the poor writing proficiency. In addition, Tanpoco et. al. (2019) conducted a university-wide study in Naga City on the writing errors among senior high school students. The results demonstrated that students committed grammatical errors as they composed essays and other written output and these are most prevalent in terms of the verb, pronoun and preposition usage. Thus, it revealed that the written-compositions of students struggled to meet the standard on the level of writing proficiency a college student should have.

In the local context, the study by Guliman et. al. (2016) which was conducted in one of the universities in Region XI specified the problem on the writing proficiency of students in higher education institutions. Challenges related to errors in writing compositions as well as structuring correct and meaningful sentences are frequently encountered. During class, students frequently make errors in grammar, spelling, and punctuation, revealing a clear lack of strategies in leading to a problem in their writing proficiency. In the same vein, Mamidted (2023) cited in his study that some faculty members of the College of Education in one of the state universities in Mindanao specifically at Maguindanao observed that the writing proficiency of the university's freshmen students are generally poor and needs to be improved through series of writing activities in terms of grammar, punctuation and sentence structure. Findings report also the importance of students to strive harder to improve their strategy and style skills in writing for them to elevate the level of their writing proficiency.

Researchers have placed an increasing focus and interest on the writing proficiency of college students (Vega et al., 2019; Syafi, 2020; and Ozcelik and Batur, 2023). However, these studies are delimited only to discuss the impact of strategies in the writing proficiency of bilingual students, identify only if the process approach enhances skills in writing, and highlight the outcomes of a proficient writer. On the other hand, this study involved exploring three variables, with writing strategies and writing motivation as independent variables while writing proficiency as the dependent variable. Moreover, there are no publications yet about the influence of these independent variables on the writing proficiency of first-year English major students. Thus, this paper can contribute to the body of related literature so as providing a basis for higher education institutions to further the language curriculum implementation such as on subjects with writing activities in response to the call of innovations and change of times.

From this context, findings and results of the study may be a good avenue and point of reference since the results will be shared to different significant authorities such as the tertiary students, academic institutions, language teachers, technical panel members, research ethics committees, future researchers and other organizations especially those in the education field. Thus, the instruments to be used in the study may be utilized as well by teachers in assessing the writing proficiency of their students and provide possible solutions to answer the problem. Lastly, the study may be presented whether in a local, national or international research conferences and will be published in order that the dissemination of the results will be given into a wide scope of audience.

OBJECTIVES OF THE STUDY

The primary purposes of this study were the following:

- 1. What is the level of writing strategies' utilization, writing motivation and writing proficiency among firstvear English major students across various Teacher Education Institutions in Region XI?
- 2. Are the combined and singular influence of writing strategies' utilization and writing motivation on writing proficiency among the students significant?
- What are the standpoints of the participants on the salient points of the qualitative results?
- How do the qualitative results explain the quantitative results of the study?

METHODS

Design

This study employed the explanatory sequential mixed methods design through regression and phenomenology. As defined by Li et. al. (2015), the mixed methods approach is a methodology that integrates qualitative and quantitative methods across various stages of the research process, encompassing philosophical assumptions, data collection, and interpretation. Also, Creswell (2003) defined mixed methods explanatory sequential design as a research design consisting of two distinct phases: quantitative followed by qualitative. To be specific, the study examined the level, the significant relationship, and the influence of WS' utilization and WM on WP. The researcher also used descriptive statistics like mean and standard deviation, to describe the level of WS' utilization, WM and WP among the first-year English major students of Teacher Education Institutions in Region XI. Further, the researcher used inferential statistics like Pearson-r for determining if the relationship between variables was significant, and multiple regression for predicting the value of WP based on WS' utilization and WM. For the qualitative part, thematic analysis was used to identify emerging themes that substantiated the findings in the quantitative part.

Additionally, the study was conducted in Region XI or Davao Region. Specifically, this study was conducted in the different Teacher Education Institutions (TEIs) in the said region specifically the state universities and colleges. The study covers five (5) different provinces namely, Davao de Oro (Compostela Valley), Davao del Norte, Davao del Sur, Davao Occidental, and Davao Oriental. One (1) TEI was taken as locale in each province.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In selecting the respondents, the researcher used stratified random sampling to recruit 300 students from the different TEIs in Region XI who are all first-year English major students. On the other hand, for the qualitative participants, there were 17 students for an in-depth interview and focus group discussion. These were identified through purposive sampling technique and were drawn out of the quantitative strand respondents.

RESULTS AND DISCUSSION

Level of Writing Strategies, Writing Motivation and Writing **Proficiency**

Reflected in Table 1 is the overall mean rating of writing strategies which is 4.04 with a descriptive equivalent of high which means it is oftentimes manifested by the students. This is based on their responses in metacognitive strategy, cognitive strategy, effort regulatory strategy, affective strategy, and social strategy as indicators of the said variable. While the overall mean rating of writing motivation is 3.87 with a descriptive equivalent of high which means that it is oftentimes manifested by the students. This was based on their responses to the indicators of the variable including intrinsic motivation, extrinsic motivation, and self-regulatory. Lastly, the overall mean rating of writing proficiency is 3.87 with a descriptive equivalent of high. This means that the level of writing proficiency among first-year English major students of TEIs in Region XI is oftentimes manifested.

Table 1 Level of Writing Strategies, Writing Motivation and Writing Proficiency among First-Year English Major Students

| Variables / Indicators | Standard Deviation | Mean | Descriptive Level |
|--|--------------------|------|----------------------|
| Writing Strategies | 0.45 | 4.04 | High |
| Metacognitive Strategy | 0.51 | 4.28 | Very High |
| Effort Regulatory Strategy | 0.57 | 4.02 | High |
| Cognitive Strategy | 0.55 | 4.11 | High |
| Social Strategy | 0.72 | 3.88 | High |
| Affective Strategy | 0.62 | 3.91 | High |
| Writing Motivation | 0.47 | 3.87 | High |
| Intrinsic Motivation | 0.45 | 4.22 | Very High |
| Extrinsic Motivation | 0.58 | 3.56 | High |
| Self-Regulatory | 0.68 | 3.83 | High |
| Writing Proficiency | 0.50 | 3.87 | High |
| Attitudes towards Writing | 0.69 | 3.91 | High |
| Generating Ideas | 0.62 | 3.70 | High |
| Revising | 0.56 | 4.01 | High |
| Feedback | 0.75 | 3.77 | High |
| Awareness and Control of Writing Process | 0.58 | 3.97 | High |

These significant results relate to the findings of the study of Aluemalai and Maniam (2020) that the use of writing strategies of the students in ESL writing classroom is high as compared to the result of the study of Maarof and Murat (2013) as cited by Dari et. al. (2022) that out of 125 first-year students, only 18 (14.4%) participants are high in the use of writing strategies. Further, the study of Aldes-Wold et. al. (2023) aligned to the results since it found that the level of writing motivation of students is high which implied that the students are highly motivated as they write. While Khatri (2022) cited that 78.1% from the total sample of 40 students in Nepal were found high in terms of their writing proficiency.

Influence of Writing Strategies' Utilization and Writing Motivation on Writing Proficiency of First-Year English **Major Students**

Before determining the significant influence of the independent variables towards the dependent variable, correlation between variables was computed to determine its significance. In the case of the said three variables, the correlations are all significant. It can be depicted from the result that there is a significant relationship between WS and WP since shown in Table 2 that the p-value is less than 0.05 for its correlation coefficient, r=.802. Likewise, results also showed a significant relationship between WM and WP (r=.699, p<.05).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2 Relationship between Variables

| Independent Variable | Dependent Variable | r- value | <i>p-</i> value |
|----------------------|---------------------|----------|-----------------|
| Writing Strategies | Writing Proficiency | .802 | .000* |
| Writing Motivation | | .699 | .000* |

The significance of the relationships between writing strategies and writing motivation on writing proficiency warrants the use of regression analysis. Table 3 shows the regression analysis results examining how writing strategies and writing motivation influence the writing proficiency of first-year English major students of Teacher Education Institutions in Region XI. It was revealed on the table that the writing strategies on their singular capacity can significantly influence the writing proficiency (p<.05). On the same manner, the writing motivation on its singular capacity can significantly influence the writing proficiency (p<.05).

Table 3 The Influence of Writing Strategies and Writing Motivation on Writing Proficiency among First-Year Major in English Students

| Independent V | ariables | B | β | t | Sig. |
|--------------------|----------|------|------|--------|------|
| Constant | | .050 | | .322 | .748 |
| Writing Strategies | | .692 | .622 | 12.900 | .000 |
| Writing Motivation | | .265 | .248 | 5.151 | .000 |
| R | .820 | | | | |
| \mathbb{R}^2 | .672 | | | | |
| ΔR | .670 | | | | |
| F | 304.882 | | | | |
| ρ | .000 | | | | |

Moreover, for every unit increase in writing strategies, it corresponds to a .692 increase in writing proficiency if the other predictor is held constant. Similarly, a unit increase in writing motivation forces corresponds to a .265 increase in writing proficiency if the other predictor is held constant. Between the two variables, writing strategies indicate a higher influence to writing proficiency compared to writing motivation. As a model, the r² of .672 implies that 67% of the variation of writing proficiency can be explained by the combined influence of the writing strategies and writing motivation. Thus, 33% can be attributed to other factors apart from writing strategies and writing motivation than can influence the writing proficiency of the first-year English major students.

These findings on the influence of WS' utilization and WM on the writing proficiency confirm the result of the study of Nhung (2023) which found that those students who employ less strategies often receive low level of proficiency. Thus, the students with high proficiency with 3.81 mean score were reported that they employ strategies in their writing to produce a well-structure writing output. Consequently, in terms with the influence of writing motivation on writing proficiency, the result of the study by Chayono and Rahayu (2020) showed that the correlation coefficient is 0.707 which means that if the students' motivation in writing is high, the students' writing proficiency is also high.

Standpoints of the Participants on the Qualitative Results

Illustrated in Table 5 are the standpoints of the participants on the quantitative results regarding the level of students' writing strategies, writing motivation and writing proficiency. The table also presents the salient results of the survey which reveals the essential theme (a priori) and thematic reasons on confirmation. The essential themes generated are as follows: the confirmed high rating of writing strategies, writing motivation and writing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

proficiency and confirmed significant influence/relationship of writing strategies and writing motivation on writing proficiency.

These findings correlate to the studies of Chen (2022) and Sicat (2022) which both mentioned that the variations in the utilization of writing strategies will influence students' writing proficiency. In which, Sicat (2022) also cited in his study that the regular

utilization of writing strategies had a great influence on the level of students' writing proficiency. Meanwhile, Sugumlu et. al. (2019) and Pupita and Iriani (2022) which emphasized that students' writing motivation influence writing proficiency since motivation served as the factor for them to organize and generate ideas in writing.

Table 5
Standpoints of the Participants on the Quantitative Results

Hence, for Dari et. al. (2022), the utilization of writing strategies into writing can yield positive outcomes, enhancing students'

strategic knowledge and increase the students' overall writing proficiency. Hence, students' utilization of strategies during writing tasks serves as a demonstration of their proficiency as writers.

Data Integration of Quantitative and Qualitative Results

Illustrated in Table 6 is the joint display of data and information gathered for both quantitative and qualitative results or mixed methods design, specifically the explanatory sequential approach.

Table 6

Joint Display of Quantitative and Qualitative Results

| Research Area | Quantitative Results | tative and Qualitative Results Qualitative Results | Nature of |

| | influences of WS (<i>B</i> = .692) and WM (<i>B</i> = .265) on WP basing on the combined influence of all its domains (R square = .672; <i>p</i> <.05) | the importance of the variable in the development of their WP as can be gleaned from their qualitative standpoints on the topic bearing out the theme confirmed significant relationship and influence of WS and WM on WP. | Connecting- Confirmation |
|--|--|---|-----------------------------|
| 3. Writing Strategies as best predictor of Writing Proficiency | Between WS and WP, Writing Strategies (<i>B</i> =0.207; <i>p</i> <0.05) Indicated significant influence on WP. Its indicators contribute to the significant influence of WS on WP as demonstrated by the significant R square (.672) of their combined influence on WP. | Participants acknowledged that the five dimensions of WS significantly influence WP. They verbalized the crucial role of MS, ERS, CS, SS and AS in the WP and confirm that they are Influencers of WP as reflected in their qualitative standpoints on the topic. | Connecting- Confirmation |

These results are confirmed in the study of Arifin (2020) and Hendrayani (2022 that the diverse range of writing strategies or techniques used by students are high since students are equipped with critical abilities as they engage in a series of sub-tasks before producing an acceptable and with quality text. In addition, the studies of Bradshaw (2023), Fabie (2020) and Sarikaya and Yilar (2021) which underscored the roles of internal motivation like needs, interests, curiosity and enjoyment as well as external motivation such as educators, incentives, and instructional approaches towards the students' writing. Also, Adrias (2022), alongside with Kincaid (2009) cited that through stating that the individual's writing proficiency should be in high level as it referred to how skillful a writer is in writing.

Moreover, the relationships among variables and influences of WS' utilization and WM on WP demonstrate a connecting and confirming nature in integrating quantitative and qualitative results. In the study of Dari et. al. (2022) and Mastan et. al. (2017), it was pointed out that there is a relationship between the students' utilization of various writing strategies like metacognition on the enhancement of students' writing proficiency. Also, Vacalares et. al. (2023) confirmed the result through their study that when the students' motivation to write is in the high level, it allows them to express their feelings in which their writing proficiency will also increase.

CONCLUSIONS

After a thorough analysis of the data gathered in this study, conclusions were drawn in answer to the set research questions and objectives of the study.

- 1. The level of writing strategies' utilization, writing motivation and writing proficiency are high which means that these are oftentimes manifested among first-year English major students.
- 2. In the study, it is concluded that the variables of writing strategies, writing motivation, and writing proficiency are statistically correlated significantly. It is also concluded that both independent variables writing strategies and writing motivation significantly influence writing proficiency both independently and taken as one among first year English major students. Furthermore, writing strategies showed a relatively stronger influence.
- 3. Also, the quantitative phase results were further substantiated through the essential themes emerged during the thematic analysis of the qualitative phase data. Generally, the results confirmed the quantitative aspect of the study based on the responses provided by the participants and informants during the interview.
- 4. It is also concluded that the integration of quantitative and qualitative findings had demonstrated a connecting and confirmation nature in all elements, including writing strategies, writing motivation, and writing proficiency.

ABSTRACT

This explanatory sequential mixed methods study aimed to assess the causal association of the reading comprehension of first year English-major students as viewed from the context of learning style preference and lexical inferencing strategies in the different state colleges and universities in Davao region. The quantitative strand utilized an adopted survey questionnaire distributed to three hundred respondents using stratified random sampling. The qualitative approach employed 17 informants from among the three hundred respondents. Ten were subjected to IDI and seven to FGD. The study revealed that the learning style preference of the respondents indicated high levels in visual, auditory, and kinesthetic. Moreover, the students perceive a high level of lexical inferencing strategies in terms of intralingual strategies and contextual strategies. On one hand, the students have a moderate rating of their reading comprehension in terms of literal, interpretive, and evaluation level while low for the creative level. Learning style preference found to have no significant relationship and influence on reading comprehension. In the contrary, lexical inferencing strategies found to have a significant relationship and a dominant influence on the reading comprehension of the students. The participants of the qualitative strand confirmed and disconfirmed with the quantitative results. Hence, the nature of data integration was revealed to be connecting-confirmation and connecting-expansion. In the broader context, this study will be of great help to the society since improving how students comprehend text translates to a more knowledgeable and capable society, fostering overall societal improvement.

KEYWORDS: Applied linguistics, Education, learning style preference, lexical inferencing strategies, reading comprehension, first year college students, Philippines

INTRODUCTION

Reading comprehension is defined as the ability to analyze, interpret, and argue about a topic that has been read, allowing for problem-solving and knowledge application and it entails creating mental representations in working memory by combining external text with internal knowledge, encompassing coherence formation, inferences, and topic-specific models (Schnotz, 2023; Caracas, 2023). Accordingly, reading comprehension skill is vital for knowledge acquisition, incorporating aspects like oral comprehension, reading speed, vocabulary, syntax, and inference generation (Acedillo, 2023). However, Lina et al. (2021) highlighted that challenges persist, particularly among college students, who struggle with interpretative, evaluative, and critical levels, often excelling only in literal comprehension

In Indonesia, college students encounter hurdles in reading comprehension across multiple dimensions: literal, interpretative, evaluative, and creative. These challenges are exacerbated by teachers' limited pedagogical knowledge (Nurjanah, 2018). Harida (2014) also noted difficulties in understanding English texts among these college students due to vocabulary, especially the limited knowledge or mastery of vocabulary. Furthermore, deficiencies in reading comprehension skills at literal, inferential, and critical levels impede critical thinking and expression of subjective views (Cabural & Infantado, 2023). A study conducted by Mutakhirani et al. (2020) in Kenya echoed similar findings, emphasizing the need for enhanced reading practices and motivation.

In the local setting of Davao City, it was being highlighted that Grade 8 students face challenges with reading comprehension, particularly at the frustration level, impacting their overall academic performance (Larioque, 2019). To add, Pascual (2019) studies reveal that students exhibit low levels of reading comprehension which is exacerbated by factors such as limited exposure to English linguistic environments poor reading habits among millennials, and high levels of reading anxiety.

This study seeks to address a research gap identified in previous studies, such as Rujani's (2019) exploration of the relationship between learning styles and reading comprehension, Anak et al. (2022) investigated learning style preferences among English Language Education students, and Juliana's (2018) study focused on lexical inferencing strategies and their effect on reading comprehension. While these studies delved into learning style preferences and lexical inferencing strategies, none have comprehensively explored the intricate connections between perceptual learning style preferences, lexical inferencing strategies, and reading comprehension among Education students in Region XI. The existing literature provides valuable insights into the aspects of reading competence and learning styles. However, there is a noticeable gap in exploring the intricate relationship between these variables. This gap emphasizes the necessity for a more focused investigation, which forms the foundation of this study's contribution to the existing knowledge.

This study delving into how Education students approach reading is exceptionally crucial. It aims to unravel the effect of their learning style preference and lexical inferencing strategies on reading comprehension—an urgent endeavor as strong reading comprehension are pivotal for success in both academic and real-life scenarios. By uncovering how students learn best, we empower educators to tailor teaching methods that benefit everyone. The outcomes will offer practical insights for teachers and curriculum planners, contributing to enhanced learning strategies. In the broader context, improving how students comprehend text translates to a more knowledgeable and capable society, fostering overall societal improvement. Therefore, the urgency and social relevance of this study lie in its potential to significantly shape the way students learn and thrive in the academic and broader societal landscape.

OBJECTIVES OF THE STUDY

This study sought to answer the following questions:

- 1. What is the level of learning style preference, lexical inferencing strategies, and reading comprehension among BSED-English students in the different State Universities and Colleges in Region XI?
- 2. Is the combined and singular influence of learning style preference and lexical inferencing strategies on reading comprehension among these students significant?
- 3. What are the standpoints of the participants on the salient points of the quantitative results?
- 4. How do the qualitative results explain the quantitative results of the study?

METHODS

Design

This study adopted a mixed methods design. Following the definition by Schoonenboom & Johnson (2017), mixed methods involve the integration of qualitative and quantitative approaches throughout various stages of the research process. Further, this study utilized an explanatory sequential mixed methods research design, combining both regression analysis and phenomenology with a non-experimental approach. According to the explanation provided by Creswell and Plano Clark (2011), qualitative data serve to expound upon or build upon the initial quantitative results, contributing to a comprehensive understanding of the research phenomena.

Additionally, phenomenology was used as the approach of choice in the qualitative phase because of its basis in the idea that personal perceptions influence actions and reactions. Forris (2015) asserts that phenomenology seeks to shed light on particular phenomena by investigating how the individuals involved perceive them. This entails obtaining detailed data using qualitative techniques like participant observation, interviews, and discussions and presenting it from the viewpoint of the research participants. According to Creswell (2009), phenomenology is a research approach that identifies the essence of human experiences connected to a phenomenon based on participant descriptions.

Population and Sample

In the quantitative phase, the participants of the study were the 300 first-year English major students enrolled in the different State Universities and Colleges in Region XI. Also, stratified random sampling technique was used in calculating the samples in each population per HEI. For the qualitative strand of the study, 10 first-year BSED-English major students were invited for the in-depth interview and seven participants for the focus group discussion. Their standpoints on the quantitative data were considered and were dealt with accordingly. In the selection of the participants, the researcher employed a purposive random technique. They were selected based on who can best address the research questions and enhance understanding to give vision of the phenomenon under study.

Research Instrument

In this section, the instruments that were used to collect quantitative and qualitative data from the participants of this study were discussed.

In the quantitative strand of the study, three sets of questionnaires were drawn from diverse authors which underwent validation by experts in questionnaire construction. For the learning style preference, it was adapted from Male (2019), the questionnaire for lexical inferencing strategies was adapted from Ngoc Yen (2023) and for reading comprehension, was from Bilbao et al. (2016). Further, in the qualitative aspect, interviews were conducted with the relevant participants using a set of guided questions. An interview protocol and a guide for focus group

discussions (FGD) were developed and validated by a panel of experts.

Data Analysis

The quantitative data analysis involved descriptive statistics such as mean which determined the level of learning style preference, lexical inferencing strategies, and reading comprehension, Pearson-r assessed the significant relationship between learning style preference and lexical inferencing strategies on the reading comprehension of first-year English major students, standard deviation measured the dispersion of respondents and regression analysis measured the relationship between the two independent variables on the dependent variables. In the qualitative phase, the notes taken from the focus groups and in-depth interviews were subjected to a series of thematic analyses. This approach focuses on finding, analyzing, and recording themes or patterns in the data.

RESULTS AND DISCUSSION

Level of Learning Style Preference, Lexical Inferencing Strategies and Reading Comprehension

Shown in Table 1 are the levels of the study's observed variables: Learning Style Preference, Lexical Inferencing Strategies and Reading Comprehension of first year English-major students in Region 11. The first independent variable, *learning style preference* gathered an overall mean of 3.69 with a level description of "high." This mean score indicates that the LSP of the students is practiced most of the time. In this variable, all the indicators acquired a level description of "high". Furthermore, the second independent variable, *lexical inferencing strategies*, gathered an overall mean of 3.95 with a level description of "high." This mean score indicates that the first-year students' LIS is practiced most of the time. In this variable, all the indicators also acquired a level description of "high". Lastly, the dependent variable, *reading comprehension*, gathered an overall mean of 2.72 with a level description of "moderate." This mean score indicates that the said variable is sometimes practiced. In this variable, all of the indicators acquired a level description of "moderate" except for the creative level with low descriptive level.

These results align with the findings of Raju and Madhuri (2022), who similarly discovered a high level of learning style preference among secondary school students in their study. The result also resonates with Foomani's (2015) study, which also identified a high level of lexical inferencing strategies among proficient college listeners. Also, this outcome echoes Yusoff et al.'s (2016) findings, which similarly indicated a moderate level of reading comprehension among students, highlighting the necessity for effective guidance in text comprehension.

Table 1
Status of Learning Style Preference, Lexical Inferencing Strategies, and Reading Comprehension among BSED-English Students in the Different State Universities and Colleges in Region XI

| Latent Variables / Observed Variables | Standard Deviation | Mean | Descriptive Level |
|---------------------------------------|--------------------|------|-------------------|
| Learning Style Preference | 0.41 | 3.69 | High |
| Visual Learning Style Preference | 0.46 | 4.06 | High |
| Auditory Learning Style Preference | 0.53 | 3.62 | High |
| Kinesthetic Learning Style Preference | 0.61 | 3.40 | High |
| | | | |
| Lexical Inferencing Strategies | 0.54 | 3.95 | High |
| Intralingual Strategies | 0.59 | 3.91 | High |
| Contextual Strategies | 0.60 | 3.99 | High |
| | | | |
| Reading Comprehension | 0.50 | 2.72 | Moderate |
| Literal Level | 0.87 | 2.60 | Moderate |
| Interpretive Level | 0.72 | 2.84 | Moderate |
| Evaluation Level | 0.77 | 2.97 | Moderate |
| Creative Level | 0.68 | 2.47 | Low |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Relationship and Influence of Learning Style Preference and Lexical Inferencing Strategies on the Reading Comprehension of Education Students

Table 2 shows the relationship between learning style preference and lexical inferencing strategies on reading comprehension. Before the influence of the learning style preference and lexical inferencing strategies to reading comprehension was determined, the relationship between each other was first established.

The table shows that there is no significant relationship between learning style preference and reading comprehension of the students. This correlates to the assertions of Pratiwi (2022) which states that there is no significant relationship between learning style preferences and reading comprehension, as indicated by the research they conducted on the twelfth graders. On the other hand, in terms of the relationship between lexical inferencing strategies and reading comprehension it was revealed that the null hypothesis is being rejected in this context. This conforms to the claim of Hassanzadeh et al. (2020) study, which found a significant relationship between lexical inferencing strategy and the development of reading comprehension among Iranian EFL learners, showing improved comprehension through the utilization of this strategy.

Table 2
Relationship between Variables

| Independent Variable | Dependent Variable | r-value | <i>p</i> -value |
|--------------------------------|-----------------------|---------|-----------------|
| Learning Style Preference | Dooding | .013 | .828 |
| Lexical Inferencing Strategies | Reading Comprehension | .155 | .007* |

^{*}p<0.05 significant

Table 3 provides the regression analysis results examining how learning style inferencing and lexical inferencing strategies influence the reading comprehension of first year English-major students. The results revealed that the learning style preference on its singular capacity cannot significantly influence reading comprehension (p>.05). This conforms the claim of Mutiara (2022) who found that students' learning style preference did not significantly influence reading comprehension achievement among eleventh graders, according to the correlational analysis conducted in the study

Likewise, the lexical inferencing strategies on its singular capacity can significantly influence the reading comprehension (p<.05). Between the two independent variables, lexical inferencing strategies indicates a significant influence to reading comprehension over learning style preference. This is in accordance to the claim of Shen (2016) which adds depth to this connection by suggesting that reading comprehension can, in turn, influence lexical inferencing.

Table 3
Combined and Singular Influence of Learning Style Preference and Lexical Inferencing Strategies on Reading Comprehension

| Reading Comprehension | | | | | |
|-----------------------------------|-----------|-------|------|--------|------|
| Independent | Variables | B | В | T | Sig. |
| Constant | | 2.439 | | 9.269 | .000 |
| Learning Style Preference | | 145 | 121 | -1.717 | .087 |
| Lexical Inferencing Strategies | | .207 | .227 | 3.202 | .002 |
| R | .183 | | | | |
| \mathbb{R}^2 | .034 | | | | |
| ΔR | .027 | | | | |
| F | 5.152 | | | | |
| P | .006 | | | | |

Standpoints of the Participants on the Quantitative Results Regarding the Level of the two Independent Variables and theDependent Variable

Table 5 shows the standpoints of the participants on the qualitative results regarding the level of Learning Style Preference, Lexical Inferencing Strategies, and Reading Comprehension. The essential themes generated are as follows: the confirmed high rating of Learning Style Preference, Lexical Inferencing Strategies, and confirmed moderate rating of Reading

Comprehension. Through these confirmations, it can be stated that the results run parallel to the perspectives presented by Nikmah (2022) which posits that using context clues strategy significantly improves reading comprehension in first-year students. Cohen (2006) also bolstered this viewpoint, asserting that in today's digitally mediated era, an overreliance on the internet can indeed impede reading comprehension. These insights underscore the pressing need to address the influence of

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

technology on RC and to foster balanced literacy practices among students.

> Table 5 Standpoints of the Participants on the Quantitative Results

| Standpoints of the Participants on the Quantitative Results | | | |
|---|---|---|--|
| Areas of Concern | Essential Theme | Core Ideas | |
| High Rating of Learning Style Preference (LSP) | Confirmed High Rating of LSP | Students utilize an approach that is applicable and effective which allows them to learn easier. Students understanding and learning improved because of their learning style. Students' LSPs allow them to cope and comprehend during discussions. Students gather information easily when using their preferred learning style. Students have enhanced understanding. Student solve problems using their LSP. | |
| High Rating of Lexical Inferencing Strategies (LIS) | Confirmed High Rating of LIS | Students employ strategies in learning new words. Students understand unfamiliar words with the use of LIS. Students utilize strategies to guess the meaning of words. Students make use of tools to figure out the meaning of words. Students use different methods to decipher the meaning. | |
| Moderate Rating of Reading Comprehension (RC) | Confirmed Moderate Rating of RC | Limited access to reading materials provides students difficulty to comprehend. Students become too dependent and rely much on technology. Students are exposed to curated and instant information from the internet. Students are not very proficient in reading. Students do not have conducive reading environments. Students lack interest in reading. Students struggle with questions that require deeper understand of the text. | |
| No Significant Relationship and Influence of LSP on RC | Confirmed No Relationship and Influence of LSP on RC | Reasons of Participants on their Confirmation on the No Significant Relationship & Influence of LSP on their RC: Other factors like the levels of development affects the RC than LSP. The preferred LSP is not suited for the reading activities. Various external factors affect RC. | |
| | Disconfirmation on the No Relationship and Influence of LSP on RC | Reasons of Participants on their Disconfirmation on the No Significant Relationship & Influence of LSP on their RC: LSP is a strong factor of RC. LSP helps students to excel in class. LSP enhanced RC of students. LSP foster deeper engagement in learning. Despite LSP of students, they still have difficulty to comprehend. | |

Standpoints of the Participants on the Relationship and Influence of Learning Style Preference and Lexical Inferencing Strategies on Reading Comprehension

As part of the inquiry, the participants shared their perspectives on the relationship and influence of Learning Style Preference and Lexical Inferencing Strategies on Reading Comprehension. Their views were analyzed and revealed into three essential themes: confirmed the significant relationship and influence of LSP and RC, disconfirmed the significant relationship and influence of LSP on RC and confirmed relationship and dominant influence of LIS on RC. The participants believed that there are other factors like the levels of development that will really affect the RC than LSP. This is also in accordance to the claim of Xiaoling (2016) who added that individual factors like motivation, age, sex, and personality, along with situational factors, influence reading comprehension beyond learning style preferences.

The findings from both in-depth interviews and focus group discussions overwhelmingly supported the notion that there is no relationship and influence between Learning Style Preferences (LSP) and Reading Comprehension (RC). According to the majority of informants, factors such as developmental levels have a more pronounced impact on reading comprehension compared to learning style preference. This consensus resonates with Kaplan's 2013 research, which highlighted the significant impact

of developmental levels on reading comprehension compared to learning style preference.

In the qualitative interview the students confirmed the relationship and influence of LIS on RC. This indicates that the students agreed that LIS has a significant relationship and a dominant influence on the RC of the first year English-major students. This assertion aligns with findings from Shafiq's study in 2018, which highlighted how lexical inferencing, a component of LIS, aids students in deciphering unfamiliar words within texts.

Data Integration of Salient Quantitative and Qualitative Findings

This paper employed a mixed methods design specifically utilizing an explanatory sequential approach. In Table 6, the joint display of the quantitative and the qualitative results is based on the data collated which revealed that there are two nature of integration: Connecting-confirmation and connecting-expansion. This finding resonates with the study conducted by Kinjari and Gopal in 2020, which emphasized how adolescent school students, with preferred learning styles such as Kinesthetic, Visual, and Auditory, can enhance their learning effectiveness both within and outside the classroom, thereby facilitating self-directed learning. Lastly, the findings are in harmony with the research of Yang, et al. (2023), which both underscore the significance of lexical inferencing strategies in bolstering reading comprehension.

Table 6
Joint Display of Quantitative and Qualitative Results

| Research Area | Quantitative Results | Qualitative Results | Nature of Integration |

| 3. Lexical Inferencing Strategies as the dominant influencer of Reading Comprehension | Between LSP and LIS, Lexical Inferencing Strategies (B=0.207; p<0.05) indicated significant influence on RC. Although LSP has no significant influence on RC but its contribution is needed by LIS to come up with the combined significant influence on RC as demonstrated by the significant R square (.034; p<0.05) | Participants acknowledged that the LIS significantly influence RC. They verbalized the crucial role of LIS on RC and confirms that LIS' dominant influence on RC compared to LSP as reflected in their qualitative standpoints on the topic. | Connecting- Confirmation |

CONCLUSION

After carefully examining the study's results and findings, conclusions are formulated in this section.

- 1. The respondents of the quantitative phase exhibited a high level of learning style preference. Learning style preference gained a high rating which means that it is oftentimes practiced. Further, the high level of students' lexical inferencing strategies expressed that the second independent variable is practiced by the students most of the time. Also, reading comprehension geared a moderate rating of which means that it is sometimes practiced.
- 2. In terms of the significant relationship and influence of the first independent variable and the dependent variable, the results of the study revealed that there is no significant relationship and influence between learning style preference and reading comprehension. On the other hand, results revealed that there is a significant relationship between lexical inferencing strategies and reading comprehension.
- 3. On the standpoint of the participants on the quantitative result of the study, there were various themes that were being generated: confirmed high level of learning style preference, confirmed high level of lexical inferencing strategies, confirmed moderate level of reading comprehension, confirmed no significant relation and

- influence of learning style preference and reading comprehension, disconfirmation on the relationship and influence of learning style preference and reading comprehension, and confirmed relationship and influence of lexical inferencing strategies and reading comprehension.
- 4. It is also affirmed that the integration of quantitative and qualitative findings had demonstrated a connectingconfirmation nature in all elements except for the significant relationship and influence of learning style preference and reading comprehension with a connectingexpansion nature.

IDENTIFYING FACTORS FOR EMPLOYEE PERFORMANCE IN PUBLIC SERVICE

Hanna Patricia R. De Ramos

Master in Public Administration, Laguna State Polytechnic University, Sta. Cruz, Laguna, Philippines

ABSTRACT

This study aimed to determine the level of employee performance in the public service during the calendar year 2023 – 2024. Involved in the study were one hundred twenty (120) employees from six (6) Local Government Units in Laguna and one hundred twenty clients (120) determined through random sampling.

Descriptive quantitative research method was employed to determine the relationship of variables such as the demographic profile, the level of influence of identifying factors to the employees in terms of Organizational Culture, Training and Development, Employee Motivation and Job Satisfaction and the level of employee performance in terms of Customer Service, Responsibilities towards the organization, Ethical Conduct and Compassion. Data analysis shows that there are significant correlations between Organizational Culture, Training and Development, Employee Motivation, and Job Satisfaction with performance in areas such as Customer Service, Responsibilities Towards the Organization, Ethical Conduct, and Compassion.

Responsibility Towards Organization showed positive relationships with Training and Development, Employee Motivation, and Job Satisfaction. These results provide valuable perspective on the factors impacting employee performance in public service in our society.

KEYWORDS: Employee Performance, Public Service, Identifying Factors for Employee Performance

INTRODUCTION

In any field, an organization's success is solely dependent on its employees. Employees play a vital role in any organization, representing its most valuable asset. They are the driving force behind the success and growth of businesses, government agencies, and non-profit organizations. Recognizing and valuing their contributions, providing appropriate support and development opportunities and fostering a positive work environment are essential to overall success and effectiveness of LGUs.

In the public service domain, employee performance directly impacts the delivery of services and the achievement of organizational objectives. Public organizations exist to serve the needs of the public, and the quality, efficiency, and effectiveness of these services are directly tied to the performance of their employees. High-performing employees can ensure that public services are delivered in a timely manner, meet the needs of citizens, and contribute to the overall development and well-being of society.

The researcher wanted to uplift and shed light for the worth of our casual and job order employees through their performance as a part of the forefront of public service delivery.

MATERIALS AND METHOD

Descriptive – quantitative research design harmonizes with the purpose of the study of stablishing associations between the

variables, hence to determine the relationships between one thing (an independent variable) and another (dependent variable) within a population (Babbie, 2010). This study will use descriptive quantitative method on gathering numerical data and generalizing it across groups of people or to explain a particular phenomenon.

According to Posinasseti (2014), descriptive study is one in which information is collected without changing the environment (e.i., nothing is manipulated). It is used to obtain information concerning the current status of the phenomena to describe "what exists" with respect to variables or conditions in a situation. As stated also by Sugiyono (2015) Quantitative methods can be interpreted as research methods based on positivism philosophy, used to examine in a particular population or sample, data collection using research instruments, quantitative data analysis / statistics, with the aim to test the hypothesis set.

Correlational method is also a vital component of the research design employed in the study since it intends as well to determine the relationships between variables and to what degree, and to test a hypothesis, i.e.; significant relationship between the Identifying Factors and the Level of Performance of employees in the Public Service in the 3rd Class Municipalities of Laguna; and the significant difference between the Identifying Factors and Level of Performance as perceived by the respondents when grouped according to profile.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

RESULTS AND DISCUSSIONS

Table 1
Frequency and Percentage Distribution of Employees Profile

| | Profile | f | % |
|-------------------|---------------------------|----|------|
| Age | | | |
| | 26 and below | 32 | 26.7 |
| | 27 - 36 | 49 | 40.8 |
| | 37 – 46 | 18 | 15.0 |
| | 47 - 56 | 18 | 15.0 |
| | 57 and above | 3 | 2.5 |
| Sex | | | |
| | Male | 53 | 44.2 |
| | Female | 67 | 55.8 |
| Educational A | Attainment | | |
| | High School Undergraduate | 11 | 9.2 |
| | High School Graduate | 18 | 15.0 |
| | College Undergraduate | 35 | 29.2 |
| | College Graduate | 45 | 37.5 |
| | Others | 11 | 9.2 |
| Years in Serv | vice | | |
| | Below 1 year | 20 | 16.7 |
| | 1 year – 5 years | 46 | 38.3 |
| | 6 years – 10 years | 30 | 25.0 |
| | 11 years – 15 years | 24 | 20.0 |
| Employment | Status | | |
| - • | Casual Employees | 41 | 34.2 |
| | Job Order | 79 | 65.8 |

Table 1 presents the age distribution of the casual employees. As reflected in the table, 49 out of 120 employees were mostly in the range of 27 – 36 years old or 40.8 % of the respondents. Second were in 26 years old and below or 26.7% of the population. Third were 37 – 46 years old and 47 – 56 years old or 15.0%. Lastly, 57 years old and above or 2.5 % of the respondents fall on this age. This information is vital as age can be a factor that affects level of influence of identifying factors to the employees in the public service, and it offers insights for possible further analysis on the relationship between age and work performance of employees in the study. It also presents the sex distribution of the employees who took part in the research. As shown in the table, 67 out of 120 respondents were female or 55.8% of the research participant. On the contrary, 53 or 44.2% of the respondents were males.

In addition to this, it shows the educational attainment distribution of the employees who were respondents of the study. As reflected in the table, 45 out of 120 employees were mostly college graduates or 37.5 % of the respondents. Second were college undergraduates or 29.2%. Third were High school graduates or 15.0%. Lastly, eleven were high school undergraduates or 9.2% of the respondents. Eleven respondents fall under the category "others".

Moreover, in terms of the years in service of the respondents, 46 out of 120 rendered 1 year to 5 years or 38.3%; 30 or 25.0% rendered 6 years to 10 years; 24 or 20.0% were 11 years to 15 years in service and 20 or 16.75% were below 1 year in service. Furthermore, the employment status of the respondents was also presented in the table. It revealed that out of 120 employees, 79 or 65.8% were job orders and 41 or 34.2% were casual employees.

Table 2
Frequency and Percentage Distribution of Clients Profile

| •] | Monthly | 17 | 14.2 |
| • (| Quarterly | 40 | 33.3 |
| • | Annually | 59 | 49.2 |

$EPRA\ International\ Journal\ of\ Multidisciplinary\ Research\ (IJMR)\ -\ Pe\underline{er}\ Reviewed\ Journal$

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2 presents the sex distribution of the clients who took part in the research. As shown in the table, 64 out of 120 respondents were female or 53.3% of the research participants. On the contrary, 56 or 46.7% of the respondents were males.

Moreover, it shows the age distribution of the clients. As reflected in the table, 108 out of 120 employees were mostly adults in the range of 20 - 59 years old or 90% of the

respondents. Second were senior who are 60 years old and above or 9.2% of the population. Lastly, teenager in the range of 13 to 19 years old or 0.8% of the respondents fall on this age.

Additionally, the table presents the frequency of visit of the clients. Out of 120 respondents, 59 or 49.2% of respondents visit annually; 40 or 33.3% of respondents visit quarterly; 17 or 14.2% of respondents visit monthly; and 4 or 3.3% of respondents visit daily.

Table 3
Level of Influence of Identifying Factors to the Employees in the Public Service in terms of Organizational Culture

| Indicative Statement | Mean | SD | Remark |
|---|------|------|-------------|
| 1. Open communication and transparency are promoted. | 4.19 | 1.06 | Influential |
| 2. Initiative and innovation are encouraged. | 4.09 | 0.97 | Influential |
| 3. Collaboration and teamwork are valued and promoted. | 4.06 | 0.99 | Influential |
| 4. A strong commitment to client satisfaction is emphasized. | 4.34 | 0.73 | Influential |
| 5. Diversity and inclusion are actively fostered within the organization. | 3.98 | 0.94 | Influential |
| 6. Opportunities for professional growth and development are provided. | 3.98 | 1.19 | Influential |
| 7. Decision-making process are fair and inclusive. | 4.04 | 0.93 | Influential |
| 8. Work-life balance and employee well-being are valued. | 4.15 | 0.88 | Influential |
| 9. A strong sense of pride and commitment among employees | 4.19 | 0.88 | Influential |
| toward the organization is practiced. | | | |
| Overall Mean | 4.11 | 0.95 | Influential |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Influential; 3.40 - 4.19 = Influential; 2.60 - 3.39 = Moderately Influential; 1.80 - 2.59 = Slightly Influential; 1.00 - 1.79 = Not Influential.

Table 3 suggests that the employees in the $3^{\rm rd}$ Class Municipalities of Laguna exhibit a high level of influence to public service in terms of organizational culture. The mean score of 4.11 (SD=0.95) shows that the level of influence of organizational culture in public service to the employees are verbally interpreted as "Influential" in terms of having open communication and exhibiting fairness and inclusivity in decision making. The highest mean score of 4.34 (SD=0.73) for the statement "A strong commitment to client satisfaction is emphasized." suggests that employees were able to show strong commitment in doing their work and meeting client satisfaction. The lowest mean score of 3.98 (SD=1.19) for the statement "Opportunities for professional growth and development are provided." suggests that employees may be less likely given focus on this matter.

Overall, the high mean score and verbal interpretation of "Influential" suggests that the employees in LGU display a strong level of influence to public service in terms of organizational culture which is very important in their day-to-day work.

This implies that employees have a strong commitment to client satisfaction. This is supported by the study of El-Rawas, A., & Yassein, S. (2017) Some aspects of organizational culture like acting sociable to customers are easy to monitor. Organizational culture in the modern era significantly impacts organizational performance by influencing innovation capabilities. Innovation, driven by individuals within organizations, can be either enhanced or hindered by the organizational culture in which they operate. This culture provides an environment for business activities and innovation, ultimately affecting organizational performance through indirect and mediated pathways such as knowledge management and job satisfaction. All organizations have unique methods of operation influenced by their organizational culture, which encompasses fundamental values, beliefs, and management practices. These practices endure over time as they have proven successful and are perceived to continue to be effective in the future.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 4
Level of Influence of Identifying Factors to the Employees in the Public Service in terms of Training and Development

| Indicative Statement | Mean | SD | Remark |
|---|------|------|-------------|
| 1. Received sufficient training to perform job effectively. | 4.00 | 1.00 | Influential |
| 2. Opportunities are provided to enhance skills and | 4.02 | 1.24 | Influential |
| knowledge. | | | |
| 3. Professional development as a casual/ job order employee | 4.09 | 0.90 | Influential |
| is supported. | | | |
| 4. The organization offers relevant and valuable training for | | | |
| casual/job order employees. | 4.04 | 0.98 | Influential |
| 5. Participation in training and development activities is | | | |
| encouraged. | 4.13 | 0.92 | Influential |
| 6. The organization recognizes and rewards casual/job order | | | |
| employees who engage in training and development. | 3.77 | 1.11 | Influential |
| 7. Training and development initiatives contribute to overall | | | |
| job satisfaction. | 4.06 | 0.99 | Influential |
| Overall Mean | 4.02 | 1.02 | Influential |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Influential; 3.40 - 4.19 = Influential; 2.60 - 3.39 = Moderately Influential; 1.80 - 2.59 = Slightly Influential; 1.00 - 1.7 = Not Influential.

Based on the results in Table 4, it shows that there is a high level of influence to public service in terms of training and development. The mean score of 4.02~(SD=1.02) suggests that the employees were provided with opportunities to enhance their skills and knowledge and were recognized for participating in trainings and development. The highest mean score of 4.13~(SD=0.92) was obtained from the statement "Participation in training and development activities is encouraged.", indicating that employees prioritize the participation in training and development activities which is important in enhancing their skills and knowledge.

At the same time, the lowest mean score of 3.77 (SD = 1.11) was obtained from the statement "The organization recognizes and rewards casual/job order employees who engage in training and development.", indicating that there is a room for improvement for the organization to give recognition to casual or job order employees who participate in trainings.

Generally, the level of influence to public service in terms of training and development can be verbally interpreted as "Influential".

This implies that employees are recognized and encouraged to participate, showing commitment to client satisfaction. This is supported by the study of Hoti, I., & Fejza, J. (2019) that training employees is very much needed to empower them. Training and Development is essential for enhancing employee skills and performance to meet current and future business needs. It is a valuable opportunity to increase knowledge among all employees, but cost can be a barrier for some employers. A structured program ensures consistent experiences and knowledge. Employees should be informed about company expectations, including safety, discrimination, and administrative procedures, to effectively perform their jobs.

Table 5
Level of Influence of Identifying Factors to the Employees in the Public Service in terms of Employee Motivation

| Indicative Statement | Mean | SD | Remark |
|---|------|------|-------------|
| 1. The organization provides recognition and rewards for a | 3.72 | 1.30 | Influential |
| job well done. | | | |
| 2. I feel motivated to perform at my best as a casual/job order employee. | 4.09 | 0.83 | Influential |
| 3. The organization fosters a positive work environment that encourages motivation. | 3.89 | 1.01 | Influential |
| 4. I receive constructive feedback and support from my supervisor to enhance my performance. | 3.94 | 1.22 | Influential |
| 5. The organization values and appreciates the contributions of casual employees. | 3.96 | 1.00 | Influential |
| 6. I have clear goals and expectations that help drive my motivation. | 4.15 | 0.91 | Influential |
| 7. The organization provides opportunities for growth and advancement as a casual/job order employee. | 3.94 | 1.01 | Influential |
| 8. I feel a sense of purpose and fulfillment in my work as a casual/job order employee. | 3.94 | 0.96 | Influential |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 9. The organization promotes a healthy work-life balance, | 4.00 | 0.93 | Influential |
|--|------|------|-------------|
| which contributes to my motivation. 10. I believe that my efforts and hard work as a casual/job | 4.00 | 0.96 | Influential |
| order employee are recognized and valued by the organization. | | | |
| Overall Mean | 3.96 | 1.01 | Influential |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Influential; 3.40 - 4.1 = Influential; 2.60 - 3.39 = Moderately Influential; 1.80 - 2.59 = Slightly Influential; 1.00 - 1.7 = Not Influential.

Table 5 shows that there is a high level of influence to public service in terms of employee motivation. The mean score of 3.96~(SD=1.01) suggests that the organization fosters a positive work environment that encourages motivation. The highest mean score of 4.15~(SD=0.91) was obtained from the statement "I have clear goals and expectations that help drive my motivation." indicating that employees' motivation is aided by having expectations and goals that are clear to them.

At the same time, the lowest mean score of 3.72~(SD=1.30) was obtained from the statement "The organization provides recognition and rewards for a job well done." indicating that there is a room for improvement for the organization to provide recognition and rewards to employees who performs well with their duties and responsibilities.

Generally, the level of influence to public service in terms of employee motivation can be verbally interpreted as "Influential".

This implies organization fosters positive work environment with clear goals. This study is supported by Ochola, G.O. (2019). States that organizations aim for goal achievement to boost productivity to motivate employees. Motivation is crucial for employee performance and job satisfaction. Different individuals are motivated by various factors such as money, recognition, and rewards. Employee motivation directly affects productivity, with motivated workers completing tasks efficiently and producing high-quality work. Overall, motivation levels in the workplace play a significant role in employee productivity and job satisfaction.

Table 6
Level of Influence of Identifying Factors to the Employees in the Public Service in terms of Job Satisfaction

| Indicative Statement | Mean | SD | Remark |
|---|------|------|-------------|
| 1. I am satisfied with my current role as a casual/job order employee. | 4.00 | 1.00 | Influential |
| 2. The organization provides a supportive and inclusive work environment. | 4.04 | 0.98 | Influential |
| 3. I feel valued and appreciated for the work I do. | 4.02 | 1.03 | Influential |
| 4. The organization offers opportunities for growth and advancement. | 3.87 | 1.03 | Influential |
| 5. I have a good work-life balance as a casual/ job order employee. | 4.06 | 1.05 | Influential |
| 6. I am satisfied with the level of compensation and benefits as a casual/job order employee. | 3.79 | 1.18 | Influential |
| 7. The organization recognizes and rewards my contributions as a casual/job order employee. | 3.87 | 1.30 | Influential |
| 8. I have the necessary resources and tools to perform my job effectively. | 4.02 | 0.94 | Influential |
| 9. I have a positive relationship with my colleagues and supervisors. | 4.17 | 0.96 | Influential |
| 10. Overall, I am satisfied with my experience as a casual/job employee in this organization. | 3.98 | 1.15 | Influential |
| Overall Mean | 3.98 | 1.06 | Influential |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Influential; 3.40 - 4.19 = Influential; 2.60 - 3.39 = Moderately Influential; 1.80 - 2.59 = Slightly Influential; 1.00 - 1.79 = Not Influential.

Table 6 shows that there is a high level of influence to public service in terms of job satisfaction. The mean score of 3.98 (SD = 1.06) suggests that the organization provides a supportive and inclusive work environment, and employees were satisfied with

their experience as an employee. The highest mean score of 4.17 (SD = 0.96) was obtained from the statement "I have a positive relationship with my colleagues and supervisors." indicating that employees have a favorable rapport with their

-751

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

managers and colleagues. At the same time, the lowest mean score of 3.79 (SD = 1.18) was obtained from the statement "I am satisfied with the level of compensation and benefits as a casual/job order employee.", indicating that there is a room for improvement for the organization to provide increase in the salary of the employees as well as their benefits.

Generally, the level of influence to public service in terms of job satisfaction can be verbally interpreted as "Influential". This implies that employees go well with their colleagues and supervisors. This is supported by the study of Guruprasad, M. (2020) that job satisfaction is crucial for employees and organizations influencing productivity and over-all well-being in the workplace.

A happy worker is often more productive. Job satisfaction is crucial because people spend a significant amount of time at work. It also impacts employees' overall well-being, as satisfied workers are content and happy. Ultimately, satisfied employees tend to be more productive.

Moreover, Herzberg's Motivation-Hygiene Theory, also known as the Two-Factor Theory, distinguishes between motivation and hygiene factors affecting job satisfaction. Hygiene factors are less important, related to avoiding unpleasantness, while motivation factors satisfy the individual's need for self-growth. Widely used in job satisfaction research, this theory highlights the importance of both factors in understanding and improving workplace satisfaction.

Table 7
Composite Table on the Level of Influence of Identifying Factors to the Employees in the Public Service

| | Identifying Factors | Over All Mean | VI |
|---------|----------------------------|---------------|-------------|
| 1. | Organizational Culture | 4.11 | Influential |
| 2. | Training and Development | 4.02 | Influential |
| 3. | Employee Motivation | 3.96 | Influential |
| 4. | Job Satisfaction | 3.98 | Influential |
| Total N | Tean | 4.02 | Influential |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Influential; 3.40 - 4.19 = Influential; 2.60 - 3.39 = Moderately Influential; 1.80 - 2.59 = Slightly Influential; 1.00 - 1.79 = Not Influential.

Table 7 shows the composite results of the study on the level of influence of identifying factors to the employees in the public service assessed by the respondents with respect to organizational culture, training and development, employee motivation and job satisfaction.

Findings showed that among the four aspects composing the extent level of influence of identifying factors to the employees, organizational culture gets the highest mean. This reveals that

the view of the employees in organizational culture of system values and beliefs that are shared by people who interact in an organization serves as an identity and as a reference behavior to achieve organizational goals. It implied that among the four aspects on the level of influence of identifying factors, though all have verbal interpretation of much influential, employee motivation is the lowest which means that employees should be given ample attention to that matter.

Table 8
Level of Performance of Employees in the Public Service as to Customer Service

| Indicative Statement | Mean | SD | Remark |
|---|------|------|------------------|
| 1. Provide excellent customer service. | 4.65 | 0.51 | Highly Performed |
| 2. Work well with clients. | 4.72 | 0.49 | Highly Performed |
| 3. Resolve customer issues and provide satisfactory solutions on time. | 4.57 | 0.59 | Highly Performed |
| 4. Value feedback from clients to improve the quality of service. | 4.48 | 0.67 | Highly Performed |
| 5. Access necessary tools and resources to deliver high-quality customer service. | 4.53 | 0.69 | Highly Performed |
| 6. Emphatic and focused listener | 4.48 | 0.63 | Highly Performed |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Overall Mean | 4.54 | 0.62 | Highly Performed |
|--|------|------|------------------|
| 10. Redefine the customer service process to meet clients' changing needs. | 4.48 | 0.56 | Highly Performed |
| 9. Skillfully overcomes client's objections. | 4.61 | 0.55 | Highly Performed |
| 8. Deals with challenging clients without being aggressive. | 4.53 | 0.74 | Highly Performed |
| 7. Go above and beyond to ensure customer satisfaction. | 4.33 | 0.74 | Highly Performed |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00; Highly Performed; 3.40 - 4.19 = Performed; 2.60 - 3.39 = Moderately Performed; 1.80 - 2.59 = Slightly Performed; 1.00 - 1.79 = Not Performed.

Table 8 shows the level of performance of employees in the public service as to customer service. The statement "Work well with clients." obtained the highest mean score of 4.72 (SD = 0.79) indicating positive behavior of the employees towards the clients in providing excellent customer service. Lastly, statement "Go above and beyond to ensure customer satisfaction." obtained lowest mean score of 4.33 (SD = 0.74). The overall score of 4.54 (SD = 0.62) indicates that the level of performance of the employees in the public service as to customer is highly performed, suggesting that the respondents place a high importance on the providing excellent customer service and value feedback from clients to improve the quality of service.

It implies that clients are satisfied with the service given by the government employees of their municipality. It is supported by

the study of Meel, P. (2020) that service quality can deliver a good measurement means to forecast customer satisfaction. There are (3) three key aspects of customer service are affect, customer mistreatment, and customer service behaviors. Affect involves emotional labor and contagion. Mistreatment is poor treatment from customers to employees. Service behaviors include customer orientation and service-oriented citizenship behaviors. Customers driven by needs expect excellent service, enhancing their quality of life. They demand faster, better service and are loyal to organizations with high service levels. Customer satisfaction and loyalty are crucial for business success. Similarly, individuals must meet customer needs to succeed. Organizations serve others to prosper through service.

Organizations, big and small, are prioritizing customer service as a key competitive edge. Providing excellent service not only benefits customers but also drives organizations success.

Table 9
Level of Performance of Employees in the Public Service as to Responsibilities Towards the Organization

| | Mean | SD | Remark |
|--|------|------|------------------|
| 1. Understand their responsibilities and roles within the | 4.83 | 0.44 | Highly Performed |
| organization. | | | |
| 2. Committed in fulfilling their responsibilities and meeting | 4.55 | 0.58 | Highly Performed |
| organizational expectations. | | | |
| 3. Take ownership of their work and strive for excellence. | 4.60 | 0.56 | Highly Performed |
| 4. Actively seek opportunities to contribute to the success of | 4.67 | 0.52 | Highly Performed |
| the organization. | | | |
| 5. Prioritize the organization's goals and objectives through | 4.78 | 0.48 | Highly Performed |
| their words and actions. | | | |
| 6. Communicate openly and honestly with colleagues and | 4.79 | 0.50 | Highly Performed |
| supervisors. | | | |
| 7. Proactive in identifying and addressing challenges that | 4.59 | 0.65 | Highly Performed |
| may impact the organization. | | | |
| 9. Committed to improve their service to achieve their goal. | 4.68 | 0.55 | Highly Performed |
| 10. Actively seek professional growth and development to | 4.80 | 0.46 | Highly Performed |
| better serve the organization. | | | |
| Overall Mean | 4.70 | 0.53 | Highly |
| | | | Performed |

Note. N-240. The mean is interpreted as follows: 4.20-5.00 = Highly Performed; 3.40-4.19 = Performed; 2.60-3.39 = Moderately Performed; 1.80-2.59 = Slightly Performed; 1.00-1.79 = Not Performed.

Table 9 shows the level of performance of employees in the public service as to responsibilities towards the organization. The statement "Understand their responsibilities and roles

within the organization." obtained the highest mean score of 4.83 (SD = 0.44) indicating that the employees recognize their roles and duties and prioritize the organization's goals and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

objectives through their words and actions. Lastly, statement "Committed in fulfilling their responsibilities and meeting organizational expectations." obtained lowest mean score of 4.55~(SD=0.58). The overall score of 4.70~(SD=0.53) indicates that the level of performance of the employees in the public service as to responsibilities towards the organization is highly performed, suggesting that the respondents to actively seek opportunities to contribute to the success of the organization.

This is supported by the study of Syahril (2019) that people who have work commitments will always strive to carry out tasks that are their responsibility well in order to obtain satisfactory results or achievement.

Emphasizing accountability for public employees is crucial for improving work outcomes in public organizations. The

management of interdependencies among agents' activities determines responsibilities within an organization, highlighting the need for clear decision-making and resource usage. Work commitment is the deep involvement both physically and psychologically in fulfilling one's responsibilities within an organization. It consists of affective, ongoing, and normative commitments, reflecting emotional attachment, the impact of work on one's life, and alignment of personal interests with work responsibilities. Providing incentives for employees who excel in their duties can help increase their work commitment. Those with strong work commitments strive to achieve satisfactory results and achievements in their tasks. Overall, promoting accountability, effective management interdependencies, and nurturing work commitment are essential for enhancing performance in public organizations.

Table 10

Level of Performance of Employees in the Public Service as to Ethical Conduct

| Indicative Statement | Mean | SD | Remark |
|--|------|------|------------------|
| 1. Consistently uphold ethical standards and conduct in their role in public office. | 4.70 | 0.51 | Highly Performed |
| 2. Prioritize the public interest and act in the best interest of the community. | 4.55 | 0.53 | Highly Performed |
| 3. Handle office resources and supplies with transparency and accountability. | 4.59 | 0.54 | Highly Performed |
| 4. Adhere to legal and regulatory requirements governing public office. | 4.76 | 0.45 | Highly Performed |
| 5. Avoid conflicts of interest and act impartially in decision-making process. | 4.67 | 0.52 | Highly Performed |
| 6. Maintain confidentiality and protect the privacy of individuals in accordance with the law. | 4.68 | 0.52 | Highly Performed |
| 7. Engage in ethical decision-making and consider the potential impact on clients. | 4.68 | 0.50 | Highly Performed |
| 8. Actively promote and contribute to a culture of ethical conduct within the public office. | 4.65 | 0.59 | Highly Performed |
| 9. Report any unethical behavior or misconduct he/she can observe or become aware of. | 4.52 | 0.55 | Highly Performed |
| 10. Believe that ethical conduct is essential for maintaining public trust and confidence in the office. | 4.73 | 0.48 | Highly Performed |
| 11. Adhere to ethical standards and conduct self with ntegrity in all aspects of their work. | 4.63 | 0.53 | Highly Performed |
| Overall Mean | 4.65 | 0.52 | Highly Performed |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Performed; 3.40 - 4.19 = Performed; 2.60 - 3.39 = Moderately Performed; 1.80 - 2.59 = Slightly Performed; 1.00 - 1.79 = Not Performed.

Table 10 shows the level of performance of employees in the public service as to ethical conduct. The statement "Adhere to legal and regulatory requirements governing public office." obtained the highest mean score of 4.76~(SD=0.45) indicating that the employees consistently uphold ethical standards and conduct in their role in public office. Lastly, statement "Report any unethical behavior or misconduct he/she can observe or become aware of." obtained lowest mean score of 4.52~(SD=0.55). The overall score of 4.65~(SD=0.52) indicates that the level of performance of the employees in the public service as to ethical conduct is highly performed, suggesting that the

respondents to always engage in ethical decision-making and consider the potential impact on clients.

This implies that employee performance on ethics in public service has high adherence to legal requirements promoting ethical conduct. This is supported by the study of Khan, N.A., Salleh, A.M., Rahman, A.L., & Ahyat, M.M. (2018) that workplace ethics are one of the advantages in helping organizations to remain a good reputation and increase work productivity.

Ethics is essential in organizational culture. A strong ethical and spiritual culture leads to better performance. Organizational

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

culture impacts human functioning, shaped by external and internal influences like values, attitudes, and beliefs. The workforce's behavior is influenced by these norms. Organizational behavior is linked to corporate culture, which

should include ethics and spirituality. Workplace ethics help maintain a good reputation and increase productivity. Better performance and reputation is the importance of ethics in fostering a positive organizational culture.

Table 11
Level of Performance of Employees in the Public Service as to Compassion

| Indicative Statement | Mean | SD | Remark |
|---|------|------|-----------|
| 1. Demonstrate empathy and understanding towards their | 4.73 | 0.46 | Highly |
| clients. | | | Performed |
| 2. Actively listen to the concerns and needs of the public | 4.81 | 0.42 | Highly |
| and strive to address them compassionately. | | | Performed |
| 3. Treat all individuals with respect and dignity, regardless | 4.79 | 0.47 | Highly |
| of their background or circumstances. | | | Performed |
| 4. Prioritize the well-being and welfare of those affected by | 4.73 | 0.51 | Highly |
| the decisions and policies I am involved in. | | | Performed |
| 5. Sensitive to the unique challenges and circumstances | 4.68 | 0.61 | Highly |
| faced by different individuals or groups within and outside | | | Performed |
| his/her workplace. | | | |
| 6. Actively seek opportunities to support and assist clients | 4.86 | 0.40 | Highly |
| who require additional help or resources. | | | Performed |
| 7. Communicate in a compassionate and considerate | 4.68 | 0.50 | Highly |
| manner, taking into account the emotions and feelings of | | | Performed |
| others. | | | |
| 8. Proactive in identifying ways to improve the quality of | 4.84 | 0.45 | Highly |
| services and support provided to the public. | | | Performed |
| 9. Collaborate with colleagues and stakeholders to find | 4.92 | 0.31 | Highly |
| compassionate and inclusive solutions to public issues. | | | Performed |
| 10. Believe that compassion plays a crucial role in | 4.81 | 0.44 | Highly |
| enhancing the overall effectiveness and impact of public | | | Performed |
| office. | | | |
| Overall Mean | 4.78 | 0.46 | Highly |
| | | | Performed |

Note. N = 240. The mean is interpreted as follows: 4.20 - 5.00 = Highly Performed; 3.40 - 4.19 = Performed; 2.60 - 3.39 = Moderately Performed; 1.80 - 2.59 = Slightly Performed; 1.00 - 1.79 = Not Performed.

Table 11 shows the level of performance of employees in the public service as to compassion. The statement "Collaborate with colleagues and stakeholders to find compassionate and inclusive solutions to public issues." obtained the highest mean score of 4.92~(SD=0.31) indicating that the employees Work together with coworkers and interested parties to resolve public concerns in a way that is inclusive and caring. Lastly, statement "Communicate in a compassionate and considerate manner, taking into account the emotions and feelings of others." obtained lowest mean score of 4.68~(SD=0.50). The overall score of 4.78~(SD=0.46) indicates that the level of performance of the employees in the public service as to compassion is highly performed, suggesting that the respondents to actively listen to the concerns and needs of the public and strive to address them compassionately.

This study is supported by Plitt Donaldson, L. (2017) states that compassion is a core virtue in social work.

Compassion is a social emotion that reveals the strength of our moral connections to others. It is a fundamental value in social work and can be linked to religion and macro practice. Compassion is triggered by recognizing our shared humanity and is a driving force for achieving sustainable goals and promoting sustainable environment.

Displaying compassion in the workplace not only leads to individual benefits but also results in overall advantages such as increased levels of shared positive emotions (e.g., pride and gratitude; Dutton et al. 2006) along with higher collective commitment and reduced turnover rates (Grant et al. 2008, Lilius et al. 2008).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 13 presents the significant difference in the identified factors when respondents are grouped according to profile wherein the computed F values and the p-values between Sex and Organizational Culture obtained were less than the significance level of .05, indicating that there is a statistical significance among these variables. However, there is no statistically significant difference between Sex, Training and Development, Employee Motivation and Job satisfaction based on the obtained values which were greater than the .05 level of significance. In addition to this, the computed F values and the p-values between Years in Service and Identifying Factors

obtained were less than the significance level of .05, indicating that there is a statistical significance among these variables except between Years in Service and Training and Development wherein p-value is higher than .05 level of significance.

Furthermore, it shows that Age, Educational Attainment and Employment Status have no statistically significant difference with any of the identifying factors based on the computed F values and p-values which obtained greater than .05 level of significance.

Table 14
Significance of Difference in the Performance of Respondents When Grouped According to Profile

| | Performance | | | | | |
|------------------------|---|---|---|---|--|--|
| Profile | Customer Service | Responsibilities Towards the Organization | Ethical Conduct | Compassion | | |
| Age | F = 2.19 not significant p = .212 | F = 1.88 not significant p = .226 | F = 1.17 not significant p = .359 | F = 1.92 not significant p = .199 | | |
| Sex | t =82 not significant p = .414 | t = -1.34 not significant p = .184 | t =67 not significant p = .505 | t = .81 not significant p = .420 | | |
| Educational Attainment | F = .81 not significant p = .907 | F = .1.17 not significant $p = .811$ | F = 1.75 not significant p = .783 | F = .915 not significant p = .922 | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Years in Service | F = 5.47* | F = 8.06* | F = 3.14* | F = 6.90* |
|-------------------|-----------------|-----------------|-----------------|-----------------|
| | p = .017 | p < .001 | p = .036 | p = .001 |
| Employment Status | t = 1.60 | F = 2.83 | F = 2.91 | F = 2.02 |
| | not significant | not significant | not significant | not significant |
| | p = .213 | p = .078 | p = .066 | p = .082 |

Table 14 presents the significant difference in the performance of respondents when grouped according to profile. It was observed that there is a significant difference between Years in Service and Performance variables since the obtained pvalues were greater than .05 level of significance. However, the

obtained p-values for Age, Sex, Educational Attainment, and Employment Status as compared to Performance were higher than .05 level of significance.

Table 15 Composite Table on the Level of Performance of the Employees in the Public Service

| Level of Employee Performance | Over All Mean | VI |
|--|---------------|------------------|
| 1. Customer Service | 4.54 | Highly Performed |
| 2. Responsibilities Towards the Organization | 4.70 | Highly Performed |
| 3. Ethical Conduct | 4.65 | Highly Performed |
| 4. Compassion | 4.78 | Highly Performed |
| Total Mean | 4.59 | Highly Performed |

Table 15 shows the composite results of the study on the level of performance of the employees in the public service assessed by the respondents with respect to customer service, responsibilities towards the organization, ethical conduct and compassion.

Findings showed that among the four aspects composing the extent level of performance of the employees, compassion gets the highest mean. This reveals that the view of the clients in employee compassion is seen in the organization as it is the core virtue in public service. It implied that among the four aspects on the level of performance of the employees, though all have verbal interpretation of much highly performed, customer service is the lowest this suggest a gap between perception and reality.

CONCLUSIONS

In view of the summary of findings, the researcher therefore concluded the following:

- Organizational Culture demonstrates high influence in employee performance in public service emphasizing client satisfaction but lacking in professional growth opportunities.
- 2. It reveals high influence on employee motivation in public service. The organization fosters a positive work environment with clear goals driving motivation.
- The level of influence of identifying factors on employees' performance with respect to organizational culture, training, motivation, and satisfaction resulted that organizational culture was found most influential while employee motivation least impactful.

- 5. Employee customer service performance "Work well with clients" scored highest while "Go above and beyond" scored lowest.
- Employees perform well in understanding and prioritizing organizational goals but could improve in commitment towards meeting expectations.
- It showcases how employees perform in terms of ethics in public service. Adhering to legal requirements results the highest score.
- Displays employees' compassionate performance in public service, results show collaboration is highly rated, while proper communication or information dissemination within the organization needs to improve.

It displays the correlation between factors and employee performance in public service. Significant relationships were found between Organizational Culture, Training and Development, Employee Motivation, Job Satisfaction, and Performance variables. Results show statistical significance between most variables, except between Organizational Culture and Responsibility Towards Organization, and Job Satisfaction and Responsibility Towards Organization.

Recommendations

The following are the recommendations and implications of the study:

- 1. LGUs might consider focusing on further in-house professional development opportunities, such as mentorship programs, targeted training, and career path mapping that could be beneficial to the job order and casual employees.
- 2. Future studies can delve deeper into the specific aspects of

organizational culture and motivation that have the most significant impact on employee performance.

3. Future researchers can conduct a comparative analysis to see if the factors affecting employee performance are consistent or vary depending on the specific context.

ABSTRACT

'Human beings' and 'Society' are profoundly entangled. 'Society' is essentially a convoluted web of relationships, norms, institutions and cultures created by human beings. 'Human beings' as social creatures, depends on society for various aspects of their lives, including 'socialisation', cooperation and the accomplishment of their 'needs' and 'desires'. Through 'socialisation' process Human beings learn how to behave in society which begins in early childhood of life and continues throughout life, shaping individuals' beliefs, values, behaviours and their identities. This paper delves into the multifaceted relationship between social factors and school education development in India. Despite notable advancements, education in India continues to be influenced by various social dynamics, including socioeconomic status, caste, gender, and cultural beliefs. These factors have a significant impact on access to education, the quality of learning and educational outcomes. It is essential for policymakers, educators and stakeholders to comprehend these social factors in order to address the persistent disparities and ensure equal education opportunities for all. By analysing existing literature and empirical evidence, this paper aims to shed light on the comprehensive nature of social factors that affect school education in India and proposes strategies to mitigate their challenges consequences for promoting inclusive and fair educational opportunities.

KEYWORDS: Society, Socialisation, Social factors, Norms, Values, Adolescence, School Education, Social change, Well-being

INTRODUCTION

A 'society' is commonly defined as a group of individuals concerned in determined 'social interaction', or a large 'social group' sharing the same geographical location, typically subject to dominant cultural outlook. According to Giddens (2009), society can be understood as "a system of structured social relationships connecting people together according to a shared culture". Furthermore, 'Society' can be viewed as this interaction results in the development of social institutions approximating family, education, religion, and economy that influence behaviour and socialisation processes (Haralambos & Holborn, 2013).

Dr. APJ Abdul Kalam said, "Real education enhances the dignity of a human being and increases his or her self-respect. If only the real sense of education could be realised by each individual and carried forward in every field of human activity, the world will be so much a better place to live in." Education serves as most powerful tool for advancement and progress of humanity. It acts as a guiding light, illuminating the paths towards enlightenment, empowerment and societal growth. Education not only shapes one's character but also fosters critical thinking, instilling values that shape both individuals and societies while freeing minds from superstitious beliefs. The development of a nation's economic, political and social foundation heavily relies on its educated human resources. At its core, education acts as a catalyst for

individual empowerment, liberating minds and equipping learners with the knowledge, skills. In India, a country known for its diverse population and rich cultural heritage, numerous social issues intersect with its educational landscape. From deep-rooted poverty and caste-based discrimination to gender disparities and regional diversities, family structure the nation grapples with complex challenges that hinder the achievement of universal education. Adolescence is a period of significant change, encompassing physical, cognitive, psychosocial growth and socio-emotional transformations in the phase of life between childhood and adulthood (WHO, 2023). This makes it a crucial time for educational growth and development. In India, however, the education of adolescents is impacted by various social factors, which create obstacles to equal opportunities and high-quality learning experiences. Education is profoundly influenced by various social issues that permeate our communities. This article delves into the intricate interplay between social issues and education, exploring how factors such as poverty, inequality, discrimination, and mental health impact learning outcomes and educational opportunities. This article delves into the complex nature of these social determinants and examines their consequences for adolescent students within the Indian context.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

EMERGENCE OF THE STUDY

The education system of any nation is always influenced by various factors that shape its formation and direction. In India, the learners' outcomes and achievements are dependent on societal approaches and interventions. Education and society have had a close association since the beginning of society itself. On one hand, education build up the individuals into different social roles; while on the other hand, 'society' and 'culture' determine the system of socialisation and the type of education to be imparted to its members. According to Berger and Luckmann (1966), 'socialisation' is the process, involves the internalisation of the values', 'behaviours, 'social skills' and norms of society, which helps individuals function effectively within it. Giddens (2009) emphasises the importance of socialisation in shaping individual identity and social roles or performances. Each society, regardless of its complexity, has its own way of educating the younger generation, leading to the development of specific institutions. Education serves multiple social functions by transmitting culture and knowledge, surroundings mankind on Earth. 'Society' plays a crucial role in the education process and in the end result 'social change' with 'mobility' occurs. Educational opportunities in India are greatly affected by socioeconomic disparities. Comfortable families have the means to send their children to private schools provide them with additional support in education and expose them to fortification activities. On the other hand, children from lowincome households face obstacles like insufficient infrastructure and a lack of resources, which perpetuate the cycle of poverty and hinder their educational achievements. A study conducted by Jha and Gaiha (2017) exemplifies this issue, revealing that economically disadvantaged children are more likely to attend government schools that lack of facilities and adequate learning materials. Consequently, their educational outcomes are significantly impacted. Education is not solely about imparting knowledge; it also reflects societal values, norms and needs. In India, various social factors heavily influence the landscape of school education, shaping the experiences and outcomes of students from different demographic groups. Research by Desai and Kulkarni (2008) highlights the association between parental education and adolescents' educational outcomes, emphasising the role of socioeconomic factors in shaping educational trajectories. So, it is very much essential to understand the various issues and aspects of affecting social dimensions through revisit and reviewing the social factors, its present day relevance in Indian society to enhance school education considering all the learners in composite school structure. Social change encompasses shifts in societal norms, values, institutions, and structures, reflecting changes in cultural practices, economic activities, and political organisation. It often results from collective human actions and interactions that drive transformations in society's functioning and organisation (Harper & Leicht, 2011).

OBJECTIVES

i. To identify the various societal factors that influenced adolescent learners learning in India.

- ii. To study the effects of various social factors on school education.
- iii. To analyse critically the outcome of constraining socio-cultural factors on adolescents in education system.
- iv. To revisit the aspect of socialisation and social change and its comprehend influence on adolescent learners' development at school level in India.

METHOD OF STUDY

A qualitative study was done based on the basis of review work. The previous studies results, reviewing and revisiting the documents, articles related to the problem i.e. social factors affecting among adolescent learners in school education. The data collected from the secondary sources which are available.

RESEARCH QUESTIONS

- i. What are the different factors that affecting school education in India?
- ii. Why does poverty hinder academic performance of adolescent learners?
- iii. How does socioeconomic status affect the adolescents in their education?
- iv. What are the different factors that adversely affect adolescent learners' education in India?
- v. What is the impact of social change on school education in India?

MAJOR FINDINGS: Social Factors affecting School Education in India

After reviewing the previous study, articles and literature including empirical study of the previous, some insight and reasoning factors are indentified which are the major issues which influences the school education system and learners specially the adolescence learners learning outcome and socialisation process are depends.

Poverty, Marginalisation and Educational Access

Poverty continues to pose a major obstacle in the pursuit of quality education. In India, where millions of individuals reside below the poverty line, this issue remains deeply ingrained. Economic deprivation restricts people's ability to obtain a high standard of education (Bhitale & Bhagyashree, 2022). In spite of considerable economic growth in recent decades, India continues to struggle with wide spread poverty, particularly in rural areas (Choudhury, Joshi & Kumar, 2023). Impoverished families find it challenging to cover expenses like school fees, uniforms and textbooks, impeding their academic progress. Additionally, children belonging to marginalised communities encounter additional hurdles in including insufficient school education resources infrastructure (Makwana & Elizabeth, 2022) and lack of transportation, trained teachers in school (Nadar, 2018) which further widen educational disparities.

Socioeconomic Disparities

Ongoing socioeconomic gaps persist within educational systems globally. Children from lower-income families and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

marginalized communities face numerous barriers, including limited financial resources and societal inequalities, which hinder their educational progress (Patel & Kleinman, 2003). These disparities perpetuate the cycle of poverty and limit opportunities for educational advancement. discrepancies not only challenge the values of equality and equity but also sustain a pattern of academic underperformance and restricted prospects, further deepening the division between advantaged and disadvantaged students. A large number of families do not allow their children to receive formal education after completing primary and even before that. The child, who has not even reached the adolescence is entrusted family responsibilities and made to earn for the family (Thanky, 2013).

Regional Disparities and Access to Quality Education

India's extensive geographical and cultural diversity is reflected in its educational panorama, exhibiting notable disparities in infrastructure, teaching standards, and educational achievements across different states, regions and social development (Ghosh, 2011). Specifically, rural and remote areas encounter obstacles (Kumar, N. & Rani R. (2019) such as a scarcity of teachers, insufficient facilities, and language barriers, which impede educational accessibility and attainment. To address these regional discrepancies, focused investments in infrastructure, teacher training, and curriculum development are essential to pledge that every student, irrespective of their location, can avail themselves of a high-quality education.

Caste and Social Hierarchy

India's caste system remains a significant factor in determining educational opportunities and outcomes though the discrimination of caste system in India being legally prohibited still sometimes persists in social exclusion. Historically marginalised groups, including 'Dalits' and tribal or 'Adivasis', continue to experience discrimination and exclusion within educational institutions (Thorat & Newman, 2017). Caste and social hierarchy continue to pose significant barriers to accessing quality education in India, perpetuating inequalities and hindering social mobility (Soni, 2023). The caste system, deeply ingrained in Indian society, assigns individuals to social groups based on birth and traditionally determines one's social status including education, social mobility, cultural identity, areas of residence and so on (Jaipal, 2018). This hierarchical social structure has profound implications for educational opportunities. This has resulted in lower enrolment rates, higher dropout rates, and lower academic achievements (Nadar, 2018) compared to higher caste individuals. Despite efforts to promote inclusivity through legal measures and affirmative action policies, such as reservations in educational institutions, the disparities based on caste persist. These persistent disparities serve as a reminder of the deeply ingrained social hierarchies within Indian society.

Gender Disparities in Education

Gender disparities in education keep on as a global challenge, with significant implications for social, economic, and personal development (UNESCO, 2020). Despite progress in

recent decades, disparities in educational access, enrolment, and outcomes persist between males and females in many parts of the world. Despite the strides made in promoting gender equality in education, gender disparities persist in many parts of India. Girls often encounter cultural biases, early marriage, and household responsibilities that hinder their access to schooling and limit their educational opportunities. It is also revealed that in India gender, poverty and education are intricately connected, highlighting the importance of implementing policies and community interventions that are sensitive to gender issues specially for girls' education development (Bandyopadhyay & Subrahmanian, 2008). Initiatives by the government like 'Beti Bachao', 'Beti Padhao' (Save Daughter, Educate Daughter) have aimed to address these disparities, and ensure equal access to education for all children, regardless of gender.

Cultural Beliefs, Norms and Practices

Cultural beliefs, identity and practices play a significant role in shaping attitudes towards education and impacting educational outcomes in India (Jaipal, 2018). The traditional understanding of gender roles, specific occupations deemed suitable for each gender, and societal expectations related to marriage and family responsibilities all have an influence on educational choices and aspirations. Moreover, cultural attitudes towards education differ across regions and communities, which in turn affect parental involvement, support for education, and attitudes towards learning. Cultural norms and practices can influence educational access, values, and ways of life and participation in the society (Maji & Das, 2023). In some regions, societal beliefs may prioritise certain types of education or restrict access based on gender, caste, or ethnicity, exacerbating disparities in educational opportunities. Positive cultural atmosphere for addressing the cultural obstacles to adolescent education and fostering inclusive learning environments among school learners are highly expected.

Well-being and Mental Health

The high occurrence of mental health problems among students presents a considerable impediment for educational establishments. By stress, anxiety, depression and other mental health disorders learning capabilities can be impaired, social interactions can be affected and academic performance hindered. Social support networks, including family, friends, and community ties, play a vital role in promoting mental well-being (Raman &Thomas, 2023). Active social interactions with learners provide emotional support, diminish feelings of loneliness & isolation, create happiness (NCERT, 2022) and buffer against the negative impacts of stressors, which is also crucial process for socialisation.

Domestic violence

Domestic violence can result in significant and enduring consequences on the education of adolescents, affecting their academic performance, mental well-being, and overall growth. Domestic violence is a pervasive social issue in India, with profound implications for the health, well-being, and rights of individuals, particularly women and children (Kishor & Johnson, 2004). Despite legal and social reforms, domestic

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

violence remains prevalent, fuelled by entrenched patriarchal attitudes, economic disparities, and cultural norms. Young individuals who are exposed to domestic violence within their homes may frequently be absent from school due to physical harm, fear, or the responsibility of taking care of themselves or other family members. Even when they do attend school, their ability to concentrate and actively participate in class may be compromised by emotional distress or preoccupation with the violence occurring at home. Witnessing or experiencing domestic violence can trigger a variety of emotional challenges such as 'anxiety', 'depression', low selfesteem, and post-traumatic stress can further obstruct their educational and socio-economic prospects. An adolescent who is exposed to violence may be at higher risk of substance misuse or either becoming a victim of dating violence. (Carolin & Xavier, 2020)

Substance Abuse

Adolescents who engage in substance abuse face numerous adverse consequences that can profoundly impact their physical health, mental well-being, academic performance, relationships, and future prospects. Poverty and economic marginalization increase susceptibility to substance abuse, as individuals may turn to drugs and alcohol as a coping mechanism for stress, trauma, and social deprivation (Ambekar et al., 2020). Substance abuse encompasses the misuse of alcohol, illicit drugs, tobacco, prescription medication, and other substances. This harmful behaviour can result in addiction, physical health complications, mental health disorders, academic under achievement, behavioural challenges, legal troubles, and sometimes tragically, fatal overdoses. Such kind of learners often stops social interactions which affect their socialisation process and actively affect their educational life. Tackling substance abuse among teenagers necessitates a holistic strategy encompassing prevention, timely intervention, accessible treatment and support services, educational initiatives, and community engagement to foster healthy behaviours and foster positive academic achievements.

Homelessness

Homeless children face numerous barriers to accessing formal education, including lack of documentation, transportation, and stable housing (UNICEF India, 2020). Enrolment processes that require proof of residence or identification documents may exclude homeless children from school, perpetuating their marginalisation. Homeless children experience psychosocial stressors, including stigma, discrimination and precedes mental illnesses, which impact their emotional well-being and social integration (Radhakrishnan et al., 2021). The experience of homelessness can lead to feelings of shame, insecurity, and low self-esteem, further hindering children's educational success.

Technological Access and Digital Divide

The potential for transforming education in India lies within the digital revolution, yet the existence of a digital divide poses a major obstacle to fully realizing this potential. The digital divide, characterised by unequal access to information and communication technologies (ICTs), is a significant social factor impacting various aspects of life, including education, employment, and social participation. In India, despite rapid progression in technology, disparities in digital access persevered, exacerbating existing social inequalities (Ranjan, 2023). Numerous students, particularly those hailing from rural and underserved areas, face challenges in accessing dependable internet connectivity, computers, and digital educational materials.

Disability and exclusion

Various physical and mental disabilities could act as a barrier for education. Marginalisation of education due to improper implementation of inclusion hampers adolescent education. Discrimination and stigma surrounding disability contribute to the exclusion and marginalisation of children with disabilities within the education system (Kalyanpur, 2008). Negative attitudes, misconceptions and lack of awareness among educators, peers, and communities perpetuate social isolation and limit opportunities for meaningful participation and learning. Social stigma around disability causes inadequate utilisation of inclusive education policies.

DISCUSSION

Poverty is the most significant obstacle that India's education system faces, impacting individuals, groups, and society as a whole. Psychologists believe that a person's development is influenced by their life experiences. Therefore, the key to helping individuals is to provide them with the necessary support and training in cognitive, motivational, and behavioural skills. This guidance will enhance their competence and enable them to function effectively in society. Psychological interventions have proven to be beneficial for the deprived and disadvantaged. However, we must consider a few important factors. Firstly, providing continuous assistance may result in psychological dependence and reliance on others, preventing individuals from taking responsibility for their actions and becoming self-sufficient. Secondly, psychological interventions may be implemented individual, community, and societal level for school learners' inclusion towards socialisation limiting the exclusion. The introduction of modern technology as computers and the Internet have become integral parts of young people's lives. While these tools can be used for academic and social engagement, they also contribute to societal problems. Within a society, learners in adolescent level should take proper care to inculcate values, prompting them to advocate for a solution from any kind of confusion or barrier in the society. Since, society comprises individuals; any condition that affects certain members of the population like factors, such as family, health or financial concerns, indifferent school environment, substance abuse, transportation issues and differing community attitudes towards education, can contribute to negative social mobility for school student and that should be minimise.

SUGGESTIONS & POLICY IMPLICATIONS

Resolving the social issues impacting school education in India necessitates a comprehensive strategy involving policy changes, specific interventions, and involvement from the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

community. It is imperative for policymakers to focus on ensuring fair access to high-quality education, tackling systemic disparities and encouraging inclusive educational methods. These goals can be accomplished by actions like increasing educational opportunities for marginalised groups, improving the standards of government schools, reinforcing affirmative action measures, advocating for gender-inclusive education, and establishing partnerships with communities to bolster educational programs. Training teachers and educational staff to recognise and address caste-based biases in the classroom is essential (Nambissan & Rao, 2021). Sensitization programmes can promote inclusive teaching practices and create supportive learning environments for all students. Local communities in education initiatives can help promote a sense of possession and support for schools may be engaged. Parents, community leaders and other stakeholders should be involved in decision-making processes to ensure that educational interventions meet the specific needs of the community. Raising awareness among the common people as well as in the society is very much essential for sustain quality education and proper socialisation among learners. Time to time curriculum reformation based on the modern societal needs is an essential parameter for providing quality education to the learners for sustaining inclusivity.

Taking into account the social aspects in education requires a comprehensive strategy that includes policy changes, specific interventions, and involvement from the community. It is crucial for policymakers to give importance to fair access to high-quality education, address systemic inequalities, and encourage inclusive approaches. For instance, initiatives like the Sarva Shiksha Abhiyan (SSA) and other Govt. Schemes for school education strive to make elementary education accessible to all and reduce socioeconomic disparities by implementing targeted interventions in marginalised communities and National Education Policy, 2020 (NEP, 2020) also suggests so many provisions for development of School Education in India.

SIGNIFICANCE & CONCLUSION

The implication of the study is to create awareness among people about the existing issues that are adversely affecting adolescent education in India. This will help policymakers, researchers, educators, readers analyse the underlying causes that act as hindrances in the education system. The study will also give insights into the solutions towards reducing the various constraints social factors that challenges adolescent learners' education. 'Social factors' which influence social change and mobility play a pivotal role in shaping the landscape of school education in India, influencing access, equity, and outcomes. Addressing these factors is essential for building a more inclusive and equitable education system that empowers all children to fulfill their potential. 'Value Education' at school level should be incorporated for sustain peace and propagate quality education in the present society in India which also suggest by the study of Nadar, 2018. By recognising the complex interplay between social dynamics and education, stakeholders can work towards creating a more just and even-handed society where each child has the prospect to receive a quality education. By adopting policies

based on evidence, encouraging community involvement and nurturing cultural sensitivity, India can strive towards achieving the goal of providing education to all, ensuring that each child has the chance to flourish and make valuable contributions to society. Addressing the complex nexus of social issues affecting education requires a multifaceted approach that prioritises equity, inclusion and holistic support for all students. By addressing poverty, dismantling systemic inequalities, promoting gender equity, prioritising mental health support and bridging the digital divide, societies can create more equitable educational systems that empower every individual to reach their full potential. Civil society with all stakeholders to work collaboratively towards this shared vision of a brighter and more inclusive future for Indian education.

LOCAL ECONOMIC DEVELOPMENT AND INVESTMENT PROMOTION OFFICE (LEDIPO) IN THE PROMOTION OF MICRO SMALL AND MEDIUM ENTERPRISES IN THE PROVINCE OF LAGUNA

Redencion A. Crisostomo

Master in Public Administration, Provincial Government of Laguna, Sta. Cruz, Laguna, Philippines

ABSTRACT

This study assessed the extent of Performance and the Level of Ability of LEDIPO in promoting Micro, Small, and Medium Enterprises in the Province of Laguna during the fiscal year 2023, as perceived by the two groups of respondents, the LEDIPO Heads, Employees and selected MSMEs from the 3rd and 4th districts, was surveyed using a self-administered questionnaire. Utilization of a descriptive-quantitative correlational research design and statistical tools such as mean, standard deviation, and Pearson's correlation coefficient and T-test to analyze the data gathered.

Results showed that the extent of performance and the level of Ability of LEDIPO in the promotion of MSMEs in the province of Laguna was verbally interpreted as "Excellent and Very Good" leading to a highly effective performance of LEDIPO. Moreover, the relationship between the extent of performance and the level of ability of LEDIPO suggests strong positive relationship in various aspects related to MSMEs promotion, this indicate significant relationships between LEDIPO performance and LEDIPO ability.

Furthermore, the study revealed that in the two group of respondents, the perception of MSMEs towards the implementer is Excellent, which means that LEDIPO should further sustain their work to meet the expectations of stakeholders.

The study recommends continuous monitoring of LEDIPO's interventions to assess the impact and align with MSME needs. Prioritize training programs and workshops to enhance MSME skills for sustainability and Strengthen collaboration with stakeholders and leverage the technology.

KEYWORDS: Local Economic Development and Investment Promotion Office, Micro Small and Medium Enterprises, Promotion of MSMEs, Performance of LEDIPO, Level of Ability.

INTRODUCTION

Micro, Small, and Medium Enterprises (MSMEs) are pivotal to fostering economic growth on a global scale. These enterprises significantly contribute to job creation, poverty alleviation, and overall economic advancement. Often regarded as the backbone of many economies, MSMEs play a crucial role in providing employment opportunities, particularly in developing countries. In the Philippines, MSMEs hold a special place in the economic landscape, notably contributing to poverty reduction and economic regeneration by generating employment opportunities for the growing workforce.

Recognizing the importance of MSMEs, the Philippine Congress enacted the Magna Carta for MSMEs, Republic Act No. 9501, in 1991. This law mandates the government to support MSMEs and promote their development by creating a conducive business environment. Despite the critical role of MSMEs, various obstacles hinder their full growth potential. Government agencies, such as the Local Economic Development and Investment Promotion Office (LEDIPO), implement programs and activities in collaboration with the Department of Trade and

Industry (DTI) to support MSMEs, particularly through marketing promotion and business environment enhancement.

The LEDIPO in the Province of Laguna plays a vital role in fostering local economic growth by promoting and supporting the development of MSMEs within the province. Established in 2021 through Executive Order No. 17 and reinforced by Provincial Ordinance No. 03 in 2022, which amended the Local Investment and Incentive Code of 2022, LEDIPO's primary mission is to nurture the growth of MSMEs. One of its main functions, as stated in EO No. 17 Series of 2021 Section 2, is to assist in the promotion and development of MSMEs in the locality.

Understanding LEDIPO's role in promoting MSMEs in Laguna is significant for gaining insights into local economic development. By examining its contribution to MSME growth, this study aims to identify factors driving local economic growth, fostering entrepreneurship, and income generation. Assessing LEDIPO's support for MSMEs is crucial for evaluating the effectiveness of local governance. The findings can inform policies for promoting

(2)

economic development and supporting MSMEs in the Province of Laguna.

This research focuses on the promotion and development of MSMEs in the Province of Laguna, with a particular emphasis on supporting local crafts and products, especially considering the economic challenges posed by the COVID-19 pandemic. The project aims to provide a platform for these businesses to recover and thrive, addressing key challenges and suggesting ways to enhance collaboration between LEDIPO and MSMEs to foster economic growth in the province.

Despite its commendable objectives, LEDIPO faces several challenges and gaps that impede its effective promotion of MSMEs. This study endeavors to comprehensively identify and address the key issues and concerns confronting LEDIPO in its pursuit of promoting MSMEs in Laguna. It aims to assess the efficacy of current strategies and initiatives employed by LEDIPO and analyze their impact on the growth and sustainability of MSMEs in the province. By delving into the various facets of LEDIPO's role and scrutinizing the challenges it encounters, the research aims to uncover potential areas of improvement and offer recommendations to enhance LEDIPO's support for the MSME sector.

Through an in-depth examination of LEDIPO's functions, this study aspires to provide valuable insights that can contribute to local economic development and foster the growth of MSMEs in the Province of Laguna. The ultimate goal is to offer a comprehensive understanding of the current state of affairs, facilitate strategic improvements, and recommend initiatives that can bolster LEDIPO's effectiveness in supporting and promoting flourishing MSMEs in the province.

MATERIALS AND METHOD

This study utilized a descriptive quantitative research design to assess the performance and the level of ability of the Local Economic Development and Investment Promotion Office (LEDIPO) in promoting Micro, Small, and Medium Enterprises (MSMEs) in the Province of Laguna. The study included 120 Heads and Personnel of LEDIPOs and 150 MSMEs from selected municipalities in the 3rd and 4th districts of Laguna.

The probability sampling technique was employed for MSMEs, in which they were randomly selected to take part in a survey. Data and information were collected through the use of structured questionnaires which is the most frequently used instrument to collect data and were distributed among the Heads and Personnel of LEDIPOs in different cities and municipalities and selected MSMEs in the 3rd and 4th district of Laguna.

This primarily a three parts questionnaire wherein the first part covers the socioeconomic profile of the respondents, the second part focuses on the extent of Performance of LEDIPO in the Promotion of MSMEs in terms of Advisory group; Business Enabling Environment; Promote Policies and Practices that will

encourage Local Investment; Public Private Partnership; Provide Support and facilitation assistance for new investors; Local Economic Database; Promotion and Marketing; Economic Development and Promotion and Development of Micro Small and Medium Enterprises (MSMEs). The last part of the questionnaire concerns the level of Ability of LEDIPO in terms of Development, Sustainability, and Partnership. The second and third parts of the questionnaire are being measured using a 5-point Likert Scale rating. A self-administered questionnaire was created and submitted to the expert for judgment and content validation. After the questionnaire was validated, the gathering of data was conducted. Permissions were obtained from relevant agencies and MSMEs before distributing the questionnaire. Data collection involved using Google Forms for LEDIPO Heads and personnel and selected MSMEs in the 3rd and 4th Districts. The data collected was tallied, tabulated, analyzed and interpreted using Frequency and Percentage Distribution to determine the respondents' demographic profiles, including age, marital status, sex, employment status, length of service (LEDIPOs), and years in business (MSMEs). Mean and Standard Deviation to Assessed the extent of LEDIPO's performance and ability to promote MSMEs, T-test to measure the significant differences between LEDIPO's performance and ability in MSME promotion, and Pearson r correlation coefficient to check the relationships among study variables. The correlation strength was interpreted using Guildford's (1973) Rule of Thumb. This methodological approach provides a structured and comprehensive analysis, ensuring the study's reliability and validity in assessing LEDIPO's role in promoting MSMEs in Laguna..

RESULTS AND DISCUSSION

The study comprised two distinct respondent groups: 150 individuals representing Micro, Small, and Medium Enterprises (MSMEs) located in the selected municipalities within the 3rd and 4th districts of Laguna, and 120 participants comprising the Heads and Personnel of LEDIPO across various cities and municipalities within the province of Laguna, specifically including those affiliated with the Provincial Government of Laguna. These totaled 270 respondents for the study. The analysis revealed that the predominant demographic among MSME respondents fell within the 31-40 age bracket. Conversely, among the Heads and Personnel of LEDIPO, individuals aged 20-30 were most prevalent. Furthermore, within the LEDIPO group, a majority were identified as married, female, holding permanent positions, and possessing between 1 to 10 years of experience in both public service and business sectors.

According to the composite table assessing LEDIPO's performance across nine indicators, the Advisory Group exhibits the highest score, indicating its superior performance. Conversely, the Economic Development of MSMEs shows the lowest score, suggesting areas for improvement within this aspect. Additionally, within the Heads and Personnel category, the Advisory Group again demonstrates the highest indicator, highlighting its effectiveness. Conversely, the Public Private Partnership aspect registers the lowest indicator, indicating

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

potential shortcomings in this area. These findings provide valuable insights for enhancing LEDIPO's overall performance and strategic planning.

In assessing the extent of the level of ability of LEDIPO in promoting MSMEs in Laguna Province, three indicators were evaluated: Development, Sustainability and Partnership. Both groups of respondents consistently rated Partnership the highest among the three indicators, while Development received the lowest scores across both groups. This suggests that the collaborative efforts and alliances formed by LEDIPO garnered the most favorable responses from respondents, indicating a strong belief in the value and impact of partnerships in facilitating MSME growth.

Conversely, the aspect of Development, which likely pertains to initiatives aimed at enhancing MSME capabilities and infrastructure, received comparatively lower ratings. This could imply a perceived need for improvement or emphasis on developmental activities within LEDIPO's promotion strategies to better support MSMEs in Laguna Province. The municipalities involved in the study as regards to the extent of Performance of LEDIPO in the promotion of MSMEs, with respect to the six dimensions in terms of their profile showed the following findings:

The relationship between the respondents' profile and the extent of performance of LEDIPO in the promotion of MSMEs in the age, employment status, length of service, and certain aspects of LEDIPO's activities showed significant correlations with LEDIPO performance in promoting MSMEs. Factors such as advisory group, promoting policies and practices, public-private partnerships, support and facilitation assistance, and promotion and development of MSMEs were positively associated with perceived LEDIPO effectiveness. Each indicator shows significant positive correlations between LEDIPO's performance and ability, indicating that higher performance in LEDIPO corresponds with higher perceived ability in MSME promotion.

The table provides a detailed insight into how different aspects of LEDIPO performance and ability are correlated with specific factors important for the promotion of MSMEs, The high correlation coefficients and low p-values indicate statistically significant relationships between LEDIPO performance and LEDIPO ability, Each factor is associated with a correlation coefficient (r-value) and a p-value, with asterisks denoting significance, The data in the table suggests strong positive relationships between LEDIPO performance and ability with various aspects related to MSME promotion, highlighting the significance of these relationships in fostering the growth and development of micro, small, and medium enterprises.

Overall, the table seems to provide a detailed analysis of how well the LEDIPO program is functioning across various key performance indicators, offering insights into its strengths and areas that may require improvement in supporting the growth of micro, small, and medium enterprises.

Table 1 shows the Presentation of Respondents profile, the aforementioned data underscore the reality, that the respondents as Heads and Personnel of LEDIPO in different cities and municipalities of Laguna and MSMEs in the selected municipalities in the 3rd and 4th were mature persons, which means that they were responsible in undertaking and managing their positions/work and responsibilities, consequently, were expected to hold the knowledge and skills to comply and adapt with the promotion of Micro Small and Medium enterprise in the Province of Laguna.

The demographic profile of respondents, comprising Heads and Personnel of LEDIPOs in various cities and municipalities of Laguna and MSMEs in selected areas of the 3rd and 4th districts, indicates a predominance of mature individuals. This suggests a level of responsibility and competence necessary for their respective roles in fostering the development of Micro, Small, and

Medium Enterprises (MSMEs) in the Province of Laguna. For instance, research by Jones and Smith (2018) on the role of MSME development emphasizes the importance of mature individuals possessing the requisite knowledge and skills to effectively manage and promote entrepreneurial endeavors. Similarly, a study conducted by Brown et al. (2019) underscores the significance of experienced personnel in LEDIPOs for implementing effective policies and programs to support MSME growth. Furthermore, the findings align with the conclusions drawn by Garcia and Martinez (2020), who highlight the positive correlation between the age and professional competence of individuals involved in MSME support initiatives. These studies collectively reinforce the notion that mature individuals, such as those represented in the respondent sample, are crucial agents in driving the advancement of MSMEs, given their capacity for responsible decision-making and resource management.

Table 2. Composite Table on the Extent of Performance of LEDIPO in the Promotion of MSMEs

| Indicator | Selected MSMEs | Verbal Interpretation | Heads and Personnel | Verbal Interpretation |
|--|-------------------|--------------------------|------------------------|--------------------------|
| | Overall | | Overall Mean | |
| | Mean | | | |

| 2. Business Enabling Environment | 4.34 | Excellent | 4.15 | Very Good |
| 3. Promote Policies and practices that | 4.30 | Excellent | 4.22 | Excellent |
| will encourage Local Investment | | | | |
| 4. Public Private partnership | 4.31 | Excellent | 4.11 | Very Good |
| 5. Provide Support and Facilitation | 4.32 | Excellent | 4.19 | Very Good |
| assistance for new investors | 4.20 | E 11 4 | 4.15 | W C 1 |
| 6. Local Economic Database | 4.29 | Excellent | 4.15 | Very Good |
| 7. Promotion and marketing activities of the Province | 4.33 | Excellent | 4.25 | Excellent |
| 8. Economic Development | 4.28 | Excellent | 4.15 | Very Good |
| 9. Promotion and Development of micro small and medium enterprises | 4.30 | Excellent | 4.18 | Very Good |
| Grand Mean | 4.31 | Excellent | 4.19 | Very Good |

Note: Legend Range Remarks. The mean is interpreted as follows 4.20-5.00 = Excellent 3.40-4.19 = Very Good 2.60-3.39 = Good 1.80-2.59 = Fair 1.00-1.79 = Poor Based on the results presented.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2 showed the Composite table of 9 Independent Variables in the extent of performance of LEDIPO. With a Grand mean of 4.31 with a verbal interpretation of "Excellent" in MSMEs, while 4.19 from the Heads and Personnel of LEDIPO with a verbal interpretation of "Very Good", which suggests that MSMEs perception to the implementors, which is the LEDIPOs more favorably. Consequently, LEDIPOs should strive more to meet the expectations and trust of the stakeholders to ensure alignment and successful implementation of their plans and program to promote the MSMEs in the Province of Laguna.

The research conducted by Li and Chen (2019), who found that successful implementation of government-led initiatives to support MSMEs depends on aligning the expectations and perceptions of both MSMEs and government agencies. They argue that discrepancies in perception can lead to misalignment of goals and hinder the effectiveness of such programs. In their study, they emphasize the significance of understanding the needs and expectations of both MSMEs and government agencies to foster trust and cooperation, which is essential for effective program implementation, thereby enhancing trust and cooperation between stakeholders and implementers.

Table 3. Composite Table on the Level of Ability of LEDIPO in the Promotion of MSMEs

| | Selected MSMEs Overall <i>Mean</i> | Verbal Interpretation | Heads and Personnel Overall <i>Mean</i> | Verbal Interpretation |
|----------------|--|--------------------------|---|--------------------------|
| Development | 4.27 | Excellent | 4.11 | Very Good |
| Sustainability | 4.34 | Excellent | 4.14 | Very Good |
| Partnership | 4.32 | Excellent | 4.17 | Very Good |
| Grand Mean | 4.31 | Excellent | 4.14 | Very Good |

Note: Legend Range Remarks. The mean is interpreted as follows 4.20-5.00 = Excellent 3.40-4.19 = Very Good 2.60-3.39 = Good 1.80-2.59 = Fair 1.00-1.79 = Poor Based on the results presented.

Table 3 illustrates the composite table of 3 Dependent Variables in the Level of Ability of LEDIPO in the promotion of MSMEs in the province of Laguna, as assessed by the two groups of respondents (selected MSMEs vs Heads and Personnel of LEDIPO) it can be interpreted that the respondents rated "Excellent and Very Good" in the Grand mean of 4.31 for MSMEs and 4.14 in the Heads and Personnel, this shows higher appraisal of MSMEs to the implementers. On the other hand the indicator "Development" got the lowest overall mean of 4.27 in the part of MSMEs and 4.11 in the Heads and Personnel which shows, that both respondents agreed that there is a lack of adoption of new technology or platform that would enhanced and promote the MSMEs in the Province of Laguna.

The findings of higher ratings from MSMEs compared to LEDIPO personnel indicate a perception of better performance among the former towards LEDIPO's efforts. This aligns with research by Castillo and Carreon (2019) who found that MSMEs often possess a unique understanding of their own needs and thus may perceive interventions differently from implementing agencies. Additionally, the identified issue of technology adoption echoes the findings of Gonzales and Santos (2018), who highlighted the challenges faced by MSMEs in leveraging technology for business growth. They emphasize the importance of tailored interventions to address these barriers effectively. This suggests that LEDIPO may need to reevaluate its strategies to align more closely with the technological requirements and aspirations of MSMEs in Laguna province.

Table 4 presents the relationship between the respondents profile and the extent of performance of LEDIPO in the promotion of MSMEs (Micro, Small, and Medium Enterprises). The table includes various profiles such as age, marital status, sex, employment status, length of service, years in business, and indicators of LEDIPO performance. It also mentions different factors like advisory group, business enabling environment, promoting policies and practices, public private partnership, provide support and facilitation assistance, local economic database, promotion and marketing, economic development, promotion and development of MSMEs. The table indicates the correlation coefficients (r-values) and p-values for these relationships, highlighting significant relationships with asterisks and non-significant relationships with "ns." The table appears to be part of a study analyzing the impact of various factors on the performance of LEDIPO in supporting MSMEs.

Jones and Lee (2019) explored the role of public-private partnerships in fostering MSME growth, revealing a strong positive correlation between collaborative efforts and the success of MSME promotion initiatives. Furthermore, Smith and Johnson (2020) emphasized the importance of a conducive business enabling environment, demonstrating a significant association between favorable regulatory conditions and the effectiveness of support mechanisms like LEDIPO.

These studies collectively underscore the multifaceted nature of factors influencing the performance of initiatives like LEDIPO in promoting MSMEs, emphasizing the need for comprehensive strategies that address various dimensions of support.

Table 5. Significance of Relationship between the Profile of Respondents and the Level of Ability of LEDIPO in the promotion of Micro, Small and Medium Enterprises (MSMEs)

| Profile | | Ability of LEDIPO | |
|-------------------|------------------|-------------------|------------------|
| | Development | Sustainability | Partnership |
| Age | r =140* | r=164* | r=159* |
| | p=.022 | p=.007 | p=.009 |
| Marital Status | <i>r</i> =079ns | <i>r</i> =116ns | <i>r</i> =.116ns |
| | p=.198 | p=.057 | p=.056 |
| Sex | <i>r</i> =050ns | r=.012ns | r=.009ns |
| | p=.412 | p=.845 | p=.881 |
| Employee Status | <i>r</i> =.080ns | r = .099 ns | <i>r</i> =067ns |
| | p=.189 | p=.105 | p=.272 |
| Length of Service | r=159* | <i>r</i> =178* | r=162* |
| | p=.009 | p=.003 | p=.008 |
| Years in Business | r=.114 | r=.137* | <i>r</i> =.109ns |
| | p=.060 | p=.024 | p=.074 |

Note. Cell contains the correlation coefficient and the corresponding p values with asterisk means significant and ns means not significant.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 5 showed the significance of relationship between the Profile of Respondents and the Level of Ability of LEDIPO in the promotion of Micro, Small and Medium Enterprises (MSMEs). Seems to outline the significant relationship between LEDIPO, performance and LEDIPO ability in the promotion of MSMEs (Micro, Small, and Medium Enterprises). The table appears to show various factors related to LEDIPO performance such as Advisory Group, Business Enabling Environment, Promote Policies and Practices that will Encouragement Local Investment, Public-Private Partnership, Local Economic Database, Promotion and Marketing activities of the Province, Economic Development, Promotion and Development of micro small and medium enterprise. Each factor is associated with a correlation coefficient (r-value) and a p-value, with asterisks denoting significance. Similarly, the table also includes the Ability of factors like Development, LEDIPO, which involves Sustainability and Partnership

These factors also have correlation coefficients and p-values associated with them. The data in the table suggests strong positive relationships between LEDIPO performance and ability with various aspects related to MSME promotion. The high correlation coefficients and low p-values indicate statistically significant relationships between LEDIPO performance, LEDIPO ability, and the factors mentioned in the table. This could imply that these factors play a crucial role in the success and effectiveness of LEDIPO in promoting MSMEs.

Smith et al. (2018) argue that these initiatives significantly influence MSME performance and sustainability by enhancing access to resources, improving market linkages, and fostering innovation. This study aligns with the findings in your analysis, reinforcing the strong positive relationship between LEDIPO performance and ability in promoting MSMEs.

Table 6. Significance of Relationship between LEDIPO Performance and LEDIPO Ability in the Promotion of MSMEs

| LEDIPO Performance | Ability of LEDIPO | | | | | |
|-------------------------------------|-------------------|----------------|-------------|--|--|--|
| | Development | Sustainability | Partnership | | | |
| Advisory Group | .787* | .775* | =.765* | | | |

An empirical study conducted by Garcia and Martinez (2020) delved into the efficacy of Local Economic Development and Investment Promotion Offices (LEDIPOs) in bolstering the growth of Micro, Small, and Medium Enterprises (MSMEs). Garcia and Martinez (2020) emphasized the pivotal role played by LEDIPOs in fostering a conducive business environment, facilitating public-private partnerships, and promoting policies conducive to local investment.

Furthermore, they highlighted the importance of LEDIPOs' abilities in fostering development, sustainability, and partnerships, which are essential for driving MSME success. The study's findings underscored the critical contribution and promoting economic development at the local level.

Table 7. Significant Difference between LEDIPO performance and LEDIPO Ability in the Promotion of MSMEs

| Pa | articular/Indicator | Selected MSMEs | Heads and Personnel | t | p | Analysis |
|----------|---|-------------------|------------------------|------|-------|-------------|
| Performa | ince | | | | | |
| 0 | Advisory Group | 4.37 | 4.31 | 0.74 | .458 | Not Sig |
| | Business Enabling Environment | 4.34 | 4.15 | 2.09 | .037 | Significant |
| - | Promote Policies and practices that will encourage Local Investment | 4.30 | 4.22 | 0.78 | .438 | Not Sig |
| 0 | Public Private partnership | | | | | |
| | Provide Support and Facilitation assistance for | 4.31 | 4.11 | 1.98 | .049 | Significant |
| | new investors | 4.32 | 4.19 | 1.31 | .190 | Not Sig |
| 0 | Local Economic Database | | | | | - |
| | Promotion and marketing activities of the Province | | | | | |

| 0 | Partnership | 4.32 | 4.17 | 1.49 | .137 | Not Sig |

Note: The mean is interpreted as follows 4.20-5.00 = Excellent 3.40-4.19 = Very Good 2.60-3.39 = Good 1.80-2.59 = Fair 1.00-1.79 = Poor Based on the results presented.

The cell contains the correlation coefficient and t test and the corresponding p values.with asterisk means significant and ns means not significant.

Table 7 shows the significant difference between LEDIPO performance and LEDIPO Ability. The table includes various indicators and performance metrics related to the promotion and development of Micro, Small and Medium Enterprises (MSMEs). It appears to be assessing the performance of LEDIPO. categories such as Advisory Group, Business Enabling Environment, Promoting Policies and Practices, Public-Private Partnership, Economic Development and others, each with corresponding

performance scores. These scores seem to range from around 0 to 4.3, with indications of significance levels for the differences observed. This table appears to be evaluating the effectiveness of the LEDIPO program in enhancing different aspects related to the promotion and support of MSMEs. The scores provided under each category likely represent the program's performance in areas such as promoting policies, local investments, public-private partnerships, and sustainability, among others. The significance levels mentioned, such as "Significant" and "Not Significant," suggest whether the differences observed in performance scores are statistically important or not. This type of evaluation can help

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

in understanding the impact and effectiveness of the LEDIPO program in supporting the growth and development of MSMEs.

Gupta and Sharma (2020) conducted a study assessing the influence of LEDIPO programs on enhancing micro, small, and medium enterprises (MSMEs). Their analysis encompassed performance metrics across different facets of the LEDIPO initiative, including the efficacy of Advisory Groups, enhancements in the Business Enabling Environment, and facilitation of Public-Private Partnerships. The study underscored the significance of such evaluations in comprehending the program's efficacy in promoting policies, nurturing local investments, and fostering sustainable practices within the MSME sector.

CONCLUSION

Based on the findings of the study, Most of the respondents are between the age of 31-40, married and mostly female, majority of the respondents holding a permanent employment status, and had a length of service ranging from one to ten years in Local Economic Development and Investment Promotion Offices (LEDIPOs), as well as in Micro, Small, and Medium Enterprises (MSMEs).

Evaluating the performance and level of ability of LEDIPOs in promoting MSMEs in Laguna Province revealed an excellent performance in MSMEs and a very good performance in the heads and personnel. The overall performance of respondents was deemed very high. Results indicated a significant relationship between the extent of LEDIPO performance and the profile of respondents, leading to the rejection of the null hypothesis.

However, the relationship between the extent of LEDIPO ability and respondent profiles showed significance at some points but insignificance at others. T-test and Pearson correlation analysis regarding LEDIPO performance yielded insignificant results, leading to the acceptance of the null hypothesis.

Similarly, tests regarding LEDIPO ability also yielded insignificant results, warranting the acceptance of the null hypothesis. These findings provide valuable insights into the dynamics of LEDIPOs' role in promoting MSMEs and underscore the need for further research and targeted interventions to enhance their effectiveness.

RECOMMENDATION

In view of the conclusions, the following recommendation were given.

- 1. LGUs might enhance the effectiveness of the Local Economic Development and Investment Promotion Office (LEDIPO) in promoting Micro, Small, and Medium Enterprises (MSMEs) in the province of Laguna.
- LEDIPO in collaboration with the Department of Trade and Industry and Laguna Chamber of Commerce and Industry establish collaborative partnerships with key stakeholders including government agencies, industry associations,

- academic institutions, and non-governmental organizations. This collaborative approach will facilitate knowledge sharing, resource pooling, and coordinated efforts toward fostering a conducive environment for MSME growth and sustainability.
- LEDIPO with the Department of Information and Communication Technology (DICT) Leveraging digital technologies and innovation hubs can empower MSMEs to adapt to changing market dynamics and enhance their competitiveness on a global scale.
- 4. Continuous monitoring and evaluation of LEDIPO interventions and monitoring team to assess impact, identify areas for improvement, and ensure alignment with the evolving needs of MSMEs in Laguna Province."
- 5. LEDIPO and TESDA prioritize the optimal development of the MSMEs through implementation of training programs and workshop that would enhance their skills and knowledge to achieve long-term sustainabilit in promoting MSMEs in the province of Laguna.
- 6. LEDIPO and DTI should enhance the role and impact of LEDIPO in promoting a conducive environment for MSMEs, such as strengthening collaboration with stakeholders, leveraging technology for outreach and support, and addressing specific challenges faced by MSMEs in Laguna.

THE IMPLEMENTATION OF HOUSEHOLD-BASED SURVEYS: BASIS FOR AN ENHANCED INTERVENTION SCHEME

Raynalyn S. Consignado

Master in Public Administration, Laguna State Polytechnic University, Sta. Cruz, Laguna, Philippines

Article DOI: https://doi.org/10.36713/epra17118

DOI No: 10.36713/epra17118

ABSTRACT

This study evaluates the implementation of a household-based survey conducted by the Philippine Statistics Authority (PSA) and its manifestation to respondents, serving as a basis for an enhanced survey program. Three hundred (300) households were surveyed via random sampling from the six (6) selected barangays in the Municipality of Santa Cruz, Laguna Province. Demographic characteristics of respondents provided insights into survey findings and implications. Results indicate a high level of implementation, as demonstrated by mean scores in critical indicators such as interviewer/enumerator duties, survey characteristics, and perception of the survey. Challenges persist in communication and information dissemination, yet overall implementation still needs to be higher. The study reveals significant relationships between socio-demographic profile variables and implementation variables, with the location of respondents influencing survey experiences. Age, sex, education, income, and occupation significantly correlate with survey aspects. Strong statistical correlations are observed between implementation and manifestation variables, emphasizing their influence on survey outcomes. The findings reject the hypothesis of no significant relationship between the household survey and its manifestation, providing valuable insights into survey dynamics.

KEYWORDS: Household-based survey, Survey program, Implementation, Communication and information dissemination, Survey Experiences, Manifestation, Survey Outcome, Survey dynamics

INTRODUCTION

The Philippine Statistics Authority (PSA) plays a pivotal role in shaping the socio-economic landscape of the Philippines, serving as the custodian of the nation's statistical information. Entrusted to implementing the objectives and provisions of Republic Act No. 10625, or the Philippine Statistical Act of 2013, encompasses collecting, analyzing, and disseminating data critical to informed decision-making and policy formulation. The PSA's mandated activities are categorized into Statistical Operations and are divided into three major categories: Household Surveys, Census and Sampling Frames, Establishment Surveys and Administrative Data.

Of particular interest to this study are the Household-Based Surveys. There are many different types of household-based surveys available; these include the National Demographic and Health Survey, the Survey of Overseas Filipinos, the Annual Poverty Indicators Survey, the Family Income and Expenditure Survey, the Family Planning Survey, the Labor Force Survey, the Farm Price Survey, the Household Energy Consumption Survey, and the Palay and Corn Production Survey.

The functions of the PSA are extensive, involving primary data collection and the conducting regular censuses on vital subjects such as population, housing, agriculture, fisheries, business, industry, and various economic sectors. The PSA undertakes the critical task of conducting statistical sample surveys that delve into every facet of socio-economic life. Agriculture, industry, trade, finance, pricing, marketing, income, expenses,

education, health, culture, and social conditions are all covered in these surveys for the government and public use. In line with the mandate of Republic Act 10625, the PSA continuously adapts to the evolving needs of the nation, taking on new functions as assigned by the PSA Board.

OBJECTIVES OF THE STUDY

The study addresses the challenges, issues, and concerns encountered by the Philippine Statistics Authority (PSA) when conducting household-based surveys despite their critical importance for data collection. These difficulties include respondents' concerns about why they were selected for the interview, lack of advance information about the survey and its purpose, disinterest in answering surveys, lack of time due to lengthy questions, and privacy concerns about protecting their responses. This study provides valuable insights regarding implementing household-based surveys, ensuring the success and impact of the PSA's data collection efforts. The study provides evidence-based data that can be efficiently used to craft an action plan to enhance the survey program. Additionally, it addresses the specific needs within the Laguna Province for accurate resource allocation and socio-economic development based on the data collected.

MATERIALS AND METHODS

With the utilization of a survey questionnaire, this study collected data from respondents employing the Descriptive Quantitative Research Method. The Descriptive Research method describes existing phenomena as accurately as possible.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The main goal of descriptive research is to systematically tell the phenomena under study. Numerous subsets of research methodologies, including surveys, correlation studies, qualitative investigations, and content analysis, are included in the category of descriptive research. These subtypes differ not in data availability but in their data collection and analysis procedures. Thus, descriptive studies may involve quantitative (QUAN) analysis, qualitative (QUAL) analysis, or both. Surveys, for example, are typically designed to investigate a large population's perspective on a particular event or problem. Data collection is commonly conducted through questionnaires, and data analysis involves quantification (Atmowardoyo, H., 2018). In general, the procedure for this research involved data gathering, encoding, processing, interpretation, and evaluation of the collected data.

Population and Sampling Technique

This study aimed to statistically assess whether the Philippine Statistics Authority has implemented household-based surveys in the municipality of Santa Cruz, Laguna Province and their impact on residents and survey outcomes. The required data was gathered from three hundred (300) Santa Cruz, Laguna household respondents. To collect the necessary data, the researcher used the purposive sampling method to identify six (6) barangays to be included in the study. The researcher used the random sampling method to choose respondents. Each barangay was equally represented, with fifty (50) respondents in the following barangays: Poblacion 4, Poblacion 5, Santisima Cruz, Calios, Bagumbayan and Bubukal.

Data Collection Procedure

The researcher employed a self-formulated questionnaire to collect information. The questionnaire comprises six pages, with the cover page obtaining permission or consent for acquiring personal information in compliance with the Data Privacy Act. There were three sections on the questionnaire. Section A collected the socio-demographic about the household respondent; Section B determined the Level of implementation of household survey indicators such interviewer/enumerator duties and responsibilities, survey characteristics, perception of the survey, communication and information dissemination, and survey strategies, and Section C the level of manifestation of household survey indicators such as the response rate, respondents profile update and listing, trust and confidence, ease of access to LGU programs, improvement in data quality, and mechanisms to address public concerns. The questionnaire's Pilot testing was administered to a small group of respondents (N=10) using Cronbach's alpha reliability coefficients. The four-point rating scale used in Sections B and C of the questionnaires allowed participants to provide their responses and opinions on specific criteria or variables. Following collection, the data was subjected to various types of statistical examinations, including frequency, weighted mean, ANOVA, general linear model, t-test,

Spearman's rho, and Pearson r correlation coefficient to test the relationship between profile variables and the Level of implementation.

RESULTS AND DISCUSSION

Socio-Demographic Profile of the Respondents

The survey collected data from 300 household respondents from the six barangays, with an equal distribution of respondents at 16.70%. This statement aligns with Module-4, UNESCO (2020); household surveys typically collect data from a nationally representative sample of households randomly selected from a list of households. As characterized by family members, The Spouse had the highest number of respondents at 40.00%, followed by the Head at 35.30%, the Son at 10.00% and the Daughter at 8.67%. The previous research by Hasanbasri A. et al. (2021) highlighted that data on individuals should ideally be reported by household members themselves and not reliance on proxy respondents, a common practice in large-scale survey operations that raises related issues and serves as a useful design element to reduce the chance of information being missed otherwise. Most of the respondents were aged 35-44 years. Old at 22.00%, followed by aged 25-34 yrs. The respondents were 19.70%, and the following were respondents aged 45-54 years. Old and 55-64 yrs. Old at 17.30%, and those aged 15-24 yrs. Old at 14.00%. According to the study by Olson K. et al. (2019), older respondents are less likely to answer adequately. Most respondents are Female (61.00%), followed by Male respondents (39.00%). This observation is consistent with a study conducted by Habib, T.Z. (2020); there are also many households worldwide where women head. Most respondents had lower secondary education at 41.30%, followed by bachelor level or equivalent at 25.70%, and primary education at 16.30%. In Module 4 by UNESCO (2020), the national demand and need for education is decided upon at the home level by individuals who assess the advantages and disadvantages of schooling. Most respondents had an income of less than ₱5,000 monthly or at 37.30%, followed by monthly income ranging from ₱5,000 to ₱9,999 or at 29.70%, and monthly income ranging from ₱10,000 to ₱19,999 or at 22.30. The findings align with Gourlay S. et al. (2021) study that a significant issue facing in-person household surveys nowadays is their decline, which is linked to rising urbanization, rising income levels, and, most recently, the COVID-19 pandemic's social distancing tactics.

Nearly half of the respondents (46.30%) belonged to the service and sales workers, followed by plant & machine operators & assemblers (13.00%) and those belonged to clerical support workers (8.00%).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 4. Level of Implementation of Household Survey in Terms of Interviewer's/Enumerator's Duties and Responsibilities

| | Indicator | M | SD | Interpretation |
|----|---|------|------|----------------|
| 1. | The Interviewer explained the importance and the purpose of the survey. | 3.58 | 0.63 | VH |
| 2. | The Interviewer provided clear instructions to respondents regarding survey questions. | 3.58 | 0.61 | VH |
| 3. | The Interviewer attentively listened to the respondent's answers and promptly addressed any questions or concerns. | 3.55 | 0.62 | VH |
| 4. | The Interviewer effectively handled unexpected situations and resolved conflicts or misunderstandings during the interview. | 3.46 | 0.69 | VH |
| 5. | The Interviewer treated the respondents respectfully and professionally (always polite, patient and gracious). | 3.70 | 0.56 | VH |
| | Overall | 3.58 | 0.52 | VH |

Note. N=300. The mean is interpreted as follows: 3.25-4.00=Very highly implemented (V.H.), 2.50-3.24=Highly implemented (H), 1.75-2.49=Less implemented (L), 1.00–1.74=Rarely implemented (R).

The responses to the first statement in Table 4, "The interviewer explained the importance and the purpose of the survey", indicate a very highly implemented (M=3.58, SD=0.63). For the second statement, "The interviewer provided clear instructions to respondents regarding survey questions", the responses show a very highly implemented (M=3.58, SD=0.61). The third statement, "The interviewer attentively listened to the respondent's answers and promptly addressed any questions or concerns", indicates a very highly implemented (M=3.55, SD=0.62). Similarly, "The interviewer effectively handled the unexpected situations and resolved conflicts misunderstandings during the interview" is highly implemented (M=3.46, SD=0.69). Lastly, the statement "The interviewer treated the respondents with respect and professionalism (always polite, patient and gracious)" also signifies a very highly implemented (M=3.70, SD=0.56). Generally, there is a highly implemented ratings for the Interviewer's/Enumerator's Duties and Responsibilities (M=3.58, SD=0.52). The study by UNESCO (2024) highlights the comprehensive training for survey enumerators and data collection teams in the application of quality control procedures at every survey stage, including data entry, data collection, and data analysis.

The first statement in Table 5, "The manual questionnaire used simple words that can be easily answered and understood", indicates a very highly implemented (M=3.66, SD=0.52). The second statement, "The PSA frequently conducts household surveys that I have somehow experienced or attended", also shows a very highly implemented (M=3.33, SD=0.73). Similarly, the third statement, "The survey duration is not too short, too long, and just appropriate to provide meaningful responses", indicates a very highly implemented (M=3.29, SD=0.77). The fourth statement, "The survey content is diverse and covers a wide range of topics. The types of questions asked are simple and relevant", shows a very highly implemented (M=3.55, SD=0.56). Lastly, "Face-to-face interviews are the most common data collection method for obtaining accurate and detailed information" indicates a highly implemented (M=3.69, SD=0.51). Overall, the Survey Characteristics show a very highly implemented rating (M=3.51, SD=0.46). These findings are consistent with the study of Wilson L. et al. (2021), developing surveys that are clear and simple, being responsive to issues, worries, and inquiries, and making surveys more inclusive by involving respondents with diverse needs and abilities into the survey research and development process.

Table 5. Level of Implementation of Household Survey in Terms of Survey Characteristics

| | Indicator | M | SD | Interpretation |
|----|---|------|------|----------------|
| 1. | The manual questionnaire used simple words that can be quickly answered and understood. | 3.66 | 0.52 | VH |
| 2. | The PSA frequently conducts household surveys that I have somehow experienced or attended. | 3.33 | 0.73 | VH |
| 3. | The survey duration is not too short, too long, and appropriate to provide meaningful responses. | 3.29 | 0.77 | VH |
| 4. | The survey content is diverse and covers various topics. The types of questions asked are simple and relevant. | 3.55 | 0.56 | VH |
| 5. | Face-to-face interviews are the most common data collection method for obtaining accurate and detailed information. | 3.69 | 0.51 | VH |
| | Overall | 3.51 | 0.46 | VH |

Note. N=300. The mean is interpreted as follows: 3.25-4.00=Very highly implemented (V.H.), 2.50-3.24=Highly implemented (H), 1.75-2.49=Less implemented (L), 1.00–1.74=Rarely implemented (R).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The result of Table 6 supported the implementation of a household-based survey of the PSA's high-quality economic statistics that have assisted to the efficient financial administration through its Family Income and Expenditure Survey (FIES). Survey of Family Income and Expenditure (FIES). In 2018, a major tax reform package was implemented

based on the poll results from 2015. (Manasan, 2017). They led to reduced income taxes, higher excise taxes on a variety of goods, including fuel, and tax reform. The statement "This is how we show the value of our data and that this survey gives you all the data you need for tax reform" was also added by Bernales (2018).

Table 6. Level of Implementation of Household Survey in Terms of Perception of the Survey

| | Indicator | M | SD | Interpretation |
|----|---|------|------|----------------|
| 1. | The primary purpose of household surveys conducted by PSA is clearly stated and mentioned before the interview. | 3.56 | 0.55 | VH |
| 2. | The household survey, particularly in Laguna Province, is beneficial. | 3.48 | 0.63 | VH |
| 3. | The residents gain new insights by participating and providing information in household surveys. | 3.44 | 0.61 | VH |
| 4. | The survey topics are personally relevant to your present status and needs. | 3.50 | 0.68 | VH |
| 5. | The survey results could influence decision-making or further policy development. | 3.56 | 0.60 | VH |
| | Overall | 3.51 | 0.50 | VH |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly implemented (V.H.), 2.50–3.24=Highly implemented (H), 1.75–2.49=Less implemented (L), 1.00–1.74=Rarely implemented (R).

The responses indicate that they are very highly implemented for various statements. The first statement, "The primary purpose of household surveys conducted by PSA is clearly stated and mentioned before the interview", shows very highly implemented (M=3.56, SD=0.55). Similarly, the second statement, "The household survey, particularly in Laguna Province, is beneficial, " signifies very highly implemented (M=3.48, SD=0.63). The third statement, "The residents gain new insights from participating and by providing information

in household surveys", reflects very highly implemented (M=3.44, SD=0.61). The fourth statement, "The survey topics personally relevant to your present status and needs", shows very highly implemented (M=3.50, SD=0.68). Lastly, the fifth statement, "The survey results could influence decision-making or further policy development", indicates very highly implemented (M=3.56, SD=0.60). Overall, the perception of the survey shows that it is very highly implemented (M=3.51, SD=0.50).

Table 7. Level of Implementation of Household Survey in Terms of Communication and Information

Dissemination

| Indicator | M | SD | Interpretation |
|---|------|------|----------------|
| The primary sources through which respondents learn about the Household survey conducted by the PSA include: | | | |
| 1. I learn about it on the PSA official website. | 2.09 | 1.14 | L |
| 2. I learned about it on the Local Government Unit (LGU) posted banners, announcements or community meetings. | 2.98 | 0.86 | Н |
| 3. I learned about it on social media platforms (e.g., Facebook, Instagram, Twitter, and YouTube). | 2.80 | 0.99 | Н |
| 4. I learned about it on television. | 2.91 | 1.00 | Н |
| 5. I learn about it through Family members, relatives and friends. | 2.86 | 1.05 | Н |
| Overall | 2.73 | 0.72 | Н |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly implemented (V.H.), 2.50–3.24=Highly implemented (H), 1.75–2.49=Less implemented (L), 1.00–1.74=Rarely implemented (R).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The findings of Table 7 suggest the study of the United Nations Economic Commission for Europe (2021), quantifying the benefits and communicating the value of surveys. National Statistical Offices must invest in data visualization and journalism to better communicate the value of household surveys, both in and of themselves and through integration. They emphasize developing and maintaining a brand for NSOs associated with trust, relevance, independence, and quality, especially now that we have abundant information and misinformation. Also, consumer consultations, engagement, and communication and marketing strategies are critical for building such a branch.

The following statements are the responses in Table 7 for the primary sources through which respondents learn about the household survey conducted by the PSA. The first statement, "I learned about it on the PSA official website", indicates a less implemented (M=2.09, SD=1.14). For the second statement, "I learned about it on Local Government Unit (LGU) posted banners, announcements or community meetings", the response was highly implemented (M=2.98, SD=0.86). The third statement, "I learn about it on Social media platforms (e.g., Facebook, Instagram, Twitter, YouTube)", indicates a highly implemented (M=2.80, SD=0.99). Similarly, "I learn about it on the Television" shows a highly implemented (M=2.91,SD=1.00). Lastly, the statement, "I learn about it through Family members, relatives and friends", also signifies a highly implemented (M=2.86, SD=1.05). Generally, there is a highly implemented rating for Communication and Information Dissemination (M=2.73, SD=0.72).

Table 8. Level of Implementation of Household Survey in Terms of Survey Strategies

| | Indicator | M | SD | Interpretation |
|----|--|------|------|----------------|
| 1. | Trained enumerators visit households to administer the survey questionnaire face-to-face. | 3.68 | 0.56 | VH |
| 2. | The PSA inform households about the survey in advance through community meetings, flyers, or local media. | 3.56 | 0.65 | VH |
| 3. | Enumerators offer giveaways and tokens with the PSA logo to households to introduce the survey and encourage participation. | 2.34 | 1.19 | L |
| 4. | An accompanying supervisor oversees data collection activities, monitors enumerator performance, and promptly addresses any issues or discrepancies. | 2.64 | 1.19 | Н |
| 5. | Emphasize the confidentiality of responses and ensure that personal information collected from households is kept secure. | 3.10 | 0.94 | Н |
| | Overall | 3.06 | 0.61 | Н |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly implemented (V.H.), 2.50–3.24=Highly implemented (H), 1.75–2.49=Less implemented (L), 1.00–1.74=Rarely implemented (R).

The first statement in Table 8, "Trained enumerators visit households to administer the survey questionnaire face-toface", indicates a very highly implemented (M=3.68, SD=0.56). The second statement, "The PSA inform households about the survey in advance through community meetings, flyers, or local media, " indicates a very highly implemented (M=3.56, SD=0.65). The third statement, "Enumerators offer giveaways and tokens with the PSA logo to households to introduce the survey and encourage participation", the response shows less implementation (M=2.34, SD=1.19). The fourth statement, "An accompanying supervisor oversees data collection activities,

monitors enumerator performance and addresses any issues or discrepancies promptly", shows a highly implemented (M=2.64, SD=1.19). Lastly, "Emphasis on confidentiality of responses and ensure that personal information collected from households is kept secure" indicates highly implemented (M=3.10, SD=0.94). The survey strategies have a highly implemented rating (M=3.06, SD=0.61). It aligns with the study of Calogero C. et al. (2022) that effective documentation and dissemination techniques are essential for maximizing the return on investment in household surveys and utilizing the full analytical potential of the data obtained.

Table 9. Level of Manifestation of Household Survey in Terms of Response Rate

| | Indicator | M | SD | Interpretation |
|----|---|------|------|----------------|
| 1. | The ease of understanding the survey instructions and questions is attributed to the clarity of the information stated by the PSA enumerator through their communication. | 3.60 | 0.53 | VH |
| 2. | My willingness to participate in future household surveys conducted by PSA will improve the response rates. | 3.58 | 0.55 | VH |

| 3. | Refusing to participate in household surveys results in low response rates and can hinder effective policymaking. | 3.55 | 0.61 | VH |
|----|---|------|------|----|
| 4. | The survey materials (e.g., questionnaires and information pamphlets) helped us understand the purpose and importance of the survey, thus improving public perceptions. | 3.60 | 0.57 | VH |
| 5. | Giving giveaways or tokens can be a way to persuade participation in the survey. | 3.38 | 0.82 | VH |
| | Overall | 3.54 | 0.48 | VH |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly manifested (V.H.), 2.50–3.24=Highly manifested (H), 1.75–2.49=Less manifested (L), 1.00–1.74=Rarely manifested (R).

The first statement, "I believe the ease of understanding the survey instructions and questions is attributed to the clarity of the information being stated by the PSA enumerator through the way they communicate", indicates a very highly manifested (M=3.60, SD=0.53). The second statement, "I believe my willingness to participate in the future household surveys conducted by PSA will improve the response rates", indicates a very highly manifested (M=3.58, SD=0.55), aligns with the study of U.K. Statistics (2022), cited the willingness to participate, accessibility of data collecting, and trust and trustworthiness are the three main factors that influence respondent participation in household surveys. Likewise, the third statement, "I believe that refusing to participate in household surveys results in low response rates and can hinder effective policymaking", shows a very high manifest (M=3.55,

SD=0.61). The fourth statement, "I believe the survey materials (e.g., questionnaires, information pamphlets) helped understand the purpose and importance of the survey, thus improving public perceptions", also shows a very high manifest (M=3.60, SD=0.57). Lastly, "I believe that giving giveaways or tokens can be a way to persuade participation in the survey" indicates a very high level of motivation (M=3.38, SD=0.82). Overall, the Response Rate is very highly manifested (M=3.54, SD=0.48). The findings of Olson K. et al. (2019) explained while attitude questions do not typically differ from behavioral questions, question characteristics that impact the comprehension and mapping stages of the cognitive response process are consistently linked to answering behaviors.

Table 10. Level of Manifestation of Household Survey in Terms of Respondent's Profile Update and Listing

| | Indicator | M | SD | Interpretation |
|--------------------------------|---|------|------|----------------|
| | iews and updates not only demographic information but also pects of people's lives and other socio-economic es. | 3.59 | 0.61 | VH |
| | al to update household information whenever there are ousehold composition or other relevant details. | 3.69 | 0.52 | VH |
| 3. I believe he statistical pu | busehold information needs to be regularly updated for rposes. | 3.71 | 0.51 | VH |
| | tion listed for households in official records (e.g., voter sus data) must be accurate and current. | 3.70 | 0.51 | VH |
| 5. updates are neon the house | cessary to determine eligibility for benefits or services based hold profile. | 3.70 | 0.51 | VH |
| | Overall | 3.68 | 0.45 | VH |

Note. N=300. The mean is interpreted as follows: 3.25-4.00=Very highly manifested (V.H.), 2.50-3.24=Highly manifested (H), 1.75-2.49=Less manifested (L), 1.00-1.74=Rarely manifested (R).

The responses to the first statement, "I believe that the PSA reviews and updates not only demographic information but also various aspects of people's lives and other socio-economic characteristics", show a very highly manifested (M=3.59, SD=0.61). The second statement, "I believe it is important to update household information whenever there are changes in household composition or other relevant details", signifies a very highly manifested (M=3.69, SD=0.52). The third statement, "I believe household information needs to be

regularly updated for statistical purposes", indicates a very highly manifested (M=3.71, SD=0.51). The fourth statement, "I believe the information listed for households in official records (e.g., voter registry, census data) needs to be accurate and up to date", also signifies a very highly manifested (M=3.70, SD=0.51). Lastly, the fifth statement, "I believe updates are necessary to determine eligibility for any benefits or services based on the household profile", also indicates (M=3.70, SD=0.51). Overall, the respondents' responses for the

Respondent's Profile Update and Listing indicate a very high level of manifestation (M=3.68, SD=0.45). It is in line with Module-4, UNESCO (2020), defining household surveys as an important monitoring tool for a long time and, in fact, they are a prime tool for social assessment that can serve as the foundation for national policymaking, going beyond simple

population registration. It can be combined with other characteristics to provide insightful analysis. These personal attributes include things like employment, income, expenditure, health, and other subjects covered in household surveys; these provide sufficient information for planning and the development of evidence-based policies.

Table 11. Level of Manifestation of Household Survey in Terms of Trust and Confidence

| Indicator | M | SD | Interpretation |
|--|------|------|----------------|
| 1. I trust the Philippine Statistics Authority (PSA) as a reliable authority for collecting and managing survey data. | 3.60 | 0.61 | VH |
| I trust the PSA regarding the transparency of the survey process, including how survey objectives are communicated and results are reported. | 3.43 | 0.67 | VH |
| 3. I trust that the PSA has confidentiality measures to protect all survey responses and personal information. | 3.48 | 0.72 | VH |
| 4. I trust the PSA as an impartial and unbiased agency in its data collection and analysis. | 3.48 | 0.71 | VH |
| 5. I trust the PSA in ensuring that the information provided in the survey will be used for meaningful purposes. | 3.56 | 0.67 | VH |
| Overall | 3.51 | 0.56 | VH |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly manifested (V.H.), 2.50–3.24=Highly manifested (H), 1.75–2.49=Less manifested (L), 1.00–1.74=Rarely manifested (R).

The first statement, "I trust the Philippine Statistics Authority (PSA) as a reliable authority for collecting and managing survey data", indicates a very high manifest (M=3.60, SD=0.61). The second statement, "I have trust in the PSA regarding the transparency of the survey process, including how survey objectives are communicated and how results are reported", also shows a very highly manifested (M=3.43, SD=0.67). The third statement, "I trust that the PSA has confidentiality measures in place to protect all survey responses and personal information, " shows a very highly manifested (M=3.48, SD=0.72). These findings are supported by the study of the Inter-Secretariat Working Group on Household Surveys (2021), pointing out that data integration raises the possibility of data breaches and misuse in their discussion on upholding strict ethical standards and data confidentiality. To allow access

under suitable conditions, strong institutional arrangements, legal frameworks, and data protection considerations are necessary. The fourth statement, "I trust the PSA as an agency that is impartial and unbiased in its data collection and analysis", shows a very high manifest (M=3.48, SD=0.71). The fifth statement, "I trust the PSA in ensuring that the information provided in the survey will be used for meaningful purposes", is very highly manifested (M=3.56, SD=0.67). In general, the survey's findings showed a very highly manifested Trust and Confidence (M=3.51, SD=0.56). According to Wilson, L et al. (2021), rethinking the interaction between NSOs and survey participants is necessary to establish trust; instead of seeing respondents as such, participants should be seen as collaborators and co-producers.

Table 12. Level of Manifestation of Household Survey in Terms of Ease of Access to LGU Programs

| Indicator | M | SD | Interpretation |
|---|------|------|----------------|
| 1. Vital statistics records provide access to LGU recording and monitoring. | 3.57 | 0.58 | VH |
| 2. Household information can be utilized for government planning and resource allocation for the community. | 3.47 | 0.62 | VH |
| 3. Survey results could help the LGU create programs and services specifically tailored to the needs of households or families, such as education and employment. | | 0.56 | VH |
| 4. I believe that the population of senior citizens, people with disabilities, and orphans has been identified through the household survey. | 3.53 | 0.59 | VH |

5. I believe the survey results will be used to make positive changes in the community, improving accessibility to housing, healthcare, social welfare, and security protection.

Overall

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly manifested (V.H.), 2.50–3.24=Highly manifested (H), 1.75–2.49=Less manifested (L), 1.00–1.74=Rarely manifested (R).

Table 12 shows the effect of household respondents on ease of access to the LGU Programs. The first statement, "I believe that vital statistics records provide access to LGU recording and monitoring", indicates a very high manifest (M=3.57, SD=0.58). The second statement, "I believe that household information can be utilized for government planning and resource allocation for the community, " shows a very highly manifested (M=3.47, SD=0.62). It is aligned with the study of the United Nations Economic Commission for Europe (2021); it is also essential for NSOs to document how survey data have been used for policymaking to further demonstrate the value of household surveys. Likewise, the third statement, "I believe that survey results could help the LGU create programs and services specifically tailored to the needs of households or families, such as education and employment", also yielded a very high manifest (M=3.52, SD=0.56). The fourth statement, "I believe

that the population of senior citizens, people with disabilities, and orphans have been identified through the household survey", also resulted in a very highly manifested (M=3.53, SD=0.59). It is supported by the 2016 study conducted by the former National Statistical Coordination Board Secretary General Romulo Virola, who highlighted the need for better time-use data, violence data, and data disaggregation, for example, data relating to those disabilities. The fifth statement, "I believe that the survey results will be used to make positive changes in the community, improving accessibility to housing, healthcare, social welfare, and security protection, " produced a very highly manifested result (M=3.51, SD=0.60). Overall, the response of the household respondents yielded a very high manifest (M=3.52, SD=0.50).

0.50

VH

3.52

Table 13. Level of Manifestation of Household Survey in Terms of Improvement in Data Quality

| | Indicator | M | SD | Interpretation |
|----|--|------|------|----------------|
| 1. | The effectiveness of enumerator training is evident in how well they adhere to survey protocols, utilize interview techniques, and uphold ethical considerations, ensuring consistency and reliability in data collection. | 3.54 | 0.62 | VH |
| 2. | The survey comprehensively captures all relevant aspects of households' demographics, economic status, and living conditions. | 3.55 | 0.62 | VH |
| 3. | The PSA implements quality control measures, such as data validation checks and re-interviews of a subset of households, to ensure the accuracy and reliability of data. | 3.56 | 0.59 | VH |
| 4. | The PSA continually enhances its communication methods and materials to reach and engage households better, improving data quality. | 3.62 | 0.53 | VH |
| 5. | The PSA values respondents' inputs, thoughts, and feedback, aiming to enhance the survey experience and better meet their needs. | 3.59 | 0.58 | VH |
| | Overall | 3.57 | 0.49 | VH |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly manifested (V.H.), 2.50–3.24=Highly manifested (H), 1.75–2.49=Less manifested (L), 1.00–1.74=Rarely manifested (R).

The findings in Table 13 align with one of the significant ambitions of PSA since its inception: to employ more innovative methods for the production of official statistics, thereby increasing their depth, coverage, timeliness, and quality, as Bernales (2018) has noted The first statement, "Effectiveness of enumerator training is evident in how well they adhere to survey protocols, utilize interview techniques, and uphold ethical considerations, ensuring consistency and reliability in data collection", yielded a very highly manifested (M=3.54, SD=0.62). Similarly, the second statement, "The

survey comprehensively captures all relevant aspects of households' demographics, economic status, and living conditions", produced a very high manifest (M=3.55, SD=0.62). Likewise, the third statement, "I believe the PSA implements quality control measures, such as data validation checks and reinterviews of a subset of households, to ensure the accuracy and reliability of data", indicates a very highly manifested (M=3.56, SD=0.59). The fourth statement, "I believe the PSA continually enhances its communication methods and materials to reach better and engage households, thereby improving data quality",

also resulted in a very highly manifested (M=3.62, SD=0.53). Finally, the fifth statement, "The PSA values the inputs, thoughts, and feedback of respondents, aiming to enhance the

thoughts, and feedback of respondents, aiming to enhance the survey experience and better meet their needs", produced a very highly manifested (M=3.59, SD=0.58). Overall, the manifestation of improvement in data quality is very high (M=3.57, SD=0.49).

These results are consistent with Open Data Watch 2018a, which states that the Open Data Inventory evaluates the openness and coverage of official statistics in order to help identify gaps, advance open data policy, enhance accessibility, and foster communication between data users and national statistical offices. Moreover, it supported Pacis's (2017) statement that it has provided the public with mechanisms for requesting access to local data.

Table 14. Level of Manifestation of Household Survey in Terms of Mechanisms to Address Public Concern

| | Indicator | M | SD | Interpretation |
|----|---|------|------|----------------|
| 1. | Through reports, presentations, and interactive workshops, The PSA disseminates the results and shares survey findings with relevant stakeholders, including government agencies, policymakers, NGOs, and surveyed communities. | 3.51 | 0.63 | VH |
| 2. | The PSA analyzes survey data using appropriate statistical methods and software, preparing comprehensive reports presenting key findings and recommendations for stakeholders. | 3.47 | 0.64 | VH |
| 3. | The PSA effectively employs various survey strategies to maximize the quality and reliability of household survey data, ultimately contributing to informed decision-making and policy development. | 3.49 | 0.61 | VH |
| 4. | The PSA establishes mechanisms for receiving feedback from households and communities to improve future survey implementation and address concerns or grievances. | 3.56 | 0.59 | VH |
| 5. | The PSA is responsive to other government agencies in addressing public concerns. | 3.62 | 0.54 | VH |
| | Overall | 3.53 | 0.50 | VH |

Note. N=300. The mean is interpreted as follows: 3.25–4.00=Very highly manifested (V.H.), 2.50–3.24=Highly manifested (H),1.75–2.49=Less manifested (L), 1.00–1.74=Rarely manifested (R).

The first statement, "The PSA disseminates the results and shares survey findings with relevant stakeholders, including government agencies, policymakers, NGOs, and surveyed communities, through reports, presentations, and interactive workshops", indicates a very highly manifested (M=3.51, SD=0.63). The second statement, "I believe the PSA analyzes survey data using appropriate statistical methods and software, preparing comprehensive reports presenting key findings and recommendations for stakeholders", yields a very highly manifested (M=3.47, SD=0.64). The third statement, "The PSA effectively employs various survey strategies to maximize the quality and reliability of household survey data, ultimately

contributing to informed decision-making and policy development", resulted in a very highly manifested (M=3.49, SD=0.61). The fourth statement, "The PSA establishes mechanisms for receiving feedback from households and communities to improve future survey implementation and address any concerns or grievances", also yielded a very highly manifested (M=3.56, SD=0.59). The fifth statement, "I believe the PSA is responsive to other government agencies in addressing public concerns", also resulted in a very high manifest (M=3.62, SD=0.54). Finally, the overall responses on the Mechanism to Address Public Concern were highly implemented (M=3.53, SD=0.50).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 15. Relationships Between Seven Profile Variables and Five Level of Implementation Variables **Level of Implementation**

| Profile variable | Interviewer/ enumerator duties and responsibilities | Survey characteristics | Perception of the survey | Communication and information dissemination | Survey strategies |
|--------------------------|--|-------------------------------------|--------------------------------------|---|-----------------------------------|
| Barangay of residence | $F(5,294)=2.61^*$ p=.025 | F(5,294)=1.82 p=.108 | $F(5,136.7)=1.23^{a}$ p=.299 | $F(5,136.9)=3.25^{a^{**}}$ p=.008 | $F(5,136.7)=2.55^{a^*}$ p=.030 |
| Household characteristic | $F=0.70^{c}$ p=.712 | $F=1.14^{\circ}$ p=.334 | $F=0.64^{\circ}$ p=.761 | F=3.86 ^{c***} p<.001 | $F=1.38^{\circ}$ p=.197 |
| Age | r_s =14* slight corr. p =.015 | r_s =16** slight corr. p =.005 | r_s =05 slight corr. p=.403 | r_s =15* slight corr. p =.010 | r_s =09 slight corr. p =.133 |
| Sex | t=-0.65 p=.516 | <i>t</i> =-1.11 <i>p</i> =.267 | t=0.50 p=.615 | $t=2.32^*$ p=.021 | <i>t</i> =1.35 <i>p</i> =.179 |
| Educational attainment | r_s =02 slight corr. p=.715 | r_s =04 slight corr. p=.457 | r_s =.06 slight corr. p =.324 | r_s =.15** slight corr. p =.008 | r_s =.05 slight corr. p =.431 |
| Monthly income | r_s =.03 slight corr. p=.564 | r_s =10 slight corr. p=.100 | r_s =.01 slight corr. p=.905 | r_s =.17** slight corr. p =.003 | r_s =.06 slight corr. p =.270 |
| Primary occupation | $F=1.00^{\circ}$ p=.438 | $F=2.70^{c**}$ p=.005 | F=2.80 c** p=.004 | F=4.16 c*** p<.001 | F=4.76 c*** p<.001 |

Note. The cell contains the test statistic and its corresponding p-value. The degree of freedom for us and Students is 298. The degrees of freedom for the generalized linear model's F are 9 and 290.

Table 15 results show the significant relationship between the socio-demographic profile variables and the Level of implementation variables. A statistically significant linear relationship exists between the Barangay of residence and Interviewer/enumerator duties and responsibilities, F(5,294)=2.61, p=.025. The relationship between the Barangay of residence and communication and information dissemination was analyzed using Welch's ANOVA because it violated the assumption of homogeneity of variance. The test yielded an Fvalue of 3.25 with a corresponding p-value of .008, indicating a statistically significant relationship (p<.01). This suggests that the Barangay of residence significantly influences the Communication and information dissemination aspect of survey implementation. A statistically significant linear relationship exists between the Barangay of residence and Survey strategies, F(5,136.7)=2.55, p=.030. This means that the respondents' residence is related to how they evaluate the implementation of the household surveys in terms of survey strategies. This means educational attainment tends to increase in the way the respondents understand the communication and information dissemination activity. These findings are

supported by the study of Ezeh, M. O. (2020), who emphasized that education is a tool for national progress and development and that only a nation or people can sustain its development with quality information. In addition, for an organization to survive, it needs quality information to maintain a competitive edge. The same result applies to monthly income and communication and information dissemination r_s = .17**, the phrase "slight corr.", and p=.003. A slight but statistically significant correlation exists between Monthly Income and Communication and information dissemination, r_s = .17, p=.003. It means that the higher their monthly income, the more they can access the communication and information dissemination about the survey. This finding highlights the study of Bauer, J.M. (2018), which states that such granular data allows for evaluating the relationship between digital skills and the Level of income or the position of an individual or household in the socioeconomic pyramid. However, relations between digital connectivity and income distribution can only be properly characterized relative to a specific group or a geographic area. The intersection of Primary occupation and Level of implementation variables such as Survey

^aWelch's ANOVA was used due to a violation of the assumption of homogeneity of variance.

^cGeneralized linear model was used, instead of one-way ANOVA, with a nominal level predictor or factor.

This is because some groups need more observations, which ANOVA cannot handle.

^{*}*p*<.05. ***p*<.01. ****p*<.001.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Characteristics ($F=2.70c^{**}$, p=.005); Perception of the survey $(F=2.80c^{**}, p=.004)$; Communication and information dissemination $F=4.16c^{***}$, p.<001); and Survey strategies $(F=4.76c^{***}, p.<001)$, generalized linear model was used, instead of one-way ANOVA, with a nominal level predictor or factor. This is due to some groups with insufficient observations, which ANOVA cannot handle. There is a statistically significant linear relationship between Primary Occupation and Survey Characteristics (F=2.70, p=.005), and it suggests that individuals' Primary occupations have a discernible impact on the characteristics of the surveys they participate in. The analysis reveals a statistically significant relationship between respondents' Primary occupations and their Perceptions of the survey (F=2.80, p=.004), indicating that individuals' primary occupations influence how they perceive the survey they are engaged in. The data demonstrates a statistically significant linear relationship between Communication and information dissemination strategies utilized in the survey process (F=4.16, p.<001), implying that the effectiveness of communication and dissemination strategies varies significantly and is influenced by other factors within the survey context. A statistically significant relationship exists between the survey strategies employed and the overall outcomes of the survey (F=4.76, p.<001). The selection and implementation of survey strategies play a vital part in shaping the effectiveness and success of the survey process. These findings align with the recommendation of UNESCO (2024) to have the technical expertise to design appropriate instruments, select the sampling methodology, and determine the proper data collection techniques. It includes deciding on the survey's scope, sample size, and questionnaire design.

Table 16. Relationships Between the Household Survey and Results of its Manifestation **Level of Manifestation**

| Level of Implementation | Response rate | Respondents' profile update and listing | Trust and confidence | Ease of access to LGU programs | Improvement in data quality | Mechanisms to address public concern |
|---|--|---|---------------------------------|--|---------------------------------|--------------------------------------|
| Interviewer/ enumerator duties and responsibilities | r=.47 moderate corr. p < .001 | r=.48 moderate corr. p < .001 | r=.38 low corr. $p < .001$ | r=.45 moderate corr. p < .001 | r=.38 low corr. p < .001 | r=.40 moderate corr. $p < .001$ |
| Survey characteristics | r=.41 moderate corr. $p < .001$ | r=.47 moderate corr. p < .001 | r=.34 moderate corr. $p < .001$ | r=.35 low corr. $p < .001$ | r=.38 low corr. p < .001 | r=.38 low corr. p < .001 |
| Perception of the survey | r=.50 moderate corr. p < .001 | r=.44 moderate corr. p < .001 | r=.44 moderate corr. $p < .001$ | r=.54 moderate corr. p < .001 | r=.53 moderate corr. $p < .001$ | r=.45 moderate corr. $p < .001$ |
| Communication and information dissemination | r=.14 slight corr. p =.016 | r=.16 slight corr. p =.005 | r=.35 low corr. p < .001 | r=.24 low corr. p < .001 | r=.22 low corr. p < .001 | r=.27 low corr. $p < .001$ |
| Survey strategies | r=.31 low corr. p < .001 | r=.28 low corr. p < .001 | r=.27 low corr. p < .001 | r=.35 low corr. p < .001 | r=.39 low corr. $p < .001$ | r=.29 low corr. p < .001 |

Note. Each cell contains Pearson r statistic, interpretation of its strength, and corresponding p-value. df=298. *p<.05. **p<.01. ***p<.001.

Table 16 displays that all Levels of implementation variables are statistically significantly correlated with all the Levels of manifestation variables with all p values less than 0.001. These findings are aligned with the study of Young, D.K. (2019); In order to improve understanding and lower nonresponse, national statistical offices also work with communication specialists and behavioral economists to customize survey designs to the needs of respondents. They also pose direct questions on response burden. Furthermore, it is in line with the study of Calogero, C. et al. (2022), as official statistics are gathered to enhance knowledge, encourage policy discussions, and inform policy. Household surveys, an essential component of the national data ecosystem, present a unique opportunity to address the data requirements of the public and policymakers. It guarantees that the information gathered from household surveys is relevant; policymakers and other relevant parties,

particularly marginalized populations, ought to be important collaborators throughout the whole survey preparation, data collection, analysis, and dissemination.

CONCLUSIONS AND RECOMMENDATIONS

The study revealed significant relationships between sociodemographic profile variables and the Level of implementation variables. The location influences and affects how the survey is conducted or experienced, as indicated by the linear relationship with the barangay of residence. Specific household traits may influence communication during the survey. Age, sex, educational attainment, monthly income, and primary occupation all exhibit significant associations with different aspects of the study. Hence, the findings rejected the hypothesis and denied that there is no significant relationship between the socio-demographic profile of respondents and the results of the household surveys.

Furthermore, the findings reveal statistically solid correlations between household survey implementation variables and their manifestation across various aspects. Interviewer/enumerator duties and responsibilities, survey characteristics, and perception of the study demonstrate moderate to high correlations with different indicators of survey manifestation, highlighting their significant influence. While communication and information dissemination show slight correlations, they still play a crucial role in survey outcomes. Although showing low correlations, survey strategies remain statistically significant, emphasizing their importance in the survey process. These findings shed light on the intricate relationships between implementation and manifestation variables, offering valuable insights into the dynamics of survey processes. Therefore, the conclusions rejected the hypothesis that there is no significant relationship between the household survey manifestation.

Based on the assessed implementation of a household-based survey conducted by the Philippine Statistics Authority in the municipality of Santa Cruz, Laguna Province, it is recommended to utilize the proposed enhanced survey program to address the issues, particularly on communication and information dissemination related to household surveys to improve survey participation and understanding among residents. Future researchers may conduct larger-scale research with more diverse municipalities, especially the 1st class municipalities and cities in Laguna. Lastly, future researchers may conduct follow-up studies to explore the nuances of survey implementation and manifestation in different contexts and utilize the findings as a basis for academic studies and projects related to survey methodologies and community development.

ABSTRACT

Ghrita preparations are widely used in ayurveda.it has mentioned indications covering in a broader way.ghrita plays an important role in ayurveda because of its utility in decreasing the LDL cholesterol, , aiding in weight loss, improving the nutrition and metabolism of the body, improving immunity and eyesight, improving memory, protective effects in insomnia, dementia, alzheimer's, epilepsy, insanity etc.one such classical multi ingredient ghrita is shatahwadi ghrita.it has many pharmaco therapeutical applications.it is formulated with broad spectrum of activities and is indicated in different types of timira.this study is an attempt to critically analyse the formulation with its insight in ingredients, dosage, indication and mode of action and its applications

KEY WORDS: shatahwadi ghrita, timira

INTRODUCTION

According to Ayurveda for a person to be in Swastha (healthy) avastha, the *Doshas,dhatus* and *malas* must be in a balanced state. The *indriyas .man*a and *Atma* must also be in pleasant state¹. so in order to attain this ,Ayurveda has described various forms of medicine such as *Churna*, *Gutika*, *Vati*, *Ghrita Paka*, *Taila paka*, *Lepa*, *Asava*, *Arishta* etc. *Sneha kalpana* is a group of products prepared in the form of medicated *Taila* and *Ghrita*. According to different classics these formulations have a longer shelf life when compared to other forms of medicines. It's the only *Kalpana* amongst the four Kalpanas which is used through all four modes of administration i.e. *Pana*, *Abhyanga*, *Nasya* & *Basti*². *Ghrita kalpana* is a formulation which is processed in a manner that both lipid and water soluble active principles of the drugs are transferred into *Ghrita*. *Shatahwadi Ghrita* is a polyherbal formulation which is formulated according to classical *Ghrita Kalpa*na method³. It mainly contains *Chakshushya*, *Tridoshahara* and *Rasayana* drugs.

AIMS AND OBJECTIVES

1.To put an insight on various references and indications of Shatahwadi Ghrita

2.To understand its use in different types of Netra rogas

3.To critically analyse the rasa panchakas of Shatahwadi ghrita

MATERIALS AND METHODS

The material is taken from various texts like Sahasrayogam, ashtanga Sangraha, ashtanga hrudaya etc

DISCUSSION

Shatahwadi ghrita is one of the important ,unexplored formulation used in the timira chikitsa as mentioned in ashtanga hrudaya,sangraha and sahasrayogam.as it is a ghrita kalpana, it can be used in the form of aschyotana,tarpana ,nasya and pana to reach the target tissue

According to dosha- shatahwadi ghrita mainly acts on tridosha ,more commonly vata shamaka in nature

According to dhatu- on analyzing different properties, this ghrita acts mainly on rakta, mamsa, medha and rasa dhatu

Pitta involved in Dristi is Alochaka pitta and vata involved is Prana Vayu and kapha involved is tarpaka kapha. Dristipatala is the seat of Alochaka pitta and it receives indrivartha in the

presence of manas. *Prana Vayu* controls this action. Thus, *dristipatala* becomes the meeting point of prana *Vayu*, *Alochaka pitta* and *mana*. This results in indriyartha sannikarsha. So, when any of these doshas is hampered due to various *nidanas*, *indriyartha saanikarsha* does not happen and hence visual defect occurs.

In contemporary science, degenerative eye disorders like optic atrophy, retinitis pigmentosa etc involves the vitiation of all the doshas causing the degeneration. the optic nerve impulses are not transferred to the visual cortex which shows the impairment of *vata dosha* and as a result the optic nerve is not nourished , which shows the impairment of *kapha*, *and pitta is the sthanika dosha in Netra* which shows the involvement of *pitta*.

The drugs mentioned in this ghrita are mainly tridoshahara ,bruhmana and jivaniya,hence can be used in all types of timira

where multiple doshas are vitiated and also in kshayaja netra vikaras

CONCLUSION

Shatahwadi ghrita which is mentioned in various texts is an important unexplored ghrita formulation which has tridoshahara, bruhmana and jivaniya properties, which can be used in the form of ,aschyotana, tarpana, nasya ,ghrita pana in all types of timira and degenerative disorders of eye

IMPACT OF POVERTY ON CRIMINAL BEHAVIOUR AMONGST YOUTHS IN UVWIE LOCAL GOVERNMENT AREA IN DELTA STATE

Agbi Nelson¹, Udemba Chinelo Prisca²

¹Lecturer, Department of Social Development, Rufus Giwa Polytechnic, Owo

ABSTRACT

Many developing countries now grapple with the problem of unemployment. Theunemployment rate among the youth is particularly higher than other demographic segments especially in developing economies. Interestingly, the cities in many developing economies with high rates of youth unemployment also battle high rates of urban crime. The purpose of this study was to establish how youth unemployment influences crime rates in Uvwie Local Government area in delta state. With the aim of identifying strategies to mitigate crime among the youth. The study objectives were to explore the extent that youth unemployment influences the crime rates in Uvwie, establish the prevalence of youth unemployment, examine the factors that cause youth unemployment, determine the connection between youth unemployment and high crime rates, and to identify the best strategy to mitigate the high number of crime ratesin Uvwie. The foundational framework for this study is Relative Deprivation Theory which argues that a discord between people's goals and means results in criminality. The theory asserts that people hold a universal social goal of attaining material wealth and success; and that there is inequality in achieving these goals leading to deprivation. Individual propensity to commit crime can also be explained through Albert Bandura's social learning theory. According to this theory, people learn to commit crime from one another by modelling their behavior, imitating them, or making observations. They look at the rewards and punishments brought by crime, and make a decision to either accept crime and pursue it for the rewards, or shun it to avoid the punishments. The research design involved a descriptive survey on a sample of 125 urban youth (both male and females) between the ages of 18-35 years. Self-administered questionnaires were also used to collect data. The target population for this study was the urban youth (both male and females) between the ages of 18-35 years who are living in Uvwie Local Government area. Purposive sampling technique was used in this study with a non- probability design. This sampling method was applied to select youths aged 18-35 years in Uvwie Local Government area. The sample size used for this study was 125 people who were selected from urban youth in Uvwie Local Government area. The two research tools used to obtain primary data were an interview guide and a questionnaire. The findings indicate that youth unemployment could influence the rates of crime in Uvwie Local Government area. Job creation can therefore help decrease criminal activities among the youth. Education is one of the strategies that can help push youth away from criminal activities and create jobs for themselves. The study further recommends that the government could develop an integrated information system which captures the biodata of all youth who are unemployed in Uvwie Local Government area and make deliberate move to help them create employment.

KEYWORDS: Poverty, Criminal Behaviour, Youths, Local Government

1. INTRODUCTION

In Nigeria, youth unemployment has been identified as one of the pressing problems facing the country, and efforts at curtailing this have not yielded the needed result, especially in Delta State, located in the south southern part of Nigeria. The United Nations Educational Scientific and Cultural Organization (2009) in its definition of youth says that it is a period of passage from the dependence of childhood to adulthood's independence and awareness of interdependence with other members of a community. Furthermore, the second Nigerian National Youth Policy (2009) sees youths as those that are characterized by energy, enthusiasm, ambition, creativity, and promise; they are faced with high levels of socio-economic uncertainty and volatility thereby becoming the most, vulnerable segment of the population. As to who constitutes a youth, the United Nations places the youth as those within the age bracket of 15-24, but due to cultural, social, and some institutional factors, the age bracket is not being used for statistical purposes in Nigeria. According to the NYP (2009), "the youth shall comprise of all young males and females aged 18-35 years old who are citizens of the Federal Republic of Nigeria." At this age, the youth is believed to undergo serious all-around development be it socially, politically, or culturally among others.

Poverty has a great influence on the crime rate. Poverty can be in a state of absolute where there is a lack of the basic resources needed to maintain a minimum of physical health, normally calculated in calories, while relative poverty has quantitative dimensions which refer to the general standard of living in different societies due to cultural sensitivity and variations between and within societies over time. Poverty is due to massive inequality, poor allocation of investment, education, planning,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and policy implementation, inadequate health facilities, human rights violations such as economic empowerment, right to protection, security, children's rights, and right to life. There are conflicts over scarce resources like land ownership, safe drinking water, streams, food, education, health which results in conflicts and criminal activities, and offenses due to poverty. Crime and violent conflicts are growing due to disparities in wealth, increasing unemployment among the youths, population press on land and resources leading to environmental degradation which provokes social discontent, polarization leading to social strife in the region.

Poverty is essentially deprivation suffered by a large segment of some essentials for sustenance such as sufficient income to provide housing, clothing, food and education, health facilities adequate opportunities for productive employment which leads to societal stress. Stress leads to increasing the anger and frustration of the poor suffering that are then exploited by violence promoting war-bent demagoguery. Indeed scarcities of the basic needs amongst the population cause social segmentation, group formation, and strengthen groups identity which creates violent collective action which takes forms from rime war, terrorism, riots, civil insurgencies, political repressions to its ultimate forms. Most of the inhabitants of Uvwie Local Government area live on subsistence farming on smallholdings of less than Mi an acre and with poor farming methods, lack of farm inputs, and technical agricultural know-how have to lessen the yield to sustain the family needs. They are no income-generating investments such as factories, plantations (cash crops) to employ the youths in the areas leading to severe unemployment and crime in the region. In 1991 the United Nations crime prevention journals stipulated that crime has accelerated far beyond the current reach of the international community. Crime is a particularly serious impediment to harmonious development. It dissipates or misdirects the gains of economic growth and impairs the quality of life; crime threatens the safety wellbeing and personal integrity of us all (United Nations, 2013). This study seeks to address the impact of poverty among youth on criminal behavior in Uvwie Local Government. Objective of the study was to investigate the impact of poverty on criminal behavior amongst youths in Uvwie Local Government area in delta state. The specific objectives of the study will be: to determine if finance can lead to criminal behavior among youths in Uvwie Local Government area in delta state and investigate how unemployment increases crime rate among youths in the Uvwie Local Government area in delta state. In line with the research objectives, the following research questions were generated:- Does the financial standing influence crime among youths in Uvwie Local Government area in delta state and How does unemployment increase crime among youths Uvwie Local Government area in delta state?

Research Hypotheses

In line with the research questions, the following null hypotheses were drawn

i. There is no relationship between finance and criminal behavior among youths Uvwie Local Government area in delta state.

ii. There is no relationship between Unemployment and Criminal behavior among youths Uvwie Local Government area in delta state

2. LITERATURE REVIEW

The Concept of Poverty

The concept of poverty is highly contested in the literature. In fact, according to Alcock (2006), there is no single clear-cut definition of the term. Perhaps, the reason for the lack of a generally accepted definition of the term is partly due to the scholars who attempted to define it according to their various intellectual temperaments. However, traditionally, poverty is conceived in terms of 'distributional issues: the lack of resources at the disposal of an individual or household to ensure a suitable standard of subsistence or living' (Barnes, 2005). Beyond an individual's ability to satisfy minimum living standards of food, clothing, and shelter, it is also about 'having what you need to have the opportunities and choices necessary to participate in the society (Bradshaw et al., 2008).

According to the United Nations (1998), Poverty is fundamentally a denial of choices and opportunities, a violation of human dignity. It means a lack of basic capacity to participate effectively in society. It means not having enough to feed and clothe a family, not having a school or clinic to go to; not having the land on which to grow one's food or a job to earn one's living, not having access to credit. It means insecurity, powerlessness and exclusion of individuals, households and communities. It means susceptibility to violence, and it often implies living in marginal or fragile environments, without access to clean water or sanitation.

Security, according to Ball (2019) refers to desire for safety and protection. Security, in this sense, implies that there is no threat to life and well-being of people. Afolabi (2015) describes security as feeling of being safe from harm, fear, anxiety, oppression, danger, poverty, defence, protection and preservation of core values and threat to such values. Stone (2020) described security "to be about the pursuit of freedom from threat and the ability of states and societies to maintain their independent identity and their functional integrity against forces of change, which they see as hostile". From the above definitions, security refers to freedom from fear, harm, danger, oppression, anxiety and threat to life and well-being of people. It is absence of threat to safety and wellbeing. Poverty is a social issue of society at the local and world level, representing a living condition in which individuals fail to achieve the minimum standard of living. Thus, the various practices of policies are oriented to remove it from human society (Wenger, 2007). Ngwube (2020) in the same vein, identified the security threats in Nigeria to include poverty, election violence, boko haram, kidnapping, illegal arms importation, power generation, oil bunkering, and corruption. (Townsend, 1970). Thus, poverty represents the inability to gain a sound livelihood, assist oneself without relying on others, and have a suitable house to reside in; and the failure to obtain good healthcare, proper educational training, and so forth. According to (Lewontin, 2000;

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Laub and Sampson, 2003). Unemployment is concerned with such a state in which a person who is at the working age to work but cannot find a job (Berglind, 1991).

Problem of Persistent Poverty in Nigeria

Poverty has remained a constant recurring factor in Nigerian society. The magnitude of poverty in Nigeria is alarming and indeed has assumed a crisis dimension. Nigeria is blessed with mineral resources and rich in crude oil. Ironically, the citizens are hungry and poor amid an abundance of these resources. To be sure, the United Nations Development Programme (UNDP) classified Nigeria as the 141 poorest nations on the human development index. In its report, Nigeria is considered one of the 20th poorest countries in the world with 70% of the population classified as poor and 54.4% living in absolute poverty (UNDP-HDI, 2006). Nigeria instead of advancing has lately degenerated into the head quarter of the world's poorest country. Furthermore, recent report of UNDP (2019) on the Multidimensional Poverty Index MPI of Nigeria reveals that even when the proportion of people who are multidimensionality poor has remained at over 50% decade up to 2017, the actual number of people who are multidimensional poor increased from 86 million people to 98 million people over the same period. The MPI report also adds that when compared to the national poverty line which measures income/consumption, a large proportion of Nigerians (51%) are multidimensional poor than those that are income poor (46%). What the MPI report clearly suggests is that the number of multidimensional poor Nigerians has risen by 10 million.

The Relationship between Youth Unemployment and Urban Crime

Crime incidences in most countries follow an almost universal age pattern. Young people increase their criminal activity as they grow up, with the peak being in their late teens. Thereafter, their involvement in crime starts to fall. According to Wu and Wu (2012), in the year 2005, Swedish men in the 19-24 years age bracket had a conviction rate of 4.2%. In comparison, the conviction rate for men in the 29-34 years age bracket was almost half the figure for the 19-24-year-olds. One common reason for this age pattern in criminality is the common susceptibility of many young people to unemployment when compared to middleaged adults. From an economic perspective, unemployed youths have an income loss that reduced their perception of the opportunity cost for crime involvement. There is also a viable hypothesis that the state of joblessness causes anger and frustration among people, and triggers them to adopt violent behavior. Unemployed people also have much free time that allows them to commit a crime (Ponge, 2013).

Adebayo (2013) points out that a proper knowledge of how youth unemployment is related to crime is valuable because it explains the age patterns and age distributions of crime. It also provides key policy insights on how investments in labor market programs can be used to bring immense social benefits such as the reduction of insecurity. The level of opportunities in the labor market is negatively correlated to the levels of crime in many societies.

Most researchers normally use aggregated measures of crime and unemployment because of data limitations. With such data sources, there is a good chance that some general equilibrium effects may confound the common manner in which youth unemployment relates to criminality. For example, some communities with high rates of unemployment may have fewer available resources for stealing, and fewer people in the streets that could potentially be mugged or robbed. In a study done by Fougère, et al. (2009) across several regions in France, youth unemployment was determined to have a significant economic and statistical effect on the rates of property crime. The findings also determined that youth unemployment has no significant effect on violent crimes – following the economic theory. In a study done by Oster and Agell (2007) on several Swedish municipalities, the findings showed that youth unemployment caused no significant effect on criminality.

3. METHODOLOGY

Research Design

This study will adopt a survey research design because it shall elude historical, content analysis and qualitative to examine the impact of poverty on criminal behavior among youths in uvwie local government of delta state, in an attempt to justify our findings we shall adopt indexes relating to poverty and these includes Unemployment, Family structure, financial standing and level of education among others. The population for this study is focused on the youths in Uwea local government. Uvwie is a local government in Delta State has its administrative headquarters in the town of Effurun with a total population of 251,265 people. Uvwie local government comprises of 15 towns which includes Ekpan, Enerhen, Jeddo, Okpaka, Okuamowah, Okuireroh, Okwemowa, Okwetata, Okwtata, Opete, Ugbokodo, Ugbolokposo, Ugbomoro, Ugboroke and Ughoton. The population for the youths in uvwie which falls between the ages of 18-35 gives a total of 190,000 (NBS, 2006). This research concentrate on 5 towns with a youth population of 21,431 (Effurun. Ekpan, Okuamowah, Okwemowa and Ohore) (Census, 2006). The objective of the research is to draw inferences from a population to generalize the target population. However, because of the large population, in most studies, researchers hardly study the entire population. Therefore the sample is always drawn from the population. The research will deploy Yamane's (1973) scientific approach for arriving at an acceptable sample size for a chosen study.

Techniques of Data Analysis

The Techniques of Data Analysis for this study will be presented using robust quantitative analysis to systemically analyze the data collected. First, the study will utilize descriptive statistics to identify and analyze the respondents under investigation. Secondly, the study will adopt the Pearson's Product moment Correlation Coefficient (R) for the main analysis of this work because the variables in the hypotheses can be measured at the interval level and this justifies the usefulness of this statistical tool. The research work will adopt SPSS version 26 in carrying out the mentioned statistical analysis.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

This study anticipated to use the feedback from 165 respondents. The researcher gave out 125 questionnaires to all the respondents that had agreed to participate in the study. A total

of 107 respondents returned their duly filled questionnaires on time. The response rate for this study was 85.6%. The researcher determined this response rate to be sufficient. In comparison, the non-response rate stood at 14.4%.

Table 2: Residents' Response Rate

| Response Rate | Frequency | Percentage |
|----------------|-----------|------------|
| Response | 107 | 85.6 |
| Non – response | 18 | 14.4 |
| Total | 156 | 100 |

Demographic Information

The results show that 78 respondents (translating to 73% of total respondents) were male and the remaining 29 respondents (translating to 27% of total respondents) were female. These study findings show that unemployed male youth were more likely to engage in crime than unemployed female youth. This finding is in line with the aggressive nature of male people as described by psychologists in the "male-warrior" hypothesis. Male and females in all age brackets have significant differences in their ability to exercise self-control whenever they face stressful conditions such as long periods of unemployment.

Female youth tend to have a strong innate ability for self- control, as compared to their impulsive male peers. Their social roles superseded their unemployment status in influencing their criminal behavior. Only a few of the female youth to engage in crime just 8 of the unemployed female youth (translating to 27% of female respondents in this study) engaged in crime.

Age Bracket

The study recorded the ages of the respondents. The results are presented below in figure 1

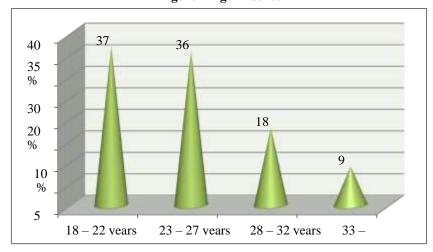

Figure 1 Age Bracket

In figure 1, the study findings show that 40 respondents (translating to 37%) who believed that youth unemployment was strongly linked to crime engagement were aged between 18-22 years, followed by 38 respondents (translating to 36%) aged from 23 years to 27 years, 19 respondents (translating to 18%) who were aged from 28 years to 32 years, and 10 respondents (translating to 9%) who were aged from 33 years to 35 years. The results, therefore, show that the age of most respondents ranged from 18 years to 22 years.

Most street criminals reach their peak in crime engagement before the age of 25 years. People develop higher executive functioning when they attain 25 years and above. Higher executive functioning helps one to achieve emotional control, impulse control, and planning. A study done by Farall (2009), indicates that most young adults below the age of 25 years lack the desired mental development that would give them higher executive functioning for emotional control, impulse control, and planning. When the youth attain 25 years, the level of street crimes takes a sharp decline because many of the youth develop improved executive functioning.

Aging has a foundational influence on the age-crime relationship. Beyond 25 years of age, young people experience the development of certain brain faculties that are responsible for risk taking, decision making, delayed gratification, impulse control, emotional maturity, and resistance to peer pressure. The age differences in crime tend to be consistent across many societies, with the overall likelihood for involvement dropping after the youth attain 25 years (Farall, 2009). This consistency in time and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

social contexts provide a strong hint that the age differences in crime are founded on some biological basis, or there are constant age-graded norms and age socializations across different societal settings that are responsible for the consistency.

The unemployed youth with ages ranging from 18 years to 22 years and those ranging from 23 year to 27 years have high likelihood of indulging in crime as compared to other age groups because they still have strong physical development that helps them to commit crime. Their good physical development (aggression, strength, stamina, prowess, and speed) pushes young people in the two age brackets to engage inphysically demanding crimes, and more dangerous ones (Farall, 2009). They can use their physical power to protect themselves during crime, recruit and manage criminal associates, enforce criminal contracts, and perpetuate violence with the goal of robbing others. Since physical strength declines with age, the unemployed youth in the 28-32 age bracket and the 33-35 age bracket perceive crime to be

too dangerous and with little chances of success.

The age-crime relationship seems to peak in the 18-22 year age bracket because of variation in testosterone. At this age, many youths contend with new upsurges in testosterone that make them susceptible to criminality and violence. Testosterone difference is also the main reason why many unemployed male youth commit more crime than their female counterparts (Farall, 2009). Ingroup differences also exist with testosterone levels, where some people with higher testosterone levels commit more crime than others. For this study, high testosterone surges for youth in the 18-22 years bracket makes them commit more crime than young adults and middle-aged adults.

Marital Status

The study analyzed the marital status of the respondents. The results are presented infigure 2

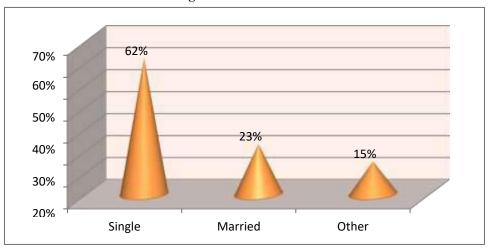

Figure 2. Marital Status

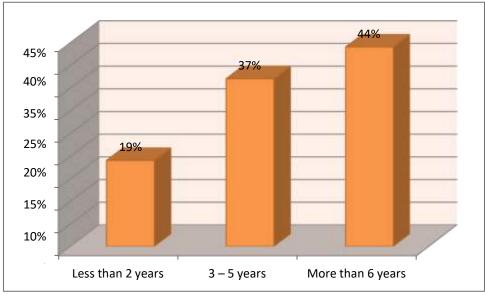

In figure 2, the study findings show that 66 respondents (translating to 62%) were single, 25 respondents (translating to 23%) were married while 16 respondents (translating to 16%) were widowed. The findings show that most of the study participants were single as indicated by 66 respondents (translating to 62%). In this study, the marriage effect significantly reduced the level of criminal recidivism for married who had a criminal past. It also dissuaded new young people from joining crime.

The marriage effect describes the moderating role that marriage plays in the life of criminals. Depending on the strength of marital ties between couples, marriage may cause medium to strong effects on crime desistance for people with a criminal past.

The peer association theory anchors its marriage effect on the idea that marriage increases opportunity for one's spouse to impart good examples on the other, and also reduces the time that one spends with delinquent peers- effectively eliminating their negative influence. However, it fails to highlight the special cases where the spouse is similarly delinquent as the peers that one wishes to stay away from. It is possible for delinquent men who marry delinquent spouses to just force the spouses into accepting their friends. They eventually integrate the spouses into the man's delinquent group. The marriage effect on crime desistance and recidivism is contingent on the criminal profile of a person. The marriage effect is reduced to insignificant levels of both spouses and delinquent at the time they are getting into marriage.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Duration of Stay in Uvwie Local Government

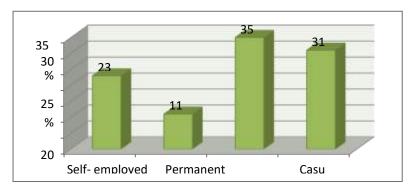

The study asked respondents to indicate how long they had lived in Uvwie. Theirresponses are presented in figure 3. In figure 3, the study findings show that 20 respondents (translating to 19%) had stayed in Uvwie Local Government area in delta state for less than 2 years, 40 respondents (translating to 37%) had stayed there for between 3-5 years while 47 respondents (translating to 44%) had stayed for more than 6 years. The results show that a majority 44% had stayed for more than 6 years.

Some 40 respondents (translating to 37%) had stayed in the slums for more than three years, but less than six years. As one stays longer within a residential environment, they tend to adapt to it. Increased duration of stay within a residential location consequently affects individual perception about deviant behavior. People who stay for the longest period in a slum area are more likely to develop coping mechanisms and pursue social networking with other residents in the area. They become more willing to excuse deviant behaviors by other slum dwellers. Individuals who stay longer in the slums are also more likely

pursue deviant behaviorwhen compared to new tenants who move into the slums. Individuals who stay for more than six years in the slum perceive deviant behavior among slum youth to be low. This is because they get accustomed to seeing the criminal behavior in slums, and begin to accept outright deviant behavior as normal. In some fringe cases, their perception of youth deviant behavior becomes low, and they may even think that their peer youth who have stayed in the slum for long duration engage in less crime as compared to new slum entrants. This fringe case goesagainst the common trend where youth who have lived in slums for longer durations have higher risk of adopting deviant behavior when compared to newcomers. They also approve most of the deviant behaviors committed by their peers, out of belief that such conduct constitutes normal slum life that should not be construed as risky behavior. In comparison, new slum entrants may lack exposure to the criminal behavior of most slum dwellers. The new entrants also lack proper social networks among the slum youth, and can easily judge the normal activities pursued by the slum youth as deviant.

Respondent's Employment

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In figure 4, the study results indicate that the majority 92 respondents (translating to 86%) were unemployed while only 15 respondents (translating to 14%) were employed. This study further sought to know the forms of employment pursued by the respondents. The results are shown in figure 4.

The study shows that 25 respondents (translating to 23%) were self-employed, 12 respondents (translating to 11%) were employed on a permanent basis and 37 respondents (translating to 35%) were on contracts while 33 respondents (translating to 31%) were on a casual basis. The study shows that majority 35% were employed on a contractual basis.

A majority of the respondents (92 participants) were unemployed at 86% – signifying the grave problem of unemployment in the slum. Even those who indicated that they were in employment (15 participants translating to 14%) were mainly engaged in seasonal

work – with only 11% of the employed people having permanent jobs. The rest were relying on other erratic jobs, with casuals forming 31% of the employed people, contractors forming 35% of the employed and self-employed people accounting for 23% of the employed people. These poor employment statistics could partly explain the origins of high crime rates in the slums.

Unemployment often creates systemic channels of marginalization and frustration for the affected populations. Such frustration may eventually force the vulnerable young people to engage in crime.

Influence of Youth Unemployment on Crime Rates

The researcher sought to determine how levels of youth unemployment influence the crime rates in Uvwie Local Government area. The results are shown in Table 3 below.

Table 3 Influence of Youth Unemployment on Crime Rates

(Where 5 – Strongly Agree, 4 - Agree, 3 - Neutral, 2 - Disagree, and 1 - Strongly Disagree).

| Statement | 5 | 4 | 3 | 2 | 1 | Total Cumulative |
|--|-----|-----|-----|-----|----|------------------|
| | | | | | | Frequency |
| Lack of legal sources of incomeforces youth to use illegal | | | | | | 100% |
| income activities | 20% | 44% | 16% | 20% | 0% | |
| High unemployment levels leadto high crime rates | 60% | 26% | 10% | 0% | 4% | 100% |
| Poverty forces unemployed people to engage in criminal | | | | | | 100% |
| activities for income | 19% | 41% | 26% | 8% | 6% | |
| Rich individuals also engage in crime. | 27% | 43% | 10% | 16% | 4% | 100% |
| Robbery, rape and prostitution in Uvwie are due to | | | | | | 100% |
| unemployment. | 24% | 36% | 28% | 8% | 4% | |
| Youths lack the skills required for formal employment, | | | | | | 100% |
| forcing them 1to pursue crime | 16% | 54% | 18% | 8% | 4% | |
| Terrorist groups and gangs target poor youths. | 21% | 29% | 26% | 18% | 6% | 100% |
| Years of joblessness and frustration due to lack of | | | | | | 100% |
| opportunity, makes graduatesresort to criminal activity | | | | | | |
| for survival | 12% | 51% | 29% | 8% | 0% | |
| Employment opportunities prevents potential offenders | | | | | | 100% |
| from criminal activities | 19% | 45% | 22% | 10% | 4% | |
| People living in less privileged areas spend more time in | | | | | | 100% |
| the streets thereby associating them self with gangs | 20% | 46% | 28% | 6% | 0% | |

The results indicate that 68 respondents (translating to 64%) agreed, 6 respondents (translating to 6%) were neutral while 22 respondents (translating to 20%) disagreed that the unemployed people lack legal income sources thus turning to illegal ways of making some income. The results indicate that 92 respondents (translating to 86%) agreed, 11 respondents were neutral (translating to 10%) while 4 respondents (translating to 4%) disagreed that high unemployment levels lead to high crime rates. This finding indicates the majority opinion of the respondents that reduction of unemployment in the area will reduce their likelihood of committing crime. Creation of jobs for young people can be used as a viable way of providing work opportunities for them toreduce their susceptibility to crime.

In chart 3, the results indicate that some 64 respondents (translating to 60%) agreed, 28 respondents (translating to 37%) were neutral while 15 respondents (translating to 14%) disagreed that poverty prompted by unemployment forced unemployed people to pursue crime as an alternative for acquiring an income.

This finding indicates the majority opinion of the respondents that poverty creates a major role in pushing people to crime. Urban youth pursue crime as a means of earning an income, after failing to find other legitimate means of work. The results indicate that some 75 respondents (70%) agreed, 11 respondents (10%) were neutral while 21 respondents (20%) disagreed that in some instances, a rich individual also engages in crime. This finding

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

indicates the majority opinion of the respondents that crime is a spontaneous activity that is influenced by many other factors beyond poverty. Rich people who have wealth also find some alternative incentives to engage in crime.

The results indicate that 62 respondents (58%) agreed, 30 respondents (28%) were neutral while 15 respondents (14%) disagreed that robbery, rape and prostitution in Uvwie Local Government area. Were as a result of unemployment. This finding indicates that creation of employment for urban youth in Uvwie Local Government area would reduce the rates of robbery, rape and prostitution in the area. The results indicate that 75 respondents (70%) agreed, 19 respondents (18%) were neural while 13 respondents (12%) disagreed that youth unemployment has forced people to use illegal means to achieve societal expectations. This finding indicates the majority opinion of the respondents that creation of increased opportunities for technical education and professional training will give young people the skills required for formal employment and cushion them from crime. The results indicate that 51 respondents (48%) agreed, 30 respondents (26%) were neutral while 29 respondents (26%) disagreed that unemployed youth are the main target for terrorist group and political violence. This finding indicates the majority opinion of the respondents that poor youths are vulnerable for manipulation by terrorist groups and gangs because they lack income. Results indicate that 67 respondents (63%) agreed, 31 respondents (29%) were neutral while 9 respondents (8%) disagreed that after some years of joblessness and frustration due to lack of opportunity in the society, many young graduates resort to criminal activity for survival or as an alternative means to actualize their expectations. This finding may indicate that creation of alternative jobs for graduates as a way of reducing their frustration may reduce their susceptibility to engage in crime. The results indicate that 68 respondents (64%) agreed, 24 respondents (22%) were neutral while 15 respondents (14%) disagreed that employment opportunities work as forces which prevent potential offenders from engaging incriminal activities. This finding may indicate the majority opinion of the respondents that urban youth crime can be solved by creating new employment opportunities for young people.

In chart 4.2.12, the results indicate that 79 respondents (74%) agreed, 17 respondents (16%) were neutral while 11 respondents (10%) disagreed that people see crime as theonly way that can help them obtain material goods which they can't obtain through legitimate ways.

These results indicate that youth unemployment influences the rates of crime assupported by 76 respondents (71%) who are in agreement with the statement that youth unemployment has forced people to use illegal means to achieve societal expectations. These findings were in line with Graversen and Jan (2008) who noted the existence of a positive relationship between unemployment and criminal activities. In their study, they observed that youth unemployment can be connected to high crime rates, as youth engage in unlawful activities as an alternative strategy to earn a living. Economic marginalization only focuses on poverty and unemployment but fails to consider other factors such inequality and peer groups.

Graversen and Jan (2008) also note that high unemployment levels lead to high crime rates. To demonstrate the effect of inequality, Graversen and Jan (2008) observed that crime levels are higher in inner-city neighborhoods than in rural areas. Perhaps the implications of unemployment to urban youths are more severe as compared to the consequences of unemployment for youth in rural areas. The cost of living in inner urban neighborhoods is often higher than rural areas due to commercialization of all basic necessities with cost factors such as housing rent, and food. For this reason, unemployed youth in inner urban neighborhoods have the highest likelihood of engaging in crime while compared to the unemployed young people in rural areas.

The Impact of Youth Unemployment on Crime Rate

The researcher sought to establish the extent to youth unemployment affects the rates of crime in Uvwie Local Government area .The Table 4.3 below presents the results given by the respondents

Table 4 Impact of Youth Unemployment on Crime Rates

(Where 5 – Strongly Agree, 4 - Agree, 3 - Neutral, 2 - Disagree, and 1 - Strongly Disagree).

| Statement | 5 | 4 | 3 | 2 | 1 | Total Cumulative Frequency |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| slums to engage in crime, prostitution, drug abuse, | | | | | | 100% |
|---|-----|-----|-----|-----|-----|------|
| and | 41% | 39% | 6% | 0% | 14% | |
| alcoholism | | | | | | |
| Overpopulation coupled with poor policy | | | | | | |
| governance leads to increasedcrime rates | 24% | 41% | 21% | 9% | 5% | 100% |
| Youth crime increase forces businesses to hire | | | | | | |
| armed security personnel at more costs | 19% | 43% | 18% | 16% | 4% | 100% |
| Inadequate training and outdated school curriculum | | | | | | |
| undermine skill development, and increase crime | 31% | 35% | 20% | 8% | 6% | 100% |
| rates | | | | | | |
| Unemployed youths are easily lured to terror gangs, | | | | | | |
| political violence | 23% | 50% | 10% | 8% | 9% | 100% |

The results indicate that 44 respondents (41%) agreed, 35 respondents (33%) were neutral, while 28 respondents (26%) disagreed that lack of consistent government policy, law and order, and rule of law limited the youth absorption by the labor market thus increasing the crime rates. A mean of 4.245 and standard deviation of .6234 was recorded. One can conclude that lack of law and order, and inconsistent government policies for youth employment contributes significantly to the risingcrime rates among young people in Uvwie Local Government area. The results indicate that 79 respondents (74%) agreed, 17 respondents (16%) were neutral while 11 respondents (10%) disagreed that people see crime as the only way that can help them obtain material goods which they can't obtain through legitimate ways. Some 61 respondents (57%) of the respondents agreed, 31 respondents (29%) were neutral while 15 respondents (14%) disagreed that when youth continue to hope for better chances in the future but lack opportunities, they resort to crime. A mean of 3.541 and standard deviation of .3543 was recorded. These findings leads to the conclusion that hopelessness and lack of opportunities among working age youth makes them vulnerable and predisposes them to criminal activities.

In chart 4.3.3, the results indicate that 40 respondents (37%) agreed, 52 respondents (49%) were neutral while 15 respondents (14%) disagreed that unemployment leads to unsustainable growth of the economy, reduced number of workforce absorption into the labor market, limited youth participation in production activities, retarded economic growth and encourages young people to join criminal insurgencies. A mean of 3.678 and standard deviation of .3543 was recorded. These findings have high number of neutral respondents who do not give conclusive indications on the link between unemployment and limited youth participation in production or their absorption into the labor market. In chart 4.3.4, the results indicate that 86 respondents (80%) of the respondents agreed, 6 respondents (6%) were neutral while 15 respondents (14%) disagreed that majority of unemployed youths ended up in the slums and streets where they engage in petty crimes such as drug abuse, prostitution and alcoholism. Therefore, unemployment predisposes youth people to slum dwelling and exposes them to criminal social groups known for prostitution, drug abuse, alcoholism and crime. The results indicate that some 70 respondents (65%) agreed, 22

respondents (21%) were neutral while 15 respondents (14%) disagreed that the current situation of overpopulation coupled with inadequate employment policies have led to increased crime rates. The results indicate that 66 respondents (62%) agreed, 19 respondents (18%) were neutral while 21 respondents (20%) disagreed that due to the increase in crimes committed by unemployed youths, businesses have opted to hire armed security personnel, leading to additional cost of running businesses. This leads to the conclusion that overpopulation coupled with lack of adequate employment policies could lead to increased crime rates among the youth and that youth crime increases business costs for entrepreneurs. The results indicate that 66% of the respondents agreed that inadequate training and an outdated school curriculum have led to increases in crime rates since the youths do not have job related skills. Some 14% of the respondents disagreed with this claim, while 20% remained neutral. These results confirm the notion that skills mismatch among young people is caused by outdated school curricula that do notmeet the realities in the job market. The finding leads to the conclusion that crime rates can be reduced if the government renews school curricula and provide adequate training to young people. The results indicate that 78 respondents (73%) agreed, 11 respondents (10%) were neutral while 18 respondents (17%) disagreed that unemployed youths are easily lured to terror gangs, and political violence. This leads to the conclusion that unemployment is a risk factor for young participation in terror gangs, and political violence.

From the findings, the researcher further determined that unemployment forces youngpeople to cohabit with their parents for youth longer periods than expected. This increases tension levels in the families with both mental and financial crisis. The research data shows that unemployment leads to early school drop out by girls and women in order to facilitate their family's wellbeing by earning some income. This leads to depression, increased crime rates, and substances abuse among the youth. The violence meted on politicians by slum dwellers shows that they are not ready to forget these promises. Furthermore, the researcher's data pointed to the reality that the government is yet to deal with the problem of organized political gangs that were formed in 2007 after a decade.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The second objective of this study was to analyze the impact of youth unemployment on crime rates. After the research, it was found that 41% of the respondents agreed to the statement that lack of consistent government policy, law and order, and rule of lawlimited the rate of youth absorption into the labor market, and consequently increased the rates of crime. A mean of 4.245 and standard deviation of .6234 was recorded.

CONCLUSIONS

In conclusion, this study tested the theory that youth unemployment influences the rates of crime in Uvwie Local Government. The results confirmed that high rates of youth unemployment cause increased crime rates in Uvwie Local Government. A majority of the study respondents identified youth unemployment as a leading cause for increased crime rates in Uvwie Local Government. This is because youth unemployment forces young people to seek for alternative ways to earn a living. Quite often, the unemployed youth will engage inillegal activities like prostitution, violent robbery, and stealing to meet their basic needs when they fail to get legal gainful employment. For this reason, any interventions that seek to address the problem of high crime rates among urban youth must deliver programs and initiatives that will reduce the rates of youth unemployment.

Recommendations

To address the first objective of this study about interrogating the influence of youth unemployment on urban crime, this study recommends that the government should develop an integrated information system which stores bio-data of all youth who are unemployed in Uvwie Local Government so that they can receive unemployment benefits. This recommendation would meet the first objective of this study by providing sufficient data on youth unemployment to the government. This information would be used to interrogate the influence of youth unemployment on urban crime. A great reduction in the number of violent crimes reported could be observed if these measures are put in place.

To address the second objective of this study about analyzing the impact of youth unemployment on crime rates, the study confirmed that there is a connection between youth unemployment and high crime rates. This study recommends that proper policies for youth empowerment should be developed to fight the problem of youth unemployment by enhancing access to initiatives like youth funds and 30% preference in public procurement for youth. There is also need to increase youth access to information on affordable sources of funding such as the youth fund and 30% preference in public procurement for youth.

To address the third objective of this study about investigating the reasons why urban youths are attracted to criminality, the study determined that youth unemployment, high rates of poverty, perceived political disenfranchisement, high rewards from crime, and other myriad factors lead youth into criminality. In order to address the problem of youth unemployment, and high rates of poverty as some of the factors that attract youth to crime, this study recommends that entrepreneurship training and skills

should be made mandatory in all stages of the education system. Its implementation should be overseen by a special team of monitors so as to uphold standards and resources accountability. This study also recommends the establishment of vocational training centers in poor neighborhoods and slums to provide graduates with the right technical skills required for the job market. Theyouths can also be engaged in direct employment for casual labor in public projects to reduce their rampant unemployment and enhance their working experience.

THE INFLUENCE OF PARENTING STYLES AND STUDY DISCIPLINE ON THE LEARNING OUTCOMES OF PANCASILA EDUCATION FOR FIFTH GRADE ELEMENTARY SCHOOL STUDENTS

Deiby Kolamban; Joulanda A. M. Rawis; Richard Daniel Herdi Pangkey

Universitas Negeri Manado

Article DOI: https://doi.org/10.36713/epra17157

DOI No: 10.36713/epra17157

ABSTRACT

This research aims to prove the influence of parenting on learning outcomes, study discipline on learning outcomes, and the influence of parenting styles and study discipline on learning outcomes. The research method used is a Survey. The population in this research are all fifth-grade students of Advent Tikala Manado Elementary School, totaling 42 students. The research data comes from primary data in the form 10f questionnaire entries and secondary data used is data on Pancasila education learning outcomes in the mid-semester exam. Data analysis techniques using descriptive statistical analysis techniques, data testing stages using normality tests, linearity tests, then multiple linear regression analysis tests, and hypothesis testing with partial tests or t-tests and simultaneous tests or F tests. The results showed (1) there is an influence of parenting styles on the learning outcomes of Pancasila Education for fifth grade elementary school students. (2) There is an influence of parenting styles and study discipline on the learning outcomes of Pancasila Education for fifth grade elementary school students. (3) there is an influence of parenting styles and study discipline on the learning outcomes, we must pay attention to and understand the factors of parenting styles and the application of student study discipline.

KEYWORDS: Parenting Styles, Study Discipline, Learning Outcomes, Pancasila Education

INTRODUCTION

Elementary school is a means for students to explore the beginning stages of knowledge to achieve higher education. Therefore, students need active interaction with teachers so that students are able to develop their potential. Students develop their potential to become responsible, independent members of society, have knowledge and creativity for the future. In addition, education is one way to shape character, find identity and take a role in the future. In order for students to develop their potential well, one of them can be through the subject of Pancasila and Citizenship Education (Pancasila Education) at school. Daryono (1998) states that Pancasila Education is one of the subjects that seeks to foster optimal student development in order to have character in accordance with the noble values of Pancasila which are manifested in daily life.

The purpose of Pancasila Education in elementary school is to make students become smart, skilled, and characterised Indonesian citizens, as well as citizens who are able to understand and implement their rights and obligations (Winataputra, 2014).

The learning outcomes of Pancasila Education are the results of the learning process. The learning outcomes of Pancasila Education are used as a basis of determining whether students are successful in mastering the material and understanding the competencies of Pancasila Education as measured by the scores of the tests given. However, in reality there are still many students who have low achievement in the learning process. This problem can be seen in the learning outcomes of fifth grade students at Advent Tikala Manado Elementary School. Based on the results of observations and interviews with 20 students and fifth grade teachers, it is known that there are factors that influence the learning outcomes achieved by these students. Some students who experience problems in the learning process, there are parents who still apply inappropriate parenting, the absence of clear assistance and lack of attention from parents. So that it has another impact on students at school such as students are not disciplined in studying, late for school, lazy to do homework and lack of attention in learning in class which has an impact on low learning outcomes.

Based on the problems above, there are two factors that influence the learning process and results, namely parenting styles and student study discipline factors. The parenting factor is the first and main environment in determining the success of children's learning, because it is in the family that a child first comes into contact with other people, namely family members and it is said to be the main because education in the family is the basis and provision for the development of children in the future. The atmosphere of a calm home environment and the form of parental involvement in children's education can be seen from the way parents educate their children. Tridhonanto (2014) argues that all interactions between parents and children,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

where parents provide encouragement by changing behaviour, knowledge, and values that are considered most appropriate for parents so that children can become independent individuals, grow and develop healthily and optimally, have selfconfidence, have curiosity, are friendly, and oriented to success.

On the other side, externally, discipline related to rules and order is one of the factors that influence student learning outcomes. Discipline according to Darmadi (2017) is student compliance with the rules that apply at school, including time in and out of school, tidiness in dressing, student compliance in participating in school activities. Students who have good study discipline will carry out learning activities well, so that learning objectives can be achieved well. Similar research states that parental attitudes and parenting methods have a major influence on children's school outcomes (Narayani et al., 2021). This research is also in line with research which states that discipline can help students to realise the goals that have been set while helping students achieve maximum goals (Hendra & Abdullah, 2019). Parenting styles and student study discipline have a

significant positive effect on student learning outcomes (Rofifah & Nasith, 2023). The purpose of this research is to prove the influence of parenting styles on learning outcomes, study discipline on learning outcomes, and the influence of parenting styles and study discipline on learning outcomes. This research is important to provide knowledge and one of the considerations in developing learning strategies that result in optimising learning outcomes.

METHOD

The approach used in this research is quantitative. The type of research used by researchers is a type of causal relationship research. Causal relationship is a relationship that is causal and effect. So here there are independent variables (variables that influence) and dependent variables (influenced).

The research procedure to prove the influence between variables in this research can be described with the framework image as follows:

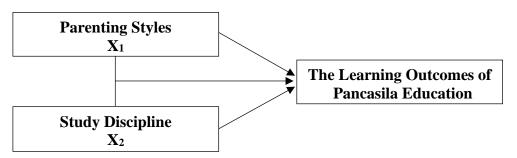

Figure 1. The influence between variables

The population in this research were all fifth grade students of Advent Tikala Manado Elementary School totalling 42 students, all of which were used as research samples. The research data comes from primary data collected by questionnaire and secondary data used is data on Pancasila education learning outcomes in the mid-semester even exam of the 2023/2024 school year for fifth grade elementary school students.

The data analysis technique uses descriptive statistical analysis techniques, pre-requisite tests and hypothesis testing. The prerequisite testing stage in this research is a normality test to determine whether the data is normally distributed or not, then a linearity test is carried out to determine whether the data variance is linear or not, then hypothesis testing is carried out using multiple linear regression analysis or simultaneous test or F test. Hypothesis testing (partial test or t test) is used to test hypotheses 1 and 2. For the research hypothesis test as follows:

- 1. H₀: There is no influence of parenting styles on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School. H_a: There is an influence of parenting styles on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.
- H₀: There is no influence of study discipline on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.

- H_a: There is an influence of study discipline on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.
- 3. H_0 : There is no influence of parenting styles and study discipline on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.
 - Ha: There is an influence of parenting styles and study discipline on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.

RESULTS

The statistical description of the data shows that the average score of parenting styles (X_1) is 119.19, study discipline (X_2) is 127.93, and learning outcomes of Pancasila Education (Y) is 87.79. Furthermore, the median of the data group of parenting styles (X_1) is 120, study discipline (X_2) is 128, and learning outcomes of Pancasila Education (Y) is 88. While the mode of the data group of parenting styles (X_1) is 118, study discipline (X₂) is 120, and learning outcomes of Pancasila Education (Y) is 80. The three measures of data concentration show that the mean, median and mode values are almost the same, this means that these three data groups have almost symmetrical frequency distribution curves. More details can be seen in the following figure 2 below.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

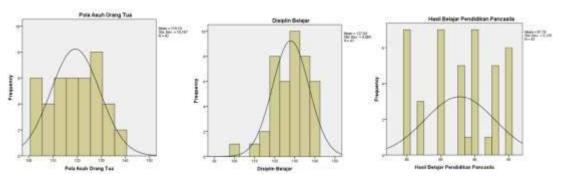

Figure 2. Frequency distribution curve and normality of 3 data groups

The normality test states that the significance value (Sig) in the One Sample Kolmogorov-Smirnov normality test for the parenting styles data group is 0.2 > 0.05 and the study discipline data group is 0.2 > 0.05, and in the Pancasila Education learning outcomes data group is 0.144 > 0.05. Exposure of the normality test data of the three data groups shows that the three data groups are normally distributed.

Furthermore, the prerequisite test of data linearity of variables X_1Y , and X_2Y was carried out. SPSS output results show that the significance value for testing the X_1Y linearity is 0.305 >0.05, with the value of F_{count} = 1.272 < F_{table} = 3.24. This means that there is a linear relationship between parenting styles and

Pancasila education learning outcomes. Furthermore, the significance value to test the linearity of X_2Y is 0.158 > 0.05, with a value of $F_{count} = 1.588 < F_{table} = 3.24$. This means that there is a linear relationship between study discipline and learning outcomes of Pancasila education.

After the pre-requisite test is fulfilled, the data analysis is continued with hypothesis testing. Hypothesis tests 1 and 2 were carried out using the t test using the help of the SPSS computer programme. The SPSS output is presented in table 1 below.

| | Table 1. Data Ana | alysis of Hy | pothesis 1 and | l Hypothesis 2 | | |
|---------|-----------------------------|--------------|----------------|----------------|-------|------|
| Coeffic | ients ^a | | | | | |
| Model | | Unstan | dardized | Standardize | t | Sig. |
| | | Coefficients | | d | | |

| 1 | (Constant) | 36,842 | 9,770 | | 3,771 | ,001 |
| | Parenting Styles | ,223 | ,067 | ,441 | 3,336 | ,002 |
| | Study Discipline | ,191 | ,075 | ,337 | 2,550 | ,015 |
| a. Depe | ndent Variable: The Learnin | g Outcomes | of Pancasila E | Education | • | • |

The data in table 1 above shows a significance value of 0.02 <0.05 or the value of $t_{count} = 3.336 > t_{table} = 2.42$. Based on the decision-making criteria, the first research finding in hypothesis testing 1, namely testing the effect of variable X_1Y , is to Accept H_a Reject H₀. This means that there is an influence of the parenting styles variable on the learning outcomes of Pancasila education.

Furthermore, in testing hypothesis 2, namely testing the effect of variable X₂Y or testing the effect of study discipline variables on Pancasila learning outcomes as presented in table 1, it was found that the significance value is 0.015 < 0.05 or the $t_{count} = 2.550 > t_{table} = 2.42$. Based on the decision-making criteria, the findings of this study Accept Ha Reject Ho. This means that there is an influence of study discipline variables on the learning outcomes of Pancasila education

| a. Dependent Variable: The Learning Outcomes of Pancasila Education | | | | | | | |
| b. Pre | b. Predictors: (Constant), Study Discipline, Parenting Styles | | | | | | |

Based on table 3 above, $F_{count} = 14.377 > F_{table} = 3.24$ with a significance value of 0.000 < 0.05. This shows that all independent variables, namely parenting styles and study discipline, have a significant effect simultaneously (together) on the learning outcomes of Pancasila Education for fifth grade elementary school students. Meanwhile, based on table 3 below, it is found that the regression equation of the influence of parenting styles and study discipline variables on the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

learning outcomes of Pancasila Education for fifth grade elementary school students is $Y = 36,842 + 0,223 X_1 + 0,191$

DISCUSSION

The results of the study found several findings: First, that the parenting styles variable has a positive and significant effect on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School. This research finding is shown through a simple regression test with the R_square value of X₁Y is 0.328. This states that the parenting styles variable has an influence of 32.8%. The findings of this research are also supported by the results of research by Gara et al. (2022) which states that parenting variables affect the improvement of student learning outcomes in elementary schools. Good parenting will make students' characters also good, so that when teachers design learning based on these characters it can lead these students to optimal learning outcomes (Katuuk et al., 2024). The findings of this research also prove that with the right and clear parenting styles applied by parents to their children, the better the learning outcomes achieved by students. This means that the encouragement and provision of appropriate and clear attention given by parents has a tremendous impact on children's results at school. On the other hand, children who are given the right attention will have the right attitude and responsibility as well, both in the school environment, society and the family environment. These results are reinforced by previous research which states that parenting has a significant relationship with student learning outcomes (Suarlin et al., 2021).

Second, the results of the research calculations carried out, it was found that there was a significant influence of study discipline on the learning outcomes of Pancasila Education for fifth grade students. This research finding is shown through a simple regression test with the R_square X₂Y value of 0.26. This states that the study discipline variable has an influence of 26%. Based on the results of this research, it proves that discipline is very necessary in the teaching and learning process. This means that discipline can help learning activities. Study discipline is part of the output of student learning motivation so as to increase interest in learning (Surentu et al., 2023) which synergises with the achievement of optimal Pancasila Education learning outcomes. Discipline can create a sense of pleasure to learn and discipline can improve social relationships and improve student learning outcomes. This is in line with previous research which states that learning discipline greatly contributes positively to student learning outcomes (Mulyawati et al., 2019). This means that study discipline makes students able to control their every action, so that students will obey all school rules. Students who are able to

apply clear and precise discipline will achieve optimal learning outcomes. The implementation of the Merdeka curriculum in the Pancasila Education subject requires study discipline.

Third, parenting styles and study discipline affect the learning outcomes of Pancasila Education for fifth grade elementary school students. This is evidenced by the results of the F test, obtained F_{count} of $14.377 > F_{table} = 3.24$ with a significant value of 0.000 < 0.05. This shows that all independent variables, namely parental styles and study discipline, have a significant effect simultaneously (together) on the learning outcomes of Pancasila Education for fifth grade elementary school students, with a regression equation $Y = 36,842 + 0,223 X_1 + 0,191 X_2$.

The findings of this study indicate that every addition of one unit to the parenting pattern variable, the value of Pancasila Education learning outcomes increases by 0.223. Likewise, the relationship with the study discipline variable. Every addition of one unit of study discipline will contribute 0.191 to the value of Pancasila Education learning outcomes. This is in accordance with previous research which states that in the selection of clear and appropriate parenting patterns, parents form children who are very responsible for the educational process taken so that the child can achieve good and appropriate results. Likewise, study discipline can improve student learning outcomes, this is because students with high discipline will be faster in the process of knowing and understanding learning (Narayani et al., 2021). Parenting styles that synergise with student study discipline simultaneously and are supported by teacher strategies that use fun learning methods can improve learning outcomes for Pancasila and civic education (Moilati et al., 2024).

The implication of this research process is that actions taken by parents to provide appropriate and clear parenting patterns are very important in improving the results of the student learning process. Parents who are highly disciplined in providing good guidance and supervision of their children when the child is studying, then the child has a clear and good study discipline pattern. On the other side, if parents are unable to observe and pay attention to their children properly while their children are studying because of many factors such as being busy at work, it will result in the child's study discipline attitude being reduced, so that it will affect the child's learning outcomes to be less than optimal.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

CONCLUSION

Based on the results of the data analysis that has been stated previously, it can generally be concluded that

- There is an influence of parenting styles on the learning outcomes of Pancasila Education for fifth grade elementary school students.
- There is an influence of study discipline on the learning outcomes of Pancasila Education for fifth grade elementary school students.
- 3. There is an influence of parenting styles and study discipline together on the learning outcomes of Pancasila Education for fifth grade students at Advent Tikala Manado Elementary School.

QUALITY OF WORK LIFE AND JOB SATISFACTION OF PUBLIC ELEMENTARY TEACHERS IN DAVAO ORIENTAL DIVISION

Monayra L. Balunganon

https://orcid.org/0009-0006-1079-8687 Teacher I, Lucatan Integrated School, Lucatan, Tarragona, Davao Oriental, Philippines

Article DOI: https://doi.org/10.36713/epra17122

DOI No: 10.36713/epra17122

ABSTRACT

The study explored the relationship of quality of work life and job satisfaction of teachers. This claim needs to be validated. However, this had never been explored specifically in the local setting. With this, the study determined the extent of quality of work life of teachers and the job satisfaction of public elementary teachers in Davao Oriental Division. Also, it investigated the association of the involved variables and the domains of quality of work life of teachers that significantly influenced job satisfaction. With the use of probability sampling, 150 elementary teachers in the public schools were selected as the respondents. Utilizing the descriptive-correlational survey method, the data collated were analyzed through the use of Mean, Product-Moment correlation and Regression Analysis. Results revealed that there was an extensive quality of work life of teachers and an extensive job satisfaction. Furthermore, there was a significant relationship between the two variables. Moreover, all domains of quality of work life of teachers were found to have significantly influence job satisfaction. Based on the findings, it was further suggested that higher officials in the Department of Education and school heads may identify means on how to provide teachers an excellent quality of work life to let them feel satisfied of their teaching jobs. More so, future researchers may further explore the involved variables considering other factors and research methods.

KEYWORDS: Quality of work life, job satisfaction, descriptive correlation, Davao Oriental Division, Philippines

INTRODUCTION

Teacher job satisfaction holds significant and wide-ranging implications. It is integral to teacher well-being, with satisfied teachers exhibiting lower susceptibility to stress and burnout. Moreover, there is evidence indicating that students of contented teachers experience improved well-being. Additionally, satisfied teachers deliver higher instructional quality and better learning support, demonstrating stronger job commitment and lower turnover rates, which is crucial amidst high teacher attrition. Unfortunately, teacher job satisfaction is in decline, with an increasing number of educators contemplating or deciding to leave the profession. This problematic work environment adversely affects not only teachers but also students and school leaders.

Internationally, particularly in the United States, teacher job satisfaction has plummeted to historic lows. According to a recent survey, only 12 percent of U.S. teachers report being very satisfied with their jobs (Will, 2022). Research suggests that the diminishing prestige of the teaching profession and unsatisfactory working conditions are primary drivers of teacher turnover, with salary issues being a minor factor. Inadequate working conditions undermine the profession's status and hinder the recruitment of new teachers. Even increased recruitment efforts may not address the turnover issue if new teachers continue to leave due to dissatisfaction with their professional status and work environment (Ingersoll, 2017).

In the Philippines, there is a prevailing sense of dissatisfaction among teachers, particularly in public schools. These teachers face challenging demands, such as managing classes with up to 90 students (Fabella et al., 2022). Persistent issues with inadequate facilities and a shortage of classrooms, especially for senior high school students, exacerbate the situation. The lack of essential resources like textbooks and learning materials, often necessitating out-of-pocket expenses from teachers, further contributes to their dissatisfaction (Tibay, 2018). These factors collectively fuel discontent among teachers within the Philippine education system.

Focusing on the Division of Davao Oriental, specific factors contributing to teacher dissatisfaction include poor working conditions, limited opportunities for professional growth, excessive workloads due to additional responsibilities, and reduced social interaction among teachers due to heavy workloads. However, these observations have not been thoroughly explored through academic research. No prior investigation has examined the quality of work life experienced by teachers and its impact on their job satisfaction in this local context. Consequently, this study aims to delve deeper into the current state of teachers' quality of work life and job satisfaction. Additionally, it seeks to understand the relationship between these variables and identify specific domains of quality of work

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

life that significantly influence teacher job satisfaction in the Division of Davao Oriental.

Statement of the Problem

This study determined the relationship between quality of work life and job satisfaction of selected public elementary teachers in Davao Oriental Division. More specifically, it sought to answer the following questions:

- 1. What is the extent of quality of work life of public elementary teachers in terms of:
 - 1.1working conditions for human capacity development;
 - 1.2 social integration in the work organization;
 - 1.3 future opportunity for growth and employment security;
 - 1.4 work and space for recreation; and
 - 1.5 remuneration and compensation?
- 2. What is the extent of job satisfaction of public elementary teachers in terms of:
 - 2.1 job responsibilities;
 - 2.2 work security;
 - 2.3 community attachment; and
 - 2.4 work environment?
- 3. Is there a significant relationship between quality of work life and job satisfaction of teachers?
- 4. Which domains of quality of work life significantly influence the job satisfaction of teachers?

METHODOLOGY

Research Design. The study employed a quantitative research approach, specifically utilizing the descriptive correlational approach. This method involves quantifying and analyzing variables to derive results, utilizing numerical data and statistical techniques to answer research questions. The descriptive correlational approach focuses on describing relationships between variables without establishing causation. This study falls within this framework as it aims to measure the connection between the quality of work life and job satisfaction among teachers without manipulating variables.

Research Respondents. The study targeted 150 public elementary teachers in the Division of Panabo City. The sampling technique utilized was two-staged cluster sampling, ensuring each member of the population had an equal probability of being included. Elementary teachers with a minimum of two years of teaching experience were included, respecting their autonomy to withdraw from participation if uncomfortable. This approach prioritized respondent welfare throughout the study.

Research Instruments. Data collection employed adapted survey questionnaires, divided into two sets focusing on the quality of work life and job satisfaction respectively. The quality of work life questionnaire consisted of 27 items covering various indicators, while the job satisfaction questionnaire comprised 40 items. Both instruments underwent pilot testing and refinement to ensure validity and reliability.

Data Gathering Procedure. A strict protocol was followed for data collection, beginning with obtaining permissions from relevant authorities. Personal administration of questionnaires adhered to health and safety protocols, with respondents allotted sufficient time for completion. Data retrieval was meticulously recorded, ensuring confidentiality.

Data Analysis. Statistical tools such as mean, Pearson r, and regression analysis were utilized for comprehensive data interpretation. Mean values measured the extent of quality of work life and job satisfaction among teachers, while Pearson r determined relationships between these variables. Regression analysis assessed the significant influence of quality of work life on job satisfaction. These techniques facilitated a thorough analysis of the data gathered.

RESULTS AND DISCUSSIONS

Extent of Quality of Work Life of Teachers in terms of Working Conditions for Human Capacity Development

Table 1 illustrates the quality of work life of teachers concerning working conditions for human capacity development, revealing an overall mean of 3.57, indicating an extensive level of manifestation. The data show that all 10 statements yield extensive results, with the highest mean scores attributed to beliefs regarding the utilization of skills and abilities, autonomy in planning and executing activities, and opportunities for applying knowledge acquired from courses. These findings underscore the significant association between conducive working conditions and the professional experiences of teachers.

The results emphasize the importance of fostering a work environment that acknowledges and utilizes teachers' diverse skills while providing autonomy and opportunities for continuous professional development. Masoom (2021) noted that factors like administrative support, institutional resources, and school leadership exert a substantial influence on teachers' career intentions, highlighting the crucial role of working conditions in shaping job satisfaction. IGI Global (2022) defines working conditions as encompassing various factors impacting an individual's performance, emphasizing their significance in educational settings where adverse conditions can compromise safety and well-being.

In line with OECD's (2019) assertion, positive working conditions, including salary structures, incentives, and supportive leadership, are vital for teacher recruitment and retention, ultimately impacting teaching efficacy and student outcomes. Therefore, prioritizing favorable working conditions is essential for cultivating a conducive environment that promotes teacher well-being and professional growth.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 1. Extent of Quality of Work Life of Teachers in terms of Working Conditions for Human Capacity Development

| No | Working Conditions for Human Capacity Development | Mean | Descriptive Equivalent |
|------|--|------|---------------------------|
| 1 | believing that my work allows me to use my different skills and abilities, with initiative and creativity. | 3.60 | Extensive |
| 2 | believing that my workplace is properly neat. | 3.55 | Extensive |
| 3 | believing that I have wide opportunities to use at work the knowledge acquired at courses. | 3.58 | Extensive |
| 4 | believing that I am satisfied with the materials available for the work. | 3.53 | Extensive |
| 5 | believing that I feel professionally satisfied with the tasks performed as a teacher. | 3.55 | Extensive |
| 6 | believing that it provides ongoing updates for their teachers allowing them to develop their potentials. | 3.57 | Extensive |
| 7 | believing that I have autonomy to plan and execute the activities of teaching, research and extension. | 3.59 | Extensive |

| 9 | believing that the institution values and respects the teachers in the sense that their work is not depreciated. | 3.56 | Extensive |
| 10 | believing that my salary as a teacher is suitable to live with dignity. | 3.57 | Extensive |
| Over | rall | 3.57 | Extensive |

Extent of Quality of Work Life of Teachers in terms of Social Integration in the Work Organization

Table 2 displays the quality of work life of teachers regarding social integration in the work organization, indicating an overall mean of 3.59, signifying an extensive level of manifestation. The data reveal extensive results across all 8 statements, with the highest mean scores attributed to beliefs regarding a spirit of community and cooperation, ethical relationships within the school community, and satisfaction with feedback received from colleagues. These findings underscore the significant correlation between social integration and the quality of work life for teachers.

The results emphasize the importance of fostering a supportive and collaborative work environment that promotes a sense of community and mutual cooperation among teachers. Kelvin and Odunayo (2019) highlighted the pivotal role of social integration in shaping work life quality by promoting fairness and equitable participation within organizations. Social integration fosters an environment of equity, dignity, and equal rights, ensuring every employee's inclusion and contribution to decision-making processes.

Similarly, Koller et al. (2018) argued that the school environment significantly influences social integration, affecting factors such as peer relationships and motivation levels among students. Changes in personnel dynamics and teacher interactions can impact social integration, highlighting the importance of nurturing positive relationships and supportive structures within the work organization to enhance the quality of work life for teachers.

Table 2. Extent of Quality of Work Life of Teachers in terms of Social Integration in the Work Organization

| No | Social Integration in the Work Organization | Mean | Descriptive Equivalent |
|----|--|------|---------------------------|
| 1 | believing that it is noticed among the teachers of this institution the prevalence of a spirit of community and cooperation rather than individuality and competitiveness. | 3.62 | Extensive |
| 2 | believing that I am satisfied with the amount of feedback I get from colleagues. | 3.60 | Extensive |
| 3 | believing that the relationship in the school community is based on the ethical, friendship and cordiality principles. | 3.61 | Extensive |
| 4 | believing that the teacher's right for privacy is respected at this institution. | 3.58 | Extensive |
| 5 | believing that I get enough feedback of my activities from the head. | 3.59 | Extensive |

Extent of Quality of Work Life of Teachers in terms of Future Opportunity for Growth and Employment Security

Table 3 presents the quality of work life of teachers regarding future opportunities for growth and employment security, indicating an overall mean of 3.60, signifying an extensive level of manifestation. All three statements yield extensive results, with the highest mean score attributed to the belief in career progression within the institution, followed by confidence in labor rights respect and salary assurance. These findings underscore the importance of factors related to career advancement and job security in shaping the quality of work life for teachers.

The results highlight the significance of fostering a work environment that values professional development, recognizes labor rights, and provides financial stability, contributing to a positive work experience for teachers. Washington (2019) emphasized the critical role of ongoing professional development in enhancing teaching effectiveness and overall school performance. Constructive feedback, collaborative teamwork, and goal-setting are essential components of successful professional development initiatives.

On the other hand, job security, as asserted by Hussain (2019), plays a vital role in fostering employee commitment, including teachers. Tenure status provides a sense of stability and confidence in employment, safeguarding against arbitrary dismissal and ensuring protection against termination without just cause. Additionally, Meador (2018) argued that professional growth activities like attending conferences and workshops contribute to the comprehensive development of teachers, allowing them to identify areas for improvement and establish professional connections. These findings collectively underscore the importance of institutions prioritizing both professional development opportunities and job security measures to enhance the quality of work life for teachers.

Table 3. Extent of Quality of Work Life of Teachers in terms of Future Opportunity for Growth and Employment Security

| No | Future Opportunity for Growth and Employment Security | Mean | Descriptive Equivalent |
|----|---|------|---------------------------|
| 1 | believing that it respects the labor rights of teachers. | 3.60 | Extensive |
| 2 | t believing that the teacher of this institution is likely to progress in career. | 3.62 | Extensive |
| 3 | believing that it provides teachers with assurance about the receipt of salary. | 3.59 | Extensive |
| | Overall | 3.60 | Extensive |

Extent of Quality of Work Life of Teachers in terms of Work and Space for Recreation

Table 4 presents the quality of work life of teachers concerning work and space for recreation, with an overall mean of 3.46, indicating an extensive level of manifestation. All three statements yield extensive results, with the highest mean score attributed to the ease of performing activities with stimulating stress throughout the day. This is followed by satisfaction with the adequacy of the working day and the ability to return home with energy for family and leisure activities. These findings underscore the importance of providing teachers with a supportive work environment that allows for a healthy work-life balance.

The results highlight a significant connection between the quality of work life for teachers and factors related to work and space for recreation. Teachers often perceive their work environment as conducive to managing daily tasks without excessive stress, with satisfaction regarding the sufficiency of the working day and the ability to balance work and personal life effectively. These findings align with Mehra's (2020) perspective on integrating leisure activities into the workplace, emphasizing the importance of utilizing free time for personal growth and professional improvement.

Furthermore, recognizing the significance of recreational activities, as highlighted by Gupta (2019), is essential for fostering employee well-being and performance. Employers increasingly view workplace recreation as integral to their strategies, positively impacting employee fitness and overall performance. Therefore, integrating suitable recreational activities into the work environment can contribute to enhancing the quality of work life for teachers and promoting their overall well-being and productivity.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 4. Extent of Quality of Work Life of Teachers in terms of Work and Space for Recreation

| No | Work and Space for Recreation | Mean | Descriptive Equivalent |
|----|--|------|---------------------------|
| 1 | believing that working day is sufficient and appropriate to carry out all activities involving my work. | 3.46 | Extensive |
| 2 | believing that I perform my activities with ease, I realize only a stimulating stress throughout the day. | 3.47 | Extensive |
| 3 | believing that after work, I come home with courage and energy to give attention to the family and / or undertake leisure activities | 3.45 | Extensive |
| | Overall | 3.46 | Extensive |

Extent of Quality of Work Life of Teachers in terms of Remuneration and Compensation

Table 5 portrays the quality of work life of teachers regarding remuneration and compensation, with an overall mean of 3.39, indicating an extensive level of manifestation. All three statements yield extensive results, with the highest mean score attributed to the belief in fair payment considering qualifications. This is followed by perceptions of better payment compared to other institutions and beliefs regarding status symbols in the hierarchical structure. These findings underscore the significance of fair and competitive compensation in shaping the quality of work life for teachers.

The results highlight a notable connection between the quality of work life for teachers and perceptions related to remuneration and compensation. Teachers often perceive their payment as equitable in relation to their qualifications, with beliefs in receiving better payment compared to other institutions and considerations of status symbols within the hierarchical structure. These findings

reinforce the importance of providing fair compensation and transparency in the institutional hierarchy to promote a positive work environment.

This outcome aligns with Allegretto and Mishel's (2020) perspective, emphasizing that teacher compensation is pivotal for retaining qualified educators and maintaining teaching as an attractive career choice. To enhance student outcomes and economic performance, it is essential to provide teachers with a stable middle-class lifestyle comparable to other professions requiring similar education levels. UNESCO-IIEP (2021) underscores the importance of setting a minimum wage for teachers to ensure a respectable standard of living and attract skilled individuals to the profession. Additionally, offering competitive compensation and long-term incentives is crucial to compete with other sectors for educated and skilled workers, ultimately contributing to the development of a skilled and valued teaching workforce.

Table 5. Extent of Quality of Work Life of Teachers in terms of Remuneration and Compensation

| No | Remuneration and Compensation Development | Mean | Descriptive Equivalent |
|----|---|------|---------------------------|
| 1 | believing that my payment is fair considering my qualifications. | 3.40 | Extensive |
| 2 | believing that teachers have a better payment than the ones of other institutions. | 3.39 | Extensive |
| 3 | believing that there are status symbols and / or sharp steps in the hierarchical structure. | 3.38 | Extensive |
| | Overall | 3.39 | Extensive |

Summary on the Extent of Quality of Work Life of Teachers

Table 6 summarizes the extent of the quality of work life of teachers, with an overall mean of 3.52, indicating an extensive level. Data reveal that all five indicators are in an extensive level, with future opportunity for growth and employment security receiving the highest mean score (3.60), followed by social integration in the work organization (3.59), working conditions for human capacity development (3.57), work and space for recreation (3.46), and remuneration and compensation (3.39).

The comprehensive examination of these indicators suggests that the quality of work life for teachers is frequently evident across various dimensions. Teachers perceive favorable prospects for career advancement and job security, along with positive interpersonal relationships and a collaborative work culture. Factors such as working conditions, opportunities for recreation, and compensation also contribute to the overall work experience positively.

These findings underscore the importance of addressing various aspects, including professional growth opportunities, social dynamics, and work environment conditions, to enhance and maintain a positive quality of work life for educators. This reaffirms the viewpoint that achieving work-life balance and ensuring employee well-being are crucial for organizational success, as highlighted by Nguyen and Pham (2020). Quality of Work Life (QWL) programs aimed at improving productivity and enhancing employee satisfaction, as emphasized by Aryeetey and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Sanda (2012), play a significant role in shaping employee perceptions and organizational outcomes. Ultimately, fostering a supportive work environment that promotes employee commitment and satisfaction contributes not only to individual

well-being but also to overall business performance and societal well-being, as highlighted by Kara et al. (2018) and Winarmo and Hermana (2019).

Table 6. Summary on the Extent of Quality of Work Life of Teachers

| No | Indicators | Mean | Descriptive Equivalent |
|----|---|------|---------------------------|
| 1 | Working Conditions for Human Capacity Development | 3.57 | Extensive |
| 2 | Social Integration in the Work Organization | 3.59 | Extensive |
| 3 | Future Opportunity for Growth and Employment Security | 3.60 | Extensive |
| 4 | Work and Space for Recreation | 3.46 | Extensive |
| 5 | Remuneration and Compensation | 3.39 | Extensive |
| | Overall | 3.52 | Extensive |

Extent of Job Satisfaction in terms of Job Responsibilities

Table 7 presents the extent of job satisfaction concerning job responsibilities, with an overall mean of 3.49, indicating an extensive level of satisfaction. All ten statements reveal extensive results, with the highest mean scores attributed to tasks promoting teamwork, an open communication environment, and opportunities for employees to utilize their abilities effectively. These findings underscore the frequent manifestation of job satisfaction among surveyed individuals regarding their job responsibilities.

The data analysis indicates extensive satisfaction across all statements, emphasizing the importance of a positive and collaborative work environment in fostering job satisfaction. Employees value mutual respect, teamwork, and opportunities for meaningful tasks that align with their skills and talents. These results affirm the significance of creating a supportive and inclusive workplace culture, where employees feel empowered and engaged in their responsibilities, ultimately contributing to their overall job satisfaction and well-being. Despite potential challenges such as workload and time constraints, prioritizing a positive work environment and meaningful tasks is essential for enhancing job satisfaction among employees.

Table 7. Extent of Job Satisfaction in terms of Job Responsibilities

| No | Job Responsibilities | Mean | Descriptive Equivalent |
|----|---|------|---------------------------|
| 1 | having the chance to "rub elbows" with important people in my | 3.35 | Moderately |
| | school through my immediate supervisor's help. | | Extensive |
| 2 | haine able to de thines that are smaller are according a | 3.33 | Moderately |
| | being able to do things that concur with my conscience. | | Extensive |
| 3 | having the opportunity to do a work that is well suited to my abilities. | 3.50 | Extensive |
| 4 | having an open working environment where I can tell to my coworkers how to do things. | 3.55 | Extensive |
| 5 | having the chance to try something new and different in my job. | 3.52 | Extensive |
| 6 | having the chance to do something that makes use of my abilities. | 3.54 | Extensive |
| 7 | having the chance to develop new and better ways to do my job. | 3.53 | Extensive |
| 8 | doing things that don't harm my other co- workers. | 3.56 | Extensive |
| 9 | being given the freedom to use my own judgment at work. | 3.53 | Extensive |
| 10 | performing my tasks without guilt of cheating anyone. | 3.53 | Extensive |
| | Overall | 3.49 | Extensive |

Extent of Job Satisfaction in terms of Work Security

Table 8 illustrates the extent of job satisfaction regarding work security, with an overall mean of 3.42, indicating an extensive level of satisfaction. All ten statements yield extensive results, with the highest mean scores attributed to items emphasizing confidence in job stability, satisfaction with benefits, and pride in job performance. These findings suggest that job satisfaction related to work security is frequently observed among surveyed individuals.

The data analysis reveals extensive satisfaction across all statements, highlighting various aspects contributing to job satisfaction concerning work security. Notably, employees value a sense of security in their job, comprehensive benefits, and recognition for their work. Confidence in job stability reflects the significance of feeling secure in one's employment for overall satisfaction. Satisfaction with benefits comparable to those offered by other institutions underscores the importance of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

competitive compensation packages. Furthermore, pride in job performance indicates the significance of recognition and accomplishment in fostering job satisfaction in the context of work security.

These results emphasize the importance of creating a work environment that provides employees with stability, competitive benefits, and opportunities for recognition, ultimately enhancing overall job satisfaction regarding work security. This aligns with recommendations from Taylor and Taylor (2011) and Das and Baruah (2013) to prioritize job security to improve employee well-being and effectiveness. Implementing supportive work environments, providing autonomy, and conducting regular evaluations can further enhance teachers' job security and commitment to the profession, as suggested by Yucel (2012) and Gu and Day (2014).

Table 8. Extent of Job Satisfaction in terms of Work Security

| No | Work Security | Mean | Descriptive Equivalent |
|----|---|------|---------------------------|
| 1 | being happy with my compensation relative to the amount of work | 3.30 | Moderately |
| | I do in school. | | Extensive |
| 2 | having a fair chance of being reclassified or be promoted in my school. | 3.46 | Extensive |
| 3 | being satisfied with the benefits I receive comparable to what other schools can offer. | 3.49 | Extensive |
| 4 | being rewarded accordingly in my school for all my efforts. | 3.34 | Moderately Extensive |
| 5 | being confident that my job could provide me a secured future. | 3.50 | Extensive |
| 6 | being able to get a full credit for the work I do. | 3.33 | Moderately Extensive |
| 7 | being able to be proud and take pride for a job well done. | 3.48 | Extensive |
| 8 | having a competitive pay with the same jobs in other schools. | 3.32 | Moderately Extensive |
| 9 | having a reasonable pay in comparison to other teachers and workers in my school. | 3.46 | Extensive |
| 10 | having fair opportunities for professional growth and advancement from my school. | 3.47 | Extensive |
| | Overall | 3.42 | Extensive |

Extent of Job Satisfaction in terms of Community Attachment

Table 9 indicates the extent of job satisfaction concerning community attachment, with an overall mean of 3.73, indicating an extensive level of satisfaction. All ten statements yield extensive results, with the highest mean scores attributed to items emphasizing contributions to community strengthening, participation in outreach programs, and service to others. These findings suggest that job satisfaction related to community attachment is frequently observed among surveyed individuals. The data analysis reveals extensive satisfaction across all statements, highlighting various aspects contributing to job satisfaction concerning community engagement. Notably, employees value opportunities to contribute to broader community initiatives and make a positive impact beyond the workplace. Satisfaction in helping the school strengthen its linkages and networks emphasizes the importance of professional

involvement in community-building efforts. Additionally, participation in community outreach programs and service to others reflects a sense of purpose and social responsibility, contributing to overall job satisfaction.

These findings underscore the significance of fostering a work environment that encourages community involvement, providing employees with opportunities to connect with and contribute to the broader community. This aligns with perspectives emphasizing the importance of a positive and supportive school environment, where members feel connected and integral to a professional community dedicated to effective teaching. By prioritizing community attachment, schools can enhance employee job satisfaction, well-being, and performance, ultimately fostering a more cohesive and supportive educational environment.

Table 9. Extent of Job Satisfaction in terms of Community Attachment

| No | Community Attachment | Mean | Descriptive Equivalent |
|----|--|------|-------------------------------|
| 1 | having the chance to build a connection in the community. | 3.50 | Extensive |
| 2 | having the chance to be in service to other people. | 4.20 | Very Extensive |
| 3 | helping in encouraging the school's stakeholders to participate in | 3.56 | Extensive |
| | all school-related activities. | | |
| 4 | having the chance to be somebody in the community. | 3.52 | Extensive |

| | (i.e. linis barangay, coastal clean-up, tree planting). | | |
| 6 | helping find solutions to the problems of people and communities. | 3.54 | Extensive |
| 7 | helping the school strengthens its linkages and networks. | 4.22 | Very Extensive |
| 8 | being supported by my immediate head in taking care of the | 3.51 | Extensive |
| | complaints of the parents in the community. | | |
| 9 | feeling the pleasantness of the school administrators towards | 3.52 | Extensive |
| | external stakeholders. | | |
| 10 | having the chance to have a social position in the community | 3.56 | Extensive |
| | which goes with my teaching job. | | |
| | Overall | 3.73 | Extensive |

Extent of Job Satisfaction in terms of Work Environment

Table 10 presents the extent of job satisfaction regarding the work environment, with an overall mean of 3.55, indicating an extensive level of satisfaction. All ten statements yield extensive results, with the highest mean scores attributed to items emphasizing mechanisms that show concern for all members, a sense of accomplishment from teaching, and promotion of teamwork and collaboration among teachers and heads.

The data analysis reveals extensive satisfaction across all statements, shedding light on various aspects contributing to job satisfaction related to the work environment. Employees value a workplace that prioritizes concern and inclusivity, recognizing achievements, and fostering teamwork and collaboration. Mechanisms demonstrating care for all members of the school community are particularly significant, emphasizing the

importance of a caring and inclusive environment. Recognition of accomplishments in teaching and promotion of teamwork underscore the significance of valuing educators' contributions and fostering a collaborative work culture.

These findings collectively underscore the importance of cultivating a positive and supportive work environment that prioritizes employee well-being, recognizes achievements, and encourages teamwork. This aligns with research emphasizing the positive impact of a supportive organizational culture on teachers' performance and motivation. By enhancing the work environment and fostering effective communication and collaboration, organizations can improve employee satisfaction, motivation, and ultimately, performance.

Table 10 Extent of Job Satisfaction in terms of Work Environment

| No | Work Environment | Mean | Descriptive Equivalent |
|----|---|------|-------------------------------|
| 1 | having fair policies and practices towards employees. | 3.50 | Extensive |
| 2 | having clear communication channel between school heads and teachers. | 3.55 | Extensive |
| 3 | promoting teamwork and collaboration among teachers and heads. | 4.10 | Extensive |
| 4 | having a conducive work environment and spaces with good air- conditioning system, lighting, and ventilation among others. | 3.52 | Extensive |
| 5 | promoting friendships and good relations among teachers. | 3.56 | Extensive |
| 6 | offering an environment that nurtures positive experiences with my colleagues in the profession. | 3.54 | Extensive |
| 7 | providing a feeling of accomplishment from teaching. | 4.21 | Very Extensive |
| 8 | providing mechanisms that show concern and love for all members of the school. | 4.22 | Very Extensive |
| 9 | providing feeling of pleasantness towards work, school and coteachers. | 3.56 | Extensive |
| 10 | giving support in times of need or difficulty to teachers, students and the community. | 3.56 | Extensive |
| | Overall | 3.73 | Extensive |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Summary on the Extent of Job Satisfaction

Table 11 presents a summary of job satisfaction, indicating an overall mean of 3.59, signifying an extensive level of satisfaction across all four indicators. Both community attachment and the work environment emerge with the highest mean score, followed by job responsibilities and work security.

The analysis suggests that job satisfaction is frequently observed among the surveyed individuals, with extensive results across all indicators. The high mean scores for community attachment and the work environment underscore the significant impact of community engagement and a positive workplace atmosphere on overall satisfaction. The close ranking of job responsibilities emphasizes the importance of fulfilling tasks, while the slightly lower mean score for work security still indicates its relevance in influencing satisfaction.

These findings highlight the multifaceted nature of factors contributing to job satisfaction, including community connection, the work environment, fulfilling responsibilities, and work security. This balanced emphasis underscores the importance of taking a holistic approach to enhance job satisfaction.

These results align with previous research emphasizing the pivotal role of job satisfaction in influencing teachers' commitment and productivity within a school organization. Positive job experiences contribute to teachers' dedication and responsibility in fulfilling their duties, ultimately benefiting students' learning experiences. Additionally, job satisfaction is perceived as essential for personal success and well-being, characterized by passion, enjoyment, and fulfillment in one's work. Ultimately, fostering job satisfaction contributes to a positive work environment and enhances overall organizational performance.

Table 11. Summary on the Extent of Job Satisfaction

| No | Indicators | Mean | Descriptive |
|----|----------------------|------|-------------|
| | | | Equivalent |
| 1 | Job Responsibilities | 3.49 | Extensive |
| 2 | Work Security | 3.42 | Extensive |
| 3 | Community Attachment | 3.73 | Extensive |
| 4 | Work Environment | 3.73 | Extensive |
| | Overall | 3.59 | Extensive |

Significance of the Relationship Between the Extent of Quality of Work Life of Teachers and Job Satisfaction

The data presented in Table 12 underscore the significant relationship between the quality of work life of teachers and their job satisfaction. The overall r-value of .467 with a p-value of <0.05 indicates the rejection of the null hypothesis, providing compelling evidence of this relationship. Pairwise correlation among the indicators further supports this, revealing computed r-values ranging from 0.461 to 0.472, all with p-values below 0.05. This implies that as aspects such as working conditions, social integration, future opportunities, and compensation improve, job satisfaction among teachers also increases.

These findings emphasize the nuanced connection between various dimensions of the work environment and teachers' satisfaction, offering valuable insights for institutions seeking to enhance the well-being of their teaching staff.

This aligns with prior research by Nair and Subash (2019), which highlights the significance of employee satisfaction for organizational stability. Quality of work life encompasses not only job satisfaction but also overall contentment in non-work domains and subjective well-being. Addressing factors contributing to organizational effectiveness and growth is crucial for promoting job satisfaction and enhancing the quality of work life. Similarly, studies by Usha and Rohini (2018) and Bhavani and Jegadeeshwaran (2014) emphasize the impact of various factors such as working conditions, compensation, and career growth on the quality of work life and job satisfaction among teachers, further underscoring the importance of addressing these aspects to foster a positive work environment and enhance overall satisfaction.

Table 12. Significance of the Relationship Between Quality of Work Life of Teachers and Job Satisfaction

| Quality of Work Life of Teachers Indicators | Dependent Variable | r-value | p- value | Decision on Ho |
|---|-----------------------|---------|----------|----------------|
| Working Conditions for Human Capacity Development | | 0.469 | 0.000 | Rejected |
| Social Integration in the Work Organization | | 0.470 | 0.000 | Rejected |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Future Opportunity for Growth and Employment Security | Job Satisfaction | 0.472 | 0.000 | Rejected |
|---|------------------|--------|-------|----------|
| Work and Space for Recreation | | 0.465 | 0.000 | Rejected |
| Remuneration and Compensation | | 0.461 | 0.000 | Rejected |
| Overall | | 0.467* | 0.000 | Rejected |

^{*}Significant at 0.05 significance level.

Regression Analysis on the Influence of Quality of Work Life of Teachers and Job Satisfaction

The regression analysis presented in Table 13 highlights the significant influence of the quality of work life of teachers on their job satisfaction. With an overall p-value of <0.05, it's evident that various domains of teachers' work life significantly predict their satisfaction levels. The B values for each domain further quantify this influence, with future opportunities for growth and employment security demonstrating the highest impact. These findings align with Walton's Quality of Work Life Model, which identifies key factors impacting overall work satisfaction, emphasizing the importance of factors like fair compensation, safe working conditions, and opportunities for growth.

Moreover, the coefficient of determination reveals that nearly half of job satisfaction (43.4%) is explained by these domains, underlining their substantial impact. This comprehensive analysis offers empirical support for rejecting the hypothesis that no domain significantly influences job satisfaction. By addressing factors such as working conditions, social integration, and compensation, organizations can enhance teacher well-being and job satisfaction, ultimately improving overall performance and effectiveness. Therefore, ensuring favorable working conditions and opportunities for growth is essential not only for individual teachers but also for organizational success and effectiveness.

Table 13. Regression Analysis on the Influence of Quality of Work Life of Teachers and Job Satisfaction

| | | Job Satisfaction | | |
|---|-------------------------------------|---------------------------------------|--------|-------|
| Quality of Work Life of Teacher | B (Standardized Coefficients) | B (Unstandardized Coefficients) | T | Sig. |
| Constant | 0.711 | 0.141 | 6.321 | 0.000 |
| Working Conditions for Human Capacity Development | 0.458 | 0.429 | 12.629 | 0.000 |
| Social Integration in the Work Organization | 0.463 | 0.432 | 12.639 | 0.000 |
| Future Opportunity for Growth and Employment Security | 0.468 | 0.434 | 12.642 | 0.000 |
| Work and Space for Recreation | 0.455 | 0.427 | 12.618 | 0.000 |
| Remuneration and Compensation | 0.448 | 0.424 | 12.595 | 0.000 |
| R | 0.467 | | | |
| \mathbb{R}^2 | 0.434 | | | |
| F | 24.083 | | | |
| p | 0.000 | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Conclusions

The study reveals that the quality of work life of teachers is frequently evident across various dimensions, including working conditions, social integration, growth opportunities, recreational spaces, and compensation. Similarly, job satisfaction among teachers is notably high, particularly concerning job responsibilities, work security, community attachment, and the work environment. Importantly, the study establishes a significant relationship between the quality of work life and job satisfaction of teachers across all domains examined.

Moreover, the findings indicate that each domain of teachers' work life significantly influences their job satisfaction, with a rejection of the null hypothesis. Specifically, improvements in working conditions, social integration, growth opportunities, recreational facilities, and compensation positively correlate with increased job satisfaction. This underscores the importance of addressing these domains to enhance overall teacher well-being and satisfaction.

Recommendations

Based on the study's conclusions, several recommendations are proposed:

Department of Education Initiatives: DepEd should prioritize initiatives aimed at improving the overall work environment for educators. This may involve targeted policies and interventions addressing specific domains identified in the study, such as professional development opportunities, positive relationships, and supportive work conditions.

Proactive Measures by School Heads: School administrators should proactively prioritize the well-being of teaching staff by implementing policies addressing workload management, recognition of achievements, and professional growth opportunities. Establishing regular channels of communication and fostering a collaborative school culture can further enhance job satisfaction.

Teacher Self-Care and Advocacy: Teachers should prioritize self-care, seek professional development opportunities, and engage in open communication with school administrators. By articulating their needs and concerns and actively contributing to a positive work environment, teachers can enhance their job satisfaction and well-being.

Future Research Directions: Future research should explore additional factors influencing the quality of work life and job satisfaction of teachers. Utilizing alternative research approaches and investigating relevant variables can provide further insights into enhancing teacher satisfaction and well-being.

By implementing these recommendations, educational institutions can foster a supportive and fulfilling work environment for teachers, ultimately enhancing their job satisfaction and contributing to improved educational outcomes.

LEARNER-ORIENTED INSTRUCTION AND DATA INTERPRETATION SKILLS OF STUDENTS IN MANAY SOUTH DISTRICT, DAVAO ORIENTAL

Jessel Joy C. Jaum

https://orcid.org/0009-0000-2706-2859

Teacher 1, Anastacio P. Mamada Elementary School, Guicob, San Ignacio, Manay, Davao Oriental, Philippines

Article DOI: https://doi.org/10.36713/epra17109

DOI No: 10.36713/epra17109

ABSTRACT

The study aimed to investigate the influence of learner-oriented instruction of teachers on the data interpretation skills of students. In this study, the researcher selected the 212 elementary school teachers in Manay South District in Davao Oriental as the respondents of the study. Stratified random sampling technique was utilized in the selection of the respondents. Non-experimental quantitative research design using descriptive-correlational method was employed. The data collected were subjected on the following statistical tools: Mean, Pearson Moment Product Correlation and Linear Regression Analysis. Findings revealed that learner-oriented instruction of teachers and data interpretation skills of students in Manay South District in Davao Oriental were described as moderately extensive. Further, correlation analysis demonstrated that there is a significant relationship between learner-oriented instruction of teachers and data interpretation skills of students in Manay South District in Davao Oriental. Evidently, regression analysis proved that learner-oriented instruction of teachers in terms of learner empowerment; self-directed learning; and active learning engagement significantly influenced the data interpretation skills of students in Manay South District in Davao Oriental. The study, therefore, conducted for further utilization of findings through publication in reputable research journal.

KEYWORDS: Educational management, learner-oriented instruction of teachers, data interpretation skills of students, regression analysis, quantitative study

INTRODUCTION

In the current educational landscape, where the focus is shifting from rote memorization to skill development, understanding the dynamics between learner-responsive pedagogy and analytical interpretation aptitude is crucial. The modern classroom is more diverse than ever, with students from various backgrounds, learning styles, and abilities. Learner-responsive pedagogy ensures that educational processes accommodate this diversity, fostering a more inclusive and equitable learning environment. As education becomes more personalized, understanding how learner-responsive pedagogy influences analytical interpretation aptitude helps educators tailor instruction to individual students' needs. This customization improves learning outcomes by catering to students' unique strengths and weaknesses. Hence, this knowledge empowers educators to create learning experiences that cultivate analytical thinking, adapt to individual needs, and prepare students for the challenges of the 21st century.

Reports indicated that poor analytical interpretation aptitude can have a detrimental effect on students' performance in various academic contexts. For instance, Nunn et al. (2016) reported that continuous struggle with analytical tasks can erode students' confidence in their abilities, leading to a negative cycle where they avoid challenging tasks altogether. In addition, Kozma et al. (2000) noted that students with poor analytical interpretation skills might struggle to comprehend and make sense of complex information, which can hinder their ability to understand academic content across various subjects. More so, Barron et al. (2008) showed that students with weak analytical aptitude might find it challenging to approach and solve complex problems in academics and real-life situations, since analytical skills are essential for identifying, analyzing, and solving problems. In th Philippine setting, Dela Cruz et al. (2018) noted that lack of analytical aptitude resulted to poor performance in math and science subjects.

Conversely, Yuanxiang (2017) pointed out that analytical interpretation aptitude are essential for students' academic success, critical thinking, problem-solving, and decision-making abilities. These skills equip students with the ability to understand and use data effectively, making them more informed and well-rounded individuals in both their academic pursuits and daily life. According to Hussain et al. (2017), developing analytical interpretation aptitude promotes critical thinking abilities. Students learn to analyze information, consider multiple perspectives, and make logical connections, enhancing their overall cognitive skills. Similalry, Medeshovaa et al. (2017) viewed that data interpretation skills are valuable in problem-solving scenarios. Students can use data to identify patterns and trends, which can guide them in finding solutions to complex problems.

Previous studies showed that lerner-oriented instruction contributed to the enhancement of data interpretation skills of students. For instance, Chickering and Gamson (1987) showed that learner-oriented instruction promotes critical thinking skills, which are essential for data interpretation. Students are encouraged to question, analyze, and evaluate data, leading to more accurate and insightful interpretations. Adding more, Kuh (2008) proposed that learner-oriented instruction emphasizes connecting learning to real-world applications. This connection helps students see the relevance of data interpretation skills in practical scenarios, making the learning process more meaningful. Similarly, Gurung (2018) proposed that learner-oriented instruction involves interactive and hands-on activities that actively engage students in data analysis and interpretation.

On one hand, Marzano et al. (2001) characterized learnerresponsive pedagogy as an educational approach that prioritizes the needs, interests, and preferences of individual learners. It places learners at the center of the learning process, encouraging active engagement, self-directed learning, and personalized experiences to foster deeper understanding and meaningful

knowledge acquisition. Also, Shooley (2017) mentioned that learner-responsive pedagogy plays a crucial role in developing learners' interest and engagement. Accordingly, learner-responsive pedagogy tailors the learning experience to individual learners' interests, needs, and experiences. By connecting the content to real-life situations and personal interests, learners find the learning process more relevant and meaningful, sparking their curiosity and motivation to explore further.

While there have been several studies investigating the influence of teachers' learner-responsive pedagogy on the analytical interpretation aptitude of students, there remains a notable gap in the literature regarding the specific mechanisms through which learner-responsive pedagogy influences different aspects of data interpretation skills of students. While existing research has established a positive correlation between learner-oriented instruction and data interpretation skills of students, there is a need for more in-depth exploration to understand the underlying factors and processes that contribute to this relationship. Thus, it is on this context that the researcher felt the need to fill in the research gap of conducting a study in the Philippine setting, particularly in Manay South District, Davao Oriental using a quantitative approach. Specifically, the researcher made used descriptive correlational design to understand the data interpretation skills of students better as determined by the learner-oriented instruction, which is found to be scarce.

Statement of the Problem

The primary objective of the study is to determine which domains of learner-oriented instruction significantly influence the data interpretation skills of students in Manay South District, Davao Oriental. Specifically, the study has the following objectives:

- 1. What is the extent of learner-oriented instruction in terms of:
 - 1.1 learner empowerment;
 - self-directed learning;
 - 1.3 active learning engagement; and
 - 1.4 technology integration?
- 2. What is the extent of data interpretation skills of students in terms of:
 - 2.1 domain knowledge;
 - 2.2 attention to detail;
 - 2.3 adaptability; and
 - time management?
- 3. Is there a significant relationship between learner-oriented instruction and data interpretation skills of students in Manay South District, Davao Oriental?
- 4. Which domains of learner-oriented instruction significantly influence the data interpretation skills of students in Manay South District, Davao Oriental?

METHODOLOGY

Research Design

A quantitative non-experimental, correlational research design was employed. Quantitative research focuses on quantifying data collection and analysis (Bhandari, 2020). Non-experimental research measures variables as they occur naturally without manipulation. Descriptive-correlational research examines the relationship between variables to establish cause and effect (Myers & Well, 2013). This study explored the relationship between learner-oriented instruction and students' data interpretation skills, focusing on how different domains of learner-oriented instruction affect these skills.

Research Respondents

The respondents were 212 elementary school teachers from Manay South District, Davao Oriental, selected using Slovin's formula from approximately 450 teachers. Stratified random sampling was used to account for the population's heterogeneity (Pandey, 2015). Only permanent-regular teachers who voluntarily participated were included.

Research Instrument

Adapted and modified survey questionnaires were used. The first part, adapted from Marzano et al. (2001), assessed learner-oriented instruction across four domains: learner empowerment, self-directed learning, active learning engagement, and technology integration. The second part, adapted from Bonato et al. (2014), evaluated students' data interpretation skills across four indicators: domain knowledge, attention to detail, adaptability, and time management. Both parts of the survey demonstrated high reliability with Cronbach's alpha values of 0.954 and 0.976, respectively. The instruments used a range of means for descriptive interpretation.

Data Gathering Procedure

After validating the research questionnaire, the following steps were taken:

- 1. Permission to Conduct the Study: Permissions were secured from relevant authorities.
- 2. Distribution and Retrieval of the Questionnaire: Questionnaires were distributed and respondents were given adequate time to complete them.
- 3. Collation and Statistical Treatment of Data: Data were tallied and analyzed using SPSS for descriptive and inferential statistics.

Ethical Considerations

The study followed ethical protocols, including informed consent, ensuring participants' voluntary involvement, protecting their psychological well-being, and maintaining confidentiality per the Data Privacy Act of 2012. The researcher ensured the safety, risk minimization, and benefits disclosure to respondents. Transparency and justice were maintained throughout the study, and the findings were shared with the community and relevant stakeholders.

Data Analysis

- Mean: Used to describe the extent of learner-oriented instruction and students' data interpretation skills.
- Pearson Product-Moment Correlation: Assessed the relationship between learner-oriented instruction and data interpretation skills.
- Linear Regression Analysis: Identified which domains of learner-oriented instruction significantly influenced data interpretation skills.

RESULTS AND DISCUSSIONSLearner-Oriented Instruction

Learner Empowerment

The findings presented in Table 1 underscore the pervasive nature of learner-oriented instruction among teachers, as evidenced by a robust mean score of 3.51, indicating an extensive implementation. This suggests a prevalent commitment among educators to cultivate learning environments wherein students are empowered to assume active roles in their education. Brinkmann (2019) highlighted the intrinsic motivation fostered by learner empowerment, wherein students' ability to make choices, set goals, and engage actively in their learning journey correlates with heightened enthusiasm. Bremner (2020) further elucidated that empowered learners, endowed with autonomy and control over their educational experiences, exhibit heightened interest and engagement, substantiating the observed extensive learner empowerment.

Table 1. Learner-Oriented Instruction in Terms of Learner Empowerment

| | Statement | Mean | Descriptive Rating |
|----|--|------|----------------------|
| 1. | Providing them with choices in their learning journey, allowing them to explore topics of interest and work at their own pace. | 3.22 | Moderately Extensive |
| 2. | Letting them decide on the research topics, methodologies, and presentation formats | 3.24 | Moderately Extensive |
| 3. | Promoting learner empowerment by involving my students in decision-making processes. | 4.15 | Extensive |
| 4. | Ensuring that my teaching methods are flexible and inclusive. | 3.43 | Extensive |

Self-Directed Learning

In Table 2, the moderately extensive mean score of 3.21 reflects the occasional implementation of self-directed learning within learner-oriented instruction. This signifies educators' efforts in encouraging students to become self-directed and autonomous in

Mean

managing their learning processes. Bremmer's (2022) discourse emphasized the personalized nature of self-directed learning, catering to individual needs and interests, thereby augmenting comprehension and academic attainment.

Extensive

3.51

Table 2. Learner-Oriented Instruction in Terms of Self-Directed Learning

| | Statement | Mean | Descriptive Rating |
|----|--|------|-------------------------|
| 1. | Encourage my students to take charge of their learning by setting their goals, identifying areas of interest, and creating their learning paths. | 3.27 | Moderately Extensive |
| 2. | Providing students with resources, guidance, and support to facilitate their independent exploration. | 3.14 | Moderately Extensive |
| 3. | Encouraging students to reflect on their learning progress and experiences. | 3.84 | Extensive |
| 4. | Starting by providing structured choices and gradually increasing autonomy as they build confidence. | 2.11 | Less Extensive |
| 5. | Encouraging students to take ownership of their education by involving them in decision-making processes | 3.67 | Extensive |
| | Mean | 3.21 | Moderately Extensive |

Active Learning Engagement

As delineated in Table 3 with a moderately extensive mean score of 3.06, illustrates sporadic integration within learner-oriented instruction. This reveals educators' endeavors to facilitate instructional activities that promote dynamic participation and collaboration among students. Zhang (2017) expounded upon the

intrinsic motivation engendered by active learning engagement, positing its role in nurturing autonomy, relevance, and positive emotional responses, thus enhancing overall academic motivation. Echoing this sentiment, Starkey (2017) underscored the intrinsic joy and satisfaction derived from active participation in the learning process.

Table 3. Learner-Oriented Instruction in Terms of Active Learning Engagement

| | Statement | Mean | Descriptive Rating |
|----|---|------|----------------------|
| 1. | Using various strategies, such as group discussions, debates, hands-on activities, and problem-solving tasks. | 3.46 | Extensive |
| 2. | Conducting simulations and role-playing exercises to make complex topics more tangible and relatable. | 2.12 | Less Extensive |
| 3. | Incorporating real-world problem-solving tasks, where students collaborate to find creative solutions. | 3.43 | Extensive |
| 4. | Becoming a facilitator of learning, guiding, and supporting students' inquiries and discoveries. | 3.23 | Moderately Extensive |
| 5. | Allowing students to contribute verbally, through written responses, or even via technology tools. | 3.93 | Extensive |
| | Mean | 3.23 | Moderately Extensive |

Technology Integration

Table 4 portrays the extent of technology integration within learner-oriented instruction, yielding a moderately extensive mean score of 3.11. This suggests that while technology integration is occasionally observed among educators in Manay South District, Davao Oriental, there remains room for

improvement in leveraging digital tools to enrich instructional practices. Carter et al. (2020) advocated for the utilization of technology to personalize learning experiences, provide immediate feedback, and infuse gamification elements, thereby fostering students' active participation and enthusiasm in their educational journey.

Table 4. Learner-Oriented Instruction in Terms of Technology Integration

| | · · | 0. | · · |
|----|---|------|-------------------------|
| | Statement | Mean | Descriptive Rating |
| 1. | Incorporating technology to encourage student participation and collaboration. | 3.26 | Moderately Extensive |
| 2. | Having the technical skills needed to use technology. | 3.25 | Extensive |
| 3. | Using technology tools to process data and report results. | 3.29 | Moderately Extensive |
| 4. | Knowing about technologies that I can use for understanding the subject matter. | 3.41 | Extensive |
| 5. | Choosing technology that can enhance the teaching approaches for a lesson. | 2.36 | Less Extensive |
| | Mean | 3.11 | Moderately Extensive |

Summary on Learner-Oriented Instruction

Additionally, Table 5 offers a comprehensive summary of learner-oriented instruction, encapsulating the mean scores across various domains. Notably, learner empowerment emerged with the highest mean score of 3.51, indicating its extensive prevalence among educators. Conversely, technology integration garnered the lowest mean score of 3.11, signaling a lesser frequency of implementation. These findings underscore the multifaceted nature of learner-oriented instruction, emphasizing the importance of empowering students and fostering active engagement to cultivate deeper understanding and meaningful knowledge acquisition. Shooley (2017) emphasized the pivotal role of learner-oriented instruction in nurturing students' interest

and engagement, tailoring the learning experience to individual preferences and experiences.

In conclusion, the results elucidate the dynamic interplay between learner-oriented instruction and students' data interpretation skills in Manay South District, Davao Oriental. By fostering active learning environments, empowering students, and integrating technology effectively, educators can significantly enhance students' proficiency in interpreting data and deriving meaningful insights. These findings underscore the transformative potential of learner-oriented instruction in shaping students' analytical acumen, critical thinking abilities, and overall academic success.

Table 5. Summary on Learner-Oriented Instruction in Manay South District, Davao Oriental

| Indicators | Mean | Descriptive Equivalent |
|----------------------------|------|------------------------|
| Learner Empowerment | 3.51 | Extensive |
| Self-Directed Learning | 3.21 | Moderately Extensive |
| Active Learning Engagement | 3.23 | Moderately Extensive |
| Technology Integration | 3.11 | Moderately Extensive |
| Overall | 3.27 | Moderately Extensive |

Data Interpretation Skills of Students

Domain Knowledge

The moderately extensive mean score of 3.35 in Table 6 elucidates the occasional manifestation of students' domain knowledge in interpreting data. This underscores students' proficiency in understanding specific domains within their

relevant contexts to derive meaningful insights from data. Papamitsiou and Economides (2018) emphasized the critical role of domain knowledge in facilitating the selection of pertinent data and identifying anomalies for accurate interpretation.

Table 6. Data Interpretation Skills of Students in Terms of Domain Knowledge

| , | Statement | Mean | Descriptive Rating |
|----|--|------|----------------------|
| 1. | Students demonstrating a strong understanding of foundational concepts. | 3.12 | Moderately Extensive |
| 2. | Students can grasp concepts quickly. | 3.42 | Extensive |
| 3. | Students can make connections between what they learn in the classroom and how it relates to their everyday lives. | 4.13 | Extensive |
| 4. | Students can connect their personal experiences to the subject matter. | 2.72 | Less Extensive |
| | Mean | 3.35 | Moderately Extensive |

Attention to Detail

Attention to detail, as depicted in Table 7 with a moderately extensive mean score of 3.12, delineates students' intermittent focus on meticulous analysis to discern errors or inconsistencies in data. This underscores the significance of students'

conscientious approach to data interpretation, ensuring accuracy and reliability in their analyses. Wang et al. (2016) underscored the pivotal role of attention to detail in bolstering the reliability and comprehensiveness of data interpretation endeavors.

Table 7. Data Interpretation Skills of Students in Terms of Attention to Detail

| | Statement | Mean | Descriptive Rating |
|----|--|------|----------------------|
| 1. | Students are very detail-oriented and tend to notice even the smallest aspects of a task or assignment. | 3.26 | Moderately Extensive |
| 2. | Students to double-check their assignments before submission. | 3.45 | Extensive |
| 3. | Students participate in close reading exercises, where they analyze a text for specific information and nuances. | 3.29 | Moderately Extensive |
| 4. | Students look for patterns among concepts. | 2.49 | Less Extensive |
| | Mean | 3.12 | Moderately Extensive |

Adaptability

Table 8 highlights adaptability in data interpretation skills, attaining an extensive mean score of 3.59, underscoring students' frequent adeptness in embracing new data interpretation techniques. This underscores the importance of students' flexibility in adapting to evolving analytical methodologies,

thereby enhancing their analytical prowess and problem-solving acumen. Sin and Muthu (2017) extolled adaptability's role in fortifying students' analytical capabilities and readiness to apply data interpretation skills across diverse academic and professional contexts.

Table 8. Data Interpretation Skills of Students in Terms of Adaptability

| | Statement | Mean | Descriptive Rating |
|----|--|------|----------------------|
| 1. | Students embrace change and are quick to adjust to new situations or learning methods. | 3.89 | Extensive |
| 2. | Students can use different learning strategies in different situations. | 3.62 | Extensive |
| 3. | Students engage themselves in problem-solving activities. | 3.35 | Moderately Extensive |
| 4. | Students show a willingness to embrace change. | 3.49 | Extensive |
| | Mean | 3.59 | Extensive |

Time Management

The moderately extensive mean score of 3.29 in Table 9 elucidates students' sporadic adherence to efficient time management practices during data interpretation endeavors. This underscores the imperative of students' judicious allocation of

time to various stages of the data interpretation process, ensuring timely delivery of insights and findings. Nigussie (2019) underscored the pivotal role of time management in optimizing productivity and deriving meaningful insights from data analyses.

Table 9. Data Interpretation Skills of Students in Terms of Time Management

| | Statement | Mean | Descriptive Rating |
|----|---|------|----------------------|
| 1. | Students prioritize tasks, meet deadlines, and plan ahead. | 3.26 | Moderately Extensive |
| 2. | Students maintain a structured approach to their tasks and responsibilities. | 3.45 | Extensive |
| 3. | Students set clear goals for themselves, both short-term and long-term. | 3.29 | Moderately Extensive |
| 4. | Students demonstrate self-discipline and avoid distractions while studying or completing assignments. | 3.17 | Moderately Extensive |
| | Mean | 3.29 | Moderately Extensive |

Summary on Data Interpretation Skills

Lastly, Table 10 summarizes the data interpretation skills of students in Manay South District, Davao Oriental. The overall mean score is 3.34, indicating that these skills are moderately extensive and sometimes manifested. This means students occasionally demonstrate the ability to analyze, evaluate, and draw insights from various data forms like charts and graphs. This finding supports Yuanxiang's (2017) proposition that data interpretation skills are essential for academic success, critical thinking, problem-solving, and decision-making.

The highest mean score of 3.59 in adaptability is described as extensive and often manifested, while the lowest mean score of 3.12 in attention to detail is described as moderately extensive and sometimes manifested. According to Hussain et al. (2017), developing data interpretation skills enhances critical thinking by teaching students to analyze information, consider multiple perspectives, and make logical connections. Medeshovaa et al. (2017) emphasize that these skills are valuable in problem-solving, enabling students to identify patterns and trends to find solutions to complex problems.

| Time Management | 3.29 | Moderately Extensive |
| Overall | 3.34 | Moderately Extensive |

Relationship Between Learner-Oriented Instruction and Data Interpretation Skills of Students in Manay South District, Davao Oriental

Table 11 reveals a significant positive relationship between learner-oriented instruction and students' data interpretation skills, denoted by a Pearson correlation coefficient (r) of 0.367 and a p-value of .000, signifying the enhancement of data

interpretation skills with improvements in learner-oriented instruction. Vann et al. (2021) expounded upon the efficacy of personalized and active learning approaches in augmenting students' understanding and retention of data interpretation concepts.

Table 11. Relationship Between Learner-Oriented Instruction and Data Interpretation Skills of Students in Manay South District, Davao Oriental

| Wastallan | Data Interpretation Skills of Students | | | | |
|--------------------------------------|--|---------|-----------------------|--|--|
| Variables | r-value | p-value | Decision | | |
| Learner Empowerment | 0.326* | 0.000 | Reject H ₀ | | |
| Self-Directed Learning | 0.399* | 0.000 | Reject H ₀ | | |
| Active Learning Engagement | 0.402* | 0.000 | Reject H ₀ | | |

Legend: Perfect Correlation for r=1.00; Strong Correlation for $0.7 \le r < 1.00$; Moderate Correlation for $0.3 \le r < 0.7$; Weak Correlation for 0.00 < r < 0.30; No Correlation for r = 0.00

Influence of Learner-Oriented Instruction on the Data Interpretation Skills of Students in Manay South District, Davao Oriental

In Table 12, the linear regression analysis demonstrates the significant influence of learner-oriented instruction on students' data interpretation skills, with learner empowerment, self-directed learning, and active learning engagement emerging as significant predictors. This underscores the pivotal role of learner-oriented instruction in shaping students' proficiency in interpreting data and deriving meaningful insights. The observed adjusted R² value of 0.512 underscores the substantial contribution of learner-oriented instruction to the variability in students' data interpretation skills, highlighting its paramount importance in fostering analytical acumen and critical thinking abilities.

By aligning with Kolb's (1984) Experiential Learning Theory, learner-oriented instruction facilitates hands-on experiences and reflective practices, thereby internalizing data interpretation processes and enhancing students' interpretative prowess. Gurung's (2018) emphasis on interactive and hands-on activities within learner-oriented instruction resonates with the observed enhancement of students' engagement and motivation, fostering a conducive environment for data interpretation skill development.

Table 12. Influence of Learner-Oriented Instruction on the Data Interpretation Skills of Students in Manay South District, Davao Oriental

| Learner-Oriented Instruction | Data Interpretation Skills of Students | | | | |
|------------------------------|--|------|------|---------|-----------------------|
| Learner-Orientea Instruction | В | Beta | S.E | p-value | Decisions |
| Learner Empowerment | .203* | .149 | .049 | .000 | Reject H ₀ |

CONCLUSIONS AND RECOMMENDATIONSFindings

The primary objective of this study was to evaluate the impact of learner-oriented instruction on the data interpretation skills of students in Manay South District, Davao Oriental. Utilizing a non-experimental quantitative design with a descriptive-correlation approach, the study selected 212 elementary school teachers through stratified random sampling. Modified and pilottested survey questionnaires were used to ensure high reliability and internal consistency.

The study revealed that learner-oriented instruction received a moderately extensive overall rating, with specific domains such as learner empowerment, self-directed learning, active learning engagement, and technology integration scoring 3.51, 3.21, 3.23, and 3.11, respectively. Students' data interpretation skills were similarly rated as moderately extensive, with domain knowledge, attention to detail, adaptability, and time management scoring 3.35, 3.12, 3.59, and 3.29, respectively.

A significant positive moderate relationship was found between learner-oriented instruction and students' data interpretation skills ($r=.367,\ p<.05$). Specific domains of learner-oriented instruction, including learner empowerment (r=.326), self-directed learning (r=.399), active learning engagement (r=.402), and technology integration (r=.334), significantly influenced students' data interpretation skills. The collective impact of learner empowerment, self-directed learning, and active learning engagement was substantial, with an F-value of 16.766 and an r2 value of 0.512, indicating that these factors account for 51.20% of the variability in students' skills.

Conclusions

Learner-Oriented Instruction. Teachers in Manay South District implement learner-oriented instruction to a moderately extensive degree. Learner empowerment is particularly emphasized, while self-directed learning, active learning engagement, and technology integration are moderately emphasized. This indicates that teachers frequently place students at the center of the learning process, promoting active engagement and personalized experiences.

Data Interpretation Skills. Students' data interpretation skills are rated as moderately extensive overall, with adaptability receiving a notably high rating. This suggests that students occasionally demonstrate the ability to analyze and derive insights from various data forms.

\Relationship and Influence. There is a significant positive moderate relationship between learner-oriented instruction and students' data interpretation skills. This finding underscores the importance of active learning, student engagement, and personalized instruction in developing critical data interpretation skills. Specific domains of learner-oriented instruction, particularly learner empowerment, self-directed learning, and active learning engagement, significantly contribute to students' data interpretation skills.

Recommendations

Curriculum Development. The Department of Education should revise curricula to emphasize learner-centered pedagogies and data literacy. Standardized assessments should be designed to evaluate students' data interpretation skills, thereby encouraging schools to prioritize this critical area.

School Leadership. School heads should cultivate a data-driven culture, utilizing data to inform instructional practices and monitor student progress. Additionally, they should support

ongoing professional development for teachers in learner-centered teaching methods and data interpretation skills.

Teacher Development. Teachers should actively engage in professional development focused on learner-centered instruction and data literacy. They should integrate data analysis and interpretation tasks into classroom activities to enhance students' skills.

Student Engagement. Students should actively participate in classroom activities involving data analysis and interpretation. They should also independently explore resources and tools to further develop their data interpretation skills.

Future Research. Researchers should prioritize investigations into effective instructional strategies for learner-oriented teaching and interventions to improve data interpretation skills. Future studies should also analyze the impact of learner-oriented instruction on student learning outcomes and data literacy development.

KNOWLEDGE REGARDING FIRST AID TRAINING SKILLS AMONG COMMERCIAL DRIVERS IN HIMACHAL PRADESH

Rohit Nadda

District Program Officer O/o CMO Chamba Distt. Chamba Himachal Pradesh

ABSTRACT

First aid is critical for preserving life, preventing further injury, and alleviating suffering until medical assistance is available. Road traffic accidents, a prevalent cause of injuries and fatalities, underscore the need for immediate first aid. This study assesses first aid knowledge among 200 commercial drivers in Chamba district, Himachal Pradesh. Using a structured questionnaire, socio-demographic data and first aid knowledge were collected and analyzed with SPSS-16. Results indicate 99% awareness of first aid, but only 30% had formal training. Key skills like controlling severe bleeding (73%) and splinting fractures (76.5%) were well-known, yet knowledge on airway management (36%) and correct patient positioning (25%) was lacking. Despite 56% recognizing chest compressions as a priority, only 20% emphasized breathing maintenance. The study highlights the necessity for comprehensive first aid training programs tailored for commercial drivers, who are frequently first responders to accidents. Enhanced training can improve emergency response, reduce economic and social impacts of traffic injuries, and promote better public health and safety outcomes. The findings stress the need for structured, recurring training sessions to bridge knowledge gaps and equip drivers with essential life-saving skills.

KEYWORDS: First aid, commercial drivers, road traffic accidents, Chamba district, Himachal Pradesh, emergency response, training programs.

KNOWLEDGE REGARDING FIRST AID TRAINING SKILLS AMONG COMMERCIAL DRIVERS IN HIMACHAL PRADESH

The first aid is the emergency assistance given to a victim sick or injured in order to preserve life, prevent further injury and relieve suffering until qualified medical care is available. In the modern world where in addition to natural disasters the manmade disasters like road traffic accident has become very common. According to World Health Organization, every year the lives of approximately 1.19 million people die as a result of road traffic accidents. Between 20 and 50 million more people suffer nonfatal injuries, with many incurring a disability.2 As per Government of Himachal Pradesh data during year 2023 a total of 1,399 accidents are reported, among them 564 are killed and 830 are injured.³ Road traffic injuries cause considerable economic losses to individuals, their families, and to nations as a whole. These losses arise from the cost of treatment as well as lost productivity for those killed and disabled by their injuries, and for family members who need to take time off work or school to care for the injured. The Government considers it necessary to protect the Good Samaritans from harassment on the actions being taken by them to save the life of the road accident victims and, therefore, the Government had issues guidelines to be followed by hospitals, police and all other authorities for the protection of Good Samaritans from legal complications.⁴

The road side injuries/ emergencies require immediate intervention at the spot to save the life of victim. So the

importance of first aid becomes very important in such scenario. If the awareness about various life saving emergency procedures like cardiopulmonary resuscitation, artificial respiration, application of splints, correct use of fire extinguisher, triage the precious life can be saved. The knowledge of first aid is important for every individual but is more so for commercial drivers as they are more likely to witness/ involved in road traffic accidents. Also, studies among commercial drivers regarding first aid knowledge are very less. Hence, this study was carried out with the aim to assess the knowledge among the commercial drivers from Chamba district of Himachal Pradesh in India, regarding first aid.

MATERIAL AND METHODS

A cross-sectional study was conducted in the Chamba district of Himachal Pradesh in 2023. In this the 200 commercial drivers are selected by simple random sampling. All the participants who were willing to participate were enrolled in the study. This was a questionnaires based study in which the closed ended questions are used to assess the knowledge about first aid among participants. The questionnaire included two sections, in which the first section includes questions about socio-demographic details of participants. The second section includes questions regarding knowledge about first aid, first aid kit and components of first aid kit along with its uses. The data was collected entered in the MS-Excel and analysed using SPSS version-16.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

RESULTS

The present study is a cross-sectional study dome among commercials drivers in Chamba district of Himachal Pradesh. The table 1 provides a comprehensive socio-demographic profile of the study participants, highlighting their age distribution, education levels, marital status, type of vehicle driven, and daily driving hours. The majority of participants are aged between 30-39 years, comprising 48.5% of the sample. Those aged 20-29 years account for 31.5%, while 17.5% are in the 40-49 years age group. Participants aged 50 years and above constitute the smallest group, making up only 2.5%. The education levels among participants vary, with the largest group having completed education from middle to higher secondary school, representing

73.0% of the sample. Those with graduate-level education and above account for 21.5%, while a small proportion, 5.5% have education up to middle school. The marital status of participants shows that a significant majority, 78.5% are married, whereas 21.5% are unmarried. In terms of vehicle type, a large proportion of participants, 81.5% (163 individuals), drive private vehicles. The remaining 18.5% (37 individuals) operate government vehicles. The distribution of daily driving hours indicates that most participants drive between 6 to 10 hours per day, making up 73.5% (147 individuals) of the sample. Those driving less than 6 hours per day constitute 17.5% (35 individuals), while 9.0% (18 individuals) drive for more than 10 hours daily.

| | Table 1: Sociodemographic profile of the | participants |
|---|--|--------------|
| 1 | Age | |
| | 20-29 | 63 (31.5%) |
| | 30-39 | 97 (48.5%) |
| | 40-49 | 35 (17.5%) |
| | ≥50 | 05 (2.5%) |
| 2 | Education | |
| | Upto middle | 11 (5.5%) |
| | Middle to higher secondary | 146 (73.0%) |
| | Graduate and above | 43 (21.5%) |
| 3 | Marital status | |
| | Married | 157 (78.5%) |
| | Unmarried | 43 (21.5%) |
| 4 | Vehicle type | |
| | Government | 37 (18.5%) |
| | Private | 163 (81.5%) |
| 5 | Hours of driving per day | |
| | <6 hours | 35 (17.5%) |
| | 6-10 hours | 147 (73.5%) |
| | >10 hours | 18 (9.0%) |

The Table-1 Showing the socio-demographic details of the participants

The table-2 is showing the first aid knowledge among participants in Himachal Pradesh, revealing a high level of general awareness but varying degrees of specific knowledge and skills. An overwhelming 99% of participants have heard about first aid, yet only 30% have received formal training. A significant 95% recognize that first aid can save lives, and 90% are aware of the emergency helpline number. Additionally, 87% have heard of 'The Good Samaritan Law,' 80% know when and where to provide first aid, 60% believe bystanders should give first aid, and 68.5% can name at least five items in a first aid kit.

Regarding first aid priorities, 56% identified chest compression as most important, 20% emphasized maintaining breathing, 10.5% prioritized calling an ambulance, 8.5% highlighted splinting fractures, and only 4% thought stopping the bleeding was crucial, with 1% unsure. Specific knowledge revealed that 36% could identify airway problem symptoms, 25% knew the correct safe position for patients, 73% understood how to apply pressure to control severe bleeding, and 76.5% knew how to apply a splint for fractures. When it came to indications for hospital transportation, 15.5% cited unconsciousness, 3.5% mentioned open wounds, 5% noted fractures, and a substantial 76% correctly identified all three conditions as reasons for hospital transport.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Knowledge of participants among first aid in Himachal Pradesh | | | |
|---|--|---------------|--|
| S. No. | Knowledge | Frequency (%) | |
| 1 | Heard about first aid | 198 (99%) | |
| 2 | Ever received training in first aid | 60 (30%) | |
| 3 | First aid saves life | 190 (95%) | |
| 4 | Emergency helpline number known | 180 (90%) | |
| 5 | Heard of 'The good Samaritan Law' | 174 (87%) | |
| 6 | Knowledge of when & where to provide first aid | 160 (80%) | |
| 7 | Bystander should give first aid | 120 (60%) | |
| 8 | First aid kit contents (name any 5 articles) | 137 (68.5%) | |
| 9 | First aid priority: | | |
| | Chest compression | 112 (56%) | |
| | Breathing maintenance | 40 (20%) | |
| | Call the ambulance | 21 (10.5%) | |
| | Splinting fractures 10 (4.0) | 17 (8.5%) | |
| | Stop the bleeding 73 (29.0) | 08 (4%) | |
| | Don't know 2 (0.8) | 02 (1%) | |
| 10 | Any symptom or sign of airway problem known | 72 (36%) | |
| 11 | Correct knowledge of safe position | 50 (25%) | |
| 12 | Applying pressure for severe bleeding | 146 (73%) | |
| 13 | Application of splint for fracture | 153 (76.5%) | |
| 14 | Indication of transportation to hospital: | , | |
| İ | Unconscious | 31 (15.5%) | |
| Ì | Open wound | 07 (3.5%) | |
| Ì | Fracture | 10 (5%) | |
| | All of the above | 152 (76%) | |

DISCUSSION

The study assessed the knowledge among commercial drivers in Chamba district of Himachal Pradesh. All the participants in the study were males as this profession is male dominated in Himachal Pradesh. The majority of drivers are males and also driving private vehicle. A notable 99% of participants have heard about first aid, indicating widespread general awareness. A study conducted by Awasthi S et al among commercial drivers in India⁵ in which majority of participants 96% have heared about first aid. In our study only 30% have received formal training while study conducted by Pallavisarji U et al in southern India⁶ in which 62% of drivers had received training.

The study highlights varied levels of specific first aid knowledge. For instance, 73% of participants know how to apply pressure to control severe bleeding, and 76.5% understand how to apply a splint for fractures. These skills are crucial for managing common injuries in road traffic accidents. However, only 36% can identify symptoms of airway problems, and a mere 25% know the correct safe position for patients. A study conducted by Olugbenga-Bello AI et al in Nijeria⁷ in which majority (59.9%) correctly prioritized airway management first, while only 37.6% identified the correct order for all the three care areas. When it comes to prioritizing first aid measures, 56% of the drivers correctly identified chest compression as the most important, reflecting a reasonable understanding of cardiopulmonary resuscitation (CPR). However, only 20% emphasized maintaining breathing, which is equally critical. This highlights the need for comprehensive training that equally addresses all life-saving priorities, ensuring a balanced approach to emergency care.

CONCLUSION

The study conducted among commercial drivers in the Chamba district of Himachal Pradesh demonstrates a high level of general awareness regarding first aid, with 99% of participants acknowledging its importance. However, only 30% of these drivers have received formal training, exposing a critical gap that needs addressing. While a significant number of drivers are proficient in essential first aid skills such as applying pressure to control severe bleeding (73%) and using splints for fractures (76.5%), there is a marked deficiency in knowledge regarding airway management (36%) and correct patient positioning (25%). These findings underscore the necessity for comprehensive and mandatory first aid training programs specifically tailored for commercial drivers, who are often first responders to road traffic accidents.

The prioritization of first aid measures by the drivers, with 56% identifying chest compression as crucial yet only 20% emphasizing the importance of maintaining breathing, further highlights the need for balanced and thorough training that covers all vital aspects of emergency care. By implementing structured, recurrent training programs and practical, hands-on sessions, the readiness of these drivers to effectively manage roadside emergencies can be significantly enhanced. Such initiatives are

not only crucial for improving immediate emergency response but also for mitigating the long-term economic and social impacts of road traffic injuries, ultimately contributing to better public health and safety outcomes.

ABSTRACT

Introduction: Forward head posture (FHP) is a common musculoskeletal problem caused by modern lifestyle variables such as prolonged sitting, poor ergonomics, and excessive use of electronic gadgets. This literature review investigates the efficacy of the McKenzie Method in addressing FHP by doing a thorough examination of relevant research.

Methods: A comprehensive search was performed in electronic databases such as PubMed, Google Scholar, and Direct Science. The inclusion criteria were studies published between 2016 and 2023 that focused on the McKenzie method for treating FHP in children and adults worldwide. A total of 33 publications were discovered, with 6 chosen for in-depth research.

Results: The review discusses the prevalence, causes, and implications of FHP, with a focus on musculoskeletal health and overall well-being. The McKenzie Method, a holistic approach to spinal and extremity pain, has emerged as an effective intervention for treating FHP. McKenzie exercises have been shown in studies to significantly enhance neck function, postural alignment, and respiratory health.

Conclusion: The study concluded that the McKenzie Method appears to be a promising approach for managing FHP, addressing the serious health consequences of this postural abnormality. Additional study is required to improve its effectiveness and promote greater postural health and general well-being.

INTRODUCTION

Posture is defined as a state of musculoskeletal balance through which a minimal amount of stress is applied to the body. Many people try to maintain good posture, but they cannot sustain it due to various factors such as their occupation, recreational activities, and BMI ⁽¹⁾. Our posture starts getting affected from a very early stage of life. As soon as children start school, their musculoskeletal system begins to change due to the continuous sitting posture. Children spend one-third of their time at school in a static position. Students sit on furniture that is not ergonomically suitable for them. Because of this static posture and faulty furniture, students experience pain in their back and neck regions, and the curvature of their spine gets affected ⁽²⁾.

Modern life also impacts posture as students study on their computers and other electronic devices in incorrect sitting positions. Carrying heavy bags also leads to postural changes. It was found that adolescents carrying more than 15% of their body weight in their bags experience postural changes. Common postural defects in adolescents include rounded shoulders, forward head posture, swayback posture, and flat back (3).

A prevalence study in Gujarat, India, states that 63 % of students between the ages of 12 and 16 years have forward head posture ⁽⁴⁾. The prevalence of university students having a forward head posture is 63.96% ⁽⁵⁾. Additionally, 79% of the population between the ages of 18 and 44 have a forward head

posture ⁽⁶⁾. Causes of forward head posture include long-duration work in front of computers ⁽⁷⁾. Those who wear glasses are more prone to forward head posture ⁽⁸⁾, as are those carrying backpacks weighing more than 15% of their body weight ⁽³⁾, electronic gamers ⁽⁹⁾, and those who excessively use smartphones ⁽¹⁰⁾. Lying on the stomach for more than 2 hours while reading also contributes to this condition ⁽¹¹⁾.

Problems associated with forward head posture include restrictions in subcranial and upper thoracic movement, hypermobility of the mid-cervical spine, headaches, dizziness, occasional loss of balance, and difficulty in total spinal motion. Excessive extension of the upper cervical spine can reduce the space for the first and second occipital nerves to exit, leading to compression and referred pain in the head. Forward head posture can also cause upper thoracic kyphosis, reducing mobility in that region, which is not reversible. Additionally, adaptive shortening of anterior muscles and drooping of the clavicles can lead to thoracic outlet syndrome. The upper rib cage is immobilized in forward head posture, requiring increased abdominal activity during respiration (12). If not treated, forward head posture can lead to TMJ dysfunction syndrome due to muscular imbalance (13).

Patho mechanics of forward head posture: A lordotic curve is normally present in the cervical spine. Continuous contraction of head and neck muscles is required to maintain a static posture for prolonged periods. Extension of the upper cervical spine and flexion of the lower cervical spine result in a protraction

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

movement. Conversely, flexion of the upper cervical spine and extension of the lower cervical spine result in a retraction movement. In normal posture, the line of gravity should pass through the external auditory meatus, cervical spine bodies, acromion, and anterior to the thoracic spine. If the cervical spine remains in a protracted position for a prolonged period due to any reason or activity, it can lead to a postural deviation known as forward head posture. Due to these postural misalignments, muscles require greater force to counter the external torque produced by gravity, altering the line of gravity from its normal location (14).

This article aims to review the literature on correcting forward head posture through the McKenzie Method. The McKenzie Method, also known as Mechanical Diagnosis and Therapy (MDT), is a comprehensive approach to spinal and extremity pain. It emphasizes self-treatment and active patient involvement to manage and prevent musculoskeletal conditions. The following sections will detail the principles of the McKenzie Method and its application in addressing forward head posture, supported by evidence from relevant studies and clinical practice.

METHODOLOGY

Materials and Methods

A comprehensive search was conducted in electronic databases including PubMed, Google Scholar, and Direct Science.

Keywords such as forward head posture, neck pain, musculoskeletal pain, epidemiology, McKenzie approach Studies focusing on the prevalence, risk factors, biomechanical aspects, and interventions for forward head posture were included. The articles were collected in full text. A total of 33 articles were collected and only 6 articles are used in this study for the research.

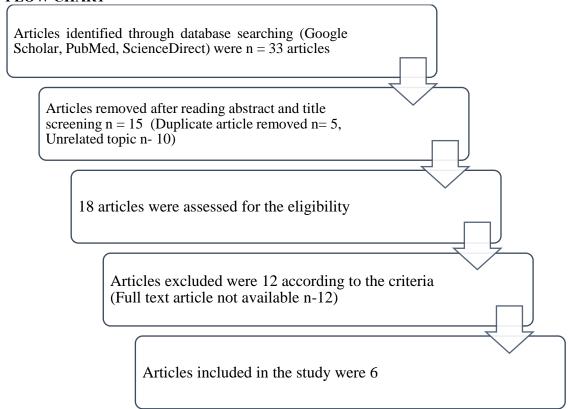

Study Selection Inclusion Criteria

- Articles were included from year 2016 to 2023.
- Articles include the use of McKenzie approach to treat forward head posture.
- Article related to forward head posture worldwide.

Exclusion Criteria

- Articles before the year 2016 not be included.
- No pathological disorders, fractures, or stenosis conditions were included which caused forward head posture.

FLOW CHART

REVIEW OF LITERATURE

1. Erina et al (2023) conducted a study, the purpose of the research is to compare the effect of isometric and cervical McKenzie exercises on the neck functional score in computer users who have forward head posture. This study

used a quasi-experimental design. By using purposive sampling, 24 computer users were selected for the study, the participants were split into two groups and given cervical McKenzie exercise (n = 12) and cervical isometric exercise (n = 12). Every group was given a distinct

- exercise. The Neck Disability Index (NDI) questionnaire was used to measure the neck's functional score both before and after the intervention. It has been concluded that cervical McKenzie exercise is much more effective than cervical isometric exercise, is more beneficial in raising neck functional scores in patients with FHP. (15)
- Shreya Joshi et al (2019) The purpose of this study was to determine how the McKenzie self-therapy protocol improved adolescent girls' forward head posture and respiratory health. Sixty school-age girls were divided into two groups at random for experimental research. For 12 weeks, group A received McKenzie self-therapy while group B was in control. The craniovertebral angle (CVA) was used to assess the forward head angle. The peak expiratory flow metre was used to measure the peak expiratory flow rate, or PEFR. With McKenzie selftherapy, a significant improvement in respiratory function and forward head posture was observed. The control group's respiratory function showed a significant difference. There was a greater variation in CVA in the exercise group, but there was no discernible difference in respiratory performance across the groups. (16)
- 3. Vishnupriya Deshpande et al (2019) this study aims to investigate how young individuals forward head posture is affected by the McKenzie technique, neck exercises, and a combination of both. Thirty subjects, aged eighteen to thirty-five, were divided into three groups Group-A, Group-B, Group- C randomly and given three sessions a week for four weeks of McKenzie approach, neck exercise, or combination treatment. The McKenzie method and neck exercises were both beneficial in treating forward head posture; however, there was a statistically significant difference between groups (A) and (B), (B) and (C), but not between groups (A) and (C).
- SeYoon Kim et al (2019), the study aimed to examine how forward head posture and respiratory function were affected by the McKenzie exercise programme. Thirty adult males and females, ages 20 to 29 with forward head posture, were assigned randomly into two groups: the experimental group (N = 15) and the control group (N =15). For four weeks, participants in the experimental group conducted the McKenzie exercises three times a week, whereas those in the control group received no assistance at all. Measurements of forced vital capacity (FVC), FVC% predicted, forced expiratory volume at one second (FEV1), and FEV1% predicted were made to assess changes in respiratory function. Craniovertebral angle (CVA) was also taken. When pre- and post-test measures were compared, the experimental group's CVA considerably increased, indicating postural improvement, while the control group showed no significant change. In experimental group, there were significant improvements in all respiratory measurements (FVC, FVC %pred, FEV1, and FEV1 %pred), while no significant differences were observed in the control group. So, they concluded forward head posture and respiratory function can both be enhanced by the McKenzie exercise. (18)
- 5. Do Youn Lee et al (2017) The purpose of this study was to ascertain the impact of exercises that improve forward head posture on rounded shoulder posture when using the

- self-stretch, McKenzie, and Kendall exercises as intervention methods. The 28 participants that were chosen were divided into three groups at random: the Kendall exercise group (n = 9), the self-stretch exercise group (n = 10), and the McKenzie exercise group (n = 9). The craniovertebral angle was employed to compare the forward head posture. The scapular index was developed to quantify the rounded shoulder posture. Within each group, there were notable variations in the scapular index and craniovertebral angle, but not between the groups. The study's findings demonstrated that all interventions raised the scapular index and the craniovertebral angle, indicating that the exercises used improved the forward-head and rounded-shoulder postures. $^{(19)}$
- Kumar Neeraj et al (2016) The goal of this research was to compare the benefits of McKenzie Neck Exercise vs Strengthening Neck Exercise for individuals with neck pain. 44 individuals with neck pain were included in a convenience sample and randomly assigned to one of three groups, A, B, or C. Postural correction, hot packs, and McKenzie treatment will be administered to Group A subjects. Postural correction, a hot pack, and strengthening exercises will be given to the Group B patient. Postural correction and Hot Pack are the subjects of Group C. For four weeks, all three groups received treatment. Tools Using analysis of variance, the subjects' height, weight, and age were compared among groups A, B, and C. The McKenzie method, the isometric strengthening exercise, and the hot pack method differed significantly from one another for treating cervical pain. Studies have shown that the McKenzie protocol is superior to the isometric strengthening exercise. (20)

DISCUSSION

The literature review provides a full summary of forward head posture (FHP), its prevalence, underlying causes, and associated health consequences, as well as the McKenzie Method's effectiveness in treating this widespread postural defect. The findings highlight the enormous impact of modern lifestyle and ergonomic variables on posture, beginning at a young age.

Forward head position is common in all age groups, with research showing that 63 % of the age group 12 to 16, 63.96 % of university students, and 79 % of the population aged 18 to 44 years demonstrate this postural condition. The predominance is attributed to long durations of sitting, poor ergonomics, and heavy backpack use. Specific behaviours, such as long-term computer work, excessive smartphone use, and wearing bags weighing more than 15% of body weight, are important causes. This prevalent occurrence underscores the importance of appropriate intervention techniques to reduce the related health risks.

FHP has wide-ranging ramifications, affecting not only musculoskeletal health but also overall well-being. FHP is associated with limitations in subcranial and upper thoracic movement, hypermobility of the mid-cervical spine, headaches, dizziness, occasional loss of balance, and issues with total spinal motion. These symptoms are compounded by

biomechanical changes produced by prolonged cervical spine protraction, which can result in increased muscular strain and nerve compression. Moreover, adaptive shortening of anterior muscles and drooping of the clavicles can result in thoracic outlet syndrome, while immobilization of the upper rib cage in FHP necessitates increased abdominal activity during respiration. If left unaddressed, FHP can also contribute to temporomandibular joint (TMJ) dysfunction due to muscular imbalance.

The Patho-mechanics of FHP involve a disruption of the normal cervical spine alignment, necessitating continuous contraction of head and neck muscles to maintain the posture. The altered line of gravity requires greater muscular force to counteract the external torque, leading to increased strain and potential postural deviations. Understanding these mechanics is crucial for developing effective therapeutic interventions.

The McKenzie approach has shown considerable promise in correcting FHP. Several studies reviewed demonstrate its effectiveness in improving neck function, postural alignment, and respiratory health. For instance, Erina et al. (2023) found that cervical McKenzie exercises significantly improved neck functional scores in computer users with FHP compared to cervical isometric exercises. Similarly, Shreya Joshi et al. (2019) reported significant improvements in both FHP and respiratory function among adolescent girls following the McKenzie self-therapy protocol.

Other studies further support these findings. Vishnupriya Deshpande et al. (2019) highlighted the benefits of the McKenzie method combined with neck exercises in treating FHP in young adults. SeYoon Kim et al. (2019) demonstrated significant improvements in postural alignment and respiratory function in adults with FHP after a four-week McKenzie exercise program. Additionally, Do Youn Lee et al. (2017) found that the McKenzie exercises improved both FHP and rounded shoulder posture, indicating its comprehensive benefits. Kumar Neeraj et al. (2016) also confirmed the superiority of the McKenzie method over isometric strengthening exercises in treating cervical pain associated with FHP.

In summary, the McKenzie Method emerges as a highly effective approach for managing and correcting FHP. Its emphasis on self-treatment and active patient involvement makes it a practical solution for various settings, from schools to workplaces. Future research should focus on the long-term efficacy and adherence to the McKenzie Method, comparative studies across different populations, and the integration of technological tools to enhance its effectiveness. Addressing these areas will further validate and refine the use of the McKenzie Method in promoting better postural health and overall well-being.

CONCLUSION

In conclusion, forward head posture (FHP) is a prevalent postural defect affecting various age groups, primarily due to modern lifestyle factors such as prolonged sitting, incorrect ergonomic setups, and excessive use of electronic devices. The

associated health problems of FHP are extensive, impacting musculoskeletal health and overall well-being by causing movement restrictions, muscle strain, nerve compression, and potential conditions like thoracic outlet syndrome and temporomandibular joint dysfunction.

The literature reviewed highlights the significant potential of the McKenzie Method in addressing FHP. Studies consistently demonstrate the effectiveness of the McKenzie exercises in improving neck function, postural alignment, and respiratory health across different populations. The method's emphasis on self-treatment and active patient involvement makes it a practical and accessible solution for various settings.

Given these findings, the McKenzie Method stands out as a highly effective approach for managing FHP. However, future research should focus on assessing the long-term efficacy and adherence to this method, conducting comparative studies across diverse populations, and integrating technological tools to further enhance its effectiveness. These steps will help validate and refine the use of the McKenzie Method, ultimately promoting better postural health and overall well-being.

Article DOI: https://doi.org/10.36713/epra17137

DOI No: 10.36713/epra17137

ABSTRACT

This explanatory sequential mixed method study aimed to know the status and determine the influence of teacher efficacy and attitude in inclusive education to teachers' readiness for inclusive education. The participants were the teachers from the public elementary schools in Region XI, Philippines, who were purposively selected. The researcher made use of validated adapted survey questionnaires and in-depth interview guide to collect relevant data. Mean, standard deviation, regression and thematic analysis were used to analyze the corresponding data gathered. In the quantitative phase, the findings revealed that the status of teacher efficacy with all the indicators: efficacy to use inclusive instruction, efficacy in managing behavior got a very high rating. The participants also rated very high as to the attitude in inclusive education with all its indicator: cognitive, affective and behavioral. As to the readiness for inclusive education, with all its indicators: curriculum instruction, curriculum content, assessment on students' performance and evaluation and monitoring of students' progress got a very high rating. It revealed further that both teacher efficacy and attitude in inclusive education significantly influence teachers' readiness for inclusive education. It also showed that the two predictors combined had a significant influence on readiness for inclusive education. In the qualitative phase, for teacher efficacy, the themes emerged were: confirmed very high rating of efficacy to use inclusive instruction, confirmed very high rating on efficacy in collaboration, and confirmed very high rating on efficacy in managing behavior. For attitude in inclusive education, the themes emerge were: confirmed very high rating on affective, confirmed very high rating on cognitive and confirmed very high rating on behavioral. As to readiness for inclusive education, the themes emerged were: confirmed very high rating on curriculum instruction, confirmed very high rating on curriculum content, confirmed very high rating on assessment of students' performance and confirmed very high rating on evaluating and monitoring students' progress. Finally, findings of the integration revealed that the results of the two phases corroborated with each other, thus the nature of integration is connecting-merging. Participants confirmed that teacher efficacy is always evident, attitude of teachers toward inclusive education is always demonstrated and readiness for inclusive education is always observed. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating.

KEYWORDS: Educational leadership, teacher efficacy, attitude in inclusive education, readiness for inclusive education, mixed methods, explanatory sequential design, Philippines.

I. INTRODUCTION

The readiness of teachers to address the needs of all students is crucial for the successful implementation of inclusive education practices (Dioso et al., 2022). However, most countries need comprehensive equity strategies to achieve this goal. According to UNESCO (2019), only 11 percent of 71 countries have implemented comprehensive equity strategies, while another 11 percent have developed approaches targeted at specific groups. It raises critical questions about the effectiveness and inclusivity of current educational systems in addressing the diverse needs of all learners and the preparedness of educators to meet these needs.

According to an Australian study on teachers' readiness for inclusive teaching, many still feel ill-equipped because of their inclusive role and are not adequately prepared for the difficulties they now encounter in implementing inclusive education (Walker, 2021). Similar to this, a study carried out in Indonesia revealed that teachers struggle to create lessons that can meet the needs of all students, lack knowledge of the traits of all students, and are unable to create individualized learning plans for learners with special educational needs (LSEN) (Tambunan &

Rachmadtullah, 2018). In addition, a study conducted in Russia revealed that teachers are cautious about the implementation of

special education and believed that they are not ready to work with LSEN for they do not understand their psychological characteristics (Pershina et al., 2018).

In 2010, the Philippine Department of Education (DepEd) projected that there were 5.49 million learners with special learning needs in the country. According to a recent presentation by the Bureau of Learning Division, there are an estimated 1.7 million persons with disabilities in the Philippines, or 1.57 percent of the country's overall population. Yet according to studies, instructors might not be sufficiently trained for inclusive education (Mendes et al., 2018). In Negros Oriental, most participants struggle to give lessons effectively to children with special needs in a system that is inclusive (Dela Fuente, 2021). Further instruction in managing students with special needs in an inclusive environment was also stressed in research conducted in Zamboanga (Dioso et al., 2021).

A study conducted by Loreman et al. (2019) examines teachers' efficacy and readiness toward inclusive education. The results showed that teachers with higher levels of teacher self-efficacy were more likely to have greater readiness for inclusive education and feel more prepared to implement inclusive practices in their classrooms. Additionally, the study found that teachers who had more experience working with students with disabilities had higher levels of teacher self-efficacy and readiness. Moreover, Kaya (2021) had similar results in their study and stated that teacher efficacy was an important predictor of preparation for inclusive education. Besides. aforementioned teachers believe that they can only make a limited number of interventions to include a student with special learning needs in a conventional classroom due to the belief that they are not ready for inclusive education (Kazanopoulos et al., 2022). Further, there is a clear connection between a positive attitude toward inclusive education and readiness for inclusive education. In other words, as attitudes toward inclusive education become more positive, readiness for inclusive education practices also increases (Zainalabidin & Ma'rof, 2021). Hence, it is reasonable to expect that a teacher who holds negative attitudes toward inclusion or a specific program may not also prepare to address all the learners' needs, thus decreasing their readiness for inclusive education (Kielblock, 2018). Teachers hold positive attitudes towards inclusion as an idea, but feel less positive about their readiness and capacity to implement inclusive practices in their classrooms (Boyle, 2021).

In spite of the growing recognition of the importance of inclusive education, there is still a lack of understanding about the specific factors that influence teacher attitude in inclusive education, teacher efficacy, and readiness for inclusive education. While some research has explored individual factors such as teacher attitude in inclusive education (Cochran,1998; Jury et al., 2021; Singh et al., 2020) and teacher efficacy (Johnson, 2020; Kazanopolous et al., 2022) alone, there is a need for more comprehensive studies that consider a range of factors that may interact to shape teacher readiness for inclusive education. Several studies have explored readiness for the

implementation of education focusing on pre-service teachers (Kudarinova, 2023; Smolyar et al., 2021); and secondary teachers (Serakalala et al. 2019). However, the cited studies were conducted abroad or outside the country and the researcher could not access studies which dealt with the same phenomenon in the local setting. This study explored the potential linkages of public elementary mainstream teachers between how teacher efficacy and attitude in inclusive education may impact the extent of their readiness for inclusive education practices. In addition, the mentioned studies were mostly quantitative in nature, but this study employed mix method design to provide a more comprehensive and well-rounded understanding about the issues on readiness for inclusive education as suggested by Zainalabidin and Marof (2021). By addressing these gaps in the literature, researchers can provide valuable insights into how to support teachers in implementing inclusive education effectively in general. Thus, the researcher saw the urgency to conduct this study.

The researcher was keenly interested in understanding the influences on teacher readiness for inclusive education. This would be very useful for mainstream teachers to further explain and address the issues of readiness in the context of curriculum instruction, curriculum content, assessment of student performance, and evaluating and monitoring students' progress. Furthermore, the researcher wanted to explore issues that could provide strong linkages between teacher attitude in inclusive education, teacher efficacy, and readiness in the context of inclusive education. Ultimately, the research aimed to contribute to promoting inclusive education practices, social equity, and high-quality education for all learners.

This study would be very useful specifically for teachers who are teaching in the general education classroom with LSEN. Thus, the findings of this study would be shared and contribute to the body of knowledge through publication in scholarly journals, conference proceedings, and academic books. This could also be disseminated via the presentation of research findings at conferences, seminars and workshops along with other professionals in the field. Further, the researcher may engage with the local communities and organizations to promote the dissemination of research findings in a meaningful way through hosting community forums, workshops, or public lectures to share research outcomes directly with the people like teachers who may benefit from or be affected by the findings.

WORLD VIEW AND THEORETICAL LENS

By combining the constructivist and pragmatic worldviews, this research can capture the subjective experiences and perspectives of teachers while also aiming to generate practical knowledge and insights to enhance readiness for inclusive education. It recognizes the importance of both the individual's construction of knowledge and the practical outcomes that can be achieved through research.

Pragmatism focuses on examining the practical implications of research data to question its validity and meaning, it is compatible with interpretive understandings of socially constructed reality that are qualitative (Morgan, 2014). It

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

presents a viewpoint on understanding as part of society and a context achievement that influences and is influenced by the lived experience of those who acquire it (Talisse & Aikin, 2008). Pragmatists believe in applying the philosophical and methodological strategy best-addressing research challenges, emphasizing knowledge that can be put into practice and viewing inquiry as a tool for experiencing. (Kelly & Cordeiro, 2020).

Constructivism, on the other hand, is a philosophical paradigm that stresses how individuals actively construct their perceptions of reality through their cognitive processes, leading to various realities (Lincoln & Guba, 1985). Adherents of this paradigm emphasize the co-construction of knowledge between researchers and participants and the importance of participants' own constructs, descriptions, and narrations of their lived experiences (Tashakkori et al., 2021).

Systems Theory by Niklas Luhmann (1984) served as the theoretical foundation of this study. As to Luhmann (1984), every society is segmented into distinct subsystems, such as legal, political, educational, scientific, or economic. It is autopoietic—a system that generates and replicates its own elements and structures (Luhmann, 2012). Several fundamental components, including differentiation, autopoiesis, communication, form the foundation of Luhmann's system theory. These are functionally differentiated and operate based on their own distinctive codes and communication patterns (Luhmann, 1984). In addition, Social Cognitive Theory (SCT) by Albert Bandura (1986) was another significant theory in this study. According to SCT, learning occurs when people, behavior, and surroundings interact dynamically and reciprocally. The distinctiveness of SCT lies in its emphasis on social influence and internal and external reinforcement. Furthermore, Furthermore, the Planned Behavior Theory (PBT) by Icek Ajzen (1985) is a theoretical framework that clarifies how individuals' intentions to engage in a specific conduct are influenced by their attitudes, subjective norms, and perceived behavioral control. PBT contends that teachers' attitudes toward implementing inclusive education, subjective norms, and perceived behavioral control have an impact on their intents to engage in inclusive activities. For instance, instructors who are supportive of inclusive education and believe that others in their social network share their views are more likely to plan to use inclusive methods. Additionally, teachers are more likely to plan to use inclusive practices if they believe they have some influence over their ability to do so.

II. METHODS Research Design

This study employed a mixed methods research design, particularly an explanatory sequential design. Mixed methods research design has become popular because it allows researchers to combine qualitative and quantitative research strengths to provide a more comprehensive and nuanced understanding of complex phenomena (Creswell, 2014). The explanatory sequential design involves first phase of quantitative data collection and analysis, followed by a second phase of qualitative data collection and analysis, with the overall goal of better understanding a research problem. In this study, following the analysis of the survey results pertaining to teacher

efficacy, attitudes towards inclusive education, and readiness for inclusive education, the researcher identified specific issues that warrant further clarification (Creswell, 2014). By employing both quantitative and qualitative methodologies, this study sought to gain a more holistic perspective on the factors influencing teacher readiness for inclusive education (Creswell & Plano Clark, 2018).

In the quantitative phase, typically involves using surveys methods to gather numerical data, which is then analyzed using statistical methods. By utilizing a correlational approach, the researcher aimed to examine the relationships between teacher efficacy and attitudes in inclusive education in order to gain insights into the readiness of teachers for inclusive education. Meanwhile, on the qualitative phase, the researcher used phenomenological approach. Phenomenology is a qualitative research approach that emphasizes the shared experiences within a specific group (Creswell, 2014). The interview guide questions used in IDI and focus FGD were taken from the results on the quantitative descriptive and inferential results, focusing on its strengths and weaknesses.

Place of Study

This study was conducted in Region 11 involving public elementary schools in DepEd Schools Division Offices. The Schools Division Offices comprises six cities namely: Digos City, Davao City, Island Garden City of Samal, Panabo City, Tagum City, City of Mati; and four provinces namely: Davao Oriental, Davao Occidental, Davao del Sur, and Davao del Norte. DepEd Region XI were chosen as the locale of the study due to the following reasons: The researcher holds a specific interest in examining the readiness of teachers for inclusive education within her local community. Next, the researcher was confident that the Davao region offers a sufficient number of participants for the study. The region is known to have a significant population of public elementary school teachers who are actively engaged in mainstream classrooms, where students with and without disabilities learn together.

Participants

The participants of the study were 300 public elementary school teachers in Region XI who have experienced teaching in the mainstream classrooms who answered the survey questionnaire. Purposive sampling was used in selecting the participants because the researcher considered first the availability of the participants who met the criteria: each participant was a full-time teacher in a public elementary school, teachers from Kinder to Grade 6, with at least 1 year of experience in teaching in the mainstream classroom, and teachers who have handled any disabilities as specified by IDEA. Those teaching less than a year, have not handled any learners with disabilities, and teachers in the secondary school were not qualified to participate in the study. The criteria were set to attain homogeneity in their responses (Creswell, 2003). In the qualitative strand, 17 participants were invited for in-depth interview (IDI) and focus group discussion (FGD), who were selected from the participants in the quantitative strand. According to Creswell (2013), a heterogeneous group may vary in size from three to four individuals to 10 to 15. Specifically, 10 participants for IDI and seven for FGD. The sampling technique and inclusion and exclusion criteria were similar to the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

quantitative strand. The findings were used as a basis to define the evolving themes that can explain the outcomes from the quantitative stage.

Instruments

This study utilized research instruments to gather the necessary data for quantitative and interview guide for qualitative phase. Survey questionnaires have three parts. The first questionnaire was about the teacher efficacy adapted from Park et al. (2014), the so-called Teacher Efficacy for Inclusive Practices (TEIP) consist of 18 items with Cronbach's alpha of .923. The second questionnaire is about the Multidimensional Attitudes Towards Inclusive Education Scale (MATIES) which has a Cronbach's alpha of .799 for the entire scale of 18 items. The third questionnaire was adapted from Taripe (2018) and used by Dioso et al., (2021) which is about teachers' readiness to implement inclusive education with Cronbach's alpha of 0.981 for the overall scale of 40 items. The three parts of survey questionnaires used five-point rating scale of 5 - Strongly Agree, 4 - Agree, 3- Moderately Agree, 2 - Disagree, and 1 -Strongly Disagree. On the qualitative phase, the researcher drafted an interview guide for qualitative data collection. Open-ended questions were used by the researcher which were listed in the interview guide. These questions came from the quantitative descriptive and inferential results emphasizing extreme means or items that have the lowest or highest mean.

Data Analysis

The collected quantitative data were examined using statistical tools like mean, standard deviation, and multiple regression analysis. Mean was used to measure the status of the studied variables, while standard deviation was used to measure the degree of reliability of the statistical conclusions in relation to the variables and multiple regression data analysis was used to examine the relationships between teacher efficacy and attitudes in inclusive education in order to gain insights into the readiness of teachers for inclusive education. Additionally, they were used to investigate the influence of teacher efficacy and attitudes in inclusive education on teachers' readiness for inclusive education. For the qualitative phase, a step-by-step process was used to analyze the verbatim data gathered by the researcher through IDI and FGD. The Collaizi's Method (1978), composed of seven steps, was observed to uncover the participants' genuine experience regarding the phenomenon being studied. The data were transcribed, reduced, coded, then themes were formed and reviewed, modified, and developed. After this, the researcher analyzed whether the themes were coherent and distinct.

Trustworthiness of the Study

Trustworthiness of this study was addressed through a thorough collection of data by survey and in-depth interview and was supported by FGD for triangulation. Establishing trustworthiness is a crucial aspect of research to ensure the accuracy and validity of findings. Researchers like Creswell (2014), Flick (2018), and Guba (2018) emphasize various methods to establish trustworthiness in qualitative research such as credibility, transferability, dependability, and confirmability to assess the trustworthiness of research findings.

III. RESULTS

Quantitative Results

Status of Teacher Efficacy

The status of teacher efficacy is presented in Table 1.1. The teacher efficacy had an overall mean of 4.48 with a description of very high. This implies that teacher efficacy for inclusive practices is always evident among general education elementary teachers in Region XI. More so, the overall standard deviation is 0.42, which is characterized as homogenous based on the consistent responses as quantified by a standard deviation not exceeding 1.00.

Efficacy to use inclusive instruction got a mean of 4.49 which is described as very high and the mean ranges from 4.42 to 4.57. On the other hand, the efficacy in collaboration obtained a mean of 4.45 which was described as very high and mean rating ranges from 4.38 to 4.61. Lastly, efficacy in managing behavior got a mean of 4.50 which has a descriptive rating of very high and the means ranges from 4.40 to 4.64.

Status of Attitude in Inclusive Education

The status of attitude in inclusive education is presented in Table 1.2 with an overall mean of 4.42 described as very high. This means that the attitude of teachers toward inclusive education is always demonstrated. More so, the overall standard deviation is 0.42, which is characterized as homogenous based on the consistent responses as quantified by a standard deviation not exceeding 1.00. Cognitive got a mean of 4.47 described as very high and the means ranges from 4.17 to 4.65 while affective indicator obtained a mean of 4.36 described as very high and the mean rating ranges from 4.32 to 4.40 and behavioral indicator got a mean of 4.43 described as very high and the means ranges from 4.27 to 4.59.

The Status of Teachers' Readiness for Inclusive Education

The status of readiness for inclusive education is presented in Table 1.3 and its overall mean is 4.44 described as very high. More so, the overall standard deviation is 0.47, which is characterized as homogenous based on the consistent responses as quantified by a standard deviation not exceeding 1.00. The Curriculum instruction got a mean of 4.43 described as very high and the means ranges from 4.54 to 4.35. Meanwhile Curriculum content got a mean of 4.40 described as very high and the means ranges from 4.48 to 4.26. The Assessment on students' performance got a mean of 4.42 with an equivalent description of very high and the mean rating ranges from 4.54 to 4.37 and the Evaluating and monitoring students' progress got the mean of 4.48 and the means ranges from 4.60 to 4.38.

Table 1.3 Status of Teachers' Readiness for Inclusive Education

Significance of the Influence of Teacher Efficacy and Attitude in Inclusive Education on Teacher Readiness for Inclusive Education

Table 2 shows the statistical data from regression analysis to determine whether the influence of teacher efficacy and attitude in inclusive education on the teacher readiness for inclusive education is significant or not. The results reveal that teacher efficacy significantly influences teacher readiness for inclusive education with a beta coefficient of 0.466, and p-value of less than 0.05. This means that in every increase in teacher efficacy there is a corresponding increase in teacher readiness for inclusive education by 0.466.

| Significance of the Influence of Education on Teacher Readine | | | | Inclusive |
|--|---------------------|---------|---------|----------------|
| Predictors | Beta coefficient | t | p-value | Remarks |
| Teacher efficacy | 0.466 | 8 240 | 0.000 | Significant |
| Attitude in inclusive education | 0.447 | 7.859 | 0.000 | Significant |
| Predictors | R-squared | F | P-value | Interpretation |
| Combined | 0.513 | 150 337 | 0.000 | Significant |

In the same manner, the attitude in inclusive education has a computed beta coefficient of 0.447 with p-value of less than 0.05. This finding indicates that there is an increase of teacher readiness for inclusive education in every increase of teacher attitude in inclusive education. Finally, the combined predictive effect of teacher efficacy and attitude in inclusive education is significant as quantified by the R-squared value of 0.513 with a p-value of less than 0.05. This result indicates that the regression model with teacher efficacy and attitude in inclusive education as predictors, will be able to account 51.3 percent of the variance in teacher readiness for inclusive education that is attributed to these predictors. It indicates then that the 48.7 of the variation can be attributed to other factors not included in this investigation.

Standpoints of the Participants on Teacher Efficacy, Attitude in Inclusive Education and Readiness for Inclusive Education

Table 3.1 reveals the standpoints of the participants on teacher efficacy, attitude in inclusive education and readiness for inclusive education. It can be gleaned in the table that participants confirmed very high rating of teacher efficacy, confirmed very high rating of attitude in inclusive education and confirmed very high rating of readiness for inclusive education.

Table 3.1. Standpoints of the Participants on Teacher Efficacy, Attitude in Inclusive Education and Readiness for Inclusive Education

| Level | Essential Themes | Typical Reasons |
|---|----------------------------------|--|
| Teacher Efficacy | | |
| Efficacy to use inclusive instruction Using a variety of assessment strategies. | Confirmed very high rating | [1]Accommodate learners needs, [2]Cater the learner multiple intelligences. [3]Consider the steengths and weaknesses of the learners, [4]Solid basis for |
| Mean 4 57 SD 0.59 | | evaluation of pupils learning and development.[5]Embrace diverse learning styles of learners. |
| Efficacy in collaboration Being confident in their ability to get parents involved in school activities of their children with disabilities. Mean: 4 46 SD 0 61 | Confirmed very high rating | [1]Teachers have good intentions. [2]Teachers give assurance to parents, [3]Teachers share the experiences of their children, [4]Teachers strengthen the communication with the parents, [5] Teachers build harmonious relationship with the parents |
| Efficacy in managing behavior Getting children to follow classroom rules Mean: 4 64 SD: 0.52 | Confirmed very high rating | [1]Firm in the classroom policy, [2]Setting classroom rule, [3]Establish clear expectations to students, [4]Consistency of classroom rules, [5] Provide positive reinforcement. |
| Attitude in Inclusive Educa | lion | |
| Cognitive | Confirmed | [1] Provide the students with knowledge |
| Permits academic permission of all students regardless of their ability. Mean: 4:65 SD: 0:53 | very high rating | [1] Provide the subdens with knowledge based on their capacity. [2] All are children of God, thus teat them equally, [3] All students have the equal opportunity to succeed, [4] Fair treatment of all students, [5] All students are accepted. |
| Affective Not womed that students with disability are included in the regular classroom, regardless of the seventy of the disability Mean. 4.34 SD: 0.72 | Confirmed very high rating | It is explained to the students the importance of 'no child left behind.' [2]Necessary to create a conductive learning environment [3] Willing to modify their leasons. [4]Teachers understand their learners better, [5] Feel fulfilled when students needs are addressed, [6]Feel responsible for the learning of all students. |
| Behavioral Adapt the curriculum to meet the individual needs of all students regardless of their disability | Confirmed very high rating | [1]Bring out the skills of the learners. [2]Be more effective in meeting the needs of the learners. |
| Mean 4.51 SD 0.58 | | [3]Increase the milestone of the learners. |
| Encourage students with disability to participate in all social activities in the regular classroom. Mean: 4.59 SD: 0.52 | Confirmed very high rating | [1]Fostering a sense of belonging and understanding among all learners. [2]Increase the learner's self-esteem. [3]Acknowledge their strength and boost the learner's potential. |
| | | |
| Readiness for Inclusive Edit Curriculum Instruction | Confirmed | Table and the state of the stat |
| Autovating students to arouse their interest in learning concepts. Mean: 4.54 SO: 0.53 | very high rating | [1]Learners kook forward for the activity. [2]Intrinsic and extrinsic rewards are provided tencourage learners. [3]Learners are eager to listen and complete th task. [4]Learners are interested to learn. [5]Teachers get away from paper and pen test. |
| Curriculum Content Using my knowledge in handling students with learning difficulties Mean: 4.46 SD: 0.64 | Confirmed very high rating | [1] Exposure to trainings and immersions helpe [2] Collaborate with experts to substantiate learning. [3] Teachers device own teaching techniques. [4] Teachers going extra miles for students. [5] Teachers focus on students strengths. |
| Assessment on students' performance Conducting formative and summative tests. Mean: 4.54 SD: 0.58 | Confirmed very high rating | [1]Modification in the summative exams to accommodate the learners learning capacity. [2]Students have specific skill to develop that cannot be measured in one assessment. [3]Evaluate the overall learning outcome and measure the effectiveness of the instructional process. [4]Teachers track students' progress. [5]Reflection on students' understanding. |
| Evaluating and Monitoring Students' Progress Applying varied evaluation tools in assessing students' achievement. Mean: 4.45 SD: 0.57 | Confirmed very high rating | [1]Videos, portfolio, anecdotal reports are used to document student progress. [2]Utilize mix of formative and summative assessments and severage technology for efficient data collection. [3]Use of checklist to monitor the skills of learners. [4]Provides consistent recording of students' progress. [5]Teachers use colluborative class activities to efficient evaluating students skills. |

[7]Teachers have positive attitude towards Education erners with disabilities.

Confirmed Very High Rating on Teacher Efficacy

It can be seen in the table that all the indicators of teacher efficacy, efficacy to use inclusive instruction, efficacy in collaboration, and efficacy in managing behavior, confirmed the very high rating found in the quantitative results of this study. The highest items on each indicators were being confirmed by the participants through IDI and FGD. The participants confirmed the very high rating of the item using a variety of assessment strategies. They were able to confirm this particular very high rating due to their confidence in the use of inclusive instruction through utilizing different strategies for all learners. The participants also confirmed the very high rating of the item being confident in their ability to get parents involved in school activities of their children with disabilities. they were able to confirm this by showing strong sense of confidence to collaborate with the parents thru giving assurance, good intentions and creating good relations. Lastly, the participants confirmed the very high rating on the item getting children to follow classroom rules. They were able to confirm this particular very high rating by emphasizing the establishment of clear expectations, be firm and consistent of given rules.

Confirmed Very High Rating of Attitude in Inclusive **Education**

It can be seen in the table that all the indicators of attitude in inclusive education: cognitive, affective and behavioral confirmed the very high rating found in the quantitative results of this study. The participants confirmed the very high rating of the item permits academic permission of all students regardless of their ability. They were able to confirmed this very high rating when participants strongly expressed their agreement on accepting all students, including LSEN because they too have their own worth or value. The participants also confirmed the very high rating of the item not worried that students with disability are included in the regular classroom, regardless of the severity of the disability. In the sharing the teachers prioritize a supportive learning environment, adapt lessons, understand students, fulfill needs, and take responsibility for all students' learning. These insights from the participants gave explanations as to why they confirmed very high rating in affective particularly in being not worried that LSEN are included in the classroom regardless of the severity of the disability. Lastly, the participants confirmed the very high rating of the items adapt the curriculum to meet the individual needs of all students regardless of their disability and encourage students with disability to participate in all social activities in the regular classroom. The participants strong willingness to do something to really meet the needs of LSEN in all aspects can confirm this very high rating.

Confirmed Very High Rating of Readiness for Inclusive

It can be seen in the table that all of the indicators of readiness for inclusive education: curriculum instruction, curriculum content, assessment on students' performance and evaluating and monitoring students' progress confirmed a very high rating. The participants confirmed the very high rating of the item motivating students to arouse their interest in learning. The standpoints shared by the participants underscored the pivotal role of motivation in shaping the effectiveness of curriculum instruction, emphasizing its capacity to inspire engagement and enhance learning outcomes. Participants confirmed this very high rating due to these reasons.

The participants confirmed the very high rating of the item using my knowledge in handling students with learning difficulties. They were able to confirmed this very high rating due to their depth understanding about curriculum content, specifically in addressing the different needs of LSEN. Their insights delineate strategies and approaches to cater to the LSEN if they need more than their knowledge, emphasizing the importance of tailored instruction and inclusive practices within the curriculum framework.

Confirmed Very High Rating on the Significance of the Influence of Teacher Efficacy and Attitude in Inclusive Education to Teacher Readiness for Inclusive Education

Based on the result, the participants confirmed the combined significant influence of Teacher Efficacy and Attitude in Inclusive Education to teacher readiness. They shared that they are confident, optimistic, flexible, and equipped with different strategies on how to handle learners with special needs. The participants were able to confirmed this very high rating mainly because of their demonstration of confidence, empathy, and flexibility. They have different teaching strategies to effectively accommodate diverse students, particularly those with special needs, emphasizing their right to education and fostering a positive attitude toward learners with disabilities.

Joint Display of Quantitative and Qualitative Results

Shown on Table 4 are the joint display of quantitative and qualitative results of the teacher efficacy, attitudes in inclusive education, and readiness of teachers for inclusive education.

Teacher efficacy. Particularly, efficacy to use inclusive instruction, the item using a variety of assessment strategies got a very high rating. The reasons expressed by the participants focused on addressing learners' individual needs by accommodating various learning styles and considering their multiple intelligences, strengths, and weaknesses. They also emphasize the importance of utilizing diverse teaching strategies that manifest their confidence in inclusive instruction. Consequently, the two are connecting-merging. As efficacy in collaboration, the item being confident in their ability to get parents involved in school activities of their children with disabilities has a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. The reasons expressed by the participants demonstrate positive intentions by providing reassurance to parents, sharing insights about their children's

experiences, fostering strong communication channels, and

Table 4. Joint Display of Quantitative and Qualitative Results

cultivating harmonious relationships with

| Research Area | Quantitative Results | Qualitative Results | Nature of Integration |
|--------------------------|--|--|--------------------------|
| Teacher Efficacy | Efficacy to use inclusive instruction. Using a variety of assessment strategies. Mean: 4.57 SD: 0.59 | Participants confirmed teacher efficacy is always evident. Based on the IDI and FGD, a could be gathered that the general assestions confirm the very high rating. (Refer to Table 3.1) | Connecting - Merging |

(Refer to Table 3.1) | Correcting Mergrig |

parents to support students' academic and personal development. Thus, connecting-merging was found to exist between the two sets of research findings in the data integration.

With regard to efficacy in managing behavior, the item *getting* children to follow classroom rules got a very high rating. Participants confirmed teacher efficacy is always evident. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. The participants expressed this by creating a structured learning environment by enforcing firm classroom policies, setting clear rules and expectations for students, maintaining consistency in their application, and utilizing positive reinforcement to encourage desired behavior. Hence, connecting-merging is the nature of data integration.

Attitude in Inclusive Education. Specifically, the item permits academic permission of all students regardless of their ability in cognitive got a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. The participants' standpoints emphasized addressing the students' needs by tailoring to their capacities while promoting equality by acknowledging all students as equal children of God. They ensure fair treatment, equal opportunities for success, and a culture of acceptance for all students, regardless of differences. Therefore, the two are connecting-merging.

Concerning affective attitude, the item *not worried that students* with disability are included in the regular classroom, regardless of the severity of the disability has a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, teachers emphasize the significance of inclusivity through the no child left behind principle, striving to cultivate a conducive learning environment by adapting lessons to meet individual student needs. They also demonstrate a deep understanding of their students, find fulfillment in addressing their needs, and feel a strong sense of responsibility for the learning outcomes of all students. Thus, the nature of data integration is connecting-merging.

Meanwhile, the behavioral attitude, two items emerged as very high rating: adapt the curriculum to meet the individual needs of all students regardless of their disability and encourage students with disability to participate in all social activities in the regular classroom. Participants confirmed attitude of teachers toward in inclusive education is always demonstrated. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, teachers empower learners by honing their skills, effectively addressing their needs, and advancing their milestones while fostering a supportive and inclusive environment. This approach aims to enhance learners' self-esteem, cultivate a sense of belonging, and maximize their potential by recognizing and boosting their strengths. Therefore, connecting-merging was found to exist between the two sets of research findings in the data integration.

Readiness for Inclusive Education. Particularly, curriculum instruction, the item *motivating students to arouse their interest in learning concepts* has a very high rating. Based on the IDI

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, they designed activities to engage learners, utilizing both intrinsic and extrinsic rewards to motivate their participation and foster active listening, task completion, and enthusiasm for learning while also shifting focus away from traditional paper-and-pen testing methods. For that reason the nature of data integration is connecting-merging.

Regarding curriculum content, the item *using my knowledge in handling students with learning difficulties* has a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, teachers enhance their skills through training and collaboration with experts, developing personalized teaching techniques, and going the extra mile to support students, focusing on recognizing and nurturing students' strengths. Their insights underscore the necessity for customized instruction and inclusive practices within the curriculum framework to effectively support learners with special educational needs. Thus, connecting-merging is the nature of data integration.

As to, assessment on students' performance, the conducting formative and summative tests emerged as a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, they necessitates the conduct of summative and formative assessments. They emphasized that the summative exams are adjusted to suit individual learning capacities, acknowledging that specific skills cannot be adequately assessed in a single evaluation. Also, the overall learning outcomes are evaluated to gauge the effectiveness of instruction, with teachers monitoring student progress and on their understanding. Therefore, connecting-merging was found to exist between the two sets of research findings in the data integration.

In the aspect of evaluating and monitoring students' progress, the item applying varied evaluation tools in assessing students' achievement received a very high rating. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. In the probing of the participants, teachers emphasized using various methods such as videos, portfolios, and anecdotal reports to document student progress comprehensively, incorporating a blend of formative and summative assessments with technology to collect and analyze data efficiently. They also use checklists to monitor student skills consistently and facilitate evaluation through collaborative class activities. With these reasons, the nature of data integration is connecting-merging.

Significance of the influence of teacher efficacy and attitude in inclusive education to teacher readiness for inclusive education. Particularly, the influence of teacher efficacy and attitude in inclusive education to teacher readiness received a very high rating. The participants confirmed the influence of teacher efficacy and attitude in inclusive education to teachers' readiness for inclusive education. Based on the IDI and FGD, it could be gathered that the general assertions that teacher efficacy and attitude in inclusive education influence teacher

readiness for inclusive education. During the probing of the participants, teachers emphasized the demonstration of confidence, empathy, and flexibility in addressing diverse student needs, utilizing a wide array of teaching strategies while prioritizing inclusivity and advocating for the educational rights of all learners, particularly those with special needs, thereby fostering a positive and supportive learning environment. These insights from the participants gave explanations as to why teacher efficacy and attitude in inclusive education influence teacher readiness. Therefore, connecting-merging was found to exist between quantitative and qualitative data findings.

IV. DISCUSSIONS

The Status of Teacher Efficacy

The status of teacher efficacy as assessed by the participants is very high. This means that teacher efficacy for inclusive practices is always evident among general education elementary teachers in Region XI. The findings of this study are parallel to the works done by Kazanopoulos et al. (2022), Hay et al. (2023), San Martin et al. (2021) and Park et al. (2016) which have very high level of teacher efficacy in all indicators which include efficacy to use inclusive instruction, efficacy in collaboration and efficacy in managing behavior. However, this study disagrees with the study of Sakari et al.(2020) which has moderate level of teacher efficacy. In addition, Abraham (2021) emphasized that teachers must provide appropriate challenges based on the needs of the students and adapt techniques to suit their needs. For students with disabilities, teachers must reject a one-size-fits-all or standardized teaching approach and instead use a strategy that appropriately meets each student's individual needs to accurately gauge students of what was taught (Smith, 2024). Therefore, teachers must possess effective classroom management skills (Gage et al., 2018) which includes their ability to communicate clear expectations to all students, effectively prevent and manage disruptive behavior, ensure students adhere to classroom rules, and handle physically aggressive students (Park et al., 2016). Teachers who establish clear expectations for students and effectively manage behaviors can increase instructional time, leading to enhanced learning opportunities for all students (Flower et al., 2017)

The Status of Attitude in Inclusive Education

The status of attitude in inclusive education as assessed by the participants is very high. This means that the attitude of teachers toward inclusive education is always demonstrated. This is measured in the three categories, namely: cognitive, affective, and behavioral.

The findings of this investigation support the study of Scanlon et al. (2022), Boyle et al. (2021) and Zainalabidin et al. (2021) that teachers have very high level of positive attitude in inclusive education and emphasized that all types of learners can learn in most situations. However, this study disagrees with the study of McCarthy (2019), Rizkiah et al. (2018) and Fu et al. (2021) who claim that teachers have negative attitude towards inclusive education due to the different factors. These factors include parents' attitude, equipment and the attitudes of the teachers as well (Fu et al., 2021).

This study contends that the cognitive attitude of teachers toward inclusive education is always demonstrated. The very

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

high status of cognitive is an indication that elementary teachers believe that inclusive schools, which accommodate students of all abilities, foster socially appropriate behavior and enable every student to learn within the regular curriculum through tailored adaptations and advocate against segregation of students with disabilities despite potential expenses in modifying the school environment. These particular beliefs shapes teachers' overall perception about inclusive education (Sun & Xin, 2020). As stipulated in the DepEd order number 72 series of 2019, that all children must be accepted regardless of ability or disability, race, size, shape and color with support from school staff, students, parents and the community (DepEd, 2019).

Status of Teachers' Readiness for Inclusive Education

The status of teachers' readiness for inclusive education as assessed by the participants is very high. This means that the readiness of teachers for inclusive education is always observed. This indicates that teachers are equipped with the different strategies and techniques, adapt curriculum to tailor the needs of the learners. This also suggest that they have different assessment strategies to track and evaluate the performance of all learners.

This study aligns with the study done by Lai et al.(2017) and Adnan (2022) that teachers have very high level of readiness and are highly prepared, and they are already aware of the different strategies and various assessments for all kinds of students (Ecoben, 2019; Serakalala et al., 2019). However the results of this study does not conform with the studies of Zainalabidin and Ma'rof (2021), and DeNeve et al. (2014) that teachers express lower levels of preparedness regarding knowledge about inclusion and students with special needs. Similarly, the investigative findings do not conform with the studies done by Dioso et al. (2022) and Hanzah (2022), because of their moderate level of preparedness for inclusive education particularly on curriculum content.

Furthermore, this study supports the idea of Pershina et al. (2018) who emphasized that readiness for inclusive education requires considerable effort, and providing learning activities that enhance collaborative learning to address student's unique needs. As emphasized by York-Barr et al. (2016) that training of different strategies should scaffold approach for teachers with monitoring and mentoring for proper guidance and execution like using effective behavior techniques to modify students' inappropriate behavior. With this, those teachers who continue their training in catering learners with disabilities would have the skills necessary to accommodate and facilitate learning and engagement (Allam & Martin, 2021).

As stipulated by the UNESCO (2016) that curriculum plays a vital role in giving quality education to all students, the knowledge and skills of the teachers conveyed provide a structured and inclusive framework for systematic and comprehensive learning. This include teachers being equipped with the skills to adapt curricula and teaching resources to ensure access and engagement for students with diverse learning needs (Hock and Deshler, 2018). Furthermore, when teachers organize classroom activities for both regular students and LSEN, they are better equipped to modify and adapt the

curriculum to meet the needs of all learners (Boyle et al., 2021). Moreover, the utilization of various assessment tools suited for learners with special needs could guide teachers about their instructional decision making (Sailor et al., 2014). Through frequent measurement, teachers gather data that aids them in making informed choices regarding ongoing interventions (McConnell & Rahn, 2016).

Significance of the Influence of Teacher Efficacy and Attitude in Inclusive Education to Teacher Readiness for Inclusive Education

The influence of teacher efficacy on readiness for inclusive education is significant. As a result, increased in teacher efficacy would also increase teachers' readiness for inclusive education. This means that teachers are more ready and motivated to design inclusive learning environments that meet the various requirements of every student when they have greater confidence in their capabilities (Leifler, 2020). The result of this study agrees with the study of Zainalabidin and Marof (2021) that there is a significant predictive correlation between teacher efficacy and teachers' readiness for inclusive education.

On the other hand, the influence of attitude in inclusive education on readiness for inclusive education is significant. As a result, increased of teachers' positive attitudes in inclusive education would also increase teachers' readiness for inclusive education. This means that attitude of teachers towards inclusive education influenced their readiness for inclusive education. The result conforms with the study of Zainalabidin and Ma'rof (2021) which found that attitude in inclusive education is one of the predictive factor on readiness for inclusive education. Similar findings were found in Kaya and Yavuz (2018) study indicating that a significant predictor of preparedness for inclusive education is the attitude toward inclusion.

Teachers' efficacy, despite being a small concept, has a significant influence (Tschannen-Moran & Hoy, 2004). Additionally, teachers who had more experience working with students with disabilities had higher levels of teacher self-efficacy and readiness (Loreman et al., 2018). On the other hand, teachers with low efficacy may find it difficult to educate children with various needs because they need more skills and confidence to do so (Marzano et al., 2001; Singh, 2020). On the other hand, Teachers with a more positive attitude toward the inclusive framework and policy are more likely to be prepared and willing to implement inclusive education (Zainalabidin & Ma'rof, 2021). Furthermore, it is reasonable to expect that a teacher who holds negative attitudes towards inclusion or a specific program may not also prepare to address all the learners needs, thus decreasing their readiness for inclusive education (Kielblock, 2018).

Standpoints of the Participants on Teacher Efficacy, Attitude in Inclusive Education and Readiness for Inclusive Education

From the standpoints of the participants on teacher efficacy, the participants confirmed the very high rating of teachers, particularly on the items: using a variety of assessment strategies, being confident in their ability to get parents involved

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

in school activities of their children with disabilities and getting children to follow classroom rules. Thus, the emergent themes are the very high rating on the efficacy of using inclusive instruction, the very high rating on efficacy in collaboration, and the very high rating on efficacy in managing behavior. This confirmation reflects the contention of Johnson (2020) that recognized the importance of tailoring assessments to accommodate the individual strengths, challenges, and learning styles of their students. Moreover, Woodcock (2022) suggested that building the learners' strengths also made the students' learning enjoyable, safe, and engaging. As Dyson et al. (2020) pointed out, ensuring that every student can completely participate and interact in the learning process involves adjusting teaching strategies, instructional materials, and evaluation procedures. Also, this study supports the contention of Gage et al. (2018) that effective classroom management should be consistent with classroom routines, for the optimal utilization of instructional time.

The data finding supports the contention that every child has the right to education and must be given equal opportunity to learn suited for their level (UNESCO, 2019). The finding confirms the assertion of Gregory (2018) that teachers have individual's knowledge and understanding of practices related to inclusive education, particularly in supporting students with disabilities within the general education setting. Further, RA 10533 emphasized that all types of learners must be catered adhering to individual differences (DepEd, 2019). Nevertheless, we must also take into account the fact that deeply rooted historical and cultural settings, as well as individual experiences, have an impact on how attitudes form. These elements may significantly impact educational systems, frequently leading to widespread prejudice and inequality (Stepaniuk, 2019).

On readiness for inclusive education, the finding of the study confirmed the hypothesis of Serin (2018) that students may be inspired to strive for learning by both intrinsic and external reasons. This is also in support with the concept of Hattie (2018) about having a student-centered approach which could lead to effective instruction by engaging students not relying on paper and pen test. This means that teachers used evidence-based instructional strategies that support the involvement and academic success of all students in the classroom like differentiation, universal design for learning, and collaborative teaching (Tomlinson, 2018). This supports the conclusions of Johnson (2020) that teachers were eager to explore additional strategies and approaches to ensure that their assessments were fair, inclusive, and aligned with the unique needs of each student by also considering the strengths of the learners.

Therefore, teacher efficacy in this study is an articulation of the statements of Mahmoud et al. (2018) that it is crucial for the implementation of inclusive education; he believed that teachers' confidence in their ability to effectively design and implement teaching strategies that cater to the diverse learning needs of all students, confidence in their ability to work collaboratively with other professionals and confidence in their ability to maintain a positive and well-managed classroom environment (Sharma et al., 2012). Further, Further, instructional techniques, resources, and evaluation procedures should be modified to enable each student to participate actively in and engage with the learning process (Dyson et al., 2020).

Likewise, on the status of attitude in inclusive education, participants overall rating is very high. Participants confirmed attitude of teachers toward in inclusive education is always demonstrated. Based on the IDI and FGD, it could be gathered that the general assertions confirm the very high rating. This result confirms that teachers have a positive attitude towards inclusive education, which corroborate on the statement of Lüke and Grosche (2018) that teachers generally exhibit positive attitudes toward the concept of inclusion. For the teachers to cater the unique needs of the children, teachers must have positive inclination towards them so that they also have positive action to address their needs (Darling-Hammond, 2020).

In line with the status of readiness for inclusive education, the qualitative results confirmed the quantitative results, particularly on the overall very high rating of readiness for inclusive education. Further, all indicators got a very high rating. This result confirms that teachers are equipped with the different strategies that would be useful in an inclusive setting. Thus, the confirmation of the very high rating is parallel to the conclusion of Dioso et al. (2022) that teachers' readiness for inclusive education was established with the provision of training and professional development. This finding also supports the result of Ecoben (2019) that teachers in general educations are very much aware with the nature of students disabilities and highly equipped with different techniques and strategies.

On the combined significant influence of teacher efficacy and attitude in inclusive education, participants confirmed the result. Based on the IDI and FGD, it could be gathered that the general assertions that teacher efficacy and attitude in inclusive education influence teacher readiness for inclusive education. This finding is consistent with conclusion of Zainalabidin and Ma'rof (2021) that teachers who had great confidence on their abilities would also lead to the improvement of their preparation, thus increasing their readiness for inclusive setting. In similar ways, this finding supports the statement of Mastropieri and Scruggs (2018) that teachers who have favorable cognitive attitudes toward inclusive education are more likely to use instructional strategies, according to a substantial link found between teachers' views and their preparedness for inclusive education.

Implications for Educational Practice

Implementing inclusive education in the Philippines, particularly in the Department of Education, is a continuous development. The ability and confidence of the teachers helped their readiness for the successful implementation of inclusive education. High levels of teacher efficacy, a favorable attitude toward inclusive education, and readiness for inclusive education all influence student outcomes, learning environments in the classroom, professional development, organizational support, and the promotion of social justice and equity in education.

General Education mainstream teachers are encourage to continue to immerse themselves with the latest methods and techniques suited for all kinds of disability or learners difficulty. In addition, all stakeholders which involves the education of all children must maintain strong collaboration and continued

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

professional development fostered strong teacher efficacy and favorable attitudes. Moreover, DepEd must continue to provide the regular assessment of all stakeholders' readiness for inclusive education that would indicates solid organizational management in support proficient educational organizations.

The data in this study were limited to elementary school teachers' perceptions; future research may include the other teachers in the high school level or higher education institutions for a broader context. Further, researchers may also include the perceptions of other professionals like special education teachers, head teachers, principals, and parents to increase the reliability of the results.

Conclusions and Recommendations

The following conclusions were drawn from the findings of the study:

The status of Teacher Efficacy among general education teachers who have handled LSEN is very high; this implies that the teacher efficacy for inclusive practices is always evident. Specifically, it was found out that indicators related to this variable has the following conclusions; efficacy to use inclusive instruction is very high, efficacy in collaboration is very high; and efficacy in managing behavior is very high.

The status of Attitude in Inclusive Education among general education teachers who have handled LSEN is very high; this implies that the attitude of teachers toward inclusive education is always demonstrated. Specifically, it was found out that indicators related to this variable has the following conclusions; cognitive is very high, affective is very high, behavioral is very high.

The status of Readiness for Inclusive Education among general education teachers who have handled LSEN is very high; this implies the readiness of teachers for inclusive education is always observed. Specifically, it was found out that indicators related to this variable has the following conclusions; curriculum instruction is very high, curriculum content is very high, assessment of students; progress is very high, and evaluating and monitoring students' performance is very high.

Teacher Efficacy and the Attitude in Inclusive Education significantly influence the Readiness for Inclusive Education among public elementary general education teachers in Region XI. Moreover, the two predictors in the study which are teacher efficacy and attitude in inclusive education are both significant factors or reasons why general education teachers are highly ready in teaching inclusive practices.

Standpoints of the participants on the variables revealed confirmed very high rating. Particularly, the theme emerged are; confirmed very high rating on teacher efficacy: confirmed very high rating on efficacy to use inclusive instruction, confirmed very high rating on efficacy in collaboration, confirmed very high rating on efficacy in managing behavior; confirmed very high rating on attitude in inclusive education: confirmed very high rating on cognitive, confirmed very high rating on

affective, confirmed very high rating on behavioral; and confirmed very high rating on readiness for inclusive education: confirmed very high rating on curriculum instruction, confirmed very high rating on curriculum content, confirmed very high rating on assessment on students' performance and confirmed very high rating on evaluating and monitoring students' progress.

As to the data integration, connecting-merging was found to exist between the two sets of research findings of all the variables and indicators. Hence, the quantitative results are generally supported by the qualitative outcomes.

DOI No: 10.36713/epra17162

ABSTRACT

The problem of late development of speech activity in young children without pronounced mental pathology is becoming more and more relevant every year (Borovtsova L.A. et al., 2015 Vatoropina S.V. et al. 2015). As a rule, all children after three years of age, whose speech is characterized by extremely limited use of linguistic means, are diagnosed with general speech underdevelopment (according to P.E. Levina).

At the same time, the mechanisms of this disorder may be different. Insufficient knowledge of the clinical forms of speech underdevelopment, as well as the similarity of their manifestations, makes it difficult to differentiate the tempo delay of speech development and its impaired variant. Speech therapy intervention in these cases is often built without taking into account the clinical uniqueness of children and the mechanisms of delay in speech development, which, accordingly, reduces the effectiveness of the work carried out. At the same time, any phenomenon subjected to scientific analysis must be determined by its most characteristic features, distinguishing it from other similar phenomena. (Guseva A.Yu. 2022)

KEYWORDS: delayed speech development, motor alalia, sensory alalia, aphasia, neurological disorders.

PURPOSE

The purpose of this article is to systematize the accumulated medical and pedagogical experience in understanding the structure of the above problem.

Available studies indicate that the time of emergence and features of speech development are largely determined by the level of formation of the child's sensorimotor and cognitive spheres. In addition, the formation of speech at an early age occurs in constant interaction with other functions.

Delayed speech development of various origins does not ensure the formation of basic language functions: communicative, cognitive and regulatory, which leads to a delay in the development of cognitive processes. (Zakhodyakina K.Yu. 2023)

The etiology of speech pathology in children is multifactorial: on the one hand, various biological causes (intoxication, infections, metabolic disorders, injuries, etc.) can play an important role, which lead to disturbances in the rate of development of brain mechanisms or cause cerebral organic damage (Chutko L. S. et al., 2015; Malinina E.V., 2016; Zuccarini M. ^ b1., 2017; on the other hand, unfavorable social factors, including educational conditions, increased demands placed on the child, including early start of education (Pontoppidan M. et b1., 2017).

The first years of life are decisive for the formation of speech, since at this age the most intensive development of cortical speech zones occurs. A variety of unfavorable factors operating

during this period can affect the development of the child's speech. (Karpenko E.S t2022)

In most cases, severe speech delay is accompanied by impaired visuospatial skills and/or motor clumsiness. Speech development typically improves as the child grows older, but mild developmental delays often remain for life. Delay in speech development is several times more common in boys than in girls. Developmental delay is characterized by a family history of similar or related disorders, suggesting an important role for genetic factors in the etiology of many (but not all) cases.

The total prevalence of mental retardation in the general structure of mental illnesses in children is 8–10% [7]. Delayed speech development is one of the types of delayed psychospeech development. Currently, there is an increase in the prevalence of speech delay, but there are no accurate statistics to estimate it.

It is customary to divide the delay of psychospeech development into primary and secondary. Primary delay is formed when there is structural damage to the brain or disruption of its function for various reasons. Secondary delay occurs against the background of a primarily intact brain in chronic somatic diseases (heart disease, etc.), accompanied by cerebral insufficiency [10]. As a rule, such a delay is systemic in nature and is distinguished by an algorithm: "the norm is minus 1, in rare cases minus 2 epicrisis periods," while the primary delay is characterized by uneven development.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

There are also terms general and systemic speech underdevelopment. General speech underdevelopment is a delay in speech development in a child with normal intelligence. Systemic speech underdevelopment is a speech disorder against the background of underdevelopment of other higher mental functions. In the first years of life, due to the immaturity of the nervous system, children often experience maturational features of motor and psycho-speech functions. Therefore, usually in early childhood we can talk about a general delay in psychomotor development with a greater severity of the lag in the psycho-emotional or psycho-speech sphere [1].

f80.1. Expressive Speech Disorder

A disorder of speech development as a result of immature speech function in the cerebral cortex is called alalia. Motor alalia is the absence of active speech in a person with a developed passive vocabulary and an unimpaired volume of understandable speech. Sensory alalia is the inability to perceive and understand spoken speech. Total (sensorimotor) alalia is a violation of the perception and reproduction of speech.

The diagnosis is made when the severity of the delay in expressive language development is beyond normal variations for the child's mental age (although it may often be slightly below average). The use of nonverbal cues (such as smiles and gestures) and "inner" speech, reflected in imagination or roleplay, is relatively intact; the ability to communicate socially without words is intact. The child will strive to communicate, despite the speech impairment, and to compensate for the lack of speech with gestures, facial expressions or non-speech vocalizations. However, co-occurring disturbances in peer relationships, emotional disturbances, behavioral disturbances and/or hyperactivity and inattention are common.

f80.2. Receptive Speech Disorder (Sensory Alalia)

Sensory alalia is a specific developmental disorder in which the child's understanding of speech is below the level corresponding to his mental age, expressive speech is also noticeably impaired, and a defect in verbal-sound pronunciation is not uncommon. Diagnostic criteria: • inability to respond to familiar names (in the absence of non-verbal cues) from the 1st birthday; • failure to identify at least some common objects by 18 months; • inability to follow simple instructions by age 2 vears.

Delayed speech development, especially alalia, is often initially mistaken for deafness. These conditions are differentiated using audiometry. The child is presented with various sounds and, if he hears them, is asked to press a key, which is recorded by the sensor. Changes in audiometry are characteristic of sensorineural hearing loss. However, this study is not always reliable, as it requires active participation from the child. In children with a negative attitude, misunderstanding of the task, or attention deficit hyperactivity disorder, the audiogram is uninformative.

CONCLUSIONS

Thus, the diagnosis of speech disorders should be based on the results of diagnostic training and the following examination algorithm.

- 1. Consultation with a neurologist, neurological status.
- Consultation with a psychologist, assessment of intellectual development, assessment of non-verbal intelligence.
- Audiometry and auditory evoked potentials.
- Electroencephalography (routine and sleep-assisted) to detect some cases of subclinical epileptic seizures that adversely affect cognitive function.
- Neuroimaging (magnetic resonance imaging of the brain, computed tomography of the skull, temporal
- Consultation with a geneticist with special genetic tests.

Against the background of developmental and correctional activities, children with delayed speech development, as a rule, require medicinal support from time to time, which reliably improves the results of correctional work [2]. The feasibility of medicinal support for children with speech delays is associated with the presence of a large number of concomitant neurological and behavioral characteristics [6].

CLINICAL AND NEUROPHYSIOLOGICAL CHARACTERISTICS OF NEUROPHTHALMOLOGICAL DISORDERS IN CHILDREN WITH SPEECH DELAY

Sh. Sh. Shamansurov, D.K. Makhkamova, I. K. Abdukadirova

Center for the Development of Professional Qualifications of Medical Workers, Department of Pediatric Neurology Republican Specialized Scientific and Practical Medical Center for Eye Microsurgery Tashkent, Uzbekistan

> Article DOI: https://doi.org/10.36713/epra17161 DOI No: 10.36713/epra17161

ABSTRACT

The problem of late development of speech activity in young children without severe mental pathology is becoming more and more relevant every year (Baranov A.A., 2012; Larkina E.V. et al., 2013; Makushkin E.V., 2013; Asmolova G. A. et al., 2014; Borovtsova L.A. et al., 2015). The lag in a child's speech development from the age norm is observed mainly in the early stages of the formation of mental activity (Shemyakina O.V., 2012). Disorders that arise in childhood do not disappear without a trace, but can worsen over time (Kuprianova I.E. et al., 2012; Clegg J. et al., 2005; Miniscalco C., et al., 2006; Bayer J.K. et al., 2008; Durkin, K., 2010). The role of the visual analyzer in the mental development of a child is great and unique. Violation of its function causes the child significant difficulties in understanding the surrounding reality, narrows social contacts, limits spatial orientation and the ability to engage in many types of activities [4].

An analysis of special psychological and pedagogical literature has shown that the peculiarities of the development of visual perception, insufficient development of motor and visual-motor coordination delay the process of mastering objective actions by a child with visual impairments and negatively affect the process of forming their ideas about objects in the surrounding world. The operational, functional and motivational aspects of object concepts in these children are not sufficiently developed, and without special work the formation of this mental process is extended over time.

The nature of the dysfunction of the central nervous system in children with delayed speech development affects the characteristics of the generation of visual evoked potentials (VEPs). The configurations of early and late VEP components differ significantly in children with speech delay and healthy children. With delayed speech development of various origins, the amplitude of the negative VEP component is reduced in the frontal, temporal and occipital regions of both hemispheres of the brain compared to the control. It has been established that a decrease in the amplitude of positive VEP components is associated with impaired attention function.

KEYWORDS: visual impairment, delayed speech development, neurological disorders.

PURPOSE

to study of clinical and neuro-ophthallogical features in children with speech development disorders.

MATERIALS AND METHODS

105 children aged 3 to 6 years were under clinical observation. Of these, 68 were children with speech development disorders and 37 were children without speech development disorders. Registration of total bioelectrical activity of the brain (EEG), isolation and analysis of visual evoked potentials was carried out using a computer encephalograph.

Long-latency visual evoked potentials were determined per flash of 50 Lx (0.5 J) with a duration of 4 ms, the interstimulus interval was 2 s (n = 100) with a probabilistic deviation of 25%. The absolute amplitudes of the components were assessed relative to the baseline, which was calculated relative to

physical zero. The latency period (LP) of the peak was measured relative to the start of stimulation. When analyzing the obtained material, the components of the evoked potential were identified: P1 (positive - up to 60 ms), N1 (negative - up to 75 ms), P2 (up to 140 ms), N2 (up to 170 ms), P3 (up to 220 ms), N3 (up to 260 ms), P4 (300) (up to 320 ms) [4, 5].

RESULTS

The reason for patients to turn to a specialist was complaints of lack of speech, disruption of the stages of psycho-speech development, as a result of which a speech development disorder was identified in these patients. All patients underwent routine clinical and neurological examination, VEP, EEG and MRI of the brain.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table. 1

Pathological condition in children during the neonatal period, %

| Pathological conditions | 1 Group, n=68 | 2 Group, n=37 |
|----------------------------|---------------|---------------|
| Asphyxia during childbirth | 36 | 5 |
| Hyperbilirubinemia | 72,5 | 3 |
| Prematurity | 49 | 5 |
| The use of ototoxic drugs | 28 | 6 |
| Viral infections | 13 | 7 |
| Anemia | 19 | 3 |

Note: * - p-values are < 0.05 **- p values are < 0.001

Asphyxia during childbirth was detected in 36% and 5% of cases, respectively, in groups I and II. In the children we examined, hyperbilirubinemia was observed in 72.5% in group II and 3% in group 1. The use of ototoxic drugs was observed in 6% of subjects in group 1 and 28% in children in group 2. Prematurity occurred in 49% of children in group 1 and 5% of patients in group 2.

At the same time, the majority of children with speech development disorders had diffuse organic neurological symptoms, as well as central insufficiency of the VII and XII pairs of the cranial nerve, anisoreflexia, and revitalization of tendon reflexes. When examining the medical history, signs of perinatal damage to the nervous system were revealed in 48 (85%) patients.

In accordance with the results obtained, in children with speech development disorders aged 2-5 years, the maximum for the P1 component was recorded in the occipital region. At the same time, in children of group I, registration of the maximum P1 component was detected in the right hemisphere, and in children of group II it was found in the left region of the brain. In children one year of age with speech developmental disorders, two maximum amplitude values of the N1 component were present in the frontal and left occipital regions. In addition, an asymmetry in the formation of the N1 component was found in these brain regions.

Consequently, when studying survey data, a wider display of interhemispheric connections was found in the group of children with speech developmental disorders compared to children without speech developmental disorders.

Table. 2

Characteristics of the state of bioelectrical activity of the brain in the study groups (%)

| of the state of bioelectrical activity of the brain in the study groups (70) | | | | | | | | | | |
|--|---------------|-----------------|--|--|--|--|--|--|--|--|
| EEG data | 1 group, n=68 | 2nd group, n=37 | | | | | | | | |
| Delayed Maturation | 40,0 | 8,5 | | | | | | | | |
| Diffuse Changes | 30,0 | 8,2 | | | | | | | | |
| Focal Changes | 25,0 | 4,2 | | | | | | | | |
| Paroxysmal Activity | 10,0 | 1,4 | | | | | | | | |
| Epileptiform Activity | 15,0 | 1 | | | | | | | | |
| Variant Of The Age Norm | 0 | 10 | | | | | | | | |

Note. * - pvalue < 0.001; ** - significant EEG differences between groups (p < 0.001).

In 69.6% of patients, bilateral asymmetry and asynchronization of the EEG were detected and a wide range of changes in regulatory and organic origin of mild to moderate severity was diagnosed. A variant of the age norm was noted in 10% of patients in group 2. The EEG data obtained in children with speech development disorders indicate that children show more significant changes in the bioelectrical activity of the cerebral hemispheres than children in the healthy group.

Characteristic were significant diffuse changes in the bioelectrical activity of the brain, with a predominance of the organic nature of the changes. There was a delay in the formation of the age-related rhythm. Focal changes are represented in 25% of children in group 1, 4.2% in group 2, mainly with bursts of slow wave activity.

Table. 4

MRI in the Examined Groups, %

| MRI data | 1group, n=68 | 2 group, n=37 |
|---|--------------|---------------|
| Expansion of the subarachnoid spaces | 61,1 | 1,7 |
| Ventriculomegaly | 61,1 | 1,7 |
| Focal lesions of white matter and basal ganglia | 27,9 | 7,3 |
| Periventricular changes | 16,8 | 4,7 |
| Anomaly of development | 2 | 0 |

In children with speech development disorders, in most cases we observed expansion of the subarachnoid spaces (61,1%), ventriculomegaly (61,1%). The incidence of these changes in children of group 1 was 91.7% and was significantly higher

(p>0.01). In 27.9% of children in group 1 and 7.3% in group 2, focal lesions of the white matter and subcortical areas were detected. In our study, 2% of cases of developmental anomaly were identified in children with speech development disorders,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

which characterizes a disorder in the maturation of nervous tissue in children against the background of intrauterine lesions.

CONCLUSIONS

An extensive examination of children with delayed speech development using clinical, neurological, ophthalmological functional studies makes it possible to determine the structure of various factors that lead to delayed speech development in children and have an impact on the further course of the disease.

As a result of a study of the characteristics of visual evoked potentials in children with speech developmental disorders, data were obtained indicating the presence of a relationship between the degree and nature of the dysfunction of the central nervous system and their influence on the processes of generating VEP components. Thus, intercentral connections are directly dependent on early disturbances in the development of brain structures, which subsequently leads to difficulty in analyzing information. Insufficient interconnection between brain regions in children with speech development disorders causes low functional activity of the fronto-occipital and interhemispheric connections of the cerebral cortex, which in turn leads to attention deficit.

ALUMNI INFORMATION COLLECTION FOR ALUMNI TRACER USING WEB SCRAPING

R.J. Pielago

ABSTRACT

This research is Quasi Experimental research that aims to develop a method on how to scrape profile data and information that is publicly available in Social Media sites specifically Facebook to help the Alumni Affairs and Placement Services Office in gathering data for the Alumni Tracer. The research focuses on the assessment of data of Alumni of the College of Computer Studies from the Laguna State Polytechnic University that are needed by the Alumni Services and Placement Office for the year 2022 & 2023. The collected data using the Web Scraper will only be collected through the publicly available data in their respective webpage/platform using proper methods and means. The research was developed using the Kanban software development methodology and the program used Zhang and Shasha's Algorithm and Tree Pattern Matching Algorithm in developing the program to use in web scraping. The researcher tested and tried different approach and techniques in scraping publicly available data and were tested by its accuracy and functionality. The acceptability of the research is also determined by conducting a survey in terms of Functionality, Reliability, Usability, Efficiency, Maintainability, Portability and Compliance. The acceptability of the web scraping program got an Overall Mean of 4.37 and an Overall Standard Deviation of 0.65 that is translated as Highly Acceptable.

KEYWORDS: Web scraping, social media scraping, Alumni tracer study, Alumni information collection, Data collection, Text mining

INTRODUCTION

Graduate and past students make up an alumni association. Colleges and Universities rely on alumni to mentor students, which enables current students to connect with graduates to learn about numerous job prospects, including industry trends, industrial events, internships, scholarships, and more. To actively participate in registering, searching for, and managing the alumni information to receive more updates, this project handles the freshmen and old graduate students with their individual information. The establishment of an online alumni interface helped students who at some point lack the knowledge to advance in their careers by providing them with the appropriate advice from knowledgeable people that graduated in in their following Colleges and Universities.

Universities, colleges, and academies can benefit from tracer studies, as can organizations that offer scholarship, job opportunities from the government, businesses, and other organizations. Alumni are tracked using tracer studies, which can be used to assess how well goals, curricula, and educational procedures relate to the circumstances of today's alumni. To reach out and get alumni to volunteer their time to complete the tracer studies, there are a few challenges in the distribution process such as not willing to answer the tracer study and leaving behind important information.

As technology advances, data is needed in every aspect of a person's life, supporting the automation of data in areas such as acquaintance communication in a timely, accurate, and understandable manner. With the development of cutting-edge technology for information technology, new capabilities have

emerged, such as the quick retrieval of data. For commercial and academic research initiatives, automatically retrieving data from the Web—a process known as "web scraping"—is becoming accepted practice. To make Web Scraping easier, many tools and technologies have been developed. The goal of this study is to solve this issue by gathering the information needed in compiling the necessary data from social media platforms, including employment, workplaces and current professions using the alumni data which scrap from social media platforms. With this in mind, the researcher wanted to create an Alumni Information Collection for Alumni Tracer using Web Scraper.

Research Objectives

The study aimed to develop a method on how to scrape profile data and information that is publicly available in Social Media sites specifically Facebook in order to help the Alumni Affairs and Placement Services Office in gathering data for the Alumni Tracer. Specifically, this study sought to find out the following: 1. to develop a web scraping program for Alumni Affairs and Placement Services where it can scrape for publicly available information in a Social Media platform like Facebook without violating the terms and conditions of the platforms/sites. 2. to test the functionality and accuracy of the developed web scrapping method in getting the correct alumni information to be listed in the Alumni Tracer. 3. to know the acceptability of using the Web scrapping method.

METHODS

Research Design

The researcher used experimental research design in the study. During the preliminary investigation, the researcher used the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

experimental research design to collect data in the Alumni Services and Placement Office of the Laguna State Polytechnic University through interviews and observations.

The researcher utilized the Developmental Research technique to study the Program-developmental, descriptive developmental described as the systematic procedure creating, developing, and assessing that must meet the criteria of the program effectiveness.

Data Collection Instruments

The researcher employed various methodologies during the data collection to better understand the research topic. These methodologies were instrumental in identifying and shaping the requirements of the study and the proposed system. The methods used by the proponent includes Internet research and Interview to gain an in-depth understanding of perceptions or opinions on the topic, the researcher conducted an interview with Chairperson of the Alumni Services and Placement Office of the Laguna State Polytechnic University to learn more about the process on how they collect data from the graduates of the said University. Upon interviewing Dr. Liza Bartolome, the researcher was given a Spreadsheet (Excel file) that contains information of the alumni from the College of Computer Studies for the year 2022 and 2023.

Development Methodology

The researcher utilized a Software Development Life Cycle (SDLC) model in the development of the prototype and its web scraping algorithms. According to Igbal & Idrees (2017), SDLC models were used typically for improving the quality of software and overall development process. Martins (2022) describes Kanban as an Agile management approach based on the idea of continuous improvement, in which tasks are "pulled" into a continuous flow of work from a product backlog. Kanban boards are used to apply the framework; they are a type of visual project management. Tasks, shown as cards on a Kanban board, progress through work stages, shown as columns. In this manner, your team can view the status of work in real time. Software development, engineering, and product teams are among the groups that use Kanban the most. However, any company looking to create a more adaptable and dynamic workflow can employ them.

In a Kanban system, you use a Kanban board—either physical or digital—to represent tasks as cards. These cards move through different stages, which are represented as columns on the board. The key columns typically include: TO DO: This column contains tasks that need to be started. They haven't been worked on yet; IN PROGRESS: Here, you'll find tasks that are currently being worked on. They're in progress but not yet completed; TESTING: Tasks move to this column once they're done. They're being reviewed, tested, or validated; DONE: Finally, tasks that have been completed successfully end up in this column.

Applied Concepts and Techniques

The researcher has examined the challenges encountered throughout the data collection, design, and software development.

The data for this study was gathered and verified through the implementation of the following methods.

Online Research and Technology Gap Analysis

The researcher used the internet to obtain data and information that aided in conducting the study. The researcher received a lot of concepts, theories and existing applications relevant to the topic. The internet played a significant role in the study since it contains a lot of helpful material that is beneficial to the study. The researcher used this information to build new ideas, theories, and concepts for developing a decision-making support system in developing the Alumni Information Collection for Alumni Tracer Using Web Scraping. Most of the studies that was found by the researcher came from Google Scholars, ScienceDirect, Scispace, Eric.ed.gov, Researchgate.net, etc.

Expert Consultation

This method helped the researcher acquire more information for developing the system and think of the best practices they should use throughout the program development process. The researcher consulted with the Chairperson of the Alumni Services and Placement Office of the Laguna State Polytechnic University to gain valuable input regarding the program of the Alumni Services and Placement Office.

Algorithm Analysis

This section shows and discusses algorithms that have been tested and analysed to determine the most suited to the study. Upon searching, these are the algorithms that can be used to create a decision support system:

Zhang and Shasha's Algorithm

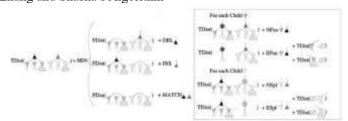

Figure 1. Zhang and Shasha's Algorithm

Figure 1 discusses the The Zhang-Shasha algorithm calculates the edit distance between trees by counting the minimum number of node insertions, deletions, and relabelings needed to transform one tree into another. This concept is analogous to the edit distance between strings but applied to tree structures. The algorithm was introduced by Kaizhong Zhang and Dennis Shasha.

The Zhang and Shasha algorithm is an effective dynamic programming algorithm that determines the tree edit distance between two trees (Cording, 2011). The bare minimum of node deletions, insertions, and replacements required to change one tree into another is known as the tree edit distance. Zhang and Shasha originally presented the technique in a groundbreaking

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

work published in 1989. Since then, the tree edit distance has been extensively used in many domains, such as intelligent tutoring systems and biology.

The algorithm works by breaking down the problem of computing the tree edit distance into smaller sub-problems and solving each sub-problem recursively. The optimal solution to each sub-problem is stored in a table and used to solve larger sub-problems until the final problem is solved. The algorithm is efficient because it avoids recomputing the same sub-problems multiple times.

Tree Pattern Matching

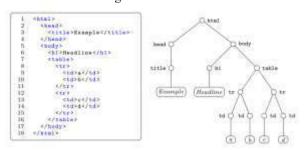

Figure 2. A HTML document and its tree model using Tree Pattern Matching Algorithm.

Hajiaghayi et.al (2021) stated that Tree pattern matching is a technique used to find a pattern in a tree structure. It is widely used in various fields, including XML query, compilers, and natural language processing. There are several algorithms for tree pattern matching, including the Zhang and Shasha algorithm. This algorithm is based on dynamic programming and is known for its efficiency. Another algorithm is the tree pattern matching algorithm called TreeMatch, which directly finds all distinct matchings of a query tree pattern.

For the second objective, to test the functionality and accuracy of the developed web scrapping method in getting the correct alumni information to be listed in the Alumni Tracer, the researcher used Accuracy, Recall, Precision, F-1 Score as the metrics to evaluate the performance of the algorithms were discussed.

Evaluation

The web scraping program was evaluated using the Likert Scale to measure acceptance and reliability. The rating scale is a tool that converts numerical values into descriptions to provide context for qualitative ratings given by the respondents. It converts scores into easily understandable categories, allowing a clear understanding of respondent sentiment. A rating of 5 indicates strong endorsement and support for the evaluated aspects, indicating high satisfaction and positive perception of the system or process. A rating of 4 signifies agreement, suggesting general approval or satisfaction with the evaluated elements. A rating of 3 indicates neutral stance, with no clear consensus or mixed perception. A rating of 2 indicates disagreement, indicating areas needing attention or improvement. A rating of 1 indicates strong disagreement, indicating apparent dissatisfaction or

conflict with the evaluated elements, indicating urgent issues needing attention and resolution.

Statistical Treatment

The Likert Scale is displayed in Table 1. In order to gather information about participants' preferences or level of agreement with a statement or collection of assertions, surveys often employ Likert scales, which are psychometric answer scales. Using five or seven levels, respondents score quality from best to worst or from high to low. Likert scales are frequently used by researchers to evaluate behaviors, attitudes, and personality. It's a useful tool for expressing complex thoughts and emotions.

| Rating | Description |
|--------|-------------------|
| 5 | Strongly Agree |
| 4 | Agree |
| 3 | Neutral |
| 2 | Disagree |
| 1 | Strongly Disagree |

Table 1. Likert Scale

The terms "minimum" and "maximum" designate the smallest and biggest values, respectively, within a data set. These are basic ideas that give a fast overview of the range of the data in descriptive statistics. The value that is equal to or less than every other value in the data collection is the minimum. Assuming that all the data points are listed in ascending order, the first number would be the minimum. The value that exceeds or equals every other value in the data collection is the maximum. The last number in an ascending list of data points would be the maximum.

$$X' = \frac{X - Xmin}{Xmax - Xmin}$$

Skewness is a statistical measure that describes the asymmetry of a distribution around its mean. In simpler terms, it indicates whether the data points tend to cluster more on one side of the scale. Zero Skewness: If the distribution is symmetrical, like a normal distribution, it has zero skewness. The left and right sides of the distribution are mirror images of each other. Positive Skewness (Right Skewed): A distribution with positive skewness has a longer tail on the right side. It means there are several unusually high values. The bulk of the data is concentrated on the left. Negative Skewness (Left-Skewed): Conversely, a distribution with negative skewness has a longer tail on the left side. This indicates a bunch of unusually low values, with most data skewed to the right.

$$skewness = \frac{(x - \mu)^3}{\sigma^3}$$

Kurtosis is a statistical measure that describes the "tailedness" of a probability distribution. It provides insight into the shape of the distribution, particularly the thickness or heaviness of the tails. Understanding kurtosis is important in fields like quality control

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

because it affects the interpretation of data and the statistical models used for analysis.

$$kurtosis = \frac{(x-\mu)^4}{\sigma^4}$$

RESULTS AND DISCUSSIONS

RESEARCH OBJECTIVE 1: to develop a web scraping program for Alumni Affairs and Placement Services where it can scrape for publicly available information in a Social Media platform like Facebook without violating the terms and conditions of the platforms/sites. When creating the web scraping program used by the researcher, as much as possible, the researcher follows laws and rules about web scraping from the Computer Fraud and Abuse Act (CFAA) in the United States and the General Data Protection Regulation (GDPR) in the European Union. These rules deal with unauthorized access to data and protecting people's privacy. It includes the following:

- The data being obtained from the website shall have public access or with explicit permission.
- Respecting the terms of service provided by the website.
- Avoid scraping private data and personal data without consent in compliance with international privacy laws.
- Implementing ethical considerations such as limiting the data being scraped to not overload the server.

RESEARCH OBJECTIVE 2: To test the functionality and accuracy of the developed web scraping method in getting the correct alumni information to be listed in the Alumni Tracer.

The researcher tested the web scraping program to see if the data from the Alumni Tracer for the Graduates of 2023 match with the scraped data from the Facebook Group where the scraper was used to know the functionality of the data extracted. The researcher selected 20 random names from the Alumni Tracer of the College of Computer Studies under the program Bachelor of Science in Information Technology, it is represented in the Table using their Last Name, then it is compared to the scraped data from the Facebook Group.

| Alumni | | Scraped? | Match? |
|-----------|------------|----------|--------|
| | Tracer | | |
| Alumni 1 | Brofar | Yes | Yes |
| Alumni 2 | Solis | Yes | Yes |
| Alumni 3 | Cagayat | Yes | Yes |
| Alumni 4 | De Luna | No | No |
| Alumni 5 | Sorromero | Yes | Yes |
| Alumni 6 | Corpuz | Yes | Yes |
| Alumni 7 | Amolato | Yes | Yes |
| Alumni 8 | Maquiling | Yes | Yes |
| Alumni 9 | Jazmin | Yes | Yes |
| Alumni 10 | Sapo | Yes | Yes |
| Alumni 11 | Briz | Yes | Yes |
| Alumni 12 | Yretarino | Yes | Yes |
| Alumni 13 | Daya | No | No |
| Alumni 14 | Alababa | Yes | Yes |
| Alumni 15 | Combalicer | Yes | Yes |
| Alumni 16 | Perez | Yes | Yes |
| Alumni 17 | Bodino | Yes | Yes |
| Alumni 18 | Abadines | Yes | Yes |
| Alumni 19 | Dela Luz | Yes | No |
| Alumni 20 | Babaan | Yes | Yes |

Table 2 shows the random pattern matching used by the researcher to determine the functionality of the web scraper when compared in the alumni tracer provided by the Alumni Services and Placement Office.

Reason of Data not being scraped is due to the Alumni is not included in the Facebook Group where the data was extracted. Additionally, another reason is that the Alumni changed their name in their Social Media profile and can also because the Alumni is not really included in the specific batch.

RESEARCH OBJECTIVE 3: to know the acceptability of using the Web scrapping method.

The functionality of the web scraping program is one of the criteria evaluated in this study. Descriptive analysis of the data shows, that respondents *strongly agree* that the program can perform the task required (M=4.46, SD=0.58); scraping result is accurate (M=4.50, SD=0.54); data collected can be helpful to the people (M=4.78, SD=0.42), and can collect the data that is publicly available to other users (M=4.46, SD=0.58).

It can also be deduced from the table, that the minimum score given by the respondents is 3 and the maximum is 5. A negative skewness, in all the statements, likewise, shows that only small proportion of respondents rated low score, precisely 3 as it is the minimum and that majority ratings were high. Negative kurtosis on the other hand, shows that most of the ratings of the respondents are close or near the mean.

Table 3 Accentability of Web Scraping Program as to Functionality

CONCLUSION

Based on the findings of the study, the following conclusions and generalizations are drawn:

- To ensure safety of both the computing device and social media platform account, the method to be used in scraping should follow the international laws and rules about data privacy and should only extract data from publicly available sources.
- To use the scraper effectively, researchers should create a group for Alumni into their respective batches and program so we can limit the data being collected to the appropriate level as to not violate the social media site's terms and conditions.
- The researcher can utilize the CSV file for data cleanup purposes to help in determining the employment status of the Alumni since a few of them displayed incorrect information.

RECOMMENDATIONS

Based on the conclusions and actual testing the researchers have reached the following recommendations:

- 1. For further improvement, the researcher recommends creating a better Graphical User Interface for the scraping program so it can be installed offline which can help if internet connection is not available and to make it more portable.
- 2.It is also recommended that there is another program to use for data cleanup for the maintainability of the files that was scraped using the program that can be used to compare results when scraped again if the Alumni has updated their profile.
- 3.Lastly, if budget constraints are not a concern, using a desktop computer with better specifications than that of what the researcher used would be preferable as to be able to use system environments that took up storage resources from the computer. The researcher suggests getting a more robust Central Processing Unit (CPU) such as the latest version of Intel Core i7 or i9 series / AMD Ryzen 7 or 9 series. Random Access memory should be a

single stick of 16/32 GB RAM DDR4 or DDR5 for better performance when executing the program. In addition, a good Graphics Processing Unit (GPU) like RTX 4090 or Radeon 7000 series can offer a lot in training datasets and avoid hangs and freezing during scraping.

ABSTRACT

It has been stated that the usage of the concept of iqtisas is common in the Arabic language. However, it is seen that this usage cannot find a place in the sources at the conceptual level. This leads to uncertainty about the framework and usage area of the concept of iqtisas. In our study, a more specific conclusion has been reached about the content and application of the concept of iqtisas and its application examples by examining it with the constructivist grounded theory method.

KEYWORDS: Arabic Language and Retoric, Iqtisas, Constructivist Grounded Theory Method

INTRODUCTION

The rhetorical aspect of the Arabic language has been the subject of many studies throughout history. One of the concepts included in these studies is the concept of iqtisas. However, although it is a phenomenon widely applied in language, it is noteworthy that this concept is mentioned at a limited level in works related to rhetoric. In this study, first the definitions of the concept of iqtisas in the literature will be determined by applying the constructivist grounded theory method[1] which is one of the qualitative research methods. Afterwards, it will be examined whether the verse text(ies) used as examples in these definitions are also used for similar purposes in Qur'an tafâsîr. Thus, it will be tried to reach the content of the concept of iqtisas based on the usage examples of the phenomenon of iqtisas.

CONSTRUCTIVIST GROUNDED THEORY METHOD

One of the qualitative research methods is the "Constructivist Grounded Theory Method". It is stated that this method, outlined by Charmaz (d. 2020), is systematic, flexible, and has guiding and constructivist features. [1] On the other hand, this method differs from other methods in that it includes the collection of data such as literature analysis and application examples in order to reach the grounded theory regarding the subject under research.[2] Therefore, in our study, the literature on iqtisas will first be examined. Afterwards, it will be investigated whether the sample iqtisas applications obtained in the literature are found in tafâsîr, especially rhetorical tafâsîr. A final evaluation will be made regarding the existence of the concept of iqtisas by evaluating the data obtained.

LITERATURE REVIEW

The concept of iqtisas at the center of our study is formed as a word from the root letters "k-s-s" (ق-ص-ص) and is inflected in the ifti'âl meter. This word includes the meanings of "to trace, to convey words or news, to tell". [3-5] Additionally, when this word is used with the letter 'ala (عَلَى), it also includes the meaning of "to narrate sensitively". [6, 7] The term meaning of

this word was expressed by Ibn Faris (d. 395/1004) as "the transfer of a word or news in the same or another surah".[5, 8] Abû Hilâl al-'Askarî (d. after 400/1009) expressed iqtisas as "the transfer of a news or word". In addition, al-'Askari stipulated that the expression with iqtisas must be correct and real.[5, 9] al-Zarkashi (d. 794/1392) [10] and al-Suyûtî (d. 911/1505) [11] included this subject in their works by creating a section with the information provided by Ibn Faris under the title of el-Iqtisas.[5] This situation can be considered as evidence that iqtisas has such importance that it can be created a separate title among other Qur'an sciences. Ibn Abi'l-Isba' al-Mısrî (d. 654/1256) discussed iqtisası under the title of îcâz and expressed it as "It is when the mutakallim tells a story in a few words and in such a concise way that nothing is taken away from it".[12] According to İsmail Durmuş, the term iqtisas is mentioned as a concept used in the science of bedî' and is expressed as "the concise transfer of a word or news that is mentioned extensively in a verse in another place of the Qur'an".[4] As can be seen, while the concept of iqtisas was initially mentioned as a form expression of the Qur'an, it was defined more comprehensively by Ibn Abi'l-Isba' al-Mısrî.[13] Additionally, Ibn Abi'l-Isba' al-Mısrî stated that there are many expressions like this in the Holy Qur'an.[12, 7] Among the examples presented regarding the concept, the verse 40/32nd of the Surah al-Mu'min will be mentioned below and the interpretations in which the iqtisas application within the scope of this verse is carried out will be examined.

IQTISAS APPLICATIONS IN THE QUR'AN WITHIN THE SCOPE OF VERSE 40/32ND OF SURAH AL-MU'MIN

One of the verses given as an example of the application of the subject of iqtisas is the verse 40/32nd of the Surah al-Mu'min, which is stated in the Qur'an as (وَوَيَا قَوْمِ إِنِّي الْخَافُ عَلَيْكُمْ يُوْمَ النَّتَاكِ "O my people, I truly fear for you the day when you will flee."[5, 8] The information obtained from the tafâsîr regarding this verse will be discussed chronologically. First of all, in the fourth century of the Hijri, al-Māturīdī (d. 333/944) stated that the verses 40/32-33rd of the Surah al-Mu'min are related to the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

34th verses of the Surah Abasa in his tafsîr titled "Te'vîlâtu Ehli's-Sunne". Al-Māturīdī stated that there is an explanation in the verses 40/32nd and 33rd of the Surah al-Mu'min about one's escape from the fire on the Day of Judgment. While expressing this, he explained, "As in the 34th verse of Surah Abasa." From this statement, it is understood that he made iqtisas from the 34th verse of the Surah Abasa.[14] It was stated by Ibn Faris, one of the scholars of the fourth century Hijri, that he made an igtisas of the verses of Surah Abasa 80/34, 35, 36, 37th.[5, 8] According to Ibn Faris, when the word التَّنَادِ in the verse is read as بَدُ an iqtisas is made from the verse إِنَّهُ مِنْ أَخِيهِ﴾ On (يَوْمَ يَفِرُ الْمَرْءُ مِنْ أَخِيهِ) that day, a person will run away from his brother", which is the 80/34th verse of Surah Abasa, until the end of the story.[8] It is noteworthy that al-Zamakhshari (d. 538/1144), one of the leading scientists in the field of rhetoric in the sixth century Hijri, established a relationship between the 40/32nd verse of the Surah al-Mu'min and the 34th verse of the Surah Abasa. While doing this, al-Zamakhshari also mentioned the text of the verse.[15] Al-Razi (d. 606/1210), one of the scientists of the seventh century Hijri, used the expression "They" يندون كما تند الإبل run away like a camel" in his interpretation of the 40/32nd verse of the Surah al-Mu'min. While using this word, he also stated that the same meaning is in the 34th verse of Surah Abasa by mentioning the wording of the verse. This shows that he also benefited from the iqtisas method.[16] al-Baydawî (d. 685/1286), another scholar of the seventh century Hijri, explained the explanation of أن بند بعضهم من بعض "running away from each other" in his interpretation of the 40/32nd verse of the Surah al-Mu'min by saying "as in the 34th verse of the Surah Abasa ". Therefore, it is understood that al-Baydawî used igtisas by referring to the 34th verse of Surah Abasa while interpreting the 40/32nd verse of the Surah al-Mu'min.[17] Abû Hayyân (d. 745/1344), one of the scholars of the eighth century Hijri, mentioned the word ند البعير اذا هرب to indicate that the word غنّ, which is mentioned as the root of the word التناد in the verse, is used to express the flight of the camel. While doing this, he then established a connection between them by mentioning the words of the 34th verse of Surah Abasa. [18] This can be considered as an example of his use of iqtisas. Abu'l-Su'ud (d. 982/1574), one of the scholars of the tenth century Hijri, described the explanation of the people like al-Baydawî "running away from each other" as in the 34th verse of Surah Abasa. This statement shows that he also applied the use of iqtisas like al-Baydawî.[19] Al-Ālusī (d. 1270/1854), a scholar of the thirteenth century Hijri, unlike other mufassirs, explained the expression يُؤمَ الهرب والفرار as يَوْمَ التناد 'the day of escape". It is seen that al-Ālusī also uses the iqtisas form of expression by mentioning the wording of the 34th verse of Surah Abasa.[20]

EVALUATION OF FINDINGS

In the tafâsîr of al-Māturīdī, Ibn Fâris, az-Zamakhshari, al-Baydawî, al-Razi, Abû Hayyân, Abu'l-Su'ud and al-Ālusī, who lived in chronologically different periods, it is seen that the text of the 34th verse of Surah Abasa is shared in explaining the meaning of the 40/32nd verse of the Surah al-Mu'min. This situation, considering that these verses are given as examples for the application of the concept of iqtisas[5, 8], shows that the expression form of iqtisas is applied without being mentioned as a concept. As a matter of fact, when examined with the constructivist grounded theory method, it was understood that

the concept of iqtisas - although its name was not mentioned as a concept - was used in different time periods.

CONCLUSION

It has been observed that the concept of iqtisas, defined by Ibn Faris, one of the scientists who lived in the fourth century Hijri, has been mentioned to a limited extent in the literature as a concept, although it is a widely used form of expression. In today's studies, it has found a place only in some dictionaries. Within the scope of our study, it was examined whether this concept was applied in the tafâsîr within the scope of the 32nd verse of the Surah al-Mu'min with the constructivist grounded theory method. As a result of the examination, it was concluded that the application examples of the concept were included in the tafâsîr, but the name of the concept was not mentioned. Studies on the use of the concept of iqtisas itself and/or its application examples outside of tafâsîr will contribute to a more comprehensive understanding of the subject.

ABSTRACT

Physical, psychological, and social changes are carried by the hormonal shifts resulting from menopause and the climacteric.

OBJECTIVE: The research was to evaluate the effect of a Pilates based exercise program on the standard of living of climacteric women, as it is thought that the movements utilized in Pilates have an impact on mental as well as physical fitness.

METHOD: The authors gathered reviews including of comprehensive randomised controlled trials, systematic reviews, and experimental research through looking PubMed and Google Scholar regarding the effectiveness of Mat Pilates exercises in menopausal women.

RESULT: All the articles taken for the review has shown that Mat Pilates exercises had a significant effect in maintaining and increasing muscles strength in menopausal women. the whole text of the articles was gathered. A Twenty of the thirty identified articles were selected for review.

KEYWORDS: Mat Pilates Exercise, Menopausal Changes, Climeteric Changes, Health Related Quality Of Life, Menstrual Symptoms, Physical And Mental Changes

INTRODUCTION

Menopause is the irreversible end of menstruation followed on by ovarian follicular function reduction. usually happens around the age approximately 45 to 55. After a year of amenorrhea, which is caused by the irreversible loss of ovarian function, menopause is identified. The menopausal age is 51.4 years on average. Menopause can cause a woman to have a longer or shorter menstrual cycle, miss periods, have a heavier or lighter period, experience hot flashes and night sweats, have trouble sleeping, have mood swings or changes including sadness and anxiety, have joint pain and stiffness in their musculoskeletal system, sometimes experience weakness in their lower extremities, and have vaginal dryness that makes it difficult to have sexual relations.

The anterior pituitary gland cyclic inhibition by oestrogen is broken, enabling the gland to continue secreting luteinizing hormone (LH) and follicle-stimulating hormone (FSH). Atrophic changes are observed, the uterus contracts, the ovaries reduce in size, the endometrium thins, and the cervix becomes smaller and secretes less. The fornices deepen and the vaginal wall atrophies, losing its elasticity. The vagina's fluids become less acidic, making an infection more likely. The genital tract and a prolapse tendency are the result of the supportive components failing. The labia become flatter and more prone to gaping, infection (vulvitis)

may ensue, and pubic hair decreases. Oestrogen shortage affects the synovial membrane, muscles, ligaments, tendon collagen, bones, and joint capsule.

Women have long faced a range of emotional and physical problems, from minor to severe. Clinical mat Pilates has demonstrated to be beneficial in increasing both the quality of existence and the strength of muscles. Occasionally, during the menopausal era, the symptoms may intensify due to the decline of hormones.

Prior till the mid-1980s, the Pilates Method was primarily unknown outside of the dance community. However, in the last ten years, the method has quickly acquired popularity, overcoming its relative obscurity. The Pilates method consists mostly on a very modest number of exercises. It is an approach to training and bringing the body and mind together as one. Joseph Pilates opened and operated a gym in New York between the latter half of the 1920s and the 1960s. He wrote two volumes outlining his methodology. First came P. Freidman and G. Eisen's 1980 book "The Pilates Method of Mental and Physical Conditioning." The books "Your Health" and "Return to Life Through Contrology," which Pilates cowrote with W. J. Millar, were published in 1945.

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Each exercise develops intentional and economical movement a "minimum of motion" and smooth succession that are then included in daily living. He explains the way his thought process has developed and includes several exercises that you may do at home.

Clinical mat Pilates is a helpful intervention for menopausal women, even though the exercise benefits both physical and mental health, including flexibility and balance. The person's strength and flexibility have increased because of a clinical mat Pilates exercise program because breath control helps to relax the muscles. A mat exercise using Pilates have been shown to improve muscle strength and flexibility, and they may also lessen the deleterious effects of menopause on function. Since there is no physical contact, the activity is less hazardous than different types of exercise since there's a lower risk of musculoskeletal harm. Additionally, it enhances quality of life, dynamic postural stability, muscle strength, muscular flexibility, and core strength.

The benefits of the Pilates technique on enhanced muscle strength, flexibility, motor skills, posture, pain management, and personal autonomy have all been investigated and validated.

| 8 | Fatma ARSLAN, et. al., | 2012 | Experimental Study | 66 | An Experimental study on "Evaluation of The Effect of Pilates Mat Exercise Program On Some Fitness Parameters And Weight Loss Of Middle Aged Perimenopausal Sedentary Women." 66 middle-aged, overweight, inactive women who experience hot flushes participated in this research as volunteers. Women who were sedentary provided their body weight, body composition (measured by the skinfold calliper), waist hip ratio, waist circumference, and body fat %. In addition, individuals filled out a questionnaire with questions about menopausal bleeding patterns, including vasomotor symptoms. The measurements were taken twice: once prior to and once subsequent to a 6-week set of one-hour exercises performed three days a week as part of a Pilates mat training programme. it was discovered that sedentary women's hot flushes from vasomotor symptoms were greatly reduced by Pilates mat activity. The results validate the impact of Pilates mat workouts on body composition measurements and weight loss. Women going through the menopause transition may benefit over the long run from Pilates mat workouts |
| 9 | Meenakshi Kalhan, et. al., | 2020 | Cross-sectional Study | 400 | A Cross-sectional Study, on "Prevalence of Menopausal Symptoms and Its Effect On Quality of Life Among Rural Middle Aged Women (40-60 Years) Of Haryana, India. Data were gathered for sociodemographic parameters, pertinent menstrual history, and other variables. The rating scale for menopause was employed in order to determine the prevalence of menopausal symptoms and the QOL. Menopausal symptoms that were discovered to be 87.7% prevalent. Among the research participants, 70.2% had a reduced QOL. The low QOL was caused by the psychological disorders in 70.8% of cases. |
| 10 | Fareha Khatoon, et. al., | 2018 | An Observational Cross- Sectional Study | 300 | An Observational Cross-sectional Study, on 'Assessment Of Menopausal Symptoms Using Modified Menopause Rating Scale (MRS) In Women Of Northern India." For a whole year the research was carried out in the Obstetrics and Gynaecology Department of Era's Lucknow Medical College and Hospital in Lucknow. The Modified Menopause Rating Scale (MRS) was used to evaluate menopausal symptoms. Joint and muscle soreness (87%), low mood (70%), heart discomfort (60.3%), physical and mental tiredness (60%) and sleep issues (56%) were the greatest often reported symptoms. Hot flushes, the most common menopausal symptom, were reported by 53.3% of women. More symptoms that included additional prevalent in descending order were |

| | | | | | irritability (46.6%), anxiety (40.3%), bladder issues (26%), vaginal dryness (23%), and sexual issues (20%). women from lower socioeconomic origins and those without a formal education were demonstrated to be more prone to experience symptoms of menopause, and this difference was determined to be statistically significant. |
|----|--|------|---|---|---|
| 11 | M. Rakibul Islam, et. al. | | A Comprehensive & Systematic Literature | MEDLINE, EMBASE, PsycINFO, CINAHL, SCOPUS | A Systematic Review." on June 2013, MEDLINE, EMBASE, PsycINFO, CINAHL, SCOPUS, and Google Scholar were used to obtain all English-language studies that had data on the appearance of menopausal symptoms in women residing in Asian nations. Utilising a risk of-bias technique specifically created for the systematic evaluation of prevalence studies, the risk of bias of the included research was evaluated. criteria were satisfied by 23 independent research. Among psychological, vasomotor, and sexual complaints, physical symptoms were the most frequent. Physical symptoms predominate, followed by psychological problems, vasomotor symptoms, and sexual symptoms. To determine whether the discrepancies in prevalence reporting are a result of methodological problems or because of racial, cultural, or other socioeconomic inequalities, Further investigation with representative samples is required. |
| 12 | Sashimalar Mathialagan, et. al., | 2022 | | | "menopause Rating Scale (MRS) In Malay Language-Translation and Validation in A Multi ethnic Population Of Selangor, Malaysia." An expert who is multilingual translated the English version of MRS into Malay and then back translated it A panel examined the translated version of MRS to assess its face validity. The Menopause Rating Scale's Malay translation of the English version demonstrated exceptional construct validity, test-retest reliability, and reliability. |
| 13 | Peter Francis, et. al. | 2019 | | | "Age-Group Differences in the Performance of Selected Tests of Physical Function and Association with Lower Extremity Strength." Peak torque (PT) of the knee extensors (KE) was measured from a maximum voluntary isometric contraction. Participants next had 5-repetition and 30-second chair rise tests, a 900-m gait speed test, and 10-m maximum and habitual gait speed tests. Extended physical performance Tests ought to be applied in aging research on healthy older adults. |

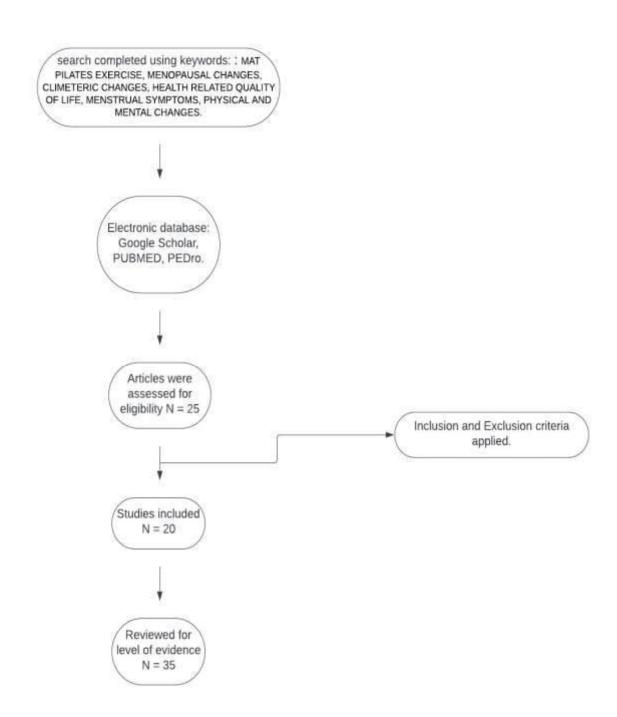

| 14 | H. Dwi Susanti, et. al., | 2019 | | 30 | Construct Validity of The Menopause Rating Scale in Indonesia. The MRS measures psychological, somaticvegetative, and urogenital symptoms using 11 items collected from participants' regularly symptom logs. According to the findings, the MRS's short sufficient construct validity for the questionnaire for assessing the signs of menopause in Indonesian women. |

| 15 | Professor H. P. G. Schneider, et. al. | 2017 | | | Accurate health-related quality of life (HRQOL) assessments is essential for clinical practise, research, health treatments, and health planning. This study addresses the important measurement characteristics of HRQOL instruments, factors influencing health status, and the HRQOL measures that are currently accessible. Specifically, each HRQOL measure created for use at the climacteric is addressed in terms of its reliability, validity, and usefulness. Depending on the person or community being examined, it is important to use tools that have undergone validation. |
| 16 | Klaas Heinemann, et. al. | 2004 | A Methodologic al Review | | "The Menopause Rating Scale (MRS): A Methodological Review." In-depth evaluations on the authenticity and reliability of the MRS are based on a large international survey from 2001–2002 that was conducted in 9 countries across 4 continents. To provide a preliminary assessment of test-retest reliability, several little convenience samples were employed. The information was centrally examined. To calculate discriminative validity, information from post marketing HRT research was employed Despite the fact that the test-retest reliability sample size was modest, reliability metrics (consistency and test retest stability) were found to be good across nations. Validity: MRS internal organisation was very consistent across nations, leading experts to believe that the scale accurately reflects the same occurrence in symptomatic women. The methodological data that is now available reveals that the MRS scale has good quality for measuring and comparing HRQoL of ageing women across time and across different geographic locations. It also suggests high reliability and high validity as far as the construct validation procedure could be finished yet. |
| 17 | Kloubec, JA. | 2010 | Experimental study | 50 | Pilates to enhance posture, balance, flexibility, and muscle endurance. This study sought to ascertain how Pilates exercises affected balance, posture, upper-body muscular endurance, hamstring flexibility, and abdominal endurance. For twelve weeks, two one-hour sessions of a 12-week Pilates program were offered to fifty individuals. According to this research study, people can improve their muscular endurance and flexibility through Pilates at a comparatively modest intensity exercises. |

| 18 | Erick KM, Michael AH, et al. | 2004 | Experimental Study | 47 | An experimental study on "Repeated Utilizing Chair Stands to Assess Lower Limb Strength in Older Adults Women". sit-to-stand (STS) For older persons, performance is frequently utilized as a stand-in for strength in the lower limbs. Furthermore, it is unknown how Ankle, knee, and hip joint strength that is bilaterally isokinetic relates to older persons' STS performances. Both the 30-second chair STS test and the 5-chair STS test were the two STS tests used by the authors to assess these associations in sexagenarian women. The majority of STS Difference was not explained showing that significant other variables are also involved in finishing the action, even while the strength of the hip flexor, knee extensor, and ankle plantar flexor are important for executing the STS movement. |

| 19 | Kang Hee Cho, et al. | 2012 | Survey Study | 86 | A survey study on "Effect of the Lower Limb Power on Falls and Balance of the Elderly To evaluate the impact of the lower limb strength on falls and balance in older people living in a community as determined by lower limb strength and balance assessments and a health status questionnaire. A total of 86 participants (69.8±5.3 years old) were divided into two groups: "Fallers" and "Non-fallers". Thirty-one The group consisted of participants who had at least one incident of an unexpected fall within the previous year. "Fallers", and the remaining 55 those who weren't familiar with a fall within the previous year, "non-fallers According to this research, the "Chair stand test" is a helpful screening method for lower limb strength, which is correlated with elderly people's risk of falls and balance. |
| 20 | Lee CW, Hyun J, Kim SG. | 2013 | Experimental Study | 40 | An experimental study on "Influence of Pilates Mat and Apparatus Exercises on Pain and Balance of Businesswomen with Chronic Low Back Pain" The objective of the research was to examine the influence of mat Pilates and apparatus Pilates on entrepreneur women with persistent back pain's pain and static balance. Participants were chosen at random allocated to Pilates mat exercises (PME) or Pilates apparatus exercise (PAE), and performed the appropriate Pilates exercises thrice a week for eight weeks. Using the those who weren't familiar with Visual Analogue Scale (VAS), Degree of pain was measured. PME showed greater improvement in pain level and balance compared with PAE in this research. |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Literature Search Methodology

Pedro and Google Scholar are two search engines on the internet that are utilized for journal collection. The articles were identified by the authors using the keywords. The full texts of the articles were gathered. A total of 40 to 45 articles were identified in which 20 articles were selected for the study.

Study Selection

Inclusion Criteria

- 1. The articles in which there is discussion of the effects of Mat Pilates Exercises were included.
- 2. The articles which are published in English language are included.
- The articles with full text from year 2004 to 2023 were included.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Exclusion Criteria

- 1. The articles which were in other languages were excluded.
- 2. The articles which were below 2004 were excluded

DISCUSSION

The most definition indicator of the end of a woman's reproductive cycle is the menopause. For most women, the menopause typically lasts from 40 to 60 years of age. Throughout the course of a woman's life, female sex hormones have a variety of effects on her health and wellbeing. Women experience extraordinary hormonal changes in the middle years as a result of ovarian aging and the menopausal transition on that followed. The menopausal transition on stage includes a rise in the blood concentration on of follicle-stimulating hormone (FSH) and a fall in the concentration on of oestradiol, both of which vary greatly between individuals. As people age, their muscle and bone mass diminish, increasing their chance of developing osteoporosis and sarcopenia in later life. Pilates is a well-known form of exercise that combines control over posture, movement, and breathing. It has been widely used in programs for physical training and rehabilitation on. Pilates embraces a set of exercises that integrate flexibility, breathing, posture, and muscular quality.

The escalating work is adjusted to the abilities and limitations of the patients and can be integrated into an individual or group-based program. Moreover, the current study's findings support Shah's assertion on that Pilates evenly targets each muscle group through a combination on of dynamic and static strength training, thereby strengthening the entire body. Every body part is taken care of. Additionally, we practice all three planes of motion: sitting, laying, and standing. This suggests that despite the absence of using large weights, the muscles are exercised in a variety of ways, resulting in a consistent and extremely deep strength and tone. Pilates develops strength from the inside out, starting with the deep core muscles that support the body during movement and working out to the limbs. Pilates also increases endurance through both individual and group activities.

There was a study in which it was evaluated to see how lower extremity muscular strength and postural stability were affected after eight weeks of core stability training with Pilates. 40 Subjects in good health were split up into two groups at random: twenty members of the core stability training (CST) group and twenty members of the control group. For eight weeks, the CST group an ended three 60-minute Pilates weekly training sessions, whereas the control group got no training at all. We used isokinetic equipment to test lower extremity muscular strength before and after training, and a balancing device was used to measure postural stability. The CST group showed significant post-test increases in postural stability and lower limb muscle strength (P<0.05). But in the group under supervision, there was minimal change in either of these metrics' notable variations in the lower extremities.

The total data from these investigations emphasizes the many advantages of Pilates instruction on for the range of demographics and health issues. Pilates is a flexible and effective exercise technique with wide-ranging implications for health promotion and preventing illness, especially in menopausal and middle-aged women, in addition to those who experience chronic low back discomfort or hypertension. It can improve physical fitness criteria, decrease chronic pain, enhance mental well-being, as well as control cardiovascular risk factors. To further understand the underlying mechanisms and enhance the application of Pilates interventions for optimizing health outcomes across a range of demographic populations, more research is recommended.

CONCLUSION

However, it was shown that mat Pilates exercises were useful in enhancing menopausal women's quality of life and physical strength. Many studies suggest that mat Pilates exercises can help reduce menopausal symptoms, which enhances quality of life and increases physical and muscle strength.

IDENTIFY SEVERAL VARIABLES THAT INFLUENCE THE WELFARE OF THE POPULATION OF INDONESIA

Muhammad Saleh Mire

Mulawarman University

ABSTRACT

This study aims to determine and examine the influence of road infrastructure, wages, GDP per capita, and MSMEs on the level of population welfare (human development index) through GDP per capita and economic growth using panel data in 34 provinces in Indonesia during 2017-2022. This research uses a path analysis model with dummy variables by grouping the system into 2 parts, namely areas with a natural resource base, called Group 1, and non-SDA-based areas, called Group 2. The results of the study show that road infrastructure has a significant negative influence on the level of welfare. both in Group 1 and Group 2. This variable also has a significant negative effect on GDP per capita in Group 2, but it is not significant in Group 1. Furthermore, this variable has no influence on economic growth in either Group 1 or Group 2.

Wages in Group 1 have a real positive effect on GDP per capita and HDI (welfare). On the other hand, Group 2 had no influence on these two variables. Furthermore, MSMEs in group 1 have a very real influence on GDP per capita and HDI, but have no influence on economic growth. On the other hand, in group 2 MSMEs have no influence on GDP per capita and economic growth, but have a significant positive influence on HDI. Finally, economic growth has a real positive influence on HDI in Group 1, whereas it has no influence in Group 2.

KEYWORDS: Road Infrastructure, MSMEs, Wages, Economic Growth, GDP per capita and HDI

JEL Classification: B55, C01, L60

INTRODUCTION

One of the parameters used for successful development in describing community welfare is the human development index (HDI) which measures human development achievements based on a number of basic components of quality of life. HDI with a basic three-dimensional approach that includes long and healthy life, knowledge, and a decent life. The United Nation Development Program (UNDP) in 1990 originally introduced an HDI indicator that it had developed, namely an indicator that can describe the development of human development in a measurable and representative manner. The HDI number ranges from 0 to 100. The closer to 100, the better the indication of human development (Androgue, 2010). HDI itself was first introduced by a Pakistani economist in the 1970s named Mahbub Ul Haq (Khodabakhshi, 2011).

Human development results vary in 34 provinces in Indonesia, showing that prosperity is far from expectations, especially in terms of equality. DKI Jakarta has the highest HDI reaching 81.65 and the lowest is Papua province with an index score of 61.39 in 2022. Specifically, the acquisition of human development index scores in provinces resulting from expansion with the hope of achieving a higher score is not fully proven. The success of the Riau Islands province was by passing the HDI achievement of Riau province, while other provinces showed the opposite results, namely that the province of North Kalimantan was not higher than the province of East Kalimantan, likewise the province of West Sulawesi had no higher score than South Sulawesi. So the results of the expansion of provinces do not guarantee higher welfare than the parent province, in fact many of them will be lower. Variations in Human Development Index (HDI) scores can be seen in Figure 1.

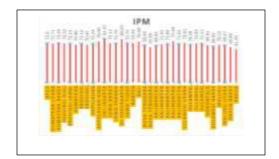

Figure 1. Provincial HDI in Indonesia in 2022

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

One indicator of success in economic development in a region is economic growth. Economic growth is a process of increasing the productive capacity of goods and services from an economy as a whole and continuously or sustainably over time, resulting in increasing levels of income over time. Rapid economic growth has attracted the attention of economists, politicians and policy makers because economic growth is considered the main prerequisite for achieving a better standard of living for the entire community (Nafziger, 2006). Economic growth is influenced by investment in a broad sense which consists of several production factors in the form of capital, labor, skills and technology (Todaro and Smith, 2020; Branson, 1992). Likewise, instructors, especially road infrastructure, is one of the economic tools that can determine the level of economic growth and community welfare (Syafira and Triani, 2021).

Infrastructure is development capital that will produce output, both directly and indirectly. It can be seen directly that infrastructure capital is one of the production factors that will cause economic growth, directly as a third input in the production function and indirectly by influencing total factor productivity (Agenor and Moreno-Dodson, 2006). Furthermore (Mohanty, at al., 2016) states that infrastructure helps overall human productivity and development of a country and also the quality of life of its people. Infrastructure, especially roads, has a tremendous impact on the socio-economic activities of society. The development of road and bridge infrastructure is the lifeblood of community mobility. The infrastructure development program is part of supporting programs in other sectors. Infrastructure development is an indicator of a country's progress (Ministry of PUPR, 2018). Rural infrastructure, especially roads and electricity, can reduce transportation costs, connect villages with markets, facilitate worker mobility and increase access to schools and health clinics (United Nations Development Program, 2016). In particular, road infrastructure plays a crucial role by providing mobility for the efficient movements of people, goods and services as well as providing accessibility to land and a wide variety of commercial and social activities (Meyer and Miller, 2001). Furthermore (Ng, C.P., at al, 2019) found that the growth in road length per thousand population would facilitate export growth. Thus it can be concluded that road infrastructure can lead to economic growth.

Wages are compensation received by workers in accordance with existing provisions and regulations. Economic activities can run smoothly because of the contribution of workers. Thus wages are directly related to production or economic growth. However, wages do not guarantee increased production. Research (Dan Lupu and Mihaela Ifrim, 2023) found that GDP increases cause wages to increase at different frequencies; there is a positive correlation between GDP growth and wage growth; the effects of wage-led growth policies were weak and only on short periods. Furthermore, it was also found that estimates cast a high degree of uncertainty on the effectiveness of wage increase policies promoted by some national authorities to achieve economic growth. Wages and the unemployment rate have a positive relationship. The size of the wages offered will influence people's interest and desire to enter the job market. If wages rise, then someone will tend to enter the job market (Mankiw, 2011). Thus, labor, which is one of the production factors measured by wages, will be able to encourage economic growth.

The increase in wages spearheaded by the government means that industry will inevitably pay higher wages. This will encourage the workforce to improve performance which in turn will have an impact in the form of increasing industrial productivity. Increasing productivity will lead to an increase in business scale which in turn will increase people's income so that the level of welfare can also increase. Apart from wages which can encourage increased productivity, per capita income is an indicator or benchmark in measuring the level of social welfare in a country.

According to BPS(2023), per capita income Indonesia increases every year, while the rate of per capita income fluctuates every year. Per capita income in Indonesia increased in 2020 by US\$ 3,912 while in 2021 it reached US\$ 4, 291 or an increase of 9.69%. Furthermore, in 2022 it will reach US\$ 4,783.9 or an increase of 11.47% and in 2023 it will reach US\$ 5,108 or an increase of 6.77% compared to the previous year. Increase in per capita income in 2023 accompanied by an increase in electricity consumption. If we observe the pattern of change, the increase in nominal and real per capita income in Indonesia has almost increased from year to year. The increase in real per capita income shows two things, namely: (1) an increase in the production of goods and services that exceed the increase in the general price level, and (2) an increase in real income that exceeds the increase in population.

One of the important sectors that uses the most electrical energy is MSMEs because they have a large quantity. This sector has a strategic role in improving the country's economy. This can be seen from the large number of workers working in this sector, the high contribution to the formation of the national economy's gross domestic product (GDP), and helping to reduce public unemployment. Furthermore, this sector has proven its resilience in facing the economic crisis that hit the Indonesian economy when many large companies went bankrupt. However, this sector experiences weaknesses in the form of: limited capital, difficulties in marketing and providing raw materials, minimal knowledge about the business world, limited mastery of technology, low quality of human resources (formal education), poor financial management, lack of proper division of tasks. clear, and often rely on family members as unpaid workers (Tambunan, 2009). Thus requiring various types of assistance, especially in the financial sector. At the heart of the government's strategy lies a commitment to providing vital financial assistance to MSMEs, enabling them to weather the storms of economic uncertainty and emerge stronger. Through initiatives like the People's Business Credit (KUR) and Micro Business Productive Assistance

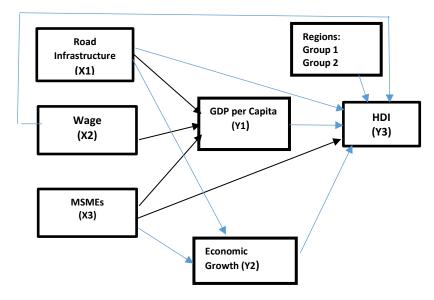

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

(BPUM), small businesses receive much-needed financing support, empowering them to invest in their operations, expand their reach, and seize new opportunities. By alleviating financial constraints and facilitating access to capital, these programs pave the way for sustainable growth and resilience in the MSME sector (Amartha, 2024).

The role of MSMEs in economic development is very strategic because they provide the largest contribution, the majority or 99% of businesses in Indonesia are at the MSME level, contributing 61.9% to the total gross domestic product (GDP) and absorbing approximately 97% of the local workforce so that they can be used as a means of alleviating poverty. Micro, small and medium enterprises (MSMEs) have an important role in driving Indonesia's economic growth, especially in the regions. This is proven by data which shows that the number of MSMEs continues to increase from year to year. In 2019, there were 65.47 million MSME units recorded in Indonesia. The contribution of MSMEs to gross domestic income also reached 61.07% or IDR 8,573.89 trillion. Apart from that, MSMEs are able to absorb 97% of the total workforce in Indonesia and collect 60.4% of total investment (BPS, 2023). Thus, an increase in the quantity of MSMEs can cause energy demand, especially electrical energy because basically MSMEs, like other large companies, have production factors that will produce output which has an impact on increasing energy demand, so that it can encourage economic growth. MSMEs have an important role in driving Indonesia's economic growth.

Steady economic growth and adequate labor absorption will have an impact on community welfare or can increase the HDI. Economic encroachment in various economic sectors can have an impact on energy absorption in various sectors because of the positive relationship between output and employment opportunities, thereby creating employment opportunities through employment opportunity multipliers (Miller and Blair, 2012). If high growth and adequate employment opportunities are created, overall societal prosperity can be achieved, even though inequality still exists. Economic growth can be determined by the length of roads, wages, the number of MSMEs and GDP per capita. Furthermore, economic growth and GDP per capita are expected to have an impact on the welfare of society in general, Figure 2. Thus, this study aims to find out and study:

Region with natural resource base (Grup 1) Region without natural resource base (Grup 2)

Figure 2. Framework

- Effect of road infrastructure on GDP per capita, economic growth and HDI
- The effect of wages on GDP per capita, economic growth and HDI
- The influence of MSMEs on GDP per capita, economic growth and HDI
- Compare the influence of road infrastructure variables, wages and MSMEs on GDP per capita, economic growth and HDI in Group 1 and Group 2.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

LITERATURE REVIEW

National Income

Per capita income is a measure of the amount of money earned per person in a country or geographic area. Per capita income can be used to determine the average income per person for an area and to evaluate the standard of living and quality of life of the population, so this concept is one of the main indicators in measuring welfare. GDP is the total amount of remuneration received by production factors participating in the production process in a region/region within a certain period of time, usually one year. Based on this understanding, NTB is the sum of wages and salaries, land rent, capital interest and profits, all before deducting income tax and other direct taxes. This approach method is called the income approach. Apart from that, GDP calculations can also be done using national income, namely adding up all household consumption expenditure and non-profit private institutions, government consumption expenditure, gross domestic fixed capital formation, changes in inventory and net exports (net exports are exports minus imports), within a region/region within a certain period, usually one year. With this method, the NTB calculation is based on the final use of the goods and services produced. Another approach is the production method, which sums up the added value of all economic sectors.

If GDP is divided by population, per capita income is obtained, which is the main measure in determining the level of welfare of a country. GDP is an input to economic growth calculated from the difference between two years of total GDP divided by final year's GDP where Y is GDP. Economic growth is an increase in the long-term capacity of the country concerned to provide various economic goods to its population which is determined by progress or adjustments in technological, institutional and ideological adjustments to various demands of existing conditions (Todaro, 2006). Furthermore, Mankiw (2003) stated that economic growth is a very popular macro performance indicator, used as macro analysis to measure the level of a country's economy. GDP calculations can be done using three (3) approaches: production approach, income approach, and expenditure approach. GDP using a production approach is carried out by summing up the output or added value of all sectors in an economy. GDP using the expenditure approach is to add up the components of final demand including those expressed by Y = C + I + G + X - M where C is household consumption, I represents investment, G is government expenditure, (X-M) is net exports. The income approach includes components of remuneration received from production factors such as wages/salaries, land rent, capital interest. So in this case we pay attention to the income from each factor of production. Capital provides income in the form of interest; labor produces income in the form of salary or wages; wealth provides income in the form of rent and management or skills generate income in the form of profits. By adding up the income from the four factors of production, GDP is obtained. Based on the three approaches above, it appears that economic growth originates from growth on the aggregate demand side (AD) and/or aggregate supply side (AS) and/or on the aggregate production side.

Welfare

The Government of the Republic of Indonesia defines welfare as the condition of fulfilling the material, spiritual and social needs of citizens so that they can live a decent life and are able to develop themselves so that they can carry out their social functions.

In essence, welfare requires the fulfillment of human needs which include primary needs, secondary needs and tertiary needs. Meanwhile, according to Law No. 11 of 2009, articles 1 and 2 concerning welfare, welfare is defined as a condition where people's adequate needs are met, so that they are able to develop themselves and can carry out their social functions.

According to Pigou (1960) economic theory of welfare is a part of social welfare that can be linked directly or indirectly to the measurement of money. Welfare can be approached based on two things, namely: (1) subjective welfare and (2) objective welfare. Wellbeing is addressed at the individual, family and community levels. At the individual level, feelings of happiness or sadness, mental peace and anxiety, and satisfaction or dissatisfaction are subjective indicators of quality of life. At the family level, the adequacy of housing conditions, such as whether there is clean water, is an example of an objective indicator. NASW (National Association of Social Workers), a social work organization in America, defines social welfare as a country's system of programs, benefits and services that help people meet the social, economic, educational and health needs that are the basis for survival, their lives (Zhastrow, C., 2010). Thus, the level of human welfare can be measured by physical and non-physical needs, such as per capita consumption levels, crime rates, labor force, economic level, and access to mass media. Apart from that, the level of community welfare can also be measured by the HDI (Human Development Index) which consists of three combined dimensions, namely: age dimensions, educated people and decent living standards.

HDI is an index that can describe the level of social welfare. A country that has a high HDI shows that the level of social welfare is high. Per capita income is one of the components of developing the HDI, in addition to the health level and education level of the community. The Human Development Index (HDI) or Human Development Index (HDI) is a comparative measurement of life expectancy, literacy, education and living standards for all countries throughout the world, a measure applied by the United Nation Development Programmer (1990) in the human development index theory, namely an approach used as a benchmark for the high and low levels of human development.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The Human Development Index (HDI) is an indicator measuring the comparison of life expectancy, literacy, education and living standards set by all countries in the world, which classifies a country as a developed, developing or underdeveloped country so that it can measure the impact on economic policy on quality of life. The Human Development Index (HDI) measures human development achievements based on a number of basic components of quality of life. As a measure of quality of life, HDI is built using a basic three-dimensional approach. These dimensions include a long and healthy life; knowledge, and a decent life. These three dimensions have a very broad meaning because they are related to many factors. To measure the health dimension, life expectancy at birth is used. Furthermore, to measure the dimensions of knowledge, a combination of literacy rate and average years of schooling is used. Meanwhile, to measure the dimensions of a decent life, indicators of people's purchasing power for a number of basic needs are used which are seen from the average amount of expenditure per capita as an income approach that represents development achievements for a decent life (BPS, 2023).

Economic Growth

Economic growth as a process of increasing output over time is an important indicator for measuring the success of a country's development (Todaro, 2005). There are several theories that explain economic growth, including: 1). Classical theory, according to the views of classical economists, exists four factors that influence economic growth, namely: population, stock of capital goods, land area and natural resources, level of technology used.

According to the classical view, the law of diminishing returns will affect economic growth. 2). Harrod-Domar theory, in analyzing the problem of economic growth, this theory aims to explain the conditions that must be met so that an economy can achieve steady growth in the long term. Harrod-Domar's analysis uses the following examples: capital goods have reached full capacity, savings are proportional to national income, the capital output ratio remains in value and the economy consists of two sectors, 3). Neo-Classical Growth Theory, this theory looks at it from a different point of view, namely from the supply perspective. According to this theory, which was developed by Swam and Solow in 1956, economic growth depends on the development of production factors. This theory states that the most important factor that brings about economic growth is not an increase in capital and an increase in labor, but the most important factor is technological progress and an increase in the skills and expertise of the workforce. According to the neoclassical view, technology does not depend on economic forces or is exogenous. Later, Romer (1986), Lucas (1988) and Grossman-Helpman (1991) argued that technological progress cannot be considered exogenous, but rather, endogenous. Thus, technological progress results from, among other things, innovation, trade, competition and education. The endogenous growth model emphasizes human capital and research and development (R&D) as the main drivers of economic growth. There are many empirical studies that support the ability of endogenous growth models to explain economic growth in developing countries (Ang and Madsen, 2011)

THE METHOD

This type of the research is quantitative, take the type of study of comparative causality that processes numerical data that can be calculated using statistical formulas. The data analysis technique used in this study is path analysis which estimates of the direct and indirect influence of exogenous variables on endogenous variables. This study uses secondary data, namely data that is already available and collected by other parties and it was panel data. The data was taken from the Indonesia Central Statistics Agency (BPS) which covers 34 provinces in Indonesia. The data used is 2017-2022 yang berasal dari dua kelompok, kelompok pertama adalah wilayah dengan basis sumber daya alam dan kelompok kedua adalah wilayah non-basis sumber daya alam. The statistical analysis technique used is path analysis using the Amos 18 statistical application program.

Based on the conceptual relationship in the framework of thinking, mathematically functional relationships can be written as

 $Y_1 = f(X_1, X_2, X_3)$ $Y_2 = f(X_1, Y_1)$

 $Y_3 = f(X_1, X_2, X_3, Y_2, Y_3, D, DX_1. DX_2, DX_3)$

Whereas:

X1 = Road infrastructure (length of state, provincial and district roads, km)

X2 =Wage (minimum wage of provinces)

X3 = MEMEs (number of small and medium enterprises)

Y1 = GDP per capita (ratio of GDP to population, rupiah)

Y2 = Economic growth (increase in production expressed as a percentage)

Y3 = Welfare (Index score from HDI)

D = Dummy variable, D = 0. Region with non-SDA basis, and D=1 region with SDA basis)

The structural equation can be rewritten:

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Substituting the value of dummy variable

D=0 in the equation (3.3), HDI which is expressed mathematically in Group 1 can be explained

$$Y_{31} = \varphi_0 + \varphi_1 \ln X_1 + \varphi_2 \ln X_2 + \varphi_3 \ln X_3 + \mu_4$$
....(3.4)

and D=1 in the same equation, HDI which is expressed mathematically in Group 2 can be explained

$$Y_{52} = (\varphi_0 + \varphi_4) + (\varphi_1 + \varphi_7) \ln X_1 + (\varphi_2 + \varphi_8) \ln X_2 + (\varphi_3 + \varphi_9) \ln X_3 + \mu_5 \dots (3.5)$$

RESULTS AND DICUSSIONS

Model Fit Test

Chi-square statistic, as stated earlier, is the most fundamental test to measure overall fit, it is very sensitive to the size of the sample used. The model is considered good if the Chi-square value is small. The smaller the value, the more feasible the research, meaning that the more it describes the match between the variance of the sample taken and the research population. The results of data processing that have been carried out using the AMOS 18 program are as shown in Table 1.

Meanwhile, from Figure 3, it is obtained

$$\begin{split} & \ln \hat{Y_1} = 15.509 - 0.242 \ln X_1 - 0.123 \ln X_2 - 0.023 \ln X_3 \quad ...$$

RESULTS AND DISCUSSION

Based on equations (3.6), (3.7) and (3.8), it is known that road infrastructure has a significant negative influence on HDI, but has no influence on GDP per capita and economic growth in group 1. If road infrastructure increases by 1% then HDI decreases by 0.0.02 % at the confidence level $\alpha = 0.05\%$. This fact is relatively more in line with research conducted by (Kusharjanto and Kim, 2011) which stated that improvements to several types of infrastructure including roads in the long term will have a lower impact on increasing HDI compared to improving infrastructure in general. On the other hand, in group 2 with (3.9), (3.10) and (3.11) road length has a significant negative effect on GDP per capita and HDI, but has no effect on economic growth. If road length increases by 1%, GDP per capita will decrease by 0.24% and HDI by 0.02% at the confidence level $\alpha = 0.05\%$. The fact that road infrastructure does not have an influence on economic growth is in accordance with research conducted in South Sumatra by (Kaupa, 2015).

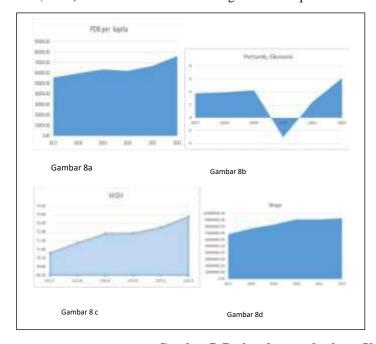

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The results of this research show that road infrastructure has not in fact provided the expected benefits for the welfare of society in general. This is because many of the roads created by regional governments still consist of dirt roads which are difficult for vehicles to pass smoothly. The condition of this road is so bad that the dirt road is still muddy in the rainy season. It should be noted that the types of central and provincial government roads relatively did not increase every year during this research period, so if there was an increase in road length, only district roads increased.

Wages are remuneration received by workers which is determined and paid according to an agreement or regulation. Based on equations (3.6), (3.7) and (3.8), it is known that in Group 1, wages have a very real positive influence on GDP per capita and HDI. On the other hand, Group 2 had no influence on these two variables. If wages increase by 1% in Group 1, it will cause an increase in GDP per capita of 1.77%, which is elastic GDP per capita to wages. Furthermore, if wages increase by 1%, HDI will increase by 0.05%. In connection with this fact, research conducted by (Karim at al, 2021) found that the level of wages affects the increase in HDI in Sulawesi Island. On the other hand, research conducted by (Zhidan Shi and Xiao Tang, 2020) states that in marginal conditions, a decrease in HDI is accompanied by an increase in wages.

Paying attention to the regression equations (3.9) and (3.11), it is known that in Group 2 wages have no influence on GDP per capita and HDI. It is hoped that the greater the wages received by workers, the level of prosperity will increase and vice versa, if the wages of workers are lower, the level of prosperity of workers will also be lower because wage-earning labor is one of the main factors of production. The research results show that wages have no effect on GDP per capita in Group 2 because the wages received by workers are not commensurate with the needs of society in general, especially in this study using the UMP as a variable. So the facts show that there is a conflict between Group 1 and Group 2 in terms of wages. So it can be concluded that Group 1 is more prosperous than group 2 in terms of the effect of wages on GDP per capita and HDI.

MSMEs are individual businesses that are created by individuals or business entities that have certain characteristics and criteria. SMEs in group 1 have a very real influence on GDP per capita and HDI, but have no influence on economic growth. On the other hand, group 2 has no influence on GDP per capita and economic growth, but has a significant positive influence on HDI. If MSMEs increase by 1% it will cause an increase in GDP per capita of 0.11% in Group 1. In group 2 if wages increase by 1% it will cause HDI to increase by 0.02%.Pertumbuhan Ekonomi memberikan pengaruh negatif yang nyata pada Grup 1, sebaliknya pada Grup 2 tidak memberikan pengaruh terhadap HDI. Jika pertumbuhan ekonomi naik 10 % maka akan menyebabkan kenaikan HDI sebesar 0,01%. So the elasticity of economic growth towards HDI is very small and is inelastic with a negative sign. The research facts are contrary to research conducted by (Maulana at. al, 2013) which states that economic growth has a positive influence on HDI.

Gambar 7. Perkembangan berbapa Variabel Penelitian.

As an illustration of national developments, several variables in the research can be seen in Figures 7a - 7d, each of which shows the development of GDP per capita (Figure 7a), the rate of economic growth (Figure 7b), the development of HDI (Figure 7 c) and the

development of provincial minimum wages (Figure 8c). The most prominent thing is the development or rate of growth of the Indonesian economy, where in 2020 it experienced growth of minus 3.03%, while wages continued to experience positive development.

CONCLUSION AND RECOMMENDATION

Conclusion

Based on the analysis and the results of the previous discussion, the following conclusions are drawn:

- 1. Road length has a significant negative effect on HDI, but has no effect on GDP per capita and economic growth in Group 1. On the other hand, in Group 2, road length has a significant negative effect on GDP per capita. GDP per capita and HDI have no significant effect on economic growth.
- 2. In Group 1, wages have a real positive influence on GDP per capita and HDI. On the other hand, Group 2 had no influence on these two variables.
- 3. SMEs in Group 1 have a real influence on GDP per capita and HDI, but do not have an influence on economic growth. On the other hand, group 2 has no influence on GDP per capita and economic growth, but has a significant positive influence on HDI
- 4. Economic growth has a real positive influence on Group 1, whereas Group 2 has no influence on HDI.

Recommendation

The suggestions to be put forward based on the discussion and conclusions that have been stated, among others:

- 1. Local governments should prioritize road improvements, not increasing the length of roads because length has a negative influence on GDP per capita and HDI
- 2. The increase in wages in Group 2 must receive attention and be calculated carefully, especially its impact on inflation because it has no effect on GDP per capita and HDI
- MSMEs need continuous guidance from both the government and the private sector so that small businesses can move up from small to medium and from medium to large businesses.
- 4. The government should make efforts to ensure that economic growth is maintained or increases from year to year because it turns out that this variable has had a negative influence, which means there is a decline in economic growth.
- 5. In efforts to increase HDI, the government should pay attention to and prioritize improving the quality of road infrastructure, growth of MSMEs, GDP per capita and wages.

DEVELOPMENT OF CRIMINALISTICS DURING THE TWO WORLD WARS

Buronov Shakhboz

Student, Faculty of Law, Samarkand State University named after Sharaf Rashidov.
Samarkand, Uzbekistan

ANNOTATION

In this article we are talking about the fact that in the period between the two world wars for domestic criminology, the volume of accumulation of empirical material was increased, the task of disseminating forensic knowledge among specialists of professional bodies, practically creating manuals and manuals, was solved. And also the issue of the independent nature of forensic science was positively resolved, which, however, met with objections from some scientists.

KEY WORDS: world wars, domestic criminalistics, crime investigation methodology, interrogation, interrogation investigation, criminal investigation, detective, criminal technique, sign, identification.

The development of forensic science in Western countries mainly consisted in the development of tools and methods for studying open evidence. Only in Germany, attention was paid to theoretical issues and problems of forensic tactics and methodology.

E. Lokar's fundamental study «Guide to Forensic Science», the last (seventh) volume that arrived on the eve of the Second World War (an abbreviated one-volume translation into Russian was published in 1940), was widely known. Locard, by discovery, for the first time studying dust and other microobjects, developed a method of identification by pores (poroscopy), for many years he was the head of the Lyon police laboratory, founded by the forensic doctor Lacassagne.

In Germany, Hans Schneikert, head of the Berlin Department of Investigation, developed questions of describing the appearance of criminals and methods of working with traces. His books «Teaching about Signs for Identification» and «Introduction to Criminal Technique» were published in Russian in 1925 and 1926. Together with V. Stieber, he publishes the «Practical Guide for Investigation Positions» (Russian edition, 1925). In 1924, Schneikert, infected by the Berlin Bureau for the Identification and Teaching of Forensic Science in the Berlin Study above, publishes the book «The Mystery of the Criminal and Ways to Reveal It», published in Russian translation the following year.

In the same years, the works of another German criminologist, Robert Heindl, are widely known: "Criminal technique"). Erich Annushat in the book «Artificial Inflammation of Crime and Gas Logic» (translated 1927) the problems of using examples of inferences, rules for constructing and testing assumptions by investigators.

This period of development of domestic criminology is characterized by a pronounced practical bias, based on the urgent tasks of combating crime, setting the work of the investigative apparatus, the employees have neither desire, nor desire, nor experience. In the forensic literature at the beginning of the period, translated works predominate in order to somehow observe and arm young investigators and experts. But even in these years, in the first domestic works, marked by more exceptions to Western forensic science, there are a number of original lawyers. They are found in the work of G. Yu. Manns (1921) and P. S. Semenovsky (1923). I. N. Yakimov in the first study on the investigation of crimes (1924) N. P. Makarenko considers the theoretical foundations of fingerprinting, some general issues of inspection tactics (1926). Even in such cases, in essence, a reference manual, such as the work of P.P. Mikheev and N.N. features of the subject of criminalistics, goals, objectives and system of this science, its main parts.

Undoubtedly, the most important and at the same time the most important for the formation and development of domestic criminology was the task of determining its subject and content.

Four subjects of definition exist under the clear exception of the pre-revolutionary views Western and criminologists. So, G. Yu. Manne, enriched in 1921 by the subjects of forensic science, believe that they are, «firstly, the commission of crimes, professional characteristics and domestic crimes (their jargon, their definition of superstition, etc.) and , secondly, the methods of investigating crimes, including the identification of criminals «[1] In the first series of criteria for criminology, proposed in 1925 by I.N. specific, considered and adopted decisions on the investigation of crimes and accusations of the moral personality of the offender, and the goal pursued is to help justice in relation to material justice in a criminal case»[2].

G. Yu. Manne, I. N. Yakimov, and later V. M. Natanson evaluated criminology as an applied, auxiliary discipline. According to the latter, the subject of criminology is the methods of collecting and fixing evidence of guilt, and its purpose is to study the methods of solving crimes [3]. N.D. Voronovsky called the methods of registering criminals, the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

technique of conducting inspections and methods of examining material evidence as the subject of forensic science [4].

The influence of the views of Western criminologists was partially overcome in the first collective Russian textbook on criminology for law schools, published in 1935. The science of how to apply the data of the natural sciences to the investigation of crimes, the best methods for conducting individual investigative actions and the most appropriate mutual arrangement of these actions, the system and planning of the investigation process, and the specific methods of investigating certain types of crimes.

For the stage of formation of domestic criminology is characterized by a view of it as a technical or natural science. It seems that the reason for such an assessment of the nature of forensic science was the desire to dissociate itself from the classical legal criminal procedural science. Emphasizing that forensic science is an applied technical discipline, the supporters of this concept thereby wanted to prove the need to delimit forensic and procedural knowledge. From such positions, this concept played, in our opinion, a progressive role.

A similar point of view in the 20s. Adhered to and G. Yu. Manne [6]. Later, M. S. Strogovich argued that forensic science is a non-legal discipline that studies the scientific and technical methods of collecting and examining evidence, an auxiliary technical tool [7].

Along with the formation of the concept of the subject, opinions were expressed about the system of forensic science. IN Yakimov believed that it consists of two parts – criminal technique and tactics. True, in the composition of the latter, he distinguished «the general part, in content reminiscent of the forensic tactics of a later time, and the special part (the scientific method of investigation), which basically coincides with modern ideas about the forensic methodology» [8].

In 1929, V. I. Gromov published a manual for police and criminal investigation agencies, which he called «Methodology for Investigating Crimes». In the introduction to it, he wrote: «... criminal judicial practice and past experience make it possible to draw generalizing practical conclusions about the methods of work available to every person with some training, the use of which can facilitate the work of investigating crimes, for every average worker, without regard to his personal individual qualities and abilities ... Such conclusions, containing practical instructions or rules tested by experience, relating to the most rational use of all methods of work permissible by law in the process of investigating crimes, set out in a certain system, naturally, can to a large extent facilitate the work of investigating crimes ... The success of the investigation of criminal cases almost always depends on the ability to methodically correctly build and carry out work, the ultimate goal of which is to solve crimes « [9].

V. I. Gromov introduced the term «method of investigating crimes», along with which the term «private technique» later began to be used. True, in the same work he often confused

methodology with methodology, using these concepts as equivalent, but the essence of the matter did not change from this: he wrote precisely about methodological recommendations.

Introducing a new term into science, V. I. Gromov did not propose to change the system of forensic science. However, its publication caused precisely these consequences, and already in the textbook of 1935, the method of investigation began to be called an independent section of forensic science, the system of which, thus, became a tripartite one.

This system was also consolidated in the second part of the textbook on criminalistics for law schools (1936), which is specially devoted to the methodology of investigation [10].

The chronological boundaries of each of the stages in the development of forensic theory, as in any periodization, are very arbitrary. Therefore, already at the stage of accumulation of empirical material, we can talk about the appearance of works that belonged to the next stage in the development of the theory — the development of private forensic theories or doctrines. This is a series of works by S. M. Potapov, V. I. Gromov.

Assessing the significance of the stage of accumulation of empirical material and the role of the first domestic forensic scientists in the development of forensic science, it seems to us that it is necessary to proceed from the following provisions.

The emergence and development of forensic theory became possible only due to the fact that science had at its disposal a huge amount of empirical material – both positive and negative about attempts to use forensic tools and methods. It was in this way that the empirical premises of the forensic theory arose both in the form of individual data and in the form of certain empirical patterns. A special role in the development of domestic forensic science was played by the work of this period by two outstanding forensic scientists - I. N. Yakimov and V. I. Gromov, whose work we consider it necessary to dwell on. Ivan Nikolayevich Yakimov was born in 1884 in Novgorod, into the family of a retired officer. In 1906, he entered the law faculty of St. Petersburg University, from which he graduated in 1911. He was enrolled as a candidate for judicial positions in the district court, and then became an assistant barrister in Warsaw. In 1914, as a reserve officer, I. N. Yakimov was drafted into the army, but in 1916 he was demobilized due to illness, he returned to the bar as a barrister at the Moscow Court of Justice. From 1917 to 1919 Ivan Nikolaevich works in the bodies of the People's Commissariat of Food. In 1919 he was drafted into the Red Army as a military specialist. For five years he has been teaching at higher educational institutions: at the Higher School of Communications, at the Higher School of Chemistry, at the Academy of the Air Fleet. Zhukovsky. Regarding the subsequent period of I. N. Yakimov's life, one of his biographers, M. V. Shvetsov, writes: "After the end of the civil war and the transition of the Soviet state to peaceful construction, when the country faced the task of strengthening the rule of law, one of the important conditions for the implementation of this The task was to train qualified personnel

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of Soviet lawyers. In accordance with this, the further activity of Ivan Nikolayevich Yakimov for 13 years took place in two directions: the first of them was practical work in the organs of the NKVD; work in the field of criminalistics"[11]. In 1924-1937. Ivan Nikolayevich works in the Moscow Criminal Investigation Department and in the Central Directorate of Criminal Investigation of the NKVD. Ivan Nikolaevich combines practical work in the criminal investigation department with teaching activities: he teaches forensic science at the Higher Police School of the NKVD and at Moscow State University - at the Faculty of Social Sciences and at the Faculty of Law, and after the closure of the latter - at the Law Academy. In 1935-1941. he is an assistant professor, and then a professor at the Moscow Law Institute. During the Great Patriotic War, Ivan Nikolayevich worked as a senior military investigator of the Military Prosecutor's Office of the Moscow garrison. Since 1942, Professor I. N. Yakimov began to lecture at the Faculty of Law of Moscow State University. In 1947 he defended his dissertation for the degree of Doctor of Law, Sciences, and on December 26 he was approved as head of the department of criminology at the Faculty of Law of Moscow State University. He served in this position until his death in January 1954. The creative path of I. N. Yakimov is marked by the creation of a number of capital works on a wide range of problems of forensic science. "Practical guide to the investigation of crimes"[12] was a presentation of a series of lectures to employees of the Central Investigation Department. The book consisted of three parts: criminal technique, criminal tactics and a section called "The application of scientific methods of criminal technique and tactics to the investigation of crimes." Criminal technology was divided into three departments. The first section, "Technical methods of registering criminals," outlined the basics of signaletic photography, verbal portraiture, fingerprinting, and written registration. The second, "Technical Methods for Producing Certain Investigative Actions," dealt with inspections and searches. The third -"Technical methods for detecting and fixing traces of a crime" provided data on the detection, fixation, seizure and study of human traces and other traces (animals, wheels, hacking tools, weapons, fakes and forgeries, combustible substances and incendiary devices during arson), and recommendations were given on the storage of items with traces of a crime. Criminal tactics were divided into four sections: the offender, the means of combating criminals, the prosecution of the criminal, and the use of dogs in the search for criminals. Here, the types of criminals and their classification by type of crimes, behavior in the wild and during detention, methods of secret intercourse of criminals were studied, characteristics were given of the qualities necessary for a criminal investigation agent and his activities, methods of monitoring criminals and their detention were described. In essence, the author called the operationalsearch activity of the bodies of inquiry a criminal tactic. The third part was divided into two sections: the general method of investigation based on circumstantial evidence (evidence) and the application of the general method to the investigation of individual crimes. The second section contained guidelines for the investigation of crimes against the person, property crimes and crimes against society (counterfeiting, forgery). The book was accompanied by a diagram definition of a crime. Immediately after the publication of the Guide, whose

circulation (3000 copies) could not satisfy the needs of practical workers, and the quality, apparently, of the author himself, I. N. Yakimov began preparing a revised and enlarged edition. It came out under the title: "Criminalistics. A Guide to Criminal Techniques and Tactics", and was also approved and recommended by the ESD of the NKVD Central Political Administration [13]. Back in the mid 20 s. I. N. Yakimov conceived the creation of a scientific work covering the entire system of forensic science, as he imagined it, that is, both criminal technique and criminal tactics. For unknown reasons, he could not realize his plan in full and limited himself to publishing only the second volume of this work, which was published in 1929 under the title: "Criminalistics. Criminal Tactics"[14]. I. N. Yakimov divided the content of criminal tactics into general and special parts. He divided the general part into three sections: the modern criminal, the crimes he commits and the fight against them; an employee of the criminal investigation department and his activities in the fight against criminals and crimes; investigative tactics. New (in comparison with the previous edition) were a table of the distribution of criminals by type of crime (ch. 1 sec. 1), the entire second division, including ch. 2 "The activities of detective officers in the prevention and suppression of crimes", section "Psychology of interrogation" in the chapter on interrogation from the third department. It can be stated that I. N. Yakimov was the first of the domestic criminologists to turn to the problem of preventing and suppressing crime and tried to solve it in the operational-search and forensic aspects. The same can be said about the foundations of the psychology of interrogation. Shortly before the publication of the book under consideration, he published a special practical guide on interrogation, the material of which he used in the indicated chapter [15]. The special part of the book consisted of two sections: I. "Scientific investigation" (the scientific method of investigating crimes) and II. "Investigation of individual crimes". The first section was supplemented by a historical essay, in which the author examined the methods of investigation proposed by A. Weinhardt, A. Niceforo and E. Annushat. The second section was supplemented with guidelines for the investigation of sexual crimes, horse theft, pickpocketing, extortion and blackmail. In subsequent years, I. N. Yakimov developed the problems of investigative examination in particular detail. In 1935, his work "Inspection" [16] was published, he wrote the chapters on inspection in forensic textbooks of 1935, 1938 and 1950. His doctoral dissertation, defended in 1947, was also devoted to the problem of investigative examination. He was one of the first to develop identification tactics [17]. I. F. Krylov rightly notes that "even a cursory biographical sketch of I. N. Yakimov speaks of the comprehensiveness of his scientific interests" [18]. The name of Vladimir Iustinovich Gromov, a scientist who made a significant contribution to the formation and development of Soviet criminalistics, has been undeservedly forgotten for many years. Meanwhile, the role of his scientific work in the formation of Soviet forensic science is such that it allows putting V. I. Gromov on a par with such scientists of that time as I. N. Yakimov and S. M. Potapov. V. I. Gromov was born in 1869 in the city of Semenov, Nizhny Novgorod province. In 1894, he graduated from the law faculty of Moscow University, after which for five years he was listed as a candidate for

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

judicial positions with the duties of secretary of the Nizhny Novgorod District Court. From 1900 to 1917 V. I. Gromov judicial investigator. After the revolution, V. I. Gromov worked as an inspector-auditor of the Military Economic Council of the People's Commissariat for Military Affairs and the People's Commissariat for Food (1917-1918), chief legal adviser and manager of the legal department of the State Control and the Workers' and Peasants' Committee (1918-1924). In the next few years - an investigator for the most important cases of the Prosecutor's Office of the RSFSR, a senior inspector and consultant of the Main Economic Directorate of the Supreme Economic Council. From 1926 to 1935 V. I. Gromov devotes himself entirely to research work in the field of forensic science and criminal procedure at the Institute of Soviet Law, the Institute for the Study of the Criminal and Crime, and the Institute of Criminal Policy. In 1935, he returned to practical work as a consultant to the Central Methodological Bureau of the RSFSR Prosecutor's Office, then as a consultant to the Investigation Department of the USSR Prosecutor's Office. From 1938 to 1950 V. I. Gromov - in teaching: first at the Moscow Law Institute, where in 1940 he was awarded the title of associate professor, and then at Moscow State University (department of criminal procedure, classical philology, ancient languages). V. I. Gromov died on March 11, 1952. V. I. Gromov began his scientific activity even before the revolution [19], but his talent as a scientist really manifested itself in the 1920s and 1930s. The first major work that brought him wide fame in the circles of the legal community was the book "Inquiry and preliminary investigation (theory and technique of investigating crimes)", published in 1925 under edited and with a preface by N. V. Krylenko and withstood six editions [20]. The book was divided into two parts. The first dealt with the investigative bodies and the limits of their activities, the general conditions and main tasks of the activities of the bodies of inquiry and preliminary investigation, and the methods of work of the investigating bodies. In the second part, the author analyzed individual acts of investigation and their technique, the organization of investigative actions, described the scientific technique of criminal investigations and its features in relation to certain types of crimes. V. I. Gromov is credited with developing the doctrine of the forensic version and planning the investigation. In 1929, V. I. Gromov's work "Methods for investigating crimes" was published [21]. We have already noted the importance of this work for forensic methodology. But her role was not only that. Constructing his "method of investigation", the author sought to outline the typical methods of investigating certain types of crimes, available to each employee "without regard to his personal individual qualities and abilities", i.e., to turn the art of investigation into the science of investigation. Of course, from the height of the modern level, much in this book looks naive. But it should not be forgotten that it was written when the literature was dominated by dogmatic schemes of the process of investigation. V. I. Gromov in this work outlined the most important stages of the investigation process and formulated the general provisions of the tactics of various investigative actions (inspection, search, examination, etc.). The circle of scientific interests of V. I. Gromov is extremely wide, his creative activity is amazing. Suffice it to say that in addition to these works, in 1929, together with N. Lagovier, he published the book

"Criminal Judicial Evidence" [22], in 1931 two of his works were published - "Inspection of the crime scene" [23] and "Techniques for investigating individual types of crimes" [24], in 1932 - "New forms and methods of investigation of official and economic crimes" [25], and in 1934 in collaboration with II. I. Tarasov-Rodionov - "Investigation of theft and abuse in the trading apparatus"[26]. Finally, in 1937, his work of a completely unusual nature was published. This is "Investigative Practice in Examples" [27], about which its editor wrote: "Scipping material from the daily practice of investigative work, the author seeks, using the example of the most common investigative cases, to give not only an analysis of the investigative actions in each case presented by him, but also to make appropriate conclusions and generalizations of a methodological nature that are generally applicable to the investigation of certain categories of criminal cases ... The information reported by the author from the field of forensic science already sounds different: these are no longer paragraphs from a textbook, but technical expediency irrefutably proven on a specific example "(with . 4). Already at the age of 80, in 1949, he took part in the preparation of the Investigator's Handbook. In 1935/36 and 1938/39. the first domestic forensic textbooks for law schools were published, in the preparation of which all the leading criminologists of that time took part: S. M. Potapov, I. N. Yakimov, V. I. Gromov, S. A. Golunsky, A. I. Vinberg, B. M. Shaver, E. U. Zitser and others. In 1940, the first textbook for law schools by B. M. Shaver and A. I. Vinberg was published. Of great importance for the formation of the theory of forensic science were the articles by B. M. Shaver "On the basic principles of private methods" and "The subject and method of Soviet forensic science", as well as the article by S. M. Potapov "Principles of forensic identification", which laid the foundation for the formation of this most important forensic theory. The question of the nature of criminalistics was not specially considered during these years; a three-term system of science was adopted: technique, tactics and methodology, and after the publication of B. M. Shaver's article on the subject of science - a two-term system, consisting of general and special parts. The period between the two world wars for domestic criminology was mainly the time of accumulation of empirical material, the task of disseminating forensic knowledge among law enforcement officers, creating practical guidelines and manuals was solved. At the same time, the scientific foundations of forensic examination were laid (the works of A. I. Vinberg, B. M. Komarinets, B. I. Shevchenko, S. M. Potapov, etc.), foreign experience in the use of scientific tools and methods was studied to a certain extent, detection of crimes, the tactics of investigative actions were formed. The issue of the independent nature of forensic science was positively resolved, which, however, met with objections from some scientists.

ABSTRACT

This article analyzes the newest layer of words that have been adopted from English to Uzbek. The structural analysis of the borrowed words characteristic of the official, literary, colloquial layer of the English language is discussed.

KEY WORDS: borrowings, bilingualism, borrowed layer, vocabulary wealth, lexical layer.

Annotatsiya

Mazkur maqolada ingliz tilidan oʻzbek tiliga oʻzlashgan soʻzlarning eng yangi qatlamini tahlil qilinadi. Ingliz tili publististik, badiiy, soʻzlashuv lugʻaviy qatlamiga xos oʻzlashma soʻzlarning tarkibiy tahlili haqida soʻz yuritiladi.

Kalit so'zlar: o'zlashma, bilingvizm, o'zlashma qatlam, lug'at boyligi, lug'aviy qatlam.

Аннотация

В данной статье анализируется новейший пласт слов, заимствованных из английского языка в узбекский. Речь идет о структурном анализе заимствованных слов, характерных для официально-художественного, разговорного слоя английского языка.

Ключевые слова: овладение, билингвизм, приобретательный слой, словарный запас, лексический слой.

INTRODUCTION

The scientific and technical developments observed on a global scale in recent years have a huge impact on every aspect of our society. Especially, this process is causing rapid changes in our language, which is the main means of communication. Therefore, any changes in life and society, first of all, take place in language and through it. These changes and developments encourage the regular enrichment of the lexicon of the Uzbek language at the expense of external sources. The political, social and cultural changes in the life of the society during the last century accelerated the process of assimilation of many words and some of them going out of use.

At that time, Russian, English, Chinese, French, and Spanish words entered through the Russian language, and today, due to the increasingly widespread globalization process, words and phrases from foreign languages are directly assimilated into the Uzbek language which is so-called the process of borrowing words. In linguistics, a borrowed word, a loan word or borrowing is a word taken over from another language and

modified in phonemic shape, spelling, paradigm and meaning according to the standards of the recipient language. There are five primary hypotheses that define the word "neologism". It has been demonstrated that emergence of neologisms and the processes of globalization and technological advancement are responsible for the expansion of language. The expanding and contracting of a word's semantics, which is mirrored in neological processes that define the lexical composition of the Uzbek language.

METHODOLOGY

In this research work various scientific methods have been used to analyze the latest borrowings from English to Uzbek. Qualitative research method is used to draw general principles and theories from investigations and documentations that carried out both in the global scale and in local area. Furthermore, since typical characteristics of qualitative methods are subjective, naturalistic, uncontrolled, exploratory and descriptive which are highly informative to investigate the volume of borrowings that may help to come to reliable and valid conclusion.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Statistic analyze is employed on the base of quantitative research using a deductive method that assists to learn the hypothesis and theories from linguists then searches for evidence to support that hypothesis or theory. The data collected to thoroughly analyze the number, sphere and usage of borrowings.

Experimental research method usually used to find out the strength of relationship between variables and examples which means that new words may be borrowed for different factors like language proficiency, aptitude, motivation, skill, interest and they are examined with this method.

Periodical analyzing the composition of the Uzbek language vocabulary, we can see that most of the acquisitions in the Middle Ages belonged to the Persian-Tajik languages and we state socio-cultural and areal proximity as the main factor of this process. By the 19th and 20th centuries, as a result of the Russian conquest, a great number of words from the Russian language began to enter which led significant changes to the composition of the national vocabulary of our language.

Today, we come across words borrowed from the English language in various areas of our lives. Foreign and Uzbek linguists have notified the results of long-term researches regarding the reasons and factors of words borrowed from foreign languages. While L.P.Krisin says that naming things and concepts is the main reason for borrowing words from foreign languages [3, 142], M.A.Breiter pointed out the lack of a suitable concept in the cognitive base of the receptive language as the primary factor of the process [2, 50].

Notable Uzbek linguist O.Jumaniyozov documented in his book related to borrowed words from the Germanic languages into the Uzbek language that geographical terms, sociopolitical terms, and national words of the language's owners are concrete cause of word borrowing [1,15]. According to our social observations about the reasons for the appropriation and the scope of use of the words, increasing interest in learning English among youngsters, English-Uzbek bilingualism and the fact that the main flow of information is in English are the prime factors of word borrowings.

RESULTS AND DISCUSSIONS

This research work is devoted to the analysis of the newest layer of words that have been assimilated from English to Uzbek and it is clear that this process is closely related to technological development of over the world. It is more accurate to analyze borrowed words dividing into 3 groups including a) neologisms taken from media materials, b) borrowed words used in literary content and c) loan words used in daily communication (colloquial words).

Undoubtedly, we come across new borrowed words nearly every day which is mainly caused by mainstream media productions, like news and broadcasts run in English as a source language. Three factors account for the emergence of neologisms and borrowings in contemporary media texts: fashion, esoteric influence, and societal necessity. This information is accepted in English language and translated into Uzbek clearly and concisely in a short period of time which means that great deal of English words can be borrowed in Uzbek as a result of this process. According to the recent researches in the field of neologisms, the following categories may be used to classify a variety of English borrowings that are employed in Uzbekistan's public media: 1) mastered borrowings; 2) internationalisms; 3) barbarisms; 4) exoticisms; 5) foreign inclusions and 6) tracing paper. "Boundaries between exotic vocabulary and "ordinary" ones borrowings - that is, words whose semantics and use not specific to a particular country (territory). At under certain circumstances, exoticism can turn into a word, although retaining signs of foreign language, but naming the reality that instilled in the lives of native speakers of the recipient language" [4,24]. They are some words mainly used in the means of mass media:

| Borrowed words | Original | Meaning |
|----------------|-----------|-------------------------------|
| Dayjest | Digest | Short information |
| Kampus | Campus | The area of the university |
| Reyting | Rating | A level on a scale |
| Gibrid | Hybrid | Mixture of two or more things |
| Smart | Smart | Clever, self-controlled |
| Zona | Zone | Area |
| Stiker | Sticker | Label |
| Avtomatik | Automatic | Work without needing someone |

Furthermore, some borrowed words are well- associated with Uzbek words to make collocations in which guest words can indicate the grammatical signals of host language. Even though they have less word forming power, they are regarded as wide collocability, high frequency and stylistically neutral. In fact, according to the classification of borrowings in mass media industry there are three ways of borrowing:

- 1) Directly, without change, such as smart, nepotism, messenger, art, coffee break, video hosting, media, smart TV.
- 2) Word by word translation, for example, photo zona, tehno zona, avto zona.
- Mixed, forming collocation delivering to the public on the mixture of resource and native language, namely, eko-bozor, davlat aktivlari, yordam paketi, smart soat. robot tarvuz. open budiet. energosamarador.

"When learning some terms, the constituent elements of the word are replaced by Uzbek suffixes. This is the process when it is possible to separate the stem of the word being learned

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

from the word-forming suffixes, it is independent in Uzbek occurs when expressing a certain concept".

Even though, the usage of borrowings and neologisms in media texts shows how a culture has integrated into a globalized one is through their positive utilization, overuse of neologisms in media texts without an obvious explanation of their meaning might cause readers to misinterpret the content. The definitions of neologisms employed in the text are not always clear to readers. Specifically, this is relevant to the elder generation majority of who do not speak any foreign languages. Therefore, it may be said that it is crucial to apply a variety of new linguistic techniques in current media texts in a balanced manner.

As regards literary layer of word-stock, there are a number of words appearing in literary contexts in which words are connected through translated literature. In this process, direct communication between representatives of both languages does not occur, due to objective need, the borrowed words appear in the written speech. It is clear from the above that bilingualism is the most important in wide spread of borrowings which can be practiced both orally and in writing.

In ongoing globalization period, Uzbek readers have an access to read a range of book by world writers either in original language or translated version. In turn, this process opens the way to borrow more words from other languages. There are some examples taken from various literary context: "absurd va isyonkor odam falsafasini oldinga surgan" (Fridrix Nitshe. "Zardusht tavallosi"), "yuzlab talabalar bosh kampusning (campus) maysazoriga qator qilib terilgan yig'ma yog'och kursilarda o'tiribmiz", "Morrining darslarida radikal (radical) talabalar ko'p edi" (Mich Elbom. "Morrining seshanba darslari"). Moreover, we can frequently come across the words like, parti (party), kretiv (creative), independent in various literary contexts.

There are a number of extralinguistic factors that affect word borrowing in **colloquial layer**. The most important of these are: political, economic and cultural relations between two languages; science development, expansion of mass media activity, advertising and texts in visual aids, widely usage of social networking sites and increasing demand for learning foreign languages.

As a result of abovementioned factors, daily conversation of Uzbek people is being filled with range of English words, for instance, klub (club), layk (like), kontent (content), parti (party), taym (time), real, feys (face), aktual (actual), luk (look), stori (story), chat, koll sentr (call centre), kofe brek (coffee break), super, mega, byuti boks (beauty box).

These words are actively used in colloquial style in the phenomenon of narrowing of the meaning. Take the words luk and layk as an example, "look" is a verb which means to turn the eyes towards something in order to see it and noun with the meaning of the act of looking but this word is borrowed to the Uzbek language with the meaning of "appearance".

Likewise, the word "**like**" is mainly used as the meaning "similar" (preposition), "to enjoy something" (verb), "favorites" (noun), as well as, adverb, conjunction and adjective form. However, it expresses just the act of the thumbs up in the Uzbek language.

CONCLUSION

To conclude, the growth and development of social life and production in the modern world and the rapid penetration of the scientific and technical revolution into all corners of the world show that it is impossible for people and languages to live separately from each other. Naturally, all this is manifested in and through language. Analyzing newly borrowed words that have appeared in our language in the last 5 years, we can see that our national vocabulary is expanding due to external factors. According to the statistic information, while about 80 English borrowings are included in the old edition of "Explanatory dictionary of the Uzbek language", more than 500 neologisms from English are explained in the newly edited version. Furthermore, "English borrowings to the Uzbek language" provides explanation for more than 350 words used in the mass media, as well as, more than a thousand lexemes have been stated as borrowings in "English-Uzbek-Russian information technologies and internet short term dictionary". In turn, this process, on the one hand, has a positive effect on the vocabulary of the Uzbek language if users of these borrowings utilize word appropriately; on the other hand, it creates urgent problems related to misuse and application that have been analyzed by linguists.

ABSTRACT

The economic situation of rural residents has changed since economic liberalization, and they are no longer considered impoverished individuals. Rural residents' income has increased significantly during the past few years. The information revolution and rural residents' rising educational levels have made them aware of many of the newest product offerings. Cultural disparities with their urban counterparts began to fade in a market that was semi-homogeneous for many durable and non-durable businesses. Reduce and attitude had significantly shifted. Teenagers from rural areas try to act like their metropolitan counterparts. A significant shift in lifestyle has occurred, with a growing number of people becoming self-conscious. Social class lines become less distinct. Rural consumers could now easily get commodities thanks to the extensive distribution network of various businesses, which contributed to the rise of rural consumerism. In summary, the paper covers various psychographic and demographic studies as well as an analysis of rural customers' demand throughout the post-liberalization era.

KEY WORDS: Demand Analysis, Economic Liberalization, psychographic and demographic studies, Rural Consumer

India made a complete 180-degree turn in its approach to market ideology and economic strategy in 1991. Up until that point, Jawaharlal Nehru's socialistic ideology dominated economic policy. The state had a very strong emphasis on controlling everything. In India, the legacy of Mahatma Gandhi was characterized by a high level of protection, local production, and self-reliance. Business was under the jurisdiction of the government. There were expensive and high taxes, and commodities were hard to come by in many areas. International brands nearly exclusively use Anna due to strict duty regulations. Dominant businesses in the majority of industries continued to be wholly uncompetitive by global standards.

Following Indira Gandhi's resignation as prime minister in the middle of the 1980s, Rajiv Gandhi began to implement several

reforms in government regulations. He absorbed some shaky advice on economic liberalization. But it wasn't until 1991during an unparalleled balance of payments crisis—that India was compelled to take the route of economic reform. Since then, India's GDP has grown rapidly, and the country's socioeconomic structure has drastically changed in both its urban and rural areas.

SHIFTS IN DEMOGRAPHY

The distribution of income was one of the most notable shifts brought about by liberalization. The income distribution measure for rural consumers, or the percentage of the population at each income group level, is shown in the following chart.

| Exhibit 1 : Rural – Percentage of Each Income Group | | | | | |
|---|---------|---------|---------|---------|--|
| Income Group | 2010-11 | 2015-16 | 2020-21 | 2023-24 | |
| Upper | 2.1 | 3.6 | 5.2 | 8.1 | |
| Upper Middle | 3.1 | 4.1 | 5 | 6.5 | |
| Middle | 8.6 | 10.1 | 13.7 | 22.3 | |
| Lower Middle | 29 | 39.5 | 43.5 | 42.5 | |
| Lower | 57.2 | 42.7 | 32.5 | 20.6 | |

This graph demonstrates how rural India's income distribution has improved over time. If we plot it graphically, we can clearly see that, in 2001-2002, the triangle transformed from being bottom-heavy to a better proportionate triangle. It began to take on the shape of a diamond in 2005-2006. This is a useful measure because it shows how changes in consumption patterns affect the shape of the income distribution and, consequently, how average consumer behaviour itself changes. The

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

distribution of income is a powerful and advantageous catalyst in determining other changes in the population.

The fact that rural customers are no longer reliant on agriculture may be one of the causes of the changes in the distribution of rural income. Their reliance on agriculture left them vulnerable to the monsoon's boom and bust cycle. Furthermore, the agricultural sector had declined by 1.9% over time. However, as of right now, agricultural activity in rural India accounts for little less than half of the GDP in rural areas and is nearly equivalent to other agricultural activities. The rapidly expanding non-agricultural sector has more disposable income. Furthermore, those in non-agricultural sectors are naturally driven individuals. Their spirit of entrepreneurship allows them to question the status quo and existing conditions. In rural India, the number of self-employed individuals is rapidly increasing, primarily in the service industry, which requires very little initial capital. Status quo is the pre-liberalization mindset that persists in rural India today. The mantra of the rural selfemployed becomes, "I can and I will." Ninety percent of rural homes in 2023 are headed by self-employed individuals. In addition, dual households are becoming more common in rural India. This has led to the emergence of other consumption drives.

Consumer confidence and comfort levels when borrowing were key factors in determining how consumers behaved in rural India. The future-oriented expectations of consumers determine their level of confidence. If people believe the future will be better than the present, they will spend money. Consumer trust is greatly increased when consumers witness the advancements made in research over the past few decades in their own homes and the homes of those in their immediate vicinity. Furthermore, there is an increase in the confidence to borrow. Indian psychology has always placed a great deal of discomfort around death. Indian mythology, religion, and society have all long-condemned debt as a means of acquiring goods. In the Mahabharata, Yudhistir gave his opinion on what makes a happy man in response to Dharma's query about what makes a happy man: "whoever ekes out the day without taking loan, going abroad." However, a few of the variables also altered the rural consumer's perspective on loans. The first is my unwavering belief that tomorrow will be better than today; the second is the low interest rate regime; and the third is the EMI facility, which allows me to use loans as pre-planned means of expenditure.

In rural India, consumption results from the widespread desire for rice. Three independent variables, namely literacy, determine aspiration. Increase communication and connectedness. In many of the states you admire, both urban and rural, literacy had taken a serious hit. Even if the achievement was not noteworthy in many states, it touched the nearly full literacy level in others, but India had nonetheless propelled itself to a new league in the post-liberalization period of literacy. Just 24% of people in the twenty to twenty-five age range lack literacy. Merely 13% of individuals aged 12 to 19 lack literacy. Over half as many people in the aforementioned age categories are illiterate. Furthermore, in the case of India, the methods and resources used to spread consciousness had beyond the conventional framework of universities and schools.

Indeed, those are the most important routes for distributing knowledge, but they cannot ensure the development of consciousness. Herein lies the opportunity for the media to contribute positively. In rural India, television was widely distributed, which led to the creation of much-needed social consciousness. In India, the revolution in communication has had a profound effect on rural households. There is a telephone in practically every village. The internet is visible in many locations, and mobile devices are gaining ground at an astounding rate. The potential of IT, whether it be for problemsolving, enhancing daily life, or generating jobs, has even permeated rural India. With the correct amount of exposure, even rural households can be tech-savvy, as demonstrated by the ITC e-choupal campaign. The aspiration level had altered due to all of these reasons. Notable anthropologist Arjun Appadurai described it as "Imaginational is not about the individual escape." It is the social activity done in groups. In order for people to construct a narrative and screenplay around themselves, envisage a prospective existence, and arrange products in an evolving sequence, they require access to information resources. Though it may not always lead to action, imagination serves as a catalyst for it. The age cohort has been correlated by the imagination of reaching anything. An age cohort is a collection of individuals from various generations. In rural India, there are three distinct generations to consider while discussing the age cohort. First, there are the youth, defined as those under the age of twenty-five. They've been referred to as "the children of liberalization." Next are the parents of children who have been liberalized; Salman Rushdie refers to these parents as "Midnight's Children." Additionally, there is a generation that originated in the years prior to independence.

Less than 10% of Indians are from the pre-independence generation, while 35% are from the post-liberalization generation. Of the population, 26% are children of midnight, while the remaining 30% were born between the liberalization of the 1970s and the year 1970. Gandhi's philosophy of 'Live simply, think high' had a great influence on the generation that lived before independence. They uphold the virtues of thrift, simplicity, honesty, abstinence, and self-reliance. The children of Midnight and Midway have witnessed the devastation caused by the process of nation-building. They frequently have a strong inclination to save. Yet, the liberalization children exhibit a strong consumerist trend. They do not have a national preconception that opposes materialism in general. The generation of the liberalization era does believe in consumption, even though the pre-independence age group is comprised of dissatisfied customers and Midnight's Children are guilty consumers. While their fathers' lack of access to transportation prevented them from leaving their villages, this generation has lived in cities from an early age. Transportation has always been essential to the spread of consumerism, whether it is in Japan, America, or another country. It turned out to be a beneficial stimulus for both the supply and demand sides. In addition to lowering barriers to mobility, it fosters a convergence of consumer test, lifestyle, values, and attitude. The line separating rural and urban areas is no longer real. Conversely, businesses seeking to service a sizable portion of the underserved or underprivileged market drove the creation

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of the supply side revolution. Products that were within easy reach of customers were made possible by the distribution revolution, which was spearheaded by some Indian corporations. The children of liberalization are essentially contributing to the rapid diffusion of the consumerism trend. Now, in addition to discussing age cohort, we should additionally discuss ethnicity at India is essentially a notion rather than a physical place, according to a statement made by Sashi Tharur. If we attempt to investigate the idea a little bit, we have to keep in mind the vast differences among individuals when it comes to language, culture, eating habits, etc. Is there anything that we can categorize as pan-Indian or pan-rural? The answer may be no, but in the post-liberalization era, a more forceful no. India's television viewing options prior to deregulation were limited to national networks. There is a strong sense of regionalism in every aspect of life due to the abundance of regional language channels. This has prompted numerous businesses to modify their operational marketing strategies in a way that better accommodates ethnic preferences.

The role of women in society has changed, though, and this is the biggest shift brought about by liberalization. Similar to the US following World War II, there has been a significant shift in the gender makeup of the working population. However, when compared to working women in cities, the proportion of rural working women is startlingly high. In India's rural areas, 42% of women work outside the home, compared to 23% of urban women. In addition, a brand-new group of working women known as Micro Entrepreneurs is on the rise. Shakti Amma of Hindustan Unilever's project Shakti propagates the woman emancipation of rural India. They not only take care of the mundane needs of the family, but also the economic needs. The cascading effect of the self -help group and the project like Shakti has created an entrepreneur spirit among the women in rural India.

Rural SEC (Socio Economic Classification) System: The rural SEC system is categorized in four classes. Categorization is based on the educational level and the kind of house the family lives in. Exhibit 2 describes the rural SEC R1 & R2 are the major consuming classes in rural India, while R3 and R4 are the poor classes. A little more than 5% rural households are R1 and little over 10% are R2. Together they account for about 22 million households or about 110 million people. In scale term, it is tantamount to one side of the India urban India. But nearly half of the rural India is R4, while R3 and R4 combined together contributed to whopping 85% of rural India. The distribution of R1, R2, R3 and R4 are skewed in certain states in favor of R1 ending certain states in favor of R4.

| Exhibit 2 : The Rural SEC | | | | | |
|--|---------------|------------|---------|--|--|
| | Type of House | | | | |
| Education | Pucca | Semi Pucca | Kuchcha | | |
| Illiterate | R4 | R4 | R4 | | |
| Literate but no formal schooling | R3 | R4 | R4 | | |
| Upto 4 th Standard | R3 | R3 | R4 | | |
| 5 th to 9 th Standard | R3 | R3 | R4 | | |
| SSC/HSC | R2 | R3 | R3 | | |
| Some College but not graduate | R1 | R2 | R3 | | |
| Graduate/Post Graduate (General) | R1 | R2 | R3 | | |
| Graduate/Post Graduate(Professional) | R1 | R2 | R3 | | |
| Source : Bijpurkar Rama, 'We are like that only' 1st edition page 136. | | | | | |

About 60% of R1 and R2 own a television of which half is black & white. About the one fourth of R4 households are having a television set. Therefore, the fact that 30 million of R3 and R4 households having television set is a strong indicator of cultural change in rural India because television is a major source of exposure to the world and also the source of aspiration.

PSYCHOGRAPHIC CHANGES OF RURAL CONSUMER

Culture is the most dominant as well as most important pillar in psychographic variables. Virginia Valentine, the founding partner of Semiotic Solution puts it "culture is not inert, it's pretty 'ert'. If it is not working for you, then it is probably working against you".

Understanding a culture becomes more difficult as a society experiences changes in its social, political, economic, and technological settings. The boundaries of authentic Indian culture remain unclear as a result of the culture's subterranean total of significant changes. It will take some time for the powerful force that seeks to combine the old and the new, the eastern and the western, to produce a definitive outcome. Every national event has an impact on a country's culture and psychographic characteristics; liberalization is no exception. In contrast to the pre-liberalization period, modern Indian rural customers do not accept their lot in life. Instead of settling for less, they aim and reach higher. They do not wish to limit themselves to a little area of land that ends at the edges of their villages or the communities next door. They desire exposure and experience. They give up practicing abstinence. Their requirements have evolved from being basic to being particular and sophisticated, matching or surpassing those of their metropolitan counterparts. This is the result of aspiration's social validity. In her book "We are like that only," Rama Bijapurkar cited Santosh Desai, who discusses breaking free from the social and economic constraints that define daily existence. It is no longer true, he claims, to teach our children to "know your place," "this is our place in the world, this is who we are not," or any similar sentiment from the past. Rural India might now consider visiting places that no one in their

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

community has been before. Stories of adversity turned wealth are cherished. Prior to now, the only way to give dreams legitimacy was via education. Currently, a wide range of goals enjoy social legitimacy. However, the most intriguing aspect of rural consumers' psychographic behavior in the context of postliberalization India's rural areas is the extent to which these areas have absorbed Western culture. We can conclude with confidence that there is still a long way to go before western values like egalitarianism, clarity, linearity, respect for opposing viewpoints, individualism, impatience, assertion, never give up attitude, novelty seeking, wealth accumulation, and respect for youth are fully assimilated with rural Indian values. Indian values include patriarchy adaptability, low dissonance, socially defined roles, patience, passivity, traditional, self-harmonious, happiness, and respecting the age. Even while popular or interactive media has helped spread some western values, most rural households still don't believe in them. One of the western ideas that permeated both rural and urban India is pragmatism. It causes some changes, such as parents being more democratic and amiable in even rural India. Everything materialistic is greatly prized. However, the fundamental element of the rural Indian psyche is its unwavering devotion in traditional religion, which accounts for the rejection of most western values. There's really no comparison to the nihilistic West. Furthermore, there is a strong mistrust of western attitudes and sex views in rural India.

DEMAND ANALYSIS OF RURAL INDIA

As of 2007, more than 60% of consumer expenditure in India comes from rural India. The rate of Expenditure growth in rural India remains to be 7%, which is not for behind of its urban counterpart. Though per capita income of rural India at \$530 is far below urban India, but the mere size which has three times more people as in urban India, makes rural market bigger in many categories. This is because of mere numbers. Mrs. Bijapurkar has given a convincing statistics "the attractiveness of rural India is provided by a simple Matric of NCAER data.

While the percentage of middle income households (that is, those earning between Rs.45000 and Rs.215000 per annum) in rural India, is about 18% the corresponding age of urban India is 58%. The number of medal income households in rural India, however, is 27 million, while the number in urban India has grown at exactly the same rate as in urban India for past ten years". The Indian Readership Survey Data for 2006 revealed that there has been considerable improvement in cable and satellite television access level. There are several emerging Technology -based services that enable rural services like banking, daily medicine and e- governance to become commercially viable.

Spending pattern of rural India vouches its preference for foodrelated expenditure. The food-related expenditure contributes to the 58.3% of total expenditure. For the top 5%, food vs nonfood is fifty-fifty. For the bottom 5%, food's contribution is 65%. But the growth of food-related expenditure has been much slower than the growth of non-food the expenditure. The fastest growing non- food expenditure categories are education and healthcare. Consumer durable is also growing fast, but FMCG expenditure share, however remains constant through 2017-2023.

The biggest dilemma about rural demand pattern is that it has some consumer doesn't and oases within it. Huge heterogeneity prevails over rural India. The following Exhibit 3 may illustrate the context in a lucid way.

In 37% villages having population up to 500, there is hardly any shop. On the contrary, 17% villages, having population from 2000 to 10000, account for 50% of the rural population and 60% of the rural wealth.

The major challenge before the companies is to manage the heterogeneity and creative long term sustainable growth opportunity out of rural India.

| Exhibit 3 : Profile of Villages | | | | |
|---------------------------------|--------------------------|------------------------------|--|--|
| | Distribution of villages | | | |
| Population | No. of Villages | Percentage of Total Villages | | |
| Less than 200 | 92541 | 15.6 | | |
| 200-500 | 127054 | 21.4 | | |
| 501-1000 | 144817 | 24.4 | | |
| 1001-2000 | 129662 | 21.9 | | |
| 2001-5000 | 80.13 | 13.5 | | |
| 5001-10000 | 18758 | 3.2 | | |
| Total No. of Villages | 593154 | 100 | | |

ABSTRACT

Training is meant to instil good improvements in knowledge, skills, and attitude, and it has a significant role to play in this regard. This research is conceptual in nature. Employees pay for training to develop new abilities that will either better prepare them for their current position or for a higher-level one with more responsibility.

KEYWORDS: personnel, organization, human resource management, training and development.

INTRODUCTION

Initiatives for human resource development frequently incorporate training. The purpose of the human resources department is to improve organizational effectiveness by providing staff members with the necessary information, abilities, and mind sets to support them in their current positions or in future ones.

Human Resources Development

The importance of human resource development (HRD) in an organization's growth plan is becoming more widely acknowledged. The success of HRD or training programs depends on how well the institutional frameworks and supporting instruments are built, which guarantees that the programs achieve their intended objectives. The process of creating such policies is complex and full with obstacles. These rules will only be successful if the necessary precautions are taken to anticipate probable roadblocks and develop solutions. HRD is inextricably tied to other human resource factors that are pertinent to a certain period of time, such as hiring practices, employment trends, and the age and skill level of the workforce. As a result, HRD policies need to be reviewed on a regular basis in order to stay current with the changing organizational environment. Thus, HRD encompasses a spectrum of activities such as training, education, mentoring, coaching, and other forms of professional development that contribute to the growth of both employees and the organization itself.

Objectives

- To enhance employees' proficiency in their existing roles.
- To equip employees for potential future positions.
- To ensure employees are well-informed and up-to-date.

Training and Development of Employees

The importance of human resource development (HRD) in an organization's growth plan is becoming more widely acknowledged. The success of HRD or training programs depends on how well the institutional frameworks and supporting instruments are built, which guarantees that the programs achieve their intended objectives. The process of creating such policies is complex and full with obstacles. These rules will only be successful if the necessary precautions are taken to anticipate probable roadblocks and develop solutions. HRD is inextricably tied to other human resource factors that are pertinent to a certain period of time, such as hiring practices, employment trends, and the age and skill level of the workforce. As a result, HRD policies need to be reviewed on a regular basis in order to stay current with the changing organizational environment.

The essential features of training:

- In order for new personnel to carry out their duties in an efficient manner, training is essential. With the right guidance, coaching, and mentoring, people can effectively and competently handle their tasks.
- Providing current staff with advancement training is essential to preparing them for promotions and higher roles.
- Given the rapid rate of technology improvements, it is vital
 that current staff members get continuous education in
 order to stay up to date on changes in work tasks.
- It's crucial to provide flexibility training to staff members so they can be assigned to various tasks based on the needs of the company.
 - When employees go from one role to another, transitional training is crucial because it helps them adjust quickly, improve their performance, and easily accomplish their career goals.

- Training to close the skills gap is required to match workers' abilities to the particular requirements of their positions.
 - The goal of productivity training is to raise employees' value and long-term efficiency inside the company.
 - By rapidly grasping their tasks and making valuable contributions to the team, employees who receive peer integration training gain the respect of their peers

Employee training is intended to improve skills or add to existing knowledge, preparing staff members to succeed in their current tasks or advance to more responsible ones. The growth trajectory of an organization is closely linked to the personal development of its members. Activities included in training are largely designed to help staff members absorb and apply the knowledge, skills, abilities, and attitudes that the company determines are essential. Training is essentially the process of increasing a worker's knowledge and skill set for a certain position. In light of the ever-changing nature of today's corporate environment, learning is the most important way to adapt. Workers are the driving force behind an organization's successes and failures because they are a source of creativity.

Employee Perception

The cognitive process by which people form and analyse their sensory observations in order to create an understanding of their environment is known as employee perception. This impression could not correspond with reality; rather, it is a person's personal interpretation of a situation. Perception plays a crucial role in organizational behaviour because it shapes conduct based on how an individual interprets reality rather than the actual facts. Perceived reality is the one that shapes behaviour. Human nature has layers of complexity, even though it can seem simple at times. Acknowledging and appreciating this complexity is critical to promoting positive employee perception at work, which is necessary for competent management and leadership. It is commonly known that organizational operations would cease to exist in the absence of perception. It is necessary for all staff members to have the same perspective in order to complete any assignment. Managers can utilize this shared knowledge to motivate team members and improve organizational productivity. For the organization to be successful, a variety of viewpoints must be present. To perform their duties, organizations need staff that are knowledgeable and experienced. If potential or present employees already fit these requirements, training becomes unnecessary. When there is a disparity, nevertheless, it is crucial to teach the staff members to improve their skill levels. Training includes the following:

- Evaluating present skill levels and projecting future growth.
- Expanding a person's repertoire of abilities.
- Developing technical know-how. Gaining a competitive advantage.
- Increasing confidence.
- Promoting the growth of the company.
- Increasing the organization overall capability in the end, it helps bring about a revolutionary change in behaviour, which results in a favourable attitude adjustment.

Motivation

The process that encourages people to use their abilities and put forth effort in a way that advances both the accomplishment of organizational goals and their own needs is known as motivation. The success of training initiatives is significantly influenced by the fervour with which employees embrace them. Studies have indicated that an employee's willingness to participate in training and development initiatives is highly influenced by their perception of the job's significance and the possibility of career progression. Effectively motivated workers typically have a positive perception of the training environment at their company, which is correlated with a higher level of participation in training initiatives. Research has also shown that those who are eager to learn are better at using new abilities in their work-related duties.

The resultant advantages foster a sense of goodwill towards the organization, thereby reinforcing their emotional commitment. When it comes to training and development, research indicates that workers are more likely to participate in learning when they understand the importance of these programs in achieving their goals for improved performance as well as the possibility of benefits like incentives and possibilities for growth. Individuals who perceive training as beneficial are more likely to exhibit increased commitment to their company.

Furthermore, it has been observed that the best result of training is an increase in task execution ability. It takes a combination of incentives and rewards, constructive criticism, unambiguous direction, and the required work resources to get the best performance out of people. This suggests that workers who believe that training is a useful instrument for meeting requirements at all levels, including self-actualization and self-esteem, tend to be more proficient in their roles.

Workers are the backbone of any business, and they make a substantial contribution to its success. Therefore, in order to maximize job performance and equip them for the demands of the contemporary, cutthroat business environment, it is imperative to invest in their growth through focused training. Although a lot has been written about HRM, there hasn't been as much written about employee training, especially when it comes to poor countries

Organizations are fighting for dominance and trying to surpass their industry rivals on a global scale. Effective human resource deployment and acquisition are necessary to achieve this. Companies have to face the fact that they need to keep their workers informed and up to date. Because of this, managers need to take into account the fundamentals of human resource management, which are important in a variety of organizational, societal, and economic contexts. These components play a major role in accomplishing corporate goals and maintaining the organization's ongoing market presence. This study goes on to look at employee training—one of the core components of human resources—and how it affects output.

Methods of Training On Job Training

The development of a manager's ability can take place onthe-job. The four techniques for on the job development are:

- Coaching
- Mentoring
- Job rotation
- Job instruction technique (JIT)

Coaching

Coaching is a type of training that is used to address areas where performance is lacking.

It involves direct, one-on-one engagement and is regarded as the best kind of instruction. It can be carried out through chat rooms, email, or phone calls.

Mentoring

Senior and junior staff members engage in a long-term mentormentee relationship through mentoring. It provides guidance and a clearer understanding of the strategic objectives of the company.

Job Rotation

Taking on different positions allows managers to gain expertise and understanding of a range of difficulties. It equips workers at lower levels to advance to roles at higher levels.

The Job Instruction Technique (JIT)

JIT is an approach that emphasizes the development of attitudes, abilities, and knowledge (both procedural and factual).

Off-the-job training

Training received outside of the workplace Employees can learn a variety of management development strategies on the job. The few widely used techniques are:

- Transactional analysis
- Sensitivity training
- •Straight lectures/lectures

Sensitivity Training

Developing social awareness and behavioural flexibility is the foundation of this approach, which aims to help people better comprehend both themselves and other people.

Transactional Analysis: This method provides a practical way to analyse and understand other people's actions. According to this theory, each encounter has an initiator whose actions cause a response from a follower, creating a "transaction."

The Lecture as a Training Method:

Lectures provide a theoretical framework for a subject or broaden the listener's knowledge base. They are an essential part of an all-encompassing training course.

Organizations provide training programs (ex) Training programme in Infosys

Infosys' training program Enabling options and developing talent are two of Infosys' talent strategy themes, and career development practise is a vital programme that tackles these issues. It offers details on job streams, rolls, career counselling, and chances for professional growth.

Concentrated Instruction

Concentrated Instruction Specific demands are addressed by the career programs meant for different stages of a career lifecycle. They adhere to a rights-based learning repository founded on the globally recognized best learning model, the "Learn, Practice, Apply" framework. Harvard Business Publishing is owned by Infosys. Your strings will be identified with the aid of their career coaching programs and the leadership managerial 360 Degree feedback endeavour. A few of these initiatives have been acknowledged as best practices on a global scale.

- Training and assessment in education
- Talent enabling
- Infosys Leadership Institute

Training Programs in Satyam

Satyam Management Consultants' training division specializes in offering sales and soft-skills training that is specifically designed to help clients thrive in the highly competitive market environment. Our specialty is developing and executing cutting-edge training initiatives. Making use of an extensive network of partners, we respond quickly to client demands by providing solutions that are not only relevant but also customized to their unique goals and results-oriented.

Increasing productivity leads to a more efficient organization, which is the foundation of good staff training. Satyam Management Consultants provides a wide range of educational possibilities for staff members through need-based training programs, all of which are designed to improve performance at work. We provide flexible scheduling to meet the specific needs of any business, whether it's on campus, in the field, or on the client's property. Our programs are dynamic and tailored to meet the unique requirements of each client's company. Each participant receives a certificate upon successfully completing these customized training programs, demonstrating their dedication to providing exceptional customer service.

Among the competences covered by the training courses are the following:

- Leadership Engagement: Developing leaders who are dedicated to fostering team success and actively involved in it.
- Fostering a High-Performance Attitude: Promoting a frame of mind focused on excellence and maximum output.
- Mentoring: Encouraging growth and development by offering direction and assistance through seasoned professionals.
- Customer Service Excellence: Educating staff members to provide exceptional customer service and raise client satisfaction levels.
- Creating High-Performance Teams: Assembling a group of people who work well together and continually produce better outcomes.

Essentially, the goal of our training programs is to impart constructive behavioural and attitude modifications that enhance the organization's overall performance and competitive advantage.

CONCLUSION

In conclusion, it is clear that improving job performance requires personnel training and development. Enhancing a worker's knowledge and skill set for a particular job function is called training. Learning is the main outcome of this kind of training. An individual improves their job performance by learning new skills, refining existing ones, and gaining insightful knowledge during training.

As a result, training plays a critical role in raising job satisfaction, lowering staff turnover, cutting errors, and enhancing productivity. It also gives workers the tools they need to adjust to changes in the company as well as more general societal and technical changes.
