EPRA International Journal of

MULTIDISCIPLINARY RESEARCH

Monthly, Peer Reviewed (Refereed) & Indexed International Journal

Volume - 10 Issue - 5 May 2024

Chief Editor Dr. A. Singaraj, M.A., M.Phil., Ph.D.

Managing Editor Mrs.M.Josephin Immaculate Ruba

Editorial Advisors

1. Dr.Yi-Lin Yu, Ph. D

Associate Professor,

Department of Advertising & Public Relations,

Fu Jen Catholic University,

Taipei, Taiwan.

2. Dr.G. Badri Narayanan, PhD,

Research Economist,

Center for Global Trade Analysis,

Purdue University,

West Lafayette,

Indiana, USA.

3. Dr. Gajendra Naidu.J., M.Com, LL.M., M.B.A., PhD. MHRM Professor & Head.

Faculty of Finance, Botho University,

Gaborone Campus, Botho Education Park,

Kgale, Gaborone, Botswana.

4. Dr. Ahmed Sebihi

Professor

Skyline University College in the University City of Sharjah United Arab Emirates & Vice President of the Afro-Asian University for International Relations and Cooperation

5. Dr. Pradeep Kumar Choudhury,

Assistant Professor,

Institute for Studies in Industrial Development,

An ICSSR Research Institute,

New Delhi- 110070.India.

6. Dr. Sumita Bharat Goyal

Assistant Professor,

Department of Commerce,

Central University of Rajasthan,

Bandar Sindri, Dist-Ajmer,

Rajasthan, India

7. Dr. C. Muniyandi, M.Sc., M. Phil., Ph. D,

Assistant Professor,

Department of Econometrics,

School of Economics,

Madurai Kamaraj University,

Madurai-625021, Tamil Nadu, India.

8. Dr. B. Ravi Kumar,

Assistant Professor

Department of GBEH,

Sree Vidyanikethan Engineering College,

A.Rangampet, Tirupati,

Andhra Pradesh, India

9. Dr. Gyanendra Awasthi, M.Sc., Ph.D., NET

Associate Professor & HOD

Department of Biochemistry,

Dolphin (PG) Institute of Biomedical & Natural Sciences, Dehradun, Uttarakhand, India.

10. Dr. D.K. Awasthi, M.SC., Ph.D.

Associate Professor

Department of Chemistry, Sri J.N.P.G. College,

Charbagh, Lucknow,

THE LIVED EXPERIENCES OF GRADE HEAD TEACHERS AS **EMPOWERED EDUCATIONAL LEADERS: AN INQUIRY**

April Rose B. Robles¹, Maria Lalaine P. Chieng²

Master of Arts in Education major in Educational Management, St. Mary's College of Tagum, Inc. Graduate School Department, Tagum City, Philippines

Article DOI: https://doi.org/10.36713/epra16678

DOI No: 10.36713/epra16678

ABSTRACT

This qualitative-phenomenological study aimed to explore and understand the lived experiences of grade head teachers as educational leaders. This also elaborates on how these experiences empower them, as well as how do they cope with the challenges they encounter in the delivery of their duties as educational leaders. There were fourteen (14) participants who took part in this study selected through purposive sampling technique. Of these 14 participants, seven (7) grade head teachers underwent in-depth interview and the remaining seven (7) were grade head teachers underwent focused group discussion. The data gathered were analyzed through thematic analysis. The study was conducted in three (3) selected public secondary schools in Sto. Tomas East district, Division of Davao del Norte. Results revealed six (6) major themes on their experiences: creating best practices as an educational leader, difficulty with the additional workload, managing different roles, maintaining a supportive and conducive environment, providing technical support, and collaborating with stakeholders. To respond to the challenges encountered, participants revealed five (5) coping mechanisms: delegating tasks to colleagues, maintaining collaboration within the team, strategizing on achieving the goals, keeping an open and honest communication and engaging on professional development. Lastly, they have cited five (5) insights that can contribute to better implementation of distance learning modality. These includes: opportunity for personal growth, necessity to adjust to situations and people, provide relevant support to the school, help implement quality and effective education and prioritize self-care. These insights, extracted from participants' reflections on their experiences and challenges, provide a holistic perspective on the multifaceted roles of grade head teachers and their key takeaways.

KEYWORDS: Educational leaders, grade head teachers, quality of education, qualitative-phenomenological study, thematic analysis, Sto. Tomas East District, Division of Davao del Norte

INTRODUCTION

Grade head teachers collaborate with colleagues at their department level to set educational goals and seek ways to achieve them. To successfully carry out these roles, grade head teachers need to receive the necessary training to become effective educational leaders (UNESCO, 2019). However, not everyone received these learning avenues to enhance themselves. While some grade head teachers improve through years of experience, others remain to lack in knowledge and skills to juggle their different priorities and become effective role as effective educational leaders in the school (Miao, 2018).

In Malaysian schools, grade head teachers are empowered to identify problems and provide interventions on their own level, though some of them failed to appropriately contextualize the situations (Sampat, 2020). Due to unfamiliarity of pandemicrelated school lockdowns, some grade head teachers were unable to boost students' academic performance. Likewise, in China, there was a need to promote teacher leadership to mobilize school improvement and effectiveness (Supovitz, 2018), especially on resolving conflict and addressing problems in school (Miao, 2018). Likewise, in Thailand, some grade head teachers were reported ineffective in addressing situational challenges and contributing to learning-centered leadership (Kulophas & Hallinger, 2021).

In the Philippines, a study conducted in Nueva Ecija revealed that grade head teachers needed to develop adequate supervisory and leadership skills, not just interpersonal skills, to better solve problems in their grade level (Villanueva et al., 2021). Likewise, in Schools Division of Antique, grade head teachers were urged to maintain their managerial skills while focusing on the key result areas outlined in the performance standards, especially given that some find it difficult to balance their managerial responsibilities and their instructional responsibilities (Songcayawon et al., 2022).

A study was conducted in Sto. Tomas Municipality revealed that among the factors of crisis leadership, grade heads scored lowest in situation factor. Relevant training on solving school issues is necessary as most of the grade head teachers lack knowledge and experience. Grade head teachers are that their solution is not always the best especially on situations that are new or unfamiliar to them (Eñano, 2022).

The topic of the experiences of grade head teachers is not a common topic among researchers as most study centers on school heads. But it cannot be ignored that grade head teacher contributes to managing teachers and learners in their own grade level, and to school achievement. By investigating on this topic, grade head teachers can receive proper attention and training for them to enhance their leadership skills and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

contribute better to the success of the school. Findings of this study may help craft necessary institutionalized program that will empower the grade head teachers, and further uplift educational quality.

PURPOSE OF THE STUDY

The purpose of this phenomenological study is to explore and understand the lived experiences of grade head teachers as empowered educational leaders. This also elaborates on how these experiences empower them, as well as how do they cope with the challenges they encountered in the delivery of their duties as educational leaders.

At this stage of research, the experiences of grade head teachers as empowered educational leaders will be generally defined as to include their experiences, coping mechanism, and their insights gained from their experience. Their experiences were described both their functions and challenges encountered as educational leaders. Their coping mechanism explained how they were able to surpass and adjust to their encountered challenges, and their insights reflect their valuable lessons gained from their experiences which were deemed worthy to be shared to others.

RESEARCH QUESTION

The study aims to answer the following research questio

- 1. What are the lived experiences of grade head teachers as empowered educational leaders in the school?
- 2. How do grade head teachers cope with the challenges encountered as empowered educational leaders in the school?
- 3. What are the insights of grade head teachers as empowered educational leaders in the school that can be shared to others?

METHODS

This study employed qualitative research particularly using the phenomenological approach which sought to explore the lived experiences of grade head teachers as empowered educational leaders. Phenomenological study was used to describe and understand the lived experiences of grade head teachers as empowered educational leaders. Besides, phenomenological study could interpret the perception and beliefs of the grade head teachers.

The participants of this study were the 14 selected grade head teachers of Sto.Tomas East district, Sto. Tomas Davao del Norte. According to Creswell and Poth (2019), in order to produce a thorough and comprehensive description of the phenomenon under inquiry, the sample size for a phenomenological study may range from three to 25 people. I purposefully selected fourteen (14) research participants for this study, representing grade head teachers as educational leaders. Seven participants would undergo In-Depth Interview (IDI) and seven participants would have the Focus Group Discussion (FGD). The interview was done face to face in the selected large schools in Sto. Tomas East district. The participants of this study were chosen through a purposive sampling technique. The following criteria was used in selecting the participants: they are designated grade head of their respective schools for at least a year, they are regular

teacher, and they are teaching in public secondary school in Sto. Tomas- East District.

Furthermore, thematic analysis is a qualitative data analysis method that involves reviewing a data collection and looking for patterns in meaning throughout the data to extract themes.

REVIEW OF RELATED LITERATURE

Grade Head Teachers as Educational LeadersEducational leadership enables leaders, such as grade head

teachers, to connect with other teachers and their roles in school (Bush, 2020). Grade head teachers, having less authority than school administrators, are in constant contact with teachers in their departments to fulfill their responsibilities as educational leaders. Similarly, they also become a contributing member that encourages collaborative school culture as they encourage teachers in their department to help the school achieve its educational goals (Lin et al., 2018).

Furthermore, as educational leadership, grade head teachers have formal duties and authority that contributes to students' learning and the school's organizational structure (Miao, 2018). To illustrate, grade head teachers' responsibilities encompass both leadership (such as goal-setting or teacher evaluation) and management duties, such as resource management, designation of task within the department (UNESCO, 2018).

In the same way, grade head teachers contribute in establishing an organizational culture necessary to provide quality teaching (World Bank, 2018). They can help provide educational tools and activities that every student needs. This allows provide them opportunity to think out of the box and be flexible within their actions in solving the problems. As such, grade head teachers as educational leadership is important in promoting school equality and equity (Spillane et al., 2019).

Moreover, as grade head teachers become actively involved in school as educational leaders, they also become motivated to make a difference. Their role is important in impacting the students and teachers in their department (Burns, 2019). Thus, they need to be wise on making decision and in deciding what is best depending on existing conditions (Chen et al., 2020). Likewise, they also need to carefully weigh their actions and their potential outcome as there are a lot of people that will be affected (Bagwell, 2020).

Furthermore, grade head teachers, as problem solvers, are expected to develop the right mindset, knowledge and skills to address the many challenges in their role as educational leaders. Also, they need to have wider perspectives so that they can come up with a sound judgement based on the situation that they need to handle (Netolicky, 2020).

Accordingly, Republic Act 9155, known as the Governance of Basic Education Act of 2001, serves as a legal basis for the designation of grade head teachers. This provides school heads the discretion to create school-based management allowing them to designate teachers and staff to contribute to the leading goals. This aims to enhance administrative efficiency in delivering educational services (Official Gazette, 2001).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Furthermore, the decentralization put grade head teachers an increasingly important role in serving as educational leaders in the school. Grade head teachers contribute to managing colleagues and improving the quality of learning of the students by facilitating programs, and services that fit the needs of the department or grade level. This culture of shared governance allows grade head teachers the opportunity to participate in decision-making at their department level (Calvo, 2021).

Challenges Encountered by Grade Head Teachers

Grade head teachers must feel at ease with their position. If they are not satisfied with their designation as educational leader in school their willingness to perform for the school is affected (Ihnatiuk et al., 2023). Grade head teachers who are happy with their jobs are also committed to their work. They are enthusiastically doing their function to professionally grow and advance their careers (Zulkifli et al., 2022).

In connection, grade head teachers also need to motivate their colleagues to participate in achieving educational objectives. They should know how to navigate across diverse and differing personalities and guide their colleagues to contribute in improving plans and executing them to achieve the deliverable (Alviz, 2019). Giving support and showing concern to struggling colleagues will help boost their moral and satisfaction to stay committed to the aims of the organization (Gonzales-Morales et al., 2018).

Another struggle that grade head teachers may encounter is conflict within their department. As grade head teachers they must make their members united and supportive with each other (Petriglieri, 2020). Grade head teachers must be able to create a team for them to set goals and collectively achieve them (Bagwell, 2020). If group are more inclusive and coherent, they can actively positive outcomes as they are more organized and they help one another to achieve organizational success (Rigby et al., 2020).

Grade head teachers could better comprehend not only the issues and objectives of the organization but also spot members' requirements for personal growth and gaps in their knowledge and abilities. They could fill the gaps by mentoring to improve the performance of their colleagues (Fernandez & Shaw, 2020). Grade head teacher contribute in building organizational resilience and self-efficacy through teamwork, where their colleagues to feel competent and contented with their work. By Interacting with colleagues, grade head teachers could inquire about their contributions, ideas, and innovations (Crawford, 2018). Fostering a coherent and inclusive culture will allow the organization to better address the problems that they will encounter (Heath & O'Hair, 2020).

Grade Head Teachers Empowerment

Empowerment includes professional development, autonomy, and decision-making (Snodgrass, 2020). Grade head teachers must be free to switch between different roles, skills, and leadership modalities in order to serve the needs of the school (Harris, 2020). Through this, they can adapt based on the context to choose the strategy that will be most effective (Southern Cross University, 2019).

Consequently, the capacity to make independent decisions about issues is one of the aspects of empowerment (Jiang et al., 2019). They could contribute to school issues, which helped them feel more effective in their profession (Ahrari et al., 2020). They could work with others and use resources to make sure everything is in line with the strategy (Sampat, 2020). This also entailed having knowledge of the operating procedures that work best for the group's and the school's continual improvement (Southern Cross University, 2019).

Supportive learning environment allows effective guidance and training for grade head teachers (UNESCO, 2019). As schools become also empowered through efficient school-based management, greater autonomy for grade head teachers allows them to contribute to the decision-making (Garcia-Moreno et al., 2019). For instance, Chinese Ministry of Education mandates training of high-quality teachers who were innovative and with deep educational feeling to develop lifelong learning education leaders (Chinese Ministry of Education, 2018).

However, there are some barriers to empowering grade head teachers which may include, such as structural barriers, personal barriers, and relational barriers (Almanthari et al., 2020). It is important that grade head teachers know their role and are given support in terms of adequate knowledge and skills for them to navigate on their duties as educational leaders (Wang & Zhao, 2020)

.3

ESULTS AND DISCUSSIONS

Maintaining a Supportive and Conducive Environment

Roles

- performing different tasks within the grade level
- helping the principal to carry out certain tasks and facilitating certain activities
- creating meaningful impact in school
- keeping a clean environment and harmonious relationship with one
- giving support to teachers especially those who are struggling with academic functions
- fostering a positive and inclusive environment that prioritizes growth and development.
- promoting diversity and inclusion within the school
- making an environment supporting the students' needs

Providing Technical Support

- supporting teachers who are struggling with academic functions
- sharing knowledge for colleagues to be updated on the use of technology
- mentoring and motivating teachers and students to realize their potential
- guiding the teachers to assist students with academic difficulties
- Collaborating with

Stakeholders

- encouraging teachers to participate actively in achieving the goal of the school
- needing to hear the voice of your colleagues on matters relevant to school concerns
- communicating and collaborating with fellow teachers to participate in group discussions to solicit feedback
- communicating with parents, teachers, and students through homeroom meetings and parent assembly
- collaborating with stakeholders on decision-making
- engaging with parents and the community

Creating Best Practices as an Educational Leader

It provides me with innovative teaching strategies, fostering a more effective and engaging learning environment IDI-07 Being designated as a grade head teacher offers advantages, including leadership experience, the opportunity to impact student success. FGD-01

In order to support teachers in developing inclusive classrooms that cater to the many needs of our students. IDI-04

Grade head teachers shape innovative teaching methods and fostering a culture of continuous improvement. They are also socially responsible in providing guidance and support, particularly to students facing challenges. Through these

efforts, grade head teachers contribute to the development and implementation of best practices that enrich the educational experience for both educators and students.

In connection, Anderson (2019) in his study supported this statement that being grade head teachers is a dynamic and influential duty. They have the opportunity to shape the educational landscape by promoting innovation in teaching, leading professional development and fostering inclusivity within the school community.

In addition, collaboration and effective communication are identified as critical components of successful educational

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

leadership. Cooper (2023) stressed the importance of collaborative efforts among teachers, the sharing of best practices, and the cultivation of a strong sense of teamwork and unity.

Difficulty with Additional Workload

It can be difficult to balance administrative tasks with teaching, and this could result in a greater workload. IDI-04
If I rate the seatbacks, top of it is the heavy workload.IDI-06
Conflict of your workloads.FGD-03

Grade head teachers confirmed that the designation of being a grade head were challenging on their part, especially that they were still performing duties as classroom teachers. Being assigned as a department leader, they take on responsibilities to not only manage their respective classes but also the academic situations within their grade level.

Moreover, Lambert (2023) supported this finding in his study stressing that lack of time and increasing workloads among middle leaders, such as grade head teachers were key source of stress. This challenges when continuous to dissatisfied middle leaders who were soon to assume higher leadership position will disappoint them, and will lead them not accepting the administrative responsibilities

Likewise, Lipscombe et al., (2023) added that middle leaders, such as grade head teachers, may often felt uncomfortable as they are set to mediate between teachers and their school administrator. Their main duty is to influence their colleagues while also impose change that were sometimes directed by the higher authority. It is on their responsibility on how to translate the task and motivate their colleagues to work and participate on the achievement of these educational goals.

Managing Different Roles

LAC Sessions were conducted to discuss instructional matters in order to cater students and teachers concerns. IDI-01 I would create a conducive learning environment and promote overall growth and development of students. FGD-02 I can lead in the development and implementation of innovative teaching strategies. IDI-07

Grade head teachers had been subjected to many and different roles which were often in conflict to their other duties. They are often tasked with fulfilling responsibilities that encompassed both instructional and administrative. These lead them to loss focus on what to prioritize and be confused on how to hit the educational targets.

Accordingly, Sampat (2020) also shared the same idea saying that as educational leaders, grade head teachers were expected to plan. The planning does not only cover their classes handled but to plan for the productivity of their entire grade level being managed. The task does not end in just planning but there are also challenges on how to execute this plan for the student's achievement and the enhancement of their colleagues in the department. Thus, it is a challenge for them to acquire the necessary skills and knowledge on these different roles that they will take up so that they can translate ideas into actions, and actions into relevant and sustainable outcomes.

Furthermore, Wang and Zhao (2020) emphasized that as grade a head teacher, one must know their role to effectively involve in the operations and development of the school. However, since not all grade heads had been trained prior to their designation, most of them learn through experience on how to manage these different roles as educational leader. Their duties had been recognized to affect operational efficiency, student's achievement and engagement of teachers under their department.

Maintaining a Supportive and Conducive Environment

Fostering a positive and inclusive learning environment that prioritizes the growth and development of both students and staff. IDI-04

Create a conducive learning environment and promote overall growth and development of students. FGD-02

Keep our environment clean, having a harmonious relationship to one another IDI-02

One of the duties of a grade head teacher is to maintain a supportive and conducive learning environment. A supportive environment is where teachers are encouraged to contribute meaningfully in achieving the collective educational goals. While conducive environment pertains to keeping a learning environment that is motivating and supportive of students' achievement and success. Thus, grade head teachers are expected to assess and study the situations concerning their managed grade level, and if they can address the issue on their level.

Woods and Robert (2019) also explained that grade head teacher contribute in maintaining order within their grade level and in the entire school. They can develop a workplace that upholds ethical issues and connects school's vision and values by monitoring the actions and practices of their teachers and students. By doing this, they can ensure that the learning environment nurture positive impact not just for the students, but also for the teachers under their team.

Murphy and Louis (2018) additionally stated that grade head teachers establish a favorable learning environment by finding ways on how to improve the situations in school, especially those that requires immediate intervention since they are the one that were exposed that the school administrators. Their role includes monitoring and evaluating the performance of their department, which is a good basis for improving the conditions and identifying key educational objectives.

Likewise, Heath and O'Hair (2020) furthermore mentioned that grade head teachers as educational leaders contribute in fostering a coherent and inclusive culture which translate into a better working condition for their teachers and a supportive learning space for their students. They are key to encouraging and communicating with students and teachers in their department to take their part in achieving the educational goals.

Providing Technical Support

We are also expected to give support to teachers. FGD-03 I set an example by incorporating technology into their teaching.FGD-07

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Encourage a culture of continuous learning and reflection and helping one another to stay updated with the latest trends in education. IDI-07

Grade head teachers are also expected to provide technical support to their colleagues, especially those are struggling to deliver their academic functions. They conduct school-based seminars, activities and meetings that enhance and give support to their teachers so they improve in the delivery of their duties and impact greatly the academic achievement of their learners. Since grade head teachers were deemed knowledgeable, they were looked up for innovations and strategies that improves the conditions of the school and provide viable alternative when their will be issues encountered.

In connection, Murray et al., (2021) expressed that similar to school heads, they provide teachers under their grade level necessary support for them to improve their teaching practices. This ensures that teachers contribute effectively to the academic quality and success of the school. Grade head teacher plan and organize professional developmental plan for their teachers, especially that they know what are the needs of the teachers in their respective department.

Moreover, McDonald (2020) also emphasized that grade head teachers should focus on initiatives that improves the teaching capacity of their colleagues and the learning outcomes of their students in their department. This can be done by disseminating learning resources and enlisting the aid of grade head teachers during teacher observation and evaluations.

Several new innovations in education may have resulted in broad adoption of online learning by the year 2020. The absence of Internet availability in some places, mainly rural areas, and the fact that various family members have changing expectations for how to use technology at home are just two examples of the persistent challenges this sector faces. Yet, creative approaches have emerged to provide students and families with the tools they need to engage in and successfully complete academic work (Darling et al., 2020).

In general, embracing change enhances the likelihood that it will be implemented effectively. Students must also consider change as a realistic way to accomplish educational goals in today's world and act as change agents if they want to develop professional abilities (Du et al., 2020).

Collaborating with Stakeholders

I always communicate with my fellow teachers to collaborate especially in decision making. FGD-05

I frequently participate in group decision-making processes. IDI-04

This means regularly meeting with stakeholders like Homeroom meetings and General Parent Teachers Association Assembly to address concerns, share ideas, and ensure everyone feels heard and valued IDI-07

De Nobile (2018) findings is related to the result of this study as it emphasizes that since grade head teachers were mostly skilled in instruction and are more aware of teacher and classroom culture, they can better translate educational mandates to be suitable based on the context of the team they managed. They firsthand experience and observe problems and they know what will work and not.

Furthermore, Supovitz (2018) also added that the role of grade head teachers in improving the school includes being able to communicate the goals to their colleagues and learners. Since they were exposed to the people in their grade level, they effectively influence them to contribute to the achievement of these educational goals.

Similarly, grade head teachers quickly respond because of the important information that they have about their grade level. This results to mediate issues which might not necessarily be needed to escalate to the school heads if they can resolve it within their department. This calls for grade head teachers to discuss matters effectively, solicit suggestions and hear feedbacks (Parker, 2019).

Table 2
Major Themes and Core Ideas on the Coping Mechanism of Grade Head Teachers on the Challenges Encountered as Educational Leaders

| Major Themes | Core Ideas |
|---|--|
| Delegating Task to Colleagues | prioritizing tasks and delegating them when possible designating tasks to fellow teachers and communicating with them for a good output sharing duties and looking for assignments with team members dividing the tasks by assigning work to teachers designating the tasks to the teachers to lighten the work |

Delegating Task to Colleagues

I designate the task to my fellow teachers and communicate them as well so that we can come up a good outcome or output. FGD -04

I look for assignments that may be given to team members at other grades or work with other educators to share duties IDI-04

You must delegate task to your teachers within your grade (level) to make the task easy FGD-07

Grade head teachers employed in resolving the challenges they encountered through delegation. This means that they identified the task, divide it into smaller tasks and assigned members to do it. Through this, grade head teachers encourage involvement with her teachers under her department while also giving them opportunity to discover and enhance their potentials.

In connection, Scroggins (2019) also mentioned that it is important for grade head teachers to know how to set up groups n-charge of planning for the entire grade level and not just own most of the responsibilities. This will enable colleagues to develop different and novel interventions to a problem, while also making sure communication and cooperation within their grade level.

On the other hand, Hoff (2018) added that delegation led to maximizing output and efficiency as there are more task that get done because of the engagement of teammates. Grade head teachers should be able to make members know their responsibilities clearly and delegate the right people for a certain task, along with the proper timeline attached. By this, teachers can focus on a same task and keep a steady line of productivity.

Moreover, Bursch (2020) also shared the same concept saying that it is important for teachers to know exactly what they should be doing and if in case there is confusion or lack of competence, they should be trained or assisted. Delegation allows teachers to come up with solution as they engage on a task and face challenges, instead of fully depending on instruction from their grade head teacher.

Maintaining Collaboration within the Team

I collaborate with colleagues to share insights and best practices, and I stay updated on new educational updates IDI-07

Collaborate with colleagues to find better strategies or provide additional support to teachers. IDI-05

Collaboration and sharing the best practices, resources, and strategies for managing the demands of the role. FGD-01

This theme is in line with the idea of Lysberg and Rusk (2022) explaining that actions and decisions should be made together with their team. Through collaboration, ideas flow easily and there is variety of suggestion on how to resolve a problem. Likewise, this is also related to Di Mario's (2022) concept on the importance of instilling a sense of community among teachers and students. With this, they can drive members of the department toward attainment of a common goal.

Furthermore, enhancing involvement supports innovations, academic standards and positive change as everyone in the grade level realize their part on the attainment of institutions' objectives. Grade head teachers' vision should be translated among each member so that they may understood it and take part in achieving educational success (Ocampo, 2019). Grade head teachers can influence the school culture by reinforcing cooperation and collaboration with colleagues, especially in sharing ideas and best practices (Wang & Zhao, 2020).

On the other hand, Lowery et al., (2018) also emphasized on the relevance of managing a group to have a greater effect on student's achievement. Grade head teachers have the influence to encourage support, unity and collaboration within their team. Moreover, Haslam et al., (2020) also added that despite the challenge of developing the same enthusiasm among each member towards work, grade head teachers should at least develop teachers' willingness to work as a team and participate actively.

Strategizing in Achieving the Goals

I first take a step back to assess the situation whether it is a complex disciplinary issue or struggling pupils. IDI-07
I create a clear list of my responsibilities and prioritize them based on importance and urgency. IDI-04
For me, I am going to prioritize task. FGD-07

Mahdzir et al., (2022) explained that as grade head teacher, they are expected to handle issues in their department. With this they should be consistent in their actions and look for avenues to create an impact. Likewise, they should be able to connect their actions to the personality of the entire group, and if solutions leads to a greater good (Bush, 2020).

Likewise, Lin et al., (2018) also added that since they serve as middle leaders between the teachers under their department and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the school administrator, grade head teachers should be able to find strategy to influence and encourage teachers in their department to contribute in achieving the educational objectives.

Furthermore, grade head teachers are deemed problem solvers and are expected to have the right mindset to address the challenges in their department. For them to be able to do this, they should use their experiences, skills and knowledge and transform them into effective direction for the group to follow (Hodge, 2019). Likewise, grade head teachers contribute to decision-making as they were given the autonomy to identify approaches based on the context of their team and the department that they are managing (Garcia-Moreno et al., 2019).

Keeping an Open and Honest Communication

I will establish open lines of communication. IDI-07 It is also a good practice to schedule regular team meetings to discuss progress, challenges, and opportunity.FGD-02 If there are problems, they need to also be open to share the issue. FGD-03

Maintaining communication is essential in creating a positive learning environment. Grade head teachers impact others if they are good in communication as it allows their members to trust and build confidence on them. Allowing colleagues to share their thoughts also offer solutions to problems. By taking time to listen to their idea, grade head teachers can glean valuable insights leading a more prudent decision. This also makes members felt validated and part of the group (Parker, 2021).

On the other hand, Pandey (2022) also mentioned that grade Head teachers should be good communicators to be able to inspire and empower their colleagues. By clearly communicating desired goals and responsibilities to their members they ensure better productivity. This also devoid miscommunication and quarrels as thoughts are transform into clear instructions for members to fulfill. Patel (2023), on the other hand, shared that communication skills among grade head

teachers can also boost organization's resilience as it unites the

Furthermore, Mousena and Raptis (2021) emphasized that effective communication of educational leaders promotes positive school climate. When teachers and students felt heard, the more they become satisfied and willingly participate in the activities and program of the school.

Engaging in Professional Growth

I invest time in professional development. IDI-04

I seek mentorship, professional development, and use available resources. IDI-05

I may attend professional development workshops or training sessions. IDI-07

Ihnatiuk et al., (2023) supported this theme, expressing that grade head teachers can only grow if they engage in professional development programs to develop their potentials. Through this, they gain essential leadership skills and expand their knowledge. Moreover, Sorensen et al., (2022) also added that they can better deal with problems they encounter if they are knowledgeable of leadership strategies. By having adequate competence from experience and education, they continue to improve their capacity as educational leader and perhaps go further in their career.

Consequently, Nsabayezu (2023) also shared that as grade head teachers continue to engage and actively participate in leadership trainings, they create new set of goals and understand better the landscape of their function as educational leader. These activities unlock their full potential as they continue to improve in knowledge and competence.

On the other hand, Grade head teachers should also be equipped with existing and current technologies and approaches in leadership. By knowing these various techniques, they manage people and resources efficiently. Current leadership trends help them manage both human resources, and allocate material resource to achieve productivity while maximizing what is readily available (McDonald, 2020).

Table 3 Major Themes and Core Ideas on the Experiences of Grade Head Teachers as Educational Leaders

| Major Themes | Core Ideas |
|---|---|
| Necessity to Adapt to Situations and People | develop skills to adjust to people and become flexible in handling situations acquire the ability to actively listen and be adaptable to changes be open-minded to other people's suggestions and opinions remain calm despite the challenging demands foster strong relationships with teachers, students, and other people |
| Opportunity for Personal Growth | develop a good attitude towards colleagues professional development opportunity that enhances leadership skills access to additional professional development opportunities grow professionally with learnings and experiences develop professionalism and capability to handle a situation opportunity to be better and create impact in the school |

Necessity to Adapt to Situations and People

I can develop my social and emotional skills because everyone has a different personality gauge FGD-06

Effective leadership demands empathy and the ability to listen actively. IDI-04

Be open-minded when there's a time that you need to ask for suggestions, opinions from your fellow teachers.FGD-04

Chen (2018) stated that in coming up with wise decision, assessment of situation is necessary to adjust the actions to be taken. this ensures that approaches consider what possible limitations set by the existing conditions that the team will have to deal. Likewise, Bagwell (2020) also added in doing these actions should be carefully laid out and weighed as it may have impact not just on their productivity but to the people who will be facilitating the action.

Likewise, Netolicky (2020) also explained that as a grade head teacher, one must have a wider perspective to handle different situations and come up with a sound judgement. As a grade head teacher, you may have to deal with a different situation, which also require a different approach, a different perspective. Likewise, Snodgrass (2020) also added that these opportunities where grade head teacher's flexibility and adaptability is put into a test, is a chance to be empowered as they were given autonomy in decision-making.

Aide in Implementing Quality and Effective Education

We provide essential leadership and coordination within their assigned grade level, ensuring consistency in teaching methods, curriculum delivery, and student assessments. IDI-07 Grade head teachers often serve as mentors and advocates for their students. FGD-02

Aligning curriculum with standards, providing targeted support for teachers, and implementing effective instructional strategies. IDI-04

Calvo (2021) shared that the role of grade head teachers is essential in improving the quality of instruction. They lead programs and services to enhance learning based on what is needed by their department. They also provide technical support for their teachers. All of these is due to their knowledge on what is required by their department and that may be need may be different from each grade level. Grade head teachers

participate in decision-making and crafting necessary changes while putting into consideration what seem to be relevant to improve their department.

While not all grade head has equal knowledge and skills in leading, they must respond quickly to the different demands in their department. As grade head teacher, they must take part in the educational procedures and monitor the performance of their department of grade level. Through constant and relevant evaluation, they can establish their positive impact to the school and to the learners (Polatcan & Cansoy, 2019).

Opportunity for Personal Growth

I could say it develops my professionalism and second, it helps develop my personality as a person. FGD-04

You became able to know like how to manage time, develop management skills and become organized because of your responsibilities, like managing your time as a subject teacher and a grade head. FGD-05

The (grade heads) can also direct professional development, assisting teachers in staying up to date with best practices and adjusting to changing educational demands. IDI-04

As grade head teachers immerse to their role as educational leaders, they gain authentic leadership activities that can help them grow professionally. They acquire firsthand knowledge and skills, especially when they participate in decision-making and managing people in their department. These activities are different when you read and learn it from books and trainings than when you put the idea and concepts in real-life situations and practice. This is because sometimes what is taught may need to be adjusted depending on the existing circumstances (Eggleston, 2019).

Similarly, Alviz (2019) shared that being a grade head is essential, especially when you want to assume a higher leadership position in the future. The first-hand experiences will allow them to test their theoretical knowledge in actual situations. These experiences help them build necessary leadership skills and behaviors. Parker (2019) also added that they can better address situations if they have experience with it. These meaningful experiences will help them grow as a leader as it will give them opportunities to learn more strategies and approaches in educational leadership, which sometimes were not taught in books.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Furthermore, Sorensen et al., 2022) also explained that grade head teachers should actively look for opportunities to demonstrate their skills. They can actively involve in activities that test their decision-making skills, managerial skills and even how they allocate resources. These experiences will help them test which skills they lack and improve.

Provision of Relevant Support to the School

Grade head teachers guide the educational journey of a specific grade level, ensuring curriculum alignment, effective teaching practices, and student progress. IDI-04

Grade heads are the partners of school heads and master teachers in the development and implementation of curriculum and instruction. IDI-06

We provide essential leadership and coordination within their assigned grade level, ensuring consistency in teaching methods, curriculum delivery, and student assessments IDI-07

Grade head teachers help in facilitating activities and supervising the teachers and students in their department are relevant support provided to school administrators as it improves delivery of quality service and enhance academic success.

This school-management that allows the designation of grade head teachers to take on leading role enhances the efficient delivery of educational services as reflected in Republic Act 9155. It can be noted that since grade head teachers are more exposed to instructional roles, they help school administrators craft necessary programs and activities by suggesting what will work considering the educational situations they encountered as teachers in the field. This was also supported by the findings of Vecaldo (2019) sharing that grade head teachers can encourage major innovations in school and can also shape the school governance.

Moreover, Comeros (2019) also stressed that assigning grade head teachers help school heads to organized and supervise as grade level and department. In the past, operations were coming from the higher authority but now schools can create a selection committee, or have a faculty meeting to assign teachers in important leadership functions in school.

Furthermore, as grade head teachers have the knowledge of the operating procedures that work best for the group's, they ensure the department and the school's continual improvement (Southern Cross University, 2019). Likewise, they actively involve in school as educational leaders by simply becoming motivated to make a positive difference to the teachers and students. Their role is important in impacting the students and teachers in their department (Burns, 2019).

Prioritizing Self-Care

I recommend prioritizing self-care, seeking support when necessary, and consistently investing in your professional development to excel in your role. IDI-05

Take care of your own well-being to avoid burnout. FGD-02 I will also prioritize self- care and stress management techniques. IDI-07

The report of getting burn-out and struggling on mental health is also observed among educational leaders. At worst, this lead for some to reconsider their job and leave because of the dissatisfaction they get (Education Support, 2020). On the other hand, Santiago (2023) also suggested that grade head teachers should take break time as a coping mechanism to the pressure of work. This will give them time to recharge and gain more clarity of their work.

ISSN (Online): 2455-3662

Furthermore, Jackson and Fransman (2018) reported that high work pressure lead to poor physical, psychological and emotional well-being which may o reduced productivity and increased absenteeism. A healthy work-life balance is necessary to provide better well-being. Stress coping strategies are also necessary to be taught to teachers such as mindfulness and emotional intelligence.

CONCLUSION

This exploration into the experiences of grade head teachers as empowered educational leaders has been incredibly enlightening for me. By delving into the varied and insightful narratives provided by these teachers, I've gained valuable understanding of the obstacles they encountered, how they dealt with them, and the beneficial results they achieved through this distinctive educational journey.

Grade head teachers faced challenges due to a heavier workload and expressed worries about handling extra duties. It's crucial to foster a supportive atmosphere conducive to learning, shedding light on factors that nurture a positive educational environment. Moreover, grade head teachers must offer technical assistance in adapting to the technology-driven educational landscape. Engaging in conversations about critical educational issues highlights their role in shaping decisions. These observations underscore the importance of grasping the particular challenges grade head teachers confront in their roles.

Grade heads have the opportunity to undergo personal growth, highlighting how their roles serve as catalysts for professional development. This necessitates the ability to adapt to various situations and interact effectively with different individuals, demonstrating the adaptive skills crucial for navigating diverse challenges and interpersonal dynamics within the educational sphere. By providing pertinent support to the school, grade head teachers underscore their pivotal role in contributing to the overall welfare and functionality of the educational institution. Moreover, their focus on facilitating the implementation of quality and effective education reflects their dedication to enhancing the educational experience for prioritizing Additionally, self-care underscores acknowledgment of the significance of personal well-being amidst the demanding nature of their roles.

In summary of the above, this study has served as a profound revelation, illuminating the myriad experiences of grade head teachers as influential leaders in education. The insights gleaned underscore the imperative of ongoing personal and professional development, crucial for providing pertinent support to schools in delivering quality education effectively. The coping mechanisms employed by grade head teachers offer invaluable lessons in resilience and perseverance, pertinent for

all entities invested in the educational journey. Moving forward, it is imperative for all stakeholders within the education sector to unite efforts in implementing measures that address the challenges outlined in this study and to enhance the support structures for grade head teachers which ultimately contribute to the improvement of the overall educational environment.

DANCE SKILLS EXECUTION HESITATION OF TERTIARY EDUCATION PHYSICAL EDUCATION (PE) INSTRUCTORS OF DAVAO DEL NORTE: A PHENOMENOLOGICAL STUDY

Dolly D. Enguito, LPT

Master of Arts in Education Major in Physical Education, St. Mary's College of Tagum, Inc. Graduate School Department, Tagum City, Philippines

Article DOI: https://doi.org/10.36713/epra16693

DOI No: 10.36713/epra16693

ABSTRACT

This research study employed a qualitative research design, specifically phenomenological approach, with the aim of uncovering and understanding the lived experiences of tertiary education PE instructors concerning dance skills execution hesitation. The study involved 14 PE instructors who were selected through purposive sampling technique in accordance with the inclusion criteria, and the data were analyzed using coding and thematic analysis. The findings of the study revealed the experiences of the participants, including difficulty in dance demonstrations, experiencing doubt and uncertainty, strengthening the foundation of dance, mastering dance techniques, poor foundation in dance education, and confidence and positivity in dancing. Conversely, the participants employed the following coping mechanisms to get through the challenges they have faced: utilization of online teaching materials, seeking help from others, nurturing dance proficiency through multiple strategies, mastering the fundamentals before instruction, and continuous learning of dance skills. Additionally, the following insights were drawn from their experiences: provision of professional development about dance skills, nurturing positive mindset and attitude, cultivate confidence and self-esteem, having constant practice for proficiency, and learning through research. The findings of the study suggest that a holistic approach to supporting PE instructors in overcoming dance skills execution hesitation should include continual training, psychological support, and pedagogical innovation to ensure effective delivery of dance education in tertiary education.

KEYWORDS: Physical education, PE instructors, dance skills, execution, hesitation, tertiary education, Davao del Norte

INTRODUCTION

Dance is a captivating art form that enables people to communicate their feelings, thoughts, and cultural identities through movement. It is a vital part of physical education curricula and has several advantages for students, including increased physical fitness, coordination, and creativity. However, despite the significance of dance education, there are physical education teachers who experience a pervasive problem that hinders their ability to effectively teach dance—their own hesitation in executing certain dance skills as well as their limited dance experience and lack the skills, knowledge, and confidence to teach dance in their respective institution (El-Sherif, 2016).

In the United States, as cited by Levenberg et. al (2020), physical education instructors frequently experience uneasiness when asked to teach dance and music in the physical education context. Some physical education instructors claim that they lack rhythm, have never received formal training in teaching dance, and are hesitant about the proper way to structure a dance unit. Similarly, in China, Zhang (2019) revealed that the issue with dance education is the lack of excellent dance instructors and low teaching quality. The majority of instructors are teaching only a few types of dances and failing to impart fundamental concepts. Moreover, in the United Kingdom, Vincent et. al (2021) also raised challenges of instructors delivering a quality dance education. Many teachers are known

to be hesitant to teach dance because they do not feel qualified. It also suggests that dance instructor's knowledge of dance pedagogy is primarily derived from their teaching experiences rather than formal studies and since the instructor's training only covered the bare minimum of the art form, instructors hesitate to teach the arts.

Meanwhile, in the Philippines, a study conducted by Garcia (2020) in Cebu City, revealed that physical education instructors have limited knowledge of instructing folk dances. The lack of seminar workshops in the nation, the limited opportunities for different dance workshops, and the limited amount of printed dance literature accessible through published books were the main causes of the lack of knowledge.

Further, in Malaybalay, Bukidnon, a research result from Silvestre and Itaas, (2020) that 20 out of 60 PEHM teachers had poor performance in Physical Education topics during the analysis of their lived experiences as PEHM teachers in the school as these were gathered through Individual Performance Commitment and Review Form (IPCRF) researcher. They also highlighted that most of the teachers lack of competencies to teach **PEHM** students. Similarly, in the Philippines, the change from online education to limited face-to-face instruction is also experienced by the students. Throughout this shift, it became clear that the loss of cooperation and instructional time, the difficulty

٩

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

understanding the courses and activities, and the adjustment period were the key challenges for students in having limited face-to-face classes (Bordeos et al., 2022).

Also, based on my firsthand observation as a Physical Education instructor in one of the private institutions in the province of Davao Del Norte, some of the Physical Education instructors in Tagum City were hesitant in dancing as well as teaching dance due to lack of experience and training. Several of the Physical Education instructors I know dislike dancing because they believe they are bad at it and find it embarrassing. An additional fact about these people is that they failed to acquire dance skills in physical education classes very well, most likely because they were exceptional athletes.

Given these results and other related literature, the researcher found a shortage of studies in terms of the lived experiences of PE teachers on their hesitation in dance skills execution. In my literature reading, there were a few studies that have explored the challenges faced by PE instructors in relation to dance skills execution such as the study of Ripalda (2019) and Brandon (2020). The first mentioned study was quantitative in nature and focused mainly on the competence of PE teachers in doing dance choreography. The second study was limited to the experiences and attitudes of physical education instructors about Zumba instruction for students with impairments in the classroom. However, there is a lack of research that has specifically examined the qualitative factors that influence the hesitation of PE instructors in dance skills execution in teaching their students. Moreover, I have not come across any studies that have looked at the accounts of instructors' lived experiences in dance skills execution hesitation. It is for this mandate that this humble research is conceived in response to the continuing and ever-changing challenges that our educational system has confronted with, particularly in dance skills execution hesitation.

This study bears great significance especially to the Tertiary Education PE instructors because this study would give additional insights into problems relating to dance hesitation and may help improve the quality of their teaching performance. This study would also pave the way to increase the students' engagement when they see their instructors confident and knowledgeable of what they are doing. Additionally, the findings would be shared by giving lectures, exhibiting the findings at national and international conferences, and conducting seminars to my fellow PE teachers focusing on how the results are obtained and how they can incorporate it in their teaching methods. Lastly, it would be disseminated through partnerships with PE research-related organizations in local, national, and global aspects.

PURPOSE OF THE STUDY: This phenomenological study aimed to explore and thoroughly understand the lived experiences of Tertiary Education PE instructors on dance skills execution hesitation and to understand the reasons behind the skills execution hesitation of Tertiary Education PE instructors in the field of dancing in some schools in Davao Del Norte. Further, the goal of the study aimed to generate results that may guide the instructors in designing appropriate interventions for the hesitation of skills execution in dancing.

At this stage in research, dance skills execution hesitation was generally defined as the act of hesitating or temporarily holding back from executing dance movements due to a lack of confidence and fluidity in doing so.

RESEARCH QUESTION

The study aims to answer the following research questions:

- 1. What are the lived experiences of tertiary education PE instructors in dance skills execution hesitation?
- 2. How do tertiary education PE instructors cope with their hesitations in executing dance skills?
- 3. What insights can tertiary education PE instructors draw from their experiences in their hesitation in executing dance skills that can be shared to others?

METHODS

This study employed a qualitative phenomenological approach in exploring the lived experiences of Tertiary Education Physical Education (PE) instructors in executing dance skills. According to Creswell (2013), and as cited by Diaz (2015), claim that qualitative research is an expressway to discovering and understanding individuals or groups ascribed to a social or human issue. It requires gathering and interpreting non-numerical data in order to grasp the concepts, opinions, and experiences required for research (Bhandari, 2020).

This phenomenological inquiry involved a number of 14 participants. Seven (7) were interviewed in-depth, while the remaining (7) participated in focus-group discussions. Both groups were related to PE Instructors from selected higher education institutions in Davao del Norte. Moreover, in determining the number of participants, I adhered to Creswell's (2013) suggestion that the studied group should consist of three to fifteen members. I believe that this number of participants was sufficient to saturate all the data needed. Equally important, purposive sampling was used to select the participants in this research study. According to Guetterman (2015), purposive sampling is also known as judgment sampling since it is a deliberate choice of participants due to the participants' qualities. Furthermore, the participants of this study were selected based on the following criteria, the PE instructors must be: (a) employed in private higher education institutions in Davao del Norte; (b) must have experience at least two years of teaching PE, and (c) must have the willingness to participate in the conduct of the study. These qualifications are required to ensure that the participants have adequate and firsthand experience with the phenomenon studied. Conversely, the exclusion criteria are as follows: non-PE instructors, not employed in a private higher education institution in Davao del Norte, and not willing to participate. I selected five (5) schools to surely gather the needed number of participants.

Furthermore, thematic analysis is a method for qualitative data analysis that involves looking through a data set (for example, transcripts from in-depth interviews or focus groups) and identifying similarities in meaning throughout the data to generate themes. Thematic analysis is an active process of reflexivity in which the researcher's subjective experience is central to deriving meaning from data (Delve, 2020).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

REVIEW OF RELATED LITERATURE

Dance Skills Execution

According to Ripalda (2019), it is vital that PE teachers be proficient in dance and choreography, though teachers can progress to different levels in both disciplines. Similarly, Rodriguez and Abocejo (2018) emphasized that it is of utmost importance that skills be acquired in dance, which can be attained through the skills and expertise of teachers in various dance forms of their fields of specialization. The Department of Education (DepEd) has a significant role in the skills that students gain, notably in senior high school, where these skills are carried over when they get to university (Abocejo, 2017).

Additionally, as stated in a study conducted by Varea and González-Calvo (2021), dance is a performance-based course in physical education courses 3 and 4 at the university level, wherein students' basic skills have been learned. In the tertiary PE-based curriculum approach, these skills are honed even more into the advanced level. The genre of hip-hop, folk dance, contemporary dance, cheer dance, and other dances are examples. Moreover, in the study published by Ripalda (2019), it was mentioned that the ability of the dance instructors to teach dance skills to their students helps their learners enhance their dancing skills. Although teachers can obtain varied levels of expertise in dance and choreography, it essential for PE teachers to be competent in both areas.

Challenges Encountered in Executing Dance SkilThe study conducted by Ripalda (2019), sheds light on the difficulties that come with teaching dance specifically for PE teachers who lack foundational training or background in the subject but on the other hand it is also extremely fulfilling. As a teacher, you must continually adapt and develop new strategies and ideas to keep your students interested. Many physical educators have little experience teaching dance and may not have the expertise, abilities, or confidence to do so in their curricula. The inclusion of dancing lessons in physical education curricula, however, can benefit students who may not enjoy traditional instruction.

Notwithstanding the difficulties students faced while switching from traditional classroom instruction to online instruction, the digital divide continues to be the primary barrier to students accessing quality e-learning. Additionally, even though there may be a number of obstacles preventing students from fully utilizing e-learning, other strategies seem to be the best option in the context of COVID-19, including providing free data bandwidth, making both physical and online resources easily accessible, and using a blended learning center (Mpungose, 2020).

Correspondingly, according to Contant (2015), teaching dance can be challenging especially for teachers who lack the fundamental dance background or expertise. This is particularly true for teachers who were not exposed to dance during their formative years and who did not view themselves as dancers, preferring instead to play sports. Additionally, for some physical educators, teaching the students to dance may be the most nerve-racking activity. Teachers who approach dance with a good attitude and enthusiasm will succeed more than those who are hesitant about teaching dance (Newnam, 2002).

Lundvall (2022) also emphasized, many physical education teachers feel that their ability to teach dance is limited and that they are uncertain of their own proficiency in the subject, which causes them to doubt their ability to actually teach it. This is congruent with the findings of Bowies (2013), who made generalizations about dance instruction in schools. To put it simply, we think that many PE instructors spend less time dancing because they themselves are not very skilled at it, which limits their capacity to instruct it.

Strategies in Teaching Dance Skills

According to Ripalda (2019), it is important for the dance teachers to be knowledgeable about the dance style they are teaching in order to be considered competent choreographers. One must be able to familiarize the dance genres before teaching it to the students to ensure quality instruction. For dance teachers to teach dances efficiently and effectively, there are several methods for learning dance. A few methods include watching dance performances, reading books on dance technique, or just being involved in a dance performance to pick up the steps and technique (Cherry, 2018).

Moreover, when preparing a lesson, the teacher must take into consideration a variety of factors, including the students' level of topic knowledge, their attitudes toward dance as a subject and those of the community, administration, parents, and students. The instructor must also take into account the facilities and materials that will be used in the lesson. For instance, dance facilities can range from an exclusive studio area to multipurpose for dance vary from a specific studio space, to multipurpose spaces, to trailers. Planning and managing lessons will be impacted by the nature and size of the area. The type and size of the facility will impact the lesson preparation and administration. The instructor quickly understands that every class is different in terms of the students' expectations, backgrounds, learning styles, ages and stages of development, and learning preferences (Gardner, 1985). Each of these elements has an impact on planning and, ultimately, effective classroom management. Cherry (2018) highlighted a few key strategies including the following: be clear about the subject matter of the class; the teacher must ensure that the learning experiences and educational objectives are consistent with the subject matter; work backward from a unit of instruction to determine the best way to pace and structure each student; practice the lesson material before delivering it if is unfamiliar; and spend time reflecting on the transitions between tasks. Effective management of the dancing class will result from planning the activities' transitions and organizing so that there will be little downtime.

Consequently, Julian (2015) mentioned that the PE instructors need to possess both theoretical and practical teaching competence and must be mindful about keeping instructions, including the broadening, and refining of tasks, brief and on point. The students must be encouraged to dance for as long as possible given the briefness of the lesson hours. The task must be thoroughly clarified by the instructor. For instance, if the instructor is mirroring students, they can be informed of the process by saying, "I'm going to mirror you while I'm demonstrating. As previously stated, the teacher must be familiar with the dance. It is necessary to know the music and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

tempo, to have the combinations committed to memory, and to be certain of the phrasing. The instructor must be able to count the music and cue the steps in the appropriate tempo and rhythm for the students. Lack of familiarity with the music and combination rules causes a sense of disorganization and unpreparedness. The teacher will be perceived as ineffective by the students, which will lead to management crisis.

Perceptions of PE Instructors in Dance Educati According to Wilson (2019), the teaching of dance is dependent on the availability of teacher's abilities and knowledge when they teach different dances based on their field of expertise. Therefore, the instructor should dedicate time practicing and executing the steps of a dance as the dance leader. The ability to understand and carry out each phase expertly gives the instructor the ability to identify transitions and call out the following step in the sequence. Once the teacher has mastered the dance's steps, she can mirror them while facing the students, which enables her to keep track of the students' progress as she teaches them.

In addition, Sharma (2019) emphasized that a dance instructor or choreographer needs to be creative, athletic, persistent, have strong interpersonal skills, have physical stamina, be funloving, and be able to work in a team in order to make dancing interesting and enjoyable. Moreover, Smuka (2012) stated that when the teacher participates in the activity with the students, student participation increases by an average of 15%. It also takes a lot of preparation to teach dance in physical education, which is made more difficult if the teachers are hesitant in their own dancing skills. Most teachers would certainly agree that practicing a dance and showing pupils how to do the moves takes a lot of time. It is truly labor-intensive to be a teacher. According to Russell-Bowie et al. (2013), the uncertainty that many teachers have can cause them to concentrate more on performing the dance than on really teaching. As a result, teachers may purposefully limit the amount of dance they teach in PE classes

RESULTS AND DISCUSSIONS

Table 1
Major Themes and Core Ideas on the Experiences of Tertiary Education Physical Education (PE) Instructors in Dance
Skills Execution Hesitation

| Major Themes | Core Ideas |
|---|---|
| Encountering Difficulty | struggling in demonstration and application |
| | having a hard time to teach social dances |
| in Dance | having unfamiliarity of different dance genre |
| Demonstrations | facing challenges with less engaged and interested students. |
| | struggling to teach dance outside one's forte specifically ballroom dances |
| | having trouble to execute some dance genres |
| | finding it hard to teach international dances particularly ballet steps |
| Experiencing Doubt and Uncertainty | being hesitant to teach due to unsureness of executing dance correctly |
| | encountering reluctance due to differing specialization particularly hip-hop dance |
| | lacking confidence caused by prioritizing sports over dance |
| | doubting capacity if it falls outside one's genre |
| | having uncertainty when teaching dance skills |
| Having Poor Foundation in Dance Education | not learning enough while still studying as a student due to a sudden shift in the mode |
| | of learning |
| | having a poor foundation or background in dance |
| | lacking in seminars and training to strengthen the dance background |
| | being unfamiliar to dance |

Encountering Difficulty in Dance Demonstrations

It is hard when it comes to the application because you will be the one to demonstrate, and I, not being a dancer, really hesitate to teach, and I also doubt if I am teaching it correctly. IDI-04

The most challenging part for me is the execution because if it is not your genre, you might doubt whether your performance is correct or what you teach them is right.FGD-04

It is not easy to teach dances that are not your forte. For example, social dance is so complex to teach students, and it is difficult for me because dance sports are more about precise movements, whereas I am not skilled in dance, as I am into sports IDI-03

One of the central challenges highlighted by the narratives of tertiary education PE instructors is the difficulty with executing and applying dance skills, particularly outside one's comfort zone. This difficulty extends to teaching dance genres that instructors may not be familiar with, leading to hesitation and potential limitations in effectively conveying the material to students. This is consistent with one of the findings of the study conducted by Contant (2015) who revealed that teaching dance can be difficult, especially for teachers who lack basic dance knowledge or skill. This difficulty is compounded for those who did not have exposure to dance during their formative years and may have prioritized sports over dance.

Similarly, another challenge faced by PE instructors in dance execution as anchored in the study of Better (2020) is the concept of learning and teaching dance itself. Dance can be difficult to learn and teach.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Experiencing Doubt and Uncertainty

They expect me to be good at teaching because it is my specialized field, but they do not realize that deep inside my mind and heart, I feel hesitant to teach because I am not sure if I am doing it right. IDI-04

I am not confident in teaching dance. I have a background and was part of a dance group in high school, but when I got to college, I did not focus much on dance because I am into sports. IDI-06

According to the experiences of Physical Education (PE) instructors, they frequently struggle with self-doubt when it comes to performing dance routines, particularly when their specialization lies in other areas within the discipline. This hesitation may originate from a lack of experience or ability in the dancing forms they were forced to teach. Furthermore, their confidence was undermined by a proclivity to favor sports-related activities above dancing, leading to feelings of inadequacy when it came to teaching or performing dance routines.

Lundvall (2022) revealed that many physical education teachers believe that their capacity to teach dance is restricted, and they are unsure of their own skill in the subject, leading them to doubt their abilities to teach it.

Many PE instructors spend less time dancing since they are not very adept at it, limiting their ability to teach it. Furthermore, it was shown that teaching dance skills and concepts frequently causes doubt among instructors, particularly those who lack specialized training or considerable expertise in dance education. Similarly, this anxiety stems from a variety of issues, including a lack of confidence in their own dance abilities, uncertainty about how to effectively teach complicated concepts, and concern about serving students' unique needs (Bowies, 2013).

Having Poor Foundation in Dance Education

There is a lack of foundation. That is one of the factors why I am not confident enough to teach; my foundation in dance is too weak IDI-03

It was a pandemic then, and we were only learning online. We do not know those dance steps, moves, or techniques, like in Latin dance, because we rely only on YouTube. No teacher teaches us one by one and step by step. IDI-04

A weak foundation in dance education can significantly influence progress and confidence. Participants in the study revealed a variety of problems and experiences that contributed to this. One important barrier identified by participants was a rapid shift in the method of learning, which frequently resulted in insufficient learning during their studies. This sudden transition, whether caused by curriculum changes or teaching methods, disrupts learning continuity, and leaves them with insufficient information and abilities. Furthermore, one research revealed that teachers lack experience attending seminars and trainings to improve their background in dance execution.

Participants noted that many educators enter dance education with a poor foundation or background in the discipline. This lack of prior experience, according to a study by Backman (2020) can hinder their ability to grasp fundamental concepts and techniques, creating barriers to progress and achievement. Additionally, participants highlighted the scarcity of seminars and training opportunities aimed at strengthening students' dance backgrounds. Without access to supplementary education and resources, students may struggle to develop the necessary skills and knowledge to succeed in dance (Almusawi, 2021).

Table 2
Major Themes and Core Ideas on the Coping Mechanisms of Tertiary Education PE instructors in Dance Skills Execution Hesitation

| Major Themes | Core Ideas |
|---|---|
| | browsing and watching video tutorials from YouTube. |
| | acquiring dance steps from YouTube videos to teach students |
| Utilizing Online | showing YouTube videos to students while teaching dance |
| Teaching Materials | researching and looking for more dance ideas in YouTube |
| | • using online resources, such as videos, to teach unfamiliar dance genres |
| | • searching more information in Google |
| Seeking Help From Others | inviting professional dancers to conduct workshops and demonstrations |
| | • seeking help from student dancers in performing dance skills properly |
| | • asking help to skilled dancers in executing dance skills correctly and making them as |
| | an example |
| | soliciting help from colleagues |
| | seeking guidance from experts |
| Nurturing Dance Proficiency through Multiple Strategies | reading dance literatures and teaching only the basics |
| | memorizing proper basics repeatedly |
| | asking the students to demonstrate while teaching the basics |
| | practicing consistently both at home and at school |
| | thoroughly reading through step-by-step process |
| | researching first the topic before teaching |
| | • studying and practicing dance material before presenting to students |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| | • | preparing and demonstrating the skills before instructing to students |
|-------------------|---|---|
| Having Continuous | • | enrolling workshops for improving dance skills |
| Learning of Dance | • | mastering dance skills through studying and practicing |
| Skills | • | continuous learning and studying dance skills |

Utilizing Online Teaching Materials

One of the resources I used was the YouTube platform, where I can watch tutorial videos. IDI-03

We do brainstorm with my classmates to share ideas about the topic. IDI-02

I look for ways, like playing YouTube videos with them; in that way, I can cope IDI-04

The participants reported often browsing and viewing video tutorials on platforms such as YouTube, which they found essential for learning new skills and approaches. Specifically, this supports the findings of Aguilera's (2020) study, which found that in dance education, instructors routinely use YouTube videos directly into their courses, offering visual aids that promote comprehension and skill development. Furthermore, educators were encouraged to emphasize the value of research and discovery on YouTube, using internet tools to uncover new ideas and techniques, particularly when teaching unfamiliar dance genres.

Comparatively, this result is aligned to the study conducted by Jogezai (2021) who covered a proactive approach to research, which frequently involves using web resources to investigate unfamiliar dance styles and seek out novel ideas. Teachers also recognized Google's value as a supplementary tool for getting new material and improving their knowledge base.

Seeking Help From Others

So what I did was I invited professional dancers aligned on it. We did a workshop and demonstration. While they are demonstrating, I am also observing and learning to learn more about that. IDI-02

During class, I use skilled dancers as examples, including myself, for performing skills correctly. IDI-03 Then I ask help to the experts. FGD-01

The collaborative aspect of dance education and the numerous ways in which teachers use the expertise of others to enhance student growth and success. Peer expertise, whether from fellow educators or skilled dancers, was emphasized as a key resource for enhancing educational approaches and practices. (White et al., 2021).

Identically, this is consistent in the study conducted by Baena-Morales and González-Víllora (2023), the result further highlighted the significance of tapping into the expertise of proficient dancers to refine and elevate the quality of dance instruction. Teachers emphasized the invaluable insights and practical advice provided by skilled dancers, which contributed to the development of more accurate and polished dance techniques among students.

Nurturing Dance Proficiency through Multiple Strategies

I am implementing strategies such as reading literature on various dances and focusing on the basics. IDI-04

Then at the same time I memorize the proper basics repetitively.

One of the things I do is research it first before teaching. IDI-

Hasanov and Mamataov's (2022) research stressed the need of repetitive repetition in understanding concept fundamentals, encouraging students to memorize suitable practices through regular rehearsal.

Similarly, one of the findings of a study conducted by Perron and Downey (1997) demonstrated that while developing successful management approaches for dancing classes, it is critical to be proactive rather than reactive. Being proactive includes booking the dancing class far ahead of the start of the school year. Furthermore, Freiburg (2002) noted that understanding the school, community, and students is an important initial step in planning. The next step is to design an idea for a unit or lesson, which continues the process of successful classroom management. Content (or what is taught) is a crucial aspect of management.

Having Continuous Learning of Dance Skills

Currently, I am enrolled in a beginner dance sports workshop. IDI-02

To overcome challenges, I acquire new skills, study, and practice. IDI-03

It is important to not only learn the basics of a specific dance, but also to continually evolve and gain more knowledge about it. FGD-03

Through workshops and seminars, teachers learn dance and choreography skills that can be applied to PE instruction. (Chatzestifani, 2017).

In addition, to ensure that students receive a high-quality education and that school instructors are considered qualified in their field, they must take professional development courses to advance their own knowledge and skills (Cardin and Denysschen, 2018)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 3
Major Themes and Core Ideas on the Insights of Tertiary Education PE instructors in Dance Skills Execution Hesitation

| Major Themes | Core Ideas |
|--|--|
| Provision of Professional Development about Dance Skills | provision of specialized trainings to refine and improve teaching participate in trainings and seminars to learn proper execution from experts attend conferences and seminars for exposure to different dance skills refresh one's knowledge and skills through workshops on a particular dance genre attend cultural events to watch and learn various dance steps |
| Nurturing Positive Mindset and Attitude | be more patient and understanding diverse learning needs practice continuously for maintaining and improving skills in dance. be teachable step out of one's comfort zone to become more effective teachers. have an open mindset and being willing to learn keep the passion and enthusiasm in teaching dance. |
| Cultivating Confidence and Self-Esteem | believe in one's abilities and skills to perform better. be confident in what you do believe in oneself and have the willingness to learn as a dance teacher. |
| Constant Practice for Proficiency | continuously practice dance skills spend more time in practicing dance rehearse dance skills to teach efficiently learn the basics by practicing in front of the mirror for accuracy engage more in dancing to be better and more effective dance teachers. research and practice more other than music |

Provision of Professional Development about Dance Skills

We teachers need to constantly refresh our skills. Until now, I still join workshops and seminars, focusing on specific genres. FGD-03

I hope there are specialized trainings that will polish our skills. Experience in college life is helpful, but specialized training enhances it further. IDI-02

Let us attend conferences and seminars, for example, participating in 2-3 days national Folk Dance seminars to learn new skills. FGD-01

The findings agreed on the study of Amado et al. (2020) who proposed that there is really a need to expand teachers' professional training in dance in order for them to become more effective dance teachers. They also mentioned that through these opportunities, it will help teachers improve their understanding of the concepts and applications needed in teaching dance executions.

Moreover, the findings align closely with Ripalda's (2019) study that emphasized the importance for Physical Education (PE) instructors to actively participate in dance-focused training sessions and workshops, ensuring they remain knowledgeable of the evolving trends and techniques in choreography. By doing these actions, it can cultivate educators the sense of versatility not only in sports education but also in the realm of dance instruction.

Nurturing Positive Mindset and Attitude

To become a better dance teacher, I need to work on expanding my patience and understanding the diversity of my students.

Sometimes I overlook certain points, as I tend to assume that all my students are highly skilled in dancing. IDI-01

You need to step out of your comfort zone and explore new skills to improve your teaching skills particularly your dance skills. IDI-03

Be open-minded and willing to learn, as everything can be understood through step-by-step process. IDI-04

We must keep the flame of passion burning in our hearts and the desire to teach. FGD-01

The findings of this study align with Herber's (2019) research, which explores the influence of Physical Education (PE) teachers' growth mindset on student performance and self-belief in physical education. By examining how a growth mindset can positively impact student attitudes and accomplishments, the study highlights the significant role of mindset in varied learning environments, particularly in PE classes. By cultivating a growth mindset among dance teachers, they can motivate students to embrace challenges, persist through obstacles, and perceive effort as a pathway to mastering dance executions. This can also enhance their self-belief, motivation, and ultimately lead to improved academic outcomes in physical education.

Furthermore, the study findings are consistent with Spinner's (2021) concept that promoting a positive mindset among teachers is essential yet challenging. He highlighted the necessity to reflect on one's progress in order to foster appreciation for the dedication to the art of dancing. Also, he added that there is a need to replace negative thoughts with

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

positive affirmations which can help nurture a healthier self-image. Lastly, through embracing gratitude, it can help teachers focus their improvement on more opportunities while enhancing their resilience in the face of challenges.

Cultivating Confidence and Self- Esteem

Believe in yourself and your abilities because you have come this far. The challenges you are facing can be overcome with the help of the resources available in the world. It is important to take advantage of these resources and make the most of them. IDI-02

It is essential to believe in one's ability to learn and the willingness to learn as a teacher. For instance, if you attend a seminar and listen attentively, you will undoubtedly learn course. IDI-04

Physical Education instructors must have self-belief and awareness to help other students develop confidence as well and the proficiency of their dance movement (Powers, 2019).

Moreover, Kang et al. (2023) also stressed the significance of self-belief and skill mastery for enhancing dance instruction. They emphasized the needed balance between technological application and human skill, emphasizing that confidence, expertise, and self-assurance which they believed are key elements for successful dance teaching in a modern digital educational environment.

Further, Steatham and Barnes (2023) underscored the vital contribution of dance teachers in cultivating confidence and self-esteem to improve one's capabilities and effectiveness in conducting successful dance instructions.

Constant Practice for Proficiency

If you are only learning things by reading or studying, but not putting them into practice, you will not see the desired results. To effectively teach others, you should practice the material yourself. The common saying is that practice makes perfect, but even if you do not achieve perfection, at least you made an attempt on your own. IDI-07

When practicing, it is important to learn the basics and consistently practice, then demonstrate your skills. I found it helpful to look in the mirror during my practice sessions. FGD-04

Regular and consistent practice is very important for developing expertise in dance instruction. Consistent dedication to refining dance skills through frequent rehearsals and practice sessions is essential. As highlighted by Secor (2018), the consistent practice, repetition, and critical assessment within the dance classroom, particularly focusing on educators, have a transformative impact. The research underscores the significance of ongoing practice and rehearsal in improving dancing skills. Through regular practice sessions, deliberate repetition of movements, and critical self-evaluation of performances, both educators and dancers can enhance their

techniques, deepen their comprehension of dance execution, and elevate their overall proficiency in dance.

LEARN THROUGH RESEARCH

Start by researching the basics to continuously learn. Research more and focus on the fundamentals. IDI-01

Researching the topic is vital because you cannot teach what you do not know. IDI-07

When Physical Education (PE) teachers explore into dance instruction, engaging in research or conducting additional information about the dance execution become crucial for enhancing one's co

This finding is consistent with Marques et al.'s (2023) study who identified a significant gap in PE teachers' understanding of physical activities emphasizing the need for continuous learning and professional development to enhance teaching standards in PE, especially in dance instruction. The researchers also highlighted that PE teachers can improve their dance teaching skills through ongoing learning and professional growth initiatives. This underscores the importance of PE teachers actively engaging in research to enhance their expertise, refine teaching approaches, and ultimately enhance the quality of dance instruction in physical education.

Furthermore, Ripalda (2019) also emphasized the importance of PE teachers utilizing other resources and innovative strategies to ensure effective learning despite the challenges. She added by doing this action by researching, one may be able to retain and improve one's information. It can also help teachers stay updated on what applicable teaching ways can be used to improve one skill in teaching dance.

IMPLICATION FOR TEACHING

The results of the study on the experiences of physical education (PE) instructors in higher education on dance skills execution hesitation have significant implications for various stakeholders in dance sector. The study highlights the significance of professional development for higher education physical education instructors in the field of dance education. It emphasizes the necessity of continuous training and support to improve the instructors' confidence as well as their skills to teach dance. It highlights how important it is to have a positive outlook on dance education and how practice is essential to maintaining skill competence. The study also emphasizes how using internet resources and professional and peer support can augment teaching methods and enrich the educational experiences of students.

For students, the study's implications have to with the quality of their dance education experiences. Competent PE instructors who have continued their professional development and have undergone thorough training are better equipped to provide high-quality instruction, which improves students' understanding of dance principles and techniques. The study emphasizes how exposure to diverse teaching methods and the motivation provided by proficient instructors are crucial for students' overall success in dance education.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

CONCLUSION

This research study has shed light on the experiences of tertiary education PE instructors in dance skill execution hesitation, revealing multifaceted issues and coping mechanisms in the field of dance education. The results highlight the significance of continuous support, innovative pedagogy, and professional growth for PE instructors to enhance their teaching proficiency and efficacy as well as their confidence in teaching dance. The study also emphasizes how important it is to use technology, foster a positive learning environment, and embracing crosscultural perspectives in order to improve dance education practices.

Notably, as a PE instructor deeply immersed in this field, conducting this study provided me with significant insights into the difficulties encountered by other instructors and the multifaceted nature of dance instruction. It emphasized the value of empathy, patience, and continual self-reflection in recognizing and meeting the needs of both teachers and students in the classroom. Furthermore, taking part in this research journey highlighted the value of collaboration, interdisciplinary dialogue, and ongoing professional growth in enhancing teaching techniques and promoting excellence in dance education. As a physical education instructor, this research has not only expanded my knowledge and understanding of dance pedagogy, but it has also inspired me to commit to lifelong learning and growth in order to build an engaging and supportive learning environment for the students. Through this research endeavor, I have developed a new understanding for education's transformative power and the significant impact it can have on molding lives and communities.

SUMMARY

Introduction: Skin alterations or lesions called pressure ulcers (PUs) encompass localized areas of ischemia with subsequent tissue necrosis, which are generated by prolonged compression, shear or friction of soft tissues between bony prominences and the external surface.

Objective: to detail current information related to pressure ulcers pathophysiology, epidemiology, risk factors, presentation and treatment.

Methodology: a total of 24 articles were analyzed in this review, including review and original articles, as well as clinical cases, of which 17 bibliographies were used because the other articles were not relevant to this study. The sources of information were PubMed, Google Scholar and Cochrane; the terms used to search for information in Spanish, Portuguese and English were: pressure ulcers, skin lesions, decubitus ulcers.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Results: The creation of pressure ulcers is multifactorial. The prevalence of pressure ulcers reported globally according to WHO is around 5 to 12%. Despite increased attention to prevention over the last 20 years, the prevalence of pressure ulcers has remained virtually unchanged, yet the related values of care continue to increase. Two-thirds of ulcers occur in people over 70 years of age. **Conclusions:** due to the high prevalence worldwide, especially in patients over 70 years of age, the recognition, presentation and pathophysiology of pressure ulcers should be clearly understood, with the aim of preventing their occurrence. Prevention consists of maintaining and improving tissue tolerance and adequate offloading. Both internal and external factors have to be evaluated because they play a major role in pressure ulcer formation. Special attention should be paid to epidemiological risk groups. Proper hydration, together with adequate nutrition are essential in the treatment of this condition, in addition to close monitoring and corresponding wound management.

Key words: ulcers, pressure, lesions, skin, decubitus.

INTRODUCTION

In the past, pressure ulcers were considered an inevitable consequence of being sick and bedridden. It is now known that this is not the case; pressure ulcers have come to be seen as an indicator of the quality of care provided by health personnel, which is why they occupy a notable place in the political agenda, as well as in the health agenda(1).

Skin alterations or lesions called pressure ulcers (PU) encompass localized areas of ischemia with subsequent tissue necrosis, which are generated by prolonged compression, shearing or friction of soft tissues between bony prominences and the external surface(2,3).

The appearance of PUs in hospitalized individuals constitutes a notable health problem, because, in addition to showing physical discomfort in the affected individual, it increases the treatment values, especially in the context of intensive care, increases the hospitalization time, as well as there is an increased risk of generating extra complications such as the need for corrective surgery, increasing the mortality rate(4,5).

In this study we will focus on providing an overview of pressure ulcers, especially their pathophysiology, epidemiology, risk factors, presentation and treatment.

METHODOLOGY

A total of 24 articles were analyzed in this review, including review and original articles, as well as cases and clinical trials, of which 17 bibliographies were used because the information collected was not important enough to be included in this study. The sources of information were Cochrane, PubMed and Google Scholar; the terms used to search for information in Spanish, Portuguese and English were: pressure ulcers, skin lesions, decubitus ulcers.

The choice of bibliography exposes elements related to pressure ulcers; in addition to this factor, pathophysiology, epidemiology, risk factors, presentation and treatment of the condition are presented.

DEVELOPMENT

Concept

A pressure ulcer also called decubitus ulcer is a wound that forms in the upper layers of the skin as a consequence of sustained pressure exerted externally, which subsequently extends both radially and into deeper tissue layers(6).

Pathophysiology

The creation of decubitus ulcers is multifactorial, however, these ulcers present a directionality to present as a consequence of ischemia and necrosis. Tissues can carry an abnormal amount of external pressure, however, constant pressure maintained for a prolonged period of time is the root cause. The external pressure must be greater than the arterial capillary pressure of 32 mm Hg to impede blood flow, and the pressure must be greater than the venous capillary closing pressure of 8 to 12 mm Hg to impede venous blood return. Sustaining a pressure above these numbers generates ischemia and tissue necrosis. This significant pressure may be due to compression by a firm mattress, hospital bed rails or any hard area in direct contact with the affected individual(7).

There are studies linking the pathophysiology of COVID-19 and the development of pressure ulcers. The research group assigned the proinflammatory cytokines interleukin-6 and tumor necrosis factor-alpha, numerous in individuals with COVID-19, as contributors to the occurrence and maintenance of inflammation following cell death and the creation of a pressure ulcer. Friction from skin rubbing against surfaces such as clothing or bedding can also develop ulcers by contributing to breaks in the surface layers of the skin. Moisture can cause new ulcers and worsen pre-existing ulcers through tissue degradation and maceration(8).

Epidemiology

Pressure ulcers are considered a major health problem in all regions of the world, affecting many individuals worldwide every year. The World Health Organization (WHO) reports that 1 out of every 10 patients living in industrialized countries presents these adverse events while being treated in health care facilities; this inadequate behavior in the quality of the individual being treated results in increased medical expenses for hospitalization, nosocomial infections, in addition to the disability it generates. There are data that in several countries present an average value between 6,000 million and 29,000 million dollars per year. The prevalence of pressure ulcers reported globally according to the WHO is around 5 to 12%, more specifically in America around 7%(9).

Some other bibliographies show that the prevalence was 12.9%. The most representative sociodemographic characteristic related to the origin of ulcers in individuals is the level of education of the caregiver. In addition, there is evidence of the connection of certain variables of the patient's state of health with the appearance of pressure ulcers(10).

Even though it is possible to prevent most cases, pressure ulcers remain a significant burden for the patient and society as a whole. There is data that approximately 3 million adults in the United States are affected annually. Despite increased attention to prevention over the past 20 years, the prevalence of pressure ulcers has remained virtually unchanged, yet the related values of care continue to increase(11).

Sacral decubitus ulcers usually occur in older individuals. Incontinent, paralyzed or debilitated individuals are more prone to develop them. Individuals with normal sensory status, mobility and mental status are less likely to form these ulcers because their regular physiological feedback system leads to periodic changes in physical position. As mentioned before, older individuals are more likely to present sacral decubitus ulcers, the literature shows that two thirds of ulcers occur in people older than 70 years, as well as some studies showing that about 83% of hospitalized patients formed ulcers within 5 days after hospitalization(7).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Risk Factors

The formation of pressure sores is complex and multifactorial. Several external as well as internal factors coincide to generate these ulcers. Internal factors such as malnutrition, endothelial dysfunction and anemia can accelerate the evolution of tissue damage. External factors such as pressure, shear force, prolonged friction and humidity can trigger tissue deformation and ischemia(6,12).

In a meta-analysis involving 19,363 individuals admitted to intensive care units, the risk factors that appeared as the most important predictors of pressure ulcer development were: length of stay in the ICU, diabetes, age, MAP time <60-70 mmHg, intermittent hemodialysis or continuous veno-venous hemofiltration therapy, turning, vasopressor support, sedation, mechanical ventilation and its duration(13).

Reduced mobility, poor nutritional status, skin moisture and loss of sensory perception stand out as the most common risk factors, as well as advanced age, cognitive impairment and comorbid conditions that affect tissue healing. The pressure maintained on the tissues can generate occlusion of the capillary bed, reducing the amount of oxygen in the area, as time progresses the ischemic tissue accumulates toxic metabolites, which in the future generates ulceration and necrosis of the tissue. Immobility of only two hours in a bedridden or post-surgical individual is enough to create the basis for a pressure ulcer. The alteration of the nervous regulatory mechanisms in charge of controlling the local blood flow is also to some extent responsible for the constitution of these ulcers(7.12.14).

Individuals with the conditions described below are predisposed to pressure ulcers:

- Dehydration.
- Malnutrition.
- Hypotension.
- Cardiovascular disease.
- Neurological disease.
- Surgical patients.
- Prolonged anesthesia.

Presentation

In individuals with unaltered sensation, mobility and mental state, prolonged pressure causes discomfort and pain, resulting in a change in body position. However, most individuals with pressure ulcers do not have these characteristics. The clinical manifestations may be different for each body site because the skin, soft tissues and muscles resist external pressure differently. The most common anatomical sites are the sacrum, ischial tuberosity and greater trochanter, although they can also be found in places such as the occiput, scapula, heel, lateral malleolus, elbow, shoulder and even the ear. The muscle can become ischemic and necrotic before skin breakdown occurs, which can be difficult to discern on medical ectoscopy, weakening the diagnosis as to the depth or extent of the ulcer. It is therefore emphasized that a complete medical history, together with a proper overall assessment of the individual at risk, is essential when assessing aspects of the wound, it is essential to keep in mind the risk assessment tools to reduce the risk of pressure ulcer incidence, for which several risk assessment scales can be used, such as the following: Waterlow, Norton and Braden(7,11).

Treatment

Before describing the multiple treatments for pressure ulcers, it is crucial to clarify that preventive intervention is the best treatment. Prevention consists of maintaining and improving tissue tolerance and adequate offloading. This could be obtained through excellent skin care, turning schedules, support surfaces, proper hydration, adequate nutrition and pressure dispersion cushions. The skin should be clean and dry. Proper hydration, accompanied by adequate nutrition are essential, nutritional supplements help benefit individuals with limited oral intake. Redistribution of pressure can be achieved by means of beds and chairs designed to avoid direct pressure on areas of anatomical risk. Studies show that turning every 4 hours on a viscoelastic foam mattress or surface generates fewer pressure ulcers than turning less frequently, in the case of 2 hours, on a standard mattress. Support surfaces should be adopted according to the level of risk, ulcer stage, mobility, patient comfort and microclimate control requirements. Following the formation of a pressure ulcer, the anatomical area involved should be actively offloaded, ensuring adequate drainage, and if infection is present, devitalized tissue should be debrided and proper wound care should be provided.

Pressure should be redistributed through active positioning of the individual, special bandages, immersion beds and reconditioning of prostheses for unloading. In case of abscess, it should be drained. Temporary application of silver sulfadiazine, iodine, hydrogen peroxide or Dakin solution is recommended in case of suspected infection, bearing in mind that they may delay wound healing in the long term. Antibiotics should only be an alternative when there is significant cellulitis or systemic signs of infection. On the contrary, when there is exposed bone in sacral decubitus ulcers, studies report a low incidence of osteomyelitis(7,15,16).

Mechanical debridement may be required to get rid of devitalized tissue and biofilms that do not allow adequate wound healing. It should not be indicated in cases of dry eschar without fluctuations or secretion of purulent material. Dressings can be used differently, always taking into account the stage of the ulcer, the infection and the presence of exudate. However, there are studies that support the use of silicone foam dressings as well as Allevyn Life silicone adhesive dressings for any pressure ulcer with a Braden score of 14 or less(7,17).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

CONCLUSIONS

Due to the high prevalence of pressure ulcers worldwide, especially in patients over 70 years of age, the recognition, presentation and pathophysiology of pressure ulcers should be clearly understood, with the aim of preventing their occurrence. Prevention consists of maintaining and improving tissue tolerance and adequate offloading. Both internal and external factors have to be evaluated because they play a major role in pressure ulcer formation. Special attention should be paid to epidemiological risk groups. Proper hydration and adequate nutrition are essential in the treatment of this condition, in addition to close monitoring and corresponding wound management.

ABSTRACT

Pandemics, with their potential for widespread devastation and global impact, have historically been a critical concern for public health and society. the historical impact of pandemics on the environment underscores the interconnectedness of human lives and health, societal systems, and the environment, highlighting the need for holistic approaches to public health and environmental management. The COVID-19 pandemic has brought about significant changes in healthcare facilities worldwide, particularly in hospitals designated for COVID-19 patients to counter and serve the impact on humans which universally led to the rapid establishment of specialized hospitals to manage the surge in patients. However, such hospitals not only posed significant challenges to healthcare systems worldwide but also highlighted the need for sustainable practices in designing and operating healthcare facilities along with their significant environmental impacts. In response to these challenges, architects, designers, and healthcare professionals have explored innovative architectural and other remedies to mitigate the environmental impacts of COVID-19 hospitals. This paper explores these potential environmental impacts and proposes architectural planning strategies that include sustainable practices and green design principles through which, by implementing, COVID-19 hospitals or similar hospitals can minimize their environmental footprint and contribute not only to a more sustainable healthcare system but also create healthier and more sustainable environments for patients, healthcare workers, and the community at large.

KEYWORDS: Hospital Environmental Impact, Hospital Environment Relation, COVID-19 Hospital Impact on Environment, COVID-19 Hospital Impact, Environmental Impact of Pandemics, Pandemic Hospital Impact on Environment

INTRODUCTION

The COVID-19 pandemic has brought unprecedented challenges to healthcare systems worldwide, which has led to the rapid construction and adaptation of healthcare facilities to meet the surge in patient demand (WHO, 2020; Ezekiel J. Emanuel, 2020). It has passed its pandemic stage but now it has been predicted to become an endemic disease (Antia, 2021) which makes it important to study every aspect of science to not only counter its impact but also to learn from it but also to apply its learnings in future similar situations to collectively reduce its impact on the world. While hospitals played a crucial role in managing the pandemic and saving lives, their operations had significant environmental impacts (Ana L. Patrício Silva, 2021). It is important to extract and highlight these environmental impacts of COVID-19 so that they can be utilized and implemented in similar future situations. Hospitals can implement such strategies to not only reduce their environmental impact but also improve the health and resilience of patients, healthcare workers, and the community in such situations. After carefully reviewing the literature, the environmental impact of hospitals requires a comprehensive approach for the assessment that considers various aspects of their operations and activities. Several key parameters can be used to evaluate and measure this impact:

- Waste Generation: Hospital waste generation is a significant environmental concern due to its complex and potentially hazardous nature. Hospitals produce a variety of waste types, including infectious waste, hazardous and pharmaceuticals, chemicals, which specialized handling and disposal methods to prevent environmental contamination and public health risks. Managing hospital waste effectively is essential to minimize its environmental impact and ensure the safety of healthcare workers, patients, and the community (Elliott Steen Windfeld, 2015).
- Energy Consumption: Hospital energy consumption is a critical aspect of healthcare facility operations, significantly impacting both operational costs and environmental sustainability. Hospitals are energyintensive buildings due to the continuous operation of medical equipment, heating, ventilation, and air conditioning (HVAC) systems, and lighting. Energy consumption efficiency is essential for hospitals to reduce their carbon footprint, lower energy costs, and ensure reliable healthcare services (Spicer, 2019; Christiansen, 2015).
- Water Consumption: Hospital water consumption is a key component of healthcare facility management, impacting both operational costs and environmental

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

sustainability. Hospitals require water for various purposes, including patient care, sanitation, and facility operations. Water consumption is crucial for hospitals to reduce costs, minimize their environmental impact, and ensure sustainable water use practices (Balwani, 2017).

- 4. **Air Emissions**: Hospital air emissions refer to the release of pollutants into the atmosphere from various hospital activities and operations. These emissions can result from the combustion of fuels in boilers and generators, as well as from the use of chemicals and medical equipment. Air emission control is essential for hospitals to minimize their impact on local air quality and public health (Amin, 2021; Marco Gola, 2019).
- 5. **Transportation Impact**: Hospital transportation impact refers to the environmental effects of the movement of people and goods to and from healthcare facilities. This includes patient transport, staff commutes, and delivery of supplies. Efficient and sustainable transportation practices are crucial for hospitals to manage transportation impact, and reduce traffic congestion, air pollution, and greenhouse gas emissions (Solomon, 2020).
- 6. Indoor Environmental Quality: Hospital indoor environmental quality (IEQ) refers to the conditions inside healthcare facilities that affect the health, comfort, and well-being of patients, staff, and visitors. IEQ encompasses factors such as indoor air quality, thermal comfort, lighting, and noise levels. Maintaining high IEQ standards is essential for hospitals to provide a safe and healthy environment for all occupants (Marco Gola, 2019).
- 7. **Greenhouse Gas Emissions**: Hospital greenhouse gas (GHG) emissions refer to the release of gases such as carbon dioxide, methane, and nitrous oxide from hospital activities. These emissions contribute to climate change and global warming. Reducing greenhouse gas emissions is crucial for hospitals to minimize their environmental impact and promote sustainability in healthcare (Amin, 2021; Bozoudis, 2022).
- 8. Chemical Management: Hospital chemical management involves the proper handling, use, storage, and disposal of chemicals used in healthcare facilities. This includes cleaning agents, disinfectants, pharmaceuticals, and other hazardous substances. Effective chemical management is essential for hospitals to prevent environmental contamination, protect the health and safety of staff and patients, and comply with regulations (Charlier, 1993).
- 9. **Biodiversity Impact**: Hospital biodiversity impact refers to the effect of healthcare facilities on the surrounding environment's biodiversity. This impact can result from activities such as land use changes, habitat destruction, and pollution. Managing biodiversity impact is important for hospitals to minimize their ecological footprint and promote environmental conservation and sustainability (Manfred Lenzen, 2020).
- 10. Sustainable Procurement: Hospital sustainable procurement involves the purchasing of goods and services in a way that minimizes negative environmental, social, and economic impacts. This includes sourcing products that are environmentally friendly, ethically produced, and have a low carbon footprint. Sustainable

procurement is essential for hospitals to promote sustainability throughout their supply chain and support the transition to a more sustainable healthcare sector (Wilburn, 2021).

METHOD

This research is based on the review of the literature which adopted a multi-phased random review approach to extract and review existing literature. The first phase of the research consisted of extracting literature related to the environmental impact of hospitals to extract the parameters that created the base to assess the environmental impact of hospitals at large. The second phase of the research consisted of extracting the literature on the environmental impacts of COVID-19 hospitals and architectural remedies which included research articles, reports, and case studies from academic and industry sources. Published Data on the environmental impacts of COVID-19 hospitals was collected from relevant sources from digital libraries searched from Google Scholar using different keywords since 2020 from which, data in English was considered. Conclusions were formulated based on relevant findings from the literature review along with the inputs from relevant professionals for healthcare facilities to implement these strategies to mitigate environmental impacts and promote sustainability.

RELEVANT FINDINGS

After conducting the literature review analysis, extracted relevant findings were divided into two main categories. Firstly, the environmental impacts, which discusses the enhanced environmental impact from such dedicated COVID-19 hospitals only as the overall impacts by other hospitals have been discussed earlier. Secondly, the architectural and other remedies for such hospitals have been discussed which will help in reducing their enhanced environmental impact.

ENVIRONMENTAL IMPACTS

- 1 Increased Energy Consumption: COVID-19 hospitals require intensive ventilation, heating, and cooling systems to maintain air quality and temperature control. This leads to higher energy consumption and increased greenhouse gas emissions (Wandong Zheng, 2021).
- Waste Generation: The COVID-19 pandemic has had a significant impact on the healthcare sector, leading to an increase in the demand for hospital facilities and the generation of substantial amounts of medical waste (Water, 2020). Several studies have highlighted the environmental implications of this surge in healthcare activities. A study by Sarkodie and Owusu (2020) examined the potential increase in medical waste generation during the COVID-19 pandemic. They estimated that the global generation of medical waste could increase by approximately 600 tons per day, posing significant challenges for waste management systems (Sarkodie, 2021). Another study by Sangkham (2020) focused on the environmental impact of personal protective equipment (PPE) disposal in Thailand, highlighting the need for proper waste management strategies to mitigate the negative effects on the environment (Sangkham, 2020).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- 3 Water Usage: As already witnessed, hospitals require large amounts of water for sanitation, cleaning, and medical procedures. The dedicated The increased demand for water in COVID-19 hospitals can strain local water resources, especially in areas already facing water scarcity (Othman Ahmed, 2023).
- 4 Chemical Usage: In response to the COVID-19 pandemic, hospitals and healthcare facilities have significantly increased their usage of various chemicals for infection control and prevention. Commonly used chemicals include disinfectants such as bleach, hydrogen peroxide, and quaternary ammonium compounds, which are effective against the SARS-CoV-2 virus. These chemicals are used to clean and disinfect surfaces, medical equipment, and high-touch areas to reduce the risk of transmission (Dewey, 2021).

ARCHITECTURAL AND OTHER REMEDIES

In terms of architectural remedies, several researchers have proposed strategies to address the environmental impact of hospitals during pandemics like COVID-19. Research advocated for the adoption of green building principles in the design and construction of healthcare facilities. They suggested incorporating features such as energy-efficient systems, water conservation measures, and sustainable materials to reduce the environmental footprint of hospitals (Capolongo, 2020). Tsai et al. (2021) explored the concept of modular and flexible hospital designs, which can be rapidly deployed and adapted to respond to surges in demand during pandemics. These modular designs allow for efficient use of resources and can be easily dismantled or repurposed after the crisis, minimizing waste and environmental impact. Beyond architectural remedies, researchers have also proposed other strategies to mitigate the environmental impact of COVID-19 hospitals. Jiang et al. (2021) emphasized the importance of effective waste management practices, including segregation, treatment, and proper disposal of medical waste. They also recommended the adoption of circular economy principles, such as waste reduction, reuse, and recycling, to minimize the environmental burden. Another architectural solution proposed by Capolongo et al. (2020) involves the implementation of infection control strategies in hospital design. Similar to the studies witnessing the strategies to control infection in hospital departments such as in the burn unit (Aziz, 2023), ophthalmology (Arafat Aziz T. N., 2023), dentistry (Arafat Aziz S. C., 2023), etc, dedicated COVID 19 hospital includes the incorporation of advanced ventilation systems, segregated areas for infectious patients, and materials that facilitate effective cleaning and disinfection. Such measures can help reduce the spread of infectious diseases and minimize the environmental impact associated with decontamination and waste disposal. Other remedies in context to COVID 19 are summerized:

- 1. Energy-Efficient Design: Designing COVID-19 hospitals with energy-efficient features such as natural ventilation, high-performance insulation, and energy-efficient lighting can reduce energy consumption and lower greenhouse gas emissions.
- 2. Waste Management Practices: Implementing effective waste management practices, including segregation, recycling, and proper disposal of medical waste, can

- minimize the environmental impact of COVID-19 hospitals.
- 3. Water Conservation Measures: Installing water-efficient fixtures, implementing rainwater harvesting systems, and promoting water recycling can help reduce the water footprint of COVID-19 hospitals.
- 4. Green Building Certifications: Seeking green building certifications, such as LEED (Leadership in Energy and Environmental Design), can ensure that COVID-19 hospitals adhere to sustainable building practices and minimize their environmental footprint.
- Use of Eco-Friendly Materials: Choosing eco-friendly building materials and furnishings can reduce the environmental impact of COVID-19 hospitals and promote a healthier indoor environment for patients and healthcare workers.
- 6. Alternative Energy Sources: Integrating renewable energy sources, such as solar panels or geothermal systems, can help COVID-19 hospitals reduce their reliance on fossil fuels and decrease their carbon footprint.

CONCLUSION

The environmental impacts of COVID-19 hospitals are significant and multifaceted, requiring a holistic approach to mitigation. One of the primary environmental impacts of COVID-19 hospitals is the increased energy and resource consumption associated with their construction. The rapid construction of temporary facilities often relies on resourceintensive materials and processes, leading to higher carbon footprints. The increased demand for energy, water, and medical supplies in these facilities further strains already limited resources. Furthermore, the operational strategies employed in COVID-19 hospitals, such as enhanced ventilation and disinfection protocols, can have long-term environmental consequences. Increased both artificial ventilation and natural ventilation rates to reduce airborne transmission of the virus can lead to higher energy consumption. Architectural solutions, such as green building principles, modular designs, and infection control strategies, have been proposed to address these challenges. Additionally, effective waste management practices and the adoption of circular economy principles could further mitigate the environmental impact of healthcare activities during pandemics. The integration of green space systems can improve indoor air quality and reduce the reliance on mechanical ventilation at the same time, the use of chemical disinfectants can result in the release of harmful pollutants into the environment. To address these environmental impacts, architects and healthcare professionals are exploring various remedial strategies. These include the use of sustainable building materials and construction techniques to reduce the carbon footprint of hospitals, as well as the implementation of energy-efficient HVAC systems and renewable energy sources to minimize energy consumption.

ABSTRACT

The Institute of Chartered Accountants of India (ICAI) plays a crucial role in promoting globally recognized accounting standards in the Indian context. In this endeavor, ICAI has introduced the "Indian Accounting Standards" (Ind AS) to align with the International Financial Reporting Standards (IFRS). We aim to assess the impact of implementing the new accounting standards compared to the pre-existing standards. To achieve this, we employed Gray's comparability index model on the key items of the consolidated financial statements of selected NIFTY FIFTY companies and examined the outcomes. The analysis reveals significant alterations in the figures of current and non-current liabilities, as well as total income and total expenses. These changes are attributed to various recognition and disclosure criteria introduced by the new accounting standard.

KEY WORDS: Ind AS, IGAAP, NIFTY FIFTY, Gray's Comparability Index

INTRODUCTION

In an era of increasing global interconnectedness, emerging economies like India are witnessing a transformative integration with mature economies through burgeoning crossborder trade and investments. This seamless integration, facilitated by the forces of globalization, has rendered the notion of regional accounting standards obsolete. The establishment of the World Trade Organization marked a significant milestone, particularly in finance, as money became the epitome of fungibility, flowing effortlessly across national boundaries. With shareholders no longer confined to the jurisdictional boundaries of individual sovereign nations but rather dispersed across continents, the traditional justification for regional accounting standards has waned. This shifting landscape has spurred a recognized and pressing need for universally acknowledged, high-quality financial reporting. Such a global financial reporting framework aims to enhance comprehension and transparency, empowering stakeholders to make well-informed decisions in a landscape where economic interactions transcend traditional geopolitical constraints.

In response to the evolving landscape of global finance, the imperative for harmonizing accounting standards has given rise to a concerted effort towards establishing a universal framework. This pursuit has materialized in the form of International Financial Reporting Standards (IFRS), a globally recognized accounting standard issued by the International Accounting Standards Board (IASB). Comprising International Accounting Standards (IAS) and International Financial Reporting Standards (IFRSs), along with interpretations issued by the Standing Interpretations Committee, this comprehensive set of guidelines transcends geographical boundaries.

Adopting a singular, high-quality accounting standard, such as IFRS, is pivotal to expedite cross-border investment and facilitate informed economic decision-making. The IFRS framework enhances market efficiency by providing a common language for financial reporting across diverse jurisdictions. Additionally, it holds the potential to mitigate capital-raising costs, further incentivizing international economic interactions. As the global business landscape continues to evolve, implementing IFRS is a critical step toward fostering transparency, comparability, and efficiency in financial reporting on a truly international scale.

According to Istrate, Costel. (2013) transition to International Financial Reporting Standards (IFRS) brings forth many benefits, prominently evident in the enhanced consistency of financial statements, reduced capital costs, and elevated quality of public information. One of the mechanisms through which this transition is executed is outlined in IFRS 1, which mandates the disclosure of information regarding the effects of the shift to IFRS on various financial elements, including assets, debt, equity, revenues, and charges.

IFRS in India

The Institute of Chartered Accountants of India (ICAI) is pivotal in advancing the cause of globally recognized accounting standards within the Indian context. In this pursuit, ICAI has introduced "Indian Accounting Standards" (Ind AS) to align with the International Financial Reporting Standards (IFRS). This proactive measure underscores the commitment to harmonizing financial reporting practices in India with global standards, enhancing comparability and transparency.

The concept of convergence becomes central to this alignment process. It involves the harmonization of accounting standards

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

that are established by various regulatory authorities. In essence, convergence signifies the alignment of standards set by multiple entities, often requiring a certain level of compromise in the form of full or partial adoption of the criteria laid out in those standards. In India's alignment with IFRS, convergence entails achieving a harmonious relationship with IFRS and formulating and maintaining national accounting standards by the International Accounting Standards.

This convergence reflects a commitment to international best practices and facilitates a seamless flow of financial information across borders. By embracing a convergence strategy, India aims to integrate its financial reporting framework with global norms, contributing to greater consistency, comparability, and understanding in the increasingly interconnected world of international finance.

The Ministry of Corporate Affairs (MCA) took a significant step towards aligning India's accounting standards with global practices on February 16, 2015. On this date, the MCA formally notified the 39 Companies (Indian Accounting Standards) Rules, 2015.

Gray Index of Conservatism

The Gray Index of Conservatism, developed by Stephen Gray, is a metric designed to measure conservatism in financial reporting. Conservatism in accounting refers to recognizing potential losses or liabilities sooner than gains, emphasizing a cautious and prudent approach to financial reporting. The Gray Index assesses financial statements based on the degree to which they exhibit conservative accounting practices, considering factors such as the recognition of contingent liabilities and the timely recognition of losses. A higher Gray Index score indicates a more conservative financial reporting approach, reflecting a preference for understating rather than overstating financial performance. This index is a valuable tool for analysts, researchers, and investors seeking insights into the reliability and risk-averse nature of financial reporting within an organization.

REVIEW OF LITERATURE

In 2018, Pramanick conducted a comparative analysis of financial statements under two accounting standards, namely Indian Generally Accepted Accounting Principles (IGAAP) and Indian Accounting Standards (Ind AS). The study employed the Gray Conservatism Index to assess the impact of the two standards on financial reporting. The findings of the study indicated that, in most cases, the adoption of Ind AS did not significantly impact the profit and loss statement or balance sheet when compared to the outcomes under IGAAP. This suggests that, according to the Gray Conservatism Index, the transition to Ind AS did not lead to substantial changes in conservatism in financial reporting. Pramanick's research contributes to understanding the relative conservatism between IGAAP and Ind AS, shedding light on the continuity or lack of significant shifts in financial reporting practices under these two accounting frameworks.

Achalapathi and Bhanu Sireesha (2015) examined the impact of the voluntary adoption of International Financial Reporting

Standards (IFRS) on key financial ratios, specifically focusing on stability, liquidity, profitability, and valuation, within a sample of 10 Indian companies. The research utilized secondary data from annual reports spanning six financial years (2008-09 to 2013-14), prepared under Indian Generally Accepted Accounting Principles (GAAP) and IFRS. Gray's Comparability Index served as a tool to gauge the relative impact of IFRS adoption on the financial ratios of the selected companies. The study identified significant differences between Indian GAAP-based and IFRS-based financial ratios. The adoption of the IFRS has led to a statistically significant increase in liquidity, profitability, and valuation ratios.

In 2015, Matthew Adeolu Abata conducted a study evaluating the impact of the International Financial Reporting Standards (IFRS) on financial reporting practices within the Nigerian Banking Sector. A T-test at a 5 percent level of significance was utilized to test the mean differences of the computed Comparability Indexes. The results of the T-test demonstrated significant differences in the mean value of the Comparability Index under Indian GAAP and IFRS. This indicated that IFRS had a measurable impact on the financial reporting practices of Nigerian banks, with quantitative differences observed in key elements of financial statements, such as assets, liabilities, and equities, when prepared under GAAP and IFRS. The study thus provided valuable insights into the specific effects of IFRS adoption within the Nigerian banking sector.

Reseachers Istrate and Costel. (2013) tries to discover the history of the Gray Index of Conservatism, the comparability index, and how it could be used as a valuable instrument for evaluating discrepancies across various accounting standards. In this study, the researchers employ this index to appraise the consequences of the obligatory adoption of International Financial Reporting Standards (IFRS) across Europe in 2005. The investigation delves into numerous accounting parameters, encompassing equity, net income, leverage, return on equity, and return on assets. The outcomes elucidate that the former Generally Accepted Accounting Principles (GAAP) in Belgium, France, and Portugal exhibited a higher prudence than IFRS. In certain instances, the findings reveal a substantial reduction in prudence in IFRS financial reporting across all nations.

Bhargava and Shikha (2013) focused on assessing the impact of International Financial Reporting Standards (IFRS) on the financial statements and key ratios of Wipro Ltd. The study involved a comparative analysis between the consolidated financial statements prepared under Generally Accepted Accounting Principles (GAAP) and those under IFRS. Notably, the examination revealed variations in total assets and liabilities attributable to the reclassification among equity and liability and differences in the application of the revenue recognition concept. They suggested that the adoption of IFRS by Wipro Ltd. not only resulted in specific changes in financial metrics but also aligned with the broader goals of promoting transparency, comparability, and a more comprehensive understanding of financial reporting practices on an international scale.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In 2012, Yadav conducted a comprehensive study examining the impact of adopting International Financial Reporting Standards (IFRS) in India. The research delved into the challenges anticipated during the transition and the procedural aspects of IFRS adoption in the Indian context. Yadav's findings highlighted that the shift from Indian Generally Accepted Accounting Principles (GAAP) to IFRS would be accompanied by several challenges. Key aspects of this process include a complete overhaul of accounting formats, revision of accounting policies, and more extensive disclosure requirements. While acknowledging the complexities of this transition, Yadav's study advocated adopting IFRS in India, emphasizing the long-term benefits and alignment with international reporting standards. This reflects the broader discourse on the global movement towards harmonization and standardization in financial reporting.

In their 2012 study, Kathryn Trewas, Nives Botica Redmayne, and Fawzi Laswad examined the repercussions of the adoption of the International Financial Reporting Standards (IFRS) on the financial statements of New Zealand public sector entities. The study employed statistical analyses, specifically paired sample tests, to compare New Zealand Generally Accepted Accounting Principles (NZ GAAP) with NZ IFRS opening and closing balances for various financial elements, including assets, liabilities, equity, revenue, expenses, and net income. The key findings indicated an overall significant impact of IFRS adoption on public sector financial reporting. Notably, liabilities for the overall sample and several analyzed subsectors experienced a substantial increase. This suggests a notable shift in the treatment of liabilities under NZ IFRS compared to NZ GAAP, with the adoption of IFRS causing significant adjustments in the financial statements of the public sector entities.

In 2011, Shobana Swamynathan and Sindhu examined the impact of the convergence to International Financial Reporting Standards (IFRS) from Indian Generally Accepted Accounting Principles (GAAP) on the financial statements, focusing on Wipro Limited. The research relied on secondary data, specifically selected financial variables sourced from the annual reports of Wipro Limited for the fiscal year ending on March 31, 2010. The study's findings revealed that the net income position in IFRS reporting and Indian GAAP did not differ substantially. However, distinctions were observed between Equity and Total Liability. While the return on equity, return on asset, total asset turnover, and net profit ratio were not significantly affected by the convergence to IFRS, the leverage ratio experienced a notable change. The study concluded that

IFRS is characterized by a fair value-oriented and balance sheet-oriented accounting approach, emphasizing transparent disclosures. In contrast, Indian GAAP was described as adopting a conservative approach. This research contributes valuable insights into the specific financial metrics influenced by the convergence to IFRS, highlighting similarities and differences in the financial reporting frameworks.

The research conducted by Liu in 2009 and Liu et al. in 2010 focused on analyzing the comparability between the United States Generally Accepted Accounting Principles (US GAAP) and International Financial Reporting Standards (IFRS). The study observed a noticeable increase in convergence between the two sets of accounting rules throughout 2004 to 2006 and 2007. However, despite this trend toward convergence, significant differences were identified between US GAAP and IFRS-EU during the specified periods. This underscores the ongoing challenges and complexities in achieving complete harmonization between these two prominent accounting standards, reflecting the nuanced nature of the global efforts toward standardization in financial reporting.

From the above literature, only a few research studies have been undertaken using the Gray Index of Conservatism in the Indian context to compare the previous GAAP and the accounting standards in place. Therefore, the current study aims to perform the Gray Index of Conservatism model on the selected companies from NIFTY FIFTY.

RESEARCH DESIGN

Objective: The research objective is to determine the impact of the convergence of Ind AS on the financial reporting of select NIFTY FIFTY companies.

Population: The NIFTY FIFTY companies listed on the stock exchange are the population for the study.

Sampling Methodology and Sample: The researcher aims to take companies across the industries among the pool of comments listed in NIFTY FIFTY. In conducting an empirical analysis, a company was selected from each industry using convenience sampling, and Gray's Comparability Index (GCI) was employed. The required secondary data for this investigation has been sourced from the published annual reports of the chosen companies. The study focuses on assessing the financial position as of March 31, 2016.

The companies selected are as follows

| Sl No | Name of the company | Industry |
|-------|------------------------------------|------------------------|
| 1 | Infosys (INFY) | Information Technology |
| 2 | ITC (ITC) | FMCG |
| 3 | Larsen & Toubro Ltd (L&T) | Construction |
| 4 | Bharti Airtel (BHARTIARTL) | Telecommunication |
| 5 | Asian Paints (ASIANPAINT) | Consumer Durables |
| 6 | Eicher Motors Ltd | Automobile |
| 7 | Sun Pharma (SUNPHARMA) | Healthcare |
| 8 | Power Grid Corporation (POWERGRID) | Power |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 9 | JSW Steel (JSWSTEEL) | Metals & Mining |
|----|--------------------------------|-----------------|
| 10 | Oil & Natural Gas Corp. (ONGC) | Oil & Gas |

ANALYSIS

Gray's Comparability Index (GCI) is utilized to evaluate the key components of financial statements, including assets, liabilities, equities, and profit, as per both Indian Generally Accepted Accounting Principles (IGAAP) and Indian Accounting Standards (Ind AS) on the consolidated financial statements. Introduced by Gray in 1980, this index quantifies the influence of diverse accounting practices through a Conservatism Index.

The model was used on the Non-Current Assets, Current Assets, Total Assets, Total Equity, Non-Current Liabilities, Total Current Liabilities, Total Equity and Liabilities, Total Income, Total Expenses, and Profit before tax to understand the impact of convergence on the financial reporting.

The formula is as follows:

 $Comparability\ Index\ of\ Non-Current\ Assets\ (NCA) = 1 - \frac{{}^{Total\ NCA\ of\ Ind\ AS-Total\ NCA\ of\ IGAAP}}{{}^{Total\ NCA\ of\ Ind\ AS}}$

Comparability Index of Current Assets (CA) = $1 - \frac{Total\ CA\ of\ Ind\ AS - Total\ CA\ of\ Ind\ AS}{Total\ CA\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Total\ Assets = 1 - \frac{Total\ Total\ Assets\ of\ Ind\ AS - Total\ Total\ Assets\ of\ Ind\ AS}{Total\ Total\ Assets\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Equity = 1 - \frac{Total\ Equity\ of\ Ind\ AS - Total\ Equity\ of\ IGAAP}{Total\ Equity\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Non-Current\ Liability\ (NCl) = 1 - \frac{Total\ NCL\ of\ Ind\ AS - Total\ NCL\ of\ IGAAP}{Total\ NCL\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Current\ Liability\ (CL) = 1 - \frac{Total\ CL\ of\ Ind\ AS - Total\ CL\ of\ IGAAP}{Total\ CL\ of\ Ind\ AS}$

Comparability Index of Total Equity and Liabilities

 $=1-rac{Total\ Total\ Equity\ and\ Liabilities\ of\ Ind\ AS-Total\ Total\ Equity\ and\ Liabilities\ of\ IGAAP}{Total\ Total\ Equity\ and\ Liabilities\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Total\ Income\ = 1 - \frac{Total\ Total\ Income\ of\ Ind\ AS - Total\ Total\ Income\ of\ Ind\ AS}{Total\ Total\ Income\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Total\ Expenses = 1 - \frac{Total\ Total\ Expenses\ of\ Ind\ AS - Total\ Total\ Expenses\ of\ Ind\ AS}{Total\ Total\ Expenses\ of\ Ind\ AS}$

 $Comparability\ Index\ of\ Profit\ before\ tax\ (PBT) = 1 - \frac{Total\ PBT\ of\ Ind\ AS - Total\ PBT\ of\ IGAAP}{Total\ PBT\ of\ Ind\ AS}$

The interpretation of results will follow this guideline. IC (Index of Comparability) equals 1 if both sets of standards yield identical values. When Ind AS values surpass those of the former standards, IC falls below 1. Conversely, if Ind AS values are lower than those derived from the previous standards, IC exceeds 1.

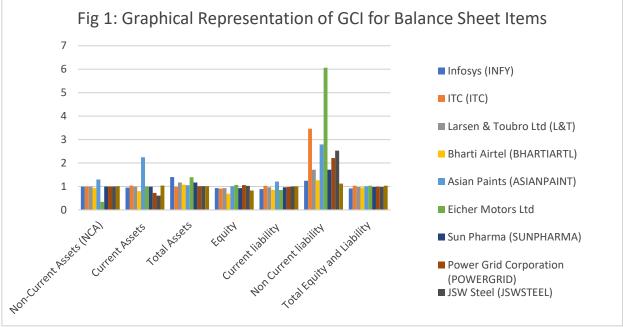

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Companies | Non- Current Assets (NCA) | Current Assets | Total Assets | Equity | Current Liability | Non- Current liability | Total Equity and Liability | Total Income | Total Expenses | Profit Before Tax |
|--|------------------------------------|-------------------|-----------------|--------|----------------------|------------------------------|-------------------------------------|-----------------|-------------------|-------------------------|
| Infosys (INFY) | 0.9911 | 1 | 0.9972 | 0.9365 | 1.2984 | 0.3433 | 0.9972 | 1.0001 | 0.995 | 1.0129 |
| ITC (ITC) | 0.9487 | 1.0382 | 0.9917 | 0.7971 | 2.2445 | 0.9995 | 0.9917 | 0.7241 | 0.6119 | 1.0386 |
| Larsen & Toubro Ltd (L&T) | 1.3987 | 0.9814 | 1.1684 | 1.0783 | 1.0507 | 1.3962 | 1.1684 | 1.0091 | 1.0119 | 1.0084 |
| Bharti Airtel (BHARTIARTL) | 0.9323 | 0.9104 | 0.9301 | 0.6883 | 1.0131 | 1.063 | 0.9301 | 1.0562 | 1.027 | 0.8304 |

| JSW Steel (JSWSTEEL) | 0.993 | 1.0207 | 0.9979 | 1.1534 | 1.0061 | 0.9161 | 0.9979 | 0.911 | 0.9096 | 0.9624 |
| Oil & Natural Gas Corp. (ONGC) | 1.0469 | 1.0052 | 1.0398 | 0.9341 | 1.2387 | 1.1605 | 1.0398 | 0.9231 | 0.9083 | 0.7319 |

Table 1: Results of Index of Comparability using Gray's Comparability Index on various elements of balance sheet and income statement

Comparing the values of IC for balance sheet items it is found while there are no significant changes in the ICs of Non-current Assets, Total assets, Equity, current liabilities, and Total equity and Liability, it was also found that there was the value of Noncurrent assets for Eicher Motors are relatively higher as per Ind AS from that of IGAAP, it was also found that the current assets of Asian Pains were higher as per IGAAP when compared to Ind AS.

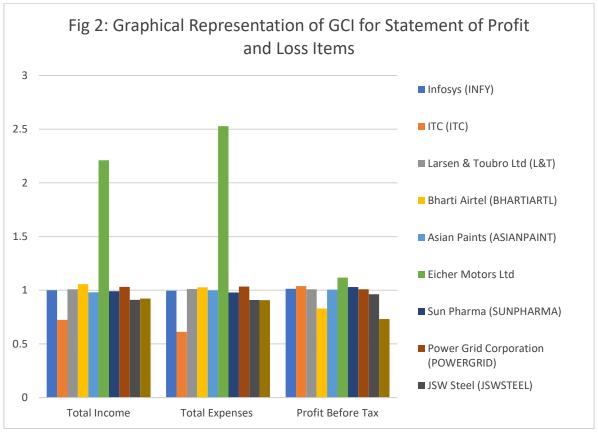

There has been a significant change in noncurrent liabilities in the ICs of ITC, Asian paints, and Eicher Motors when compared to other companies, this could be because of the reduction in the manner of recording of noncurrent liabilities in terms of Ind AS because of the reasons such as liabilities of a disposal group classified as held for sale is to be presented separately from other liabilities in the balance sheet, the loan is mandated to be

assessed at amortized cost, as per the guidelines outlined in Ind AS 109, consequently, its carrying amount should be adjusted or restated to reflect its amortized cost, aligning with the principles outlined in Ind AS 109, Accounting for deferred taxes under IGAAP differs fundamentally from that under Indian Accounting Standards (Ind AS).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

There has been a significant difference in the value of IC for Total Income and total expenses in Eicher Motors only and other companies had no significant difference. The reasons for drastic change may be because the application of Ind AS 12 - Income Taxes necessitates the recognition of deferred tax for new temporary differences arising between the carrying amount of an asset or liability in the balance sheet and its corresponding tax base this requirement was not present under IGAAP, under the old accounting standards, the changes in the value of liabilities related to post-employment benefits are included in the profit or loss for the year. However, under Indian Accounting Standards (Ind AS), the valuations, including actuarial gains and losses and return on plan assets, are recognized under Other Comprehensive Income instead of being directly attributed to profit or loss.

CONCLUSION

In conclusion, the transition from Indian Generally Accepted Accounting Principles (GAAP) to Indian Accounting Standards (Ind AS) has resulted in significant impacts on various items, as well as the balance sheet and income statement. Although this paper does not assess the statistical significance of the differences, it provides a comprehensive overview of the noticeable changes arising from the distinct recognition criteria outlined by Ind AS. Notably, the discrepancies in accounting treatment for taxes, discounting on provisions, and contingent assets contribute to variations between IGAAP and Ind AS reporting, particularly under the category of non-current liabilities. This highlights the importance of understanding and appropriately addressing these differences for accurate financial reporting and analysis under the new accounting standards.

ABSTRACT

Drought is a serious global problem and a state of affairs since ancient times. Until today, the world has to face the problem of drought. Famine is a condition resulting from prolonged acute shortage of total food grains resulting in widespread starvation, impoverishment and emaciation of the majority of the population, resulting in a large increase in population mortality.

Various types of causes of droughts in the Indian subcontinent include unreliable rainfall, deforestation, floods, which have adverse effects on agriculture. In ancient and medieval times, Indian society was completely dependent on agriculture like any other society. During this period, people's life was disrupted due to drought. But due to the generous policy of the ruler, relief work was undertaken on occasion.

During the rule of the British East India Company, there were many famines in different regions of India. They include famines in Bengal in 1769-70, famine in Madras province in 1791-92, ...etc. The company helped meagerly and belatedly. Due to this, there was a terrible loss of life and financial loss.

In 1858, the administration of India was transferred from the Company to the British Crown. During this period, for the first time, the British government established drought relief committees from time to time in order to alleviate droughts in India such as Smith Committee (1860-61), Campbell Commission (1866), Strachey Commission (1880), Lyall Commission (1896), McDonnell Commission (1900). Through these committees efforts were made to get information about drought and prevent drought. **KEYWORDS:** Famine, British, Smith Committee, Campbell Commission, Strachey Commission, Lyell Commission, McDonnell Commission.

1. INTRODUCTION

Drought is an ancient phenomenon. The description of drought in ancient times can be seen in Sanskrit literature and the writings of foreign pilgrims. The description of drought during the reign of Emperor Chandragupta Maurya is described in Chanakya's book "Arthashastra". Relief work is mentioned in it. In ancient and medieval times, people's life was disrupted due to drought. But due to the liberal policy of the ruler, relief work was undertaken on occasion.

The information and record of droughts in the world till date is very insufficient and its record can be found in history. From this, the main causes of global drought are explored, in which the weak elements of the society and the farming class are suffering due to the scarcity of food grains, wars, internal unrest, floods, crop pests, locust attacks due to the nature's disorder or irregular balance. Due to the problem of drought, the rural life is disrupted to a large extent.

Droughts occur only in societies dependent on agriculture. In the Pre-British i.e. ancient and medieval times, Indian society was completely dependent on agriculture like any other society. Although weavers, chambhars, carpenters, potters etc. Although the artisan trade was carried on a large scale, it was entirely associated with agriculture. In the Balutedari system, the goods or services rendered by the Balutedars to the village were paid in the form of grain. Also, the supply of raw material like cotton needed by the weavers was also from agriculture. This agriculture was also completely dependent on rain. Except for wells, small ponds and dams, large irrigation facilities, lack of science and technology and industrial progress, could not have existed in those times. Therefore, in case of drought, there was no situation where a large balance of water was available. There were no other means of livelihood. In such a case, it was quite natural that there would be scarcity of food grains as a result of drought. Apart from drought, there were droughts during this period due to many other reasons. Heavy rains and hailstorms, crop pests and locusts caused extensive crop damage in a region. Sometimes, due to epidemics of diseases like Devi, Pataki, Plague, Influenza, the villages would die and due to this, the agricultural activities would become cold. Also, due to the lack of communication facilities during this period, it was not possible to transport food grains from the places where food was available to the drought areas immediately and on a large scale. Therefore, it was not possible to reduce the severity of drought by removing the scarcity of food grains.

2. FAMINES IN ANCIENT AND MEDIEVAL INDIA

There are many mentions of drought in ancient and medieval India in Vedas, Ramayana, Buddhist Jataka Katha, Chanakya's Economics, Kalhana's Rajtarangini, Abhang of various saints etc. found to have come from Vadmaya.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Prior to the 19th century, droughts were naturally occurring. In it, all the people were starved and there was a terrible loss of people, cattle, animals and money. But in today's modern times, the nature of drought has changed. In this, the poor people suffered more than the rich and it was filled with it.

According to the study of historians, during the Pre-British period, there was a major and severe drought in India at least once every fifty years. At other times there were short or localized droughts. Fourteen major droughts occurred in India between the eleventh century and the fourteenth century. Most of these droughts were caused by drought.

3. EFFECTS OF FAMINE IN PRE-BRITISH PERIOD AND REMEDIAL EFFORTS

During this period, as agriculture was completely dependent on the whims of nature, drought was truly a natural disaster, in such a situation, the rulers of that time, i.e. kings-maharajas or nawabshahs, could only try to 'prevent' this disaster. Secondly, since the entire economy is dependent on agriculture, the economy would not be able to function unless the agricultural activities were resumed smoothly.

Therefore, it seems that on many occasions, the kings tried to help the drought-stricken people as much as possible. Among them, provision of food grains, provision of drinking water, assistance to the disabled, elderly and poor, provision of fodder for cattle, etc., were provided. For this, stop the export of food grains from the state, import food grains and make them available to the people at cheap rates. Remedies were taken. Knowing that it is not possible to give farm manure due to lack of sufficient crops, the Sara (tax) should be waived off. It seems that the kings also did things like building roads, palaces or forts, recruiting large numbers of soldiers so that the people could get a means of livelihood. At the same time, rulers provided seeds, implements, bullocks and surplus land to the peasantry so that they could start farming again in the new season, often helping to clear forests and build new villages.

Of course, not all kings or feudal lords take such measures. Many of these kings and feudal lords used to exploit the people even during famine. However, many famous kings are found to have taken some measures to alleviate the drought. E.g. During the famine of 1629-31, Mugal Emperor Shah Jahan started shelters, distributed food and money to the poor and waived all taxes on the public for two years. During the famine of 1661 in Delhi, Agra region, Aurangzeb himself supervised the famine relief work. Opening his treasury to relieve the famine, he imported large quantities of grain from Punjab and Bengal and sold it to the public at very low rates. Those who could not even buy grain felt free. All taxes on the public were waived during this period and money was distributed to the people wherever necessary. During this drought, Maharana Raj Singh of Udaipur built an elegant marble tower at a cost of lakhs of rupees to block the water of a large canal, and with the help of the people, he built a three-mile long earthen embankment. Due to this, the production of agriculture in this area increased and some stability was created. During the drought in Maharashtra of 1802-03, the Peshwas imported large quantities of grain and

exempted land revenue. Apart from this, landlords, traders, moneylenders etc. Through the private charity work of people of the modern class, facilities like food hostels, drinking fountains and shelters were provided to the drought-affected people.

4. FAMINE IN INDIA DURING BRITISH EAST INDIA COMPANY

There are records of severe droughts by the British, especially during the East India Company period. During the company's rule, there were many famines in different regions of India. In the Bengal famine of 1769-70, approximately 1/3 of the population died due to famine. The company government has not implemented any remedial plan or did not help. Not only this, during the drought, he bought rice at a low price and sold it at a high price and made a huge profit. In 1781-82 there was a famine in Madras and in 1784 in the whole of North India. The company government did relief work. But that was not enough. In 1833, 2 lakhs people out of 5 lakhs died in Guntur district. Also in 1837, severe drought again occurred in North India, in which the Company government started some public activities. But the aid did not reach the drought victims. Due to this, there was a terrible loss of life and financial loss. From this, during the rule of the company, there was no sure measure to save the common people from drought and for relief work. Therefore, the drought-affected people got substantial relief work from the company government.

5. FAMINE IN BRITISH INDIA

In 1858, the transfer of the administration of India from the Company to the British Crown and the development of railways and other means of communication, the advancement of foreign trade, changed the nature of the problem of drought. The British government also realized this. It was the responsibility of the British government to expand irrigation works in India, make agricultural laws, try to alleviate droughts, formulate a drought policy. An average of 10 severe droughts occurred during this period. In 1860-61 there was a famine abroad in Delhi and Agra. This was the first time that arrangements were made to accommodate the famine victims. It was decided to investigate the causes of the drought. Colonel Smith was appointed for this purpose. There was no concrete suggestion in his report. Even though the drought in Orissa in 1866 was more serious, no preparations were made to face the drought. So the government was following the theory of supply and demand. As a result, 13 lakhs people died. This point was proved by drought changes. A committee was set up by the government under the chairmanship of George Campbell. During the drought of 1876-78, there was a severe drought in the states of Madras, Bombay, Uttar Pradesh and Punjab. In this 5 crore 80 lakhs people were caught in the grip of drought. The government made superficial efforts to prevent drought. Thousands of people died in this. The Bengal famine of 1942-43 was the worst and worst of the many droughts in India, in which thousands died. Looking at the nature of this drought, due to the policy of the British government and the Second World War of 1939, it is seen that the hand of man was more than that of God in this drought.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

6. CAUSES OF FAMINE IN BRITISH RULE

Seeing that, after the arrival of the British in India, there was no problem to overcome the above limits to effectively prevent and eliminate drought, i.e. eliminate drought permanently. Trade increased with British expansion in India. Also, the means of transport and communication like roads, railways, post and wire were expanded. Similarly, if irrigation, agriculture and industries were developed and expanded in India on the basis of modern science and technology and capital production methods, the ability of the Indian economy to face natural calamities would have increased. Drought would have been largely eradicated from India. But the opposite happened.

Food grains and agricultural products like jute, cotton, tea, indigo etc. were exported to Britain as raw materials from India. While the cloth, leather goods, utensils etc. from the mills of

England. Cheap ready-made goods began to be consumed in India. Therefore, weavers, tanners, coppersmiths etc. in India. As the goods of the artisans became scarce, they lost their business as artisans. Also, the British took care that no mills should be set up in India in order to consume the goods of English mills here. As a result of all this, on the one hand agriculture was destroyed and the farmers were greatly impoverished, on the other hand, due to the destruction of craftsmanship and lack of industrial development, the entire population turned to agriculture for livelihood. This increased the population burden on agriculture. In such a situation, how will the Indian economy's ability to face natural calamities like drought increase due to the arrival of the British? The opposite potential also decreased. Even a small amount of rain led to the collapse of the agricultural system and the growing agricultural population was thrown into the abyss of drought.

7. LIST OF FAMINES IN INDIA BETWEEN 1765 AND 1947

| Year | Name of Famine | British territory |
|-----------|----------------------------------|---|
| 1769–70 | Great Bengal Famine | Bihar, Western Bengal |
| 1791-92 | Doji Bara Famine or Skull Famine | Madras Presidency |
| 1837-38 | Agra Famine | Central Doab and trans-Jammu districts of the |
| | | Northern-West (later Agra Province), including |
| | | Delhi and Hissar |
| 1860-61 | Upper Doab Famine | Upper Doab of Agra, Delhi and Hissar divisions of |
| | | Punjab |
| 1865-67 | Orissa Famine | Orissa, Bihar, Bellary and Ganjam District of |
| | | Madras |
| 1868-70 | Rajputana Famine | Ajmer, Western Agra and Eastern Punjab |
| 1873-74 | Bihar Famine | Bihar |
| 1876-78 | Southern India Famine | Madras and Bombay |

8. ESTIMATES OF THE NUMBER OF VICTIMS OF DROUGHTS IN INDIA SINCE THE 19TH CENTURY ARE

Year of drought Drought-affected region Number of victims (in lakhs)

| Year | Region | No. of Victims (in lakhs) |
|-----------|---------------------------------------|---------------------------|
| 1838 | Uttar Pradesh | 8.0 |
| 1865 | Orissa and Bengal | 15.0 |
| 1869 | Delhi-Agra region and Rajputana | 15.0 |
| 1876-78 | India-Mysore, Madras, Bombay Province | 52.0 |
| 1896-97 | North and South India | 7.5 |
| 1899-1901 | North and South India | 10.0 |

It is estimated that a total of at least 2 crore 14 lakhs people may have died in India during the hundred years between 1800 and

1900 due to all major and minor droughts. The details are as follows:-

Number of victims over the years:

| Year | Number of victims |
|-----------|-------------------|
| 1800-1825 | 10 Lakhs |
| 1826-1850 | 4 Lakhs |
| 1851-1875 | 50 Lakhs |
| 1876-1900 | 1 Crore 50 Lakhs |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

During the 50 year period from 1850 to 1900, 2 crore people died due to famine. This drought is a cruel glimpse of the dark British colonialism that plunged India into the trenches of long-

term hunger, unemployment and poverty through immense looting and extreme exploitation.

9. IMAGES OF FAMINE DURING BRITISH RULE IN INDIA

Famine of 1776-78

Famine of 1899-1901

10. BRITISH FAMINE RELIEF PLANS DROUGHT COMMISSION

1. Smith Committee, 1860-61

In 1860-61 there was a famine in Delhi and Agra region. Seeing the severity of this drought, the British government established the Smith Committee for the first time under the leadership of British officer Smith. This committee worked to get information about the severity of drought in and around Delhi.

2. Campbell Commission, 1866

In 1865-66 there was a devastating drought in Orissa, Bengal, Bihar and Madras. 20 lakhs people died in this drought. 1 million people died in Orissa alone. The severity of this drought was highest in the Orissa region. Hence this drought is also called Orissa drought. Seeing the severity of this drought, the British government appointed a committee under the chairmanship of Sir George Campbell. This committee held the government system responsible for this drought. Sir John Lawrence was the Viceroy at this time.

3. Strachey Commission, 1880

The Great Famine of 1876-78 was the worst disaster experienced since the beginning of the 19th century. Madras, Bombay, Uttar Pradesh and Punjab were affected and about 5 million people died within a year. The government made half-hearted efforts to help the drought-stricken people.

In 1880, Viceroy Lytton appointed a commission headed by Richard Strachey to formulate general principles and suggest measures to permanently overcome the famine. This commission is called Strachey Commission or Strachey Commission.

The Strachey Commission made the following recommendations

- i) The Commission recommended adjustment of wages from time to time to provide adequate food to the worker.
- ii) It should be the duty of the State to provide free relief to the poor and list the persons who are eligible for it. In it, instructions were given regarding the suspension and exemption of land revenue and rent.
- iii) Employment opportunities should be made available before starvation. Employment remuneration should be determined from time to time.
- iv) The cost of drought relief was to be borne by the provincial governments. However, when necessary from the Centre

Help was given.

- v) Camps should be opened and export of food grains should be stopped during drought.
- vi) Land revenue and other taxes should be reduced.
- vii) Transmigration of animals to other places.

The Government generally accepted the Commission's recommendations and steps were taken to create a Famine

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Fund. In 1883, the Provisional Famine Code was framed. which formed the guide and basis for provincial drought codes.

4. Lyall Commission, 1896

The previous drought was followed by the drought of 1896-97. It affected almost every province to varying degrees, and the total drought was estimated to have affected a population of 34 million.

A commission headed by Sir James Lyall, the former Lieutenant Governor of Punjab, followed the views expressed by him in 1896. It suggested some changes to give more flexibility to the then accepted principles. The commission recommended development of irrigation facilities. Lord Elgin was the second Viceroy.

5. McDonnell Commission, 1900

After the famine of 1899-1900, Lord Curzon appointed a Famine Commission headed by MacDonnell. In a report in 1901, he summarized the principles of relief and suggested changes where necessary.

The McDonnell Commission made the following recommendations

- i) The Commission emphasized the policy benefits of ethical policy.
- ii) Immediate disbursement of advance funds for purchase of seeds and animals and digging of temporary wells.
- iii) Advocated the appointment of Drought Commissioners in provinces when relief operations were expected to be extensive.
- iv) Emphasis was placed on enlisting non-governmental assistance on a large scale.
- v) The Commission emphasized on taking vigorous measures for better transport facilities, opening of agricultural banks, improvement of irrigation facilities and rapid improvement of agricultural practices.

Most of the commission's recommendations were accepted, and before Curzon left India he had taken several measures to prevent and deal with famine.

For example, district authorities were given the power to cancel crops if the produce was destroyed by calamity. Curzon appointed Inspector General in 1901 for agricultural guidance. An Agricultural Research Center was set up at Pusa in Bengal. However, most of the measures were taken half-heartedly.

11. CONCLUSION

Since Indian agriculture is dependent on the monsoon, certain regions of India fall into drought prone areas. The vastness of India's terrain and the monsoon climate are factors that play a role in drought. This is a state of affairs that has been going on since ancient times. During the British era India also experienced many droughts in some regions. In the Bengal famine of 1769-70 during the East India Company period, approximately 1/3 of the population died due to famine. The company government has not implemented any remedial plan. A.D. In 1781-82 there was a famine in Madras and in 1784 in the whole of North India. The company government did relief work. But that was not enough. In 1833, 2 lakhs people out of 5 lakhs died in Guntur district. Also, in 1837, there was a severe drought in North India again, and the Company government did

not organize the relief work. Due to this, there was a terrible loss of life and financial loss.

In 1860-61 there was a famine abroad in Delhi and Agra. This was the first time that arrangements were made to accommodate the famine victims. The Smith Committee was formed under the leadership of Smith. This committee worked to get information about the severity of drought in and around Delhi.

Even though the drought in Orissa in 1866 was more serious, no preparations were made to face the drought. As a result, 13 lakhs people died. Seeing the severity of this drought, the British government appointed a committee under the chairmanship of Sir George Campbell. This committee held the government system responsible for this drought.

The Great Famine of 1876-78 was the worst disaster experienced since the beginning of the 19th century. Madras, Bombay, Uttar Pradesh and Punjab were affected and about 5 million people died within a year. In 1880, a commission was appointed under the chairmanship of Richard Strachey to suggest measures to overcome the drought permanently.

There was a drought in 1896-97. The drought affected almost every province to varying degrees. A commission headed by Sir James Lyall, former Lt. Governor of the Punjab, followed the views expressed by him in 1896.

After the famine of 1899-1900, Lord Curzon appointed a Famine Commission headed by MacDonnell. But efforts were made to avoid the suffering of the farmer. The most important of them is the relationship between agricultural crops and clan zamindars, even during droughts, agricultural crops were forcibly collected. Dadabhai Naoroji, Rameshchandu Dutt tried to solve this question regarding the British government's drought relief work. The Congress blamed the government for the drought. The British government did not adopt a nationwide policy. Therefore, it is clear that the Indian people suffered a huge loss of life and money.

CHALLENGES ENCOUNTERED BY THE POLICE OFFICERS IN CRIME PREVENTION IN TABUK CITY, KALINGA

Benjamin D. Gom-gom-o Jr.

Ph.D. Crim student, Graduate School of Criminal Justice and Public Safety, University of Baguio

Article DOI: https://doi.org/10.36713/epra16729

DOI No: 10.36713/epra16729

ABSTRACT

This study generally determined the challenges encountered by police officers in crime prevention in Tabuk City, Kalinga. The study specifically aimed to determine the specific challenges faced by police officers in effectively preventing crime regarding personal, family, and community relations and resources. Additionally, it sought to investigate the coping mechanisms of police officers to manage the challenges associated with their role in crime prevention. The study used a qualitative-narrative research design, and an interview guide was used to collect the data. The researcher used purposive sampling to select seven participants based on the specific characteristics or criteria relevant to the research questions. Through the use of inductive thematic analysis to analyze the qualitative data, the result revealed that police officers had encountered challenges during the implementation of crime prevention. It includes the impact of duty and personal relationships, threats and attacks, and cultural sensitivity and diversity regarding personal obstacles. Lack of time, high risk and stress, role modeling, and guidance regarding family challenges. Maximum tolerance, community engagement, concealment of criminals, and wrong perception regarding community challenges. Resource challenges require more funds and adequate equipment and vehicles. However, through proactive coping mechanisms, police officers attempted to overcome these obstacles. It concluded that the difficulties encountered by police officers in effectively preventing crime were complex and multifaceted, and they required a holistic approach that prioritized officers' well-being and could better fulfill their mission of promoting public safety.

KEYWORDS: Problem encountered, coping mechanism, personal and family challenges, community and resources challenges, police officers

INTRODUCTIONS

Around the world, police personnel face many obstacles when implementing crime prevention strategies. Inadequate resources, such as funding, staff, and equipment, frequently impair their capacity to deter crime. Although it is essential to foster collaboration and trust across communities, law enforcement personnel may find their work complicated by strained relations with the public and unfavorable opinions of police.

The work of police officers can have a significant effect on their personal lives, their families, and communities. Police officers often face a high level of stress and trauma due to the nature of their work, including exposure to danger and critical incidents. Their actions and behavior can influence the public trust and perception of law enforcement within the community, and police officers struggle to balance work commitments with family responsibilities.

According to the United Nations (2021), criminal justice systems worldwide face numerous obstacles. Integrated and coordinated measures are required to address them efficiently, and the United Nations plays an essential role in this. These challenges included an ongoing increase in violence and crime, the need to respond to emerging kinds of criminality, as well as improving responses to long-standing criminal behaviors such as corruption and the lack of enough human and financial resources. This caused many problems in the legal system, including law enforcement authorities in the countries of Cambodia and Egypt as well as Guatemala, a country Kiribati, Mozambique, the nation of Pakistan, the nation of Peru, the Solomon Islands, Tunisia, and Vietnam.

In connection, Singh (2022) stated that the grounds for police corruption are varied. There are significant constants and variables to consider. Due to the constant issues, discretion can be practiced with licit and illegal cores, management lacking visibility, discretion of managers keeping police culture intact even if corruption is susceptible, low wage and status concerns, and association with criminals that impede the fulfillment of police tasks. Even if law enforcement personnel are well-paid, they may perceive that they are not reimbursed to meet their obligations, which might encourage dishonest practices.

Additionally, police forces around the country have come under heavy public scrutiny. According to the Southern Columbia website (2022), the spotlight is on law enforcement personnel's behavior, and departments are responding to demands for urgent reform at numerous levels. In Columbia, police bring new and complex concerns to be solved daily, whether finding

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

ways to retain police or adopting crime prevention measures without jeopardizing the public's trust. Hence, criminal justice professionals face the challenge of doing crucial work for their communities while considering public perception.

Therefore, it was impossible to overestimate the role of the police in society. They are responsible for maintaining social order and implementing legislation. Like in Liberia, many administrations have attempted to restructure the police force to reflect current policing ideas. In most countries that implement community policing, the situation is no longer acceptable for police to treat other members of the community as if they were unwelcome. Also, Liberia needed to recognize the worldwide paradigm shift in the police. As well as the Liberian policing and security system also encountered numerous challenges due to these multicultural compositions. However, recognizing and raising awareness about community policing was crucial (Badu, 2022).

While the majority of the implementation difficulties encountered by Canadian police in crime prevention corresponded to managing information and completing forms, hiring, referrals, and continued participation of participants and their parents, developing modifications to address participants' needs, staff recruiting, turnover, and instruction, including funding and financial resources also obtaining suitable facilities/sites and availability and partnership building and service and lastly the administration and management (Public Safety Canada, n.d.). On the other country, Japan's successful low crime rate is due to its competent and effective policing system. The Japanese police have a high crime-solving success rate, and having them in the neighborhood contributes to public safety. However, they face rising organized crime, emerging cybercrime, adjusting to new technologies, and integrating individual rights protection with social order maintenance (Ilarde, 2023).

Tuttle et al. (2019) stated that United States Police officers endure particular obstacles in the line of duty that affect their physical and mental well-being. Also, police officers faced a variety of organizational, functional, community-related, and personal stressors, including shift work and emergency response to public expectations on police-community relationships and social media. Stress and trauma provide external hurdles to their wellness, putting police officers at risk for compassion fatigue, moral harm, and burnout. In addition, according to the research study of James et al. (2023) found out that 77.4% of police officers had low levels of sleep, 25.7% had excessive tiredness during the day, 50.2% had symptoms of post-traumatic stress disorder, 51.9% had depressed symptoms, and 40.8% had symptoms of anxiety.

Hence, according to the study of Annag et al. (2023) in Ghana, challenges such as inadequate logistics, insufficient personnel, language barriers, and political interference hampered the Ghana Police Service's ability to carry out its mandate effectively. These issues significantly impacted the morale of Police Service officers, reducing their motivation to carry out their

responsibilities successfully. The studies also revealed that service inefficiencies hampered day-to-day operations and harmed service members' and women's confidence in going above and above when called upon.

In the other part of the word, the Law Enforcement Federation of England and Wales has expressed grave concerns about the well-being of individuals in the policing sector, highlighting the demanding and challenging nature of their job. According to Kilo (2024), research found that, despite their high degree of professional dedication, police personnel face substantial problems such as workplace aggression, verbal threats, and being subjected to traumatic situations. Furthermore, research findings revealed a disturbing trend of unhappiness with salary, rising financial concerns, and low confidence among police personnel, with the highest intent to quit ever recorded.

In the Philippines, police officers face many challenges in preventing crime. The need for more resources in terms of workforce and equipment is one of the main challenges. With limited staffing and outdated technology, law enforcement must adequately cover areas and respond promptly to incidents. Besides, Lobete (n.d.) stated that Philippine society faces numerous political, economic, and social challenges. Despite challenges such as terrorism, poverty, and bureaucracies, the Philippine National Police (PNP) remains a trusted resource for protecting residents.

The study by Cynic et al. (2024) revealed that the Pasay City Police Station's problems are based on personnel needs, facilities, supplies, and equipment; the respondent's suggestions to help solve the problems are specifically geared toward solving the problems encountered. However, Pasay City Police Officers/Personnel also revealed that they would be more efficient in solving crime problems if additional intelligence officers were dispatched to areas where criminal activity is prevalent.

Similarly, Mendoza et al. (2021) also found from their study that the Police officers in the National Capital Region (NCR) behind their performance of their duty have numerous issues, including administration, corruption, and national security concerns. As a result, establishing an effective succession of leaders capable of meeting these problems and improving enforcement efficacy and broader security sector changes is essential. Also, on January 4, 2023, Department of the Interior and Local Government Benjamin Abalos requested that the Philippine National Police (PNP) generals and colonels submit 'courtesy' resignations. The action is designed to clean up the ranks of the PNP, particularly those implicated in illegal narcotics. The request for courteous resignations was part of a credible campaign against government corruption (Tugade & Fernandez, 2023).

Moreover, the study by Falloran et al. (2022) in the local Police Station of Misamis Occidental revealed that perceptions of barriers, work environment dissatisfaction, and frustration

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

discomfort were predictors of occupational stress. This suggests that these factors play a significant role in determining the overall level of occupational stress experienced by employees. However, these findings underscore the interconnectedness of various factors within the work environment and their influence on police well-being.

In Tabuk City, Kalinga, police officers have experienced crime prevention challenges that have impacted them personally, socially, and within their communities and families. In diverse communities, language barriers and cultural differences may impede effective communication and engagement between police officers and residents, making it challenging to build rapport and address community-specific crime issues. Limited resources and competing priorities may lead to disparities in policing services across different neighborhoods, exacerbating feelings of inequality and distrust among marginalized communities (Philstar Global, 2023).

Hence, during the third quarter's meeting of the Provincial Peace and Order Council (PPOC), the Kalinga Police Provincial Office reiterated its dedication to crime prevention efforts in the province and continued to push initiatives aimed at developing a safe and secure environment for the public, with support from local government units, communities, and stakeholders. However, it challenged them to the need for more trust between law enforcement and the communities they serve, hindering cooperation and collaboration in crime prevention efforts (Serion, 2023).

Today, police organizations greatly need to recognize the issues they encounter while fulfilling their duties and obligations. This recognition is vital for understanding the hurdles they face in serving the community effectively. To tackle this challenge, various methods can aid police officers in enhancing their performance. As a result, the researcher decided to determine the challenges encountered and coping mechanisms by the police officers in Tabuk City in implementing crime prevention. As a goal to investigate the challenges faced by police officers in crime prevention, the researcher can provide policy recommendations to better support police officers and their resources, improve personal, family, and community relations, and enhance overall effectiveness in crime prevention efforts.

Theoretical Framework

The Social Support, Stress and Coping, and General Strain theories guided this study.

Social Support Theory by Cullen (1999) emphasizes how social relationships and networks can help individuals buffer the adverse effects of stress and enhance their coping resources. Social support in police work can be obtained from various sources, such as colleagues, supervisors, friends, and family members. Positive social support networks could provide police officers with emotional support, practical assistance, advice, and validation, which could help them cope with job-related stressors more effectively (Edward et al. (2021).

In addition, Lazarus' Stress and Coping Theory (1984) examines how individuals perceive and respond to stressful situations. Police officers often encounter high levels of stress due to the nature of their work, which can affect their psychological well-being and job performance. Understanding how officers cope with stress and the effectiveness of different coping strategies can provide insights into their ability to fulfill their duties effectively (Janse, 2022).

In connection, the General Strain Theory by Agnew (1992) posits that individuals experience strain or stress when they perceive a discrepancy between their expectations or aspirations and their actual life circumstances. This strain can arise from various sources, including adverse events, such as financial hardship, interpersonal conflict, or failure to achieve goals. In the context of police work, officers may encounter strain from factors such as exposure to violence, traumatic incidents, organizational stressors, and the demanding nature of their job. These strains can contribute to negative emotions, such as anger, frustration, or depression, which may, in turn, lead to maladaptive coping strategies or deviant behavior (Edward, et. al. (2021).

Significance of the Study

The research study will provide supporting documentation that may be used in future studies. This may also serve as the foundation for developing a plan, program, and model to improve police performance. The results of the research would be helpful to the following:

Tabuk City Police Station. The police station can implement targeted training programs, provide necessary resources, and develop supportive policies to address the identified issues to enhance the overall performance and morale of the police officers within the police station.

Police personnel. For police officers, recognizing and addressing crime prevention challenges can improve job satisfaction, mental health, and job performance.

Families of police officers. Understanding the challenges encountered can help families provide better support to the police officers and encourage the development of coping mechanisms that promote family resilience.

Community. This study can contribute to police-community relations, developing trust, and enhancing community safety.

Future Researcher. This study can be used by researchers as an additional foundation for their related research, for discussion, dissemination of information, and raising awareness.

Objectives of the study

This aimed to investigate the challenges encountered by police officers in crime prevention within Tabuk City, Kalinga. The study specifically aims:

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- To determine the specific challenges faced by police officers in effectively preventing crime in terms of personal, family, and community relations and resources.
- To investigate the coping mechanisms of police officers to manage the challenges encountered associated with their role in crime prevention

METHODOLOGY

The following presented the study design, population, data gathering tool/s, data gathering procedure, treatment of the data, and ethical considerations that will be used in this study.

Study Design

The study used the qualitative-narrative design to match the proper outcome. Using this design offered data collection and analysis flexibility, allowing the researcher to adapt their approach based on emerging themes and insights. Using this design, the researcher gathered narrative data through informal interviews that were analyzed using thematic analysis, focusing on examining themes within the data collected.

Sample of the study

The researcher used purposive sampling to select seven participants based on the specific characteristics or criteria relevant to the research questions. The selected participants had been police officers who had stayed at least five (5) years in Tabuk City and had extensive experience, expertise, or direct involvement in implementing crime prevention. These participants were chosen because they possess valuable insights and perspectives relevant to the research topics for addressing the research question effectively. Those police officers who were not qualified with the specific criteria were excluded to ensure the validity and reliability of the findings. Based on the objectives of this study only focused on particular locations. Including additional local areas may have diluted the research focus or made it overly complex, and it may question the credibility and trustworthiness of the study. By acknowledging limitations, researchers can prevent misinterpretations of overgeneralizations of the findings. This helped ensure that readers understood the scope and boundaries of the study.

Data Gathering tool

This study used an interview guide as a tool. The adviser and tool validator checked the unstructured interview guide questions first to ensure validity and reliability. The survey interview guide consisted of two parts: the first was to determine the specific challenges faced by police officers in effectively preventing crime in terms of personal, family, and community relations and resources, and the second part was to investigate the coping mechanisms of police officers to manage the challenges encountered associated with their role in crime prevention. A secure and safe place in the facility for conducting interviews or designated meeting spaces that offer a degree of privacy and security. However, the researcher always prioritized safety protocols and ensured that the interview environment was safe for

all involved parties. The researcher used a recording tool with the consent of the participants and handled and stored the recorded data securely and confidentially to protect participant privacy.

Data Gathering Procedure

Upon the approval of the Dean, Adviser, and Tool Validators, the researcher proceeded to the data gathering.

First, before conducting the interview, the researcher was given a communication letter for approval, signed by the researcher's adviser, to the Chief of Police in Tabuk City to obtain the necessary data of the respondents in this study. Then, after the approval of all the communication letters, the researcher was referred and endorsed to inform and locate the study participants. The researcher discussed the informed consent and the nature of the study. Such as the objectives of the study, the willingness to participate in the study, and all data gathered were kept confidential. No force was used, and participants answered the questions voluntarily.

After the participants had consented, the researcher proceeded to interview them until data saturation was reached. Then, the data collected were transcribed to create a narrative format. Then, from the transcribed data, the common responses were categorized, and the theme was identified.

Treatment of the Data

The study used inductive thematic analysis to analyze qualitative data in the first and second parts of the interview guide to identify patterns or themes systematically. Initially, researchers familiarized themselves with the data and then generated initial codes by labeling sections of the data. These codes were grouped and refined into potential themes, which were reviewed, defined, and named. The final step involves writing up the analysis and creating a narrative for each theme supported by the data.

Ethical Considerations

In this study, participants were treated according to the ethical standard of treatment. The researcher strictly followed the ethical standards imposed before, during, and after the study's conduct.

Participants in this study were voluntary. To maintain confidentiality, the participants' real names and ranks were not revealed and treated with the utmost care. Thus, the researcher used a codename to present each participant's narration or responses. There was no harm done in getting information from the participants. The information received from participants was preserved and utilized solely for this research study. The researcher protected the participants' privacy, confidentiality, and anonymity. To ensure the trustworthiness of this study, the researcher sets aside personal feelings and opinions to achieve a better result. The researcher ensured that the Tabuk City police station received a copy of this research study and a signed copy upon receiving it with photos as a piece of evidence. This research was given to them so that the administration would be aware of whether or not there were still improvement needs. The paper's integrity was protected by citing references used in the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

study. Data collected were stored in a password-protected device, and hard copies of the questionnaires were kept until the study was completed.

RESULT AND DISCUSSION

The following presents the result and discussion of the findings of the gathered data.

1. Challenges encountered by police officers in crime prevention within Tabuk City, Kalinga in terms of personal, family, and community relations and resources.

In terms of Personal obstacles or challenges encountered **Impact of duty and personal relationship.** The police officers illustrate the complex interplay between the effects of duty and personal relationships in crime prevention efforts, as quoted from the sample statement of P1: "Thinking of what would be the impact of my action, but I must have to do so, to implement what is due" and P2 stated that "The personal obstacle I faced when trying to prevent crime in Tabuk City is when I'm alone, and I'm not physically prepared to respond". Also, P6 added, "During the implementation of traffic rules, I cannot deny that some are friends, acquaintances and relatives who violate but the understanding of situations sometimes prevails but if no valid reason rules must also prevail and should face a penalty." This emphasizes the sense of duty and accountability that comes with their involvement in attempts to prevent a crime. However, police officers' professionalism and honesty in their responsibilities to prevent crime can be improved by recognizing and addressing the influence of their relationships and responsibilities. The impact of police officers' duty and personal relationships on implementing crime prevention was crucial to effective law enforcement, as effective police officers are diligent and efficient in their duties and responsibilities (Ejoc & Alferez, 2018).

Threat and personal attack. The challenges of threats and personal attacks draw attention to the severe personal difficulties that police officers deal with when attempting to prevent crime. As quoted from the statement of P3, "Threat, harassment and fear," and added from P5, "Personal attack and hatred." These highlighted the severe challenges that police officers have in their attempts to prevent crimes because of the threats and personal attacks that were leveled at them. This also emphasized that police officers suffered the added burden of being the subject of personal harassment or violence in addition to the risks that come with their duties. Gomes et al. (2022) emphasized that persistent threats increased officer stress and burnout, potentially leading to retention issues and staffing shortages within police departments. Cultural sensitivity and diversity. The police officers highlighted their challenges in crime prevention through cultural sensitivity and diversity. As quoted from the statements of P4, "Our province is composed of many tribes, and sometimes this tribal connection is used negatively. Tribes must be considered due to differences in customs and traditions, but most of all, considered to help the peace and order of the province" and also from P7 "Intervention of the Bodong System (Peace Pact System)." This implies that tensions or disputes within the group may arise from cultural differences, such as the disparities in customs and traditions among various tribes. The Bodong system's involvement shows how dependent the community is on customary means of settling conflicts and upholding social orders. Fair (2023) highlighted that when police officers do not understand diverse cultural backgrounds within communities, they might inadvertently perpetuate biases or engage in discriminatory practices, leading to mistrust among marginalized groups.

In terms of family obstacles or challenges encountered

Lack of time. One major issue that impacted family relationships among police officers was the lack of time because of the demands of their jobs. As provided from the statements of P2, "As a police officer, it saves me the chance to sustain the needs of my family, but it also limits the time to be with them during special occasions and holidays," added P4 "My family is proud to have a police officer in our family group, but there is a consequence of sacrifices on other matters like family gatherings if in case the Philippine National Police is on full alert" and P7 "Time Mismanagement." This implies that family members of the police officers might find it difficult to connect or partake in meaningful activities together due to this lack of time, which can result in police officers being absent from significant family gatherings or celebrations. Dingman (2022) found that the nature of police officers often involved irregular and long hours, rotating shifts, and unpredictable work schedules, which could significantly disrupt families' routines and limit quality time spent with their loved ones.

High risk and stress. This highlighted the experience of the police officers' families in the impact of the risks and stressors of their loved one's occupation in law enforcement. As quoted from the statement of P3, "High risk because of the stressors of the job, as well as the stress created by shift work." This suggests that because the family members are at risk of coming into danger daily, the family members frequently feel increased anxiety, fear, and mental discomfort. Furthermore, the strain brought on by the unpredictability of shift work may also affect the welfare of the police officer's family. In addition, Eikenberry et al. (2023) emphasized that police officers might have struggled to switch off work-related stressors at home, leading to conflict or disconnection from family members.

Role modeling and guidance. This highlighted the significant responsibility that police officers carry out not only in their professional roles but also in their roles within their own families. As stated by sample P6, "I should be a good example and always remind my family members to be guided in rules and regulations that are being implemented." This suggested the dual nature of the police officers' role. In addition to upholding the law and keeping their communities safe, police officers must lead by a good example and be role models for their families. Valmari et al, (2023) emphasized that police officers often served as role models for their families, demonstrating responsibilities,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

integrity, and dedication to public service, regardless of the challenges in their work.

In terms of community obstacles or challenges encountered **Tolerance.** This emphasized Maximum encountered by the police officers in showing tolerance and calm in difficult situations. As quoted from the statements of the P4, "Trying to keep in touch with the community through dialogue and being a person with maximum tolerance if engaged in any police operation to a disrespectful person with any violent reactions," and added from the P6, "Some of the populaces are arrogant and not willing to abide but always practice maximum tolerance." This shows how important it is for police officers to communicate with the public in a patient, understanding, and respectful manner, especially in situations that could involve confrontation. Caliwan and Nepomuceno (2023) stated that a maximum tolerance approach of police officers could contribute to a sense of security and safety within the community, even becoming challenging to implement.

Community engagement. Police officer's challenge encountered when trying to build trust and cooperation with the community to prevent crime was community engagement. As quoted from the statements of P3, "Engage to school, pairing law enforcement together with school is another way to build trust." P5 added, "Become a good model, courteous, actively participating in various activities and communication in the community." This implies that police officers actively participate in community engagement to prevent crime and improve public safety by fostering positive relationships between police officers and the communities they serve.

Concealment of criminals. This highlighted the severe problems of criminals hiding out in the community, which makes it difficult for police officers to enforce the law. This issue implies that efforts to establish confidence and support crime prevention may be hampered by community member's unwillingness to cooperate or report criminal activities. As revealed by the quoted statement of P1, "Concealment of criminals is the main problem of law enforcement." Valenzuela and Tamayo (2021) emphasized that if police work was ineffective or lacked community support, criminals might find it easier to hide within neighborhoods. This could occur when residents were reluctant to cooperate with police officers due to distrust and fear of

Wrong perception. This emphasizes mistrust and unfavorable attitudes among community members toward the police officers. As quoted from the statement of P7, "Wrong perception of the community about the police". This perception may be from negative experiences in the community, abuse of authority by the police, discrimination, or media representations. As a result, creating partnerships with the community to prevent or deter crime becomes extremely difficult. Clark et al. (2019) found that negative perceptions of the police within communities could result in a loss of trust between them, which could hinder

cooperation with police investigations and discourage individuals from reporting crimes.

In terms of resources obstacles or challenges encountered

Limited funds. Police officers highlighted the limited funds needed to implement crime prevention, as quoted from the statement of P1: "Our city Local Government Unit is very cooperative and supportive, but they cannot provide everything, so normally they are still short of funds." P4 added, "Limited funds to support activities, but not to the extent of sacrificing the safety of the public." The statements suggested that although the Local Government Units cooperated and provided support, inadequate funds were available for successful crime prevention efforts. Rushin and Michalski (2020) emphasized that the limited funds might have led to staffing shortages within police departments, resulting in fewer officers to patrol neighborhoods, conduct investigations, and respond to emergencies.

Inadequate equipment and vehicles. Police emphasized the severe shortage of essential equipment and vehicles within their department, which significantly challenges them to carry out their duties effectively and ensure public safety. As quoted from the statements of P2, "Lack of mobility or mobile vehicles to be used in the main office," P3, "Lack of mobile vehicle and the other vehicles are under maintenance," P5, "Lack of CCTVs," and including from P7, "Lack of mobility and lack of radio communication equipment." This implies that police officers encountered difficulties in maintaining operational preparedness and safety and successfully preventing crime due to a lack of equipment and vehicles in the police department, including patrol cars, communication devices, and surveillance technology. Annang et al. (2023) highlighted that inadequate vehicles could have led to delays in deploying officers to highpriority incidents responding to emergency calls and could have restricted mobility, particularly in rural or remote areas with large geographic regions to cover.

2. Coping mechanisms of police officers to manage the challenges encountered associated with their role in crime prevention

Coping mechanisms in terms of personal

Professional commitment and responsibilities. Police officers showed the need to carry out their duties and commitment despite the personal obstacles they faced in implementing crime prevention, as quoted by the statements from P1: "By focusing on what is my part in implementing such activities, and doing my job religiously, fair, and with commitment," P5 "As being part of the PNP organization we are equipped to face all challenges we encounter and also we practice maximum tolerance," P6 "Always think that there are rules to be implemented and we are implementing those for prevention" and added by P7 "Avoid political intervention and iust follow orders." This highlighted that the police officers' continuous commitment to fulfilling their duties regardless of the personal challenges encountered to ensure successful efforts to prevent crime and maintaining professional integrity and adherence to

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

legal orders are essentials for their effectiveness. Dempsey et al. (2023) stated that police officers were bound by codes of ethics and professional standards that guided their conduct and decision-making. Upholding these principles, such as honesty, integrity, and impartiality, enabled police officers to navigate obstacles and maintain public trust in law enforcement.

Spiritual well-being, mental, and physical preparedness. Coping through spiritual well-being and mental and physical conditioning suggested a recognition of the pressure works of police officers in crime prevention, as quoted from the statement of P2, "I cope by mind and physically conditioned," and P3, "Through praying and having fun with my family." This implies the importance of addressing the holistic well-being of police officers to ensure their resilience and effectiveness in crime prevention efforts. Police officer's spiritual well-being provides inner strength, while mental preparedness fosters resilience and sound decision-making under pressure (Murali, 2019). Physical preparedness ensured that police officers were physically fit and capable of performing their duties safely and effectively (Holder, 2023).

Cultural understanding and adaptation. Recognizing, understanding, and respecting the cultural differences within the community of Kalinga emerged as a coping mechanism among police officers in implementing successful crime prevention, as quoted from the statement of P4: "Learn the culture of every tribe in Kalinga, adopt the good one, show respect and accept." This emphasized the significance of different cultural competencies in effective community policing and crime prevention. Hancock and Tarallo (2021) revealed that understanding cultural differences enabled police officers to build trust, communicate effectively, and respond appropriately to community needs.

Coping mechanisms in terms of family

Effective communication and time spent with family. Police officers highlighted the importance of effective communication and time spent with family as the vital coping mechanism for problems encountered in their duties, particularly concerning their families. As quoted from the statements of P1, "By explaining to them the nature of my job so they understand and admit it heartfully," then P2, "I always informed my family of the activities," P3 "Have time with the family," from P4 "Having happy hour with family on another day if not busy or alert. Find time to have them socially engage" and from P5 "Communication." This implies that police officers understand how important it is to keep communication and spend time with their families to manage the pressures of being a police officer. Soua et al. (2023) highlighted that maintaining open and honest communication within the family helped police officers navigate the challenges of their profession, including trauma, stress, and the demands of shift work.

Expressing care and financial support. Police officers expressed care and financial support as essential coping strategies

they faced in their families in their related duties. As quoted from the statements of P6, "Constant reminder to my family member that will be sure of showing care to them," and P7, "Time and financial management." This suggests that the police officers show how crucial it is to express family love and care. By actively reminding their families of their care, police officers aim to foster a sense of security and well-being. Furthermore, adequate financial support is vital for ensuring they meet the needs of their families while fulfilling their responsibilities or duties as police officers. Zemlok (2022) highlighted that demonstrating care and support helped alleviate the anxiety and stress that family members may have experienced due to the inherent risks associated with police work.

Coping mechanisms in terms of community

Positive community engagement. Positive community engagement is an essential aspect of effective law enforcement. This theme highlighted the proactive approach that police officers can take to cultivate a supportive and cohesive community environment. This theme, as evidenced by the responses from P1 and P5, suggested the significance of fostering solid ties with the community to promote safety, trust, and cooperation. P1 highlighted the importance of imparting the values of peace to community members and emphasizing its positive impact on the community. As quoted from the statement of P1, "By imparting to them the importance of peace and its effects on the community and development." This suggested that the police officers recognized the role of communication in cultivating a shared understanding of the benefits of peace and cooperation in the community. Similarly, P5 emphasized the need to actively strengthen relationships within the community to gain its trust and support. As quoted from the statement of P5, "Strengthen community relationships to win the heart of the community." It implies that winning the hearts of community members requires consistent effort and responsiveness to their needs and concerns. Modise (2023) stated that positive community engagement fostered mutual respect and understanding between residents and police officers, reducing tensions and helping police departments tailor their services to meet the specific needs and priorities of the communities they served.

Professionalism and Ethical Conduct. This theme emphasized the importance of upholding high standards of behavior and integrity in law enforcement practice. As evidenced by the responses provided, P2 stresses the importance of being "Always genuine in action." This implies that police officers should consistently act with honesty, sincerity, and transparency in their interactions with the community. P3 emphasized the fundamental responsibility of police officers to "Just do our work and duties as a police officer." This implies the importance of dedication and professionalism in fulfilling the obligations associated with the role of a police officer. P4 added, "Just continue patience since PNP work is not finished until you retire. Love your work, and avoid any unfavorable situations that may affect PNP as a whole". This highlighted the encouragement of the police officers to maintain patience and dedication throughout their

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

careers; this response also emphasized the long-term commitment required to serve and protect communities effectively. Similarly, P6 stresses the importance of "Observing maximum tolerance and understanding of the situation." This suggests that police officers should approach challenging situations with empathy and patience with the community. P7 focused on the imperative to "Avoid doing unnecessary negative activities." This implies the importance of ethical decision-making and integrity in law enforcement practice. This theme is highlighted as the foundation principles that guide effective police officer practices and are essential for maintaining public confidence and trust in the police. By embodying ethical and professional behavior, police officers not only upheld the rules of law but also promoted positive relationships with the community, enhanced accountability, and maintained the criminal justice system's integrity (Philippine National Police Code of Professional Conduct and Ethical Standards, 2022).

Coping Mechanisms in terms of resources

Resource Management. This emphasized the importance of effectively utilizing available resources to address challenges and limitations in crime prevention efforts. As quoted from the statement of P1, "Optimized the available resources." This response emphasized the need to make the best use of the resources already at hand, namely that by optimizing available resources, police officers can maximize their efficiency and effectiveness in addressing crime prevention, as quoted from the statement of P6, "Used resources in proper and right usages." It highlighted the importance of using resources responsibly and efficiently and ensuring they were utilized effectively to achieve desired outcomes. P4 added, "We have to cut off unnecessary expenses like conserved electric energy and follow the guidance of the higher headquarters regarding energy conservation." This response emphasized the importance of cost-saving measures and conservation efforts in resource management. This theme of proper resource management enables police officers to operate more effectively and efficiently, maximizing their impact on crime prevention without overstretching limited resources. Townsen and Loudoun (2023) emphasized allocating and utilizing personnel, equipment, funding, and technology-enabled police departments to respond to emergencies promptly and implement proactive crime prevention strategies.

Collaboration and Partnership for Resource Support. The theme highlighted the importance of working with external entities to access additional resources to strengthen their capabilities and effectiveness in addressing crime and maintaining public safety. As evidenced from the responses, P5 emphasized the importance of "Engagement to various establishments to set up CCTVs for security purposes." This partnership provides additional resources and fosters a sense of shared responsibility for community safety among stakeholders. Added by P7: "Seek the support of stakeholders like Local Government Units." This response emphasized the importance of seeking support from LGUs to bolster crime prevention efforts, and by collaborating with LGUs, police officers can tap into

additional resources. Zaghloul and Patridge (2022) emphasized that collaboration and partnership for resource support enabled police departments to enhance their capabilities, optimize resource allocation, and deliver more comprehensive and impactful services to the communities they served.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Based on the findings, the following conclusions were drawn.

The challenges faced by police officers in effectively preventing crime were complex and multifaceted, encompassing personal, familial, community relations, and resource-related obstacles. Police officers navigated the strains of high-stress environments, grappling with mental health issues and physical demands while balancing the needs of their families against the demands of their profession. However, through proactive coping mechanisms, police officers endeavored to overcome these obstacles. By prioritizing mental, physical, emotional, and spiritual well-being, officers enhanced their ability to effectively serve and protect their communities, contributing to safer and more cohesive societies.

Recommendations

Based on the findings of the study, the researcher recommends the following;

- Police Departments may prioritize mental health support for police officers, including access to counseling services, peer support programs, and stress management resources.
- 2. Police Departments may promote work-life balance through flexible scheduling options, adequate time off, and family-friendly policies.
- 3. Investing in cultural competency training for police officers and promoting transparency and accountability in policing practices can also help bridge the gap between law enforcement and the community.
- 4. Collaborating with other law enforcement agencies, community organizations, and government entities can also help leverage additional resources and support.
- 5. The original research, focused only on police officers. However, conducting a follow-up study among other researchers that examines or determines the experience or perception of the community on the effectiveness of police officers in implementing crime prevention can provide a more comprehensive understanding.

Appendix B Interview Guide

Challenges encountered by the Police officers of crime prevention in Tabuk City, Kalinga

This aims to determine the challenges encountered by police officers in crime prevention within Tabuk City, Kalinga.

- A. The following are the interview questions regarding the challenges encountered by the police officer, in terms of; Personal (yourself); Family Relationships; Community Relations; and Resources.
- 1. Can you tell me about some of the personal obstacles you faced when trying to prevent crime in Tabuk City?
- 2. What is the impact of your work as a police officer on your family life and relationships?
- 3. What are the challenges you encounter when trying to build trust and cooperation with the community to prevent crime?
- 4. In your efforts to prevent crime in Tabuk City, what are some of the challenges you face due to resources (like funds, equipment, or materials to be used)?
- B. The following are the interview questions regarding the coping mechanisms of police officers in Tabuk City, Kalinga utilize to manage the challenges encountered associated with their role in crime prevention.
- 1. How do you personally cope with the obstacles you face when trying to prevent crime in Tabuk City?
- 2. What coping strategies do you employ on these challenges you encountered as a police officer in your family life and relationships?
- 3. How do you manage these challenges you encounter within the community while still striving to maintain positive relationships as a law enforcement officer?
- 4. What coping strategies do you employ to overcome resource limitations and challenges in your crime prevention efforts?

Appendix C. Transcript

- 1 Can you tell me about some of the personal obstacles you faced when trying to prevent crime in Tabuk City?
- P1 "Thinking of what would be the impact of my action, but I must have to do so, to implement what is due".
- P2 "The personal obstacle I faced when trying to prevent crime in Tabuk City is when I'm alone and I'm not physically prepared to respond.
- P3 "Threat, harassment and fear".
- P4 "Our province is composed of many tribes, sometimes this tribal connection was used negatively. Tribes must be considered due to differences in customs and traditions, but most of all, considered to help the peace and order of the province".
- P5 "Personal attack and hatred".
- P6 "During the implementation of traffic rules, I cannot deny that some are friends, acquaintances and relatives who violate but the understanding of situations sometimes prevails but if no valid reason rules must also prevail and should face penalty".
- P7 "Intervention of the Bodong System (Peace Pact System)".
- 2 What is the impact of your work as a police officer on your family life and relationships?
- P1 "I was a police officer before we married my partner, hence she accepted all the challenges or consequences of being a law enforcer's wife".
- P2 "As a police officer it saves me the chance to sustain the needs of my family but it also limits the time to be with them during special occasions and holidays.
- P3 "High risk because of the stressors of the job, as well as the stress created by shift work".
- P4 "My family is proud to have a police officer in our family group, but there is a consequence of sacrifices on other matters like family gatherings if in case the Philippine National Police is on full alert".

A COMPREHENSIVE ANALYSIS OF PHARMACOGENOMICS AND PERSONALIZED MEDICINE

Shivani Fotedar

Assistant Professor, Dept. of Pharmaceutics, Chameli Devi Institute of Pharmacy, Indore (MP), India

ABSTRACT

Pharmacogenomics, the study of how genetic variations influence an individual's response to drugs, lies at the core of personalized medicine. By elucidating the genetic determinants of drug efficacy and toxicity, pharmacogenomics offers the potential to tailor drug therapy to each patient's unique genetic profile. This review provides a comprehensive overview of the current state of pharmacogenomics and its applications in personalized medicine. We explore the genetic basis of drug response, pharmacokinetic and pharmacodynamic factors, and the techniques for pharmacogenomic testing. Key applications across various therapeutic areas, including oncology, cardiovascular diseases, psychiatry, and neurology, are highlighted. We also discuss the barriers to implementation, such as clinical decision support tools, education, ethical and legal implications, and reimbursement challenges. Finally, we examine future directions, including the integration of pharmacogenomics with other omics data, artificial intelligence, regulatory developments, and direct-to-consumer genetic testing. Overcoming the challenges and realizing the promise of precision therapeutics will require a concerted effort from various stakeholders, continued research, and collaborative efforts to translate pharmacogenomic discoveries into clinical practice.

KEY WORDS: Pharmacogenomics, Drug response, Clinical implementation, Ethical, legal, and social implications (ELSI).

INTRODUCTION

The advent of genomic technologies has ushered in a new era of personalized medicine, where an individual's genetic makeup can be leveraged to optimize therapeutic interventions and improve clinical outcomes. Pharmacogenomics, the study of how genetic variations influence an individual's response to drugs, lies at the core of this paradigm shift. By elucidating the genetic determinants of drug efficacy and toxicity, pharmacogenomics offers the potential to tailor drug therapy to each patient's unique genetic profile, maximizing therapeutic benefit while minimizing adverse reactions. This review aims to provide a comprehensive overview of the current state of pharmacogenomics and its applications in personalized medicine. We will explore the genetic basis of drug response, techniques and challenges associated pharmacogenomic testing, and the implementation of pharmacogenomics across various therapeutic areas. Additionally, we will discuss the barriers and future directions in translating pharmacogenomic discoveries into clinical practice.

GENETIC BASIS OF DRUG RESPONSE

The interplay between genetics and drug response can be broadly categorized into pharmacokinetic and pharmacodynamic factors. Pharmacokinetics governs the absorption, distribution, metabolism, and elimination (ADME) of drugs, while pharmacodynamics determines the molecular mechanisms and targets through which drugs exert their therapeutic effects.

A. Pharmacokinetics

1. Role of genetic variations in drug-metabolizing enzymes

- O Cytochrome P450 (CYP) enzymes and their impact on drug metabolism
- Examples: CYP2D6 and codeine, CYP2C19 and clopidogrel
- 2. Influence on drug absorption, distribution, and elimination
 - o Transporters (e.g., P-glycoprotein) and their role in drug disposition

B. Pharmacodynamics

- Genetic variations in drug targets (receptors, enzymes, etc.)
 - Examples: HER2 and trastuzumab, VKORC1 and warfarin
- 2. Impact on drug efficacy and adverse effects
 - Mechanism of action and receptor binding affinities

PHARMACOGENOMIC TESTING

The implementation of pharmacogenomics in clinical practice hinges on reliable and accurate genetic testing methodologies. Various techniques, including genotyping, sequencing, and gene expression analysis, have been developed to identify clinically relevant genetic variants.

A. Techniques and platforms (genotyping, sequencing, etc.)

- Polymerase chain reaction (PCR)-based methods
- Microarrays and SNP chips
- Next-generation sequencing (NGS)

B. Interpretation and clinical validity

- Establishing genotype-phenotype associations
- Clinical validity and utility of pharmacogenomic markers

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

• Guidelines and resources (e.g., PharmGKB, CPIC)

C. Challenges and limitations

- Analytical validity and quality control
- Cost and reimbursement considerations
- Access to testing and implementation barriers

APPLICATIONS OF PHARMACOGENOMICS

Pharmacogenomics has found widespread applications across various therapeutic areas, enabling more personalized and precise treatment strategies. This section will highlight some of the most notable examples and success stories.

A. Oncology

- 1. Targeted therapies based on genetic markers
 - o HER2 testing for trastuzumab in breast cancer
 - EGFR mutations and tyrosine kinase inhibitors in lung cancer
- 2. Dose optimization and toxicity prevention
 - o TPMT and thiopurine dosing in acute lymphoblastic leukaemia
 - UGT1A1 and irinotecan toxicity

B. Cardiovascular diseases

- 1. Anticoagulant and antiplatelet therapy
 - o CYP2C9 and VKORC1 for warfarin dosing
 - o CYP2C19 and clopidogrel response
- 2. Lipid-lowering therapies
 - o SLCO1B1 and statin-induced myopathy

C. Psychiatry and neurology

- 1. Antidepressants and antipsychotics
 - o CYP2D6 and codeine, selective serotonin reuptake inhibitors (SSRIs)
 - o HLA-B*15:02 and carbamazepine-induced Stevens-Johnson syndrome
- 2. Anticonvulsants and pain management
 - HLA-B*15:02 and carbamazepine-induced Stevens-Johnson syndrome
 - o CYP2D6 and codeine analgesia

D. Other therapeutic areas

- HIV (CCR5, HLA-B*57:01, and abacavir hypersensitivity)
- Transplantation (TPMT and azathioprine, NUDT15 and thiopurines)

IMPLEMENTATION AND BARRIERS

Despite the promise of pharmacogenomics, its widespread adoption in clinical practice has encountered several barriers and challenges.

A. Clinical decision support tools and guidelines

- Integrating pharmacogenomic information into electronic health records
- Development of clinical practice guidelines (e.g., CPIC)

B. Education and training of healthcare professionals

- Increasing awareness and understanding among physicians, pharmacists, and nurses
- Incorporating pharmacogenomics into healthcare curricula

C. Ethical, legal and social implications (ELSI)

• Privacy and confidentiality of genetic information

- Potential for genetic discrimination
- Informed consent and patient autonomy

D. Reimbursement and cost-effectiveness considerations

- Coverage and reimbursement policies for pharmacogenomic testing
- Pharmacoeconomic evaluations and value assessments

FUTURE DIRECTIONS AND EMERGING TRENDS

As the field of pharmacogenomics continues to evolve, new frontiers and opportunities are emerging to further advance personalized medicine.

A. Integration of pharmacogenomics with other omics data

- Combining genomic, transcriptomic, proteomic, and metabolomic data
- Comprehensive multi-omics profiling for precision medicine

B. Artificial intelligence and machine learning in personalized medicine

- Predictive modelling and decision support systems
- Identification of novel biomarkers and drug targets

C. Regulatory and policy developments

- Evolving regulatory frameworks for pharmacogenomic testing and companion diagnostics
- Harmonization of guidelines and standards across different regions

D. Direct-to-consumer genetic testing and its implications

- Opportunities and challenges of consumer-initiated genetic testing
- Regulatory oversight and quality control

CONCLUSION

Pharmacogenomics represents a paradigm shift in drug therapy, offering the potential to optimize treatment efficacy, minimize adverse effects, and ultimately improve patient outcomes. While significant progress has been made in elucidating the genetic determinants of drug response and implementing pharmacogenomic testing in various therapeutic areas, several challenges remain.

Overcoming these barriers will require a concerted effort from various stakeholders, including healthcare professionals, regulatory agencies, payers, and the pharmaceutical industry. Continued research, education, and collaborative efforts will be crucial in translating pharmacogenomic discoveries into clinical practice and realizing the full potential of personalized medicine.

As our understanding of genomics and its interplay with drug response deepens, and as emerging technologies and data integration strategies evolve, the future of pharmacogenomics holds immense promise for transforming healthcare delivery and optimizing therapeutic outcomes for individual patients.

A CODE FOR ALL? ASSESSING THE NEW LABOUR CODES' IMPACT ON INDIA'S UNREGULATED WORKFORCE

Ms. Ishani Vaidya

Research scholar, Department of Law (HPU)& Assistant Professor, Asian Law College, Noida

ABSTRACT

Labour law in India comprised of many legislations, most of whose underlying purposes were increasing social welfare and security. 2020 was expected to be a revolution in Indian labour regulations as the previous laws were consolidated into four new Labour Codes. The influence of the Codes on India's unorganised economy and information technology ("IT") industry, where the pink-slip movement is rife, is the exclusive subject of this article. It also investigates how the inapplicability of the Codes to the unorganized sector adversely impacts its stakeholder. This research is extremely necessary, particularly in view of current socioeconomic developments affecting Indian labourers, particularly in emerging industries like information technology, where the pink-slip phenomenon was observed to be pervasive during the COVID-19 outbreak. The analysis on the unorganized sector is particularly crucial as it reveals the lacunae in the existing legislation and also stresses on the insufficient reforms ushered in by the Labour Codes. The data is gathered and analysed for the article using the doctrinal approach of legal research. It also gives a summary of India's labour law system, which culminated in the four labour codes. In the end, it proves that the codes are inadequate in their current form and makes recommendations for future revisions.

KEYWORDS: Labour law, New codes, Unorganised sector, Wages

INTRODUCTION

The goal of labour law is to effectively address the conflict between workers' rights and the socioeconomic conditions that now violate those rights. Given that there are roughly 16 laws that regulate labourers in the nation, India's labour law system is quite extensive in this regard. Although it has been almost 76 years since India gained independence, the majority of these laws were mostly implemented during the British colonial era in the country.

According to the Indian Constitution, the State has a responsibility to protect the welfare of labourers and workers. Articles 39, 41, 42, 43, 43A, and 54 of Part IV of the Indian Constitution of 1950, which addresses the Directive Principles of State Policy (or "DPSP"), establish the State's obligation to create these laws. The Constitution allows both the federal government and state governments to enact laws on labour because it lists labour as a concurrent list subject (Entries 22–24). Furthermore, a significant number of these regulations were formulated using international norms of the International Labour Organisation ("ILO").

Though the ILO has had a favourable impact on India's labour policy and has been recognised since 1956, the country has only ratified four of the eight fundamental treaties of the ILO.

(V. K. R. Menon, 1956, pp. 551–571). There are a lot of ramifications from this, but the most significant one is the legislature's apparent lack of interest in understanding the dynamics of workers' rights and creating new laws or updating old ones to better reflect the modern social scenarios.

Despite the fact that Indian labour legislation is extensive, some of its inadequacies in terms of its applicability to various sectors compromise the goals of these laws. Notably, especially in recent times, the Indian regime has also failed to address the problems that workers in the Information Technology ("IT") sector face—problems that clearly violate labour law legislation. Even after India's labour laws were recently "reformed" by consolidating them into four "Labour Codes"—the 2020 Code on Social Security, 2020 Code on Industrial Relations, 2019 Code on Wages, and 2020 Code on Occupational Safety, Health, and Working Conditions—these problems still exist. Interestingly, these labour codes have not yet been formally announced, indicating that they are not yet legally binding. This is important because a pre-notification examination of the different sections of the four Codes would increase the likelihood of identifying any gaps and provide suggestions for how to fix them.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Labour law in India—Differentiating Employees and Workers

Under the Indian labour law regime, the phrases "employee," "workmen," and "worker" are crucial terms that determine whether or not the rules apply. Differentiating between "workman" and "employee" is essential to understanding India's labour law system, particularly when viewed via the Industrial Disputes Act 1947.

Pre-Labour Codes

Prior to the introduction of the Codes, the Courts were mostly responsible for determining what constituted a workman and an employee under the Indian labour law system because the Legislature had not expressly provided for such a distinction in the ID Act. The Employee State Insurance Act of 1948 did, however, define "employee" in a different way. However, even this definition is limited to the Act's purview and cannot be utilised in conjunction with other labor-law laws.

The Act's definition of "workman" excludes some categories of workers, such as those in management or supervisory positions and those making less than Rs. 10,000 per month. Interpreting this definition, Indian courts have over the years determined important considerations to be considered in deciding whether an employee is considered a workman for the purposes of the ID Act. Ciba Geigy of India Pvt. Ltd. v. Arkal Govind Raj Rao(1985 AIR 985.) is a significant ruling in this context. wherein the Supreme Court ruled that any extra obligations should not be considered in favour of the employee's core and primary duties. The observation aligns with Section 1(s) clause (iii), which states that personnel serving in administrative capacities are not considered workers under the Act.

Notably, the courts have also examined whether or not various employee categories fall under the definition of "workman." These categories include supervisory employees, as determined in G.M. Pillai v. A.P. Lakhmikar Judge(1998 LLR 310.), part-time employees, as acknowledged in Bombay Dyeing and Manufacturing Co. Ltd. v. R.A. Bidoo (1989 (2) BomCR 367). technical employees, and so on.

Thus, under the previous system, the Courts, not the Legislature, were ultimately responsible for deciding which employee classifications would be classified as "workmen" for the purposes of the Act. This decision was important because it affected the existence and enforceability of many rights that an employee could have.

It is untrue, though, that the Legislature has done nothing to make the distinction between workers and employees crystal plain. The 2009 Amendment to the Workmen's Compensation Act of 1923, which changed the Act's name to the Employees' Compensation Act, is one example of how the legislature acknowledged this distinction. The Legislature demonstrated its readiness to explicitly distinguish between labour and employees by passing this amendment. Unfortunately, no further action was made to address this differentiation, which was restricted to the aforementioned Amendment Act. Consequently, uncertainties about the application of numerous other labour law laws in the nation still exist.

Post-Labour Codes

It appears that the Legislature has gained more attention than the Courts since the implementation of the Labour Codes. The reason for this is that, with the exception of the Social Security Code, which does not define "worker," all of the Codes have embraced the concepts of "employee" and "worker." According to the Code, an employee is someone who works for pay in a business, excluding apprentices, and is hired to perform a variety of tasks, including skilled, semi-skilled, and unskilled labour, regardless of whether the job has explicit or implicit employment terms. The SS Code distinguishes and defines many categories of workers (gig workers, unorganised workers, etc.) as opposed to providing a single definition for all workers.

It follows that the new labour codes maintain the basis for differentiating between an employee and a workman, with a greater focus on the type of compensation an employee receives as a consideration.

The Codes' concept of "wages" becomes pertinent in this situation. According to the definition, wages include any compensation, such as salary, benefits, etc., that is given to an individual upon meeting the requirements of their job, whether those requirements are stated explicitly or implicitly, and that is expressed in monetary terms or capable of being expressed as such. Basic salary, dearness allowance, and retention allowance are also included in wages; inter alia, bonuses, transport allowance, etc., are not.

While the concept above is not problematic in and of itself, there is misunderstanding regarding the applicability of wages due to its provisos. This is due to the fact that the provisions' clauses pertaining to the subsections' subsections as well as the provisos addressing wage computation, gender-neutral compensation, etc., solely address the salaries that an employer pays an employee. This means that either the distinction between a worker and an employee is no longer necessary, or it is accepted that workers are not entitled to "wages." This may also help to explain why some laws, like those on equal compensation, have not been implemented well enough to minimise the significant salary gap between men and women. (Agarwal, 2014, pp. 329–340).

Therefore, one of the following changes must be done in order to standardise the definition:

• Additionally, the word "wages" needs to be explicitly applied to employees; and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

To avoid confusion, the word "employee" must be replaced with "worker" in the provisos.

It is also advised to change the present criterion used to differentiate between the two categories to a sectoral one, i.e., the person's employment status in the organised or unorganised sector. The justifications for this claim have been expounded upon in the ensuing portions of this article, specifically in relation to the SS Code rules pertaining to the unorganised sector.

In this sense, distinct definitions of employees and workers might be incorporated using the laws of the United Kingdom as a point of reference. There are four different definitions of who is covered by the UK labour law regime: worker, employee, jobholder, and trainee. (Deakin & Morris, Citation 2019)

A different set of rights are covered under the laws' concept of a "employment relation." It is evident from this that several categories of workers and employees are clearly defined by UK law, and each type's rights have been protected and provided for by legislative enactments. As established in Lawrie-Blum v. Land Baden-Württemberg ([1986] ECR 2121)., workers are considered the more vulnerable class under this regime and thus require higher degrees of protection than do employees. As such, provisions pertaining to workers carry greater weight than provisions relating to employees or the other two aforementioned types. Interestingly, the distinction implemented under the UK regime also aligns with the concepts which are accepted by the ILO for comparing various nations' labour laws.

There is little question that changing the current definitions under the Indian labour laws to be more like those under the UK laws would be advantageous to all parties involved, given the similarities between Indian and UK law. By taking this action, the Legislature would also be able to differentiate between workers and employees explicitly, something that has been lacking since the 2009 Amendment Act.

Interplay between labour law, social security and the unorganized sector

The majority of the laws under it were focused on social security prior to India's employment regulations being combined under the employment Codes. These laws, which were replaced by Section 164 of the SS Code, were as follows:

The Act of 1923 concerning Employees' Compensation (formerly called the Workmen's Compensation Act of 1923); The 1948 Employees' State Insurance Act

Act of 1952 on Employee's Provident Funds and Miscellaneous Provisions;

The Act of 1959 Concerning Employment Exchanges (Compulsory Notification of Vacancies);

The Act of 1961 on Maternity Benefits;

The 1962 Gratuity Payment Act;

The 1981 Cine-Workers Welfare Fund Act

The Welfare Cess Act of 1996 for Building and Other Construction Workers; and

Act of 2008 Concerning Unorganised Workers' Social Security.

The social nature of these laws can be deduced from their titles alone. Put another way, the lengthy titles of these Acts when combined with their individual Preambles make it very evident that these laws are all similar in that their fundamental goals for enactment are social fairness and social welfare. Consequently, social security is a key component of their goals as well. Consequently, it is reasonable to anticipate that the SS Code, which is an amalgamation of all the previously described laws, will address every flaw in those laws in order to facilitate the achievement of their goals.

The main flaw—which the SS Code has sadly done little to address—is that because of the narrow definitions included in these social security laws, the unorganised sector was essentially exempt from application. For example, due to the peculiarities of work in the sector, it is rare for businesses in the unorganised sector to employ people who fit the requirements of the definition of a "employer."

These problems are also present in another piece of legislation, the Unorganised Worker's Social Security Act of 2008 (henceforth referred to as the "2008 Act"), which focuses especially on the unorganised sector. The Act solely defines the unorganised sector in arbitrary and limited terms; it makes no mention of the phrase "worker." All employees in the industry are included under the Act's simple definition of "unorganised worker."

Regretfully, the definitions and provisions included in this legislation have been merely copied into the SS Code without any meaningful changes. This means that the 2008 Act's shortcomings and the shortcomings of the other pertinent legislations have been combined into the SS Code. Therefore, it is required to go into further detail about the concerns in the Code in order to comprehend the issues with the applicability of social-security legislations (currently the aforesaid Code):

The definition of the unorganised sector is arbitrary and constrictive: Section 1(85) of the Code contains a copy of the definition of the unorganised sector taken from Section 1(1) of the 2008 Act. A "business owned by individuals and self-employed workers

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

engaged in production or sale of goods or providing service of any kind whatsoever, and where the enterprise employs workers, the number of such workers is less than ten," is what the definition of the unorganised sector refers to. As to Section 1(86) of the Code, wage workers, self-employed individuals, and home-based labourers are all considered "unorganised workers." Interestingly, unorganised workers are not mentioned in the definition of the unorganised sector. When the clause is read plainly, it means that the unorganised sector is made up of independent contractors or self-employed individuals who provide goods or services; wage workers are not included in this definition of unorganised workers, as stated in the subsection. (86)

➤ "Gig worker" is defined as "a person who performs work or participates in a work arrangement and earns from such activities outside of traditional employer-employee relationship" in Section 1(35) of the Code.

This provision appears to be the definition of a worker in the unorganised sector at a cursory reading. The SS Code effectively ended the definition of a gig worker's applicability to the unorganised sector by defining the terms "unorganised worker" and "unorganised sector" separately and inadequately. This means that gig workers can benefit from the SS Code's provisions, but unorganised sector workers cannot.

Non-implementation of Section 5: Section 5 of the Code establishes the State Unorganised Workers' Board and the National Social Security Board for Unorganised Workers. It is derived from Chapter-III (which includes Section 4) of the 2008 Act. This National Board has not been established in the fourteen years since the 2008 Act was passed. It is intended that the Board will be quickly created following the Codes' announcement.

The Uttar Pradesh Unorganised Workers Social Security Board (UPSSB), which serves just the Northern State of Uttar Pradesh, is actually one of the ten State Boards established under this Act that is currently in operation. By 2013, five years after the 2008 Act was passed, twenty-three other states still had not created the Board. Thus, the goals of the 2008 Act are undermined by not creating the National Board and by not guaranteeing the creation of State Boards by every State.

Central Government Programmes under Section 45: The SS Code's Section 45 gives the Central Government the authority to create programmes for platform, gig, and unorganised labourers. But as the phrase "may" qualifies the Central Government's authority to adopt such plans, the SS Code does not mandate their implementation; rather, it leaves it up to the Central Government's judgement.

The SS Code once again jeopardises its primary goals by leaving such a crucial responsibility to the discretion of the Central Government, since the absence of a mandate calls into question the assurance of the creation of such programmes. Therefore, in order to achieve the goals of the Code as well as the relevant sections of the Constitution, it is essential that this position be modified and that the Central Government be given a more robust mandate. Moreover, the execution and financing of the aforementioned programmes are provided under Chapter IX of the Code, specifically Section 109. The Central Government is required under subsection (4) to make provisions for things like the schemes' scope, authority, and other requirements that are needed to carry out their provisions. But when the creation of these programmes is left up to personal judgement, this requirement loses all meaning. As a result, even though this clause is in place, it cannot truly take effect unless and until the aforementioned adjustments are made.

Registration Process: With a few modifications, Section 10 of the 2008 Act served as the model for the registration process envisioned in Section 113 of the SS Code. Essentially, the clause says that unorganised workers must be registered in order to get benefits under the SS Code and the Central Government-created programmes for them. In accordance with subsection (1), the individual must also be older than 16 and have electronically or otherwise submitted a self-declaration. The last step requires the employees to apply for Central Government registration by providing, among other things, their Aadhaar card. This registration process just adds needless bureaucracy and complexity to a law whose successful implementation would be achieved if such difficulties were avoided in the first place, given the state and character of the unorganised sector. Furthermore, by making the provision contingent on meeting a bureaucratic requirement, it ignores the Code's primary goal, which is to provide social security. While it is acknowledged that registration is required to prevent abuse of the benefits of the programmes under the SS Code, there is room for improvement in the process and a great deal of attention needs to be paid to its execution, to avoid the situation that the National Social Security Board found itself in.

Thus, based on the aforementioned analysis of the pertinent provisions of the Social Security Code—which is essentially a replication of the 2008 Act—it can be concluded that there are a number of issues regarding the applicability of social-security legislations in India to the unorganised sector. Of particular concern is the fact that many of these issues stem from the shortcomings inherent in the SS Code, which calls for immediate correction. Other issues include the failure to implement Code provisions, which could actually benefit workers in the unorganised sector.

Labour Codes—Have They Achieved Their Objectives?

The provisions of the SS Code and the IRC are not better than the laws that already exist, according to a review of the provisions. In actuality, the labour codes have merely duplicated the provisions of the earlier laws under the guise of consolidation. This implies that, as previously said, not only have the effective elements from the earlier legislations been integrated into the Codes, but also the ineffective provisions that required change.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The main goal of the new labour codes, according to a booklet released by the Indian government's Ministry of Labour and Employment, is to free workers from the "web of legislations," which required them to submit numerous forms in order to receive even a single benefit (Kashyap, 2023).

It is accepted that the Codes' goals are admirable. In fact, the main goal of the Codes appears to have been achieved by combining 29 labour law statutes into four Codes. Nonetheless, it is abundantly evident from the lengthy titles of the Codes that they are intended for both law consolidation and revision. The Codes need to be changed because they have proven to be unsuccessful in the area of amendments. More specifically, the Code's definitions require revision, notably with regard to appropriately distinguishing between workers and employees as well as identifying and characterising various labour classes and subclasses.

The Labour Codes have not even achieved their primary goal of consolidation, as all they appear to have done is classify the laws into four groups and then compile them in that order. However, compilation is not the same as consolidation in this case.

Furthermore, it doesn't appear plausible that the Codes will be announced earlier based on prior official communications from the Government of India's Ministry of Labour and Employment (Press Information Bureau, Citation2022). This essentially implies that the Codes' provisions may yet be changed to achieve a radical change in the framework of Indian labour law (Desai Associates, Citation2022). Drawing from the analysis, it is evident that the necessary modifications pertain primarily to the applicability and extent of the Codes. Specifically, the Codes must encompass all industries, regardless of their sector, in order to achieve the primary goals behind their enactment.

Conclusion and Suggestions

As it stands, the Indian labour law system has numerous gaps. A 2021 study that examined 1500 minimum wages discovered that, despite the existence of laws (which were not without flaws), there was a clear discrepancy between the minimum wage regulations that were established de facto and de jure, which resulted from inadequate implementation (Mansoor & O'Neil, 2021). In this situation, the issue of non-execution takes a backseat to the serious worry of inadequate legislation. But it's also important to remember that, according to Deakin et al. (2014), India and the other BRICS nations benefited from more stringent labour rules that protected social rights without compromising employment.

Legislation simplification for the good of the interested parties is nearly always a necessary endeavour. This becomes even more important when labourers themselves, as well as other stakeholders like trade unions, voice concerns about the efficacy of the Codes (Siddaramu, 2021). (Mohan et al.,2021). The Labour Codes appear to be a good first step in this direction, but because of their very ineffective implementation, the whole intent behind them is undermined. It appears that the Codes have overlooked the various gaps in Indian labour law laws, making their continued existence meaningless.

> Here are some recommendations that are put forth:

- In order to clearly provide for the members in the relevant sector, define and distinguish between "employee" and "worker" based on the sector in which they work, rather than the type of job they conduct; this can also be done by drawing inspiration from the labour laws of the United Kingdom;
- > Change the meanings of terms like "unorganised sector," etc. to make them more precise and inclusive;
- > Even if it means straying from earlier laws, streamline the registration process and other Labour Code-mandated processes;
- Conduct additional research on the many gaps in all of India's labour law laws and the potential changes that can be made to them before they are incorporated into the Labour Codes; a Standing Committee akin to the one established in 2009 may be established for this purpose; and
- ➤ Present the labour laws to the public and provide them a chance to voice any thoughts, comments, or suggestions regarding the changes after the aforementioned study has been completed and the ensuing revisions have been formulated. This will eventually lead to a more democratic process underlying the Codes.

These recommendations apply to both the IRC and the SS Code generally, as well as to them in particular. It is highly believed that the modifications that would entail benefiting all classes of Indian workers and employees and resulting in a stronger labour law system if they are carried out correctly and effectively. Therefore, it is hoped that changes to this impact would be implemented prior to the Codes being announced.

THE ROLE OF COMPLEX SYNTACTIC UNITS IN LINGUISTICS

Amanov Abdijabbor Sattarovich

Ph.D., Associate Professor of Namanagan State University

ABSTRACT

This article explores the role of complex syntactic units in English and Uzbek, examining their contributions to syntax theory and implications for practical applications like language learning and AI. By analyzing syntactic structures within these languages, we highlight the diversity in syntactic complexity and the need for linguistic theories that accommodate such variations.

KEYWORDS: syntactic complexity, linguistics, language theory, natural language processing

INTRODUCTION

The study of complex syntactic units is fundamental in linguistics, offering insights into the cognitive processes involved in language comprehension and production. These units, which include clauses, phrases, and idiomatic expressions, serve as the building blocks of language, enabling nuanced communication and thought. The exploration of these elements in diverse linguistic contexts reveals their universal and language-specific characteristics.

Complex syntactic units are essential for parsing the grammatical structure of sentences, helping to convey meaning through the arrangement of words and phrases. Their complexity lies in their capacity to embed within each other, creating layers of meaning that can be both explicit and implicit. This structural depth not only enhances the expressivity of a language but also poses significant challenges in linguistic analysis and understanding.

The study of these units is not merely academic but has practical applications in various fields including computational linguistics, neurolinguistics, and language education. In computational linguistics, understanding complex syntactic structures aids in improving natural language processing systems. In neurolinguistics, researchers explore how the brain processes complex constructions, which contributes to better strategies for language rehabilitation after neurological events. In education, insights into syntactic complexity can inform more effective teaching methods that cater to the linguistic strengths and weaknesses of learners.

Moreover, the comparative analysis of syntactic units across languages such as English and Uzbek provides a rich field of study due to their differing syntactic strategies and structures. This not only aids in a deeper understanding of individual languages but also contributes to the broader field of typological comparison, enhancing our understanding of human linguistic capabilities and limitations.

Through this article, we aim to highlight the significance of complex syntactic units in linguistics, exploring both their theoretical implications and their practical applications, thereby underscoring their indispensable role in our understanding of language as a fundamental human faculty.

LITERATURE REVIEW

The field of linguistics has long been fascinated by the structure and complexity of syntactic units. Initial studies primarily focused on the simpler elements of syntax, largely influenced by the early works of Ferdinand de Saussure and Leonard Bloomfield, who laid the groundwork for structural linguistics. These foundational theories were pivotal in setting the stage for understanding language as a system of interrelated units.

The seminal work by Noam Chomsky in the 1950s revolutionized this landscape with the introduction of transformational grammar, which brought the complexity of syntactic structures into sharper focus. Chomsky's theory emphasized the role of deep structures and transformations in generating the observable surface structures of language, proposing that the mind has an innate capacity for language characterized by a universal grammar applicable to all languages.

Following Chomsky, there was a surge in the exploration of complex syntactic units. Scholars like Joseph Greenberg contributed with his universals of language, which provided empirical evidence supporting the existence of common syntactic patterns across languages, regardless of their superficial differences. This led to further studies on the typological classification of languages based on their syntactic features, such as those by Bernard Comrie and Talmy Givón, who focused on the implications of syntactic typology for cognitive processes.

In the late 20th and early 21st centuries, the Minimalist Program, also initiated by Chomsky, sought to refine the earlier models by reducing the syntactic structure to its most essential elements, arguing that linguistic processes obey an 'economy of derivation' and an 'economy of representation', which restrict the complexity of syntactic structures.

More recently, the rise of computational linguistics has introduced quantitative methods to syntactic analysis, allowing for more precise and extensive studies. Work by researchers like Joan Bresnan and Jane Grimshaw has integrated statistical

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

models to study syntactic variation and complexity, bridging the gap between theoretical linguistics and practical applications in natural language processing.

These evolving theories and methodologies underscore the dynamic nature of research on complex syntactic units, highlighting their central role in the broader understanding of human language.

ANALYSIS AND RESULTS

The analysis focused on comparing the complex syntactic units in English and Uzbek, two languages that represent different syntactic typologies—English as a largely analytic language with fixed word order and Uzbek as a highly agglutinative language with a flexible sentence structure. The primary aim was to explore how the complexity of syntactic structures manifests in these languages and to understand the implications of these manifestations for syntactic theory and linguistic processing.

Data Collection and Methodology: For this comparative analysis, large corpora containing journalistic and literary texts, as well as spoken dialogues, were compiled for both languages. The English corpus included 1 million words, and the Uzbek corpus was matched for genre and size. Using computational tools such as syntactic parsers and frequency analyzers, each corpus was processed to identify and categorize complex syntactic units, including subordinate clauses, passive constructions, and nominalizations.

English Findings: In English, complex syntactic units frequently involve the use of subordinate clauses, passive voice, and nominalizations. These structures often serve to condense information and maintain a formal tone, which is particularly prevalent in written language. For instance, the use of passive constructions was notably high in formal and academic texts, facilitating a depersonalized style of communication that focuses more on the action than on the actor.

Uzbek Findings: Uzbek, in contrast, showed a different kind of complexity. The language's agglutinative nature allows for extensive inflectional morphemes to be attached to base words, impacting the syntactic structure significantly. Complex syntactic units in Uzbek often involve chains of agglutinated forms that create lengthy and information-rich word forms. This linguistic feature supports a flexible word order, with a higher frequency of embedded clauses that are marked not by separate words but by affixes to a greater extent than in English.

Comparative Insights: The analysis revealed significant differences in how syntactic complexity is realized in the two languages. English tends to use more discrete words to form complex syntactic units, which can add clarity but also increases sentence length and potential ambiguity. In contrast, Uzbek's morphological complexity often results in shorter sentences that are densely packed with information due to the agglutinative nature of its grammar.

Implications for Syntactic Theory: These findings challenge certain assumptions of universality in syntactic theory, particularly those proposed by earlier generative grammars. While the deep structures posited by such theories may suggest a common underlying framework, the surface manifestations in languages like Uzbek show that morphological strategies can significantly alter syntactic constructions. This calls for a more nuanced approach to syntactic analysis that considers morphological and syntactic diversity.

CONCLUSION

The exploration of complex syntactic units in English and Uzbek highlights the intricate ways in which languages harness grammatical structures to organize and communicate information. This study has not only provided insights into the distinct syntactic strategies employed by each language but also illuminated broader implications for linguistic theory and practice.

Theoretical Implications: Our findings challenge traditional syntactic theories that often emphasize uniformity across languages. The significant differences between English and Uzbek—particularly in how complexity is managed within their respective syntactic and morphological frameworks—suggest that linguistic theories need to be more inclusive of typological diversity. This necessitates a shift towards more flexible models that can accommodate the unique characteristics of languages with different grammatical systems. Such models should not only account for the structural aspects of language but also consider the cognitive and communicative functions that these structures serve.

Practical Implications: From a practical standpoint, understanding the specifics of syntactic complexity in different languages has significant implications for various applied fields. In language education, for instance, these insights can lead to more effective teaching strategies that are tailored to the structural complexities of the target language. For learners of English or Uzbek, an awareness of syntactic nuances will aid in mastering effective communication and comprehension skills. Furthermore, in the realm of computational linguistics, enhancing natural language processing algorithms to better recognize and interpret complex syntactic constructions can improve machine translation, text analysis, and voice recognition software, especially for underrepresented languages like Uzbek.

ABSTRACT

Breast cancer and brain tumor stand as leading global causes of mortality. Brain tumor uses Magnetic Resonance Imaging (MRI) which offers superior clarity in visualizing brain structures compared to other imaging modalities, while Breast cancer uses ultrasonography (US) serves as a common tool for detecting breast cancer despite its inherent limitations in image quality. Motion artifacts frequently hinder MRI scans, necessitating skilled radiologists for accurate interpretation. Computer-aided diagnosis (CAD) systems driven by artificial intelligence, present a promising solution by consistently assisting radiologists in analyzing US images. Convolutional neural networks (CNNs) leverage various optimizers like Adam and Stochastic Gradient Descent (SGD), RMSprop, Adagrad, and Adadelta as well as activation functions including PReLu, LeakyReLu, Elu, and ReLu for their construction and training. The comparative analysis highlights the importance of optimizers and activation functions in deep learning algorithms for predicting brain tumors and breast cancer. The Adam optimizer combined with the ReLU activation function achieved an accuracy of 85% for breast cancer prediction, while RMSprop combined with ReLU activation function achieved a higher accuracy of 93% for brain tumor classification. From this research, considerable deep learning configurations are identified for both breast cancer and brain tumor prediction, facilitating more precise and efficient diagnoses. The comparative analysis provides valuable insights for those involved in medical imaging applications. Furthermore, The CNN model is deployed in web interface using flask framework to streamline the integration of these models into healthcare systems. This interface simplifies the input of medical data including image data and provides real-time predictions.

I. INTRODUCTION

Early detection and accurate diagnosis are critical for effective treatment and improved outcomes in breast cancer and brain tumors, two prevalent and potentially fatal conditions worldwide. Diagnosing cancer is often challenging due to the complex and varied characteristics of tumor appearance and growth [1]. Significant advancements in technology, particularly in the field of deep learning have revolutionized the development of predictive models in healthcare domain. By leveraging large datasets and complex neural network architectures, deep learning algorithms can effectively identify patterns and features in medical images, enhancing the precision and effectiveness of diagnoses for breast cancer and brain tumors. Over the last 26 years, there has been a notable increase in the age-standardized incidence rate of breast cancer among females, showing a rise of 39.1% (95% confidence interval, 5.1 to 85.5) [2].

Breast cancer and brain tumors are rare but lethal diseases affecting millions globally. While breast cancer targets breast tissue, brain tumors can develop within or around the brain. Despite their distinctions, both illnesses present significant challenges to patients, families, and healthcare providers. Each year, more than 250,000 individuals receive a diagnosis of brain tumors, with approximately 2% of cases identified as malignant [3]. This study aimed to assess the predictive potential of deep

learning systems for breast cancer and brain tumors. Specifically, comparative analysis of optimizers and activation functions using a convolutional neural network (CNN) model focusing on these crucial elements of deep learning models. Optimizers play a crucial role in training models by adjusting parameters such as weights and biases to enhance accuracy and convergence. These algorithms modify the model's parameters based on the evaluation provided by the loss function, aiming to minimize error. Popular optimizers include Adagrad, Stochastic Gradient Descent (SGD), Adam, RMSprop, and Adadelta.

TABLE I. DESCRIPTION OF OPTIMIZERS

| OPTIMIZERS | FUNCTIONALITY |
|----------------|---|
| Adam (Adaptive | An optimization method that merges |
| Moment | elements from both RMSprop and |
| Estimation) | momentum, thereby creating an |
| | adaptive learning rate technique. |
| RMSprop (Root | RMSprop addresses the diminishing |
| Mean Square | learning rate problem of AdaGrad by |
| Propagation) | introducing adaptive adjustments to the |
| | learning rate. |
| AdaGrad | AdaGrad adapts the learning rate |
| (Adaptive | individually for each parameter by |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Gradient | considering the historical gradients | | | |
|------------------|---|--|--|--|
| Algorithm) | collected for that parameter. | | | |
| Adadelta | Adadelta, an enhancement of | | | |
| | RMSprop, reduces the need for a | | | |
| | manually selected global learning rate. | | | |
| Stochastic | It calculates the gradient using only | | | |
| Gradient Descent | one randomly chosen sample from the | | | |
| (SGD) | training dataset. | | | |

Activation functions introduce non-linearity to neural networks, allowing them to capture complex patterns within the data. These functions are applied to the output of each neuron layer before passing it to the next layer. Commonly used activation functions include PReLU, LeakyReLU, Elu, ReLU, Softmax, and Tanh.

TABLE II. DESCRIPTION OF ACTIVATION FUNCTIONS

| ACTIVATION | FUNCTIONALITY |
|------------------|---|
| FUNCTIONS | |
| ReLU (Rectified | It replaces all negative values in the |
| Linear Unit) | input with zeros enhances sparsity and |
| | introduces non-linearity. |
| PRELU | In contrast to ReLU, PRELU allows |
| (Parametric | for a slight training-derived slope to be |
| Rectified Linear | present in the negative component of |
| Unit) | the input. |
| Leaky ReLU | A variation of the ReLU function |
| | designed to tackle the issue of dying |
| | ReLU by enabling a modest non-zero |
| | gradient for negative inputs. |
| ELU (Exponential | A smooth negative value curve which |
| Linear Unit) | minimizes problems arising from dead |
| | neurons. |

Softmax and Tanh are used for binary classification as this research deals with multi-class classification these activation functions are not used.

This research aims to enhance the performance of deep learning models for predicting brain tumors and breast cancer by systematically evaluating different optimizers and activation functions within convolutional neural networks (CNNs). The objective is to pinpoint the optimal combination of optimizer and activation function that yields the highest prediction accuracy and resilience through thorough analysis of diverse configurations. The primary objective of this research is to support the development of more reliable and efficient diagnostic tools for these critical diseases. It is essential to bear in mind that while the overall process of analyzing data on brain tumors and breast cancer remains consistent. Exploring potential web interface designs for the streamlined CNN models using the Flask framework. Enhancing medical practitioners' access and utilization of deep learning models through internet applications accelerates diagnosis and treatment decisionmaking processes.

II. LITERATURE REVIEW

A. Breast Cancer

Swati Nadkarni et.al [4] Utilizing a combination of deep learning alongside diffusion weighted imaging (DWI) and

dynamic contrast-enhanced MRI (DCE-MRI), this research aims to enhance the detection of breast cancer. It builds upon prior studies conducted by researchers which highlighted the complementary nature of DCE-MRI and DWI in lesion detection. Drawing from the methodologies for addressing class imbalances and improving dataset quality. The study addresses issues related to class imbalance and data augmentation. Employing convolutional neural network (CNN) architectures such as DenseNet-201, AlexNet, and Inception-V3, the research achieves a maximum accuracy of 90.8% with Inception-V3, showcasing the efficacy of deep learning in facilitating quicker detection of breast cancer lesions by radiologists. Amrisha R R et.al [5] study underscores the importance of timely diagnosis through precise analysis of medical imaging data, particularly in ultrasonography, mammography, and histopathology. Utilizing transfer learning and convolutional neural networks (CNNs), the study demonstrates how artificial intelligence (AI) in medical image analysis can enhance precision medicine and the diagnosis of breast cancer. This advancement aims to decrease the mortality rate associated with the disease by enabling early detection and tailored treatment strategies.

Mobarak Zourhri et.al [6] explores the application of deep learning techniques in the classification of breast cancer ultrasound images, specifically investigating the efficacy of transfer learning utilizing pre-trained models like VGG16, VGG19, MobileNetV2, and ResNet50V2. The evaluation was conducted using a dataset comprising 9016 ultrasound images. The findings suggest that transfer learning can enhance the accuracy of breast tumor identification from ultrasound images, offering potential advancements for computer-aided diagnosis systems. However, the study acknowledges its constraints and underscores the need for further research, particularly considering the dataset's size and the absence of patient-specific data. Nalinikanta Routray et.al [7] research delves into the application of deep learning methodologies, specifically RNN and GRU models, for detecting and treating breast cancer. It highlights the crucial role of preprocessing data to ensure accurate predictions, achieving an impressive accuracy rate of 97% with the GRU model. Deep learning outperformed standard classifiers in classification tasks, indicating its promising prospects for early cancer diagnosis. The study underscores the importance of timely breast cancer detection in enhancing patient prognosis.

The study of Md Harun or Rashid et.al [8] addresses the pressing need for timely detection of breast cancer, a condition that affects numerous women annually. It presents a novel CNN model and a Computer-Aided Diagnosis (CAD) system employing pre-trained Deep Learning algorithms (CNN, LSTM, and MLP). Emphasizing the critical role of early detection in mitigating the advancement of breast cancer, the research also proposes potential future applications, including an automated tool to assist physicians in early identification. Harsh Manishkumar et.al [9] proposes the utilization of an Adaptive Deep Convolutional Neural Network (ADCNN) for early breast cancer detection through mammography data analysis. The objective is to enhance computational effectiveness in diagnosing breast cancer by employing a flexible CNN framework, highlighting the importance of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

refined training methods to achieve the best results. Mokhairi Makhtar et.al [10] proposes an enhanced approach for predicting breast cancer by employing a multi-classifier based deep learning method. This method integrates classifiers such as SMO, J48, RFs, NB, and IBk, aiming to enhance prediction accuracy. It underscores the critical importance of early detection and efficient treatment in reducing breast cancer mortality rates. Moreover, the study delves into the utilization of deep learning in medical image processing, emphasizing its growing significance in the healthcare sector. Through the suggested Deep Multi-classifier Learning (DMCL) technique, which integrates feature selection and classification within a deep neural network architecture, a comprehensive approach is presented to enhance breast cancer detection. Rosepreet Kaur Bhogal et.al [11] The study underscores the crucial necessity for rapid technological advancements in combating this prevalent and life-threatening illness by offering a comprehensive examination of the utilization of deep learning and machine learning methodologies, with a particular focus on Convolutional Neural Networks (CNNs), in the timely detection and diagnosis of breast cancer.

B. Brain Tumor

Deep learning methods, particularly those utilizing MRI, have been increasingly employed in various imaging modalities for the prediction and classification of brain cancers Md. Shabir Khan Akash et.al [12].

Hanaa ZainEldin et.al [13] introduced an enhanced Brain Tumor Classification Model (BCM-CNN) employing Convolutional Neural Networks (CNNs) fine-tuned with an Adaptive Dynamic Sine-Cosine Fitness Grey Wolf Optimizer (ADSCFGWO). While the computational demands of this approach might delay real-time implementation, it also opens avenues for further exploration into scalability and predictive challenges beyond categorization. Taiwo Soewu et.al [13] underscores the significance of employing deep learning models, particularly Convolutional Neural Networks (CNNs), in medical imaging tasks to enhance the precision of tumor detection from MRI scans. These models leverage advancements in subsequent architectures like AlexNet.

Ayesha Younis et.al [14] utilizes the VGG 16 architecture to construct and train its model, resulting in outstanding accuracy in tumor detection. It examines various approaches and strategies from prior studies, underscoring the significance of automated categorization systems in enhancing detection efficacy. Almetwally M. Mostafa et.al [15] introduces a DL approach for brain tumor (BT) segmentation utilizing MRI data, underscoring DL's importance in medical image analysis. Employing a CNN structure, the model comprises stages for preprocessing, data organization, model training, and assessment. It underscores the promise of DL methods in enhancing the accuracy of BT diagnosis. Md. Saikat Islam Khan et.al [16] Research indicates that employing a 23-layer CNN architecture alongside a Fine-tuned CNN utilizing the VGG16 architecture proves effective across various dataset sizes, mitigating limitations associated with traditional methods. These findings underscore the efficacy of the proposed

methodologies in improving brain tumor diagnosis and highlight their potential as superior alternatives in this domain. Shamim Ahmed et.al [17] Proposing an explanation-driven deep learning model, the research employs a convolutional neural network (CNN) leveraging EfficientNetB0 architecture alongside Shapley additive explanation (SHAP) to discern various brain tumor subtypes from MRI data. Notably, the solution integrates data augmentation techniques to address the challenge posed by unexpected imaging angles within the dataset, surpassing previous methodologies. This study underscores the significance of eXplainable Artificial Intelligence (XAI) in enhancing both quantitative assessment and visual proficiency, thereby showcasing the efficacy of the proposed approach in identifying and categorizing brain cancer. Poonam Shourie et.al [18] This article discusses the utilization of MRI images in diagnosing various types of brain cancer through the application of the deep convolutional neural network known as the VGG-16 model. By undertaking extensive data preparation and augmentation, the study harnesses the robust classification abilities of the VGG-16 architecture, showcasing potential advancements in the analysis of medical images for identifying brain tumors.

Ahmed s. musallam et.al [19] The research study introduces an innovative Deep Convolutional Neural Network (DCNN) structure along with a three-step preprocessing technique to precisely recognize brain disorders using MRI data. This approach demonstrates robustness in identifying pituitary anomalies, meningiomas, and gliomas in comparison to existing models.

III. METHODOLOGY

Brain tumors and breast cancer pose significant health challenges affecting millions globally, presenting complex issues for medical professionals and patients. The MRI scan produces numerous 2D image slices with excellent soft tissue contrast, all achieved without the need for ionizing radiation [20]. Brain tumors originate within or near the brain, whereas breast cancer primarily affects breast tissue. Breast cancer typically begins in breast tissue, where abnormal cell growth and mutation lead to the formation of tumors. Using CNN models, the classification of brain tumors and breast cancer prognosis is based on this approach. CNNs excel in extracting detailed features and categorizing them accurately from raw pixel data, making them well-suited for image-based tasks like medical imaging. It can enhance the performance of the CNN model for specific medical imaging purposes, such as classifying abnormalities indicative of breast cancer or brain tumors, by adjusting its parameters and architecture.

A. Dataset

The most prevalent form of cancer affecting women is breast cancer (BC). Globally, approximately 2.1 million women are at risk of succumbing to breast cancer, as per the World Health Organization (WHO) [21].

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

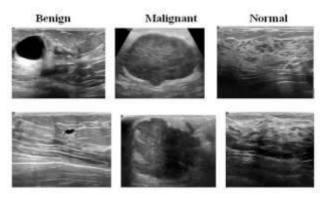

Fig. 1. Breast cancer ultrasound images of three classes.

As shown in "Fig.1" dataset containing ultrasound images of breast cancer (Dataset_BUSI_with_GT) is categorized into three groups: benign, malignant, and normal. A benign breast tumor is a growth that doesn't spread (metastasize) to other body organs. Typically, non-cancerous tumors pose minimal risk to life. Malignant tumors develop in or around breast tissue, typically within the milk ducts and glands. These tumors usually originate from abnormalities in cell growth, presenting as lumps or calcium deposits. Healthy breast cells are indicated as normal.

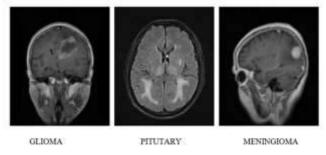

Fig. 2. Brain tumor MRI images of three classes.

Brain tumor is the most hazardous disease that develops in humans. The brain is a sophisticated organ of the human organ, which includes neurons and tissues that control most of the body's functions, including breathing, muscle movement, and our senses. Each cell grows with their capabilities, resist, and become abnormal. Brain tumors, also referred to as intracranial cancer, result from abnormal cell growth within the brain. As of 2021, the US has reported 24,530 cases, with 10,690 involving women and 13,840 involving men. Over the past three decades, the National Brain Tumor Foundation (NBTF) notes a 300% increase in death rates across various countries. Primary brain tumors are characterized by localized abnormal cell formation that doesn't spread to other parts of the body. As shown in "Fig.2." Brain tumor MRI Pictures Database (BT_MRI) collection contains 7023 human brain MRI pictures organized into three categories: glioma, meningioma, and pituitary. Gliomas, which originate from the supportive glial cells surrounding neurons in the brain, constitute approximately onethird of all brain cancer cases.

B. Model Planning

The main goal of the project is to develop Convolutional Neural Network (CNN) models for image classification, focusing on tasks such as detecting breast cancer and brain tumors. As depicted in "Figure 3," the initial phase involves importing the

necessary libraries (scipy-learn, TensorFlow, Seaborn, PIL, Matplotlib, NumPy, and pandas) essential for data manipulation, visualization, and model development. Upon importing the dataset, preprocessing steps are applied, such as downsampling, grayscale conversion, reshaping, normalization, and augmentation. The CNN architecture comprises layers like Conv2D, MaxPooling2D, Flatten, and Dense with dropout regularization. The model is constructed trained on the training dataset, evaluated using validation data, and tested with a separate testing dataset to ensure its generalizability. This process involves selecting appropriate optimizers and loss functions. Finally, the trained model is deployed online using Flask, enabling users to utilize it for predicting new data.

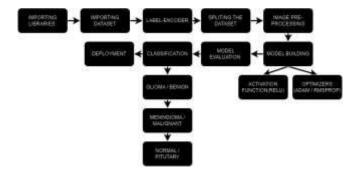

Fig.3. Model planning for both the datasets.

C. Data Preprocessing

The initial stages of constructing the preprocessing pipeline for the breast cancer ultrasound and brain tumor MRI images datasets involves five crucial steps. Firstly, data organization and label encoding were performed, where the datasets are structured into subfolders representing three different classes for each, and labels were encoded numerically using one-hot encoding. The dataset was then split into training and testing sets, ensuring balanced representation across classes. Following individual image preprocessing steps were applied, including loading, resizing, converting to grayscale, converting to NumPy arrays, reshaping, and normalization. Data augmentation was implemented exclusively on the training sets to create additional images with random transformations, enhancing model generalization. Finally, batching data for training was employed, presenting the model with batches of images to improve training efficiency. This involved using the ImageDataGenerator to iterate through training images in batches, optimizing resource utilization during training.

D. Convolutional Neural Network(CNNs)

CNNs have revolutionized computer vision applications by automating the recognition of objects within images for tasks like image categorization. Their ability to extract intricate features from raw image data has significantly advanced tasks such as item identification, scene interpretation, and visual data processing. Within the CNN architecture, convolutional layers employ convolving filters to extract features from input images, while input layers store the raw image data. On the other hand, pooling layers downsample images and reduce spatial dimensions. The output layer categorizes images into distinct groups based on learned features, while fully connected layers identify complex relationships between these features. CNNs

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

are a subset of deep neural networks that have found widespread use in image recognition and classification, and their essential components are discussed here. CNNs are designed with interconnected layers of neurons, enabling them to autonomously learn from input data and extract relevant information. Convolutional layers, pooling layers, and fully linked layers are common components of this layer structure [22].

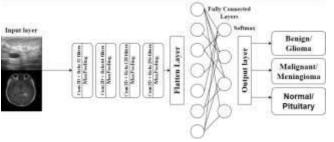

Fig.4.CNN Architecture for both breast cancer and brain tumor.

As shown in "Fig.4" within Convolutional Neural Networks (CNNs), convolutional layers are responsible for extracting fundamental visual components such as edges, textures, and shapes. Following this, pooling layers diminish spatial dimensions to preserve significant details. Subsequently, fully connected layers are employed to classify the extracted features, and the output layer produces probabilities for various classes. This hierarchical methodology empowers CNNs to effectively learn and recognize complex patterns in images, rendering them crucial for tasks like image classification and object recognition.

E. Comparitive Analysis

Comparative analysis plays a crucial role in the evaluation and advancement of deep learning algorithms for predicting diseases like breast cancer and brain tumors. By systematically comparing different optimizers and activation functions, significantly impacts a neural network's performance metrics such as accuracy, sensitivity, precision, and f1-score. This comparative analysis provides valuable insights into which combination of optimizer and activation function works best for the given datasets and problem domain. Activation functions like ReLU offer efficient training with its simplicity, while others like tanh can struggle with vanishing gradients. Optimizers like Adam are known for their adaptive learning rates, tackling issues faced by SGD (Stochastic Gradient Descent) but potentially converging slower. Selecting the best combination depends on the specific problem and dataset. Experimenting with different options is crucial to find the optimal configuration for neural networks.

IV. RESULTS

The system's performance is evaluated using the following performance metrics: True Negative (TN) signifies the correctly categorized benign samples, while True Positive (TP) denotes the accurately recognized malignant samples. False Positive (FP) indicates the mislabeling of benign samples as malignant, whereas False Negative (FN) represents the mislabeling of malignant samples as benign. These definitions characterize the subsequent measures.

A. Precision

Precision is the proportion of accurate positive forecasts among all forecasts that are positive as shown in Equation 1.

$$Precision = \frac{TP}{TP + FP} \tag{1}$$

B. Recall

$$Recall(Sensitivity) = \frac{TP}{TP+FN}$$
 (2) The total count, as defined by Equation 2, represents the

The total count, as defined by Equation 2, represents the cumulative number of malignant samples. A high sensitivity rating suggests that even with few false negatives, many disease-positive samples may still be accurately identified, minimizing the risk of missing them.

C. F1-Score

$$F1 - Score = \frac{2TP}{2TP + FP + FN} \tag{3}$$

When class distribution is uneven, prioritizing the F1 score over accuracy becomes crucial, as it is a more meaningful metric. Equation 4 delineates the calculation of the F1 Score.

D. Accuracy

$$Accuracy = \frac{TP + TN}{TP + TN + FP + FN} \tag{4}$$

Equation 1 defines accuracy as the proportion of correctly identified samples out of the total number of samples. The results showcase the effects of various combinations of optimizers and activation functions on two models.

TABLE III. COMPARING ADAM OPTIMIZER AND ACTIVATION FUNCTIONS WITH BOTH DATASETS.

| Adam | Prec | ision | Re | call | F1- S | Score | Accu | ıracy |
|-----------|------|-------|------|------|-------|-------|------|-------|
| | BC | BT | BC | BT | BC | BT | BC | BT |
| Relu | 0.87 | 0.92 | 0.85 | 0.92 | 0.86 | 0.92 | 0.88 | 0.92 |
| LeakyRelu | 0.81 | 0.91 | 0.86 | 0.90 | 0.83 | 0.91 | 0.83 | 0.90 |
| PReLU | 0.84 | 082 | 0.84 | 0.82 | 0.84 | 0.81 | 0.85 | 0.82 |
| Elu | 0.83 | 0.79 | 0.73 | 0.83 | 0.76 | 0.75 | 0.77 | 0.76 |

Table III illustrates that Relu exhibits outstanding recall, precision, and F1-score across datasets associated with brain tumors and breast cancer. Among all activation functions depicted, it achieves the highest accuracy. "Fig.5" shows the graphical representation of Comparison of Adam optimizer and activation functions.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

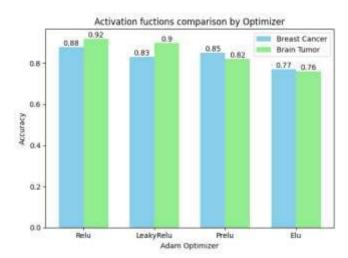

Fig.5. Comparison of Adam optimizer and activation functions.

TABLE IV. COMPARING SGD OPTIMIZER AND ACTIVATION FUNCTIONS WITH BOTH DATASETS.

| SGD | Prec | ision | Red | call | F1- S | Score | Accı | ıracy |
|-----------|------|-------|------|------|-------|-------|------|-------|
| | BC | BT | BC | BT | BC | BT | BC | BT |
| Relu | 0.76 | 0.74 | 0.55 | 0.71 | 0.59 | 0.70 | 0.67 | 0.71 |
| LeakyRelu | 0.77 | 0.75 | 0.60 | 0.75 | 0.59 | 0.74 | 0.67 | 0.75 |
| PReLU | 0.77 | 0.74 | 0.60 | 0.69 | 0.59 | 0.73 | 0.70 | 0.68 |
| Elu | 0.74 | 0.77 | 0.54 | 0.72 | 0.56 | 0.73 | 0.66 | 0.69 |

As described in Table IV, Relu demonstrates a moderate level of accuracy, precision, recall, and F1-score. While yielding acceptable results, it falls short compared to other optimizers. An illustration of the contrast between activation functions and SGD optimizer is shown in "Fig.6".

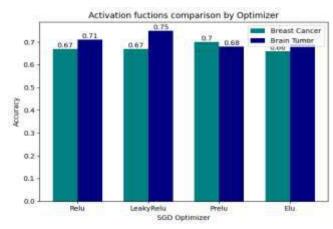

Fig.6. Comparison of SGD optimizer and activation functions.

TABLE V. COMPARING RMSPROP OPTIMIZER AND ACTIVATION FUNCTIONS WITH BOTH DATASETS.

| Rmsprop | Prec | ision | Red | call | F1- S | Score | Accu | ıracy |
|-----------|------|-------|------|------|-------|-------|------|-------|
| | BC | BT | BC | BT | BC | BT | BC | BT |
| Relu | 0.85 | 0.93 | 0.81 | 0.93 | 0.82 | 0.93 | 0.84 | 0.93 |
| LeakyRelu | 0.81 | 0.94 | 0.81 | 0.93 | 0.80 | 0.94 | 0.82 | 0.93 |
| PReLU | 0.83 | 0.91 | 0.83 | 0.88 | 0.83 | 0.90 | 0.84 | 0.90 |
| Elu | 0.84 | 0.88 | 0.76 | 0.92 | 0.79 | 0.89 | 0.81 | 0.92 |

In table V, Relu demonstrates consistent performance with commendable F1-score, accuracy, precision, and recall across both datasets. Its notable recall across both datasets distinguishes it from other activation functions, consistently surpassing them. "Fig. 7" illustrates a visual comparison between the RMSprop optimizer and different activation functions.

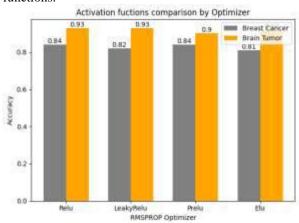

Fig.7. Comparison of RMSprop optimizer and activation functions.

TABLE VI. COMPARING ADAGRAD OPTIMIZER AND ACTIVATION FUNCTIONS WITH BOTH DATASETS.

| Adagrad | Prec | ision | Red | call | F1- S | Score | Accı | ıracy |
|-----------|------|-------|------|------|-------|-------|------|-------|
| | BC | BT | BC | BT | BC | BT | BC | BT |
| Relu | 0.36 | 0.68 | 0.33 | 0.55 | 0.25 | 0.52 | 0.56 | 0.56 |
| LeakyRelu | 0.37 | 0.69 | 0.33 | 0.66 | 0.25 | 0.63 | 0.56 | 0.66 |
| PReLU | 0.19 | 0.69 | 0.33 | 0.66 | 0.24 | 0.63 | 0.56 | 0.66 |
| Elu | 0.74 | 0.71 | 0.52 | 0.68 | 0.53 | 0.67 | 0.65 | 0.68 |

Table VI, ReLU demonstrates moderate performance across both datasets. "Fig.8" shows the graphical representation of Comparison of Adagrad optimizer and activation functions.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

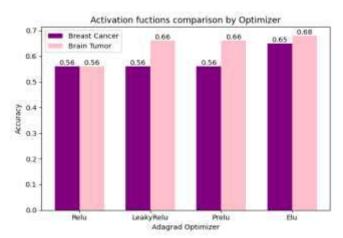

Fig.8. Comparison of Adagrad optimizer and activation functions.

COMPARING ADADELTA OPTIMIZER AND TABLE VII. ACTIVATION FUNCTIONS WITH BOTH DATASETS.

| Adadelta | Duna | ision | Red | 2011 | T/1 6 | Score | Accı | |
|-----------|------|--------|------|------|-------|-------|------|------|
| Adadena | FIEC | ISIOII | Ke | can | 1.1-5 | SCOLE | Acci | nacy |
| | BC | BT | BC | BT | BC | BT | BC | BT |
| Relu | 0.19 | 0.23 | 0.33 | 0.34 | 0.24 | 0.21 | 0.56 | 0.37 |
| LeakyRelu | 0.19 | 0.35 | 0.33 | 0.35 | 0.24 | 0.20 | 0.56 | 0.37 |
| PReLU | 0.36 | 0.34 | 0.33 | 0.35 | 0.25 | 0.21 | 0.56 | 0,41 |
| Elu | 0.19 | 0.31 | 0.33 | 0.35 | 0.24 | 0.21 | 0.56 | 0.37 |

Table VII illustrates that the utilization of Relu activation in combination with Adadelta optimization yields lower accuracy, recall, and F1-score metrics for both datasets. Despite the suboptimal overall performance, brain tumors are identified more accurately compared to breast cancer. A depiction showcasing the differentiation between activation functions and the Adadelta optimizer is available in "Figure 9".

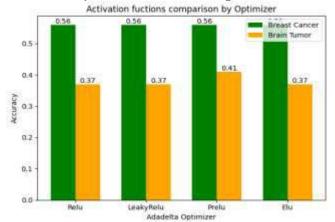

Fig.9. Comparison of Adadelta optimizer and activation functions.

In summary, these findings indicate that the combinations of optimizer and activation function are effective. For instance, using the Adam optimizer and ReLU activation function led to an 85% accuracy in the breast cancer classification model. Similarly, the brain tumor classification model achieved a high

accuracy of 93% by using the ReLU activation function and RMSprop optimizer.

Article DOI: https://doi.org/10.36713/epra16767

DOI No: 10.36713/epra16767

ABSTRACT

In terms of Biology humans are just another species on this planet, but when it comes to explaining the biology of the context of Human behavior, it really becomes very tough. Humans have the physiology and anatomy similar to that of a cave man, yet the level of our intelligence has far evolved in comparison to the extent that the cave man anatomy and physiology becomes inadequate to serve to the needs of certain aspects of human intelligence of modern times which essentially functions beyond the level of just survival (for example in animals), and is capable of performing such advanced functions as retaining a huge past memory and can anticipate a future situation. This in many ways has made us far superior to the animal world, yet many of us get messed up in handling our intelligence properly and either develop chronic stress, indulge in violence or mishandle the adolescence related issues of our teenagers. Biologically speaking human behavior is determined largely by how our brains are shaped by developmental and evolutionary processes, at the heart of which lies the genetic and epigenetic changes and environmental impact. Because at any critical moment brains are to decide about any bit of a behavior, therefore the knowledge of underlying brain anatomy and physiology is important. This article is about explaining how biology makes a sense to human behavior and is essentially focused on its three important aspects, i.e. adolescence, chronic stress and violence, which are described in detail in the following paragraphs.

KEYWORDS: Amygdala, Brain Reward System, Dopamine, Endocrinology, Homeostasis, Neuropsychology, Prefrontal Cortex. Striatum.

INTRODUCTION

Human behavior is a whole range of physical and emotional actions and interactions that the humans engage in, biologically, socially, intellectually etc. and is influenced by value, ethics, authority, attitudes, persuasion and or genetics. Because our behaviors determine our welfare or misery as human beings, it is pertinent to understand all those forces operating behind any perceivable human behavior and devise ways and means by managing them to make human life beautiful, purposeful and above all peaceful. Following are the three important aspects of Human behavior and the biology behind them:

1. Teenage related behavior: Teenage is a period when components of the limbic system of brain associated with the brain reward system namely striatum, nucleus accumbens, hippocampus etc create a variety of high intensity pleasurable responses in adolescents in comparison to that in adults for the same sort of stimuli like food sex, music, etc; the kind of behaviors fundamentally linked to our survival. This is a normal part of developmental process and happens because the prefrontal cortex is half baked yet and is unable to fully regulate the activity of this part of limbic system allowing it to go for a full blast due to dopamine activity. This high intensity feeling of pleasure in adolescents is associated with memory and learning which motivates them to seek and repeat such behaviors very often. In a way this is remarkable as the adolescents in this period of life take many bold and innovative steps under the motivation of seeking rewards without caring

too much for the consequences. The same thing declines in adulthood getting balanced as the prefrontal cortex becomes fully developed nearly by the age of 25 years, which by a cross talk can regulate the activity of brain reward system. The teenagers require a little guidance from the side of their parents and teachers without too much authoritative control, to make up for the deficiency of prefrontal cortex at this point in time so that they may cope with all kinds of pressures with confidence and responsibility.

The brain reward system however is prone to be hijacked by many psychotropic drugs which cause an unregulated dopamine activity in the brain reward centre leading to a pathological euphoria and addiction. The drug addict simply cannot experience the normal pleasures in response to behaviors linked to survival e.g. food, sex etc. and indulge in behaviors associated with seeking and consuming drugs by all means. This situation is alarming which demand an understanding of the gravity of crisis and requires a proper counseling and rehabilitation of drug victims who should not be harassed, punished or neglected socially as the drugs tend to pathologically strengthen certain neural pathways and make the others sluggish by affecting the activity of neurotransmitters, synaptic communication and neuroplasticity. The damage is so serious that a mere will power of the victim as is often talked about doesn't work to reverse the altered biochemistry of the brain under the influence of chronic drug abuse because the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

cognitive ability of the brain fails miserably to control the compulsive behavior arising out of a craving to seek and use drugs by the addicts. Once the reward centre rewires itself under drug influence the brain begins to associate certain people, places, events and activities with the addiction reward which trigger behavioral/biological cues that can be violent at times. In no uncertain terms addiction is brain disease that must be treated with recovery. In the case of adolescents, the situation is even the more serious because of their tendency to seek new experiences and their developing brain can be irreversibly damaged beyond repairs by narcotics and other substance of abuse.

2. Behavioral aspects of Stress response: Stress is a physiological and psychological imbalance arising out of disparity between situational demand and individual's ability and motivation to meet those demands. Amygdala, a component of limbic system is central to initiate the stress response whose activity gets strengthened over a period of chronic stress at the cost of other vital brain centres like hippocampus and frontal cortex concerned with cognition and memory which suffer deterioration.

When someone experiences a real or perceived threat, amygdala reacts fast even not waiting for the inputs from the frontal cortex and stimulates hypothalamus to initiate a twofold stress response; one through sympathetic part of autonomic nervous system with the end result of adrenaline release from adrenal gland and consequential "fight or flight response" and the other by releasing adrenocorticotropic release hormone, activating HPA (hypothalamo- pituitary- adrenal axis) with the end result of glucocorticoids release from adrenal gland and a prolong effect of stress response on the body.

When the stress is quite frequent and merely for psychological reasons, it becomes a chronic stress and manifests itself as hyperactivity of amygdala, suppression and regression of hippocampus and frontal cortex affecting memory and cognition. Other symptoms are; high blood pressure, cardiac diabetes, gastric dysfunction, dysfunction, suppression, reproductive dysfunction, insomnia, obesity etc. This all happens because most of our blood supply is diverted to muscles and organs associated with "fight and flight" under neuroendocrine control at the cost of other vital organs. This suggests that stress response is prima facie a disorder itself, but the fact is that the ability of our body to initiate stress response is very fundamental to our survival. When evoked against the real threat, it enhances the chances of our survival but if activated merely for psychological reasons which happens very often when we anticipate a future threat though there is not a real one or get struck by the thought of a horrible past experience, we turn on body's ultimate defense mechanism in the form of stress response which turns body's own strength against itself. This appears to be a result of fast evolving Human intelligence in comparison to the pace of evolution of underlying physiology and anatomy which is still of that of a cave man and seems insufficient to fulfill the modern needs of our intelligence. In this connection it is important to reflect on the concerns of human welfare by introducing ways and means

of managing stress through psychosocial support and adapting healthy life styles like physical exercise, yoga, meditation etc.

3. Violence related Behavior: Violence is intentional use of physical force or power threatened or actual to harm oneself or others. Humans are miserably violent species though they are equally altruistic and compassionate too. As an intelligent spp. we denounce violent behaviors, but actually we hate the wrong kind of violence only and when it is of right kind according to us we glorify it and love it. In certain settings pulling the trigger of a gun is crime and in others it is a heroic act. In some cases, putting your hand on someone else's is deeply compassionate and in others it is a deep betrayal. So, when it comes to violence, we are a confused human species and the real challenge is to understand the biology of the context of violent behavior.

Let us have a thought experiment; you have a gun and there is rioting and violence around you. A stranger holding something in his hand looking like a gun or a cell phone is running towards you and having perceived an imminent threat you pull the trigger. It turns out later that the person was actually holding a mobile phone and not a gun. Now a biological question can be asked as to what caused this behavior. To find an answer one must know what activity was going on in the amygdala seconds before you pulled the trigger. Obviously, the sights and the sounds of rioting are pertinent but you are more likely to pull the trigger if that person was a stranger, male and of a different race. Moving further minutes to hours back, if you were in pain frustrated or hungry, your frontal cortex (which controls the activity of amygdala) is going to be sluggish, letting amygdala to go ahead unilaterally and cause this violent behavior. Going further back days to weeks in to the realm of hormones, e.g if stress hormones were high, they make the amygdala more excitable and at the same time frontal cortex more sluggish and atrophied by strengthening the synaptic communication through neuroplasticity in the former and with the opposite effect on the later. Pushing even back into the adolescent period, where the central fact of adolescent brain is that it is all set for a blast except for the frontal cortex which is half baked and all those childhood experiences can influence the frontal cortex making it relevant to pulling the trigger in this critical moment. But remarkably enough we have to move even further back into early childhood and fetal life when the brain is being constructed and epigenetic changes triggered by mother's hormonal status can activate certain genes and turn off others, thus affecting brain development; e.g. high level of mother's stress hormones during fetal life can produce amygdala in a highly excitable form in adulthood, causing increased release of stress hormones thereby enhancing the tendency towards violent behavior.

Thus, human behavior related to violence is interplay of various biological, psychological, environmental and social factors all of which need to be considered while managing violence at the individual level and in the society at large.

CONCLUSION

From the foregoing discussion it can be concluded that the human behavior is so complex and weird that to explain every

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

bit of it requires knowledge of what happened seconds before an event to millions of years back during evolution and everything in between. In other words, every bit of behavior has multiple levels of causality. But there is every possibility of modification of our behaviors to suit the needs of modern times. Genetics and epigenetic changes at the heart of biology which determine our behavior to a large extent doesn't function in isolation but by interacting with environment. It is here that the key lies i.e. by working on self through inner management/spiritual awakening as individual human beings and at the same time continuing working on the betterment of external situations at the community level, we can fix our neuropsychology and endocrinology in an optimum state of homeostasis to be healthy, peaceful and joyful which is fundamentally required for excellence in all our endeavours to achieve human wellbeing. People can adapt to healthy life style activities like brisk walks, yoga, meditation etc. Many studies have shown that people having strong social bonds and enjoying close relationships with their spouses or friends live a long healthy and successful life apart from the ability to cope with stress effectively at the time of crises. This type of selfempowerment through individual transformation means an understanding that "our goal is not to become super humans but to get a realization that being human is super."

ABSTRACT

This study aimed to assess the employment rates and employability status of graduates from the Bachelor of Science in Business Administration – Financial Management program at Kapalong College of Agriculture, Sciences, and Technology from 2019 to 2023. It also examined graduates' attitudes towards work, the quality of education provided by the institution, and their skills development. Using a descriptive research method, a total of 587 respondents participated in an online survey conducted through Google Forms.

Findings revealed that 88.17% of financial management graduates were employed, with 52.07% working in job-related professions such as credit & collection assistant, entrepreneur, cashier, auditor, bookkeeper, inventory personnel, accounting staff, and account officer. Additionally, 30.77% were employed in non-related fields including office-based clerk, government employee, sales agent/specialist/representative, call center agent, marketing specialist, technical staff, and photographer. Among the employed graduates, 37% held regular positions, 33% were on job order, 16% worked on a contractual basis, 8% were casual employees, and 6% were self-employed.

Furthermore, only 0.85% pursued a Master in Business Administration, while 4.26% became teacher education unit earners. The study found that graduates consistently exhibited very high levels of attitude towards work, quality education provisions, and skills development. However, computer and ICT skills received the lowest mean score, suggesting a need for the program to offer practical training sessions, workshops, or laboratory sessions to enhance students' proficiency in these areas. Providing opportunities for students to practice using computer software and applications in simulated business environments or real-world projects is recommended.

INTRODUCTION

In the dynamic landscape of education, the adaptability and employability of graduates emerge as pivotal factors in shaping curricular reforms. The institution's success is related to the quality of its graduates. There was a prevailing notion that the increasing global need for highly skilled professionals emphasized the significance of higher education in fostering career development (Nunez et al., 2022)

In Asia, graduates encounter the challenge of securing employment immediately upon completing their studies. It is crucial that they have acquired optimal knowledge and skills within their specialized fields before entering their chosen work. The graduates struggle to secure positions aligned with their degree courses due to influential factors stemming from the mismatch between educational qualifications and insufficient mastery of skills necessary for employment. This reality indicates that some academic institutions have not adequately equipped graduates with essential skills and the curriculum may not align with the demands of the current

global labor market. Nations undergoing rapid expansion in higher education express widespread concerns about graduates facing significant hurdles in job searches and some being compelled to accept less favorable early employment (Teichler & Jung, 2017).

In the Philippine context, employers today are increasingly focused on identifying competent employees who not only possess fundamental academic skills such as reading, writing, oral communication, and listening but also exhibit advanced cognitive abilities like learning, reasoning, creative thinking, decision-making, and problem-solving. Besides, they are also looking for employees that have personal qualities that among all include responsibility, self-confidence, self-control, social skill, adaptable and flexible, good work attitude, cooperative, self-motivated. However, most of our graduates are not aware of this current phenomenon whereby they sometimes do not see the connection on what they do in class with the real job world that they will venture into later. Moreover, job mismatch postulates a major challenge to academic institutions and labor

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

markets in the Philippines. This prevailing situation is projected to widen the gaps between education and jobs in the industry and an even important issue to deal with relative to economic and educational policies in the country (Toquero, 2021).

The Kapalong College of Agriculture, Sciences and Technology, in its commitment to consistently enhance its teaching methodologies for the education and training of emerging professionals, the institution has found it appropriate to conduct a tracer study among graduates in order to assess their employability. The data collected from tracer study provides feedback on the relevance of the curriculum. The institution can also identify areas where improvements are needed in order to ensure that the quality of education they provide is in line with the quality standards set by academic accreditation organization and by the industry.

It is in this light that this study was conducted in order to assess both the employment rate and employment status of graduates. Additionally, the study aims to gather self-assessments regarding their work attitudes, perceptions of the institution's quality education provision and the development of skills and abilities among graduates from Bachelor of Science in Business Administration - Major in Financial Management (BSBA-FM) degree. The findings will guide the development and design of a curriculum that ensures students' employability and further strengthen the institution's commitment to delivering continuous and high-quality education.

OBJECTIVES OF THE STUDY

This study aimed to identify the employability of the KCAST graduates in the program of Business Administration – Financial Management from academic year 2019-2023. Specifically, this study sought to answer the following research objectives:

- 1. To describe the demographic characteristics of the graduate respondents in terms of:
 - 1.1. sex when grouped per academic year;
 - 1.2. civil status;
 - 1.3. age;
 - 1.4. year graduated; and
 - 1.5. educational attainment and development;
- 2. To describe the employment profile and features of the graduate-respondents in terms of:
 - 2.1. employment rate;
 - 2.2. employment status;
 - 2.3. level of income;
 - 2.4. period of seeking the first job after college
 - 2.5. relevance of college degree to the present job; and
 - 2.6. job mismatching.
- 3. To determine the level of the graduate-respondents self-rated evaluation with their attitude to work.

- 4. To determine the level of the graduate-respondents self-rated evaluation with the quality of education provision of the institution.
- 5. To determine the level of the graduate-respondents self-rated evaluation with the skills and abilities obtained in the institution and its usability with their present occupation.

METHODS

Design

The study employed the descriptive research method due to its focus on collecting quantitative information presented in numerical form that aligns with the inherent nature of descriptive studies. This method was utilized to describe the characteristics of the population or phenomenon being studied. It emphasizes on describing the nature of a demographic segment, without delving into the reasons behind the occurrence of a specific phenomenon. Also, it aims to describe the subject of the research without addressing the why or how it occurs. To sum up, descriptive research is a systematic scientific approach that details an event, situation, phenomena, or fact within a specific area or population (Sharma et al, 2019). In the context of the current study, the descriptive method was used to describe the demographic characteristics of the graduate respondents particularly focusing on sex, age, civil status, year graduated and educational attainment and development. Also, to describe the employment profile and features of the graduaterespondents in terms of employment rate, employment status, level of income, period of seeking the first job after college, relevance of college degree to the present job, and job mismatching.

Population and Sample

The Table 1 shows the population and sample of this tracer study of which were the graduates of Bachelor of Science in Business Administration – Financial Management in Kapalong College of Agriculture, Sciences and Technology from academic year 2019 up until academic year 2023. Hence, the study used random sampling since the very purpose of the study is to track and trace graduates in terms of their employment status and rate. There is a total population 782 graduates and there are 587 graduates who positively responded the survey questionnaire. In 2019, with the total graduate respondents of 159, 119 or 74.53% are females and 41 or 25.47% are males. In 2020, with the total graduate respondents of 138, 86 or 62.50% are females and 52 or 37.50% are males. In 2021, with the total graduate respondents of 136, 91 or 66.85% are females and 45 or 33.15% are males. In 2022, with the total graduate respondents of 65, 51 or 79.07% are females and 14 or 20.93% are males. Lastly, in 2023, with the total graduate respondents of 89, 58 or 64.71% are females and 32 or 35.29% are males.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Year Graduated Sex Frequency Percent Female 119 74.53% 2019 Male 41 25,47% 159 Total 100% Female 86 62.50% 2020 Male 52 37.50% Total 138 100% Female 91 66.85% 2021 Male 45 33.15% Total 136 100% 51 Female 79.07% 20.93% 2022 Male 14 Total 65 100% Female 58 64.71% 2023 Male 32 35.29% 89 Total 100%

Table 1: Population and Sample

Research Instrument

The research tool employed in this study was derived from Escandallo's (2024) study titled "A Tracer Study on the Elementary Education Graduates from Academic Year 2015 to 2019: Employment in Focus," which yielded a Cronbach's alpha coefficient of 0.955. This indicates that the questionnaire

utilized exhibits outstanding internal consistency, ensuring its reliability.

To easily evaluate the data gathered with this study, the researcher made the five orderable categories with their respective means and that is as follows:

| Parameter Limits | Descriptive Equivalent | Interpretation |
|-------------------------|-------------------------------|--|
| 4.20 - 5.00 | Very High | If the measure described in item or construct is always observed |
| 3.40 - 4.19 | High | If the measure described in item or construct is oftentimes observed |
| 2.60 - 3.39 | Moderate | If the measure described in item or construct is sometimes observed |
| 1.80 - 2.59 | Low | If the measure described in item or construct is seldom observed |
| 1.00 - 1.79 | Very Low | If the measure described in item or construct is rarely observed |

Data Gathering Procedure

Data collection is the systematic process of gathering, measuring, and analyzing precise information through established and validated methods for research purposes. It constitutes a fundamental and crucial initial stage in research, irrespective of the specific field of study (Lazar et al, 2017). Therefore, the necessary data for the study was conscientiously collected through the implementation of the following procedure:

First, since the institution's BSBA-FM graduates made up the study's population and sample, the researchers asked the college registrar for information on the total number of graduates from the academic years 2019 to 2023 so that precise and reliable data could be prioritized.

Second, upon obtaining the overall population of graduates, the researcher employed a survey tracer questionnaire adapted from Escandallo (2024). This questionnaire aimed to assess various aspects such as demographic characteristics, the

employment profile and features, work attitude, quality of education received, and the development of skills and abilities of each graduate.

Third, the researcher initiated the process of tracing graduates to gather information which was accomplished by utilizing Google Forms.

Fourth, upon the completion of answering the questionnaire by each participating graduate, the researcher proceeded to tally the data. The designated school statistician then analyzed and interpreted the data for the purpose of presenting it in tabular form that facilitates a clear and comprehensible understanding of the results.

Data Analysis

Mean was employed to calculate the average scores, assessing the graduates' attitudes towards work, evaluating the quality of education provision, and the development of various skills and abilities.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

RESULTS AND DISCUSSION

The results and discussion are provided in response to the objectives set forth in the study.

Demographic Characteristics of the BSBA Financial Management graduates

The objective of this tracer study is to describe the demographic profile of BSBA Financial Management graduates spanning from the academic year 2019 to 2023. This profile encompasses factors such as sex, civil status, age, year graduated, and educational attainment and development.

Sex. Table 2 presents the aggregate number of respondents who are BSBA Financial Management graduates spanning from the academic year 2018-2019 to the academic year 2022-2023. In 2019, out of the total 159 graduate respondents, 119 (or 74.53%) are female and 41 (or 25.47%) are male. In 2020, out of 138 graduate respondents, 86 (or 62.50%) are female and 52 (or 37.50%) are male. Moving to 2021, out of 136 graduate respondents, 91 (or 66.85%) are female and 45 (or 33.15%) are male. In 2022, out of 65 graduate respondents, 51 (or 79.07%) are female and 14 (or 20.93%) are male. Lastly, in 2023, out of 89 graduate respondents, 58 (or 64.71%) are female and 32 (or 35.29%) are male.

Table 2: Sex Distribution of Financial Management Graduates

| Year Graduated | Sex | Frequency | Percent |
|----------------|--------|-----------|---------|
| | Female | 119 | 74.53% |
| 2019 | Male | 41 | 25.47% |
| | Total | 159 | 100% |
| | Female | 86 | 62.50% |
| 2020 | Male | 52 | 37.50% |
| | Total | 138 | 100% |
| | Female | 91 | 66.85% |
| 2021 | Male | 45 | 33.15% |
| | Total | 136 | 100% |
| | Female | 51 | 79.07% |
| 2022 | Male | 14 | 20.93% |
| | Total | 65 | 100% |
| | Female | 58 | 64.71% |
| 2023 | Male | 32 | 35.29% |
| | Total | 89 | 100% |

Civil Status. Table 3 displays the civil status distribution of Bachelor of Science in Business Administration – Financial Management graduates from the academic year 2018-2019 to 2022-2023. The data indicates that out of the total graduate respondents, 528 (or 89.90%) are single, while 59 (or 10.10%)

are married. Additionally, the survey questionnaire includes options for widowed and separated statuses; however, none of the graduates reported having these marital statuses at the time of the survey.

Table 3: Civil Status of Financial Management Graduates

| Civil Status | Frequency | Percent |
|--------------|-----------|---------|
| Single | 528 | 89.90% |
| Married | 59 | 10.10% |
| Total | 587 | 100% |

Age. The table 4 illustrates the age distribution of Bachelor of Science in Business Administration – Financial Management graduates from the academic year 2018-2019 to 2022-2023. Out of the 587 total respondents who participated in the online survey conducted via Google Forms, 306 respondents fall

within the age range of 21-25, while another 250 graduates fall within the age range of 26-30. Additionally, there are 17 graduates aged between 31-35, along with 7 graduates each in the age ranges of 36-40 and 41 and above.

Table 4: Age Distribution of Financial Management Graduates

| Age | Frequency | Percent |
|-------|-----------|---------|
| 21-25 | 306 | 52.07% |
| 26-30 | 250 | 42.60% |
| 31-35 | 17 | 2.96% |
| 36-40 | 7 | 1.18% |
| 41-45 | 7 | 1.18% |
| Total | 587 | 100% |

Year Graduated. Table 5 presents the total number of respondents who are Bachelor of Science in Business Administration – Financial Management graduates across the academic years from 2018-2019 to 2022-2023. In 2019, there

are 159 graduate respondents. In 2020, there are 138 graduate respondents. Moving to 2021, there are 136 graduate respondents. In 2022, there are 65 graduate respondents. Lastly, in 2023, there are 89 total graduate respondents.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 5: Year Graduated of Financial Management Graduates

| Year Graduated | Frequency | Percent |
|----------------|-----------|---------|
| 2019 | 159 | 27% |
| 2020 | 138 | 24% |
| 2021 | 136 | 23% |
| 2022 | 65 | 11% |
| 2023 | 89 | 15% |
| Total | 587 | 100% |

Educational Attainment and Development. Between the academic years 2018-2019 and 2022-2023, a survey revealed that 11.24% of Bachelor of Science in Business Administration – Financial Management graduates obtained vocational education or a national certificate, while 88.76% did not.

Vocational education options included training in areas such as bookkeeping NCIII, food processing, computer hardware servicing NCII, computer systems servicing, consumer electric servicing NCII, hotel and restaurant management and automotive.

Table 6: Vocational Education of Financial Management Graduates

| Vocational Education | Frequency | Percent |
|----------------------|-----------|---------|
| With | 66 | 11.24% |
| Without | 521 | 88.76% |
| Total | 587 | 100% |

Table 6.1: Specification of Vocational Education of Financial Management Graduates

| Vocational Education | Frequency | Percent |
|----------------------------------|-----------|---------|
| Bookkeeping NCIII | 20 | 3.41% |
| Food Processing | 20 | 3.41% |
| Computer Hardware Servicing NCII | 10 | 1.70% |
| Computer Systems Servicing | 7 | 1.12% |
| Consumer Electric Servicing NCII | 3 | 1.12% |
| Hotel and Restaurant Management | 3 | 0.51% |
| Automotive | 3 | 0.51% |
| Total | 66 | 11.24% |

It can be gleaned in Table 7 that the total number of respondents who are BSBA Financial Management graduates from the academic years 2018-2019 to 2022-2023, indicates their pursuit in postgraduate degree programs or studies. According to the survey, only 0.85% of graduates pursued postgraduate studies

or postgraduate degree, while 4.26% obtained teacher education units. Additionally, the data shows that the majority, comprising 94.89%, did not pursue further studies beyond their BSBA Financial Management degree.

 Table 7: Postgraduate

Studies/Other Baccalaureate Degree of Financial Management Graduates **Postgraduate** Frequency Percent **Studies/Other Baccalaureate Degree** Master's Degree in Business 0.85% 5 Administration 4.26% Teacher Education Unit Earners 25 557 Without 94.89% Total 587 100%

Employment Profile and Features of BSBA Financial Management Graduates

The second research objective of this tracer study is to determine the employment profile and features of the of Bachelor of Science in Business Administration – Financial Management from academic year 2018-2019 to 2022-2023 which includes the following: employment rate; employment status; level of income; period of seeking the first job after college; relevance of college degree to the present job; and job mismatching.

Employment Rate. Table 8 displays the employment rate of Bachelor of Science in Business Administration – Financial Management from the academic years 2018-2019 to 2022-2023. According to the survey, out of the total 587 respondents who participated in the online survey and responded positively, 518, or 88.17%, are currently employed, while 69, or 11.83%, are unemployed. Additionally, among the employed graduates, some are working in professions related to their field of study, while others are in unrelated professions.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 8: Employment Rate of Financial Management Graduates

| Employment Rate | Frequency | Percent |
|------------------------|-----------|---------|
| Employed | 518 | 88.17% |
| Unemployed | 69 | 11.83% |
| Total | 587 | 100% |

Employment Status. The table below illustrates the employment status of Bachelor of Science in Business Administration – Financial Management students from the academic years 2018-2019 to 2022-2023. Findings from the survey indicated that out of the 518 graduate students who provided responses in this aspect, 486, or 82.84%, are engaged in full-time employment, while 10, or 1.78%, are working part-

time but actively seeking full-time opportunities, and 21, or 3.55%, are working part-time and not actively seeking full-time employment. Moreover, the data reveals that 37% of graduate respondents have secured regular positions, 33% are employed on a job order basis, 16% are working under contractual arrangements, 8% are casual employees, and 6% are self-employed.

Table 9: Employment Status of Financial Management Graduates

| Employment Status | Frequency | Percent |
|--|-----------|---------|
| Working full-time | 486 | 82.84% |
| Working part-time but seeking full-time work | 10 | 1.78% |
| Working part-time but not seeking full-time work | 21 | 3.55% |
| Total | 518 | 88.17% |

Table 9.1: Employment Status If Working Full-time

| Employment Status | Percent |
|------------------------------|---------|
| Regular | 37% |
| Job order | 33% |
| Working on contractual basis | 16% |
| Casual | 8% |
| Self-employed | 6% |
| Total | 100% |

Level of Income. Table 10 presents the monthly income distribution of Bachelor of Science in Business Administration – Financial Management graduates from the academic years 2018-2019 to 2022-2023. According to the survey findings, out of the 518 respondents who provided information in this regard, 28, or 4.73%, earned below 5,000 pesos per month.

Additionally, 128, or 21.89%, earned between 6,000 and 10,000 pesos monthly, while 236, or 40.24%, earned between 11,000 and 15,000 pesos. Moreover, 83, or 14.20%, earned between 16,000 and 20,000 pesos, and finally, 43, or 7.10%, earned more than 21,000 pesos per month.

Table 10: Level of Income of Financial Management Graduates

| Income | Frequency | Percent |
|---------------|-----------|---------|
| Below 5,000 | 28 | 4.73% |
| 6,000-10,000 | 128 | 21.89% |
| 11,000-15,000 | 236 | 40.24% |
| 16,000-20,000 | 83 | 14.20% |
| Above 21,000 | 43 | 7.10% |
| Total | 518 | 88.17% |

Period Seeking of Job After College. Table 11 displays the duration of time Bachelor of Science in Business Administration – Financial Management graduates took to secure their first job after college, spanning from the academic years 2018-2019 to 2022-2023. According to the survey results, out of the 518 respondents who provided information on this

matter, 267, or 45.56%, were able to secure a job within 1-3 months after graduation. Additionally, 195, or 33.14%, found employment within 4-8 months. Moreover, 24, or 4.14%, took 9-12 months to secure a job, while 31, or 5.33%, landed a job after one year or more.

Table 11: Period Seeking of Job After College of Financial Management Graduates

| Period | Frequency | Percent |
|--------------|-----------|---------|
| 1-3 months | 267 | 45.56% |
| 4-8 months | 195 | 33.14% |
| 9-12 months | 24 | 4.14% |
| Above 1 year | 31 | 5.33% |
| Total | 518 | 88.17% |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Relevance of College Degree to the Present Job. Table 12 presents the assessment of Bachelor of Science in Business Administration – Financial Management graduates from the academic years 2018-2019 to 2022-2023 regarding the alignment of their college degree with their current job. According to the survey results, out of the 518 respondents who

provided feedback on this aspect, 292, or 49.70%, indicated that their degree is "very much relevant," while 125, or 21.30%, stated it is "much relevant." Moreover, 73, or 12.43%, chose "neutral," 10, or 1.78%, selected "a little relevance," and 17, or 2.96%, opted for "not at all."

Table 12: Relevance of College Degree to the Present Job of Financial Management Graduates

| Relevance of Degree | Frequency | Percent |
|---------------------|-----------|---------|
| Very much | 292 | 49.70% |
| Much | 125 | 21.30% |
| Neutral | 73 | 12.43% |
| A little | 10 | 1.78% |
| Not at all | 17 | 2.96% |
| Total | 518 | 88.17% |

Job Mismatching. Table 13 presents the job mismatch or alignment of Business Administration – Financial Management graduates from the academic years 2018-2019 to 2022-2023. According to the survey results, out of the 518 graduate students who responded in this aspect, 5.33% are working in

the academe. Additionally, 52.07% are employed in job-related professions such as credit & collection assistant, entrepreneur, cashier, auditor, bookkeeper, inventory personnel, accounting staff, and account officer.

Table 13: Job Mismatching/Alignment of Financial Management Graduates

| Job Mismatching/Alignment | Frequency | Percent |
|---------------------------|-----------|---------|
| Academe | 31 | 5.33% |
| Job-related Profession | 306 | 52.07% |
| Non-related | | 20.770/ |
| Profession | 181 | 30.77% |
| Total | 518 | 88.17% |

On the other hand, the Table 13.1 illustrates the non-related profession specifications of Business Administration – Financial Management graduates from the academic years 2018-2019 to 2022-2023. The survey findings indicate that 30.77% are employed in non-related professions, including office-based clerk, government employee, sales

agent/specialist/representative, call center agent, marketing, specialist, technical staff, photographer, pharmacist assistant, beautician, receptionist, annotator, leadman, mass media personnel, special media specialist, recruitment officer, and warehouse staff.

Table 13.1 Non-related Profession Specifications of Financial Management Graduates

| Non-related Profession | Frequency | Percent |
|---------------------------------------|-----------|---------|
| Office-Based Clerk | 45 | 8.69% |
| Government Employee | 41 | 7.92% |
| Sales Agent/Specialist/Representative | 29 | 5.60% |
| Call Center Agent | 29 | 5.60% |
| Marketing Specialist | 7 | 1.35% |
| Technical Staff | 7 | 1.35% |
| Photographer | 5 | 0.97% |
| Pharmacist Assistant | 2 | 0.39% |
| Beautician | 2 | 0.39% |
| Receptionist | 2 | 0.39% |

Level of the Bachelor of BSBA Financial Management Graduates

Attitude to Work

Shown in Table 14 is the level of the Bachelor of Science in Business Administration – Financial Management graduates with their attitude to work which obtained and earned an overall mean score of 4.52 described as very high. This descriptive meaning and equivalent entails that the level of the financial management graduates' attitude to work is always manifested since the respondents strongly agree to all the identified subquestions under attitude to work.

In the table, it showed that of all the ten sub-questions, item number 2 stating *I like the kind of job and work I am doing* obtained the lowest mean score of 4.37 with a descriptive equivalent as very high which means that the said item and/or construct is always manifested by the BSBA financial management graduates in their work. Meanwhile, the items which obtained the highest mean score of 4.52 is item number seven stating *I have a good relationship with my colleagues and co-employees* with a descriptive equivalent as very high which means that the said items and/or constructs are always manifested by the BSBA Financial Management graduates in their work or in their workplace.

Table 14. Level of the BSBA Financial Management Graduates
Attitude to Work

| Attitude to Work | Mean | Description |
|--|------|-------------|
| 1. I am very interested, happy and satisfied with my work and it is very important for me. | 4.56 | Very High |
| 2. I like the kind of job and work I am doing. | 4.37 | Very High |
| 3. I accepted assignments and tasks given to me at work without complaints. | 4.48 | Very High |
| 4. I arrived on time to prepare my work and extend working hours if necessary. | 4.53 | Very High |
| 5. I can work better and functional under different working environment and situations. | 4.52 | Very High |
| 6. I participated in all activities and events inside my workplace. | 4.56 | Very High |
| 7. I have a good relationship with my colleagues and co-employees. | 4.59 | Very High |
| 8. I submitted necessary documents and papers on time and beat deadlines. | 4.56 | Very High |
| 9. I performed my task and job with excellence and outstanding quality. | 4.52 | Very High |
| 10. I seek assistance and help from others whenever I have clarifications and queries. | 4.53 | Very High |
| Overall | 4.52 | Very High |

Level of the BSBA Financial Management Graduates Ouality Education Provisions

Shown in Table 15 is the level of the Bachelor of Science in Business Administration – Financial Management graduates with quality education provisions which obtained and earned an overall mean score of 4.46 described as very high. This descriptive meaning and equivalent entails that the level of BSBA financial management graduates' quality education provision is always manifested since the respondents always agree to all of the identified sub-questions under quality education provision. From the ten sub-questions, item number six stating quality of different courses offered in the program that develops the total sum of the student skills obtained the lowest mean score of 4.39 with a descriptive equivalent as very

high which means that the said item and/or construct is always manifested by the BSBA financial management graduates as they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST). Further, the items which obtained the highest mean score of 4.55 are items number 9 and 10 stating different trainings, seminars and workshops that prepare students for employment and varied learning assessments and instructions which assess students 'progress and learning fairly and equally which are described as very high which means that the said items and/or constructs are always manifested by the BSBA financial management graduates as they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST).

Table 15. Level of the BSBA Financial Management Graduates Quality Education Provision

| Quality Education Provision | Mean | Description |
|---|------|-------------|
| Availability of course materials and different learning resources needed for our studies. | 4.42 | Very High |
| 2. Quality of course contents from courses offered as well as the teaching and learning process. | 4.47 | Very High |
| 3. Conduciveness of the learning environment and atmosphere. | 4.44 | Very High |
| 4. Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.44 | Very High |

| Overall | 4.46 | Very High |

Level of the BSBA Financial Management Graduates Skills and Abilities Development

Shown in Table 16 is the level of the Bachelor of Science in Business Administration – Financial Management graduates with skills and abilities development which obtained and earned an overall mean score of 4.48 described as very high. This descriptive meaning and equivalent entails that the level of BSBA financial management graduates' skills and abilities development is always manifested since the respondents always agree to all of the identified sub-questions under skills and abilities development. From the ten sub-questions, item number

eight stating *computer and ICT skills* obtained the lowest mean score of 4.32 with a descriptive equivalent as very high which means that the said item and/or construct is always manifested by the BSBA financial management graduates. Moreover, the item which obtained the highest mean score of 4.60 is item number 3 stating *ability to work independently as well as team work and team play* which is described as very high which means that the said item and/or construct is always manifested by the BSBA financial management graduates as they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST).

Table 16. Level of the BSBA Financial Management Graduates Skills and Abilities Development

| Skills and Abilities Development | Mean | Description |
|--|------|-------------|
| Organizational and leadership skill. | 4.50 | Very High |
| 2. Problem solving and critical thinking skills. | 4.51 | Very High |
| 3. Ability to work independently as well as team work and team play. | 4.60 | Very High |
| 4. Creative thinking and creativity, initiative and taking a risk if necessary. | 4.55 | Very High |
| 5. Time Management and decision-making skills. | 4.52 | Very High |
| 6. Writing competence and skills including technical writing. | 4.42 | Very High |
| 7. Communication and interpersonal skills. | 4.52 | Very High |
| 8. Computer and ICT Skills. | 4.32 | Very High |
| 9. Technical and Entrepreneurial Skills | 4.40 | Very High |
| 10. Ability to work under pressure. | 4.49 | Very High |
| 11. Ability to prepare financial reports essential to my field of expertise | 4.45 | Very High |
| 12. Code of ethics applied to my profession | 4.51 | Very High |
| 13. Knowledge with financial management skills such as budgeting, saving, and investing through seminars and workshop | 4.41 | Very High |
| 14. Expertise about business research that is essential for understanding stakeholders' needs and interest in business | 4.47 | Very High |
| 15. Trainings, seminars and workshops about the preparation and evaluation of strategic management planning applied in business. | 4.48 | Very High |
| Overall | 4.48 | Very High |

DISCUSSION

Below is the summary of findings based on the gathered data conducted through online survey using google forms, the conclusions drawn and the recommendations.

Demographic profile of the BSBA Financial Management Graduates

The first research objective of the study is to identify the demographic profile of the Bachelor of Science in Business Administration – Financial Management graduates from batch 2019 to batch 2023. Result of the survey showed that most of the graduates were female and majority of them are working in job-related profession. Also, more than half of the total

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

population were single and their age ranges from 21 to 30 and only seven of them ages 41 and above.

Moreover, the influence of sex on landing a job has been studied in various research works. One study focused on factors affecting graduates' job opportunities, highlighting that female graduates tend to find jobs faster than male graduates (Kong, 2015). Also, women have made strides in gaining more job opportunities compared to men in certain fields. For example, in managerial, business and finance women have increased their presence significantly over the years, with their share rising from 26% to 40% in managerial occupations from 1982 to 2022. However, a study on women's career challenges and opportunities in Bangladesh found that despite increases in women's labor force participation, they still face several barriers in the workplace. These include societal expectations, lack of access to education and training, gender-based discrimination, work-life imbalance, and limited opportunities for career advancement (Raihen, 2023). Moreover, a study using data from 28 EU countries found that the gender gap in job satisfaction disappears when accounting for differences in job preferences between men and women. Specifically, the study found that women place greater importance on being interested in their work and having a good work-life balance, which are strongly associated with higher job satisfaction. This suggests that the gender gap in job satisfaction is largely explained by differences in what men and women value in a job (Redmond & McGuinness, 2019).

In addition, civil status, which encompasses marital status, can influence an individual's chances of landing a job. Research suggests that civil status plays a role in job opportunities, with factors like being married, single, separated, divorced, widowed, or in a civil partnership impacting employment prospects. A study on marital status and productivity found that married individuals tended to have higher job productivity, as measured by performance reviews and promotions, compared to their unmarried counterparts. This can be attributed to marriage premium to potential differences in unobserved characteristics between married and unmarried workers, such as greater stability, commitment, and focus on career advancement (Hafeez et al. 2020).

The relationship between age and employment opportunities is complex and influenced by various factors. Research suggests that age can impact employment opportunities, with different age groups facing distinct challenges and opportunities in the labor market. Young workers tend find more job opportunities and they are more likely to have predictable work hours. They work full time and they are more likely to work only one job. They are most likely to work in leisure and hospitality, retail trade, and education and health services (Economic Policy Institute, 2023). Likewise, there is an increase in employment of young workers as seen in various countries where new youthhiring subsidies have been established or existing programs expanded to promote employment among young people. For example, countries like Australia, Belgium, Chile, Colombia, France, Greece, Hungary, Ireland, Italy, New Zealand, Portugal, Sweden, and the United Kingdom have taken measures to boost youth employment through hiring subsidies and incentives (International Labour Organization, 2023).

This tracer study also describes the educational attainment of BSBA Financial Management graduates of which, result of the survey showed that 11.24% of the graduates earned and obtained a vocational educational degree and/or National Certificate Level II. This vocational education includes bookkeeping NCII, food processing, computer hardware servicing NCII, computer systems servicing, consumer electric servicing NCII, hotel and restaurant management and automotive. In addition, some of the graduates as well continued and obtained degrees for further studies which is Master in Business Administration. Thus, educational attainment positively influences the employment of graduates. Attaining high levels of education is associated with favorable employment prospects, lower unemployment rates, and increased self-sufficiency in the labor market (OECD, 2013)

Employment Profile and Features of BSBA Financial Management Graduates

Based on the result of the survey of this tracer study, 88.17% among the graduate respondents are employed and 11.83 are unemployed. Notably, 52.07% of the graduates are working in a job-related profession which includes credit & collection assistant, entrepreneur, cashier, auditor, bookkeeper, inventory personnel, accounting staff, and account officer. On the other hand, 30.77% of the graduates are currently working as officebased clerk, government employee, agent/specialist/representative, call center agent, marketing, specialist, technical staff, photographer, pharmacist assistant, beautician, receptionist, annotator, leadman, mass media personnel, special media specialist, recruitment officer, and warehouse staff. Lastly, 5.33% of the graduates are also working in the academe. Thus, the Business Administration course is highly versatile, offering a wide range of skills and knowledge that can be applied across various industries and sectors. Research studies emphasize the versatility of a Business Administration degree, highlighting its broad applicability and the diverse career paths it opens up for graduates (Catacutan, 2020).

Moreover, the result of this survey revealed that 82.84% of the respondents are working full-time, 1.78% are working parttime but seeking full-time work, and 3.55% are working parttime but not seeking full-time work. The result also discloses that 37% accounts for graduate respondents who secured regular positions, 33% for job order, 16% for working on contractual basis, 8% for casual employees and 6% for selfemployed. On the other hand, the level of income among the respondents reflects an extent of variation. 4.73% earns 5,000 and below, while 21.89% earns 6,000 to 10,000. Also, 40.24% accounts for those who earn 11,000 to 15,000 while 14.20% earns 16,000 to 20,000 and the remaining 7.10% earns above 21,000. This income distribution of the respondents depicts the challenges faced by some of the employees nowadays however, salaries and benefits play a big role in staying or leaving the first job. It is considered rewarding for a job with higher salaries and numerous benefits being given by the company to its employees. It serves as extrinsic motivating factor to stay the employees in the company especially if they have proper orientation and awareness on how they will be given

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

opportunity for professional growth and on how they see themselves five (5) to ten (10) years as member of the organization (Celis et al. 2013)

In addition, as to the period of seeking the first job after college, the result of this tracer study provides insights into the job search process for college graduates. The fact that 45.56% secure a job within 1 to 3 months suggests that a significant portion of graduates find employment relatively quickly after completing their studies. This could indicate a healthy job market or strong demand for freshly graduated talent in certain fields. The 33.14% who secure a job within 4 to 8 months indicates that for some graduates, it takes a bit longer to find suitable employment. This could be due to various factors such as industry competitiveness, geographical location, or individual circumstances. The 4.14% who find employment within 9 to 12 months represent a smaller percentage, suggesting that for a minority of graduates, the job search process may take a significant amount of time. Lastly, the 5.33% who unfortunately land their job after 1 year might indicate challenges or obstacles faced by some graduates in finding employment (Moore, 2019).

Moreover, it is worth mentioning that the relevance of college degree to the present job is significant as the graduate positively responded the survey. The 49.70% of the respondents believed that their college degree is very much related to their job while 2.96% claimed not at all. The high percentage of respondents who see a strong connection between their college degree and their job suggests that they perceive value in higher education. This underscores the importance of obtaining a college degree for career advancement or job performance in their field (Ali & Jalal, 2018).

Lastly, result of the survey revealed that 52.07% of the respondents are working in a job-related profession. This suggests that a significant portion of individuals believe their college education directly aligns with their career paths. This implies that they have pursued fields of study that are directly applicable to their current professions, such as accounting, auditing, entrepreneurship, and inventory management. The survey results also indicate a diversity of career paths among respondents. Alongside those in job-related professions, there are individuals working in non-related professions (30.77%), such as office-based clerk, government employee, sales agent/specialist/representative, call center agent, marketing, specialist, technical staff, photographer, pharmacist assistant, beautician, receptionist, annotator, leadman, mass media personnel, special media specialist, recruitment officer, and warehouse staff. This suggests that individuals with college degrees may pursue various career opportunities beyond their field of study (Chassamboulli & Gomes, 2023)

Level of the BSBA Financial Management Graduates Attitude to Work

The level of the Bachelor of Science in Business Administration – Financial Management graduates' attitude towards work is very high which indicates that their attitude towards work consistently shows in their behavior. This descriptive interpretation suggests that the graduates consistently exhibit a strong agreement with all the identified aspects of work attitude in the survey questions.

In connection to this, the consistent display of a strong agreement with all aspects of work attitude in the survey indicates that these graduates' attitudes align closely with what is expected or desired in a professional work environment. Employers can expect them to approach their work with enthusiasm and diligence. Their positive mindset and commitment to their work can contribute to higher productivity, job satisfaction, and opportunities for advancement. Their dedication and commitment can contribute to a productive, efficient work environment and organizational performance (Yaday, 2022).

Moreover, employees with positive attitudes are generally more satisfied with their jobs. They find fulfillment and enjoyment in their work, which can lead to higher levels of commitment and loyalty to the organization. Satisfied employees are also less likely to seek employment elsewhere, reducing turnover rates. Positive attitudes foster better teamwork and collaboration within the workplace. Employees with positive attitudes are more likely to communicate effectively, support their colleagues, and contribute positively to team dynamics, leading to improved performance across the organization (Estacio & Cabrera, 2018)

Level of BSBA Financial Management Graduates Quality Education Provisions

The level of BSBA Financial Management graduates' quality education provisions was described as very high. This highlights the consistent demonstration of quality education provisions, as every respondent strongly agrees with all subquestions related to these provisions.

In relation to this, graduates who perceive their education as of very high quality are likely to have greater confidence in their abilities and a positive outlook on their career prospects. This perception can contribute to higher job satisfaction, performance, and opportunities for advancement. This also mean that institution is effective in delivering educational programs that meet or exceed the expectations of its students. The structure of professional courses in universities and the teaching methods employed by educators during educational endeavors significantly contribute to enhancing college students' professional skills, ethical standards, values, and sense of accountability. These factors collectively constitute the primary elements influencing students' readiness for employment (Tian, 2023).

Furthermore, higher educational institutions can better prepare students for the workforce and enhance their employability skills through various strategies and initiatives. Providing opportunities for students to gain practical work experience through internships, placements, and industry projects. This hands-on experience helps students apply theoretical knowledge in real-world settings and develop relevant skills. Emphasizing the importance of transferable skills such as communication, teamwork, problem-solving, and critical thinking. These skills are highly valued by employers and are essential for success in the workplace (Reddy, 2019).

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of BSBA Financial Management Graduates Skills and Abilities Development

The level of the BSBA Financial Management graduates with the skills and abilities development was described as very high. This description implies that the graduates consistently demonstrate a high level of skill and ability development.

This aligns with the findings of a tracer study, which emphasized that the skills obtained during academic education are directly applicable to the respondents' current jobs. All respondents unanimously agreed that they have gained relevant skills and competencies that match the requirements of their professions. Additionally, it was noted that the degree they obtained is closely linked to their current employment. The acquisition of these essential competencies ensures graduates' suitability for industry roles, indicating a strong practical application of their academic learning (Albina and Sumagaysay, 2020). Woya (2019) also advocated for higher education institutions to reinforce graduate attributes in order to contribute effectively to career development objectives.

Likewise, academic in-course activities and student organization activities were perceived as most helpful for developing graduate skills. These activities provide students with opportunities to develop key skills such as critical thinking, communication, teamwork, and leadership. Furthermore, extracurricular activities, such as volunteering, participation in clubs and societies, and internships, were identified as valuable experiences for students to enhance their graduate skills. These activities offer opportunities for students to apply their knowledge in real-world settings, improve their communication and interpersonal skills, and gain practical experience that is beneficial for their future careers (Swingler et al, 2019).

SUMMARY OF FINDINGS

After conducting a survey that garnered responses from over half of the total population, the findings are as follows: Kapalong College of Agriculture Sciences and Technology, specifically its Bachelor of Science in Business Administration major in Financial Management program, yielded a total of 782 graduates from 2019 to 2023. Among them, 587 graduates participated in the survey, comprising 405 females and 183 males. Regarding civil status, 89.90% of respondents are single, while 10.10% are married. Age-wise, 52.07% fall in the 21-25 age bracket, 42.60% in the 26-30 range, with smaller percentages in older age groups. As for educational background, 11.24% have vocational education, while the majority, 88.76%, do not. Additionally, 0.85% pursued a Master's Degree in Business Administration, and 4.26% earned a Teacher Education Unit.

Furthermore, concerning employment rate and status, 88.17% of the graduates are currently employed, while 11.83% are not. The majority of them hold full-time positions. From the employed respondents, 37% have secured regular positions, 33% are on job order, 16% work on a contractual basis, 8% are casual employees, and 6% are self-employed. The majority of graduates earn between 11,000 to 15,000 monthly, with 14.20% earning between 16,000 to 20,000. Regarding the transition to

employment post-college, most graduates find employment within 1-3 months, while only a few took longer than a year. Additionally, 49.70% of respondents believe their college degree is highly relevant to their current job. Notably, most respondents work in professions related to their field of study, while some work in unrelated professions or in academe

Finally, the survey revealed a significantly a high level of work attitude among graduates in financial management, along with an exceptionally high level of quality education provided by the institution. Additionally, graduates were found to have developed their skills and abilities to a very high level.

Conclusion

After the conduct of the survey, the following were the conclusions drawn: the employment rate of the Bachelor of Science in Business Administration major in Financial Management is 88.17%. This suggests that the program has a high success rate in preparing graduates for the workforce and that there is strong demand for individuals with this particular qualification in the job market. On the other hand, 82.84% from the respondents are working full-time and 37% secured regular positions. The survey also revealed that their college degree is very relevant on their field of work. The high relevance of the college degree to their field of work suggests that the Bachelor of Science in Business Administration major in Financial Management program adequately prepares graduates with the skills and knowledge needed for their chosen profession. Also, the significant proportion of graduates working full-time and securing regular positions indicates stability in employment. It suggests that these graduates are not only finding jobs but also establishing themselves in stable, potentially long-term positions within their field.

The survey revealed that the level of attitude to work of the BSBA financial management is very high which indicates that graduates from the program possess a strong work ethic. They are likely motivated, dedicated, and committed to performing well in their professional roles, which can lead to higher productivity, job satisfaction, and career success. Also, the high level of quality education provisions implies that BSBA Financial Management program is very relevant and delivered with quality. The curriculum, teaching methodologies, resources, and faculty expertise contribute significantly to the students' learning experience and academic achievement. Lastly, the skills and abilities development of the graduates were found to be very high. This suggests that graduates have acquired a comprehensive set of competencies relevant to their field. These may include technical skills specific to financial management, as well as soft skills such as communication, problem-solving, and leadership abilities.

Recommendations

Based on the summarized findings and conclusions of the study, the following recommendations are proposed: First, given the percentage of unemployed graduates the institution and the program must forge and strengthen partnerships with businesses, financial institutions, and industry associations to provide students with opportunities for internships, mentorship programs, and networking events. The job placement

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

coordinator of this institution must actively seek out job openings, internship opportunities, and recruitment events relevant to graduates' fields of study. They can curate job listings, organize career fairs, and facilitate connections between graduates and hiring managers to increase job placement rates. Second, due to the notable percentage of graduates working in unrelated fields which may pose a risk that they may not apply the knowledge and skills they acquired and may lead to a waste of their potential, it is then recommended that the institution's job placement coordinator and alumni association's officers must facilitate connections between current students and alumni working in relevant industries to provide mentorship and networking opportunities. Third, since the computer and ICT skills got the lowest mean score, it is recommended that the program must provide handson training sessions, workshops, or laboratory sessions to help students develop practical computer and ICT skills. Offer opportunities for students to practice using computer software, tools, and applications in simulated business scenarios or realworld projects. Fourth, given that the majority of graduates who took vocational education were related to bookkeeping, it is advisable for both the institution and the BSBA Financial Management program to maintain and enhance their efforts in providing students with opportunities for immersive training in bookkeeping. This includes offering international bookkeeping training programs that offers international certifications.

A TRACER STUDY OF BACHELOR IN PUBLIC ADMINISTRATION GRADUATES FROM ACADEMIC YEAR 2018 TO 2023

Khate Jay C. Failagmao, Letty Q. Poliquit, DPA

Researchers, College of Agriculture, Sciences and Technology Maniki, Kapalong, Davao Del Norte

Article DOI: https://doi.org/10.36713/epra16770

DOI No: 10.36713/epra16770

ABSTRACT

This quantitative descriptive study aimed to determine the profile of the 118 Bachelor of Public Administration (BPA) graduates from the Academic Year 2018 to 2023 at Kapalong College of Agriculture, Sciences and Technology (KCAST). This tracer study involves the gathering of quantitative information through the use of online survey forms to get the necessary data, the study employed the descriptive quantitative technique of research. According to findings, 65% of graduates are currently employed, with the majority of them holding full-time jobs, the remaining 35% are not working yet because of their job preferences. Further, the results showed that 44% are working full-time, 25% are working on contractual basis, 10% in regular positions, 2% are working part-time, and another 1% are self-employed. Then, 43% are employed in the government, 18% as office-based clerk, 9% as sales agent/representatives, 18% as account specialist, 8% as marketing specialist, and the remaining 4% as call center agent. The level of attitude to work obtained a very high descriptive rating which means that the public administration graduates always manifested the said behavior. The quality education provisions of the institution as well as skills and abilities development obtained a high descriptive rating which means that the public administration graduates manifested the influence of the factor as extensive. It is recommended that to achieve the program's core academic goals and objectives, the institution should strengthen its connections, collaborations, and partnerships with other governmental and non-governmental organizations.

KEYWORDS: descriptive-quantitative method, graduate tracer study, public administration study

INTRODUCTION

Rationale

The discipline of public administration is an application of both art and science, not simply one of them. A degree program in public administration trains students for positions in government and public administration. It is meant for students who aspire to dedicate their lives to serving the public in civil society and government (CHED Memorandum Order 6 s. 2010).

A three-year 2006–2008 study of Open University Malaysia (OUM) graduates was conducted in Malaysia. According to their findings, OUM graduates' satisfaction with the institution's services has grown during the previous three years. Graduates' overall development, especially in terms of maturity, independence, and teamwork, was greatly impacted by their study programs. Further evidence of the importance of lifelong learning comes from the fact that over 75% of respondents said they would be interested in continuing their education after graduation (Latif & Bahroom, 2010).

According to the University of Pangasinan's Graduate Tracer Study, recent graduates face difficulties finding employment, which logically causes them to wait longer for positions due to inexperience (Rocaberte, 2016). Additionally, Verona (2011) provides support for the idea that the government should

address labor mismatch concerns, which arise when there is not enough labor available overall to solve the loss in productive labor, particularly in urban or semi-urban areas.

The government, which is the biggest employer in the nation, has to have a steady supply of people who will be devoted and committed public servants notwithstanding the challenges facing public administration. In order to pursue causes aimed at the public benefit, civil society organizations require employees and volunteers who share the same ideals to lead and oversee their advocacy and service delivery programs (CHED Memorandum Order 6 s. 2010).

The Kapalong College of Agriculture, Sciences, and Technology was the first local college in Region XI to receive accreditation from the Association of Local Colleges and Universities – Commission on Accreditation (ALCUCOA) Level 1 upon its establishment in 2005. As part of its ongoing efforts to improve its pedagogies and prepare its graduates for the workforce, the college decided it was appropriate to carry out a tracer study on its professional graduates in order to determine their employability, including their employment status. Additionally, this is to gather information for the institution regarding innovations or enhancements that can be added to the current curriculum to help its young professionals

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

become even more employable in the field of employability related to their course of study and field of expertise.

Therefore, based on this premise, a tracer study must be carried out to ascertain the employment rate and status of the graduate students as well as their self-rated assessments regarding their work ethic, the institution's quality of education, and the graduates' acquisition of skills and abilities after earning a Bachelor of Public Administration (BPA). This is the institution's way of responding to its ideals and social responsibilities by creating a curriculum that will guarantee students' employment after graduation and strengthen and expanding its ongoing provision of high-quality education.

OBJECTIVES OF THE STUDY

High rates of underemployment and unemployment affects the Philippines. It has 21% of jobless individuals held a college degree in 2012. The country's unemployment rate was 7% at that time (Bureau of Labor and Employment Statistics, 2012). Thus, the target audience for this study was KCAST public administration graduates from the 2018–2023 academic year. Specifically, this study sought to answer the following research objectives:

- 1. To describe the demographic characteristics of the graduate-respondents in terms of:
 - 1.1. sex;
 - 1.2. civil status;
 - 1.3. age;
 - 1.4. year graduated;
 - 1.5. educational attainment and development;
 - 1.6. relevance of the degree to their present
- 2. To describe the employment profile and features of the graduate-respondents in terms of:
 - 2.1. employment rate;
 - 2.2. employment status;
 - 2.3. level of income;
 - 2.4. period of seeking the first job after college
 - 2.5. Nature of job;
 - 2.6. relevance of college degree to the present job; and
 - 2.7. job mismatching.
- 3. What is the level of the graduates-respondent self-rated evaluation with their attitude to work?
- 4. What is the level of the graduates-respondent selfrated evaluation with the quality of education provision of the institution?
- 5. What is the level of the graduates-respondent selfrated evaluation with the skills and abilities obtained in the institution and its usability with their present occupation?

METHODS

Research Design

This study employed a quantitative descriptive design. The fundamental nature of descriptive studies is the collecting of quantitative data that can be compiled in numerical form, this

tracer study employed the descriptive technique of research. It is also underlined that the features of the population or phenomenon under study were described using this method. Without emphasizing the reasons behind a certain phenomenon, the primary goal of this research method is to characterize the characteristics of a demographic segment. Also, it discusses the research topic but leaves out the explanation for why it occurs. In order to test theories or find answers, data collection is also necessary. It also ascertains and documents the current state of affairs. Lastly, descriptive research is a subset of scientific study that methodically describes a phenomenon, event, condition, or fact pertaining to a particular region or population (Gay, 2016).

In context of the current study, the descriptive method of research was utilized to describe the employment rate and employment status of the Kapalong College of Agriculture, Sciences, and Technology, Bachelor of Public Administration. This is done in order to quantify graduates' employment rate and to clearly identify their work status and demographic profile, including gender, age, and marital status.

Population and Sample

Primarily, the population and sample of this tracer study were the graduates of Bachelor of Public Administration in Kapalong College of Agriculture, Sciences and Technology from academic year 2018 up until academic year 2023. Hence, the study used complete enumeration random sampling since the very purpose of the study is to track and trace graduates in terms of their employment status and rate. To be specific, in year 2018, there are 32 respondents of which there are 11 males and 21 females; in year 2019, there are 26 males and 26 females; in year 2022, there are 5 males and 14 females; lastly, in year 2023, there are 10 males and 5 females which make a total of 118 respondents. Thus, the total population and sample of this study were 52 males and 66 females for a total of 118 Public Administration respondents.

Research Instrument

This study utilized a researchers-made tracer survey questionnaire which was validated by the panel of experts and examiners in order to ascertain the content validity and reliability of the survey questionnaire and to verify if the survey's design and content would accurately measure the study's desired outcome. Experts also determine this by assessing the items' and directions' clarity, presentation and organization, the items' suitability and adequateness within each category, the items' achievement of the intended goal, their impartiality, and the rating system's scale evaluation.

Furthermore, the aim of the tracer survey questionnaire was to track the study's employment history and current status, to keep track of their educational progress, to gauge their level of work-related attitude, to verify their assessment of the institution's quality of education, and, finally, to gauge the degree to which the institution fostered and enhanced their diverse skill set while they were enrolled in KCAST.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The parameter limits below were used in the interpretation of the degree of attitude toward work, evaluation of the quality education provision, and the skills and abilities of the Bachelor of Public Administration graduates in KCAST in order to provide a clear understanding and interpretation of the results and data gathered in this tracer study.

Data Collection Procedure

Data collection is the process of gathering, quantifying, and interpreting precise research insights through the application of established, verified methods. Furthermore, regardless of the research subject, it is typically the first and most crucial phase in the process (Questionpro, 2020). Thus, the following primary steps were taken responsibly to gather the needed data of the study.

First, the researcher asked the college registrar for the total number of graduates from the academic year 2018 to the academic year 2023, since the population and sample of the study includes the institution's graduate students pursuing a bachelor's degree in public administration. This ensures that precise and accurate data are taken into account and given priority.

Second, the researcher developed the survey tracer questionnaire after determining the total number of graduates. This helped to ascertain the graduates' employment rate, employment status, educational attainment and development, work attitude, access to high-quality education, and growth of their skills and abilities.

Third, using Google Forms, the researcher began tracking the graduates to learn about their employment status and rate, educational attainment and development, work attitude, access

to high-quality education, and skill and ability development after creating the survey questionnaire.

Fourth, the researcher grasped the questionnaire and began the tally in order to get ready for the data analysis after completely answered by graduate students.

Finally, the data was examined and processed by the school's designated statistician in order to display the collected data in a tabular and graphical format that would make understanding the outcome easier and better.

Data Analysis

For analyzing the data, mean was used for getting the average score in measuring the level of graduate's attitude to work, evaluation of quality education provision and the development of different skills and abilities.

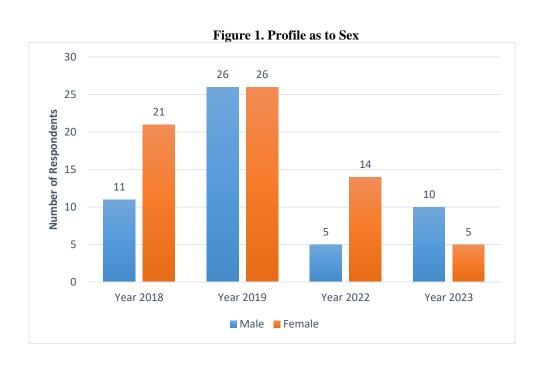

RESULTS AND DISCUSSION

The study's statistical applications led to the discussion of the interpretation and descriptive-quantitative analyses, which were based on the responses obtained from the data gathering instrument and the profile of the BPA graduates.

Demographic Characteristics of the Graduate Respondents

Sex

Figure shows in year 2018, there are 32 respondents of which there are 11 or 34% males and 21 or 66% females; in year 2019, there are 26 or 50% males and another 26 or 50% females; in year 2022, there are 5 or 26% males and 14 or 74% females; lastly, in year 2023, there are 10 or 67% males and 5 or 33% females which make a total of 118 respondents in which 56% were female and 44% were male.

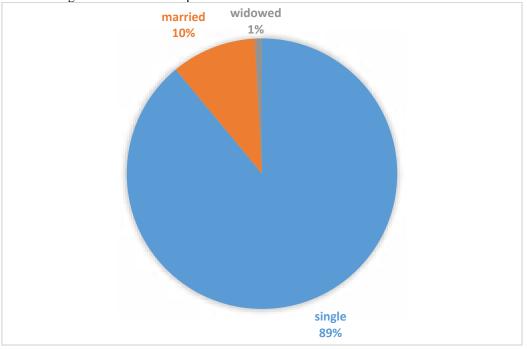

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Civil Status

As shown in the figure, the majority of graduate respondents 89% or 105 respondents are single and 10% or 12 respondents

are married, and the remaining 1% or 1 is having the widowed civil status.

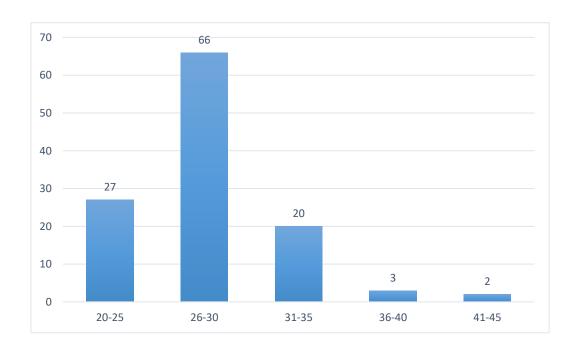

Age

Shown in the figure is the age of the Bachelor of Public Administration from academic year 2017-2018 to 2022-2023. From the total of 118 graduates who responded to the online survey conducted through google forms, there are 27 graduates whose age ranges from 20-25, another 66 graduates whose age ranges from 31-35 and there are 3 graduates whose age ranges from 36-40 and lastly, the remaining 2 graduates whose age ranges from 41-45.

Year Graduated

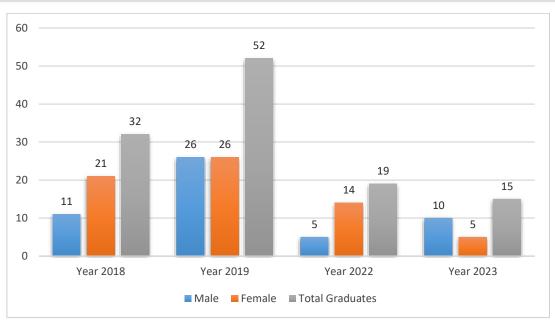

Shown in the figure is the total number of Bachelor of Public Administration from academic year 217-2018 to 2022-2023. For the year 2018, there are 32 respondents of which 21 are males and 32 females. In 2019, there are 52 respondents and 26 of this are males and another 26 are females. In 2022, there are 19 respondents which composed of 5 males and 14 females. Lastly, in 2019, there are 15 respondents which composed of 10 males and 5 females.

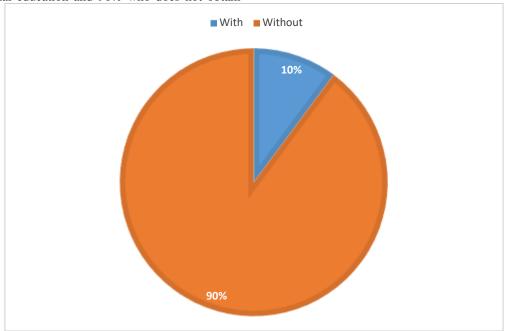

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Educational Attainment and Development

Shown in the figure is the total number of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023 who obtained a vocational education and/or national certificate. The survey reported that there are 10% of he graduates who obtained vocational education and 90% who does not obtain

vocational education. This vocational education includes Automotive Servicing, Massage Theraphy, Electrical Installation and Maintenance, Trainers Methodology, Health Care Service, Computer Science, Computer Hardware Servicing, Driving, Electrician and Computer Technology.

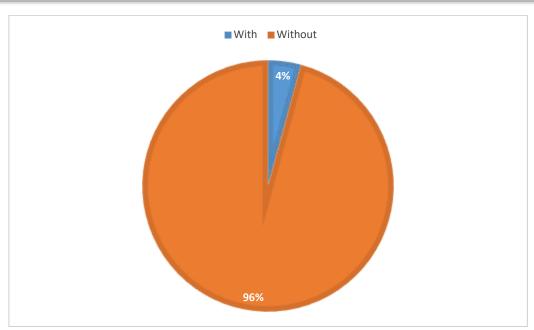

Shown in the figure is the total number of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023 who obtained and undergone post graduate degree or studies. The survey reported that there are only 4% of the respondents who obtained and undergone post graduate studies or degree and there are 96% who do not proceed to further studies. Further, survey reported that there are only two degrees which

graduates obtained and these are the ongoing Master in Public Administration, and earning units of Bachelor of Secondary Education major in Social Studies to which the source of their funding is their work and family income, and the institution which they enrolled are Kapalong College of Agriculture, Sciences and Technology, North Davao College of Tagum and University of Mindanao.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

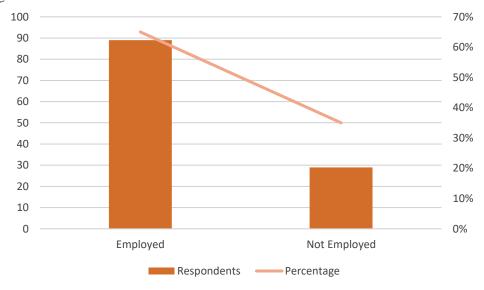

Employment Profile and Features of BPA Graduates

The second research objective of this tracer study is to determine the employment profile and features of the Bachelor of Public Administration from academic year 2017-1018 to 2022-2023 which includes the following: employment rate; employment status; level of income; period of seeking the first job after college; relevance of college degree to the present job; and job mismatching.

Employment Rate

As to the employment rate of the respondents of Bachelor of Public Administration, shown in the figure from academic year 2017-2018 to 2022-2023, approximately 89 or 65% of the graduates are working both public and private field, and 29 or 35% are not working yet because of their job preferences.

Employment Status

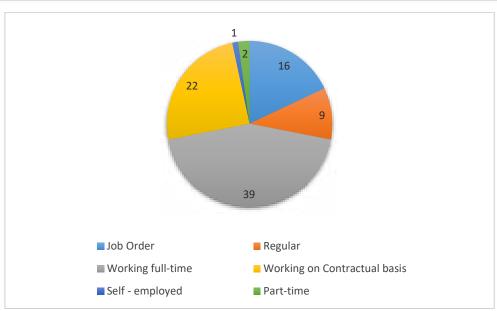

Shown in the figure is the employment status of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023. Result of the survey showed that from the 118

respondents in this aspect, 39 of them are working full-time, 22 are on a contractual basis, another 16 working in job order, the other 9 working as regular employee, 2 are working part-time and lastly, the remaining 1 respondent is self-employed.

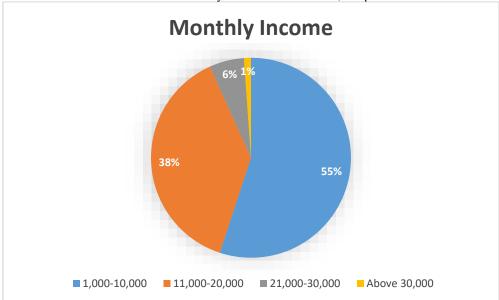

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of Income

Pertaining to the level of income of the respondents as shown in the figure of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023. Result of the survey

showed that 49 or 55% earned 1,000-10,000 salary every month, 34 or 38% who earned 11,000-20,000 a month and another 5 or 6% 21,000-30,000 a month and lastly, there is 1 or 1% who earned above 30,000 per month.

Period Seeking of Job after College

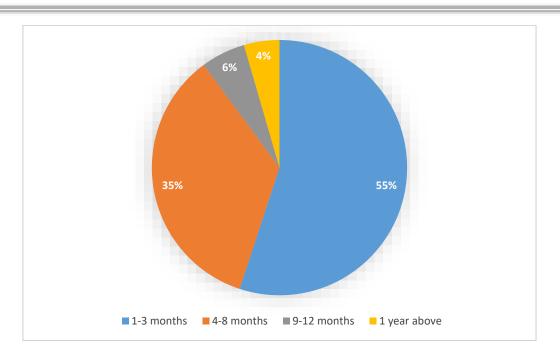

Data in figure further established the period seeking of job after college of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023. Result of the survey showed that

from 118 respondents in this aspect, there are 49 or 55% was already earning 1-3 months after graduation, 31 or 35% was hired in 4-8 months after graduation, 5 or 6% within 9-12 months and lastly, 4 or 4% landed a job after a year already.

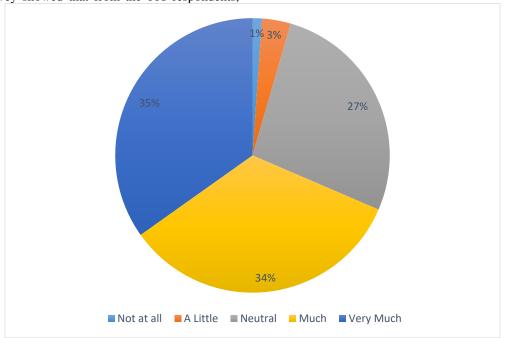

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Relevance of College Degree to the Present Job

Shown in the figure is the relevance the college degree of the respondents of Bachelor of Public Administration from academic year 2017-2018 to 2022-2023 to their present job. Result of the survey showed that from the 118 respondents,

there are 31 or 35% chose very much relevance of the degree to their job, 30 or 34% chose much relevant and another 24 or 27% chose neither. The other 3 or 3% chose a little relevant and lastly, the remaining 1 or 1% chose not at all.

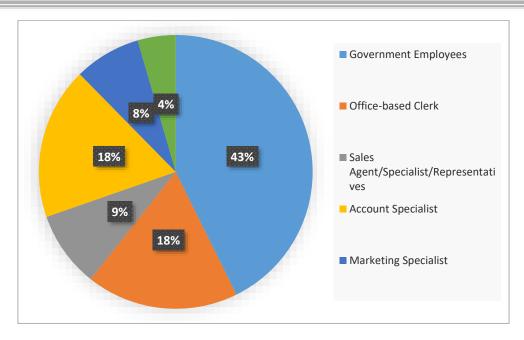

Job Mismatching

Showed in the figure gathered from the respondents of the Bachelor of Public Administration from academic year 2018-2023. Result of the survey showed that from the 118 graduates, respondents are employed in the government that has 38 or 43% which includes instructor, teacher, administrative staff/aide, liason officer, facilitator, mayor's secretary, Barangay Kagawad, executive assistant, enlisted personnel (private), fire

officer, enumerator, and social welfare aide. The respondents working in private sector which is 16 or 18% was working in the office-based clerk, there are 8 or 9% working as sales agent/specialist/representatives, another 16 or 18% working as account specialist, the other 7 or 8% working as marketing specialist. Lastly, the remaining 4 or 4% are working as call center agent and/or representative.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of the Bachelor of Public Administration Graduates Attitude to Work

Shown in Table 1 is the level of the Bachelor of Public Administration graduates with their attitude to work which obtained and earned an overall mean score of 4.36 described as very high. This implied that the level of graduates-respondent self-rated evaluation with their attitude to work is always manifested since the respondents strongly agree to all the identified sub-questions under attitude to work.

The overall mean score was based from the very high mean and to the very low mean. In the table, it showed that of all the ten sub-questions, item number 3 stating - I accepted assignments and tasks given to me at work without complaints with the mean score of 4.51 or very high got the highest mean connoted that the attitude to work influence of the factor is very extensive. And also, item number 1 - I am very interested, happy and satisfied with my work and it is very important for me with the mean score 4.22 got the lowest mean among all which connoted that the attitude to work influence of the factor is still very extensive.

Table 1: Level of the Bachelor of Public Administration Graduates Attitude to Work

| Items | Mean | Descriptive Equivalent |
|--|------|---------------------------|
| 1. I am very interested, happy and satisfied with my work and it is very important for me. | 4.22 | Very High |
| 2. I like the kind of job and work I am doing. | 4.25 | Very High |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of the Bachelor of Public Administration Graduates Quality Education Provisions

Shown in Table 2 is the level of the Bachelor of Public Administration graduates with quality education provision which obtained and earned an oerall mean score of 4.14 described as high. This descriptive meaning and equivalent entails that the quality of education provision in the institution influence of the factor is extensive since the respondents always agree to all of the identified sub-questions under quality education provision.

From the ten sub-questions, item number 8 stating well-trained and self-renewing faculty members and staffs, with the mean score of 4.21 or very high which connotes that the influence of the factor is always extensive. Further, item number 5 stating quality of learning facilities for first-hand and direct experiences like of different laboratories got the lowest mean among all. This connoted that the quality of education provision influence of the factor is still manifested.

Table 2: Level of the Bachelor of Public Administration Graduates Quality Education Provisions

| Items | Mean | Descriptive Equivalent |
|---|------|---------------------------|
| 1. Availability of course materials and different learning resources needed for our studies. | 4.14 | High |
| 2. Quality of course contents from courses offered as well as the teaching and learning process. | 4.13 | High |
| 3. Conduciveness of the learning environment and atmosphere. | 4.10 | High |
| 4. Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.18 | High |
| 5. Quality of learning facilities for first-hand and direct experiences like of different laboratories. | 4.02 | High |
| 6. Quality of different courses offered in the program that develops the total sum of the student skills. | 4.14 | High |
| 7. Level of optimum interaction and contact with my fellow students through different in-campus activities. | 4.17 | High |
| 8. Well-trained and self-renewing Faculty members and staffs. | 4.21 | Very High |
| 9. Different trainings, seminars and workshops that prepare students for employment. | 4.19 | High |
| 10. Varied learning assessments and instructions which assess students' progress and learning fairly and equally. | 4.14 | High |
| Overall | 4.14 | High |

Level of the Bachelor of Public Administration Graduates Skills and Abilities Development

Shown in Table 3 is the level of the Bachelor of Public Administration graduates with skills and abilities development obtained in the institution and its usability with their present occupation. The data manifested an overall mean score of 4.17 this implied that the level of skills and abilities was high.

The overall mean score was based from the very high mean and to the very low mean, as to item number 5 stating *time management and decision-making skills* has the highest mean score of 4.25 or very high. This connoted that the influence of the factor is very extensive. Additionally, item number 9 stating *technical and entrepreneurial skills* with the lowest mean score obtained 4.06 or high. This connotes that the technical and entrepreneurial skills influence of the factor is manifested.

Table 3: Level of the Bachelor of Public Administration Graduates Skills and Abilities Development

| Items | Mean | Descriptive Equivalent |
|---|------|---------------------------|
| 1. Organizational and leadership skill. | 4.12 | High |
| 2. Problem solving and critical thinking skills | 4.20 | Very High |
| 3. Ability to work independently as well as team work and team play. | 4.18 | High |
| 4. Creative thinking and creativity, initiative and taking a risk if necessary. | 4.18 | High |
| 5. Time Management and decision-making skills. | 4.25 | Very High |
| 6. Writing competence and skills including technical | 4.10 | High |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| writing. | | |
|---|------|-----------|
| 7. Communication and interpersonal skills. | 4.15 | High |
| 8. Computer and ICT Skills | 4.18 | High |
| 9. Technical and Entrepreneurial Skills | 4.06 | High |
| 10. Ability to work under pressure. | 4.22 | Very High |
| 11. Ability to write the essentials and basics of effective community planning. | 4.13 | High |
| 12. Code of ethical standards applied in my profession. | 4.24 | Very High |
| 13. Knowledge in public leadership and good governance through seminars and workshop. | 4.19 | High |
| 14. Expertise about research and development for good governance. | 4.17 | High |
| 15. Skills and organizational management in public relation. | 4.18 | High |
| Overall | 4.17 | High |

DISCUSSION

Below is the summary of findings based on the gathered data conducted through online survey using google forms, the conclusions drawn and the recommendations.

Demographic Profile of the Bachelor of Public Administration Graduates

The first research objective of the study was to identify the demographic profile of the Bachelor of Public Administration graduates from batch 2018 to batch 2023. Result of the survey showed that most of the respondents were female and majority working in the private sector which is also part of the context of public administration. Given that the distribution is almost equal, the respondents' composition is beneficial because both sexes are adequately represented. Also, more than half of the total population were single and their age ranges from 26-30.

The findings could be explained by a survey finding that many millennials desire to establish their place in the world financially and professionally because of the uncertain state of the global economy. Because of this, a lot of young professionals don't get married (Power of Positivity). As stated (Rachelle, 2012), among other things, information about the graduates' professional careers, status, and income is needed, as is information about the value of and connection between knowledge and skills, job needs, location of the workplace, and position.

According to studies, a person's sex can have an impact on their employment. A study on young people's employment revealed the disparities between the employed and unemployed youth in terms of sex, gender identity, and how these factors interact with views of employability. Women appear to be more optimistic about their chances of finding work when they are unemployed when it comes to sex. Men, on the other hand, are more optimistic than women about their prospects of finding work in their company (Cifre et al., 2018).

Another claim clarified why it's more difficult for women than for males to find employment when they wish to work. With almost 16% of women unemployed, Northern Africa and the Arab States are severely affected by this issue. Moreover,

although vulnerable employment is common for both men and women, there are some vulnerable job categories where women are prominent compared to men: women are more likely to assist in their homes or in the businesses of their relatives, whereas men are more likely to work in own-account employment (International Labor Organisation, 2017).

Furthermore, a study pointed out and discovered that married women with small children at home who could work part-time reported higher levels of satisfaction with their work-life balance than older women without children. This study shows that married women who choose to work part-time tend to be more successful than those who remarry and have no kids. On the other hand, mothers of little children who work full-time experience is opposite (Kifle et al., 2014).

Similarly, a different study found a statistically significant three-way interaction with statistically significant differences in the mean applicant rating scores for females. Lesbian women were rated higher when they were single than when they were married, and heterosexual females were rated higher when they were alone. It is imperative for recruiting managers to acknowledge that biases related to marital status, gender, and sexual orientation might influence hiring decisions and introduce unintentional bias. In order to ensure that non-job-relevant factors do not affect their hiring decisions, hiring managers should also adopt preventative measures (Nadler & Kufahl, 2016).

In the meantime, studies have shown that people who are more willing to try a new experience will be more likely to switch careers. In addition, it has been pointed out that factors influencing career mobility and career change are both individual characteristics and the labor market. As a result, when people were younger, they were more likely to change their organization, industry, and profession, with age having the strongest influence (University of East Anglia, 2018).

Finally, another study showed that younger workers are more concerned with the variety of tasks as opposed to older workers. For example, a survey has shown that younger workers with a higher variety of tasks are more satisfied with their work, as

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

they are able to perform a variety of tasks. In contrast, older workers are more likely than younger workers to be attracted to work that has a higher level of significance for their tasks, contrary to the idea that younger workers have greater attraction to jobs with lower levels of importance (Zacher et al., 2017).

Educational Attainment and Development

The tracer study also describes the degree of education acquired by Bachelor of Public Administration graduates who, according to the results of the survey, 10% have completed and attained a diploma or higher national certificate level II.

This includes a national certificate in automotive servicing, massage therapy, electrical installation and maintenance, trainer methodology, health care service, computer science, computer hardware servicing, driving, electrician and computer technology. Moreover, some graduates have continued their studies and acquired degrees from the Faculty of Public Administration as Master of Social Studies or earned units for a bachelor's secondary education degree.

The majority of respondents want to improve their skills in order to secure employment in the future, especially in the Public Sector, as well as enhance their competences and qualifications. According to Loughlin & Barling (2001), there are two main arguments as to how experience affects one's views on a job. The first argument is that the motivation of the employee is a response to the company; that is, the employee's attitudes are likely to change as a result of the company.

This suggests that after they start working, those with no prior work experience will no longer have their idealistic expectations. First, consider salary as an example: someone joining the government agency could find that their wages are too low. A man who has decided to remain with the company may undergo a process of rationalization in order to convince himself that massive income is not his first priority (Houston, 2000).

Employment Profile and Features of Bachelor of Public Administration Graduates

Based on the result of the survey of this tracer study, more than half of the graduates are already employed and majority of them are working in the private sector as part of the context of public administration however, some are working in the government, in call center agents, office-based clerk, sales agent, account & marketing specialist. Moreover, they work fulltime jobs that pay from 1000 to 20,000 a month.

Moreover, the tracer study also showed that graduates have a job within less than one month of their graduation and are currently employed with salaries ranging from P10,000.00 to less than P15,000.00 per month. Similarly, according to Lalican (2007) standpoint, she stressed that gaining knowledge in a field of specialization together with skills and competencies can help graduates become more productive, efficient, and knowledgeable in their current roles.

There were only 4 pursuing Master of Public Administration degrees as their highest educational attainment and none among the respondents who were holders of Doctor of Public Administration. In terms of employment status, 39 fulltime workers, 22 contract workers, 16 occupational orders, 9 regular workers, 2 part-time workers and 1 unemployed worker were employed. The curriculum relevance according to the respondents was 31 and those who answered NO did not give any suggestions to further improve the curriculum. Among the competencies measured, time management skills ranked 1st, code of ethical standards ranked 2nd while work under pressure ranked 3rd. In addition to information on the value and correlation of knowledge and skills, job requirements or places of employment, Rachelle (2012) pointed out that graduates should also be aware of their professional career, status and income.

Due to a large underemployed and unemployment rate, the Philippines, a developing country, is facing the same problems that have plagued it for decades. The rate of population growth and labour force expansion is still above the level of officially created jobs. However, the creation of jobs is not the same as the granting of degrees by universities (De Ocampo et al., 2012). This will provide graduates with a chance to succeed, find work and be recognized in their fields as well as the capacity to act as valuable resources on a market which is highly competitive (Menez, 2014).

Menez (2014) claims that higher education institutions are not only focused on teaching, but also have a key role in maintaining competitive economies as well as ensuring graduates' desire to find employment, gain societal recognition and succeed in their chosen fields.

Typical factors that contribute to this mismatch between industry demand and education supply are the lack of existing labour market information on student choice, course selection or staffing plans as well as an insufficient level of training for graduates in view of Industry's limited involvement in teaching and curriculum development.

Level of the Bachelor of Public Administration Graduates Attitude to Work

It was noted that the degree of bachelor of public administration graduates was very high in terms of their attitude to work. This indicates that, as the respondents strongly agree with all of the identified sub-questions on the attitude to work, the respondents' own assessments of the attitudes of the graduates to work are always manifested.

In addition, according to Moreland (2006), employability is a combination of skills, knowledge, and character traits that increase a person's chances of securing and succeeding in his or her chosen career for the benefit of himself, his family, the workforce, and the economy. In order to get a job, graduates must have the majority of their skills required by employers. In order to participate in the knowledge economy, which will increase their economic status and national prosperity, they must also be able to make use of what they learn from college.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of the Bachelor of Public Administration Graduates Ouality Education Provisions

It was noted that the level of graduates with a degree in public administration with quality education was high. This descriptive meaning and equivalent entails that the level of the BPA graduates' quality education provision is manifested since the respondents agree to all of the identified sub-questions under quality education provision.

In the real world of academic, the role of higher education institutions extends beyond providing instruction; they are also responsible for ensuring that their graduates succeed in their fields, are employable, and are valuable assets in a market that is highly competitive. However, one of the main causes of underemployment and the challenge of obtaining work is graduates' incapacity to satisfy the industry's requirements for skills and competencies Higher education institutions play an important role in the academic world beyond providing training; they also bear responsibility for ensuring that their graduates are able to find employment, and have valuable assets on a market which is highly competitive. However, the lack of graduates who are able to fulfil industry requirements in terms of skills and competences is one of the major causes for under employment and job challenges (Menez, 2014). Moreover, higher education is one of the most important tools to adapt to changes in 21st century's complex and evolving character. In addition to the additional functions of research, higher education is an important and strategic part of development as it fulfils a trilateral role in production, research and teaching.

Level of the Bachelor of Public Administration Graduates Skills and Abilities Development

The level of a bachelor's degree in public administration with developing skills and abilities is high. The level of skills and abilities developed by BPA graduates needs to be reflected in this descriptive meaning and equivalent is manifested.

One of the main challenges facing today's universities is to link training with employability. In order to gain a deeper understanding of these ideas, the researcher relies on several theories concerning the relationship between education and employability in graduate studies. One of these theories is the human capital hypothesis, which argues that education gives people a means to acquire useful abilities. In the area of education, this theory claims that knowledge and skills which directly affect workers' work are acquired by training (Becker, 2002).

In addition, another study has shown that today's society is in need of appropriate and proper implementation of life skills training. Facilitating the teaching of life skill to students can help, because it addresses children's needs in a specific way and provides them with motivation for learning how to change their lives: Practical, mental, emotion, social and management knowledge. Furthermore, it is noted that providing students with life skills training has a positive impact on changing their attitudes, thinking and behaviour by giving them an environment where they are supported (Ravindra et al., 2017).

Summary of Findings

The results of the survey, which was successful in answering more than half of the respondents, are summarized as follows: the institution, Kapalong College of Agriculture, Science and Technology produced a total of 118 graduates consisting of 52 males and 66 females. In terms of civil status, the survey showed that 89% of the graduates is single and 10% is married, and the remaining 1% is widowed. About age, the majority of graduates aged 26 to 30, only two people who are over 41 years old above. In addition, the highest number of respondents was 52 graduates in class 2019 and the lowest were 15 respondents in class 2023. Lastly, there are 10% of the graduates obtained a vocational course or national certificate and only 4% of the graduate proceed to further studies.

In terms of employment, 65% of graduates are employed, while 35% are unemployed. The survey also revealed that nearly half of the graduates responding to the survey are employed full-time, while the remaining are employed contractual, part-time, regular, on a job order, or as self-employed workers. Further, most of the graduates have a monthly income of 1,000 to 10,000 and there are only few who earned at least 30,000 above monthly and most of them took 0-3 and 4-8 months to land a job after college to which most graduates agreed that their college degree is very much relevant with their present as it obtained a total of 35%. Lastly, the number of graduates who responded to this survey working in government stands at 43%.

The survey also showed that graduates of the Bachelor in Public Administration have a very high level of attitude towards their work, the level of quality of education provided by the institution is good and that the level of skills and abilities is high.

CONCLUSION

After the conduct of the survey, the following were the conclusions drawn: the employment rate of the BPA graduates from batch 2018-2023 is 65% which can be gleaned that three-fourth of the graduates is competent enough to look for and to land a job. And most of the graduates are working on full-time basis.

Finally, it can be noted that the institution offers a quality education with courses and disciplines that prepare graduates to enter the labour market, given that the survey showed that the college degree is very important to the job.

In addition, the level of the attitude of work of the graduates' students obtained a descriptive equivalent of strongly agree to which it signifies that the graduates' students perform their tasks and responsibilities efficiently and effectively.

In addition, the level of the institution's quality education provision has been described as good enough to indicate that KCAST offers quality education to most of its graduates through the provision of different trainings and seminars, the provision of different learning resources and materials, as well as qualified and experienced faculty and staff.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Finally, the degree of skills and abilities developed by graduates is high which indicates that KCAST was able to develop, fine tune and enhance a variety of interests, competences and capabilities within its students during their studies in this institution.

RECOMMENDATIONS

The following recommendations are based upon the summary findings and conclusions of the study: First, in order to meet the basic academic goals and objectives of the program, it is recommended that public administration pursue partnerships, collaboration or partnership with other government and non-governmental organizations. This is particularly important since the current implementation of education based on outcomes is being carried out by public authorities.

Secondly, the program of Public Administration will continue to offer program which respond to students' different needs whether or not they are connected with government bodies.

Finally, more research on tracer studies should be carried out by future researchers on the wide range of methods for obtaining the best feedback from graduates and on the skills developed by graduates.

ABSTRACT

This tracer study assessed the employment status and job readiness of graduates from the Bachelor of Science in Business Administration-Marketing Management program at a local college in Kapalong, Davao del Norte, focusing on batches from 2022 to 2023. Using a descriptive research methodology, the study gathered data from 143 alumni through an online survey conducted via Google Forms. Findings revealed that 88.11% of the surveyed graduates were employed, with 46.85% working in marketing-related jobs, 6.29% in academia, and 34.97% in government or non-job-related professions. Employment status varied, with 38.46% as a permanent position, 27.27% on contractual terms, 10.49% as job orders, another 10.49% self-employed, and 1.40% in probationary positions. In the same manner, 35.66% of these graduate-respondents are now earning a salary range of Php.11,000-15,000 and 53.15% of them were able to find a job within 1-3 months after graduation. Additionally, 2.10% of the respondents were pursuing further studies, specifically master's degrees. The graduates rated very high in terms of work attitude, the quality of education provided, and the development of skills and abilities, consistently exhibiting these positive attributes. However, the study identified a notable deficiency in computer and ICT skills among the graduates. Thus, it is recommended that the college enhance its marketing curriculum by incorporating practical training in commonly used computer and ICT software to better prepare students for the demands of the job market.

KEYWORDS: Tracer Study, Marketing Management Graduates, Employment

INTRODUCTION

Higher Education Institutions (HEIs) play a pivotal role in preparing students to acquire essential knowledge and professional skills essential for the progress of their chosen disciplines. Academic establishments deliver high-quality instruction, engage in pertinent research endeavors, and undertake meaningful extension activities to cultivate undergraduate students into proficient and high-caliber future professionals who align with the demands of the job market and the global community (Camuyong et al., 2023).

Enhancing educational attainment in the labor force is anticipated to bring about enhanced opportunities and higher income expectations in the job market. However, despite a reported high employability rate of graduates surpassing 80%, Malaysia grapples with a persistent challenge— a noticeable mismatch between education and occupation leading to labor shortages in skilled jobs, as highlighted in a 2019 World Bank report. This structural issue intensifies the broader skills gap problem in the country, with employers consistently facing a scarcity of qualified workers (MOHE, various years). This posits that graduates in developing countries, particularly in Malaysia, encounter formidable barriers such as a discernible skills gap, the concentration of skilled jobs in urban areas disadvantaging rural youth, insufficient wages, and prevalent

gender and ethnic discrimination in the labor market. Additional barriers include financial constraints impeding self-employment and informal decisions at the individual and family level hindering youths from realizing their life and career aspirations. This comparison of high graduate employability rates and the persistent mismatch between education and labor market needs underscores the critical nature of addressing these structural challenges to bridge the skills gap and ensure meaningful employment for graduates in Malaysia (Abu Rahim et al, 2023).

Unemployment and underemployment pose persistent challenges for graduates in the Philippines, distinguishing it from its Asian counterparts. The root cause lies in the continuous outpacing of the working-age population and labor force size, surpassing the creation of new job opportunities. The intense competition for employment among qualified graduates from higher education institutions (HEIs) worsens the issue, leaving many well-qualified individuals unemployed. Additionally, the plain disparity between industry expectations for graduates' expertise and the actual performance of HEI graduates creates a significant hurdle in the transition from education to employment. The mismatch between taught skills and the evolving demands of the job market further complicates graduates' efforts to secure meaningful employment,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

emphasizing the pressing need for a comprehensive and adaptable approach to align education with the dynamic needs of society (Ebuenga et al, 2023).

The inception of Kapalong College of Agriculture, Sciences and Technology dates back to 2005, marking its distinction as the first local college accredited at Level 1 by the Association of Local Colleges and Universities - Commission on Accreditation (ALCUCOA) in Region XI. With a commitment to continually elevate its educational standards, the institution now aims to enhance its teaching methodologies further. To achieve this, the college has initiated a tracer study for its professional graduates, focusing on their employability and current employment status. This endeavor seeks not only to gauge the success of its graduates but also to garner insights and recommendations for potential enhancements or innovations in the curriculum, ensuring the sustained competence and employability of its professionals in their respective fields.

In light of these considerations, it becomes imperative to undertake a tracer study examining the employment rates and statuses of graduates, particularly their self-assessed attitudes toward work, the quality of education provided by the institution, and the skill and ability development of those who have completed the Bachelor of Science in Business Administration - Major in Marketing Management (BSBA-MM) program. This initiative is driven by the institution's commitment to fulfilling its social responsibilities and values. The primary objective is to inform the development and refinement of curricula, ensuring graduates' employability postgraduation. Through this, the institution aims to fortify its commitment to consistently offering high-quality education.

Research Objectives

This study aimed to identify the employability of the KCAST graduates in the program of Business Administration major in Marketing Management from the academic year 2022 to academic year 2023. Specifically, this study sought to answer the following research objectives:

- 1. To determine the demographic characteristics of the graduate-respondents in terms of:
 - 1.1. sex when grouped per academic year;
 - 1.2. civil status;
 - 1.3. age;
 - 1.4. year graduated; and
 - 1.5. educational attainment and development.
- 2. To determine the employment profile and features of the graduate-respondents in terms of:
 - 2.1. employment rate:
 - 2.2. employment status;
 - 2.3. level of income;
 - 2.4. period of seeking the first job after college;
 - 2.5. relevance of a college degree to the present job; and
 - 2.6. career alignment.
- 3. To determine the level of the graduate-respondents' self-rated evaluation with their attitude to work.
- 4. To determine the level of the graduate-respondents' selfrated evaluation with the quality of education provision of the institution

5. To determine the level of the graduate-respondents' selfrated evaluation with the skills and abilities obtained in the institution and its usability with their present occupation

METHOD

This chapter discusses the research design, research instrument, and the statistical tool used by the researchers in gathering data. This also includes the research locale where the researchers conducted their study.

Research Design

The research employed the descriptive research method, chosen due to the quantitative nature of this tracer study, involving the collection of numerical data that were organized and presented in tabular form. Descriptive studies are inherently characterized by this nature of presenting information in a numerical format. The primary purpose of this method was to offer a comprehensive depiction of the characteristics of the population or phenomenon under investigation. Descriptive research is particularly adept at portraying the attributes of a demographic segment without delving into the causation of a specific phenomenon. In essence, it seeks to delineate the subject of the research without explicating the reasons behind its occurrence (Pamaran & Pamaran, 2013). To elaborate further, descriptive research is a scientific investigation method that concentrates on providing a detailed account of one or more variables without involving any manipulation. Unlike experimental research, which involves deliberate intervention and control of variables, descriptive research maintains an observational and non-intrusive stance, focusing solely on the depiction and analysis of existing characteristics (McCombes,

In the present study, the descriptive research method was applied to outline and analyze the employment rate and employment status of BSBA-Marketing Management graduates from Kapalong College of Agriculture, Sciences, and Technology (KCAST). The primary objective of this tracer study was to quantify the extent of graduates' employment, particularly on their employment rate, employment status, level of income, period of seeking the first job after college, relevance of college degree to the present job, and career alignment. Further, its other objective was to ascertain their demographic profile, focusing particularly on sex when grouped per academic year, civil status, age, year graduates, and education attainment and development. And lastly, to determine the level of graduates' attitude to work, quality of education provision, and skills and abilities. This approach allows for a thorough examination of the employment outcomes of the graduates, offering insights into both the quantitative aspects of employment rates and the qualitative aspects of employment status and demographic characteristics.

Research Locale

The tracer study took place at Kapalong College of Agriculture Sciences and Technology, a community-based institution located in the Municipality of Kapalong within the province of Davao del Norte. This college holds the distinction of being the inaugural local college in Region XI to attain Level 1 accreditation from the Association of Local Colleges and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Universities Commission on Accreditation (ALCUCOA). Commencing its operations in 2005, the college provides a range of seven programs to its student body.

Research Respondents

Primarily, the respondents of this tracer study were the graduates of BSBA-MM alumni in KCAST from 2022 to 2023.

As shown in the table, in year 2022 there were 153 graduates of which there are 53 males and 100 females, while in 2023, there were 173 graduates of which 81 are males and 92 are females who composed the graduates. The constitutes to a total population of 326 graduates.

| BACHELOR OF SCIENCE IN BUSINESS ADMINISTRATION – | | | | |
|--|------------------------|-----|-----|--|
| MAJOR IN MARKETING MANAGEMENT | | | | |
| Year | Year Male Female Total | | | |
| 2022 | 53 | 100 | 153 | |
| 2023 | 81 | 92 | 173 | |
| TOTAL 134 192 326 | | | | |

The tracer study questionnaire was distributed online to all graduates, however only 143 graduates responded to the survey. Overall, this study was composed of 143 graduate-respondents of which 60 are males and 83 are females, representing the BSBA major in Marketing Management graduates from the past two (2) years.

Research Instrument

The research instrument used in this study was adapted from the study of Escandallo (2024) entitled "A Tracer Study on the Elementary Education Graduates from Academic Year 2015 to 2019: Employment in Focus" with a Cronbach's alpha of 0.955. Thus, it can be ensured that the internal consistency of the questionnaire used is excellent. The said questionnaire had undergone validation by a panel of experts and examiners. This validation aimed to ensure that the questionnaire's constructs and content reliably and effectively measured the intended outcomes of the study. The experts assessed the clarity of directions and items, the organization of items, item suitability, adequacy per category, alignment with the study's purpose, objectivity, and the rating system's scale evaluation. The tracer survey questionnaire aimed to trace the employment records and statuses of the graduates, monitor their educational attainment and development, gauge their attitudes toward their work, evaluate their perceptions of the institution's education quality, and assess the extent to which the institution had enhanced their diverse skills and abilities during their tenure at KCAST.

Data Gathering Procedure

Data collection is characterized as the systematic process of gathering, measuring, and analyzing precise information for research purposes, employing standardized and validated techniques. In most instances, it stands as the foremost and crucial step in research, irrespective of the field of focus (Questionpro, 2020). Therefore, the study diligently undertook the following primary steps to responsibly collect the necessary data.

Identifying the total number of respondents. As the study encompasses the population and sample of BSBA-MM graduates from the institution, the researchers sought the total number of graduates from Academic Year 2022 to Academic Year 2023 directly from the college registrar. This approach was taken to ensure the precision and accuracy of the data,

emphasizing the importance of obtaining exact and reliable information for the study.

Questionnaire adaptation. A survey tracer questionnaire adapted from Escandallo (2024), covering aspects such as employment rate, employment status, educational progression, work attitude, quality of education, and skills development for each graduate. The questionnaire aimed to comprehensively capture and analyze these key dimensions to gather insightful and valuable data for the study.

Distribution and retrieval of the questionnaires. Upon finalizing the survey questionnaire, the researcher initiated the process of tracing the graduates to gather information on their employment status and rate, educational attainment and development, attitude towards work, quality of education provision, and skills and abilities development. This tracing process was facilitated through the utilization of Google Forms, providing a convenient and efficient platform for data collection. Using this digital tool allowed for streamlined and organized data gathering, enhancing the overall efficiency of the study.

Collection and Tabulation of the Data. Once each participating graduate had fully completed the questionnaire, the researcher collected the responses and proceeded to tally the data. The collected data were then handed over to the designated school statistician for analysis and interpretation. The statistician played a crucial role in presenting the retrieved data in a tabular format, facilitating an easy and comprehensive understanding of the results. This systematic process of data analysis ensured clarity and accessibility in interpreting the findings of the study.

Statistical Tool

Mean was used for getting the average score in measuring the level of graduates' attitude to work, evaluation of quality education provision and the development of different skills and abilities.

Frequency and *percentage* were used to represent most personal information of the graduates' demographic and employment profiles.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

RESULTS AND DISCUSSION

The results and discussion are provided in response to the established objectives of the study.

Demographic Characteristics of Business Administration-Marketing Management

The first objective of this tracer study is to describe the demographic characteristics of the Business Administration-Marketing Management graduates from the academic year 2022 up until the academic year 2023. These demographic

characteristics encompass sex, civil status, age, year graduated, and educational attainment and development.

Sex. Presented in Table 1 is the sex distribution of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic year 2022-2023. In batch 2022, comprised of 64 graduaterespondents, it could be gleaned that 34 or 53.13% are female and the remaining 30 or 46.88% are males. Meanwhile in batch 2023, comprised of 79 graduate-respondents, 49 or 62.03% are females and the remaining 30 or 37.97% are males.

Table 1: Sex Distribution of Marketing Management Graduate-Respondents

| Year Graduated | Sex | Frequency | Percent |
|----------------|--------|-----------|---------|
| | Female | 34 | 53.13% |
| 2022 | Male | 30 | 46.88% |
| | Total | 64 | 100% |
| | Female | 49 | 62.03% |
| 2023 | Male | 30 | 37.97% |
| | Total | 79 | 100% |

Civil Status. Presented in Table 2 is the civil status of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic year 2022-2023. As emphasized, 127 or 88.81% of

the graduate-respondents are single, 15 or 10.49% are married, and only 1 or 0.70% are separated. This implies that majority of the graduate-respondents are not yet married.

Table 2: Civil Status of Marketing Management Graduate-Respondents

| Civil Status | Frequency | Percent |
|--------------|-----------|---------|
| Single | 127 | 88.81% |
| Married | 15 | 10.49% |
| Separated | 1 | 0.70% |
| Total | 143 | 100% |

Age. Presented in Table 3 is the age distribution of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic year 2022-2023. As reflected on the data below, 75 or 52.45%

of the graduate-respondents are aged 22-24, 41 or 28.67% are aged 25-27, 13 or 9.09% are aged 28-30, 8 or 5.59% are aged 31-33, and lastly, 6 or 4.20% are aged 34-36. This implies that majority of the graduate-respondents are 22-24 years of age.

Table 3: Age Distribution of Marketing Management Graduate-Respondents

| Age | Frequency | Percent |
|-------|-----------|---------|
| 22-24 | 75 | 52.45% |
| 25-27 | 41 | 28.67% |
| 28-30 | 13 | 9.09% |
| 31-33 | 8 | 5.59% |
| 34-36 | 6 | 4.20% |
| Total | 143 | 100% |

Year Graduated. Presented in Table 4 is the year graduated of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic year 2022-2023. For the year 2022, there are 64

graduate-respondents, comprising 44.76%; while for the year 2023, there are 79 graduate-respondents, comprising 55.24%.

Table 4: Year Graduated of Marketing Management Graduate-Respondents

| Year Graduated | Frequency | Percent |
|----------------|-----------|---------|
| 2022 | 64 | 44.76% |
| 2023 | 79 | 55.24% |
| Total | 143 | 100% |

Educational Attainment and Development. Presented in Table 5 is the data on vocational education of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic

year 2022-2023. It can be interpreted from the data that 124 or 86.71% of the graduate-respondents had not undertaken vocational education; while 19 or 13.29% had obtained training and national certifications from Technical Education and Skills

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Development Authority. Some of which are: Heavy-Equipment Operation NC II, Food and Beverage NC II, Shielded Metal Arc Welding NC II, Electrical Installation and Maintenance NC II,

Automotive Servicing NC II, and Computer System Servicing NC II.

Table 5: Vocational Education of Marketing Management Graduate-Respondents

| Vocational Education | Frequency | Percent |
|----------------------|-----------|---------|
| With | 19 | 13.29% |
| Without | 124 | 86.71% |
| Total | 143 | 100% |

Furthermore, presented in Table 6 is the postgraduate studies of the Bachelor of Science in Business Administration major in Marketing Management from the academic year 2021-2022 to academic year 2022-2023. As detailed below, 140 or 97.90% of the graduate-respondents did not acquire any postgraduate

degree; while only 3 or 2.10% pursued postgraduate studies. To be specific, these individuals are currently undertaking their Master's Degree in Business Administration at the University of the Immaculate Conception, an institution renowned for producing quality and competitive graduates.

Table 6: Postgraduate Studies of Marketing Management Graduate-Respondents

| Postgraduate Studies | Frequency | Percent |
|-------------------------|-----------|---------|
| With | 3 | 2.10% |
| Without | 140 | 97.90% |
| Total | 143 | 100% |

Employment Profile and Features of Business Administration-Marketing Management Graduates

The second objective of this tracer study is to describe the employment profile and features of the Business Administration-Marketing Management graduates from academic year 2022 up until academic year 2023. These employment profile and features encompass employment rate, employment status, level of income, period of seeking the first job after college, relevance of college degree to the present job, and job mismatching.

Employment Rate. Presented in Table 7 is the employment rate of the Bachelor of Business Administration major in Marketing Management graduates from the academic year 2021-2022 to academic year 2022-2023. It could be gleaned from the data that 88.11% of the graduate-respondents are now currently employed while the remaining 11.89% are not working. This implies that majority of the marketing management graduate-respondents already have work.

Table 7. Employment rate of Marketing Management Graduate-Respondents

| Employment Rate | Frequency | Percent |
|------------------------|-----------|---------|
| Employed | 126 | 88.11% |
| Unemployed | 17 | 11.89% |
| Total | 143 | 100% |

Employment Status. Presented in Table 8 is the employment status of the Bachelor of Science in Business Administration major in Marketing graduate-respondents from the academic year 2021-2022 to academic year 2022-2023. It is evident from the data that 55 or 38.46% of the graduate-respondents are working regular; 39 or 27.27% of the marketing management

graduate-respondents are working on contractual basis; 15 or 10.49% of the graduate-respondents are working on job order basis; 15 or 10.49% are self-employed and 2 or 1.40% are under probationary. This implies that the majority of the marketing management graduate-respondents are working on regular basis.

Table 8: Employment Status of Marketing Management Graduate-Respondents

| Employment Status | Frequency | Percent |
|--------------------------|-----------|---------|
| Regular | 55 | 38.46% |
| Contractual | 39 | 27.27% |
| Job Order | 15 | 10.49% |
| Probationary | 2 | 1.40% |
| Self-employed | 15 | 10.49% |
| Total | 126 | 88.11% |

Level of Income. Presented in Table 9 is the level of income of the Bachelor of Science in Business Administration major in Marketing graduate-respondents from the academic year 2021-2022 to academic year 2022-2023. From the data, it can be seen that 51 or 35.66% of the marketing management graduate-respondents are having a salary range of Php11,000-15,000

monthly; 32 or 22.38% of the graduate-respondents are earning Php6,000-10,000 monthly; 20 or 13.99% of the marketing management graduate-respondents are having a monthly income of Php5,000 below; 13 or 9.09% of the marketing management graduate-respondents are having a monthly salary range of Php16,000-20,000; 7 or 4.90% of marketing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

management graduate-respondents are earning monthly Php21,000-25,000 meanwhile, 3 or 2.10% of the graduate-respondents are earning a monthly salary of Php26,000 and

above. In summary, out of 126 or 88.11% graduate-respondents that are employed 35.66% earning monthly Php11,000-15,000.

Table 9: Level of Income of Marketing Management Graduate-Respondents

| Income | Frequency | Percent |
|---------------|-----------|---------|
| Below 5,000 | 20 | 13.99% |
| 6,000-10,000 | 32 | 22.38% |
| 11,000-15,000 | 51 | 35.66% |
| 16,000-20,000 | 13 | 9.09% |
| 21,000-25,000 | 7 | 4.90% |
| Above 26,000 | 3 | 2.10% |
| Total | 126 | 88.11% |

Period of Seeking the First Job after College. Presented in Table 10 is the period of seeking the first job after college of the Bachelor of Science in Business Administration major in Marketing Management graduate-respondents from the academic year 2021-2022 to academic year 2022-2023. The survey results indicate that 76 or 53.15% of the graduate-respondents found work within 1-3 months after graduation; 29

or 20.28% of the graduate-respondents found work within 4-8 months after graduation; 15 or 10.49% of the graduate-respondents found work a year after graduation. Meanwhile 6 or 4.20% of the graduate-respondents found work within 9-12 months after graduation. This implies that majority of the marketing management graduate-respondents attained employment right after graduation.

Table 10. Period of Seeking the First Job after Collegeof Marketing Management Graduate-Respondents

| Period | Frequency | Percent |
|--------------|-----------|---------|
| 1-3 months | 76 | 53.15% |
| 4-8 months | 29 | 20.28% |
| 9-12 months | 6 | 4.20% |
| Above 1 year | 15 | 10.49% |
| Total | 126 | 88.11% |

Relevance of College Degree to the Present Job. Presented in Table 11 is the relevance of college degree to the present job of the Bachelor of Science in Business Administration major in Marketing Management graduate-respondents from the academic year 2021-2022 to academic year 2022-2023. As revealed in the data below, it could be gleaned that 63 or 44.06% of the graduate-respondents described their college

degree as *very much relevant* to their current work; 33 or 23.08% described it as *much relevant*; 19 or 13.29% described it as *neutrally relevant*; 9 or 6.29% described it as *not at all*; and lastly, 2 or 1.40% described it as *a little relevant*. Overall, this shows that majority of the marketing management graduate-respondents found their college degree as highly relevant to their current field of employment.

Table 11. Relevance of College Degree to the Present Job of Marketing Management Graduate-Respondents

| Relevance of Degree | Frequency | Percent |
|---------------------|-----------|---------|
| Very much | 63 | 44.06% |
| Much | 33 | 23.08% |
| Neutral | 19 | 13.29% |
| A little | 2 | 1.40% |
| Not at all | 9 | 6.29% |
| Total | 126 | 88.11% |

Job Mismatching. Presented in Table 11 is the status of job alignment of the Bachelor of Science in Business Administration major in Marketing Management graduaterespondents from the academic year 2021-2022 to academic year 2022-2023. The survey results show that 67 or 46.85% of the graduate-respondents pursued job-related professions; 50 or 34.97% took up non-related professions; and lastly, the remaining 9 or 6.29% attained employment in the academe.

Specifically, under the job-related profession, some graduates work as receptionists, customer service agents,

sales/merchandising agents/assistants, marketing specialists, entrepreneurs and business managers/owners, service crew, and staff in marketing and sales departments. Further, in the academe, some of the graduates currently work as instructors and administration staff.

However, under the non-related profession, some graduates work as website editors, content creators, government employees, baggers/checkers, credit investigators, bookkeepers/record keepers, finance officers, farmers, security guards, drivers, and pump attendants.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 12: Job Alignment Status of Marketing Management Graduate-Respondents

| Job Alignment | Frequency | Percent |
|---------------------------|-----------|---------|
| Academe | 9 | 6.29% |
| Job-related Profession | 67 | 46.85% |
| Non-related Profession | 50 | 34.97% |
| Total | 126 | 88.11% |

Level of Business Administration-Marketing Management Graduate-Respondents Attitude to Work

Table 13 displays the attitude towards work among Business Administration-Marketing Management Graduate-

Respondents, with an overall mean score of 4.34, indicating a very high level. This suggests that the graduates consistently exhibit positive attitudes across all aspects of their work, as they strongly agree with all sub-questions.

Table 13: Level of the BSBA Marketing Management Graduates Attitude to Work

| Attit | ude to Work | Mean | Description |
|-------|---|------|-------------|
| 1. | I am very interested, happy and satisfied with my work and it is very important for me. | 4.25 | Very High |
| 2. | I like the kind of job and work I am doing. | 4.27 | Very High |
| 3. | I accepted assignments and tasks given to me at work without complaints. | 4.39 | Very High |
| 4. | I arrived on time to prepare my work and extend working hours if necessary. | 4.41 | Very High |
| 5. | I can work better and functional under different working environment and situations. | 4.33 | Very High |
| 6. | I participated in all activities and events inside my workplace. | 4.36 | Very High |
| 7. | I have a good relationship with my colleagues and co-employees. | 4.34 | Very High |
| 8. | I submitted necessary documents and papers on time and beat deadlines. | 4.31 | Very High |
| 9. | I performed my task and job with excellence and outstanding quality. | 4.33 | Very High |
| 10. | I seek assistance and help from others whenever I have clarifications and queries. | 4.40 | Very High |
| | Overall | 4.34 | Very High |

Notably, item 4– *I arrived on time to prepare my work and extend working hours if necessary*, received the highest mean score of 4.41, reaffirming their consistent manifestation among marketing management graduate-respondents in their workplace. Conversely, item number 1– *I am very interested, happy and satisfied with my work and it is very important for me*, received the lowest mean score of 4.25, yet still considered very high, indicating consistent manifestation among graduates related to work attitude.

Level of Business Administration-Marketing Management Graduate-Respondents Quality Education Provisions

Table 14 presents the evaluation of quality education provisions among Business Administration-Marketing Management Graduate-Respondents, yielding an overall mean score of 4.41, indicating a very high level. This suggests that the graduates consistently experience high-quality education provisions, as they consistently agree with all identified sub-questions related to this aspect.

Table 14: Level of the BSBA Marketing Management Graduates Quality Education Provision

| Qual | ity Education Provision | Mean | Description |
|------|--|------|-------------|
| 1. | Availability of course materials and different learning resources needed for our studies. | 4.38 | Very High |
| 2. | Quality of course contents from courses offered as well as the teaching and learning process. | 4.45 | Very High |
| 3. | Conduciveness of the learning environment and atmosphere. | 4.36 | Very High |
| 4. | Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.43 | Very High |
| 5. | Quality of learning facilities for first-hand and direct experiences like of different laboratories. | 4.40 | Very High |
| 6. | Quality of different courses offered in the program that develops the total sum of the student skills. | 4.34 | Very High |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 7. Level of optimum interaction and contact with my fellow students through different in-campus activities. | 4.37 | Very High |
|---|------|-----------|
| 8. Well-trained and self-renewing Faculty members and staffs. | 4.41 | Very High |
| 9. Different trainings, seminars and workshops that prepare students for employment. | 4.50 | Very High |
| 10. Varied learning assessments and instructions which assess students' progress and learning fairly and equally. | 4.50 | Very High |
| Overall | 4.41 | Very High |

Among these, item number 9– Different trainings, seminars and workshops that prepare students for employment and item number 10- Varied learning assessments and instructions which assess students' progress and learning fairly and equally both received the highest mean score of 4.50, reaffirming its consistent manifestation among marketing management graduates, particularly those who studied at Kapalong College of Agriculture, Sciences and Technology (KCAST). Conversely, item number 6- Quality of different courses offered in the program that develops the total sum of the student skills, received the lowest mean score of 4.34, still considered very high, indicating consistent manifestation among marketing

management graduates, particularly those who studied at KCAST.

Level of Business Administration-Marketing Management **Graduate-Respondents Skills and Abilities Development**

Table 15 illustrates the skills and abilities development among Business Administration-Marketing Management Graduate-Respondents. The overall mean score of 4.38 suggests a notably very high level of skills and abilities development of the marketing management graduates, as they consistently agree with all evaluated aspects.

Table 15: Level of the BSBA Marketing Management GraduatesSkills and Abilities Development

| Skills and Abilities Development | Mean | Description |
|--|------|-------------|
| Organizational and leadership skill. | 4.41 | Very High |
| 2. Problem solving and critical thinking skills. | 4.42 | Very High |
| 3. Ability to work independently as well as team work and team play. | 4.52 | Very High |
| 4. Creative thinking and creativity, initiative and taking a risk if necessary. | 4.46 | Very High |
| 5. Time Management and decision-making skills. | 4.52 | Very High |
| 6. Writing competence and skills including technical writing. | 4.24 | Very High |
| 7. Communication and interpersonal skills. | 4.36 | Very High |
| 8. Computer and ICT Skills. | 4.11 | High |
| 9. Technical and Entrepreneurial Skills | 4.38 | Very High |
| 10. Ability to work under pressure. | 4.33 | Very High |
| 11. Ability to prepare any reports essential to my field of expertise | 4.32 | Very High |
| 12. Ability to follow the legal, ethical, and moral standards of society. | 4.44 | Very High |
| 13. Knowledge with marketing management skills such as advertising, editing and any forms of skills related to my field. | 4.31 | Very High |
| 14. Analytical and Investigative skills. | 4.35 | Very High |
| 15. Trainings, seminars and workshops about the preparation and evaluation of strategic management planning applied in business. | 4.50 | Very High |
| Overall | 4.38 | Very High |

Specifically, item number 3-Ability to work independently as well as team work and team play., received the highest mean score of 4.52, indicating a very high level of manifestation among marketing management graduate-respondents. Conversely, item number 9- Computer and ICT Skills., received the lowest mean score of 4.11, considered as high, suggesting consistent manifestation among marketing managements graduates, particularly those from KCAST.

DISCUSSION

Below is a summary of the findings derived from the collected data via an online survey administered through Google Forms, along with the conclusions reached and the recommendations provided.

Demographic Profile of Business Administration-**Marketing Management Graduate-Respondents**

The primary research objective of this study was to identify the demographic profile of Bachelor of Science in Business Administration major in Marketing Management graduates, spanning from batch 2022 to batch 2023.

The study revealed that most of the graduate-respondents were female consisting of 58.04% while the male only composed of 41.96%. In relation, such findings are related to the study of Gustafson (2018) who quoted Yamauchi and Marites Tiongco of De La Salle University in the Philippines that girls tend to receive more schooling than boys. Also, most of the graduates mark themselves as single.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

On the other hand, most of the graduate-respondents age as of now are ranging from 22 – 24 years old. The results show that the majority of the graduates were in their early adulthood, which is the typical age range for students completing their college education Cuadra et al. (2019). Additionally, it can be gleaned from the results that there were 64 graduate respondents in 2022, while in 2023, there were 79 graduate respondents. This indicates that there is a significant increase in produced graduates from the pioneering batch of marketing management students and the following year. Furthermore, this study reveals the educational achievements of graduates in marketing management. It shows that 13.29% of the graduate respondents hold vocational qualifications, and 2.20% have pursued further studies, taking up Master's Degrees in Business Administration. This indicates that the graduate respondents have acquired a diverse set of skills and knowledge, allowing them to be more competitive compared to graduates from other schools. Additionally, advancing their educational attainment gives these graduates increased chances of employment. In some industries or fields, younger, well-educated workers are highly sought after. With this, they may receive more job offers or opportunities (Fehrmann, 2019).

Employment Profile and Features of Business Administration-Marketing Management Graduate-Respondents

Based on the result of the survey of this tracer study, 88.11% of the graduate-respondents in Business Administration-Marketing Management are already employed and the majority of them are working in the marketing and sales department. This indicates the effectiveness of the program particularly in helping the graduates to land a job after graduation. The number of employed graduates is in consonance to the study of Baking and Colleagues (2015) were their study results revealed that the majority of their graduates were employed.

On the other hand, most of the graduates who are employed are working under regular status Similarly, a tracer study of the Lyceum of the Philippines presented almost the same percentage of employed respondents with regular or permanent status (Macatangay, 2013). In addition, most of the graduate-respondents of Business Administration major in Marketing Management are now earning a monthly salary ranging from Php11,000-15,000. Amazingly, these graduate-respondents are employed or found a job within 1-3 months after graduation. Indicates willingness and the demand of human resources.

Moreover, the study shows that most of the graduate-respondents find their degree relevant particularly in landing their individual job. Further, it is revealed in the study that 6.29% are working in academe, 34.97% are working in non-related positions and 46.85% are working in related position to their degree. This highlights that most of the graduates are able to use the knowledge and skills they have gained since they are currently connected in the marketing field. This finding suggests that the majority of graduates believe their degree programs equipped them with the essential knowledge and skills needed for their respective careers Cuadra et al., (2019).

Level of Business Administration-Marketing Management Graduate-Respondents Attitude Toward Work

The work attitudes of Bachelor of Science in Business Administration graduates, majoring in Marketing Management, were described as very high. This assessment means that the graduates' attitudes toward work are consistently positive, as indicated by their strong agreement with all the sub-questions related to work attitudes. This implies that these graduates demonstrate great respect for their work in their respective workplaces and strive to uphold their reputations by avoiding actions that could tarnish their names.

Relating to the findings, the college serves as a transformative environment where young, inexperienced students evolve into highly sought-after graduates and potential employees. Universities align with societal needs by equipping students with essential skills upon graduation. These include communication, human relations, critical thinking, problemsolving, information technology, and marketing skills. Possessing such skills is crucial for graduates as they transition into the workforce, where a strong work ethic and positive attitude are invaluable (Hansen and Hansen, 2019).

Furthermore, Pentang et al. (2022) discovered in their study that have shown a high level of proficiency and capability, excelling in both professional and academic settings. The institution has deliberately prepared them for the workforce, emphasizing their work ethic and personal attributes over traditional benchmarks. Their readiness for the employability world and their outstanding professional conduct serves as concrete proof of their successful adaptation to their respective positions (Pentang et al., 2022).

Level of Business Administration-Marketing Management Graduate-Respondents Quality Education Provisions

The level of quality education provision for Bachelor of Science in Business Administration graduates was described as very high. This descriptive meaning and equivalent entail that the level of the marketing management graduate-respondents' quality education provision is consistently manifested, as the respondents always agree to all of the identified sub-questions under quality education provision.

Consequently, the findings from Asoy et al. (2024) highlight the effectiveness of the educational strategies employed by the institution. The very good rating attributed to the institution's quality education provisions suggests a robust educational framework that significantly benefits the students. This framework likely includes a comprehensive approach that integrates practical training sessions and seminars, which are essential for applying theoretical knowledge in real-world scenarios. Additionally, the availability of ample resources supports an enriched learning environment that caters to the diverse needs of the students.

Additionally, another study by Harrison et al. (2022) emphasized that high-quality teaching is crucial within the higher education sector. The pursuit of excellence in teaching has intensified due to increased competition among institutions and the expanding opportunities for global study through

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

various modes. This trend underscores the need for educational institutions to continually enhance their teaching methodologies and faculty capabilities to maintain relevance and attractiveness to a diverse student body.

Level of Business Administration-Marketing Management Graduate-Respondents Skills and Abilities Development

The level of skills and abilities development in Bachelor of Science in Business Administration graduates majoring in Marketing Management was described as very high. This illustrative significance and equivalent demand show that the degree of skills and abilities development is consistently demonstrated. This implies that the institution from which the graduates came has successfully equipped them with sufficient knowledge, skills, and relevant learning that they are now applying in their workplaces.

In consonance, the degree programs that students pursue help improve their skills and their employment status. These are manifested by the high percentage of respondents whose degrees are highly related and relevant to their current jobs; that several skills they learned are found useful in the performance of their jobs, and that they are having regular and/or permanent items. The respondents are generally satisfied with the delivery of the undergraduate degree programs of the university; likewise, they give high average ratings on the curricular offering (Cuadra et. al., 2019).

Andari (2021) noted that graduates reported their academic knowledge, skills, and competencies as significantly contributing to their job performance. By integrating advanced knowledge and skills that are continually refined, business programs can provide a graduate profile tailored to meet the demands of the workforce. The effectiveness of these programs is evident in the graduates' ability to fulfill the expected learning outcomes within their respective fields of work.

Summary of Findings

Following the successful completion of a survey that received responses from all graduates of the Bachelor of Science in Business Administration major in Marketing Management program at Kapalong College of Agriculture, Sciences, and Technology during the academic years 2022 to 2023, the following key findings emerged:

The institution produced a total of 326 graduates; however, only 143 graduate-respondents answered the survey, who then became the focus of this study. These 143 graduate-respondents consisted of 83 females and 60 males. Regarding civil status, 88.81% of the graduates are single, while 10.49% are married, and 0.70% are separated. In terms of age distribution, 52.45% fall within the 22-24 age bracket, 28.67% are aged 25-27, 9.09% are aged 28-30, 5.59% are aged 31-33, and 4.20% are aged 34-36. The first batch, in 2022, consisted of 64 graduates, while the second batch, in 2023, produced 79 graduates. Only 19 graduates obtained vocational courses and national certifications, with 3 pursuing post-graduate studies.

In terms of employment, 88.11% of the graduate-respondents are employed, with 11.59% unemployed. Of those employed, 38.46% work regularly, and 27.27% are on contractual terms,

while 10.49% are in job order or self-employed positions, and 1.40% are under probationary status. Additionally, 35.66% of the graduates earn a monthly income ranging from Php 11,000 to Php 15,000, with 53.15% securing employment within 0-3 months. Nearly half (44.06%) agreed that their college degree is highly relevant to their current work. However, 34.97% of the graduates are employed in roles not related to their field of study.

The survey revealed a very high level of work attitude among the marketing management graduate-respondents and indicated that the institution provides a very high quality of education. Additionally, the level of skills and abilities development among the graduates was assessed as exceptionally high.

Conclusion

After conducting the survey, it was determined that the employment rate of marketing management graduaterespondents from batches 2022 to 2023 is 88.11%, indicating that almost all of the graduate-respondents are sufficiently skilled to seek and obtain employment in the marketing field; additionally, the majority are already employed into regular positions within 1-3 months from graduation. From this, it can be inferred that the marketing management graduaterespondents are highly employable and possess the necessary skills to secure jobs in the marketing field. The fact that the majority of them have obtained regular positions within a relatively short period after graduation suggests that they are in demand and valued by employers. This high employment rate and quick transition into regular positions reflect positively on the quality of education and training they received in their marketing management program.

Moreover, the survey indicated that the college degree of marketing graduate students aligns closely with their job requirements, implying that the institution delivers high-quality education tailored to their field. Furthermore, respondents strongly agreed on the graduates' diligent work ethic, indicating their proficiency in task execution, while the institution's education offerings received high ratings, suggesting access to diverse training, seminars, resources, and skilled faculty. Finally, the assessment of graduates' skills and abilities revealed a high level of development, showcasing the institution's effectiveness in nurturing a broad spectrum of competencies among its marketing students.

Recommendation

Based on the summary of findings and conclusions drawn from the study, the following recommendations are made: First, given that a percentage of the graduates are unemployed, it is advised that the school establish a graduate and employability coordinator role. This position would track and monitor graduates' employment status and could also facilitate online forums to inform graduates about various job vacancies and opportunities available for application.

Secondly, it is noted that the graduate-respondents' interest and satisfaction with their work got the lowest mean in the survey. Thus, it is recommended that the institution may offer comprehensive career counseling services to identify strengths

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and aspirations, provide professional skills development workshops, fostering alumni support networks for guidance, collaborate with industry partners to keep the curriculum relevant, emphasize personal values alignment with career choices, and soliciting continuous feedback for improvement. Through these efforts, the institution can empower graduates to make informed career decisions, pursue fulfilling opportunities, and ultimately find satisfaction and happiness in their professional lives.

Thirdly, it can be seen that the graduate-respondents' overall enhancement with their skill set got the lowest mean. With this, it is recommended that the program may offer a diverse array of courses that comprehensively develop students' skills across multiple dimensions. It is recommended that each course includes measurable learning outcomes and integrates practical applications to ensure students acquire and can apply critical competencies effectively in real-world scenarios, thus enhancing both their personal growth and professional readiness.

Lastly, it is shown the graduate-respondents' ICT skills also got the lowest mean. Therefore, to improve the practical application of computer and ICT skills in marketing courses, it is essential to integrate foundational training on widely used software applications. Specifically, including modules on Microsoft Word, PowerPoint, and Excel will enable students to master data organization, presentation creation, and document formatting—skills crucial for effective communication in the marketing field. Additionally, incorporating basic training in graphic design tools for editing and layout will equip students with the ability to produce visually appealing marketing materials. This well-rounded approach will not only enhance students' technical proficiency but also their ability to efficiently manage and present marketing data and campaigns in a professional context.

ABSTRACT

INTRO/BACK GROUND

Ac joint dysfunction is a prevalent cause of shoulder discomfort. As far as we're aware, there are currently no published studies focused on the manual therapy management of AC joint dysfunction. However, manual physical therapy has proven successful in treating various other shoulder conditions. To address this, recent research has started to investigate whether manual techniques are more effective in treating ac joint dysfunction.

OBIECTIVE

Aim of this study on the literature review pointing on the available evidence for the manual therapy interventions in acromicclavicular joint dysfunction patients.

METHODS

Research involved a computerized data base used for searching articles were Science direct, Pedro, PubMed, goggle scholar search pertaining to studies that include the manual therapy among acromicalavicular joint dysfunction Patients'

RESULTS:

These 10 studies were based on the inclusion exclusion criteria were included in this review the methods used in all these studies were strengthening exercises, transverse friction massage, joint mobilization, myofascial release techniques, active passive motion exercises, scapulothoracic exercises, peri joint muscle exercises, joint stability exercises with different sets of exercises for muscle activation and range of motion and function these manual therapy techniques aims to alleviate inflammation recover the shoulder pain free rom and restore the proper function of soft tissue and joint.

CONCLUSION:

We conclude from this review that a variety of manual treatment procedures have been shown to be useful and effective in treating patients with AC joint dysfunction. There is, however, a dearth of data on the use of manual therapy procedures or interventions to treat ac joint dysfunction. More investigation is required to determine the precise role that manual therapy strategies may play in managing ac joint dysfunction.

KEY WORDS: ac joint dysfunction, manual therapy, interventions, shoulder dysfunction

INTRODUCTION

The acromioclavicular (AC) joint connects the lateral end of the clavicle with the anteriorly projecting acromion of the scapula. This joint is essential for providing stability and facilitating movement within the shoulder complex (1) The acromioclavicular (AC) joint is a type of synovial joint characterized by the lateral clavicle connecting with the acromion process, which extends forward from the scapula. Functioning as a plane joint, its typical function involves facilitating gliding movements. (2) In its normal state, it contributes to mobility of the scapula, aiding in actions like shoulder abduction and flexion. Additionally, it plays a crucial role in transmitting forces from the upper arm to the skeletal structure. (3)

The AC joint is encased by a capsule and features a synovial membrane. Positioned between the bony structures is an intraarticular cartilaginous disk, with fibrocartilage covering the articulating surfaces instead of hyaline cartilage. Three primary

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

ligaments play crucial roles in stabilizing the joint. The acromioclavicular ligament (AC) consists of superior, inferior, anterior, and posterior components, with the superior and posterior ligaments being particularly robust, providing horizontal stability. (4) The coracoclavicular ligaments (CC) complex, comprising the conoid and trapezoid ligaments, inserts onto the undersurface of the distal clavicle, contributing to vertical stability. Moreover, the coracoacromial ligament, a sturdy triangular band connecting the coracoid process to the acromion, also aids in vertical stability. (5)(6)

Acromioclavicular (AC) joint injuries are frequently encountered among athletes and young people, constituting over forty percent of shoulder injuries. While minor injuries typically don't result in significant health issues, severe cases can lead to notable decreases in shoulder strength and function. (7) Most AC joint injuries occur in young males, typically from a direct fall onto the superior aspect of the shoulder when the arm is adducted (8) Symptoms like Swelling and bruising (ecchymoses) can develop around the distal end of the clavicle due to downward displacement of the shoulder girdle. Tenderness is commonly experienced upon touching the AC joint, and discomfort frequently restricts the mobility of the shoulder (9) The approximate incidence rate stood at 1.8 cases per 10,000 individuals per year, with males disproportionately affected compared to females, with a ratio of 8.5 to 1. Around 50.5% of all dislocations were reported in individuals aged 20 to 39 years. Sports-related injuries constituted the most prevalent traumatic mechanism, with Rockwood type III dislocation being the most common type observed. (10)

This injury is frequently seen in contact athletes who sustain a fall directly onto the superolateral shoulder, causing the acromion to move inferomedial relative to the distal clavicle. With increasing impact severity, there is a progressive injury pattern affecting stabilizing structures, starting with the AC ligaments, then the CC ligaments, and potentially involving the deltotrapezial fascia in more severe cases. The most common cause of AC injuries is direct trauma, but there are several indirect mechanisms as well. For example, falling onto an outstretched arm that has been abducted can cause the shoulder blade to be forced into the inferior region of the acromion and the AC joint. (11) Manual therapy, a longstanding practice employed for centuries to alleviate pain and enhance functionality, has seen a rise in the utilization of joint mobilization. This increase stems from compelling evidence demonstrating its efficacy in diminishing pain and addressing limitations in joint range-of-motion. (12) The treatment of pain, restricted motion, and posture issues frequently involves manual therapy, which encompasses a range of

techniques such as soft tissue manipulation, massage, manual traction, joint manipulation, and joint mobilization. Joint mobilization consists of gentle, slow movements within or at the edge of the joint's range of motion, while joint manipulation involves a swift, forceful thrust to temporarily surpass the restricted range. Recent trends in physical therapy education and ongoing professional development have highlighted the importance of joint mobilization techniques, leading to increased emphasis on these methods in both academic and practical settings. (13)

METHODOLOGY

STUDY DESIGN

SEARCH METHODS AND ELIGIBILITY CRITERIA

The databases utilized to look up content were science direct, Pedro, PubMed, google scholar search. The articles collected full test and screened properly. The key words used to search the relevant articles are Acromioclavicular joint dysfunction, manual therapy, interventions, shoulder dysfunctions, management of ac joint. Citation and reference of relevant articles were checked to find out availability of more articles. Every possible pertinent article was acquired along with a title, abstract, full text literature availability with proper screening of all the literature inclusion criteria.

SAMPLE SIZE

A sample size of 30 articles was searched with the keywords of Acromioclavicular joint dysfunction, manual therapy, management of ac joint, shoulder dysfunction. Out of these articles, papers obeying the inclusion and exclusion criteria were filtered and finally, 10 articles were obtained for the review.

INCLUSION CRITERIA

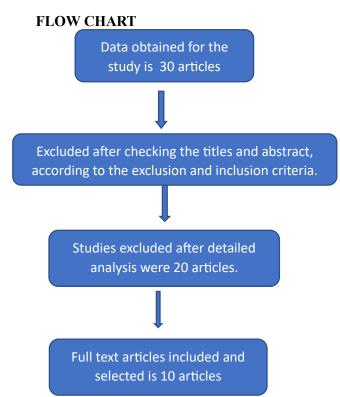

- Articles explaining ac joint dysfunction manual therapy were included
- Recent publications of articles
- Full text articles.
- Articles written in English
- Articles from year 2010- 2024 were included.

EXCLUSION CRITERIA

- Articles of past 2010
- Articles explaining other than manual therapy were excluded.
- Article discussed other than shoulder dysfunction were excluded.
- Articles not containing relevant discussion were excluded

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

RESULTS

Out of 30 articles, only 10 articles were retrieved which fulfilled the eligibility criteria using above mentioned selection strategy.

Numerous articles were eliminated due to their duplicate content, inability to fulfill the requirements for inclusion or exclusion. Findings of these 10 articles are summarized below.

| | rindings of these 10 articles are summarized below. | | | | |

DISSCUSION

Manual therapy aims to alleviate inflammation recover the shoulders pain free range of motion and restore the proper function of soft tissue and joints Thierry Marc PT 2024 stated in their study Effectiveness of a joint mobilizations protocol for shoulder subacromial pain syndrome: A pilot study 45 patients diagnosed with Shoulder Pain Syndrome (SPS) were randomly assigned to two groups: an experimental group and a control group. Both groups underwent a rehabilitation program called the Shoulder Global Concept. However, a difference in the initial session between the experimental and control groups. The experimental group received all specific mobilizations, including spin correction mobilizations, while the control group received the same program but without the spin correction mobilizations. The second session was identical for both groups, involving all specific mobilizations Before and after the first two sessions, range of motion (ROM) in flexion, abduction, external and internal rotations, pain levels, and functional status were evaluated using the Constant score and Quick Dash. All ROM were improved after the first session for both groups, but significantly more in the experimental group for glenohumeral (GH) abduction and external rotation (p < 0.05). Functional scores, pain and strength were significantly improved after 11 rehabilitation sessions. Fatemesh et al 2023 stated in his study Comparing the Effects of Tele-Physical therapy and Supervised Physical Therapy on Pain, Range of Motion, Function, and Satisfaction in Patients with Sub Acromial Pain Syndrome: A Protocol of Randomized Clinical Trial he study will include 33 patients with SAPS, divided into three groups: Control group receiving supervised Exercise Therapy (ET) + Manual Therapy (MT), Videoconferencing group receiving ET + self-release therapy, and Video-based group receiving ET + self-release therapy. Self-release therapies involve self-joint mobilization and self-myofascial release using a tennis ball, while MT includes joint mobilization techniques and transverse friction massages.

ET comprises stretching and strengthening exercises. Each group will undergo 10 sessions of therapy over three weeks. Assessments will be conducted at baseline, midterm, and post-treatment, using measures such as the VAS for pain, the SPADI for function, and flexibility evaluation. Patient satisfaction will also be assessed using the Telehealth Satisfaction Scale and Physical Therapy Patient Satisfaction Questionnaire. Data analysis will involve repeated measures ANOVA to compare outcomes among the groups over time. The experiment's goal is to contrast the efficacy of tele-physical therapy utilizing self-release techniques and exercises via videoconferencing against traditional face-to-face therapy with supervise exercises and manual therapy. The focus is on pain reduction, functional improvement, Range of Motion enhancement, and patient satisfaction.

Jardon et al stated that A quantitative, placebo-controlled investigation of the effectiveness of acromioclavicular joint dysfunction in weight trainers twenty weight trainers were randomly assigned to two groups. Each group received four treatments over two weeks Patients were evaluated at initial, one week, two weeks, and one-month follow-ups. Algometer and Inclinometer readings were used. Numerical Pain Rating Scales (NRS), Shoulder Rating Questionnaire (SRQ), and (SPADI) were employed. Manipulation appears effective in treating malfunction of the AC joint, particularly with respect to the goals. Ming zangh et al In 2015, he reported that among 40 patients with traumatic shoulder discomfort, scapulothoracic joint control training activities were beneficial in treating shoulder joint dysfunction. These patients were split into two groups at random: the therapy group and the control group. Standard rehabilitation procedures, including glenohumeral joint mobilization, ultrasound therapy, interfering current therapy, and traditional Chinese medicine, were administered to both groups. The treatment group also received these conventional treatments plus one month of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

scapulothoracic joint control training activities. These workouts included peri-joint muscle activities, joint stability-enhancing exercises, and both passive and dynamic scapulothoracic joint motions. The Constant-Murley scales were used to evaluate the patients' conditions both before and after the therapies. The results showed that after the recommended therapies, there were notable improvements in a number of areas, including pain levels, everyday activities, range of mobility, and overall ratings. Additionally, patients in the treatment group showed statistically significant improvements in pain management, daily activities, breadth of activities, and overall scores (P < 0.05) in comparison to the control group. Regarding the results of the strength tests, there was, however, no discernible difference between the two groups.

LIMITATION

- Limited articles on manual treatment for ac joint dysfunction
- Non-availability of articles in other search engines
- Difficult to find full text articles in above mention search engines

STRENGTH

This review has shown more scope of research to analyze manual therapy procedures for ac joint dysfunction.

CONCLUSION

We conclude from this review that a variety of manual treatment modalities have been shown to be useful and effective in treating patients with AC joint dysfunction. Further research and study are required to determine how manual therapy techniques can help manage ac joint dysfunction, as there has been little research on the use of these techniques or interventions for treating ac joint dysfunction.

RELATIONSHIP BETWEEN SERVICE QUALITY AND CUSTOMER SATISFACTION WITH SPECIAL REFERENCE TO ORGANIZED RETAIL STORES IN BHOPAL CITY

Sonal Singh

Assistant Professor Faculty of Management RKDF University Bhopal

ABSTRACT

The purpose of the present research paper is to explore the relationship between service quality and customer satisfaction of organized retail stores in Bhopal city. In order to explore the relationship between service quality and customer satisfaction few parameters of service such as service product, service delivery and service environment has been discussed. The study is based on primary data and sample has been collected by using convenient sample method among the 167 respondent. The findings of the study clearly indicate that service quality organized retail stores is positively related with customer satisfaction with respect to service product, service delivery and service environment.

INTRODUCTION

In the present situation service quality has become one of the significant issues for each and every organization. However, it is important for both customers as well as organizations. Service quality played a significant role because it is directly related with satisfaction level of the customers. Most of the research study has been suggested that quality of service is only decided the satisfaction level of the customer. Service quality in customer satisfaction both are the most important indicator make strong association between customers and organizations. Now a day's organized retail stores has become the most important place to fulfil customers requirement under the one roof. Therefore, quality of service for the organised retail stores always taken most important process in order to attract customers for increasing sales. Customer on the other hand want best value of their money and not very much interested to spare efforts in searching of high quality. The present research is based on the relationship between service quality and customer satisfaction towards organized retail stores in Bhopal city. In order to explore the relationship between the service quality and customer satisfaction three important parameters of service has been discussed such as service product, service environment and service delivery.

LITERATURE REVIEW

Kim Leng Khoo (2020), has been conducted a research study to explore the relationship between service quality, corporate image, customer satisfaction and word of mouth. The purpose of the paper is to understand impact of service quality on corporate image and customer satisfaction. The study was based on primary data which has been collected among the 253 respondent by using survey questionnaire method. The findings of the study explore that service quality has a significant impact on corporate image and customer satisfaction. On the other hand study conclude that corporate have no significant impact on revisit intension but has a significant impact on word of mouth. Furthermore study point-out that customer satisfaction a positively and significantly related with word-of-mouth and corporate image.

Ngo Vu Minh at., (2016), has been conducted a research study on The Relationship between Service Quality, Customer Satisfaction and Customer Loyalty in retail industry. The purpose of the study is to develop empirical interrelationship between service quality, customer satisfaction and customer loyalty. The study was based on primary data which has been collected among the 261 respondents by using survey analysis, the data analysis and hypothesis testing done with the help of factor analysis. The findings of the study indicated that service quality and customer satisfaction is significantly and positively related with each others, however customer loyalty have a mediate effect on the relationship between service quality and customer satisfaction. On the other hand study also indicated that there are non-linear relationships between all three construct of the study.

Anthony SumnayaKumasey (2014), has been conducted a research study to explore the relationship between service quality and customer satisfaction among the selected public sector organization. The study was based on primary data which has been collected by using questionnaire methods. Total 304 participants have been taken as sample, data analysis and hypothesis testing taken place by using correlation analysis. Findings of the study indicated that there is a significant and positive relationship between service quality and customer satisfaction.

Areej Fatma et al (2024), has been conducted a research study on Exploring the Correlation between Service Quality and Customer Satisfaction in the Hospitality Industry. The purpose of the study is to explore relationship between service quality and customer satisfaction among the hospital industry. The purpose of the study is to examine various factors whose impact the customer satisfaction and service quality. The study was based on primary data which has been collected among the customers of hospital industry. The study has been reveals that customer satisfaction played a significant role among the service quality and customer loyalty. The findings of the study

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

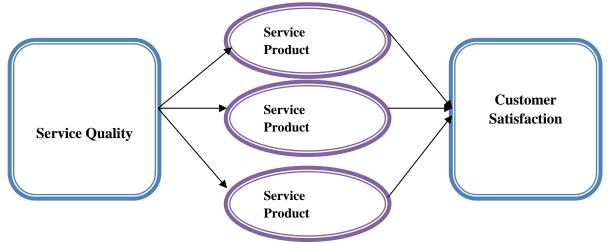

indicated that the five dimensions of service quality have verifying the impact of customer satisfaction.

OBJECTIVES OF THE STUDY

The various objectives of the study are as under

- 1. The explore the relationship between service quality and customer satisfaction towards service product
- 2. The explore the relationship between service quality and customer satisfaction towards service delivery
- The explore the relationship between service quality and customer satisfaction towards service environment

RESEARCH FRAMEWORK

FORMULATIONS OF HYPOTHESIS

The various hypothesis of the study are as under

 \mathbf{H}_{01} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service product

 \mathbf{H}_{al} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service product

 H_{02} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service delivery

 H_{a2} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service delivery

 H_{03} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service environment

 H_{a3} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service environment

RESEARCH METHODOLOGY

A descriptive method of research has been used to explore the relationship between service quality and customer satisfaction of organized retail stores. Data for present study has been obtained with the help of questionnaire methods among the customers of organized retails stores. Sample size and design, sample methods also has been discussed in the sections.

SAMPLE SIZE AND DESIGN

Sample for present study has been taken among the customers of selected retails stores in Bhopal city. Sample was taken by suing questionnaire methods with multiple choices. Convenient methods have been used to collect the sample among the entire populations. In order to maintain the accuracy in data the sample collected from different locations of the retail stores in Bhopal city. The final questionnaire has been distributed among the 200 peoples and 167 respondents have been positively replied.

SAMPLE METHOD AND AREA

Convenient method of sampling has been used to collect the sample among the entire populations and sample area for the study was limited up to different locations of organized retail stores in Bhopal city.

MEASUREMENT AND DATA ANALYSIS TOOLS

5 point Likert scale has been used for scaling of data and one way ANOVA analysis has been applied to test the hypothesis in order to explore the relationship between service quality of organized retail stores and customer satisfaction.

DATA ANALYSIS

Testing of first hypothesis

 H_{01} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service product

 H_{al} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service product

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 1: ANOVA
(Relationship between service products of organized retail stores and customer satisfaction)

| Hypothesis | Relationship statement | Sum of square | df | Mean Square | F | Sig. |
|---|--|---------------|---------|----------------|-------|-------|
| H ₀₁ | Relationship between service product of organized retail storesand customer satisfaction | 8.121 | 5 | 4.639 | 9.714 | 0.027 |
| | Dependent vari | able: Custo | mer sat | 0.512 | | |
| Dependent variable: Customer satisfaction (Predictors) Level of customer satisfaction on Service Product | | | | | | |

The above table explore the relationship between service quality of organized retail stores and customer satisfaction with respect to service product. It is clearly observing from the table that calculate value stores of sum square 8.121 and F score is 9.714 which is significant at 5% level of significant and 95% level of confidence ($P \ge 0.027$). The above result is exploring to the rejection of null hypothesis and accepts of alternative hypothesis. However, on the basis of result it can be reveals that there is significant and positive relationship between service products of organized retail stores and customer satisfaction.

Testing of Second Hypothesis

 H_{02} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service delivery

 H_{a2} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service delivery

Table 2: ANOVA (Relationship between service delivery of organized retail stores and customer satisfaction)

| Hypothesis | Relationship | Sum of | df | Mean | F | Sig. |
|---|-----------------------|----------------|------------|--------------|---------|-------|
| | statement | square | | Square | | |
| H_{02} | Relationship between | | | | | |
| | service delivery of | 10.678 | 5 | 8.215 | 9.067 | 0.000 |
| | organized retail | | | | | |
| H_{a2} | storesand customer | | | | | |
| | satisfaction | | | | | |
| | | | | 0.591 | | |
| Dependent variable: Customer satisfaction | | | | | | |
| | (Predictors) Level of | of customer sa | tisfaction | on Service D | elivery | |

The above table explore the relationship between service delivery of organized retail stores and customer satisfaction with respect to service product. It is clearly observing from the table that calculate value stores of sum square 10.678 and F score is 9.067. Which is significant at 5% level of significant and 95% level of confidence ($P \ge 0.05$), The above result is exploring to the rejection of null hypothesis and accepts of alternative hypothesis. However, on the basis of result it can be reveals that there is significant and positive relationship

between service delivery of organized retail stores and customer satisfaction.

Testing of Third Hypothesis

 H_{03} : There is no significant relationship between service quality of organized retail stores and customer satisfaction with respect to service environment

 H_{a3} : There is a significant relationship between service quality of organized retail stores and customer satisfaction with respect to service environment

 Table 3: ANOVA

 (Relationship between service environment of organized retail stores and customer satisfaction)

| Hypothesis | Relationship statement | Sum of | df | Mean | \mathbf{F} | Sig. |
|--|---|--------|----|--------|--------------|-------|
| | | square | | Square | | |
| H_{03} | Relationship between service environment of | | | 7.619 | | |
| H _{a3} | organized retail storesand customer | 10.062 | 5 | 7.019 | 9.214 | 0.001 |
| | satisfaction | | | 0.588 | | |
| Dependent variable: Customer satisfaction | | | | | | |
| (Predictors) Level of customer satisfaction on service environment | | | | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The above table explore the relationship between service environments of organized retail stores and customer satisfaction with respect to service product. It is clearly observing from the table that calculate value stores of sum square 10.062 and F score is 9.214. Which is significant at 5% level of significant and 95% level of confidence ($P \ge 0.05$), the above result is exploring to the rejection of null hypothesis and accepts of alternative hypothesis. However, on the basis of result it can be reveals that there is significant and positive relationship between service environment of organized retail stores and customer satisfaction.

FINDINGS OF THE STUDY

The various findings of the study are as under

- 1. Table1clearly reveals that service product of organized retail stores is most important parameters of service quality because it is positively and significantly associated with customer satisfaction. However, study rejected null hypothesis and accepted alternative hypothesis. On the basis of hypothesis result it can be said that there is a significant and positive relationship between service qualities of organized retail stores and customer satisfaction with respect to service product.
- 2. Table2 clearly reveals that service delivery of organized retail stores is most important parameters of service quality because it is positively and significantly associated with customer satisfaction. However, study rejected null hypothesis and accepted alternative hypothesis. On the basis of hypothesis result it can be said that there is a significant and positive relationship between service deliveries of organized retail stores and customer satisfaction with respect to service delivery.
- 3. Table3 clearly reveals that service environment of organized retail stores is most important parameters of service quality because it is positively and significantly associated with customer satisfaction. However, study rejected null hypothesis and accepted alternative hypothesis. On the basis of hypothesis result it can be said that there is a significant and positive relationship between service environments of organized retail stores and customer satisfaction with respect to service environment.

CONCLUSION

As it has been observed from the findings that service quality of organized retail stores is highly associated with customer satisfaction with respect to service product, service delivery and service environment. The findings of the study has been clearly mentioned that all the parameters of service of organized retail stores are significantly related with customer satisfaction at 5% level of significant. On the basis of findings reported it can be conclude that organized retail stores of Bhopal cites are providing expected service in the area of product delivery and environment. Which is highly attracted large number of customer in order to increase the level of customer satisfaction?

ABSTRACT

In today's educational landscape, where academic success shapes the future of the learners, the intense competition for excellence often pushes them into the dark realm of anxiety and depression. This struggle results in isolation, identity crisis and gives birth to various health issues such as hypertension, obesity, cardiovascular disorders and heightened aggression. Positive Psychology is a branch of psychology that emphasises on the importance of cultivating positive emotions such as joy, gratitude and contentment. It focuses on leveraging personal strengths and mental resilience to help individuals cope with life's challenges more effectively. Bhagavad Gita holds an important place in Indian knowledge system as its timeless wisdom has guided the people over centuries. What positive psychology says today was said long back by Sri Krishna on the battlefield of Kurukshetra to bring Arjuna out of sadness and confusion and prepare him for the war. Through this paper, an humble attempt has been made to explore the ideas of positive psychology from the perspective of Bhagavad Gita.

KEYWORDS: Shrimad Bhagavad Gita, Positive Psychology, Indian knowledge system, Stress Management, School Education.

I. INTRODUCTION

The National Education Policy (NEP) 2020 has introduced transformative changes in education, emphasising dynamic, personalised, technology-enhanced individualistic learning coupled with technological advancements such as Artificial Intelligence (AI), Virtual Reality (VR), robotics etc that will explore the curiosity of the child, integrate learning with doing and prepare an environment to facilitate life-long learning. However, amidst the focus on academic excellence and high-tech teaching methods, the physical and mental well-being of learners often goes overlooked.

Similar to the caged parrot in Tagore's story 'Tota-Kahini', students are confined within the pressures of academic achievement, with little attention given to their holistic development. (Bhatia,1994) The Indian education system emphasises theoretical knowledge over practical learning, leading to a lack of creativity and critical thinking skills. Students face immense pressure from family, school and peers to excel academically, with success measured solely by grades (Rani & Rawat, 2019).

This pressure contributes to high levels of academic anxiety and mental health issues among students. The emphasis on exam results exacerbates stress and can lead to severe consequences, including suicide (Poddar, 2020). The pandemic has further intensified these challenges, exacerbating the gap in learning and increasing academic pressure on school students.

The National Crime Record Bureau (NCRB) Report data shows that every hour one student commits suicide in India, with about 28 suicides reported every day. Its report also shed light over the alarming rate of student's suicide over the years. 10,159 students died by suicide in the year 2018, a significant increase from 9,905 in 2017, and 9,478 in 2016. According to a 2012 Lancet report, suicide rates in India are highest in the 15-19 years age group, among which 40% youths are male and 60% youths are females (Garai, 2020; Mukhopadhyaya, 2019). The situation has worsened in the recent years due to advent of the pandemic. According to 2019 NCRB Report, a total number of 1, 39,123 suicides were reported in the country during 2019 showing an increase of 3.4% in comparison to 2018. The unexpected and sudden shift from the traditionally practiced classroom-based teaching to digital based education due to the pandemic has created a significant gap in learning resulted in higher levels of academic anxiety among learners (D'Souza, 2021). More than 12,500 students died by suicide in the country when pandemic hit in 2020, which was at the rate of 34 person/ day, with many states reporting more than one death per day (Kumar, 2021). In 2020 alone, India witnessed a historic increase of 21% in suicide cases compared to 2019. Out of 12,526 student suicides in 2020, nearly 53% or 6,598 were from six states- Maharashtra, Odisha, Madhya Pradesh, Tamilnadu, Jharkhand and Karnataka, while all other states and union territories together reported 5,928 deaths (Kumar, 2021). When we look at the world scenario, India is the most depressed country in the world, followed by china and USA. A 2014 study reported in WHO, conducted for NCMH (National Care for

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Mental Health), states that at least 6.5 % of the Indian population suffers from some form of serious mental disorder (India Today, 2018).

Positive psychology is a branch of psychology that focuses on the study of optimal human functioning and the factors that contribute to a fulfilling life. Unlike traditional psychology, which often focuses on treating mental illness and dysfunction, positive psychology aims to understand and promote well being and happiness. Martin Seligman is considered one of the founders of positive psychology. His book, "Authentic Happiness", published in 2002, is a seminal work in the field. In this book, Seligman explores the concept of authentic happiness and presents strategies for cultivating happiness and well being in everyday life.

In this age of cut-throat competition where a decimal point can be a deciding factor in one's career, it is crucial that we should focus on exploring our ancient texts to find out solutions that will be beneficial for our students to manage their mental stress. Bhagavad Gita can be a solution to this as it offers timeless lessons on how to lead our life, how to behave in stressful conditions and what practices we can adopt to lead a more peaceful and fulfilling life. Though Bhagavad Gita does not offer any alternative cure in serious mental health conditions but introducing our students to the teachings can be beneficial to provide them a lifestyle which will lessen the chances of serious mental stress related ailments among the students.

Review of Related Literature

The Bhagavad Gita was given to Arjuna Sri Krishna at the battlefield of Kurukshetra. At the outset in 'Arjuna Visada Yoga' we observe that when Arjuna observed the warriors on both sides, including his own relatives and friends, he was filled with fear and sorrow that he will loose them in the battle. The prospect of killing his own relatives and the resulting sin weighted heavily on his conscience. This emotional turmoil led Arjuna to surrender to Sri Krishna, seeking solution to his inner conflict. Sri Krishna, much like a counsellor gradually imparted wisdom to Arjuna, explaining the nature of the field, knowledge, ignorance and the knowable. Krishna compared this process to a mother feeding her child in small portions, ensuring that Arjuna could comprehend and absorb the teachings step by step. Thus, Bhagavad Gita is a collection of teachings to achieve a state of equilibrium of the mind.

Over the years, research has increasingly highlighted the potential of the Bhagavad Gita as a valuable resource in psychotherapy and stress management. Bhatia et al. (2013) advocated for the practical integration of Gita's teachings into psychotherapeutic practices, noting its ability to enhance intervention effectiveness and augment the methods of Western psychotherapies. Verma (2014) emphasised the relevance of Gita's teachings in promoting effective stress management strategies. Ashtankar (2016) delved into the exploration of Bhagavad Gita's principles, particularly in the realm of mind management and the fostering of human capital development. Furthermore, Tayal (2019) underscored the necessity of incorporating Bhagavad Gita teachings into educational

curricula at various levels, citing its potential in nurturing well-rounded and responsible citizens.

II. OBJECTIVES OF THE STUDY

1. To explore the different dimensions of Positive Psychology from Shrimad Bhagavad Gita.

III. METHODOLOGY OF THE STUDY

In the present study, the necessary data was collected using the method of document analysis and it utilises secondary data from various writings on Shrimad Bhagavad Gita, research papers, newspaper articles, medical journals, government reports etc.

IV. FINDINGS OF THE STUDY

Objective 1: To explore the different dimensions of Positive Psychology from Shrimad Bhagavad Gita

1. Concept of Mind: In Sankhya philosophy, the mind is often referred to as 'Manas' which originates from Satvik Ahankara. it is described as one of the components of 'antahkarana' along with intellect (buddha) and Ego (Ahankar). It is considered as part of the subtle body. The mind, in Sankhya, is responsible for thoughts, emotions, desires and perceptions. In Yoga philosophy, the mind is also recognised as a crucial aspect of human experience and seen as a tool that can be trained and disciplined to achieve higher states of consciousness and liberation. "Yogash chitta-vritti-nirodhah" (Yoga Sutra 1:2). Yoga aims to calm the fluctuations of the mind to attain a state of inner peace and self-realisation.

In Shrimad Bhagavad Gita, importance has been given on the mind. In chapter 6, verse 6 Sri Krishna says, बन्धुरात्मात्मनस्तस्य येनात्मैवात्मना जितः। अनात्मनस्तु शत्रुत्वे वर्तेतात्मैव शत्रुवत्।। VI.6 ||

Which means for those who have conquered the mind, it is their friend. For those who have failed to do so, the mind works like an enemy. In chapter 6, verse 34, the controlling of the mind has been compared with controlling the wind, Sri Krishna said, चञ्चलं हि मन: कृष्ण प्रमाथि बलवद्दढम्। तस्याहं निग्रहं मन्ये वायोरिव सुद्ष्करम्॥ VI.34॥

Which means, the mind is very restless, turbulent, strong and obstinate, O Krishna. It appears to me that it is more difficult to control than the wind. Further in chapter 6 verse 5 Sri Krishna says,

उद्धरेदात्मनात्मानं नात्मानमवसादयेत्। आत्मैव ह्यात्मनो बन्धुरात्मैव रिपुरात्मन:॥ VI.5॥

which denotes, elevate yourself through the power of your mind, and not degrade yourself, for the mind can be the friend and also the enemy of the self.

2. Approaches for Cultivating Mental Stability: Shrimad Bhagavad Gita also offers various techniques through which mental stability can be achieved. In chapter 6, verse 36, Sri Krishna says,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

असंयतात्मना योगो दुष्प्राप इति मे मति: | वश्यात्मना तु यतता शक्योऽवाप्तुमुपायत: || VI.36|

Which means, Yog is difficult to attain for one whose mind is unbridled. However, those who have learnt to control the mind, and who strive earnestly by proper means, can attain perfection in Yog. In Chapter 6 Verse 20, Sri Krishna has talked about controlling the mind through Yoga.

यत्रोपरमते चित्तं निरुद्धं योगसेवया। यत्र चैवात्मनात्मानं पश्यन्नात्मनि तुष्यति ॥ VI.20 ॥

It means that When the mind, restrained from material activities, becomes still by the practice of Yog, then the yogi is able to behold the soul through the purified mind, and he rejoices in the inner joy.

Besides, in chapter 6 verse 17, Sri Krishna emphasises the importance of balance and moderation in various aspects of life. It states that one who is moderate in eating, recreation, work, sleep, and wakefulness can alleviate the distress and suffering in life.

युक्ताहारविहारस्य युक्तचेष्टस्य कर्मसु | युक्तस्वप्नावबोधस्य योगो भवति दु:खहा || VI.17 ||

Which means, those who are temperate in eating and recreation, balanced in work, and regulated in sleep, can mitigate all sorrows by practicing Yog.

3. Lessons on Positive Psychology

3.1 The Art of Detachment: The first lesson that the Bhagavad Gita teaches us regarding mental well-being is the art of detachment. The Gita emphasises the importance of detachment, guiding us to perform our duties without being overly attached to the fruits of our actions. Sri Krishna wisely states,

कर्मण्येवाधिकारस्ते मा फलेषु कदाचन | मा कर्मफलहेतुर्भूमां ते सङ्गोऽस्त्वकर्मणि || II.47 ||

which denotes you have the right to perform your prescribed duties, but you are not entitled to the fruits of your actions. Never consider yourself to be the cause of the results of your activities. This verse focuses on the effort put into our actions rather than fixating on the outcomes. The Gita teaches us that being detached allows us to stay balanced and free from the anxieties that arise from success or failure. Further he advises, क्रोधाद्भवति सम्मोहः सम्मोहात्स्मृतिविभ्रमः।

स्मृतिभ्रंशाद्बुद्धिनाशो बुद्धिनाशात्प्रणश्यति।।II.63।।

It denotes, from anger comes delusion; from delusion, confused memory; from confused memory, the ruin of reason; and from ruin of reason, man finally perishes. Sri Krishna explains that our desire is the root cause of all sin and wrong action in the world, desire gives rise to anger and anger leads to delusion and delusion to loss of memory, which leads to the loss of discrimination between right and wrong which ultimately destroys the person. Those who are intelligent and free from material desires, who have renounced the fruits of their actions, are liberated from the cycle of birth and death and attained the

state beyond suffering (II.51; III.19), as a result the person leads a more happy and fulfilling life (II. 64,65).

3.2 Adaptation to Present Moment: The Gita teaches us about accepting life's challenges and always try to adapt to the present moment through controlling our mind. Sri Krishna says, जितात्मनः प्रशान्तस्य परमात्मा समाहितः।

शीतोष्णसुखदुःखेषु तथा मानापमानयोः।।VI.7।। Which translates as for one who has conque

Which translates as for one who has conquered the mind, the Supersoul is already reached, for he has attained tranquility. To such a person, heat and cold, happiness and distress, honour and dishonour are all the same. Often times we become restless if something does not happen as we hoped, or we are criticised for the things we have not done. Gita teaches us to approach both the situation with equal importance and not get overwhelmed by extreme joy or sadness. By practicing calmness, a person can train themselves to face difficult situations in life bravely and thus nothing will disturb the mental harmony of a person.

3.3 Surrender to Supreme Force: Through Bhagavad Gita, we come to know about the path of dharma and a person can only explore this path if he embark on a journey to the almighty and follow the path of righteousness (dharma). Sri Krishna says,

भोक्तारं यज्ञतपसां सर्वलोकमहेश्वरम्। सुहृदं सर्वभूतानां ज्ञात्वा मां शान्तिमृच्छति॥v.29॥

It can be explained as knowing me as the ultimate purpose of all sacrifices and austerities, the supreme lord of all planets and demigods, and the benefactor and well-wisher of all living entities, one attains peace from the pangs of material miseries. Simply accepting God as our friend and protector can have a significant effect on our thinking and mental well-being. The belief that there is someone who loves us and care for us give us a sense of comfort which helps in maintaining our mental well-being.

3.4 Knowing the Self: Gita teaches us about having Atma-Jnana also known as understanding the self. Only when a person understands the self he/she can attain peace. Sri Krishna says

रागद्वेषवियुक्तैस्तु विषयानिन्द्रियैश्वरन्। आत्मवश्यैर्विधेयात्मा प्रसादमधिगच्छति॥ II.64॥

Which means, the self-controlled man, moving among objects with the senses restrained and free from attraction and repulsion, attains peace. We often forget that we are not immortal, our body will be destroyed one day and we will loose all our might. Our bodily luster makes us believe that we are all powerful and it develops ego in us. The ego wants to stay in easy situations but when stressful moments comes we become uneasy. In chapter 2, verse 30, Sri Krishna says,

देही नित्यमवध्योऽयं देहे सर्वस्य भारत। तस्मात्सर्वाणि भूतानि न त्वं शोचितुमर्हसि॥ II.30॥

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Which says, the indweller in the body of everyone is ever indestructible, O Arjuna: therefore, you should not grief for any creature. He further said,

न जायते म्रियते वा कदाचि न्यायं भूत्वा भविता वा न भूयः। अजो नित्यः शाश्वतोऽयं पुराणो न हन्यते हन्यमाने शरीरे॥ II.20॥

Which denotes, never is this soul born; nor has it any existence after having once been. The soul is unborn, eternal, ever-existing, undying, and primeval. It is not slain when the body is slain. The understanding that we are a part of the supreme being makes us tolerant, sensible, empathetic and enable us to control our harmful and negative emotions.

3.5 Balance in Thought and Action: The Gita gives emphasis on maintaining balance in life and avoid extreme thoughts and action. Sri Krishna says,

नात्पश्रतस्तु योगोऽस्ति न चैकान्तमनश्रतः। न चातिस्वप्नशीलस्य जाग्रतो नैव चार्जुन॥ VI.16॥

Which means, there is no possibility of one's becoming a yogi, O Arjuna, if one eats too much or eats too little, sleeps too much or does not sleep enough. This verse emphasises the importance of moderation in lifestyle choices. It encourages individuals to activities such as eating and sleeping, avoiding excesses that may disrupt mental and physical well-being. Besides, Sri Krishna says to Arjuna,

मात्रास्पर्शास्तु कौन्तेय शीतोष्णसुखदुःखदाः। आगमापायिनोऽनित्यास्तांस्तितिक्षस्व भारत॥ II.14॥

Which translates as, O son of Kunti, the nonpermanent appearance of happiness and distress, and their disappearance in due course, are like the appearance and disappearance of winter and summer seasons. They arise from sense perception, O Scion of Bharata, and one must learn to tolerate them without being disturbed. This verse teaches us to view life's ups and downs with equanimity, recognising the transient nature of pleasure and pain. By maintaining a balanced perspective, one can navigate challenges without being overwhelmed.

4. Meditation for Mental Peace: The sixth chapter of the Bhagavad Gita, 'Dhayan Yoga' provides profound insights into mind control through meditation. The practice of Meditation is presented as a powerful tool to achieve mental equilibrium and spiritual growth. Sri Krishna says,

उद्धरेदात्मनाऽऽत्मानं नाऽत्मानमवसादयेत्। आत्मैव ह्यात्मनो बन्धुरात्मैव रिपुरात्मनः॥ VI.5॥

Which means, a person should uplift oneself by one's own self, and should not degrade oneself. The self alone is one's friend, as well as one's enemy. This verse underscores the importance of self-discipline in controlling one's thoughts. Through meditation, Individuals can elevate their consciousness and overcome mental disturbances. In 'Dhayan Yoga' one can also find guidance regarding the proper way of doing meditation. Sri Krishna says,

तत्रैकाग्रं मनः कृत्वा यतचित्तेन्द्रियक्रियः | उपविश्यासने युञ्ज्याद्योगमात्मविशुद्धये || VI.12|| समं कायशिरोग्रीवं धारयन्नचलं स्थिरः | सम्प्रेक्ष्य नासिकाग्रं स्वं दिशश्चानवलोकयन || VI.13||

Which translates as , one should hold one's body, neck, and head erect in a straight line and stare steadily at the tip of the nose. Thus, with an unagitated, subdued mind, devoid of fear, one should meditate upon Me within the heart. By maintaining a steady posture and focused gaze during meditation, the mind becomes concentrated, aiding in controlling wandering thoughts and achieving a tranquil state. Sri Krishna also says,

सङ्कल्पप्रभवान्कामांस्त्यक्त्वा सर्वानशेषत: | मनसैवेन्द्रियग्रामं विनियम्य समन्तत: || VI.24||

शनै: शनैरुपरमेद्बुद्ध्या धृतिगृहीतया।

आत्मसंस्थं मन: कृत्वा न किञ्चिदपि चिन्तयेत् ॥ VI.25॥

Which means, completely renouncing all desires arising from thoughts of the world, one should restrain the senses from all sides with the mind. Slowly and steadily, with conviction in the intellect, the mind will become fixed in God alone, and will think of nothing else. The verse emphasises the gradual process of meditation, through this one can cultivate concentration and redirect the mind towards the Self, freeing it from external distractions.

5. Emotional Resilience and Mental Strength: The profound teachings of Bhagavad Gita also focuses on the development of emotional resilience and mental strength. In the chapter 6, verse 5, we observe an emphasis on the role of self-discipline in the development of mental strength:

उद्धरेदात्मनाऽत्मानं नात्मानमवसादयेत्। आत्मैव ह्यात्मनो बन्धुरात्मैव रिपुरात्मनः॥VI.5॥

Which means, elevate yourself through the power of your mind, and not degrade yourself. The mind is your friend and also your enemy; control it with the power of the self. Sri Krishna underscores the importance of developing mental strength to overcome challenges and adversities. In chapter 18, verse 66, Sri Krishna concludes his teachings with a powerful message on surrender and mental fortitude:

सर्वधर्मान्परित्यज्य मामेकं शरणं व्रज। अहं त्वा सर्वपापेभ्यो मोक्षयिष्यामि मा शुचः ||XVIII.66||

Which translates as, abandon all varieties of religion and just surrender unto Me. I shall deliver you from all sinful reactions. Do not fear. This verse highlights the transformative strength that comes from surrendering to a higher purpose, cultivating resilience in the face of life's trails.

6. Mindfullness for Happy Life: Throughout Bhagavad Gita, there are several examples of how one can practice mindfulness in life. In the chapter 6 (Dhayan Yoga), verses 10-15 focuses on the practice of meditation and mindfulness. Sri Krishna describes the process of calming the mind through meditation, comparing it to the challenge of controlling the wind. Verse 14 specifically addresses the essence of mindfulness:

प्रशान्तात्मा विगतभीर्ब्रह्मचारिव्रते स्थित:।

मनः संयम्य मच्चित्तो युक्त आसीत मत्परः || VI.14||

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

It meas, thus, with a serene, fearless, and unwavering mind, and staunch in the vow of celibacy, the vigilant yogi should meditate on Me, having Me alone as the supreme goal. Here Sri Krishna extols the mindful yogi who maintains contentment, self-discipline, and unwavering determination. In chapter 6, verse 20, the essence of mindfulness is further elucidated in the following verse:

यत्रोपरमर्ते चित्तं निरुद्धं योगसेवया। यत्र चैवात्मनात्मानं पश्यन्नात्मनि तष्यति॥VI.20॥

It means, when the mind, restrained from material activities, becomes still by the practice of Yog, then the yogi is able to behold the soul through the purified mind, and he rejoices in the inner joy. This verse illustrates the pinnacle of mindfulness in samadhi, where the mind achieves profound concentration and joyous awareness. The Bhagavad Gita serves as a timeless guide for practicing mindfulness through disciplined thought, focused meditation, and unwavering devotion.

7. Fostering Compassion for positive Relationships: The teachings of Lord Krishna to Arjuna in the midst of the Kurukshetra War offers timeless wisdom on the development of compassion, empathy and kindness to foster positive relationships. In chapter 12, verse 13, Sri Krishna emphasises the significance of compassion:

अध्वेष्टा सर्वभूतानां मैत्रः करुण एव च। निर्ममो निरहङ्कारः समदुःखसुखः क्षमी॥ XII.13॥

It translates as, he who is not envious of anyone, who is friendly and compassionate, who has no material possessions, who is free from ego, who is balanced in happiness and distress and who is forgiving- such a person is very dear to Me. Here, Sri Krishna encourages the cultivation of a compassionate attitude towards everyone, transcending biases and prejudices. Further, in chapter 16, verses 1-3, Sri Krishna delineates the divine and demoniac natures. Verse 3 highlights the demonic qualities, including lack of compassion: "Pride, arrogance, conceit, anger, harshness, and ignorance- these qualities belong to those of demonic nature" This underscores the importance of cultivating compassion to transcend negative tendencies. Additionally, chapter 16, verse 5, Sri Krishna said:

दैवी सम्पद्विमोक्षाय निबन्धायासुरी मता। मा शचः सम्पदं दैवीमभिजातोऽसि पाण्डव || XVI. 5||

Which means, the divine qualities lead to liberation, while the

demoniac qualities are the cause for a continuing destiny of bondage. Grieve not, O Arjun, as you were born with saintly virtues. The Bhagavad Gita teaches us that compassion is the cornerstone of positive relationships. By embracing selflessness and kindness, individuals can build harmonious connections, transcending ego and fostering a sense of unity and empathy with all beings.

CONCLUSION

In an era characterised by relentless competition, where students contend with mounting mental pressures, there arises a pressing imperative to incorporate our ancient wisdom, such as the teachings of the Bhagavad Gita, into the educational

paradigm. By integrating these profound texts into the teachinglearning process, we can offer learners a respite from the pervasive anxiety and stress that permeate modern life. Regular engagement with the Bhagavad Gita not only equips individuals with tools to effectively manage their stress but also furnishes them with invaluable guidance for navigating life's complexities with wisdom and purpose.

Recognising the urgent need for such holistic education, the Indian government has undertaken commendable efforts to infuse Indian knowledge systems into the school curriculum, orchestrating a comprehensive redesign aimed at fostering the holistic development of learners. In this transformative educational landscape, the inclusion of the Bhagavad Gita assumes paramount significance, serving as a cornerstone for nurturing the mental well-being of students. By grounding them in timeless principles of resilience, equanimity, and selfawareness, the Bhagavad Gita empowers learners to confront life's challenges with fortitude and grace, thereby fostering not only academic excellence but also holistic personal growth.

Moreover, by weaving the teachings of the Bhagavad Gita into the fabric of education, we embark on a journey of cultural preservation and revival, honouring the rich heritage that defines our identity as a civilisation. As students delve into the profound insights of this ancient scripture, they not only cultivate a deeper appreciation for their cultural roots but also develop a broader perspective that transcends temporal boundaries. Thus, the integration of the Bhagavad Gita into the educational landscape not only nurtures individual well-being but also contributes to the preservation and propagation of our cultural heritage, fostering a more harmonious and enlightened society.

In essence, as we embark on this transformative educational journey, let us embrace the timeless wisdom encapsulated in the Bhagavad Gita, recognising its profound potential to alleviate the mental burdens of our students and illuminate their path towards a life of fulfilment and purpose. By harnessing the transformative power of ancient wisdom, we can sculpt a future where education serves not only to enlighten the mind but also to nourish the soul, fostering a generation of resilient, compassionate, and purpose-driven individuals poised to navigate the complexities of the modern world with grace and resilience.

ABSTRACT

Tracer study is used to determine the needs for improvement of a program in colleges and university by measuring the employability and the effectivity of the quality education provided by the institution to its graduates. This tracer study aims to determine the employment rate and status of graduates from 2019 to 2023 of the program Bachelor in Elementary Education – Generalist of a local college in Kapalong, Davao del Norte. The study used a descriptive method with a total number of 172 respondents and was conducted online using Google Forms. The result of the tracer study reveals that the employment rate of the graduates is 51.16% in which 30.81% practiced the teaching profession while 20.35% are in non-teaching field. The survey also revealed that 22.67% of the employed graduates earned within Php21,000 to Php30,000 per month, and 20.93% have secured their first job within 4 to 8 months. Attitude to work, quality education provision, and skills and abilities development both obtained a very high level of description which signifies that these are always manifested by the graduates. Thus, it is recommended that the institution should improve its partnerships with local industry partners and community linkages and establish graduates and employability coordinator to trace and help graduates informed for more opportunities for work.

KEYWORDS: tracer study, elementary education, employability, teacher education

INTRODUCTION

Tracer study serves an important indicator to measure the effectiveness of providing quality education and relevant services among educational institution. It gives universities and colleges instructors the skill and knowledge which help them provide

quality education as it help them identify the strength, weaknesses, and areas of need of the program. In fact, future employees' standing in the labor market is significantly influenced by the quality of the educational services they receive and how employers and students see it (Adillo, 2024).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Moreover, tracer study looks on the details of employment, profile of the graduates, and the status of employment to determine the career profiles of the graduates to ensure the relevance of the curriculum. Therefore, the results from tracer study serves as basis for enhancing training program and revision of current implemented curriculum in the program (Mendoza, 2023).

Around the world, university and colleges conducted tracer study to monitor reliable data on the employability of their graduates and effectivity of their programs. In Ethiopia, Tefera (2018) conducted a tracer study to gather accurate and valid data that could help in improving the standard of the educational courses at Debre Berhan University. Additionally, a tracer study conducted by Dabrowska-Resiak (2019) to verify how education led to the labor market, the development of the career of Polish university graduates which includes students who are enlisted under Erasmus programs. In Southeast Asia, the Royal University of Phnom Penh conducted biannual tracer studies to expand understanding of their alumni's employability and satisfaction with the program (Chet, Sok, Vong, & Sok, 2021).

Pardo and Pichay (2019), traced the 2016 graduates of College of Teacher Education of University of Northern Philippines in Ilocos Sur to assess their employment status, the most useful job-related and learned competencies, and their suggestion for enhancement of the program's curriculum. Using descriptive survey method, a total of 320 graduates where reached as respondents. The results showed that within six months after their graduation, most of the graduates where employed in private entities related to their course. The study also reveals that communication and practice teaching subjects are the most useful to the graduates and they suggested that teaching-learning process should focus on the development of their skills and the application of concepts, theories, and principles to real world.

In Davao de Oriental, 150 graduates of Bachelor of Elementary Education from 2013-2021 serves as respondents of a tracer study conducted by Davao Oriental State University – Cateel Extension Campus. The results showed that most of the graduates, who are mostly females, acquired their job within six months after they graduated and are employed as regular or permanent basic education teachers within Davao Oriental. Furthermore, most of them are employed in the Department of Education and earned a salary of almost ₱27,500 per month with communication skills and discipline are considered by the graduates as the most useful in their employment. Lastly, the study also recommended that increasing the availability the resources, facilities, and equipment of the school's library and laboratory will enhance instruction and assist the students more on their academic endeavors (Apostol & Susada, 2022).

In the local setting, Escandallo (2024) traced the graduates of Bachelor of Elementary Education – Generalist from 2015 to 2019 of a local college in Kapalong to determine the rate of employment and their employability status. A total of 209

respondents answered the researchers-made tracer survey reveals that the employment rate of the elementary education graduates was 85.16%, in which graduates who works as teachers comprised 61.8%. It also shows that 31.6% of the graduates are regular employees, 29.9% are full-time, 15.5% are self-employed, 11.5% are contractual, and 6.9% are part-time employees. The survey also showed that 10% of the graduates pursued graduate and post-graduate studies. The results also showed a very high-level manifestation of attitude to work, quality education provisions of the institution, and skills and abilities development among elementary education graduates.

Hence, this tracer study was conducted to check the rate and status of employment of the Bachelor of Elementary Education graduates which includes their self-rated evaluation about their attitude to work, the quality education provided by the institution and their development in terms of skills and abilities obtained from it. This will serve as an indicator of the institution on their continuing enhancement of providing quality education through improving and designing the curriculum of elementary education that will ensure future graduates employment and equip them with skills and values needed by the community.

OBJECTIVES OF THE STUDY

The primary purpose of this study was to:

- 1. Describe the demographic profiles of the graduate-respondents in terms of:
 - 1.1. sex when grouped per academic year;
 - 1.2. civil status;
 - 1.3. age;
 - 1.4. year graduated;
- 2. Describe the employment profile and features of the graduate-respondents in terms of:
 - 2.1. employment rate;
 - 2.2. employment status;
 - 2.3. level of income;
 - 2.4. period of seeking the first job after college;
 - 2.5. relevance of college degree to the present job; and
 - 2.6. job mismatching.
- 3. Describe the level of the graduate-respondents self-rated evaluation with their attitude to work?
- 4. Determine the level of the graduate-respondents selfrated evaluation with the quality education provision of the institution?
- 5. Determine the level of the graduate-respondents selfrated evaluation with the skills and abilities obtained in the institution and its usability with their present occupation?

METHODS

Design

This tracer study used descriptive method of research for it involved a collection of quantitative information tabulated in numerical form. Baker (2017) refer to descriptive quantitative design as skipping into potential cause and effect for it gathered variable without changing the environment or adjusting the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

variables. Additionally, Ghanad (2023) stated that descriptive method is more concerned to "what, where, and when" to describe accurately a population, situation and phenomenon than "why" it happened. Moreover, it frequently used observational and survey method to gather descriptive data and uses graphs and charts to aid audience to visually understand the data distribution. In this study, descriptive method was used to describe the rate and status of employment of the graduates of Bachelor of Elementary Education – Generalist of Kapalong College of Agriculture, Sciences and Technology. Along with describing the employment status, it will also measure the employment rate and help provide information about the graduates' age, gender, and marital status.

Population and Sample

The primary population and sample of this tracer study were the Bachelor of Elementary Education graduates of Kapalong College of Agriculture, Sciences and Technology from the academic year 2019 until academic year 2023. Hence, complete enumeration random sampling was used to track and trace the graduates of their employment rate and status. To be more specific, in the year 2019, there were 105 graduates, 17 are males and 88 are females; in year 2020, there are 2 graduates in which all are females. There are no recorded graduates of the program for the year 2021. In 2022, there are a total of 28 graduates in which 4 are males and 24 are females; and for 2023, there are 37 graduates, 5 of which are males while 32 are females. Overall, the total population and sample of the study is 172 graduates of elementary education from 2019 to 2023, in which 26 are males and 146 are females.

Research Instrument

The research instrument used in this study was from the tracer study of Escandallo (2024) entitled "A TRACER STUDY ON THE ELEMENTARY EDUCATION GRADUATES FROM ACADEMIC YEAR 2015 TO 2019: EMPLOYMENT IN FOCUS". The survey questionnaire has a Cronbach alpha of 0.955 which can be interpreted as having an excellent internal consistency.

Data Collection Procedure

Data collection refers to the process of acquiring data with the aim of learning more of the research topic. Further, it is in this stage that allows a researcher to find answers for the research questions (Taherdoost, 2021). Thus, the following are the steps primarily taken responsibly by the researchers in gathering the data needed for this study.

First, the researchers asked the data of the total number of Bachelor of Elementary Education who graduated from academic year 2019 up to academic year 2023 to the college registrar so that the data will be exact and accurate.

Second, after obtaining the total number of graduates, the researchers utilized the survey tracer questionnaire of Escandallo (2024) to determine the employment rate, employment status, educational attainment and development, attitude to work, provision quality of education, and development of skills and abilities of every elementary education graduate.

Third, using Google Forms, the researchers began tracking the graduates based on their employment status and rate, educational attainment and development, work attitude, provision of quality education, and development of skills and abilities.

Fourth, the researchers collected the questionnaire and started tallying after the graduate students finished responding to it to be prepared for data treatment and analysis.

Lastly, for an easier and better understanding of the outcome, the data was analyzed and evaluated by the institution's designated statistician and presented in tabular and graphical form.

Data Analysis

For the data analysis, mean was used to get the average score in measuring the level of graduates' attitude to work, evaluation of quality education provision and the development of different skills and abilities.

RESULTS AND DISCUSSION

The results and discussion are presented based on answering the set of objectives of the study.

Demographic Profiles of the BEED Graduates

The first main objective of this tracer study is to describe the demographic profile of the Elementary Education graduates from the academic year 2019 up to academic year 2023. These profiles include the sex, civil status, age, year graduated, and educational attainment and development.

Sex. Shown in Table 1 is the total number of Bachelor of Elementary Education – Generalist graduates from the school year 2018-2019 to school year 2022-2023. In the batch 2019, with a total number of 105graduates or 61.05% of the total graduate-respondents, 17 or 9.88% are males while the remaining 88 or 83.81% are females. In batch 2020, all the 2 graduates are female which constitute 1.16% of the total graduate-respondents. In batch 2021, there are no graduates from the program. In batch 2022, out of 28 graduates which is 16.28% of the total graduate-respondents, 4 or 2.33% are males while the remaining 24 or 13.95% are females. Lastly, in batch 2023, out of 37 graduates which is 21.51% of the total graduate-respondents, 5 or 2.91% are males and the remaining 32 or 18.60% are females. Overall, the total number of males is 26 of the total graduate-respondents while the remaining 146 are females.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Year Graduated | Sex | Frequency | Percent (%) |
|----------------|----------|-----------|-------------|
| 2019 | Male | 17 | 9.88 |
| 2019 | Female | 88 | 51.16 |
| Subtotal | | 105 | 61.05 |
| 2020 | Male | 0 | 0.00 |
| 2020 | Female | 2 | 1.16 |
| Subtotal | Subtotal | | 1.16 |
| 2022 | Male | 4 | 2.33 |
| 2022 | Female | 24 | 13.95 |
| Subtotal | | 28 | 16.28 |
| 2022 | Male | 5 | 2.91 |
| Female | | 32 | 18.60 |
| Subtotal | | 37 | 21.51 |
| Total | | 172 | 100.00 |

Table 1. Sex Distribution of Bachelor of Elementary Education – Generalist Graduates

Civil Status. Shown in Table 2 is the civil status of Bachelor of Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. The data reveals

that out of 172 graduate-respondents, only 1.74% or 3 are already married while the remaining 169 or 98.26% are still single. Further, no graduates currently identify widowed or separated.

| Civil Status | Frequency | Percent (%) |
|--------------|-----------|-------------|
| Single | 169 | 98.26 |
| Married | 3 | 1.74 |
| Total | 172 | 100.00 |

Table 2. Civil Status of Bachelor of Elementary Education – Generalist Graduates

Age. In Table 3, it shows the age of the Bachelor of Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. Out of 172 graduate-

respondents, 66.86% are 21-25 years old; 28.49% are 26-30 years old; 4.07% are 31-35 years old; and remaining 0.58% aged around 36-40 years old.

| Age | Frequency | Percent (%) |
|-------|-----------|-------------|
| 21-25 | 115 | 66.86 |
| 26-30 | 49 | 28.49 |
| 31-35 | 7 | 4.07 |
| 36-40 | 1 | 0.58 |
| Total | 172 | 100.00 |

Table 3. Age Distribution of Bachelor of Elementary Education – Generalist Graduates

Year Graduated. Shown in Table 4 is the total number of graduates of Bachelor of Elementary Education – Generalist from the academic year 2018-2019 up to academic year 2022-2023. There are 172 graduate-respondents in this study. For the year 2019, there are 105 graduates, comprising 61.05% of the total graduate-respondents. In the batch 2020, there are only 2

graduates, which only constitute 1.16% percent of the total graduate-respondents. Batch 2022 comprised of 28 graduates which is 16.28% of the total graduate-respondents. Lastly, batch 2023 comprised of 37 graduates which is 21.51% of the total graduate-respondents.

| Year Graduated | Frequency | Percent (%) |
|----------------|-----------|-------------|
| 2019 | 105 | 61.05 |
| 2020 | 2 | 1.16 |
| 2022 | 28 | 16.28 |
| 2023 | 37 | 21.51 |
| Total | 172 | 100.00 |

Table 4. Year Graduated of Bachelor in Elementary Education – Generalist Graduates

Employment Profile and Features of BEED Graduates

The second research objective of this tracer study is to determine the employment profile and features of Bachelor in Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. The following are included in this objective are employment rate, employment status, level

of income, period of seeking job after college, relevance of college degree to the present job and job mismatching.

Employment Rate. Table 5 shows the employment rate of Bachelor in Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Out of 172 graduate-respondents that answered the survey, 88 or 51.16% are employed which includes teaching and non-teaching job while the remaining 84 or 48.84% are unemployed.

| Employment Rate | Frequency | Percent (%) |
|------------------------|-----------|-------------|
| Employed | 88 | 51.16 |
| Unemployed | 84 | 48.84 |
| Total | 172 | 100.00 |

Table 5. Employment Rate of Bachelor of Elementary Education – Generalist Graduates

Employment Status. Shown table 6 is the employment status of Bachelor in Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. Based on the results of the survey, out of 88 or 51.16% of employed BEED graduates, 19.19% are regular, 13.95% are

working full-time, 9.30% are working on contractual basis, and 3.49% are working part-time. 1.74% of employed graduates are working part-time but not seeking full-time work. Similarly, employed graduates on both job order and self-employed status got 1.74% each.

| Employment Status | Frequency | Percent (%) |
|--|-----------|-------------|
| Working Full Time | 24 | 13.95 |
| Working Part Time | 6 | 3.49 |
| Working part-time but not seeking full-time work | 3 | 1.74 |
| Working on contractual basis | 16 | 9.30 |
| Regular | 33 | 19.19 |
| Job Order | 3 | 1.74 |
| Self-employed | 3 | 1.74 |
| Total | 88 | 51.16 |

Table 6. Employment Status of Bachelor of Elementary Education – Generalist Graduates

Level of Income. Table 7 shows the monthly income of Bachelor in Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. Based from the results of the survey, from 51.16% of employed

graduates, 12.215 from this earned Php1,000-Php10,000 per month, 13.95% earned Php11,000-Php20,000 per month, 22.67% earned Php21,000-Php30,000 per month. Only 2.33% earned above Php30,000 per month.

| Level of Income | Frequency | Percent (%) |
|---------------------|-----------|-------------|
| Php1,000-Php10,000 | 21 | 12.21 |
| Php11,000-Php20,000 | 24 | 13.95 |
| Php21,000-Php30,000 | 39 | 22.67 |
| Above Php30,000 | 4 | 2.33 |
| Total | 88 | 51.16 |

Table 7. Level of Income of Bachelor of Elementary Education – Generalist Graduates

Period Seeking of Job After College. Table 8 shows the range of period seeking job after college of Bachelor of Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. Results from the survey shows that from 5.16% of employed BEED graduates, 19.19%

took on 0-3 months to have their first job, 20.93% have their first job within 4-8 months, 9.30% have their first job within 9-12 months. Only 3 or 1.74% have landed in their first job above a year.

| Period of Seeking the First Job after College | Frequency | Percent (%) |
|--|-----------|-------------|
| 0-3 months | 33 | 19.19 |
| 4-8 months | 36 | 20.93 |
| 9-12 months | 16 | 9.30 |
| Above 1 year | 3 | 1.74 |
| Total | 88 | 51.16 |

Table 8. Period of Seeking the First Job after College of Bachelor of Elementary Education - Generalist Graduates

Relevance of College Degree to the Present Job. Shown in table 9 is the evaluation of the Bachelor of Elementary Education –

Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023 on the relevance of their college degree

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

to their present job. Based from the result of the survey, from the 51.16% employed graduates, 38.37% says that their college degree is very much relevant to their present job.

| Relevance of College Degree to the Present Job | Frequency | Percent (%) |
|---|-----------|-------------|
| Very Much | 66 | 38.37 |
| Much | 14 | 8.14 |
| Neutral | 5 | 2.91 |
| A Little | 2 | 1.16 |
| Not At All | 1 | 0.58 |
| Total | 88 | 51.16 |

Table 9. Relevance of College Degree to the Present Job of Bachelor of Elementary Education – Generalist Graduates

Job Mismatching. Shown in table 10 is the mismatch in job or job alignment of the Bachelor of Elementary Education – Generalist graduates from the academic year 2018-2019 up to academic year 2022-2023. From the 172 BEED graduates that

respond to the survey, 53 or 30.81% are working as teacher in private or public institution. Meanwhile, 35 or 20.35% of the graduates are working as non-teaching employee which is specified in the next figure.

| Job Alignment | Frequency | Percent (%) |
|---------------|-----------|-------------|
| Teaching | 53 | 30.81 |
| Non-Teaching | 35 | 20.35 |
| Total | 88 | 51.16 |

Table 10. Job Alignment of Bachelor of Elementary Education – Generalist Graduates

Presented in table 11 the job specification of non-teaching roles of Bachelor of Elementary Education – Generalist graduates from batch 2019 to batch 2023. From the 35 or 20.35% who work as non-teaching employee, 5.81% of them are office-based clerks, 4.65% of which are call center agents, 4.07% are government

employees, 2.91% are sales agent/specialist/representatives. Meanwhile, 1.16% are account specialist. Both marketing specialist, technician, and domestic helper account for 0.58% each.

| Job Specification for Non- Teaching Roles | Frequency | Percent (%) |
|--|-----------|-------------|
| Government Employee | 7 | 4.07 |
| Sales | 5 | 2.91 |
| Agent/Specialist/Representative | | |
| Account Specialist | 2 | 1.16 |
| Marketing Specialist | 1 | 0.58 |
| Technician | 1 | 0.58 |
| Office-based Clerk | 10 | 5.81 |
| Domestic Helper | 1 | 0.58 |
| Call Center Agent | 8 | 4.65 |
| Total | 35 | 20.35 |

Table 11. Job Specification for Non-Teaching Roles of Bachelor of Elementary Education – Generalist Graduates

Level of the Bachelor of Elementary Education Graduates Attitude to Work

Table 12 shows the level of the Bachelor of Elementary Education – Generalist graduates with their attitude to work which obtain and earned an overall mean score of 4.68 described as very high. This means that the level of attitude to work by BEED- Generalist graduates is always manifested since most of the response of the graduates are identified to be strongly agreed with the subquestions under attitude to work.

Based on the table, item number 6 stating – I participated in all activities and events inside my workplace got the lowest mean which is 4.6 which is described as very high means that it is always manifested in the workplace of BEED – Generalist graduates. Item number 10 which states – I seek assistance and help from others whenever I have clarifications and queries obtained the highest mean which is 4.77 and described as very high means that the said item is always manifested by the BEED – Generalist graduates in their workplace.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Attitude to Work | Mean | Description |
|--|------|-------------|
| 1. I am very interested, happy and satisfied with my work and it is very important for me. | 4.68 | Very High |
| 2. I like the kind of job and work I am doing. | 4.63 | Very High |
| 3. I accepted assignments and tasks given to me at work without complaints. | 4.70 | Very High |
| 4. I arrived on time to prepare my work and extend working hours if necessary. | 4.70 | Very High |
| 5. I can work better and functional under different working environment and situations. | 4.65 | Very High |
| 6. I participated in all activities and events inside my workplace. | 4.62 | Very High |
| 7. I have a good relationship with my colleagues and co-employees. | 4.66 | Very High |
| 8. I submitted necessary documents and papers on time and beat deadlines. | 4.67 | Very High |
| 9. I performed my task and job with excellence and outstanding quality. | 4.67 | Very High |
| 10. I seek assistance and help from others whenever I have clarifications and queries. | 4.77 | Very High |
| Overall | 4.68 | Very High |

Table 12. Level of Bachelor of Elementary Education – Generalist Graduates Attitude to Work

Level of the Bachelor of Elementary Education Graduates **Quality Education Provisions**

Table 13 shows the level of Bachelor of Elementary Education – Generalist graduates with quality education provisions which obtained an overall mean of 4.77 described as very high which means that graduates of BEED - Generalist's quality education provision is always manifested as they have responded to every sub-question under the quality education provision as strongly agreed.

From the ten sub-questions, item number 5 which states -qualityof learning facilities for first-hand and direct experiences like of different laboratories obtained the lowest mean of 4.67 which can be described as very high means that this item is always manifested when the graduates studied at the Kapalong College of Agriculture, Sciences and Technology. On the other hand, item number 7 stating – Level of optimum interaction and contact with my fellow students through different in-campus activities got the highest means of 4.82 that can be described as very high means that the graduates during their studies in Kapalong College of Agriculture, Sciences and Technology has always manifested the said item.

| Quality Education Provision | Mean | Description |
|---|------|-------------|
| Availability of course materials and different learning resources needed for our studies. | 4.77 | Very High |
| Quality of course contents from courses offered as well as the teaching and learning process. | 4.78 | Very High |
| 3. Conduciveness of the learning environment and atmosphere. | 4.78 | Very High |
| 4. Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.80 | Very High |
| 5. Quality of learning facilities for first-hand and direct experiences like of different laboratories. | 4.67 | Very High |
| 6. Quality of different courses offered in the program that develops the total sum of the student skills. | 4.76 | Very High |
| 7. Level of optimum interaction and contact with my fellow students through different in-campus activities. | 4.82 | Very High |
| 8. Well-trained and self-renewing Faculty members and staffs. | 4.74 | Very High |
| 9. Different trainings, seminars and workshops that prepare students for employment. | 4.81 | Very High |
| 10. Varied learning assessments and instructions which assess students' progress and learning fairly and equally. | 4.78 | Very High |
| Overall | 4.77 | Very High |

Table 13. Level of Bachelor of Elementary Education – Generalist Graduates Quality Education Provision

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of the Bachelor of Elementary Education Graduates Skills and Abilities Development

Shown in this table 14 is the level of Bachelor of Elementary Education – Generalist graduates with the skills and abilities development which obtained an overall mean of 4.70 described as very high, suggesting that skills and abilities development among BEED graduates are always manifested.

Item number 9 which is the *Technical and Entrepreneurial Skills* obtained the lowest mean of 4.60 described as very high which suggest that BEED graduates always manifest such item. On the other hand, item number 3 which is – *ability to work independently as well as team work and team play* got the highest mean which is 4.80 indicates a very high level of manifestation among BEED graduates.

| Skills and Abilities Development | Mean | Description |
|--|------|-------------|
| 1. Organizational and leadership skill. | 4.69 | Very High |
| 2. Problem solving and critical thinking skills. | 4.63 | Very High |
| 3. Ability to work independently as well as team work and team play. | 4.80 | Very High |
| 4. Creative thinking and creativity, initiative and taking a risk, if necessary. | 4.70 | Very High |
| 5. Time Management and decision-making skills. | 4.69 | Very High |
| 6. Writing competence and skills including technical writing. | 4.64 | Very High |
| 7. Communication and interpersonal skills. | 4.74 | Very High |
| 8. Computer and ICT Skills. | 4.63 | Very High |
| 9. Technical and Entrepreneurial Skills | 4.60 | Very High |
| 10. Ability to work under pressure. | 4.70 | Very High |
| 11. Ability to write the essentials and basics of effective lesson planning. | 4.74 | Very High |
| 12. Code of ethics applied to my teaching profession. | 4.77 | Very High |
| 13. Knowledge with the different teaching methodologies, techniques and approaches through seminars and workshops. | 4.75 | Very High |
| 14. Expertise about multidisciplinary research that is essential for understanding students' needs and interests. | 4.70 | Very High |
| 15. Trainings, seminars and workshops about the preparation and evaluation of different instructional materials. | 4.74 | Very High |
| Overall | 4.70 | Very High |

Table 14. Level of Bachelor of Elementary Education – Generalist Graduates Skills and Abilities Development

DISCUSSION

The summary of the findings based on the collected data through online survey using Google Forms are used to draw the following conclusions and recommendations.

Demographic profile of the BEED Graduates

This tracer study first objective was to identify the demographic profile of Elementary Education graduates from batch 2019 to batch 2023. The results showed that most of the graduates are females encompassing 146 of the graduates. This support the study conducted by Shauman (2016) indicates that female graduates have been increasing at a faster rate compared to male graduates, leading to a decline in the male to female graduate ratio.

Moreover, 98.26% of the graduates are still single with the remaining 1.74% are already married. Othman, Shan, Yusoff, and Kee (2018) states that civil status is one of the factors affecting employability of graduates.

Lastly, most of the graduates are aged around 21-25 years old which is 66.86% of the total graduate-respondents from batch

2019 to batch 2023. According to Mncayi (2016) age have significant influence on the employability of graduates in which in his study, majority of unemployed are from ages 21-24 years old.

Employment Profile and Features of BEED Graduates

Based on the result of the survey of this tracer study, 51.16% of the graduates are employed with majority of them are working as teachers in private or public institutions, 19.195 working as regular employee and 13.95% working as full-time employee. Also, 38.37% of which have said that their college degree has very much relevance to their current job. However, 48.84% of the graduates are still unemployed. Pending license for some graduates have contributed to unemployment as it is a basic entry requirement to public institutions and some private sectors (Pentang, et al., 2022). Another reason to this is the lack of items or position and few job vacancies contribute to the difficulties of employment of some graduates (Gines, 2014).

Also, this can also be true to non-teaching employed graduates which consist of 20.35% of the employed graduates. Most of the non-teaching graduates worked as office-based clerk which is

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

5.81% of the total non-teaching employed graduates, 4.65% work as call center agent, and 4.07% work as government employee.

On the level of income of employed graduates, 22.67% have an income of not less than Php21,000 but not more than Php30,000 per month. Only 2.33% have an income of above Php30,000 per month while 12.21% have income that ranges from Php1,000 to Php10,000 per month. Further, 20.93% of the employed graduates have landed on their first job within 4 to 8 months after they graduated. While 19.19% have their first job within 3 months after graduation and only 1.74% have their first job after a year or more. Notably, some graduates who have their first job within a month after they graduated have a monthly earning ranging from Php5,000 to Php10,000 (Biscante, Clemencio, & Negado, 2019).

Level of the Bachelor of Elementary Education Graduates Attitude to Work

The graduates Bachelor of Elementary Education – Generalist with their attitude to work indicated a very high level of description. This entails that BEED graduates' level of attitude to work is always manifested as the graduate-respondents strongly agree with the sub-questions under attitude to work.

Similarly, a recent tracer study conducted by Asoy, et al., (2024) on BSED Mathematics graduates revealed that graduates have a very high level of attitude to work which means that they are efficient and effective on their work tasks or in their workplace. Also, a study of Sarsenova, Sadyrova, Montayev, & Imanbekova (2016) found out that the attitude towards work of education graduates is influenced by factors like professional values, motivation, and employment prospects, shaping their career decisions and satisfaction levels. The study also emphasizes the view of students to higher education as a necessity for career development and life.

Level of the Bachelor of Elementary Education Graduates Quality Education Provisions

The level of the Bachelor of Elementary Education – Generalist graduates with their quality education provision was described as very high. This entails that the graduate-respondents strongly agree with the sub-questions of quality education provision and that it is always manifested during their time studying in Kapalong College of Agriculture, Sciences and Technology.

Similarly, a tracer study of Silongan et al., (2024) with graduates of BSED Filipino reveals the institution commitment in providing its clients quality education by allowing students to be expose to different training programs, seminars, learning resources, and competent line of faculty and staff.

In connection to the findings of this study, Mahputriono (2022) The quality of education provision directly impacts the quality of education and graduates, influenced by funding management and curriculum effectiveness. Also, quality education provision ensures well-prepared graduates, enhancing their competitiveness in the labor market. It is also crucial for individual development

and societal progress in a knowledge-based society (Branişte, Calugher, & Lungu, 2017).

Level of the Bachelor of Elementary Education Graduates Skills and Abilities Development

The level of the Bachelor of Elementary Education – Generalist graduates with skills and abilities development was described as very high. This means that skills and abilities among BEED graduates are always manifested.

In connection to the result, Ilyas and Ali (2023) emphasizes the importance of employability skills development programs during and after graduation for enhancing employability of the graduates. They said that employability component such as personal qualities, core skills, attitudes and work ethics of the graduates have influence to their employability.

Moreover, the elementary education graduates exhibit very high level of communication and interpersonal skills, problem solving and critical thinking skills, and ability to work independently as well as team work and team play. Education graduates need to develop both professional skills and soft skills like communication, problem-solving, and adaptability to succeed in the evolving job market (Qizi, 2020). A study by Baird and Parayitam (2019) found out that most employers place importance to the interpersonal skills, critical thinking skills, communication skills, problem solving skills, professionalism and personal motivation of job seekers in hiring workers.

Summary of Findings

After the successful conduct of the survey, which received responses from graduates of Bachelor of Elementary Education – Generalist program of the Kapalong College of Agriculture, Sciences and Technology, the following are the summary of findings:

From 2019 to 2023, the institution produced a total of graduates in which 26 males and 146 are females. In terms of civil status, most of the graduates are single with 98.26% of the total number of graduates-respondents and the remaining 1.74% are already married. Also, in terms of age, 66.86% of the graduates are in the range of 21 to 25 years old. Batch 2019 have the highest number of graduates with a total of 105 while batch 2020 have lowest which consist of only 2 graduates.

Moreover, the employment rate of the graduates is 51.16% with the remaining 48.84% are unemployed. From those graduates who are employed, 22.67% have monthly income within the range of Php21,000 to Php30,000, with 20.93% have secured their first job within 4 to 8 months. Also, 38.37% of the employed graduates have said that their degree has very much relevant to their current job. However, 20.35% of employed graduates are working on jobs that are non-teaching.

Lastly, the response of the graduates in the survey indicates a very high level of attitude to work and quality education provision of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the institution. Also, the level of skills and abilities development of the graduates was evaluated as very high.

CONCLUSION

After the conduct of the survey, the following were the conclusion drawn: the employment rate of BEED graduates from batch 2019 to 2023 is 51.15% indicating that half of the graduates are capable to seek and obtain job with most of them working as regular and full-time employee. Further, it was also revealed that their degree has very much relevant to their current job as most of them practice the teaching profession in their work. These indicates that the institution has successfully prepared the graduates to their fields as the it offers quality education.

Moreover, the graduates' attitude to work have obtained a very high level of description which indicates that they have values of professionalism that is important in their job to work competently and excellently. Also, the level of quality education provision was rated very high which signifies that the institution is committed in providing quality education to their students by conducting seminars and trainings, accessibility of different learning resources and materials, and hiring competent faculty and staff. Lastly, the skills and abilities development of the graduates was evaluated as very high which indicates that the institution have undoubtedly supported the development of skills and interest of the graduates throughout their time studying there.

RECOMMENDATIONS

Based on the summary of findings and drawn conclusions of the study, the following are the recommendation of the study: First, the institution should improve partnerships with local industries and community linkages to provide more opportunities for graduates to wok after completing their degree considering that most of the graduates have secured their first job within four to eight months after they graduated and to improve the rate of employment. Second, establishing graduate and employability coordinator will help the institution trace the employment of the graduates and inform them of vacancies for work and other job opportunities. Third, the institution should organize seminars, workshops, and trainings that would help motivate graduates and BEED graduates who work in non-teaching fields to continue to pursue the teaching profession. Lastly, the institution should invest on facilities such as laboratories to improve its quality education provision. The institution should also improve the technical and entrepreneurial skills of the students by strengthening partnership with local businesses and conducting workshops and seminars.

APPLICATION OF UNIFIED POWER FLOW CONTROLLER FOR PERFORMANCE IMPROVEMENT OF POWER SYSTEM

Fasina E.T.¹, and Adebanji B.²

^{1,2} Department of Electrical and Electronic Engineering, Faculty of Engineering Ekiti State University, Ado Ekiti, Nigeria

Corresponding Author: Fasina E.T.

ABSTRACT

The growing demand for electricity due to population growth and industrialization often leads to heavy loading of transmission lines and voltage instability. However, conventional methods of improving voltage stability are normally slow and difficult to control. This paper employs a Unified Power Flow Controller (UPFC) for performance improvement of the Nigeria's 330kV transmission system. The result shows significant improvement in the network voltage and reduction in power losses.

1. INTRODUCTION

The rising demand for electricity in Nigeria has led to severe disturbances, breakdowns and voltage collapses. Voltage stability is the capability of a power system to maintain steady voltages at all buses or nodes in the system, under normal operating condition and after being exposed to disturbances from a given initial operating condition (Ingole and Gohokar, 2016). The major incidents causing voltage instability are insufficient supply of reactive power or excessive absorption of the reactive power from the system, large distance between the sending and receiving end voltages, sudden increase in load demand in a heavily stressed network (Chowdhury et.al, 2015). The aforementioned causes of voltage instability when left unattended to will result in voltage collapse and subsequently, in partial or total blackout of an entire network as a result of the cascading failure it caused.

Flexible A.C transmission system is an evolving technology used to solve power system instability problems. Its first concept was introduced by (Hingoram and Gyugyi, 1999). Since then different kinds of FACTS devices have been proposed. Flexible Alternating Current Transmission Systems (FACTS) was developed and deployed as a sustainable short-term measure to control system operation by ensuring voltage stability and increasing transmission line transfer capacity(Suchak et al., 2017). Amongst the various FACTS devices, Unified Power Flow Controller (UPFC) has a unique capability to control flow of power in multiple line and even sub-network, as against the more conventional FACT devices that control only single line power flow (Padiyar, 2007). Placing FACTS controllers at appropriate location, enhances the stability of the system. Proper installation of UPFC would ensure minimal congestion in critical lines, reduce losses on the system, and also improve stability of the system (Sharma and Gupta, 2012).

2. UNIFIED POWER FLOW CONTROLLER

The unified power flow controller is a second-generation FACTS controller. It is the most promising device in the FACTS concept. It has the ability to adjust the three control parameters, i.e., the bus voltage, transmission line reactance and phase angle between two buses. UPFC is also the most versatile FACTS controller that can be used to improve steady state stability, dynamic stability and transient stability (Onuegbu et al., 2020). Among the various FACTS devices, UPFC is regarded as the most effective version since it serves to control the three parameters at the same time. It suggests that control of transmission power can be affected by changing three parameters namely impedance, voltage magnitude and voltage angle difference between the ends of the line.

Unified power flow controller is a power electronics-based controllers that can acts as a shunt compensator, phase converters and series compensators simultaneously or separately on the transmission line (Sadikovic, 2003). The UPFC operation can be changed from one state to another without having to do generation reschedule or change line topology (Slochanal, Latha, and Chithiravelu, 2005).

The basic structure of the UPFC is shown in Fig 1. It consists of two voltage source converters and a DC circuit represented by the capacitor. Converter 1 is primarily used to provide the real power demand of converter 2 at the common DC link terminal from the AC power system. Converter 1 can also generate or absorb reactive power at its AC terminal, which is independent of the active power transfer to (or from) the DC terminal. Therefore, with proper control, it can also fulfill the function of an independent advanced static VAR compensator providing reactive power compensation for the transmission line and thus executing indirect voltage regulation at the input terminal of the UPFC.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

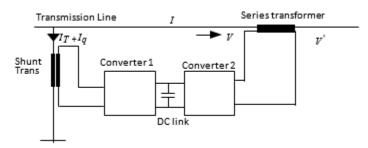

Fig 1. Schematic diagram of UPFC (Sadikovic, 2003).

Converter 2 is used to generate a voltage source at the fundamental frequency with variable amplitude ($0 \le V_T \le V_{Tmax}$) and phase angle ($0 \le \Phi_T \le 2\pi$), which is added to the AC transmission line by the series connected boosting transformer. The converter 2 output voltage injected in series with line can be used for direct voltage control, series compensation, phase shifter and their combinations. This voltage source can internally generate or absorb all the reactive power required by the different type of controls applied and transfers active power at its DC terminal.

2.1 UPFC Equivalent Circuit

Fig 2 indicates the P_{pq} representing the real power exchange between shunt and series branches. V_{pq} represents the voltage through series compensator and Q_{pq} reactive power injected by the compensator and also shown in the circuit V_S sending and V_R receiving-end voltages. Also, shown that $V_{seff} = V_S + V_{pq}$ Where, $V_{seff} = Effective$ voltage $V_S = Sending\ Voltage\ V_{pq} = Represents$ the voltage through series compensator

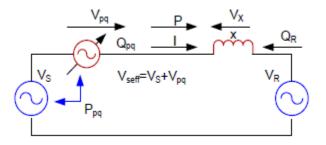

Fig. 2: UPFC operations schematic [10] (Cao and Qian, 2011).

2.2 UPFC Phasor Diagram

Fig 3(a) indicates the voltage regulation operations in UPFC. In the second Fig 3(b) indicates the line impedance compensation

and management in the UPFC controller. In the third Fig 3(c) phase shifting expressed in UPFC controller and in the Fig 3-(d) indicates UPFC control parameters.

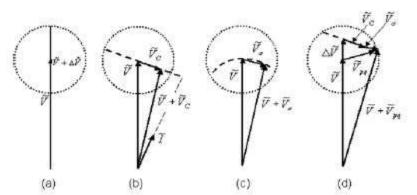

Fig 3: UPFC Phasor diagram (Abdollahi and Tavakoli, 2010).

2.3 Mathematical modelling of UPFC

A UPFC can be represented by two voltage sources representing fundamental components of output voltage waveforms of the two converters and impedances being leakage reactance of the two coupling transformers as shown in Fig 4 (Mete and Mehmet, 2007).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

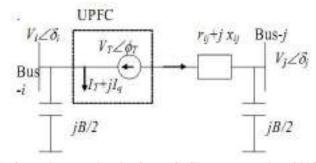

Fig 4. Equivalent circuit of UPFC (Singh and Erlich, 2005).

Based on the basic principle of UPFC and network theory, the active and reactive power flows in the line, from bus-i to bus-j, having UPFC can be written as (Verma, Singh and Gupta, 2001).

$$P_{ij} = (V_1^2 + V_T^2)g_{ij} + 2V_i V_T g_{ij} \cos(\emptyset_T - \delta_j) - V_J V_T [g_{ij} \cos(\emptyset_T - \delta_j) + b_{ij} (\sin(\emptyset_T - \delta_i)] - V_i V_i (g_{ij} \cos\delta_{ij} + b_{ij} \sin\delta_{ij})$$

$$\tag{1}$$

$$Q_{ij} = -V_i I - V_i^2 (b_{ij} + B/2) - V_i V_T [g_{ij} \sin(\phi_T - \delta_i) + b_{ij} \cos(\phi_T - \delta_i)]$$

$$-V_i V_j (g_{ij} \sin \delta_{ij} - b_{ij} \cos \delta_{ij})]$$
(2)

Where $g_{ij} + jb_{ij} = \frac{1}{r_{ij} + jx_{ij}}$ and I_q is the reactive current flowing in the shunt transformer to improve the voltage of the shunt connected bus of UPFC. Similarly, the active and reactive power flows in the line, from bus-j to bus-i, having UPFC can be written as,

$$P_{ij} = V_j^2 g_{ij} - V_j V_T [g_{ij} \cos(\phi_T - \delta_j) - b_{ij} \sin(\phi_T - \delta_j)] - V_i V_j (g_{ij} \cos\delta_{ij} - b_{ij} \sin\delta_{ij})$$
(3)

$$Q_{ji} = -V_j^2 (b_{ij} + B/2) - V_i V_j (g_{ij} \sin(\emptyset_T - \delta_j) - b_{ij} \cos(\emptyset_T - \delta_j))$$

+ $V_i V_j (g_{ij} \sin\delta_{ij} + b_{ij} \cos\delta_{ij})$ (4)

The real power and reactive power injections at bus-i with the system loading (λ) can be written as (Singh and Erlich, 2005).

$$P_i = P_{Gi} - P_{Di}^0(1+\lambda) = \sum_{J \in N_b} P_{ij}$$
 (5)

$$Q_i = Q_{Gi} - Q_{Di}^0(1 + \lambda) = \sum_{J \in N_b} Q_{ij}$$
 (6)

Where,

 P_{Di}^{0} and Q_{Di}^{0} are the initial real and reactive power demands.

 P_{Gi} and Q_{Gi} are the real and reactive power generations at bus-i respectively.

 N_b is the number of system buses and λ is the sensitivity of system loading (Verma, Singh and Gupta, 2001).

2.4 UPFC Controller Benefits

UPFC has an exceptional capability to control independently the real and reactive power flow at any transmission angle. The sending and receiving end voltages are provided by independent power systems that are able to supply and absorb real power without any internal angular change. In practice, the situation will be different depending on the change in load angle.

3. METHODOLOGY

Newton Raphson iterative technique was adopted in this study because of its fast convergence and accuracy with small number of iterations. MATLAB program was used to perform the load flow computation and simulation. The load flow result identifies weak buses in the network. Those weak bus are considered as the possible locations for placement of unified UPFC, with a view of improving voltages in those buses to acceptable limits.

3.1 The System Description

The test system is the 24-bus Nigerian power system consist of 7 generators, 23 loads, and 39 lines as shown in Fig.2. There is an installed capacity of 6,500 MW of generated power. The system is characterized by high power losses and frequent voltage instability. The transmission grid system is also characterized by radial, fragile and long transmission lines. The existing system comprises over 11,000km of transmission lines (about 5,523km for 330kV lines and about 6,889km for 132kV lines). There are 32 Nos of 330/132 kV substations with total installed transformer

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

capacity of 7,688MVA (equivalent to 6,534.8 MW). The distribution sector is comprised of 23,753km of 33KV lines 19,226km of 11kv lines, 679 of 33/11KV sub-stations. There are

also 1790 distribution transformers and 680 injection substations. The 24-bus model of Nigerian network is as shown in Fig.5.

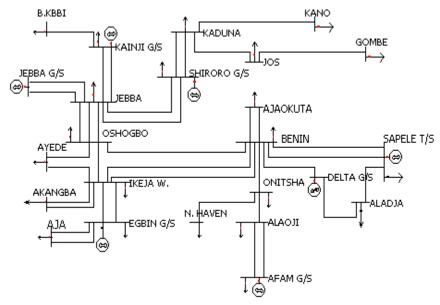

Fig. 5. A single line diagram of the Nigerian 330kV power system (Fasina et al, 2020).

3.2 Data Collection: The data used for this study were obtained from Power Holding Company of Nigeria (PHCN) and are presented in Table 1, Table 2 and Table 3.

4. RESULT AND DISCUSSION

This section presents the result of load flow analysis using Newton Raphson iteration method. The analysis was based on 24bus 330KV power transmission line in Nigeria used as a case study. Taking into consideration IEEE standard acceptable limits of $\pm 10\%$ tolerance.

4.1 POWER FLOW SOLUTION BY NEWTON RAPHSON **METHOD**

The result of the power flow solution for the system under consideration is as presented in Table 4 and Table 5. Newton Raphson power flow analysis was carried out on the test case with and without the UPFC using MATLAB software because of the number of buses involved.

The result of power flow solution without UPFC incorporated shows that there are some buses like bus 9 (Ayede), 19 (Jos), 16 (Gombe), 22 (Kano), 13 (New heaven) and 20 (Kaduna) are having low voltages (i.e. below 0.94pu the allowable or permissible voltage limit) and was improved by applying UPFC in other to maintain the bus voltage magnitudes at 1.04 pu. The updated voltages are presented in the Table 5.

5. CONCLUSIONS

The growing demand for electricity due to population increase and industrialization without a corresponding increase in generation has resulted in system instability. In this paper, the power flow analysis of Nigerian 330kv grid system was carried out with and without incorporation of UPFC. The results show the weak buses which are found in the northern part of the country. The incorporation of UPFC in the power system provided improvement to the voltage instability at the weak buses. Unified power flow controller (UPFC) is a modern control equipment to control the real and reactive power flow on transmission lines either simultaneously or separately. Therefore, it is strongly recommended that the Nigeria power utility has to consider the use of Unified Power Flow Controller (UPFC to improve the network voltage and reduce voltage losses across the line in the system.

EVOLUTION OF A REBEL HERO: A STUDY OF GURDIAL SINGH'S NIGHT OF THE HALF MOON/ADH CHANANI RAAT

Dr. Rakesh Kumar

Associate Professor, Department of English, University of Jammu

ABSTRACT

Gurdial Singh Rahi is a reputed novelist, who has portrayed realistic Malwa region of Punjab in his fiction and is translated from original Punjabi language into many of the world languages. His fifth novel, Night of the Half Moon/Adh Chanani Raat, is a critically acclaimed piece of art, in which Gurdial Singh has created an immortal rebel hero, Modan, who shares heroic characteristics of the legendry heroes of Punjab like Dulla Bhatti, Jeona Morh, Jagga Daku, Sucha Surma, Mirza and Arjan Valley etc. The paper endeavours to study the nuances of the evolution of a rebel hero, by understanding what is to be a hero, hero's definition, and his inspiration from Northrop Fry's archetypal and Albert Camus' existential lenses. The paper attempts to understand the psychology of the novel's rebel hero, who strives hard for keeping his honour, putting at stake all that he has, for living a manly life, when all other, around him are falling into nihilism.

KEYWORDS: absurdity, existentialism, honour, meta narratives, mythology, nihilism, rebel hero.

Punjabi fiction has a rich and diverse history that spans several centuries. The literary tradition of Punjabi fiction has evolved over time, influenced by the cultural, social, and political changes in the Punjab region. The early period of Punjabi literature was dominated by religious and mystical poetry, primarily in the form of Sufi poetry by saints like Baba Farid and Guru Nanak. However, narrative elements were present in these poetic works. The 19th century saw the emergence of prose fiction in Punjabi literature. This period marked the beginning of the modern Punjabi literary tradition. Punjabi novel is said to have emerged with the works of stalwarts like Bhai Vir Singh, Mohan Singh Vaid, Charan Singh Shaheed, Joshua Fazal Din, and others. The works of Bhai Vir Singh, a prominent Sikh scholar, poet, and novelist, played a crucial role in shaping Punjabi fiction. His novels, such as Satwant Kaur and Sundari, were among the early contributions to Punjabi prose fiction. Based on the vibrant Punjabi culture, the early 20th century witnessed a significant growth in Punjabi literature in fiction, with writers exploring various themes related to social issues, cultural identity, and rural life. Nanak Singh, a renowned Punjabi novelist, made notable contributions during this period. His novel Chitta Lahu (White Blood) is considered a classic in Punjabi literature. The partition of India in 1947 had a profound impact on Punjabi literature. Writers from both sides of the border explored the themes of displacement, loss, and identity in their works. Prominent Punjabi fiction writers of this period include Khushwant Singh, Amrita Pritam, and Balwant Gargi. Amrita Pritam's Pinjar (The Skeleton) is a well-known novel that delves deep into the consequences of partition. Punjabi fiction has continued to evolve in the contemporary period, with writers exploring a wide range of themes such as militancy, class/caste struggles, urbanisation, globalisation, resistance and the challenges faced by the Punjabi diaspora. Recent Punjabi fiction writers include Gurdial Singh, Waryam Singh Sandhu, and Surjit Patar, among others. Punjabi fiction, like literature in any other language, reflects the social and

cultural makeup and evolution of the community it represents. The themes and styles have diversified over time, providing a rich tapestry of storytelling that captures the essence of heroic Punjabi life and its ever-changing dynamics.

Gurdial Singh Rahi (10 January 1933 to 16 August 2016), a celebrated writer, born in Punjab's small village Bhaini Fateh, near Jaito in Faridkot district, is an established eminent novelist who wrote in Punjabi. Gurdial Sigh did not have a smooth and easy childhood. His father who was a carpenter and a blacksmith had to drop out his son from school when he was in his eighth grade. Gurdial Singh had no other option than to be an apprentice, because of his economic condition. Master Madan Mohan, the Headmaster in the Primary School, Jaito, held Gurdial Singh's hand, encouraged him to continue his education and mentored him. With his compassionate and crucial help, Gurdial Singh matriculated and was appointed as a primary teacher. He continued his studies and was promoted to High School and earned MA in Punjabi in 1967. Gurdial Singh had to leave his village for his teaching, but the village remained in him wherever he was, and, after he retired, he settled in Jaito, for rest of his life. As he lived a rustic life, he grew to be a rare literary talent portraying an authentic rural Punjab, particularly the Malwa region, in his fiction. As a successful creative writer of fiction he was honoured with various literary recognitions and awards, such as Language department, Government of Punjab's Sarvottam Pustak Puruskar consecutively for three years in 1966, 1967 and 1968. He bagged this award again in the year 1972. In 1975 he was finalised for the prestigious Sahitya Academy Award and reputed Nanak Singh Novelist Award. In 1976, he was conferred with Punjab Sahitya Academy Award followed by Soviet Nehru Award in 1986, Punjab Government's Best Litterateur Award and Guru Nanak Dev University's Bhai Veer Singh Award in 1992. The President of India honoured Gurdial

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Singh with Padma Shree in 1998. He was also honoured with the prestigious Jnanpeeth Award in 1999.

Gurdial Singh is considered a pioneer of realism in modern Punjabi fiction. He has successfully depicted the changes along with the crisis at the time of the shift from feudalism to capitalism in Punjab. He has depicted the changing relations between individuals and their crises due to economic upheavals with special reference to Malwai fraternity. Gurdial Singh has passionately and realistically presented the stress of human minds in his writings. Most of his novels are concerned with the period of Green Revolution when on one side, feudalism was still in existence and on the other, commercialisation of agriculture on the capitalist pattern had already begun. Therefore, the individuals were going through a period of turbulence due to substitution of old moral and social values with relatively amoral commercial attitude. The main reason for this change may have been the shift in whole economic system as all social life/superstructure is ingrained in economic set up/base. His first short story was published in 1957 but his real break in the literary world came with the publication of his first novel Marhi da Diva (The Last Flicker) in 1964 as it intricately explores the lives of landless peasants, offering a poignant depiction of socio-economic disparities in rural Punjab. In Anhe Ghode da Dan (The Gift of a Blind Horse), Singh delves into the harsh realities faced by Dalits, masterfully critiquing social injustices and portraying the resilience of marginalised communities. Parsa weaves a narrative around a folk artist, examining the preservation of cultural heritage amidst societal shifts. Singh's literary contributions, characterised by realism and depth, portraying the underdog hero weathering all odds, continue to resonate in Punjabi literature, enriching the understanding of Punjab's socio-cultural intricacies.

Gurdial Singh's critically acclaimed, fifth novel, ਅੱਧ ਚਾਨਣੀ ਰੀਤ Night of the Half Moon (Adh Chanani Raat) was originally published in Punjabi in the year 1972 and was later translated in English by Pushpinder Syal and Rana Nayar, published by Macmillan Publishing house in the year 1996. The novel presents an actual microcosm of the Malwa region of Punjab, as Gurdial Singh depicts the heroism of Modan, modelled on Punjabi folk heroes like Dulla Bhatti, Jeona Morh, Jagga Daku, Sucha Surma, and Mirza etc, a representative of the Jat community and their value of honour, above everything else. The novel fetched Sahitya Akademi Award and Nanak Singh Novelist Award in 1975 for its acknowledged literary merits. On one level, the novel offers the story of a dispute between two agrarian families of rural Malwai Punjab, and on another, it delves deep into the real Malwai life of Punjab of 1970s. Singh, belongs to the third generation of Punjabi novelist and is celebrated as a realist artist who writes unconventionally. fiddling with the linear chronology of the narrative and offering his plot using flashbacks and flashforwards in order to reveal the internal lives of his characters, especially in his Night of the Half Moon/Adh Chanani Raat.

Heroism has been a significant value and is as old as human civilisation. A hero, universally, is supposed to possess certain qualities, which establish one as superior to the common lot, undisputedly. The word hero, etymologically, came into English language from Greek word $\tilde{\eta}\rho\omega\varsigma$ (hērōs), meaning a

protector or a defender. Cambridge dictionary defines hero, to be "a person who is admired for having done something very brave or having achieved something great" ("Hero"). Many cultures demand some common qualities in a hero, like, courage, honour, bravery, honesty, loyalty, sacrifice, loyalty etc. Each culture has its own set of sources like myths, tales, legends, folk literature, and songs for idealising a hero. According to Andrew Bernstein, the concept of heroism is a complex one, derived from a high-level abstractions. Primarily, it is moral concept which, "requires a rational philosophical system, including the principle of mind-body integration, as its proper base. Without such a basis the concept can be neither rigorously defined nor adequately understood" ("Philosophical Foundations"). He believes:

A hero is... an individual of elevated moral stature and superior ability who pursues his goals indefatigably in the face of powerful antagonist(s). Because of his unbreached devotion to the good, no matter the opposition, a hero attains spiritual grandeur, even if he fails to achieve practical victory. Notice then the four components of heroism: moral greatness, ability or prowess, action in the face of opposition, and triumph in at least a spiritual, if not a physical, form. ("Philosophical Foundations")

Gurdial Singh, has created an immortal character, whom he has named Modan in this novel. Modan has all the characteristics mentioned by Bernstein as he displays his moral greatness, ability to sustain, action in tough times, and triumph in winning readers' hearts. No hero can be created in a vacuum, in isolation, in an absence of a good cause, without a support system, and without a great antagonist. Modan, a thorough Jat, lives in a realist Malvai village in Punjab amidst Malwai characters, and struggles for his honour, displays ample courage repeatedly, makes many sacrifices for his brothers, loves his wife Dani, behaves like a great son, brother, husband and friend, who ultimately dies for his honour.

Aristotle also shared his views on heroism in his *Poetics*. Highlighting passages from Aristotle's *Poetics*, Northrop Frye reveals:

In the second paragraph of the Poetics Aristotle speaks of the differences in works of fiction which are caused by the different elevations of the characters in them. In some fictions, he says, the characters are better than we are, in others worse, in still others on the same level. This passage has not received much attention from modern critics, as the importance Aristotle assigns to goodness and badness seems to indicate a somewhat narrowly moralistic view of literature. Aristotle's words for good and bad, however, are spoudaios and phaulos, which have a figurative sense of weighty and light. In literary fictions the plot consists of somebody doing something. The somebody, if an individual, is the hero, and the something he does or fails to do is what he can do, or could have done, on the level of the postulates made about him by the author and the consequent expectations of the audience. Fictions, therefore, may be classified, not morally, but by the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

hero's power of action, which may be greater than ours, less, or roughly the same. (Frye 33)

Aristotle considers the "weighty" characters to be heroes, who dare to go against the wind for their conviction, do some difficult tasks, which cannot be done by ordinary. His hero is a life like, a common character, but, his conviction, character, courage and determination is uncommon. The real characters in life and literature try to emulate heroic characters in mythologies, scriptures, epics etc, but, to trace the real influence is not possible, as it deals more with the unconscious than the conscious being of a society. Northrop Frye states,

Where a religion is mythological and polytheistic, where there are promiscuous incarnations, deified heroes and kings of divine descent, where the same adjective 'godlike' can be applied either to Zeus or to Achilles, it is hardly possible to separate the mythical, romantic, and high mimetic strands completely. (34)

Andrew Bernstein describes heroes, as, the people, "who pursue rational values in the teeth of every form of opposition" ("Philosophical Foundations"). Developing his essay on heroes, Bernstein further explores:

Some are predominantly physicalistic heroes, some primarily intellectual, some are excellent examples of the principle of mind-body integration; some are grand scale characters towering through a work of fiction, whether on the printed page, stage or screen — while some perform their great and notable deeds in actual existence.... And yet, through the teeming multiplicity of individualized differences, there runs a recurrent thread, a distinguishing essence that unites them all into a common classification, as differentiated from their antipode, from the mundane, the trivial, the everyday, the pedestrian, the non-heroic — or worse, from the evil, the villainous, the antiheroic. ("Philosophical Foundations")

One of the characteristic hallmarks of all heroes is their resistance or rebellion to injustice. After studying about the rebel historically and philosophically in many cultures Albert Camus in his *The Rebel* agrees that the world in which we are living is absurd because we have "no higher value to direct our action" (13). Camus realises this world is absurd and we are living in an illogical situation, where God does not control anything and we are stuck in existential being where, "man is in danger of falling into nihilism" (Todd x). In such an absurd world, man does not have any hope of being protected by God, and he has an option either to fall to nihilism or to rebel and be a rebellion. Fighting and being a rebellion is better than falling to nihilism, passively, "The will to fight injustices can counterbalance the nihilistic temptation" (Todd x). Modan, the hero, in this novel also choses to be a rebellion, than to be an ordinary person suffering and falling to nihilism in a godless world. To rebel is to say 'No' to injustice and to hold on to the manliness. Oliver Todd writes in this context:

Camus claimed that the rebel is a man who says no, because he wants to defend what has to be defended in Man. True to a literary and metaphysical mood, very much in the continental French rationalist tradition,

Camus substituted 'I rebel therefore we are' for Descartes' 'I think therefore I am'. (x)

The narrative opens from the middle of the plot with revealing the psychological state of the hero, Modan, who is returning home after completing fourteen years of imprisonment for his eventual tragic death. He is mentally occupied and thinks about his life that he spent in his village before his conviction. He is unable to reconnect with his surroundings and misses his jail friends who are still living a life of prisoner. Being suffering from a sort of melancholy, he is reticent and a bit rude to answer the friendly advances of his fellow traveller. He reaches his village in the dark and registers the change that the mud houses are replaced by the brick houses. He is not warmly received by his brothers notices that his brothers have also reconstructed a portion of the house. When he sees his mother, Har Kaur in pathetic condition he gets more depressed. He feels out of place and insists that he will shift to their old house situated on a mound, outside the village. By now, the reader does not know the cause of Modan's imprisonment and the changed attitude of his brothers. Gurdial Singh like a modernist, uses the technique of flashback and reveals the events and the characters that have led to Modan's imprisonment. Singh introduces Pala, who was Modan's father, and was an innocent and diligent farmer, living peacefully with his wife Har Kaur and three sons, Modan, Sajjan and Chhottu. Whole of his life, Pala lived a harmless life and never wronged anyone in his village.

The novelist also introduces another farmer Ghana Lambardar, who hates Pala, because the latter's uncle, Sauna had stood against Ghana's father trying to capture the land of his cousins fraudulently. Because of his tussle, Ghana frames Pala in a false case and gets him insulted, arrested and imprisonment for one and a half years. Pala is so shocked psychologically that after being released he cannot face society, does not get up from bed, gets weaker and weaker and ultimately dies. He keeps on wondering for the wrong for which he was so punished, "What harm have I ever done to anyone? Where lies my fault? Tell me. Can anyone answer me?" (Night of the Half Moon 20). All know Ghana's conspiracy, but none dares speak about it. Not only this, young teenager Modan was also traumatised because of police's public beating of his mother and her public disrespect, without any crime of his parents. Being the elder male in the family, though a teenager, Modan bravely takes up the responsibility of his family, after his father's death. Some years after losing his father, one night, Modan visits his uncle, Taya Lallu, and his friends Sheri and Gyala. They invoke his anger by telling his Jat lineage, his tragedy because of the conspiracy hatched against his father by Ghana. "He felt as if his whole body was burning with fever. A deep, stabbing pain shot through his eyes, almost as if someone had pierced his eyelids with a scythe..." (41). Sheri's words echo in Modan's head, "The man who does not avenge his fathers and his forefathers is not a man" (37). Gurdial Singh uses a minor character to highlight that it is paramount for a Jat to take revenge for the injustice, "Jat just can't think straight. My dear fellow, he was after all their father. And if they let his murderers go scot fi'ee, you think they will ever be able to face the people?" (61). Infuriated with anger, young Modan in frenzy, kills Ghana to avenge his father's death, and is consequently convicted and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

sent to jail for fourteen years. His brothers are also accused initially, but later are freed from the murder case, when the case is withdrawn from Sajjan and Chhottu by Ghana's family for the compensation of half of the land of Modan's family. Throughout, Ruldu Modan's only friend, stands by Modan's revenge and supports it as his duty by publicly acknowledging:

True son of his mother he has proved himself to be... people are only good at making claims about their personal courage ... but not many would do as he has done... Man makes property; but that property can't bring back a dead man. You are born only once. So what's the point in becoming a *lakhpati* if one can't even guard one's sense of honour ... money even prostitutes have. (48-50)

Modan exemplifies the courage and possesses the essential virtues befitting an individual of self-respect. Unwilling to endure a life of humiliation, he is compelled to seek retribution for the unjust murder of his father to safeguard both his self-respect and his family's reputation. Embracing a tragic course of action becomes imperative for Modan as it becomes the means through which he can live with dignity and shield his family from degradation and shame (125).

Then the story comes back to present and Modan goes to Ruldu's house. Ruldu reveals Sajjan's friendship with Ghana's sons. Modan also comes to know that Chhottu, being economically dependent on Sajjan and being of weak character is dominated by Sajjan. Modan decides not to live with his brothers and he takes his mother along and shifts to old house. He also separates his land and being a man of honour prefers his crops to wilt than being irrigated with the water from Ghana's tubewell. For him that water is, "blood-spattered water" (82). Apparently, it becomes the war of self-respect and economic interests in which Modan chooses to align with the former unlike his brothers. In *Punjabi Novel da Sanskritik Aadheyan* Dr. T. R. Vinod observes,

The crisis of *Night of the Half Moon* derives its sustenance from the crisis arising out of effect of capitalism on the inter-family and intra family of landowners. The ownership of family has an important place in feudal system. However, the cultural importance of self-respect and reputation of family is also given due importance as economic interests are surrendered to protect them. (120)

Modan like a true hero faces all the adverse circumstances so as to uphold the values of self- respect and family reputation. Ruldu like a true friend supports Modan's decision and says:

This land and property will all be left behind, but a man without honour and self-respect is as good as naught. His life is a deadly curse...It's not a matter of livelihood alone- as far as that goes, even cats and dogs know how to scrounge 164 (??) for a meal. Tell me, how else is a man different from other lowly animals? (*Night of the Half Moon* 83)

After being separated from his brothers, Modan lives a wretched life as he bears a great loss by giving his lion's share in the form of agricultural tools etc to his brothers. Ruldu helps

Modan in buying a bull for agriculture and in order to buy Dani, a widower, for Modan to start his family, Ruldu mortgages his two acres of land to one Sukhu Lambardaar and gets Dani, along with her son Gelu (from her previous husband) to Modan. Modan disapproves Ruldu mortgaging his land for him. Ruldu is always there for Modan, and he is determined to help Modan in whatever way is possible. He shares his commitment, "When I finally leave, 1 want people to sit up and say: "Well, this was a man who was born with a purpose"... Beside's, what's the point in wasting such a precious life? No?" (91). Modan does not like Gelu, but with the passage of time both develop liking for each other. Modan's younger brother Chhottu keeps visiting him on regular intervals and shares with Modan about Sajjan's friendship with Ghana's sons. Chhottu also tells that since Sajjan has indulged in an illegitimate affair with one of Ghana's daughters in law, Sajjan is forcing him for the cooperative farming with Ghana's sons. This selfish attitude of Sajjan infuriates Modan, who is surprised by the proximity of his own brother to their father's enemy. Modan's days are not good, and one day in absence of Ruldu, Dani's brother Waryama comes to take his sister, and Modan separates from Dani, in times of distress. When Ruldu comes to know that Dani has gone with her brother, he complains to Modan, "you shouldn't have done this, you should have at least waited for me to get back...but let me tell you this wasn't not a very wise thing to do ... you shouldn't have driven Laxmi out of the house on such an auspicious day! (134)

Later, from Ruldu, Modan comes to know that Waryama has resold his sister Dani to some one else. Chhottu reports Modan than Ghana's sons has rebuked him and forbidden him to use their unplanted fields to approach his fields. Modan get annoyed with Chhottu':

O my gentle soul, you mean to say that if tomorrow they tell our wives and children not to step out of our houses, we'll take it lying down? Such defensive behaviour is not going to help beyond a point. Besides, how downright demeaning for a Jat's son to show such cowardice. This won't help, I tell you. (127-128)

Burning in anger, Modan goes to his friend Ruldu, both consume liquor, and Modan shares his anger with Ruldu for Ghana's sons. Infuriated and inebriated both go towards Ghana's house to settle the score. Modan's anger escalates when he sees lush green fields of Mirab, Ghana's son. Gurdial Singh writes, "A tremendous surge of revolt appeared to rise up from the earth like a cloud, and he saw flames around him, generating a heat that nearly scorched him" (138). Burning in his own anger for Ghana's sons Modan moves towards their house, followed by Ruldu. Modan is very loud and warns Ghana's sons outside their house:

Oye ... today I'm going to chew them up alive - those bloody bastards! ... come on now, if you're the true sons of your mother - come and accept this challenge - you swine! - here I come, your 'son-in-law'! ... Do you have the guts to face me ... Oye. (141)

Modan is unaware that his brother Sajjan is there, Sajjan suddenly comes out and attacks Modan with his pickaxe. By the time Ruldu retaliates and helps his friend, Modan sustains three axe-blows, one on his head, another on his shoulder-blade and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the third on his leg. Modan refuses to go to hospital or police saying like a Malwai Jat, "We aren't going to the police station ... nor do we want any deed of compromise . . . If some how we survive and have the necessary strength ... we'll settle it on our own ... otherwise ... well, it's all right the way it is" (144). The blow on his leg happens to be mortal, and ultimately Modan dies after he accepts the apologies of his brother Sajjan, sees Dani, and Ruldu promises to avenge the death of his friend. Throughout the narrative, Modan is the only character who does not compromise and lives a life of honour, no matter what is the consequence. He is hero enough to choose the path less travelled by and that of unending strife. Modan is a living example of a Camus' rebel and dies as a Camus' rebel:

If an individual actually consents to die, and, when the occasion arises, accepts death as a consequence of his rebellion, he demonstrates that he is willing to sacrifice himself for the sake of a common good which he considers more important than his own destiny. If he prefers the risk of death to a denial of the rights that he defends, it is because he considers that the latter are more important than he is. (*The Rebel* 21-22)

For Camus absurdity is individual and is followed by rebellion which is rather collective, "in absurdist experience suffering is individual. But from the moment that a movement of rebellion begins, suffering is seen as a collective experience – as the experience of everyone" (28).

Modan's temperament is modelled on the Punjabi folk heroes like Dulla Bhatti, Jeona Morh, Jagga Daku, Sucha Surma, and Mirza etc, that is why like them instead of falling to nihilism, he also prefers to resist, be a rebel and say no to injustice and dishonour. For him his honour is everything, more significant than his life. Following the model of sacrifice and resistance he prefers death to a compromised life of dishonour. Through Modan, Gurdial Singh captures the spirit of a rebel hero. Who inspires to pull reader out of the darkness of absurdity and nihilism and infuses him/her with the spirit to fight against, rebel, resist the injustice, dishonour and loot. For Modan to accept injustice like his brother Sajjan, is to be a part of it. To accept injustice or to be a part of it can only be avoided by rebelling against it **than mere** blaming others for injustice, exploitation or dishonour, like an unheroic and ordinary human.

ABSTRACT

In the face of challenging situations, Filipino Catholics manifest, through the expression of bahala na, certain cultural traits that portray Christian values, such as an attitude of undying faith in God. However, at some point, the same expression also reveals attitudes that are inconsistent with the Christian message and practices. Through the review and analysis of different literatures that have studied bahala na, the paper articulates the contrasting nuances that give the expression ambivalent dynamics while, at the same time, presenting its significant influence on the faith of Filipino Catholics. So, in terms of the expression's negative cultural nuances, the paper examines some distortions that could perpetuate Filipino Catholics' interpretation of the Gospel message, particularly on their understanding of Divine will, Divine providence, and Christian discipleship, which, consequently, affects how some of them treat their personal freedom and responsibilities as somewhat insignificant in alleviating themselves from suffering, and in attaining salvation.

KEYWORDS: culture, experience, suffering, bahala na, Filipino

Bahala na, an experience of culture and faith

Culture can be described in various ways. According to Donal Dorr (2013), based on his reading of Evangelii Nuntiandi (20), culture is described as the people's shared understanding and attitudes which are observable through their ways of life and traditions. For some sociologists, it is described as 'the systematic sets of code, narratives, discourses, and practices which structure the interpretation of social life and social action' (Back et al, 2012, p. xiv). While for other sociologists, 'culture comes to be seen not primarily as a distinct or overarching system of belief, but as something more pervasive and integral to everyday life indeed, as the very medium of lived experience' (Jacobs & Hanrahan, 2005, p. 1). There might be disparities between these descriptions, but the common thing that can be said about them is the way culture is experienced and accordingly, experience is a process of 'learning through 'direct' contact with people and things' (Schillebeeckx, 1980, p. 31). To put it differently, culture as shared understanding and attitudes are learned through social contact which allows the interpretation and communication of codes and practices making it part of everyday experiences. In Christian countries, like the Philippines, culture can therefore be said to be a medium of the experience of faith as the latter also permeates people's everyday experiences (Cruz, 1999). As noted by José de Mesa (1979) based on his reading of *Gaudium et Spes* (53), it is also a feature of culture that throughout the course of time, people express and manifest in their lives these experiences of faith. With that, such experience of culture and faith is also translated into different expressions. In the Philippine context, the common expression that could translate these lived experiences is the phrase *bahala na* (Mijares, 1977). According to the study conducted by Alfredo Lagmay (1993, p. 34):

The culture bearer, as the locus of convergent forces in personal history, the habit system of society and the environment, is possessed of a rich mosaic of experiential processes which can be triggered by word and situation into a patterned response. *Bahala na* is one such trigger for an experience very much shared by other members of the culture.

Therefore, studying bahala na as an expression that is deeply connected with experience offers another way of looking into the culture of Filipinos and its connection with faith, specifically, the Catholic faith.

Looking at bahala na as an expression of experience, one can see that it is usually evoked in moments of uncertainty, struggles, or suffering (Lagmay, 1993). It can be loosely translated in English

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

as 'come/happen what may' pointing to a determined attitude, although in some cases, it could point to an attitude of indifference to what the future may hold. Another English translation is 'let it be', which could either have a defeatist tendency or, in some cases, could be more of an attitude of trust in someone or something (Gripaldo, 2005). So, most of the time, the expression is viewed ambivalently for it reveals traits and attitudes among Filipinos that could either be a positive or a negative response to suffering.

Another example of the various traits it manifests is resiliency or katatagang-loob. Filipinos are known to endure almost every form of challenges. Some suggest that this trait is a product of historical conditioning which formed a consciousness habituated in suffering due to the Filipinos' desire to outlive the colonial oppression (Tiangco, 2005). Filipino resiliency might have been beneficial in freeing the nation from foreign bondage, but today, the same trait is challenged by some for it has seemed to become an excuse for mediocrity (Arellano, 2018).1 From economic and environmental to socio-cultural and political spheres, most Filipinos have been given less of what they deserve, yet they endure the experience of deprivation and suffering. Even if working abroad presents a challenging situation for families, some Filipino parents would still leave their children behind due to economic considerations. Even if public service has been exploited by people with the same brand of service, some Filipinos would still entrust their future to the same people in exchange for a short-term benefit. Even if the environmental threat is first-hand experienced, some Filipinos would still act passively. Even if some Filipinos are living lives that are devoid of their rights as human, they would still celebrate each moment of life. Yes, Filipinos are resilient, but the reality is they are still suffering. In the end, one would just say, "bahala na!" Thus, the expression could either be a sigh of relief or disappointment, either an expression of hope or despair, and either a sign of inner strength or submission.

To elaborate on these ambivalent responses which reveal Filipinos' positive and negative attitudes, below is the reexamination of some contrasting nuances of the expression.

Bahala na: the nuances and dynamics

As an expression deeply rooted in experience, bahala na can be understood through situational settings (Gripaldo, 2005). Thus, its meaning can be derivatives from different situations. In the interviews conducted by Lagmay (1993), whenever the expression is evoked, what can be observed from the situations of the respondents are the presence of adversaries and difficulties. These situations all point to particular deficiencies that if met would give them security, but if remaining unresolved, would keep them preoccupied with uncertainties (Lagmay, 1993). In other words, within the Filipino culture, bahala na is a response

to the experience of suffering (Casiño, 2015) 'arising from a perceived sense of personal incapacity for the moment, or deficiency in knowledge, information, or material means for determining the outcome of a situation or course of action' (Lagmay, 1993, 33).

Furthermore, it can be observed that *bahala na*, as a response to the experience of suffering, can be used responsibly or irresponsibly (Gripaldo, 2005). As a result, this opens up a variety of meanings causing ambivalence to the way it is understood as a cultural value affecting one's attitude in the face of suffering. In his article, Gripaldo (2005, p. 208) emphasizes the importance of categorizing this different understanding. He states:

'Bahala na' is a characteristic trait of the Filipino culture. The Filipino child is exposed to this culture and s/he unquestioningly imbibes this trait, thereby forming a predisposition towards it and eventually shaping an attitude about it. The attitude is reinforced in his/her daily contact with others in society where 'Bahala na' is openly manifested. S/He too manifests it and finds no objections from others. In time, s/he cannot distinguish its negative applications from the positive ones. S/He simply lumps them all into one piece.

To articulate these positive and negative traits, the author presents the contrasting nuances and dynamics of the expression below.

(1) Bahala na as attitudes of courage and fatalism According to De Mesa (1979), when it comes to the meaning associated with bahala na, it is the fatalistic resignation of the Filipinos that is commonly used to characterize the expression. This points to a tendency of withdrawing from crisis or avoiding personal responsibility. As Eugene Mijares writes (1977, p. 113), it is 'an attitude of total abandonment, an acceptance that nothing can be done anymore by an individual faced with a situation. Moreover, De Mesa (1979, p. 85) states that this attitude can be traced to a belief that 'one's destiny is something that is already fixed. In other words, resignation or mere acceptance of a deplorable situation may find a fertile breeding ground in this belief.' According to Tereso Casiño (2015), this Filipino worldview is phrased as Gulong ng Palad (Wheel of Fortune) which rules out any concept of purpose and meaning as every situation depends on fate. 'Anything, then, that happens to a Filipino (whether good or bad) is attributed to a cause . . . known as suwerte (luck), tsamba (chance), or kapalaran (destiny)' (Casiño, 2015, p. 86). In effect, this gives the expression a negative implication leading to a defeatist attitude toward suffering (De Mesa, 1979). One therefore, tries to take the present in stride and awaits the future with very little hope that he can change it' (De Mesa, 1979, 85).

Nevertheless, in his book Elements of Filipino Theology, Leonardo Mercado (1974) points out that *bahala na* can also be perceived as hope which involves risk-taking projecting the virtue

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of courage. In contrast to fatalism, this attitude has a positive implication as it allows one to face the difficult situation. According to Merriam-Webster Dictionary (2023), courage is a 'mental or moral strength to venture, persevere, and withstand danger, fear, or difficulty.' Hence, *bahala na* shows that 'there is trust in (one's) capacity to meet any contingency, a fleetingly emboldened self-confidence in the face of uncertainty' (Lagmay, 1993, p. 33). As De Mesa (1979, p. 121) puts it, 'the positive *bahala na* attitude is a hopeful risk-taking motivated by hope which goes together with the required human effort. It is an active kind of hope, a responsive and responsible hope.'

(2) Bahala na as attitudes of trust and overdependence With courage as a value found in the expression, it consequently projects a positive attitude of trust. Whenever bahala na is evoked as courage, it could inspire trust in something to overcome the situation however difficult it is and uncertain the future might hold (De Mesa, 1979). Furthermore, trust as a value can be understood in two ways, trust in oneself to resolve the situation or trust in the other when such a situation is overwhelming to be resolved on his/her own. The latter most of the time refers to a transcendental reality. Filipinos might be commonly using bahala na in a fatalistic sense, but in this situation the intent of the expression is providential, i.e., it carries the wish or hope that providence will personally take care of one's future, hence, trust in someone who could be in control of or has the power over fate (Gripaldo, 2005). However, one has to be mindful of this value because one might confuse trust with overdependence (Matienzo, 2015). With fatalism as its common value, the expression has the tendency to lead one to leave everything to higher powers while he/she becomes oblivious of his/her own capacities and obligations (De Mesa, 1979). In this manner, bahala na as an attitude of over-dependence subtly inspires passive resignation (Matienzo, 2015). Contrary to overdependence and passive resignation, trust as inspired by courage points to a better future which also depends on personal effort (Mercado, 1974).

(3) Bahala na as attitudes of commitment and indifference With the contrasting nuances mentioned above, *bahala na* could also be evoked either as an attitude of being committed or indifferent. On one hand, *bahala na* as a commitment stems from the values of courage and trust. According to Rowen Rebustillo (1997), in taking the risk of confronting the circumstance, one acts with confidence in the providence of the higher powers while still being mindful of his/her responsibilities and own capacities. Hence, the evocation of *bahala na* in this situation does not indicate the avoidance of the problem, but a commitment to overcoming it (Lagmay, 1993). Furthermore, Casiño (2015) adds that this attitude of commitment also inspires stewardship, i.e., being responsible for other people which is usually expressed in the phrase 'ako na bahala sa'yo' (I will take care of you). So, 'when invoked, *bahala na* becomes a binding covenant through

which people commit themselves to help or take care for other people' (Casiño, 2015, p. 84). De Mesa (1979) emphasizes this through the value of *malasakit* (compassion), a Filipino attitude that captures one's commitment by making sacrifices, i.e., enduring pain suffering for the sake of the good of the other.

On the other hand, bahala na as indifference stems from resigned and overdependent attitudes. One leaves a difficult situation all to fate or chance that he/she becomes forgetful of his/her obligations (Gripaldo, 2005). The expression then projects an escapist attitude where one becomes unmindful of his/her decisions and their consequences (De Mesa, 1979). With this, the evocation of bahala na is used as an excuse for one to do whatever he/she wants while being indifferent to the harm or danger that the situation might bring (Gripaldo, 2005). As stated by Casiño (2015, p. 84):

Bahala na may also encourage Filipinos to embrace an unproductive perspective about life. Resigning totally to the work of *kapalaran* or *suwerte*, the Filipino may appear indifferent in the face of graft and corruption as well as welcome personal misfortunes impassively.

Hence, bahala na inspires an 'I-don't-care' attitude pulling Filipinos away from actively participating in the events of life which, in effect, becomes harmful to individual and social progress (Casiño, 2015). Based on the writings of De Mesa (1979), this is bahala na that is devoid of malasakit.

(4) Bahala na as attitudes of determination and mediocrity

Other contrasting attitudes that can be observed and derived from the discussions above are determination and mediocrity. By definition determination means a 'firm and fixed intention to achieve a desired end' (Merriam-Webster, 2023). Based on the results of the interviews conducted by Lagmay (1993), bahala na as a commitment permits one to improvise on difficult situations as they come along the way in order for him/her to achieve the desired result which, in this case, is toward resolving the difficulties. It follows that bahala na expressed as a commitment reveals an attitude of one's determination to get through suffering. This hypothesized that 'Filipino culture has indeed a built-in mechanism of flexibility and resiliency in bahala na for dealing with the pervasively uncertain contingencies of daily living' (Lagmay, 1993, 34).

Nevertheless, based on the results of the same study, Lagmay (1993) finds that this mechanism of flexibility and resiliency could also lead one to live his/her life without any definite plans for 'one follows the lead of the moment and action shapes itself into the molds of the changing situation' (Lagmay, 1993, p. 34). Such life depends on impulse and chance which makes one's present and future both ambiguous (Lagmay, 1993). As Casiño (2015, p. 85) puts it, 'Filipinos who put their trust in *kapalaran* (fortune) tend to be complacent about their work or future.'

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Hence, this evocation of bahala na might appear positive for it seems to project the value of courage in facing uncertainties. However, on a deeper level, according to Berniemack Arellano (2018), it could develop an attitude of mediocrity in addressing the difficult situation, i.e., instead of solving the problem by making plans, one would just rely on one's capacity to adapt even if it means embracing a situation which is caused by injustices. In this case, one evokes the expression irresponsibly as he/she acts passively in the face of suffering with the belief: 'Talagang ganyan ang kapalaran' (There is nothing we can do about our fate) (Andres, 1981). As a result, 'it harnesses one's behavior to a submissiveness that eats up one's sense of responsibility and personal independence. It provides one with fall sense of self-confidence to proceed with an unsound action in the belief that somehow one will manage to get by' (Andres, 1981, p. 132).

So, with the dynamics of these responses, it can be observed that *bahala na* is surrounded by concepts that are closely related to Christian spirituality. This association can be attributed to the historical conditions that made the interaction between culture and faith possible. This is elaborated below.

Bahala Na's influence on the experience of Filipino Catholics The interaction between Filipino culture and the Christian faith develops a tradition that forms Filipinos' understanding of bahala na. Consequently, this results in a split-level spirituality, i.e., 'the co-existence within the same person of two (or more) thought and behavior systems which are not only inconsistent with one another but are also in the state of non-communication with each other' (De Mesa, 1979, p. 10).

To explore this influence, the paper has looked into some details of Philippine history to present how the interaction between faith and culture has developed a tradition that gives *bahala na* its nuances and dynamics.

Bahala Na and the Filipino Spirituality

In his study, Casiño (2015) presents that *bahala na* is initially influenced by Ancient Filipinos' animistic spirituality, i.e., a belief in the spirits residing within nature, and these spirits are somewhat influencing fate causing fortunes and misfortunes in one's life (De Mesa, 1979). This belief, with its fatalistic nuance, survives the test of time and is considered the bedrock of the Philippine religious experience (Casiño, 2015). 'As the Spanish brand spread across the archipelago, it affected little the traditional fatalistic Filipino concept of *bahala na*. Over the centuries, Filipino Catholics, and later, many Protestants, embraced the concept without critical objection' (Casiño, 2015, p. 84). Its influence continues to manifest even in the present-day Catholicism (Casiño, 2015).

(1) Bahala na as Divine Will

First, this can be observed in the way bahala na has influenced Filipino Catholics' understanding of the Divine Will. According to De Mesa (1979) Some believe that the misfortunes happening in their lives, such as sickness and calamities, are all part of His will. With the belief that God's will is at work within nature, there is the tendency for believers to embrace and just accept every situation, even those that are ill-fated because, in the end, God's providence will always be there to save the day. Arguably, De Mesa (1979) has pointed out that there is even a linguistic misconception about the very phrase bahala na. Some presuppose that the expression has its origin in the term Bathala—ancient Filipino's highest ranking and powerful deity—which suggests that Filipinos have nothing to worry about adversities because Bathala will provide, thus, 'Bathala na!' (Gripaldo, 2005). Aside from this term, some also suggest that the Filipino expression bahala na may have been derived from the Sanskrit word, bhara, which literally translated as 'load' which could mean 'responsibility'. The shift from 'r' to 'l', and in this case, from bhara to bhala, was a common linguistic phenomenon in the early times (Casiño, 2015). However, it may be unclear whether it is or is not the origin of the expression, but in terms of its usage, it can be observed that bahala na suggests that Filipino Catholics have this disposition to trust in the providential will of God even to point of leaving their own responsibilities to Him (Gripaldo, 2005). So, with this understanding, it leads to the second point.

(2) Bahala na as Divine Providence

According to Catherine Punsalan-Manlimos (2016, p. 340), 'bahala na reveals a capacity to trust in the providence of God when confronted by life challenges.' Such trust has developed certain views of how Filipinos understand Divine Providence which implies passive resignation and overdependence (Catechism for Filipino Catholics, 2005, no. 1158) i.e., their tendency to leave everything to God while becoming forgetful of their own capabilities and responsibilities (De Mesa, 1979). Some claim that these originate from the lack of ambitions among Filipinos or simply from their indolence —a derogatory term used by Spaniards to speak of Filipinos' mediocrity. However, Punsalan (2016) emphasizes that this is not an inherent attitude among Filipinos, but a consequence of colonization, an effect of their daily suffering at the hands of their colonizers. As Punsalan (2016, p. 342) has cited:

Rizal acknowledged that indolence — the infamous Spanish malediction of the Filipinos — was a problem in his time. But he did not propose a "moral recovery program," as the Manila orthodoxy did nearly a century later... as a cure to the country's ills... Instead, he proposed cultivating a historical awareness... so that "instead of regarding [indolence] as the cause of the backwardness and disorder, we should regard it as the effect of disorder and backwardness." He traced the so called Filipino

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

inferiority to the "daily and constant plucking of the soul so that it [will] not fly to the religion of light, [which] drains the energies [and] paralyzes all tendency towards advancement,... [so that] at the least strife a man gives up without fighting (Rizal, 1972, p. 256, quoted in Rimonte 1997, p. 58).

Punsalan (2016, p. 343) then writes, 'a constant experience of disempowerment and inefficacy of one's actions and initiatives creates a sense of resignation. Such a response can be read as a kind of realism in the face of social and cultural violence of colonialism'. In other words, *bahala na* has become the expression of Filipinos' desperate call for God's providential and saving acts in the face of century-long suffering and oppression (Punsalan, 2016).

(3) Bahala na as Christian Discipleship

Third observation, citing another context that forms the meaning of bahala na, Punsalan (2016) points out the vulnerability of the Philippines to the forces of nature. As this always puts Filipinos in situations beyond their control, it appears that this does not only influence their understanding of Divine Providence, but also of Christian Discipleship (Casiño, 2015). This shows in the fascination of Filipinos with Jesus' suffering and death. According to the study conducted by Peter Bräunlein (2009, p. 892) 'the fascination with the suffering, battered and dead Christ can be regarded as a characteristic feature of Philippine lowland society.' Thus, they tend to believe that self-inflicted suffering is a way for them to follow him (Bräunlein, 2009),—a literal interpretation of the biblical text where Jesus says, 'Whoever wishes to follow me, take up his cross, and follow me' (Mk. 8.34). This is demonstrated through their superstitious practices that adhere to traditional animistic beliefs wherein they have to do acts that serve as a way to please God for which they would be spared from harm and suffering (Casiño, 2015). Such practices have been commonly observed among Filipinos living in rural areas. For them, the physical and spiritual realities are intertwined that the misfortunes and catastrophes they are experiencing are punishments for certain actions that they have done (De Mesa, 1979). Hence, to make amends they would do acts of sacrifice or rituals. In some parts of the countries, during Holy Week, some Catholics will perform rituals of crucifixion, self-flagellations, and other forms of self-mortifications. Asking why they do such practices, the usual answer is, that they are for repentance in order for them to be spared from the threat of foreboding calamities (Bräunlein, 2009).

Furthermore, aside from its influences on Filipino Catholics' practices of repentance and worship, this understanding of discipleship also has an influence on their understanding of salvation. It has the tendency to reduce the salvific act into two extremes, either for purely material improvement or purely spiritual gains (Bräunlein, 2009). As a consequence, this

dichotomy significantly affects the way Filipino Catholics live their lives and the way they perceive their individual commitments, as well as their responsibilities, both to the church and the society (Casiño, 2015). This develops negative attitudes and some of them are mediocrity and indifference which are inconsistent with authentic Christian discipleship as it distorts the notion of the loving concern of the Divine Will (De Mesa, 1979). De Mesa (1979, p. 133) argues:

This, if left unchallenged, would make the image of God one of unconcern for the welfare of man; it would also characterize Him as a God who makes sure that the duties He has imposed on His creatures are followed, otherwise punishment shall be meted out. Another reason for the importance of elucidating this matter is the fact God's will is salvific. It is not against man, it is for man . . . It is a will that wants to bring out the best of someone who wants to be a better person . . . It is a will that ready to allow someone to make his own mistakes, and to forgive and to welcome him anew upon realizing his mistakes.

Moreover, these discussions on the background of *bahala na* and its influence on Filipino Catholics show how the expression can be understood and develop into a kind of folk spirituality. By definition, folk spirituality is an unofficial form of worship by virtue of its being instituted by the people through their traditional and cultural practices. It is unofficial because it is outside of what is officially prescribed by the Catholic Church that entails universality (Matienzo, 2015). This is further discussed below.

Bahala Na as Folk Spirituality

As noted by Rhochie Matienzo (2015), in the Philippines, an important folk spirituality is found in the expression bahala na; and according to Casiño (2015), this folk spirituality has greatly influenced Filipino Catholics both positively and negatively. In connection to the discussions above, the negative traits of the expression 'arise from the idea that individual freedom is minutely insignificant before a pantheistic reality of 'Providence' (Matienzo, 2015, p. 90). With this, it 'depicts a Filipino as a mere automaton whose existence is at the disposal of impersonal forces' (Casiño, 2015, p. 86). Matienzo (2015) observed this through the Filipino's devotion to the Black Nazarene where some devotees expose themselves to danger in their exercise of worship during Traslación²—a procession commemorating the transfer of the image to Quiapo basilica with the common belief that their fate, including both material providence and salvation, is in the hands of the mute image of Christ who personifies the omnipotence of God. So, one would exclaim, 'Bahala na ang Maykapal' (God shall take care of things) (Matienzo, 2015) or 'Ipasadiyos mo na lang' (leave it up to God) (Punsalan, 2016).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Furthermore, in terms of material providence, Matienzo (2015, p. 91) points out that 'it may bring false hopes and at the same time degrades the perfection and supremacy of God in a level of commerce, as if faith is a matter of depositing prayers and withdrawing granted wishes.' In terms of salvation, he notes that there is a tendency to misunderstand the Church's teaching since bahala na folk spirituality can be abused, e.g., some devotees who lead questionable moral lives believe in their hearts that faith alone could save them (Matienzo, 2015); and also 'the obliterations in lives and properties have become necessary repercussions of the fatalistic worldview of bahala na folk spirituality' (Matienzo, 2015, p. 93).

With these observations —wherein joining the lethal procession seems to be enough even if it does not bring change to one's life because, in the end, 'Bahala na ang Maykapal' (Matienzo, 2015)— bahala na folk spirituality has become a convenient theodicy for Filipinos that through which it seems to lessen the suffering caused by an adverse circumstance and justifies it however unjust it might be (Casiño, 2015).

In Gaudium et Spes (43), the Church is reminded that she should not be blind to the discrepancy between the message being proclaimed and the human weakness of those to whom the Gospel has been entrusted. They cannot ignore these shortcomings and must combat them earnestly, lest they hinder the spread of the Gospel. As observed by De Mesa (1979, p. 9) 'what seems to exist in place of genuine and mature Christianity is 'an adaptation of Christian practices to the pre-Christian pattern of beliefs rather than a raising of genuine values of the pre-Christian past to the level of Christianity.'' Therefore, despite the interconnectedness of culture and faith, one must still be vigilant against cultural influences that distort the content of the Catholic faith and disconnect it from daily life experiences.

Conclusion and Recommendations

- (1) Bahala na as a cultural expression is evoked during the experiences of suffering. It is conditioned historically by how Filipinos respond to such experiences. So, with the dynamics of these responses, they create the expression's nuances revealing Filipinos' positive and negative attitudes which, at the same time, find their place in Filipino spirituality.
- (2) While the Philippines is a Christian country and the Christian faith is essentially cultural, the influence between *bahala na* and the Catholic faith goes both ways. However, the negative nuances of the expression lead to a split-level spirituality that significantly affects Filipino Catholics' understanding of suffering and salvation. With *bahala na*'s fatalistic nuance, Filipinos subject themselves to meaningless suffering leading to mediocre and indifferent attitudes because they tend to believe that

- salvation is Divinely willed and has nothing to do with human responsibility.
- (3) Taking notice of the negative cultural traits that *bahala na* projects could help significantly in discovering how the promise of salvation can be revealed in the experience of Filipino Catholics. With such awareness, the expression can be filtered from distortions. This gives way to the realization of the promise through the expression's positive nuances that project positive hope which then motivates Christian praxis, i.e., Filipino Catholics' commitment and determination to alleviate themselves from suffering. Hence, *bahala na*, more than just an expression, becomes a salvific experience that is instrumental in revealing the emancipative message of the Gospel.
- (4) In the advancement of understanding the Christian faith through Filipino culture, the Catholic notion of *bahala na* can be explored more especially in the field of Christian education. The relevance and popularity of the expression can become instrumental in delivering theological concepts for the consumption of learners. A study on integrating such cultural expression in teaching Christian Living is highly recommended.
- (5) A new way of looking at *bahala na*—a phrase that expresses Filipino emancipative traits—can offer a perspective in doing a further study of the concept of Filipino resiliency. Through this, it can help in reconfiguring its meaning positively and therefore can offer a better understanding of Filipino culture.
- (6) With the number of Christian concepts discovered in *bahala na*, they are recommended as subjects for independent research. A further study of each concept founded in Filipino culture can offer additional insights into the inculturation of the Christian faith.
- 1. In his article, Arellano (2018) points to the mediocre response of Filipinos and the government in handling disaster. Accordingly, such response is most of the time being justified by resiliency, meaning, whatever the situation is, Filipinos can deal with it anyway. 'One can certainly praise resilience while also raising awareness for the victims' sufferings and trauma, in this context, glorification and romanticization add nothing to the discourse on how to alleviate the harsh realities that victims face. It is ironic that while narratives of Filipino resilience earn them admiration and attention from the public, it does not offer anything tangible that they deserve given the urgency of their situation' (Tanggol, 2020, para. 8).
- 2. The feast of the Black Nazarene is popular with the practice of *Traslación*—a procession commemorating the transfer of the image to Quiapo basilica. Although the procession is about the dramatic performance of struggle

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of Filipinos alongside Jesus' suffering, it is, however, infamously known for the dangerous rush of a great number of devotees that unfortunately leads to some injuries, and sometimes death (Matienzo, 90). Nevertheless, the 2024 *Translación* had been more organized and less dangerous as it was better coordinated according to the National Capital Region Police Office (Santos, 2024).

FEATURES OF QUANTITATIVE INDICATORS OF UBM STUDY OF THE STRUCTURES OF THE ANTERIOR SEGMENT OF THE EYE DURING PRIMARY PAOG WITH PUPILLARY BLOCK

Rustambekova Shakhnoza Shoiskandar kizi , Ikromov Otabek Azizovich , Ikromov Azizbek Fozilovich

Department of Ophthalmology, Andijan State Medical Institute, Andijan, Uzbekistan

ANNOTATION

UBM study indicators in age and gender in primary PACG were studied according to the mechanism of blocking the anterior chamber angle, which determines not only the increase in IOP, but also the subsequent course and outcome of the disease. On the basis of which the choice of treatment for primary PACG is necessary.

KEYWORDS. Ultrasound biomicroscopy, primary angle - closure glaucoma, diagnosis, treatment.

RELEVANCE

In a UBM study, the study population of patients with angleclosure glaucoma was divided into the following groups according to the pathogenetic mechanism of blocking the anterior chamber angle: With pupillary block; with a flat iris; with a vitreolenticular block (malignant glaucoma) and with a shortened anterior chamber angle ("creeping" glaucoma) [1,5] . It was not possible to completely differentiate the mechanism blockade of the UPC biomicroscopically gonioscopically. The study of anatomical and topographic relationships of the structures of the anterior segment of the eye with morphometric analysis of linear and angular parameters made it possible to identify differential signs for the diagnosis of intraocular blocks [6, 8] . In the primary angle-closure form of glaucoma, the contributing factor to the increase in intraocular pressure is the complete or partial blocking of the anterior chamber by the root of the iris or due to pupillary block, according to a mechanism that is progressive, which is reflected in the classification of this pathology, which determines the clinical course of the disease. Based on this, there is a need to distribute the contingent of patients suffering from primary closed-angle glaucoma according to the mechanism of blocking the anterior chamber angle [7,9].

PURPOSE OF THE STUDY . To study the indicators and UBM studies in age and gender in primary PACG

MATERIALS AND METHODS OF RESEARCH. In

our work, to analyze the morbidity and disability of the population of the Andijan region, statistical research methods were used - absolute and intensive indicators were studied (per 10,000 population). We applied the analytical method in studying the structure of the general incidence of glaucoma, studying risk factors, and a comparative study of frequency indicators (intensity) among various groups of patients (age, gender, social, and other indicators). A total of 6,356

individuals, aged from 20 to 86 years, were studied in the districts of the Andijan region. During the examination of each patient, an individual card was created, which included passport data, general and ophthalmological history, as well as the results of an examination using traditional and special methods for diagnosing glaucoma.

Our ophthalmological examination of residents of the Andijan region, organized by the Andijan State Medical Institute, made it possible to identify a number of diseases of the organ of vision among the examined population, while some patients had two or more eye diseases occurring simultaneously.

RESULTS

The gonioscopy data we obtained for PCOG shows that the number of patients with pupillary block is about 75%, and the second developed stage prevails. Functional blockade most often develops in eyes with relative pupillary block, when the angle of the anterior chamber is closed by the iris root protruding anteriorly. In addition, in eyes with a narrow anterior chamber angle, a sharp apex, or a posterior position of Schlemm's canal, the trabecular zone may be closed by the hilar fold of the iris (Fuchs' fold) when the pupil dilates. In this case, the iris is not protruded, it is flat, the anterior chamber is of medium depth.

Usually in clinical practice it is observed that the course of this form of glaucoma is wavy, attacks are replaced by calm, asymptomatic intervals. As a result of each attack, adhesions remain in the drainage system, subsequently leading to chronically high intraocular pressure and changes in the visual fields characteristic of glaucoma.

UBM studies of patients with angle-closure glaucoma were carried out mainly in early stages I and advanced stages II of the disease. The first group included 103 patients (183 eyes) with a shallow anterior chamber, a convex iris profile, thinning

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of the iris in the basal zone, a narrow and closed angle of the anterior chamber, and increased depth of the posterior chamber. The rear camera had a triangular configuration. This structure corresponded to the picture of the pupillary block.

Table 1. UBM study indicators in genital incision for PCOG with pupillary block in the early stage - I

| UBM indicators M±M (mm) | | Healthy individuals without visual pathology | | PACG with pupillary block in the early stage - I | |
|-------------------------|---|--|-------------|---|-------------|
| | | men | women | men | women |
| 1 | Anterior chamber depth (mm) from the corneal endothelium to the lens capsule at the optical center | 2.79±0.07 | 2.78±0.05 | 2.13±0.09 | 2.14±0.08 |
| 2 | Anterior chamber angle, degrees | 16.62±1.43 | 16.69±1.26 | 8.15±1.75 | 8.16±1.57 |
| 3 | Thickness of the iris root in the corneal zone 250 µm from the scleral spur | 0.397±0.009 | 0.389±0.008 | 0.38±0.02 | 0.39±0.03 |
| 4 | Trabecula-iris distance from the corneal endothelium to the anterior surface of the iris 500 µm from the scleral spur | 0.196±0.009 | 0.192±0.005 | 0.107±0.08 | 0.108±0.07 |
| 5 | Distance "trabecula-ciliary processes" from the corneal endothelium through the iris 500 µm from the scleral spur | 0.698±0.008 | 0.702±0.004 | 0.494±0.018 | 0.492±0.021 |
| 6 | Position of the ciliary body | average | average | average | average |

| 8 | Iris-lens distance | 0.31±0.01 | 0.31±0.02 | 0.22±0.03 | 0.22±0.03 |
| 9 | Rear camera shape | triangular | triangular | triangular | triangular |
| 10 | The depth of the posterior chamber (mm) is the distance from the posterior surface of the iris to the first visualized fiber of the zonular ligament. | 0.567±0.009 | 0.564±0.008 | 0.63±0.03 | 0.62±0.04 |

UBM study in the early – 1st stage with PACG with pupillary block is characterized by the following characteristic features:

- The anterior chamber of the CPC is shallow, the depth of the anterior chamber from the corneal endothelium to the lens capsule in the optical center is 2.13 ± 0.09 mm (2.03 – 2.28), and in women - **2.14** \pm **0.08** mm (2.09 – 2.23); Anterior chamber angle, degrees -8.15 ± 1.75 (8.05 -9.01) and **8.16±1.57** (8.07 – 9.23); The thickness of the iris root in the corneal zone 250 µm from the scleral spur is **0.38±0.02** (0.374 -0.397) and **0.39±0.03** (0.378 -0.411); The "trabecula-iris" distance from the corneal endothelium to the anterior surface of the iris 500 µm from the scleral spur is sharply reduced and equal to **0.107±0.08** (0.104-0.109) and **0.108±0.07** (0.103-0.121); The distance "trabecula-ciliary processes" from the corneal endothelium through the iris 500 µm from the scleral spur is **0.494±0.018** (0.481 - 0.498) and **0.492±0.021** (0.485 -0.497); The depth of the anterior chamber of the posterior chamber is 500 µm from the scleral spur -

0.474±0.018 (0.468 – 0.489) and **0.482±0.017** (0.474 – 0.487); The distance "iris – lens" is 0.31 ± 0.02 and 0.32 ± 0.3 , respectively. The shape of the rear camera is the usual triangular.

- Convex profile of the iris;

- Slight thinning of the iris in the root zone;
- In most cases, narrow and not
- The depth of the posterior chamber which is closed by the angle of the anterior chamber; cameras are enlarged; c (mm) distance from the posterior surface of the iris to the first visualized fiber of the zonular ligament in healthy men 0.563 ± 0.014 (0.537-0.578) and 0.562 ± 0.013 (0.527-0.577) in women; and in case of PACG with pupillary block in early stage stage I

 0.63 ± 0.03 (0.624 - 0.645) and 0.62 ±0.04 (0.623 - 0.652) respectively.

-The shape of the rear camera has been changed, it has a triangular configuration.

CONCLUSION

According to this form of PACG in the early stage - 1, the number of patients with pupillary block we studied was 28 people and 43 eyes, most of them were diagnosed with pathology in both eyes.

THE EMERGENCE OF TECHNOLOGICAL LEADERSHIP **AMID THE PANDEMIC: REALIZING** POTENTIALS AND PRACTICES

Mariefe Ambat- Escalaw, LPT, PhD

University of Perpetual Help System Dalta, Las Pinas, Philippines, University of Cabuyao, Cabuyao City, Philippines, City College of Calamba, Philippines, Department of Education, Philippines

ABSTRACT

This study utilized a sequential explanatory mixed-methods research design to explore the school head's technological leadership amid the pandemic and delve into the school head's technological potentials and practices. The respondents to this research are the 67 school heads in one of the school divisions in Region 4A and 339 teachers. Based on the result, there is no significant relationship between school head technological leadership and teachers' technological competency (p-value = 0.789 and r-value = .015). The noteworthy result of this study is that there is a significant relation to age $[\chi^2 (2, N=67) = 11.58, p=.003]$., length of service (in reverse) $[\chi^2 (2, N=67) = 11.58, p=.003]$. 6.69, p=.035], and highest educational attainment [χ^2 (1, N=67) = .04, p=.843]. The following themes emerged from the participants interviews with the school head on technological practices: learning delivery with technology, professional development for teachers, strengthening of mentoring and support, collaboration with local, national, and international academic and professional development institutions, and strengthening technology utilization for management and administration. The significant recommendation of the study based on the Escalaw's Technological Leadership Framework is that DepEd may further the technological information structure and infrastructure in all schools; may consider creating a technological training department in every division for the enhancement of technological skills for teachers and especially for school heads.

KEYWORD: TL Potential, TL Practices, Technological Leadership, Explanatory Sequential Mixed Method, Digital Transformation

INTRODUCTION

The technological advancement of schools has the potential to revolutionize the educational system and its electronic native pupils. Technological leadership in education is required, as it focuses on a leader's attributes to motivate staff to incorporate technology within the organization. Technology leaders should have strong ICT capabilities, develop ICT potential strategically, and engage and inspire instructors to utilize ICT more effectively. The Philippine Constitution states that it will establish, maintain, and support a complete, adequate education for the sovereign people. In line with this, the Department of Education (DepEd) is committed to the unhindered delivery of basic education services to its learners and the community amidst the public health emergency caused by the COVID-19 pandemic. The DepEd Order (DO) No. 012 s. 2020 mandated continued learning opportunities for students while protecting and safeguarding teaching and nonteaching personnel. The learning delivery through blended learning, distance learning, and homeschooling (DO No. 032 s. 2020) was implemented.

The Governance of Basic Education Act of 2001 mandates school heads to be technologically savvy and updated on technology. The COVID-19 pandemic has emphasized the need for technological leadership in educational institutions, as leaders must anticipate and respond quickly to crises. In the 21st-century digital education, leaders must be technologically proficient to provide teachers with technological assistance and adapt to digital

learners. Technology leadership involves decision-making, guidelines, policies, and implementation. The Department of Education (DepEd) has issued a Google Workspace Training Program to upskill personnel in technology. This study examines the technological leadership of school heads during the pandemic and how their practices contribute to the digital transformation of the Department of Education.

METHODOLOGY

This investigation will employ an explanatory sequential mixed technique. This technique comprises performing quantitative research first, assessing the results, and then using the results to complement qualitative research that delves deeper to explain the findings (Creswell & Creswell, 2018).

RESULTS AND DISCUSSIONS

The level of teachers' technological competencies, with twentyfour indicators, is subdivided into seven constructs: learner, leader, citizen, collaborator, designer, facilitator, and analyst. Based on teachers' technological competencies, the teacher as Citizen got the highest rating (M = 6.99), while the teacher as Analyst got the lowest (M = 6.64), but both are verbally interpreted as high. However, all teachers' technological competencies fall under high verbal interpretation. The overall mean score of the Level for Teachers Technological Competencies

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

was (mean = 6.77) with high verbal interpretation. The result implied that teachers' technological competencies were high-level.

The study reveals high teacher technological competencies, indicating continuous professional development. During the lockdown, teachers have access to numerous technological webinars and trainings from the Department of Education and non-governmental providers like Eryutech and Vibal. Hero's (2020) research supports this, stating that teachers are proficient technology users in teaching and learning. Teachers should actively embrace technology and pursue advanced technological professional development programs to improve student learning.

The overall descriptive result of school head technical leadership is high (M = 7.21), supporting Hero's (2020) findings. Technology leadership in a school involves enthusiasm for technology use and the implementation of technology professional development for teachers. Technology leaders play a crucial role in guiding and teaching the use of technology in education. They manage and run schools, promoting technological integration and knowledge. School administrators must possess the skills and knowledge to incorporate technology into every educational process. When learning objectives and outcomes are correctly matched, learning professionals can form long-term collaborations with technology specialists to find and select appropriate solutions. Technology leadership significantly impacts the adoption of digitally enhanced teaching and learning.

The test of a significant relationship between school head technological leadership and teacher technological competencies utilizing the Pearson r correlation resulted in a non-significant relationship. Furthermore, the Pearson correlation has a p-value of 0.789 and an r-value of 0.015. The results of the correlation analyses reveal that there is no significant relationship between the technological competencies of the teachers and the technological leadership of their school heads. Since the computed p-values are all greater than the 0.05 significance level, the decision is not to reject the null hypothesis.

The study found no direct correlation between the school head's technological leadership and teachers' technological competencies, but digital leadership positively influenced teachers' technology usage during COVID-19. Factors influencing this relationship include professional development, classroom technology use, ICT training, and equipment availability. However, according to Schwab (2018), technological leadership should be alongside the digital world and digital education (Erkulova et al., 2020; Bocanet and Fleseriu, 2020; Matos et al., 2019; Frick, 2020; Anas, 2019).

The result of the Chi-square test on the significant relationship between school head technological leadership and demographic profile is as follows: significant with age, χ^2 (2, N = 67) = 11.58, p =.003; length of service, χ^2 (2, N = 67) = 6.69, p =.035; and highest educational attainment, χ^2 (3, N = 67) = 8.50, p =.037. However, the school head technological leadership relationship was not significant with sex χ^2 (1, N = 67) =.04, p =.843, and position χ^2 (4, N = 67) = 4.89, p =.299. The study by Minaz, Özel,

and Ay (2022) reveals that older school leaders often lack technical leadership but not school performance. Visionary leadership is crucial for transforming schools, and principals must have a plan to implement changes efficiently. Younger teachers have stronger digital competencies, while older individuals have lower technological skills. Gender doesn't affect a school principal's level of technological leadership or digital citizenship. Higher educational attainment is associated with greater overall technological leadership.

The research of Hecker et al. provided support for the conclusions. According to the investigation done in 2021 with older and younger Americans, the more educated a person is, the more likely they are to be digitally literate, and the less likely they are to have little or no digital abilities (Hecker et al., 2021). Other studies with school principals found no statistically significant difference in the technology competence of school administrators according to whether they have bachelor's or master's degrees (Aktaş, 2016; Akr & Aktay, 2018; Gürkan, 2017; Escalaw, 2021), supporting the findings of the current study by Turan and Gökbulut (2022). School leaders with longer tenures will likely demonstrate less overall technological leadership. Newly appointed or younger school administrators exhibited higher levels of ICT proficiency than those with more administrative experience.

In contrast, Kirsch and Lennon's (2005) findings showed no statistically significant difference between workers with more and less expertise in ICT proficiency. However, a principal's prior experience as a school leader has no appreciable impact on how they employ ICT. In Taiwanese primary schools, Chang et al.'s study from 2023 found that there were substantial differences in teachers' assessments of all the principals' technological leadership components depending on age and teaching experience.

The considerable expertise of the moderator in those constructs did not influence the technical leadership and integration constructs. This finding is consistent with Seyal's (2012) findings that principals' educational background and school leadership experience have no discernible impact on their use of ICT, as well as Kusano et al.'s (2013) finding that teaching experience is not a significant predictor of US teachers' attitudes toward technology integration. A recent study by Orlinga and Escalaw (2022) has indicated that teaching experience considerably impacts technology integration (Marshall et al., 2020; Winter et al., 2021).

The study reveals that older school heads tend to have lower levels of overall technological leadership, indicating that school heads with longer service years are more likely to possess such leadership. However, school leaders in authority positions are likely to have comparable levels of overall technological leadership, suggesting that school administrators in leadership positions will likely possess similar degrees of technological leadership. Since the Internet of Things is quickly transforming classrooms in ways no one could have predicted, school administrators must support and encourage teachers as they incorporate technology into learning and teaching (Escalaw, 2021; Escalaw, 2022; Escalaw, 2023). In line with Raman and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Thannimalai (2019), expertise leadership is being adapted to hasten the use of technology in classrooms and to maintain the development of the skills necessary to generate skilled labor.

The study proposed two frameworks: the School Head Technological Leadership Framework for School Digitalization and the Technological Leadership Framework During the Pandemic. It suggests that a school leader's age, education level, and experience can influence their technical leadership. The study suggests that professional development training for technology executives should be tailored to their unique skills to promote digital transformation.

The potential of a school head is influenced by their intangible values and beliefs, which can be shared among other leaders. This could help reduce the technological leadership divide and achieve digital transformation in education. A technology leader who guides the path towards this goal is essential for schools to achieve digital transformation. Motivating factors include promotion, competitiveness, family support, fear of the unknown, stakeholder pride, professional development studies, responsibility, accountability, and school head performance assessment (OPCRF).

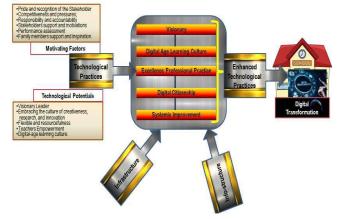

School heads are motivated to extend their technological leadership practice through learning conveyance, professional development for educators, strengthening mentoring and support, collaboration with local, national, and international academic and professional development institutions, and strengthening technology utilization for management and administration. This approach demonstrates that school heads have the technological integration or utilization of technology in all educational institution systems of function.

Digital transformation is a shift in the work system driven by cutting-edge digital technologies and creative business concepts. Implementing a technology solution requires coordination of organizational, human, and digital variables. Technological leadership is crucial for achieving digital transformation in education. The school head's technological potential is crucial for a school's digital transformation, as it can influence future technological practices. This potential includes values, beliefs, and qualities that can drive technology utilization in the school.

Aligning digital technologies with human and organizational factors is essential. Digital technologies refer to the structure and infrastructure needed for a 21st-century school, while technological infrastructure refers to data management in the school. Organizational factors include the school's mission, culture, location, stakeholders, and technological resources. Digital transformation creates new skills and models, necessitating the strategic use of modern technologies. School heads must strategically utilize both soft and hard skills and innovate to improve the technological environment in the school.

This framework suggests that since all school heads encounter difficulties in terms of technological aspects, if school heads optimize technological potentials that are latent, such as being visionary, technologically innovative, and resourceful, some technological provision that is lacking may find a way to make it happen. Technological leadership covers technological skills and capabilities that are parallel or connected to other leadership styles and potentials.

Figure 1 School Head Technological Leadership for School Digitalization Framework

CONCLUSION

Based on the qualitative data analysis, this study was summoned to establish a technological leadership framework amid the pandemic. The school head's motivating factors and technological potentials are the aspects or dimensions that the school head has to further the school's technological practices that enable the educational institutions to heighten teaching and learning delivery to the stakeholders during pandemic education.

Most school heads are motivated despite their fear and uncertainty about the unknown causes of COVID-19. Moreover, most school heads are also emotional, as seen in the theme that emerged in motivating factors such as family members' support and inspiration. During COVID-19, everyone cares for the welfare of others.

The pandemic gives the nation a sense of family first. Hence, the familial notion is on the broader spectrum—family not only by blood but as a nation. Other motivating factors are common even before the pandemic, such as aiming for promotion, competitiveness and pressures, fear of the unknown, pride and recognition of the stakeholder, professional development studies, responsibility and accountability, and school head performance assessment (OPCRF).

Motivation is a system that leads, supports, and governs behavior, which is critical in the workplace (Lazarova, 2021). This technological framework concerning motivating factors is paramount, as school leaders must be motivated to enhance the school's digital transformation, which this technological framework is grounded upon and supported by different scholars.

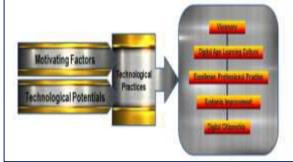

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Motivating factors as theme emerged such as aiming for promotion (Yamin, 2020); competitiveness and pressures (Goegan et al., 2020; Daniels et al., 2020); family members' support and inspiration (Menges et al., 2017; Karakose et al. 2021); fear of the unknown (Yang, 2022); responsibility and accountability (Whang, 2021; Mbangula & Albert, 2022); professional development (Caingcoy & Lepardo 2020); school head performance assessment (OPCRF) (Mapa, 2019; Aquino et al., 2021).

The study explored the potential of school heads as technological leaders during the pandemic. Key themes include visionary leadership, embracing creativity and innovation, flexibility, resourcefulness, empowering teachers, and fostering a digital-age learning culture. These qualities are essential for school leaders to possess. The study also highlights the importance of practice in achieving digital transformation. Key themes include learning delivery through technology, professional development for teachers, collaboration with digital academic institutions, and strengthening technology utilization for management and administration. Future research may explore these aspects and discover additional valuable qualities for school heads in technological leadership.

The study supports ISTE's constructs on technological leadership for school heads, including visionary leadership, digital age learning culture, excellence in professional practice, systemic improvement, and digital citizenship. The quantitative data analysis shows high results, indicating that the Technological Leadership Framework explains participants' high school head technological leadership, which may motivate them to adopt technological practices during the pandemic.

Figure 4 presents the proposed technological leadership framework amid the pandemic education.

Figure 4 Technological Leadership Framework amid the Pandemic

RECOMMENDATION

The following recommendations are made based on the findings of this research

1. Technological training for school heads will be based on strategic training, considering the range of time of life, extent of service, and highest educational fulfillment.

- 2. Technological training for the school head should be targeted or customized depending on the dimensions of the school head who needs a certain competency.
- 3. School head training may be done by experts in the technology field and not through a specialized Department for true application skills.
- 4. The DepEd may further the technological infrastructure and infrastructure of all schools in the Department of Education.
- 5. The DepEd may consider creating a technological training department in every division for the enhancement of technological skills for teachers, especially for the school head.
- 6. Future researchers may revisit the results of this study to support or debunk the results of this undertaking.

THE USE OF DIPLOMATIC TERMS IN FICTION

Sadullayeva Sapura Batirbek kizi

Trainee-teacher at Urgench State University

ABSTRACT

This article is devoted to the presentation of diplomatic terms in fiction. In the article, the original of the novel "Past Days" by A. Qadiri, a representative of Uzbek literature, and its indirect translation into German are taken as a source. Diplomatic terms, which are the object of research used in the novel, are analyzed in a comparative and comparative aspect.

KEY WORDS: diplomatic term, pure term, general language, general literary language, fiction, citizen, visit, command, authority.

DIE VERWENDUNG DIPLOMATISCHER BEGRIFFE IN DER BELLETRISTIK

Lehramtsstudent an der Staatlichen Universität Urgentsch

Annatotsia: Dieser Artikel ist der Darstellung diplomatischer Begriffe in der Belletristik gewidmet. Als Quelle werden im Artikel das Original des Romans "Vergangene Tage" von A.Qadiri, einem Vertreter der usbekischen Literatur, und dessen indirekte Übersetzung ins Deutsche herangezogen. Diplomatische Begriffe, die Gegenstand der im Roman verwendeten Forschung sind, werden vergleichend und vergleichend analysiert.

Schlüsselwörter: diplomatischer Begriff, reiner Begriff, allgemeine Sprache, allgemeine Literatursprache, Fiktion, Bürger, Besuch, Befehl, Autorität.

In einer Zeit, in der die Technologie fortgeschritten ist und sich der Prozess der Globalisierung beschleunigt, steigt die Notwendigkeit, Nationalsprachen zu bewahren. Auf dem Gebiet der Linguistik werden viele Forschungen durchgeführt, um dieses Problem zu untersuchen und positiv zu lösen sowie den Wert der Landessprache weiter zu steigern. Ein klares Beispiel hierfür ist das erstmals in Usbekisch veröffentlichte "Erklärende Wörterbuch diplomatischer Begriffe" Außenpolitik. Dieses Wörterbuch trägt zur Entwicklung des usbekischen diplomatischen Diskurses bei und hilft, das Ansehen der usbekischen Sprache auf internationaler Ebene zu steigern. Es ist kein Geheimnis, dass die Bedeutung der Diplomatie für die Stärkung der Position und des Einflusses Usbekistans in der Weltgemeinschaft unbegrenzt ist. Diplomatie spiegelt sich jedoch nicht nur in offiziellen Beziehungen wider, sondern auch in dem einen oder anderen Aspekt des Lebens. In diesem Zusammenhang wollten wir auch den Umfang der Verwendung des diplomatischen Begriffs in der Belletristik untersuchen und analysieren. Schließlich kann die Sprache, eine große Entdeckung der Menschheit, zu einer so mächtigen Waffe in der Fiktion werden und einen großen Einfluss auf die Menschen haben.

Fiktion ist eine unerschöpfliche Quelle von Ideen. Es spiegelt die Gedanken, Meinungen, Träume und Hoffnungen von Menschen verschiedener Zeiten, politischer, ideologischer, moralisch-pädagogischer, philosophischer, religiöser und anderer Ansichten der Gesellschaft wider. Aus diesem Grund haben wir uns entschieden, zunächst am Beispiel der Fiktion zu

analysieren, wie aktiv diplomatische Begriffe in unserer Rede sind. Zu diesem Zweck haben wir uns Abdulla Qadiris "Otkan Kunlar"-Romane zugewandt.

Die usbekische Literatur hat eine sehr reiche, alte Geschichte, genau wie usbekisches Volk selbst. Es hat seine eigene Art der Bildung und Entwicklung, Entwicklungsgesetze. Um diese Dinge zu fühlen, zu verstehen und zu verallgemeinern, ist es notwendig, ihre Geschichte sorgfältig zu studieren, um sie richtig zu fördern. Die Literaturgeschichte gibt Aufschluss über die Entwicklungsprozesse der Sprechkunst, klassischer [9]. Deshalb haben wir uns nicht umsonst an Abdulla Qadiris Roman "Vergangene Tage" gewandt. In diesem Werk wird nicht nur der Lebensstil des einfachen Volkes, sondern auch das Leben der Höflinge und Adligen mit politischer Macht erzählt. Unser Ziel ist es zu analysieren, inwieweit diplomatische Begriffe zu dieser Zeit und in der Belletristik aktiv verwendet wurden.

Wenden wir uns zunächst dem Roman "Vergangene Tage" zu, in diesem Roman:

Es gibt rein diplomatische Begriffe wie "Yorlig`"(Etikett), (13), "Bürger", (31,32,33,,100,113,284,) "Besuch" (35), "Autorität" (54). Hier bedeutet das Wort "rein diplomatischer Begriff" nicht das rein usbekische Wort, sondern die im erklärenden Wörterbuch der diplomatischen Begriffe aufgeführten Wörter.

"Yorlig" (Etikett) – 1) schriftliche Dokumente, die von türkisch-mongolischen Khans veröffentlicht wurden. Auch

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

diplomatische Notizen und der Text zwischenstaatlicher Abkommen sind im Khan-Label enthalten. Meistens wurde dieses Etikett jedoch als Rechtsdokument zur persönlichen Unverletzlichkeit angesehen, das die Khans der Goldenen Horde, Kasan und Krim ihren untergeordneten Beamten und religiösen Persönlichkeiten verliehen hatten [8].

Im Roman spiegelt sich das Wort "Etikett" in der folgenden Passage wider:... Lekin xonning yo'l boshchisi bo'lg'an kishining o`zi zulmda Azizbekdan necha zina baland o`rinni ishg`ol etuvchi kimsa bo`lsa, biz qandog` qilaylik. Ammo shunisi ham borki, shu keying vaqtlarda Azizbek Qo`qonning vorlig` va farmonlarini iltifotsiz qoldira boshladi [7]. Auch hier wird das Wort "Etikett" im Sinne eines Dokuments mit politischer Macht, also einer schriftlichen Anordnung des Khans, verwendet. Denn das Wort "Etikett" hat andere Bedeutungen. Zum Beispiel eine Marke in Form eines Papiers, eines Etiketts, das auf einem Produkt oder einem daran befestigten Ticket angebracht wird und Informationen über das Produkt (Gewicht, Menge, Preis, Hersteller, Produktionsdatum usw.) enthält. Allerdings wurden in der deutschen Übersetzung des Werkes die Wörter "label" und "Dekret" durch das Wort "Befehl" übersetzt: " Azizbek an Grausamkeit noch übertifft. Überdies pfeift Azizbek in letzter Zeit auf alle Befehle aus Kokand. Wohl ist man in Taschkent der Grausamkeit und Willkür Azizbeks überdrüssig, aber niemand weiß woher Hilfe kommen soll."

Aus diesem Grund hat der usbekische Diplomatenbegriff in diesem Satz seine ursprüngliche Bedeutung verloren.

Nächster diplomatischer Begriff ist das Wort "Besuch". "Die Bedeutung des Wortes "Besuch" wird im erklärenden Wörterbuch der usbekischen Sprache wie folgt erklärt: [a. - Respekt; Verherrlichen, Ehren; Zeremonie; willkommen]. Für kurze Zeit an einen Ort, ein Haus, ein Haus oder zu jemandem gehen [2].

Unter diesem Wort versteht man als diplomatischen Begriff vor allem diplomatische Besuche, also Besuche von Regierungschefs und deren Vertretern in anderen Ländern.

Im orginalen Roman: "Ziyo shohichi bu vaqtsiz tashrifga tushuna olmay, "nima qilib yuribsan" degandek, bir necha qayta Hasanaliga qarab oldi [7]."

In der Passage des Romans wird das Wort "Besuch" im Sinne von "gehen", "besuchen" verwendet und es handelt sich nicht um den Besuch eines politischen Vertreters, sondern ums Kommen von Hasanali nach Hause von Ziyo Shohichi. Daher wird das Wort "Besuch" nicht als diplomatischer Begriff verwendet. Ebenso wird in der deutschen Passage das Wort "der Besuch" exakt verwendet: Die beiden nahmen am Sandal Platz und versanken in Schweigen. Bemüht, die Ursache des unerwarteten Besuches zu erraten, blickte Ziyo Shohichi den Alten einige Male fragend an. (46)

So kamm es, daß der Qutidor überraschend Besuch erhielt. (43)

Noch ein Begriff ist "Bürger".Das Wort "Bürger" wird zusammen mit dem Begriff "Staatsbürgerschaft" im erklärenden Wörterbuch diplomatischer Begriffe von Shamsimuxammedov verwendet: "Shaxsning ma'lum bir davlat bilan barqaror huquqiy aloqa o'matishi" tarzida izohlangan: Shaxs fuqarolikka ega bo'lgach, davlat uning barcha huquq va erkinliklarini e'tirof etadi, ularni amalga oshirishini ta'minlash choralarini ko'radi. Davlat faqarolarining manfaatini ular boshqa mamlakatlar hududida turgan vaqtda ham himoya qiladi. O'z navbatida, fuqarolar davlat, jamiyat oldida o'z rchlarini bajaradilar. O'zbekistonda yagona fuqarolik o'matilgan, ya'ni O'zbekiston fuqarolari bir vaqtning o'zida boshqa mamlakatlaming fuqarolari bo'lishi mumkin emas [1]."

Das Wort "Bürger" wird im Werk "O'tkan Kunlar" mehrmals wiederholt: "Bu kun Kirvochidan besh ming sipoh ila Normuhammad qushbegi Toshkand ustiga buyurilg`anini eshitdik. Fuqaroning tag`in qandog` ko`rguliklari bor ekan, oʻgʻlim!"

"-Men ko'p umrimni shu yurtning tinchlig'i va **fuqaroning** osoyishi uchun sarf qilib, o'zimga azobdan boshqa hech bir qanoat hosil qilaolmadim." (284)

"Rahmat fuqaro! Eshitamanki, qipchoqlar Normuhammad qushbegi qo`l ostida Toshkand ustiga harakat boshlag`an emishlar. Bunga qarshi bizning hozirlanishimiz kerakmi, yo`qmi fuqaro?!"

Obwohl in den Auszügen aus dem oben genannten Werk das Wort "Bürger" vorkommt, ist es notwendig, diesen Begriff als diplomatischen Begriff zu akzeptieren. Denn in diesen Passagen geht es um Bürger eines bestimmten Staates, zum Beispiel:

"Rahmat fuqaro! Eshitamanki, qipchoqlar Normuhammad qushbegi qo`l ostida Toshkand ustiga harakat boshlag`an emishlar...." Hier ermutigte Azizbek seine Bürger zum Kampf gegen die Kiptschaken ein. In der deutschen Übersetzung werden anstelle von Bürgern die Wörter "die Bevölkerung" und "das Volk" verwendet:

"Die Bevölkerung nahm die Nachricht gleichgültig auf; solche Unruhen waren an der Tagesordnung. Man hatte sich an sich an sie gewöhnt." (36 Seite)

Eines der nächsten diplomatischen Begriffe im Werk ist das Wort "Autorität". Autorität ist ein arabisches Wort, das Repräsentation, Autorität bedeutet. Eine Person, Institution, Organisation, Staat usw. das Recht, im Namen zu handeln, das Vertretungsrecht. Dieses Wort wird im erklärenden Wörterbuch der diplomatischen Begriffe von Shamsimuxammedov I. wie folgt erklärt:

"Vakolatlar" xalqaro, ayniqsa, diplomatik amaliyotda qo`laniladigan hujjat bolib, unda nomi keltirilgan shaxs(lar)ning davlat, hukumat yoki boshqa rasmiy idora nomidan gapirish va muzokaralar olib borish, xalqaro anjumanlarda ishtirok etish, shartnoma va bitimlarni imzolash, davlatning xalqaro tashkilotlardagi vakili ekani huquqlarini tasdiqlaydi [1]."

Die folgende Passage ist aus dem 11. Abschnitt des ersten Teils entnommen: "Kumushbibidan vakolat olish ham juda qiyin bo`ldi. Domlaning: "Sizkim Kumushbibi Mirzakarim qizi,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

nafsingizni toshkandlik musulmon Otabek Yusufbek hoji o`g`liga bag`ishlamoq vakolatini amakingiz Muhammadrahim Yo`ldosh o`g`liga topshirdingizmi?" degan so`rog`iga olti, yetti qaytarilg`anidan keyin, shunda ham yangalar qistog`i ostida arang uning rizolig`i olindi [7]."

Obwohl das Wort "Autorität" hier das Recht auf Vertretung bedeutet, handelt es sich dabei nicht um ein Dokument, wie im "Explanatory Dictionary of Diplomatic Terms" erläutert, sondern um das Recht, mündlich im Namen einer Person zu sprechen. Dementsprechend kann man sagen, dass das Wort "Autorität" sowohl ein diplomatischer Begriff als auch ein in der Umgangssprache verwendeter Begriff ist.

Wenn wir uns nun der deutschen Übersetzung dieser Passage zuwenden, können wir erkennen, dass der Übersetzer nicht die deutsche Alternative des Wortes "Autorität" verwendet hat? Seine kontextuelle Bedeutung von Zustimmung, also "Das Jawort" als alternative Übersetzung, konnte die Bedeutung des Originals vollständig erhellen.

"Es machte Mühe, das Jawort der Braut zu erhalten. Mehrmals mußte der Mulla sie fragen:" Habt Ihr, Kumushbibi, Tochter des Mirzakarim, Eurem Oheim Muhammad-Rahim, dem Sohne des Yoldosh, aufgetragen, dem Bürger von Taschkent, dem Muslim Otabek, dem Sohne des Yusufbek-Hoji, Eure Liebe zu überbringen [6]?"

Basierend auf dem oben Gesagten kann man sagen, dass im Roman "O'tkan Kunlar" nur 4 Wörter das diplomatische Lexikon bilden. Die folgenden im Werk vorkommenden Wörter können jedoch in diplomatischen Situationen und im allgemeinen Sprachgebrauch als Begriffe aus einem anderen Fachgebiet verwendet werden.

"Chet el"(14), "Istiqlol" (98), "O`rda" (101), "Siyosat" (33,112), "Davlat "(113), "Janobi oliy" (113), "Xon janobi"(119), "Xaloyiq"(289), "Mustaqil hukumat" (262), "Shoh" (113), "G`alaba(99), "Istiqbol"(77), "Mamlakat" (61), "Sherik"(33), "Ittifoq"(263), "Musofirlik" (42),

Natürlich können diese Wörter je nach Inhalt des Textes als Begriff eines bestimmten Fachgebiets auftauchen. In dieser Hinsicht können wir zum Beispiel das Wortes "Chet el" durchsehen, das sich im Text widerspiegelt "O'ris sharlariga borib savdo qilg`uvchilar Turkistonda juda oz hisobda bo'lib, chet ellarni ko'rgan Otabek majliska tansiqlandi [7]."

Dabei kann das Wort "Ausländisch" im Sinne des Sehens eines anderen Landes, fremder Länder, als diplomatischer Begriff betrachtet werden. Denn Diplomatie dient in erster Linie dem Aufbau von Beziehungen zum Ausland.

Wenn wir nun die Anzahl der diplomatischen Wörter in der ins Deutsche übersetzten Version dieses historischen Romans zählen, sind es im Roman insgesamt vier, und in einigen Sätzen haben sie keine diplomatische Bedeutung.: "Ein Fuchs, dieser Azizbek! Dachte Otabek, während er die ihm unklar gebliebenen Stellen der Botschaft noch einmal überlas. Bei dem Satz, er möge nicht nach Taschkent zurückkehren, bevor dort

wieder Ruhe herrsche, sagte er lächelnd:""Wenn es so ist, dann möge es noch lange unruhig bleiben!" (39)

"Gespannt warte er, daß sich die Starrheit des jungen Mannes löste und er ihm die frohe Botschaft übermitteln konnte. (49)

Zusammenfassend lässt sich sagen, dass diplomatische Begriffe in der Belletristik manchmal im Sinne diplomatischer Begriffe verwendet werden und in vielen Fällen die Konzepte widerspiegeln, die in der allgemeinen Literatursprache verwendet werden. Auch Wörter, die in der allgemeinen Literatursprache aktiv sind, können gleichzeitig als Wörter mit Bezug zu mehreren Fachgebieten dienen, ohne dass es sich dabei um einen fachgebiets- oder wissenschaftsbezogenen Begriff handelt. Beispielsweise können Wörter wie "Politik", "Staat", "Unabhängige Regierung" je nach der Situation, die sie darstellen, als diplomatische oder politische, juristische und andere Fachbegriffe verwendet werden. Aus dem Inhalt des Textes ergibt sich, dass diplomatische Begriffe in der Belletristik als Wort verwendet werden, das die internationale Situation beleuchtet, oder als Lexikon, das die Situation in der Standardsprache beleuchtet. Diplomatische Begriffe, die ursprünglich im Roman "O'tkan kunlar" verwendet wurden, verloren im Zuge der Übersetzung durch die Mittelsprache ihre charakteristischen Merkmale diplomatischer Begriffe und wurden zu einem Teil der Wörter, die in unserem Alltag aktiv verwendet werden.

GLANCES AT THE NAMES OF SOME GEMMONYMS IN THE UZBEK LANGUAGE

Shahodat Abdiyeva Kenjebay qizi

Master of Uzbek Philology Faculty of Urganch State University

ABSTRACT

This article discusses the onomasiological units used in the Uzbek language that represent precious stones and metals. Also, information is given about the naming principles of such units and their sociolinguistic aspects in Uzbek language.

KEY WORDS: Uzbek language, gemmonym, precious metal, official name, sociolect, artistic naming.

Have you ever wondered how the names of familiar and unfamiliar metals and stones in the world around us are called by their names or by names that have nothing to do with them? Gold, silver, pearl, ruby, diamond and bead, coral, marble and similar names are named based on what motives and are they related to naming motives in related and non-related languages? We will try to find answers to these and similar questions in this article.

Since ancient times, people have valued certain things in life and used them as a means of calculation. The tools considered as valuables can be divided into two types. The first type includes metals such as gold, silver, and copper, and the second type includes minerals such as sapphires, rubies, diamonds, pearls, and beads.

Linguistic sources note that such units used in our language are one of the areas that have not been studied until now [1]. Names related to precious stones and metals are used in world linguistics with terms such as **gemmonym**, **chrematonym**, **mineralonym**. However, these terms are almost never found in linguistic dictionaries. For example, in the dictionary of onomastic terms of the Russian language compiled by Russian linguist N.V.Podolskaya, only the term *chrematonym* is explained [7]. Also, in the dictionary of E.Begmatov and N.Ulukov, aimed at regulating Uzbek onomastic terms, only the above term *chrematonym* is explained [4].

It is also known from the given information that this direction is one of the actual areas that are still waiting for their researchers. We see that the term *gemmonym* is interpreted as "the name of precious and semi-precious stones [5]..."

In general, during the examination of linguistic elements related to precious stones and metals in the Uzbek language, we made sure that this field will provide very relevant and interesting information for our linguistics.

For the Uzbek language, the volume of such linguistic elements constitutes a wide circle in a certain sense. In particular, such linguistic elements can be found in different forms from the oldest sources (ancient Turkic sources), in sources related to the period of the old Uzbek language, and in texts related to our modern language. In addition, the lexicon related to precious stones and metals can be sufficiently researched and checked in terms of linguistic layers between the languages that are in linguistic contact with the Uzbek language. That is, it will be necessary to find an answer to the question of which languages are historically and etymologically related to the units related to precious stones and metals used in our language.

Of course, it will not be possible to search for answers and clarify all the above issues within the scope of this article. For this reason, we preferred to focus on the most known and famous among such units in our language, the precious metal word "oltin" (gold), which has kept its value for almost many times.

Here we face another problem. So, are the names given to precious stones and metals considered a proper unit or a common unit? Why aren't they written with a capital letter if they're going to be a proper unit? This problem is observed in several types of names that are considered to be related to the direction of onomastics. For example, phytonyms (melon, watermelon), ethnonyms (Uzbek, Kyrgyz) and others. In addition, none of the above-mentioned terms gemmonym, mineralonym, and chrematonym refers to the naming of precious metals. Their comments refer to precious stones and minerals, but there are no sufficient grounds to include metals such as gold and silver. In our opinion, it is necessary to find a correct solution to this terminological problem based on scientific approaches. The conducted investigations showed that the intended names can be divided into several categories.

- 1. Official naming. It is necessary to understand that this type is named from the chemical point of view of a specific metal or mineral, as well as from the point of view of literary language.
- 2. Dialectal or informal naming. This type refers to the name of a certain precious metal or mineral in certain regions or in the form of jargons in the language of different groups of society.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

3. Artistic naming. This type refers to the naming of objects in fiction.

Within the framework of this article, we tried to analyze the name of the gold metal as the most active unit, refraining from the analysis of some of the names related to precious stones and metals used in the Uzbek language [6].

If we pay attention to the word "oltin" (gold), it should be noted that its composition is divided into two parts, that is, it is formed from the parts "ol" (red) and "tin" (coin) on the basis of lexemes related to Turkic languages. It is known that gold is compared to red in other related Turkic languages. For example, in the Turkmen language, the word gold is called "gyzyl", which means "red". In the explanatory dictionary of the Turkmen language, it is explained as "yellow colored precious metal, gold, gilt, chemical element..." (Gyzyl sagat. Gyzyl ýüzük. Gyzyl dis) [9].

Gold is called "zar" in Persian language explanations [8]. It is known that the word zar means yellow as well as gold. The zar component is used in the meaning of gold in the Uzbek language such as zargar, zardozi, zarkokil.

It is noted in the sources that the word referring to the Latin word gold comes from the old Latin word "aurum" and it is noted that this word means dawn, the interpretation of the word "dawn" refers to the golden-yellow shine of this metal. The English word "gold" derives from the Indo-European word "geolu," which also means yellow. For this peculiar property of gold, (besides copper, it's the only metal with a distinct color), it was associated with the sun in many ancient cultures.

From the given information, it is understood that the naming of gold, which is considered a precious metal, for many languages of the world, is based primarily on its color. Since time immemorial, gold has symbolically embodied dignity, wealth, honor, prestige, etc. In the sources of the old Uzbek language, it is used in such forms as *oltun*, *tillo*, *zar*. In particular, it is one of the most active words in the language of A. Navoi's works.

Dema, **sarg'ordi** Navoiyning yuzikim ishq aro, Buyla **oltunni** qilurg'a poymoling qazg'anur...[2]; or: Ey Navoiy **oltun**-u shingarf-u zangor aylama, Bo'ldi nazming rangidin devon qizil, **sorig'**, yashil[2].

In the Uzbek literary language, there are many colloquial expressions related to gold, where the word **oltin** (gold) is used. For example, **oltin jom** (golden cup, often in fiction), **oltin fasl**, **oltin kuz** (golden season, golden autumn, in the sense of autumn when the leaves turn yellow); **oq oltin** (white gold, figurative expression of cotton), **qora oltin** (black gold, figurative expression of oil) and others.

In addition, it can be observed that the **gold** element is actively used in various onomastic units. For example, the place names include: in the historical toponym of **Oltin Urda** (Golden Horde), **Oltinsoy** (Golden canal, name of a village in Bukhara region), **Oltinkul** (Golden Lake, name of a district in Andijan region), **Oltinkala** [10] (Golden fortress, name of a village in

Shavot district of Khorezm region) and others. Including personal names: Oltinoy (Golden Moon), Oltinsoch (Golden hair), Oltinbuvish (Golden Grandma), Tillokhan [3] (Goldenkhan) and others.

In general, it can be noted that by collecting and analyzing the names related to precious stones and metals used in the Uzbek language, it is clear that we will have important linguistic information for our modern linguistics. This sphere is one of the fields of Uzbek linguistics that is waiting for its young researchers today.

ABSTRACT

This qualitative phenomenological study aimed to explore and understand the views and perceptions of Master Teachers as educational leaders during in-person classes in the elementary and secondary schools of the Division of Davao de Oro. The study was gleaned from the Contingency Theory and Path-Goal Theory. The research design employed in this study is a qualitative phenomenological design. Purposive sampling was used in selecting the participants, who are Master teachers in the elementary and secondary schools of Davao De Oro. There were fourteen (14) Master teachers, seven (7) for in-depth interview and seven (7) for focus group discussion. Results of the participants' experiences mainly include managing curriculum implementation, facilitating pedagogical development, encountering difficulties as master teacher, and engaging support for professional growth. Participants also shared that they handled the situation by carrying out effective instructional leadership, being provided with support, and implementing strategies in new setup. Apart from other findings, possessing skills as instructional leader is one of the solutions to continue one's educational leader role during in-person classes. It is also recommended to research further about the experiences of teachers as school-in-charge as another angle to be seen along with how they coped with the struggles in handling both instruction and administration tasks during in-person classes.

KEYWORDS: In-person classes, educational leader, Master teachers, qualitative phenomenological inquiry

INTRODUCTION

The COVID-19 pandemic has emerged as a complex crisis that necessitates great leadership. Due to the disruption caused by this pandemic to the world's educational system, leadership in schools under normal conditions is different from that in times of emergency. Due to this, the implementation of in-person sessions after more than two years of blended learning presents significant problems for the instructional leadership of Master Teachers. They act as a role model for the rest of the teaching team as a result, which directly affects how well each student learns. However, when Master Teachers' instructional leadership will not be effective, teachers and students are having a hard time adjusting to the return of face-to-face instruction since these they form a great part in implementing the curricular landscape of the school.

In Malaysia, schools are scrambling to stay up with the global learning recovery as a result of the increased in-person instruction since it was found in a study that Master Teachers were only completing their leadership duties at a leadership function below 90% (Rumeli et al., 2022). In a similar vein, it was discovered that most local schools in Thailand lacked suitable methods for instructional leadership (Luo, 2022). As evidenced by the gaps between goals and actual implementation, there have been incidents of inadequate instructional leadership reported in Indonesia (Rahayu & Usman, 2022). The results of studies conducted in Malaysia, Thailand, and Indonesia suggest that there are significant challenges in providing effective instructional leadership in

schools, with Master Teachers in Malaysia not fully meeting their leadership duties and a lack of suitable methods for instructional leadership in Thailand.

In the Philippines, Laude, et al. (2019) revealed that based on the consolidated National Competency Based Teaching Standard (NCBTS) -Teachers Strength Needs Assessment (TSNA) results for three consecutive years starting SY 2014-2016, in the Department of Education-Division of Biliran, there is a need for the secondary Master Teachers to acquire relevant skills pertaining to ICT instruction, pedagogy, and making a training design to further enhance their instructional leadership capacity as Master Teachers who have been assigned with various curriculum tasks. Similarly, Mendoza and Bautista (2022) supported the notion that Master Teachers will be more competent in terms of their instructional competence skills if they performed their instructional leadership practices well. On the other hand, Ojale (2019) stressed that even though they are allocated with funds for training and seminars, due to their heavy teaching loads, lack of preparation, and the challenges associated with using instructional technologies, master teachers are also unable to provide instructional supervision.

Based on my firsthand observation in one of the schools in Davao de Oro, Master Teachers face challenges, and they are still struggling in adapting to the resumption of in-person classes after more than two years of having blended learning. As instructional leaders, they are tasked to provide mentorship to teachers who are stunned with the return of face-to-face

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

classes. When teachers are not well supervised, effectiveness in instruction will be adversely affected and the instructional purposes may not be well realized. Thus, this only means that Master Teachers' instructional leadership must be properly employed to address the current situation. With this, I would like to understand the viewpoints of the Master Teachers in carrying out their task as curriculum and instruction experts, and the challenges they encountered to carry out a proposal for a development plan on the areas master teachers need coaching and mentoring as a response to the changes and challenges of the modern world.

In the numerous research articles, instructional leaders support teachers in their practice by coordinating professional development opportunities and offering coaching and mentoring to guarantee that best practices are applied in their schools. In order to give students, the greatest instruction possible, teachers should have access to everything they need (Brolund, 2016 as cited in Amakyi, (2021). Additionally, school leaders' instructional leadership approaches influence their level of leadership self-efficacy. The effectiveness of school leaders' responsibilities, choices, and actions will increase as they work on tasks that have an impact on school improvement (McBrayer et al., 2020). The effectiveness of providing high-quality education will be increased as a direct result of the master teachers' instructional leadership; they serve as the compass in this process. To overcome the learning gap that the pandemic has caused in the students, the master teachers must carry out their duties.

This study needs to be carried out as soon as possible because full implementation of in-person classes happens this year and master teachers had significant difficulties when the Philippine schools were reopened after more than two years of blended learning. The master teachers' experiences, coping skills, and insights will be a tremendous aid for the smooth adjustment in the reopening of the schools and it could help to improve the school's situation. Additionally, there is a paucity of literature and study about master teachers' leadership in the classroom, and some of the studies are so old that they cannot be utilized as a guide for contemporary academics.

The results of this study also aimed to offer a fresh perspective on how education would proceed following the pandemic and perhaps help all master teachers who were having trouble managing their workloads and other responsibilities at the time of in-person classes. Additionally, it will highlight the master instructors' function and how it affects both teachers' and students' performance. The findings of this study will be shared with the academic community and other interested parties by publishing the research in a reputable journal. This will allow the results to be accessible to a wide audience, including educators, researchers, policymakers, and other stakeholders in the field of education.

PURPOSE OF THE STUDY

The purpose of this phenomenological study is to explore and understand the experiences, coping mechanisms, and insights met by Master Teachers in their instructional leadership during in-person sessions. The Master Teachers are from different schools in the Division of Davao de Oro as they gained experience after the comeback of in-person classes.

At this point in the research, the Master Teachers' instructional leadership was broadly defined as their concerns about how they adjusted their leadership and adapted the implementation of in-person classes after more than two years of using blended learning due to the pandemic. Upon delving into the experiences of these Master Teachers, it will help them to adjust their work routine in the new normal education.

RESEARCH QUESTION

The study aims to answer the following research questions:

- 1. What are the lived experiences of Master Teachers as instructional leaders during the in-person classes?
- 2. How do Master Teachers cope with the challenges encountered as instructional leaders during in-person classes?
- 3. What insights can they share with other Master Teachers as instructional leaders?

METHODS

This study employed a qualitative research design utilizing phenomenological approach. The purpose of qualitative research, according to Fossey, E. et al. (2002), is to provide answers to queries concerning how to understand the significance and experiential elements of people's lives and social surroundings more fully. A qualitative research strategy also provides a thorough understanding of a particular issue, challenge, or meaning based on first-hand experience (Maxwell, 2012).

This study primarily used a phenomenological technique to investigate the Master Teachers' experiences during the inperson classes. The phenomenological approach was used to investigate human lived experiences or an investigation of lived experiences. This method's main objective was to describe the nature of the specific phenomenon (Creswell, 2013).

A thorough interview was conducted as part of this study's phenomenological approach because it allowed the researcher to delve into the perspectives, understandings, and emotions of those who were actually experiencing the phenomenon—in this case, the master teacher's instructional leadership during the inperson classes. The researcher was able to completely comprehend and analyze the participant's experiences because of this.

The use of a qualitative-phenomenological methodology in this study allowed for the identification, exploration, and understanding of participant statements and descriptions regarding their experiences and insights. The fact that this research design recounts the information acquired from the interviews makes it the most suitable for this investigation.

In this study, fourteen (14) participants took part in this study: seven (7) participants for the focus group discussion (FGD), and seven (7) participants for the in-depth interview (IDI). These 14 participants were master teachers from public elementary and secondary schools in the Schools Division of Davao de Oro- Laak North District. According to Creswell

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

(2013), there should be three (3) or no more than fifteen (15) participants in a phenomenological study conducted with a heterogeneous group.

It used the purposive sampling method since it only includes master teachers from various elementary and secondary public schools in the Laak North District, Division of Davao de Oro. For the collection of data that is rich in detail and of premium, purposeful sampling is a common and well-liked method in qualitative analysis. According to Patton (2015), purposeful sampling involves choosing examples that have a lot of information so that the limited sources are used as efficiently as possible.

I identified and selected the participants using the following selection criteria: a.) must have a permanent item as a master teacher of either elementary or secondary public school in Laak North District, Division of Davao de Oro, b.) have at least three years of experience of teaching face-to-face classes, and c) must be assigned in the school under Laak North District, Division of Davao de Oro.

On the other hand, these are the exclusion criteria of my study: a.) the principal or the school heads of the school, b.) the Teacher I to Teacher III and c.) non-teaching staff like Administrative Assistant III.

REVIEW OF RELATED LITERATURE Duties and Responsibilities of Master Teachers

The Department of Education (DepEd) emphasizes a merit-based approach in the selection and advancement of employees, as outlined in DepEd Order No. 29, s. 2002, focusing on qualities and competence. This commitment to merit, competence, fitness, and equality is fundamental to DepEd's policies. Additionally, DECS Order No. 70, s. 1998, governs the allocation of Master Teacher (MT) positions, linking them to the number of teachers in a district, with one MT post designated for 5-7 instructors at the secondary level. Master Teachers, as detailed in DO no. 42, s. 2017, play a pivotal role in providing technical support across various educational domains, including subject matter, pedagogy, curriculum, assessment, and professional growth, ensuring a comprehensive approach to instructional leadership within the education system

The monitoring of modular distance learning (MDL) instructors' lived experiences was uncovered through an interview and a focus group discussion as part of the research into these lived experiences. Master Teachers have accomplished educators who are passionate about expanding their influence as teachers to raise the standard of instruction in their schools (Arce, 2019). Additionally, Master Teachers are highly skilled at planning projects for the entire school and supporting colleagues' professional development. Master Teachers work together with school and/or district administration to plan professional development programs, oversee teacher teams, and facilitate coaching sessions to help their peers develop (Danahy & Tsai, 2021).

Moreover, with the "New Normal" teaching trend, it is their responsibility as master teachers to monitor how the pupils and

teachers are faring. Some participants noted that face-to-face training is very different from seeing modular distance learning instructors teach and going through the learning experience. In the school year 2020–2021, it is predicted that education would start under the New Normal. Parents, students, and the Department of Education were all put at risk by the abrupt shift from in-person instruction to online instruction since the latter sought to preserve educational quality despite changes in how instruction was given (Ancheta & Ancheta, 2020).

Thus, the Department of Education is tackling the difficulties in basic education through its Basic Education Learning Continuity Plan (BE-LCP), in accordance with Department of Education Order No. 012, s. 2020. This strategy seeks to find a way to continue instruction despite these difficulties while also ensuring the health, safety, and well-being of students, instructors, and staff throughout the COVID-19 epidemic. The BE-LCP was specifically developed with a legal framework that responds to the "new normal," keeping in mind the constitutional duty to continuously protect every citizen's access to a high standard of education (Creus, 2019).

The school principal, head teachers, and master teachers must oversee and watch learning delivery to verify that it truly takes place and that the necessary feedback and technical assistance will be provided (Wong, 2019). This is necessary to ensure learning continuity. A study found that the MTs performed exceptionally well in terms of their instructional competence and that they were highly skilled in terms of educational leadership, notably in the areas of planning, assessing, reporting, and professional growth and development. Due to their competence in education, they are qualified to advise and mentor other teachers with these (Donato, 2021).

In addition, Abasolo et al. (2021) in their study reiterated that master teachers are very good in terms of modeling exemplary practice in the application of content knowledge and pedagogy showing its integration within and across learning areas. This means that teachers look up to them on how teaching instruction must be carried out, and this would serve as a guide to them to do the same. On the contrary, even though a secondary master teacher entails a subject he specializes in he must relate his area of expertise to other disciplines which some teachers find hard. Therefore, master teachers are expected to demonstrate such concern.

Resiliency of Master Teachers on New Curricular Routines

In 2020, distance learning via online learning gained popularity because of the COVID-19 pandemic (Kim, 2020). By the end of October 2020, around 25 countries in the East Asia and Pacific region that had been entirely shuttered during COVID-19 have either started or restarted lessons (UNICEF, 2020). Only "green districts," or those with less COVID-19 danger, have seen school reopening in Indonesia since July 2020. During COVID-19, internet learning was employed in several Indonesian schools. With this, master teachers should cooperate fully with the teachers below them and offer technical support. The goal is to minimize academic losses through efficient event, emotion, and consequence management (Hanafi et al., 2021).

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Although face-to-face classes go back to normal, there are still emergency situations like calamities where distance learning is implemented for the safety of students. Nicholls (2020, as cited in Abasolo et al., 2021) stated that having distance learning could mean more work on the part of teachers who print learning materials and create essential content that students can cope with despite the circumstances. So, it is a challenge for the Master Teachers to supervise them effectively in adjusting to such setup. So, they must be aware of their capabilities and responsibilities in the context of New Normal K12 Education.

Furthermore, changes should be implemented based on the lessons learned to maintain the safest environment possible for children, staff, and larger communities. Difficulties in implementing the distance learning plan developed on a regular basis. Due to a dearth of distance education competence as well as computer literacy, teachers were caught off guard for emergency remote instruction. Indeed, the pandemic puts teachers' adaptability and flexibility to the test (Cardullo et al., 2021). As a result of the present constraints, MTs must modify their practices when watching classes. Mentoring and coaching are more important than ever in assisting instructors with instructional implementation (Caratiquit & Pablo, 2021).

Teachers are driven to come up with novel ways to communicate with their students with the help of MTs (Lagua, 2020). Furthermore, technical assistance to instructors should be provided on a consistent basis. The situation has necessitated greater dedication to the task at hand, empathy for others, and extra measures to ensure that training continues in the event of a pandemic. As a result of these issues, the master teachers were forced to take on new responsibilities (Caraan et al., 2022).

Adapting in the face of hardship is one of the master teachers' strengths. Various problems exist, particularly during this trying time, and teachers are still adjusting to the new normal (Tosun et al., 2021). To effectively offer their teachings, they must use available and suitable pedagogy (Lapada et al., 2020). Because MTs are more familiar with, conversant with, and educated about educational philosophies, one of their duties is to impart their instructional competence to Teachers I-III (Teruel et al., 2022).

Finally, to ensure quality education, the MTs oversee the implementation of in-person classes to Teachers I-III through classroom observation (CO). COs are completed using predetermined metrics and the Philippine Professional Standards for Teachers-Results-Based Performance Management System (PPST-RPMS). During the pre-observation process, the MT and the instructor must discuss and agree. These indications must be monitored throughout the delivery of actual instruction, and a post-observation conference must take place (Patadilla-Naquines & Salazar, 2022).

Master Teachers as Instructional Leaders

Continuous, collaborative, and professional efforts to improve teaching effectiveness constitute instructional leadership. It may be important to give management, support, impart ideas, aid, or creativity to improve a teacher's capacity for managing varied learning contexts (Donato, 2021). A well-rounded master teacher who is second only to the principal will have a broad leadership style that integrates several different

leadership models. The goal of classroom instruction is to follow the practice of instructional leadership. It could be determined by how successfully its administrators and members work together. These leaders must have a thorough understanding of and familiarity with the educational environment. They must encourage collaboration to strengthen the school and its professional learning community (Hanafi et al., 2021).

Additionally, instructional leadership is a strategy for formulating and disseminating a distinct vision and goals for students as well as for assisting instructors through coaching, mentoring, and professional development (Rahayu & Usman, 2022). As a result, instructional leaders are held accountable to the community, parents, teachers, and students on a wide range of levels. Teachers require a knowledgeable, energizing, and supportive leader in the classroom (Potane et al., 2021).

People have long been curious about the relationship between instructional leadership and school effectiveness, which is often gauged by student academic accomplishment. According to prior studies, instructional leadership has the most empirical impact on the results of student learning of any kind of leadership (Qian et al. 2017). In support of this, a meta-analysis showed that instructional leadership typically had a three to four times better influence on student learning outcomes than transformational leadership. The size of the effects of instructional leadership may also vary depending on cultural background (Zhao, 2018).

Additionally, the decisions and actions of instructional leaders play a crucial role in building and sustaining trust in a school. A leader sets the atmosphere for their organizations. Their attitudes, behaviors, and beliefs have a significant impact on how trustworthy the workplace is (Ma & Marion, 2021).

Positive instructional leadership characteristics have been shown to significantly predict teachers' trust in the literature. Determining a vision, managing through norms and procedures, coaching instructional programs, and modeling professional actions are important leadership techniques that promote trust. The data point to a positive association between instructional leadership and faculty trust in the instructional leaders (Atik & Celik, 2020).

It was found in a study of master teachers in Cavite, Philippines, that master teachers needed to oversee and evaluate learning delivery to make sure that it truly happened and that the necessary feedback and technical support were provided (Espineli, 2021). The master instructors are further qualified to advise and coach other educators due to their depth of knowledge in teaching. By providing teachers with the chance to learn effective methods that could improve schools' ability for critical thinking and education, instructional supervision can help re-professionalize teachers' work (Mendoza & Bautista, 2022).

An investigation carried out in Tanzania by Manaseh (2016) found that the hard workload, lack of financial support, inadequate training, and carelessness of instructors all have an impact on the instructional leadership of heads of schools. The report suggests that heads of schools schedule frequent in-

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

service training sessions and that more research be done to determine the extent to which heads of schools use instructional leadership approaches.

Another study conducted in Malaysia found that instructors need significant support from their principals in order to strengthen their influence over classroom management, subject matter material, different aspects of their pedagogy, and student assessments. This study also shows that, in contrast to conventional methods of formal teacher training, a school leader can take on the role of an instructional leader when he or she actively engages in coaching, mentoring, and assisting their subordinates to enhance their teaching and learning methods (Abdullah et al. 2020). Additionally, research in the State of Kedah has demonstrated how instructional leadership's involvement in the current flow of educational, teaching, and learning processes has increased teachers' functional competency. Sustainable leaders should inspire teachers to collaboratively increase school quality in order to tackle the challenges of the 21st century in education (Ismail et al., 2020).

On the other hand, a study from Quisquino (2022) revealed that master teachers' high competence in terms of mentoring, observation, instruction, and supervision significantly related to the professional growth of the teachers under his supervision. If Master Teachers demonstrate all the time their responsibility in giving technical assistance to teachers, then it could improve the supervisory practice and performance of teachers. This implies further that the more effective a master teacher is, the more efficient a teacher becomes under his care.

Additionally, one of the responsibilities of instructional leaders is to provide a resource for teachers who desire to advance their pedagogical practices. Master teachers admitted that they find it difficult to become good instructional leaders because they lack the time and expertise or because it makes them uncomfortable to criticize the teaching methods of other teachers. Principals and master teachers can employ these ideas to improve teaching and learning in the classroom (Zahed-Babelan et al., 2019).

An instructional leader's other major responsibility is to develop and articulate a clear vision for the future of the school. To increase student achievement, principals must develop a vision, which they hope teachers will adopt and implement in their classrooms on a continuous basis. By establishing goals and creating a vision, the school can work toward improved student performance (Alsaleh, 2019). Teachers will work together toward a shared objective when principals set goals for the school and communicate these goals to the workforce. While in high-performing institutions, leaders regard themselves as visionaries and act accordingly, school leaders in Greece, for example, rarely discuss the institution's goals and objectives with their staff members (Qadach et al., 2020).

Master Teachers are competent leaders who have mastered management skills in making students independent learners who have developed critical thinking skills to grow and thrive. It is also reiterated that Master Teachers visit classrooms and coach teachers to improve instruction. They also ensure that curriculum development happens as well as support such as meeting the teachers for the planning of professional development training. This is in the form of Learning Action Cells (LAC) sessions implemented by the Department of Education in all schools. It provides opportunities for teachers to discuss the learning gaps, new strategies in teaching, and interventions to be made among students who performed lower than expected from them. All these endeavors are properly administered by a Master Teacher as the most competent in terms of delivering high-quality instruction (Jentsch & Konig, 2022).

It is believed that master instructors, who are supposed to have more expertise in curriculum development, professional development, and mentorship than typical teachers, are the ones who attain the highest standard in teaching. Their teaching strategies will be different from those of regular, non-master teachers because they are the "creme de la creme" of educators (Basilio & Bueno, 2019). Therefore, effective MTs possess exemplary pre-teaching skills, outstanding teaching strategies, motivational and communication abilities, a thorough knowledge of the subject, interpersonal abilities, and classroom management competence. Additionally, MTs are seen as excellent sources of curricular leadership, qualified instructors, staff development, and stimulus (Chew & Cerbin, 2021).

Master Teachers is a model of teacher learning that incorporates three elements that have been recommended as helpful for teacher development programs. Priority one for programs should be their scope and sustainability. The average length of MTs is greater than three years. Second, a program needs to be especially made for teachers' needs and habits (Mayo, K.E., 2002). According to Pambudi and Gunawan (2019), an MT is an experienced educator who puts operational issues with classroom education first.

The MTS has a high level of professional autonomy because the MT establishes the goals, rules, materials, and schedule. Teachers in a learning environment pick up knowledge from their peers and subject-matter specialists. An MTS, as opposed to a one-time training, gives participants the chance to develop long-lasting relationships with the MT and other teachers from different schools (Zhang & Wong, 2018).

In summary, these pieces of literature highlight the important roles of Master Teachers in providing instructional support not only to teachers but the school as a whole. The resumption of in-person classes signifies that certain curricular adjustments must be done such as carefully planning the teaching loads of teachers in congruence to the number of students, establishing appropriate teaching strategies to scaffold some "learning loss" of students due to the pandemic, and providing adequate mentorship to teachers in performing their duties and responsibilities in making the teaching-learning process effective. According to the mentioned authors, Master Teachers as instructional leaders of a learning institution, play a critical role in shaping the core of the curriculum. The literature discussed in this chapter is structured to have a thorough understanding of the study. Evidence shows that there is a need to conduct further study in this field.

Managing Curriculum Implementation

"My role during the implementation of in-person classes is to collaborate with the principal and fellow teachers in providing curriculum direction and guidance for the successful implementation of the curriculum." FGD-06

"As a master teacher, there are many roles in the implementation of in-person classes. The roles I play are about the teaching-learning process, monitoring teaching strategies and pedagogies, and mentoring colleagues. I feel contented and satisfied complying with that role." IDI-02

"These are the roles that I play as a master teacher: serve as a mentor to facilitate professional development and deliver important information to my co-teachers." FGD-04

Traditionally, teachers have focused on delivering curriculum within the classroom, but nowadays master teachers become curriculum managers. These experienced teachers are stepping into leadership roles to leverage their understanding of the pedagogy and the needs of the students in shaping the curriculum they deliver.

Moore (2015) highlighted that master teachers play a crucial role in education, not only as instructional leaders but also as curriculum managers. They are independent learners dedicated to enhancing their own learning to effectively impart knowledge to their peers. Master teachers are distinct from traditional teachers, focusing on providing high-quality professional development to their colleagues and analyzing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

student data to create academic achievement plans for their schools. Their responsibilities include conducting observations, scoring assessments, and researching effective teaching strategies to support their peers in improving their instructional practices.

Facilitating Pedagogical Development

"We have to ensure a positive classroom environment and facilitate varied instructional methods because we are not sure if students answer their modules or not when they are at home."

"I facilitate them through the use of different kinds of activities so that they would also be motivated to learn in the classroom. It is effective because they have high scores in assessment."

"As a master teacher, I employ strategies and techniques where they can learn and interact more. I also give attention to those students who need special attention." FGD-04

The role of teachers has evolved beyond simply imparting knowledge. It has been found in this study that master teachers play a key role in facilitating pedagogical development. Furthermore, the participants expressed that they have to play various roles as master teacher which include not only facilitating the learners but also act as mentors for new teachers, guiding them in effective lesson delivery. Their leadership roles ensure best practices, and are passed on, and benefits the students as well as the educators.

In connection to the above ideas, master teachers facilitating students' learning are supported by Cheng (2020) who emphasized that the instructional coaching and collaborative lesson planning of master teachers can significantly improve the quality of classroom instruction leading to a better student achievement. This collaborative approach not only benefit the students but also shows the educational leadership of master teachers in shaping dynamic and successful learning environment for all students.

Encountering Difficulties as Master Teacher"

"In the implementation of in-person classes, master teachers faced various struggles one of which is time management. There was so much paperwork that some of my classes were affected." IDI-07

"There are role-overloaded works I do. I become the OIC, checking the cleanliness of the environment, becoming a teacher, a master teacher, and then coaching others." IDI-01

"The struggles I experienced in the implementation of inperson classes are the learning gaps of the students. They are not ready to have face-to-face learning since there are adjustments in their behavior and understanding the lessons ' FGD-01

Master teachers, having honed their skills over years of experience and dedication, are frequently regarded as paragons of educational excellence. Upon delving unto the experiences of the master teachers, it can be inferred that their journey is not without difficulties. The study shows the unforeseen difficulties they encounter in their pursuit of fostering effective student learning. Having to teach their own students at the same time mentoring co-teachers challenge their time management skills.

The study of Abasolo et al. (2021) reveals that work overload and stress were some of the most viewed difficulties of master teachers in implementing instruction. Master teachers mentioned that they become stressed whenever there was unannounced submission of reports that needed to be passed on the day or tomorrow. These gave master teachers stress as they have work overloads and their time with teaching the students will be compromised. Thus, work overloads leading to stress among master teachers have been one of the known challenges.

Engaging Support for Professional Growth

"In assisting our proficient and beginning teachers, I split the newly hired teachers into two to have a Teacher Induction program." IDI-01

"I assisted the beginning teachers in the implementation of their instruction by providing technical assistance in their respective subjects." FGD-03

"I assisted the proficient and beginning teachers through class observation, I saw to it that they achieved the indicators in the observation tool." IDI-05

Master teachers plays an important role in establishing mentorship relationships with other teachers, fostering professional growth and development within educational settings. These mentorship programs are designed to enhance teaching practices, improve classroom management, and support the overall well-being of educators.

According to Smith and Johnson (2018), mentorship by master teachers can lead to increased job satisfaction, reduced burnout, and higher retention rates among novice teachers. Additionally, research by Brown et al. (2020) highlights how mentorship from master teachers positively impacts student outcomes by improving instructional quality and teacher effectiveness.

Table 2 Major Themes and Core Ideas on the Coping Mechanisms of Master Teachers as Instructional Leaders during In-person Classes

| Major Themes | Core Ideas | | | | |
|--|---|--|--|--|--|
| Carrying Out Effective Instructional Leadership | having the right attitude in managing and leading the school understanding and patience for the students having good planning in managing and leading the instructional aspect of the school leading the teachers properly so that plans and objectives will be achieved to improve quality education having proper and clear communication with fellow teachers creating a well-balanced time performing one's duties and responsibilities well | | | | |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

|--|---|--|--|
| Being Provided with Support | having support system by getting technical assistance for the improvement of school program having emotional, moral, spiritual and monetary support from family and friends getting constructive criticism and sharing of thoughts from the school principal and colleagues having a school head to monitor implementation of activities overcoming challenges easily through moral and technical support having supportive school principal and co-teachers in helping implement activities and programs well continuing professional development to stay competitive and reliable to one's job | | |
| Implementing Strategies in the New Set-up | establishing think-pair-and-share activity with the students foster collaborative environment where students and teachers can work together to address challenges soliciting ideas from colleagues on effective ways that would make learning effective in the classroom seeking support form co-teachers, administrators and stakeholders employing peer teaching strategy to learn from each other | | |

Carrying Out Effective Instructional Leadership

"In leading and managing the school, it is important to have the right attitude to be a mentor to teachers. You should be professional and committed to your duties and responsibilities "IDI-01

"Managing and leading the instructional aspect of a school during the come back of face to face classes requires good planning, execution and time management. Through this the objectives of the school will be achieved." IDI-06

"As an instructional leader, I just create a well-balanced time in facilitating colleagues and learners in delivering quality education." FGD-06

Carrying out one's role as master teachers as a coping mechanism in facing challenges is a crucial aspect of the teaching profession. Though challenges are inevitable in teaching, some teachers find focusing on their roles as master teachers help them cope up with these difficulties. Master teachers immerse themselves in honing their crafts, developing interactive lessons, and ensuring student growth instead of being stressed out of the various challenges hindering their tasks.

Lacy & Guirguis (2017), states that master teachers cope with challenges in their role through various strategies and mechanisms. Their research indicates that experienced educators often rely on their expertise, resilience, and mentorship skills to navigate difficulties effectively. They exhibit adaptability and use their knowledge to guide others through tough times, providing stability and support within educational settings. They also engage in emotional labor, managing their emotions, and maintaining professionalism as coping mechanisms when facing adversities in the classroom.

Being Provided with Support

"My colleagues supported me by giving constructive criticisms and sharing thoughts on how the learners have been improved especially in reading. And for my administrator, the school principal, he helps me a lot since he has these words of wisdom to share, especially in achieving the best classroom interaction." IDI-05

"Our principal is very supportive. My co-teachers help a lot to implement the school activities as we address the transition to in-person classes the implementation of the activities." IDI-01 "The support that I have is the moral support, most especially to my family and my friends. And the spiritual support by prayers and the technical support or technical assistance by my colleagues most especially in my professional growth." FGD-04

Having a strong support system can significantly motivate teachers in performing their jobs effectively. When teachers feel valued, acknowledged, and supported by their colleagues, leaders, and students, it creates a positive work environment that boosts motivation. This recognition can take various forms, such as expressing gratitude, celebrating achievements, and acknowledging strengths through thank-you note, shout-outs, incentives, and encouraging peer recognition.

According to Grossman (2022) creating a culture of recognition in schools where gratitude is expressed, achievements are celebrated, and strengths are acknowledged can foster a sense of value and support among teachers. Encouraging peer recognition and feedback can further enhance the feeling of being trusted and supported by colleagues among teachers. Thus, being provided with support is one of coping mechanism among teachers when facing difficulties in their role as master teachers.

Implementing Strategies in the New Set-up

"My strategy is to share my thoughts with my colleagues because it is them who know the problems of the learners. Just like having a think-pair-share activity. Whatever challenges we observe, we think and share to solve the problem." IDI-02

"Peer teaching is a strategy we do so that they can share during SLAC sessions and we are learning from each other. For the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

next year, we exchange topics so there will be new points of view. "IDI-01

"As to the strategies that I employed in facing those challenges that I encountered, one strategy is by sharing it to my colleagues. Another strategy is by accepting the reality that as time goes by, learning environment change." FGD-02

Master teachers play a crucial role in the education system, often facing various challenges that require effective coping mechanisms. As the educational landscape shifted, master teachers are increasingly adapting to innovative techniques and strategies in this changing educational environment.

Implementing strategies in a new setup is a key approach for master teachers to navigate these challenges successfully.

For instance, research by Smith (2018) highlighted the significance of proactive strategies in adapting to new environments. He emphasized the importance of master teachers being flexible and open to change when implementing strategies in unfamiliar settings. This adaptability allows them to address challenges more effectively and enhance their teaching practices. These strategies include integrating technologies inside the classroom and maintaining open communication to students, colleagues, and parents.

Major Themes and Core Ideas on the Insights of Master Teachers as Instructional Leaders during Inperson classes

| person classes | | | | |
|--|---|--|--|--|
| Major Themes | | | | |
| Possession of Required Skills and Competencies | be wise and prepared all the time to implement successful and relevant output give one's best and be responsible to all the tasks to become productive citizen always be prepared to handle tasks ensure learner's needs will not be short change use differentiated instruction to meet the learning needs of the students monitor the progress of the students encourage teachers to have diagnostic assessment to identify the level and learning needs of the students monitor classes to assess the problems of the teachers | | | |
| Possessing Skills as an Instructional Leader | improve instructional leadership skills become more effective make oneself responsive and confident in learning new knowledge experience is the best teacher develop strategic plans to help the students and teachers for the good of the school be an efficient teacher with an open heart share one's knowledge and expertise learn to be open-minded and listen to others helpful experiences to improve one's skills as instructional leader share thoughts and practices in the classroom set clear direction to achieve goals | | | |
| Imposing an Engaging and Supportive Teaching- Learning Environment | implement varied strategies in the classroom to enhance student learning implement strategies that learners learn while having fun in the classroom good learning environment for students necessity in having quality teachers and physical facilities give importance to teaching and learning process implement more time on reading for non-readers set standards to encourage students to improve academic performance | | | |
| Having Positive Attitude Despite Challenge | do what is right for the benefit of the learners and love one's work give the best for the learners work happily, be open-minded and positive at all times look into the brighter side and focus on solutions not problems take a break if feeling tired | | | |

Possession of Required Skills and Competencies

"First, use differentiated instruction, recognize their unique ability, and then adapt your teaching strategies.IDI-03 We master teachers must use differentiated activities to monitor the progress of students." IDI-06

"To ensure that learners' needs will not be short-changed during in-person classes, I recommend to the master teachers that they should properly and wisely be prepared on the activities they implemented to have a successful and relevant output." FGD-01

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Master teachers' preparedness on their tasks is of great importance for ensuring effective teaching practices and positive student outcomes. As a seasoned educator, the level of readiness and competence of master teachers bring to the classroom directly influences the quality of education students receive. A well-prepared master teacher is important in shaping students' academic growth and overall development.

In fact, Baecher (2012) emphasizes that the quality of teacher preparation programs directly impacts the effectiveness of teachers in enhancing student learning outcomes. Being adequately prepared as a master teacher involves a combination of formal training, ongoing professional development, and practical experience to excel in the dynamic educational landscape. Teachers' feelings of preparedness play a significant role in their ability to navigate various classroom requirements, such as maintaining order and discipline, addressing student needs, and engaging in professional development activities.

Possessing Skills as an Instructional Leader

"The experiences I acquired made me open-minded in developing strategies in planning what suits best to the needs of teachers, students, and school. IDI-01

It gives me new knowledge to make my instructional leadership effective." IDI-06

"Be open to change and accept the reality that we make mistakes anytime. Be open to share what you know to your colleagues." FGD-04

Master teachers play a crucial role as instructional leaders within educational settings. Instructional leadership is not solely the responsibility of principals but should also be integrated into the expertise of master teachers. These educators are known for their ability to deliver high-quality professional development to both students and fellow teachers, focusing on improving instructional practices and student achievement.

Moreover, Wien and Beck (2022) underscore that master teachers possess various skills such as managing classrooms effectively, accelerating student learning, and fostering critical thinking skills among learners. Furthermore, they are described as exceptional communicators who tailor their teaching to meet the diverse needs of their students, emphasizing the importance of creating independent learners capable of thriving academically.

Imposing an Engaging and Supportive Teaching-Learning **Environment**

"I will implement varied activities inside my classroom which it can catch students' attention". IDI-03

"I hope to implement a good learning environment for my students." IDI-07

"We need to set standards for our students to help them improve their academic performance." FGD-05

Master teachers play a crucial role in instructional leadership, focusing on professional development, supporting classroom teachers, and enhancing teaching effectiveness. They engage in various activities such as providing demonstration lessons, coaching, team-teaching, and conducting walk-throughs to ensure the effective implementation of strategies and best practices.

In line with this, according to Gouedard et al. (2020) the effectiveness of master teachers in driving curricular improvements lies in their pedagogical expertise and ability to embed authentic application of skills through research-based professional development. They are described as change agents who conduct extensive behind-the-scenes work to guide teachers in improving their effectiveness and student achievement. Master teachers are independent learners dedicated to enhancing their own learning to deliver highquality professional development to their peers.

Having a Positive Attitude Despite Challenges

"Just do what benefits best for the learners. You also have to love your work." IDI-03

"We should work happily because we are lucky to have this job. Just be yourself, and be open-minded we should think positively at all times." IDI-05

"The advice that I can give to other master teachers is just to do what is best for the improvement of instruction to learners.'

Master Teachers are recognized for their profound impact on students and the classroom environment. They possess a unique set of behaviors, attributes, and techniques that set them apart, contributing significantly to student learning and development. The role of master teachers is not only to impart knowledge but also to inspire creativity, share innovative teaching techniques, and continuously strive for excellence in education.

In connection to the above idea, Letzel et al. (2022) highlighted that teachers, especially master teachers, are faced with various challenges but are adept at instilling a positive attitude despite difficulties. These resilience and positive outlook are crucial in maintaining motivation, engagement and fostering a conducive learning environment for students. Master teachers navigate challenges effectively while they remain focused on the ultimate goal of providing quality education.

IMPLICATION FOR TEACHING PRACTICE

The implications of this study to the teaching practice are profound. First, the study emphasizes the importance of master teachers as instructional leaders in creating a conducive learning environment. Educators may develop their instructional leadership skills by analyzing and leveraging their experiences, which will result in better student outcomes and engagement.

Second, the findings of the study highlight the value of mentorship and professional development programs for teachers. Master teachers can be valuable mentors, sharing their knowledge and insights with colleagues to foster a culture of continuous learning and growth. Implementing structured mentorship programs based on the experiences of these instructional leaders can have a major impact on teachers' professional development and contribute to a more collaborative learning community.

Furthermore, the study emphasizes the importance of reflective practice in teaching. Master teachers frequently use reflective practices to examine their instructional strategies, assess student learning outcomes, and adjust their approaches accordingly. Encouraging all educators to include reflective methods into their teaching can result in more effective

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

instruction, higher student engagement, and better understanding of the teaching-learning process.

Lastly, the study implies that educational institutions should recognize and encourage master teachers as instructional leaders. Providing opportunities for these experienced teachers to share their knowledge, lead professional development activities, and contribute to curriculum development can improve teaching practice within the school and raise the overall quality of education delivered to students. By recognizing and rewarding master teachers, educational institutions may foster as more dynamic and effective learning environment for both educators and students.

CONCLUSION

In conclusion, the study on the lived experiences of master teachers as instructional leaders during in-person classes in the Division of Davao de Oro has provided valuable insights into the dynamic role these educators play in shaping the educational landscape. Through an exploration of their instructional leadership practices, mentorship approaches, and classroom management techniques, this research has highlighted the significant impact master teachers have on student achievement and overall school improvement initiatives. By delving into the professional development needs of master teachers, the study has underscored the importance of tailored training programs and support systems to enhance their instructional leadership skills and effectiveness.

Furthermore, the assessment of the role of master teachers in school improvement has emphasized the collaborative nature of their work, their contributions to curriculum development, and their role in fostering professional growth among educators. Understanding the challenges faced by master teachers in fulfilling their instructional leadership roles has shed light on critical issues such as time constraints, resource limitations, and the need for additional support. Addressing these challenges is essential to empower master teachers to lead instructional initiatives effectively and promote continuous improvement in teaching and learning practices.

Moving forward, future research endeavors could focus on exploring the impact of instructional leadership on student achievement in greater depth, examining the specific strategies and practices that yield the most significant outcomes. Additionally, investigating the broader implications of master teachers' roles in school improvement initiatives and identifying innovative solutions to overcome the challenges they face will be crucial for advancing educational practices in the Division of Davao de Oro. By building on the findings of this study and continuing to explore the lived experiences of master teachers, educators, policymakers, and stakeholders can work collaboratively to enhance instructional leadership practices and ultimately improve the quality of education for all students in the region.nurturing learning environments. The coping mechanisms employed by the students can serve as valuable lessons for concerned entities in fostering resilience and perseverance in their educational journey. Moving forward, it is crucial for all stakeholders in the education sector to collaborate and implement measures that address the challenges highlighted in this study, ensuring a more inclusive, adaptable, and supportive educational landscape for all students.

ABSTRAK

Ang kuwalitatibong pananaliksik na ito ay isinagawa upang magalugad ang karanasan, pagtatagumpay, at mga kuro-kurong nabuo ng 8 guro sa kanilang pagtuturo ng kasanayan sa pagsasalita sa mga mag-aaral na may espesyal na pangangailangan sa mga pampublikong paaralang sekondarya na saklaw ng Lupon West at Banaybanay District, Sangay ng Davao Oriental para sa Taong-Panuruan 2022-2023. Sa pamamagitan ng pagsasagawa ng pinalalim na panayam, natuklasan ang mga tema: nahahamon sa pagdadala ng tungkulin sa pagtuturo; nagsasagawa ng panibagong pag-aaral; nahaharap sa mga pagsubok; nalilinang ang katatasan sa wika; mabungang pagsasaling-wika; pagsasagawa ng sariling pag-aaral; nagtatanong sa mga dalubhasa; nagsasagawa ng mga pananaliksik; pagpapalakas ng INSET sa pagtuturo ng inklusibong edukasyon; pagsasagawa ng pananaliksik sa inklusibong edukasyon; at paglalaan ng budget para sa kagamitang pampagtuturo. Hindi naging madali ang pagpapatupad ng inklusibong edukasyon dahil natukoy na mismo ng UNESCO ang mga hadlang sa inklusibong edukasyon. Ito ang mga sumusunod: negatibong saloobin sa pagkakaiba; pisikal na mga hadlang upang makapasok sa paaralan; mga kakayahan at saloobin ng guro; iba't ibang wika at komunikasyon ng mga guro at magaaral; at mga kakulangan sa kagamitan.

MGA SUSING SALITA: Inklusibong Edukasyon, Kasanayan sa Pagsasalita, Sangay ng Davao Oriental, Rehiyon XI

INTRODUKSYON

Sa kasalukuyan, ang sistema ng edukasyon ay sumasailalim sa maraming pagbabago, kabilang na ang pagtataguyod ng inklusibong edukasyon na isinusulong ng United Nations Educational Scientific and Cultural Organization (UNESCO). Ang inklusibong edukasyon, ayon kay UNESCO (2009), ay naglalayong tanggapin ang lahat ng uri ng indibidwal upang malinang ang kanilang kakayahan at maging aktibong kasapi ng lipunan. Nakatuon ang pag-aaral na ito sa kasanayan sa pagsasalita ng mga mag-aaral na may espesyal na pangangailangan, na binigyang-diin bilang isang mahalagang aspeto ng kanilang karapatan sa edukasyon (Mag, Sinfield, at Burns, 2017).

Sa paglipas ng mga dekada, ang espesyal na edukasyon ay untiunting umuunlad patungo sa inklusibong modelo na kinikilala bilang pamantayan sa global na edukasyon (Hettiarachchi at Das, 2014). Gayunpaman, ang mga mauunlad na bansa, tulad ng Pilipinas at Indonesia, ay kinakailangan pa ring magdoble ng pagsisikap upang maisakatuparan ang ganitong sistema sa kabila ng mga hadlang tulad ng negatibong saloobin, pisikal na mga barrier, at kakulangan sa kagamitan (UNESCO, 2009).

Ang Individuals with Disabilities Education Improvement Act (IDEA) ng 2004 at ang mga pagbabago sa mga umiiral na batas ay nagpapatibay sa karapatan ng mga batang may espesyal na pangangailangan na magkaroon ng access sa regular na mga silidaralan at makasama ang ibang mga mag-aaral (Yell at Drasgow, 2007). Ayon kay Foreman (2007), ang mga magulang ay naging mas mapangahas sa paghahanap ng pantay na pagtrato sa edukasyon para sa kanilang mga anak na may espesyal na pangangailangan sa kasanayan sa pagsasalita.

Gayundin, ayon sa pag-aaral nina Forlin, Sharma, Loreman, at Sprunt (2015), ang mga guro na sumailalim sa pagsasanay sa inklusibong edukasyon ay nagpapakita ng mas positibong saloobin sa pagtanggap at pagtuturo sa mga mag-aaral na may espesyal na pangangailangan. Sa kabilang banda, ang kakulangan ng pagsasanay at propesyonal na pag-unlad ay patuloy na naging isang malaking hamon para sa mga guro (Odongo at Davidson, 2016).

Sa pangkalahatan, ang pag-aaral na ito ay naglalayong itaguyod ang inklusibong edukasyon at magsagawa ng mga pananaliksik upang mapabuti ang kasanayan sa pagsasalita ng mga mag-aaral na may espesyal na pangangailangan. Ang ganitong mga inisyatibo ay mahalaga upang matiyak na ang lahat ng mga magaaral ay makakatanggap ng pantay na oportunidad sa edukasyon

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

at maipahayag ang kanilang mga kasanayan at potensyal sa isang sumusuportang kapaligiran.

Layunin ng Pag-aaral

Ang layunin ng pananaliksik na ito ay galugarin ang mga karanasan at pagtatagumpay ng mga gurong nagtuturo ng kasanayan sa pagsasalita sa mga mag-aaral na may espesyal na pangangailangan sa asignaturang Filipino, sa mga paaralang nasasakop ng Lupon West at Banaybanay District, Sangay ng Davao Oriental. Mula sa mga karanasang ito, inalam din ng mananaliksik ang mga kabatiran at natutuhan ng mga guro na nais nilang ibahagi sa kapuwa mga guro sa pagtuturo ng kasanayan sa pagsasalita sa mga mag-aaral na may espesyal na pangangailangan upang gawing lundayan ng mga palatuntunang lilinang sa kahusayan sa pagsasalita.

Mga Katanungan sa Pananaliksik

Ang pananaliksik na ito ay naglalayong magalugad ang karanasan, pagtatagumpay, at mga kabatiran at natutuhan ng mga guro sa sekondarya na nagtuturo ng kasanayan sa pagsasalita sa mga mag-aaral na may espesyal na pangangailangan sa inklusibong edukasyon. Ninanais kong mabigyang kasagutan ang sumusunod na tanong:

- 1. Ano-ano ang karanasan ng mga guro sa pagtuturo ng pagsasalita sa mga mag-aaral na may espesyal na pangangailangan?
- 2. Paano hinarap ng mga guro ang mga problema sa pagtuturo sa mga mag-aaral na may espesyal na pangangailangan?
- 3. Ano-ano ang mga pananaw sa pamamahala ng inklusibong edukasyon ang nakuha mula sa salaysay ng mga guro?

METODOLOHIYA

Disenyo ng Pananaliksik

Ang disenyo ng pag-aaral na ito ay kuwalitatibo, gamit ang metodolohiyang penomenolohikal upang masuri ang mga karanasan ng mga guro sa pagtuturo ng kasanayan sa pagsasalita sa mga mag-aaral na may espesyal na pangangailangan. Nilalayon ng disenyo na ito na maunawaan at bigyang kahulugan ang mga karanasan ng mga kalahok sa isang malalim at holistikong pamamaraan, kung saan ang mananaliksik ay malapitang nakikipag-ugnayan sa mga kalahok at nakakalap ng detalyadong naratibo.

Mga Kalahok ng Pananaliksik

Ang mga kalahok sa pag-aaral ay walong guro ng asignaturang Filipino mula sa mga sekondaryang paaralan sa Lupon West at Banaybanay District, Sangay ng Davao Oriental. Pinili ang mga kalahok sa pamamagitan ng purposive sampling, kung saan ang mga guro ay may higit sa limang taon ng karanasan sa pagtuturo at kasalukuyang nagtuturo sa mga mag-aaral na may espesyal na pangangailangan sa kasanayan sa pagsasalita.

Etikal na Konsiderasyon ng Pag-aaral

Sa pag-aaral na ito, ang etikal na mga konsiderasyon ay kinabibilangan ng pagsunod sa mga prinsipyo ng awtonomiya, beneficence, at katarungan. Nagsagawa ang mananaliksik ng mga hakbang upang matiyak ang proteksyon sa mga kalahok mula sa anumang panganib o pagsasamantala, kabilang ang paghingi ng malinaw na pahintulot sa mga kalahok at pagtitiyak na may kalayaan silang umatras sa pag-aaral anumang oras.

Tungkulin ng Mananaliksik

Ang mananaliksik ay nagsilbing pangunahing instrumento sa paglikom ng datos, na responsable sa pagplano at pagsasagawa ng mga panayam, transkripsyon ng mga tugon, at analisis ng mga nakuhang impormasyon. Tungkulin din ng mananaliksik na siguraduhin na ang proseso ng pananaliksik ay isinasagawa nang may integridad at paggalang sa mga kalahok.

Paglikom ng mga Datos

Ginamit ang pinalalim na panayam bilang pangunahing pamamaraan sa paglikom ng datos. Isinagawa ang mga panayam sa paraang verbatim upang tiyakin na tumpak ang mga datos na nakalap, at ginabayan ng mga partikular na katanungan na dinisenyo upang tuklasin ang mga pananaw at karanasan ng mga guro.

Pagsusuri ng mga Datos

Sa pagsusuri ng datos, gumamit ang mananaliksik ng tematikong analisis upang makilala at mag-organisa ng mga tema mula sa mga transkripsyon ng panayam. Layunin ng prosesong ito na ilantad ang mga pangunahing pattern at kahulugan sa loob ng mga naratibo na makakatulong sa pag-unawa sa mga karanasan ng mga guro.

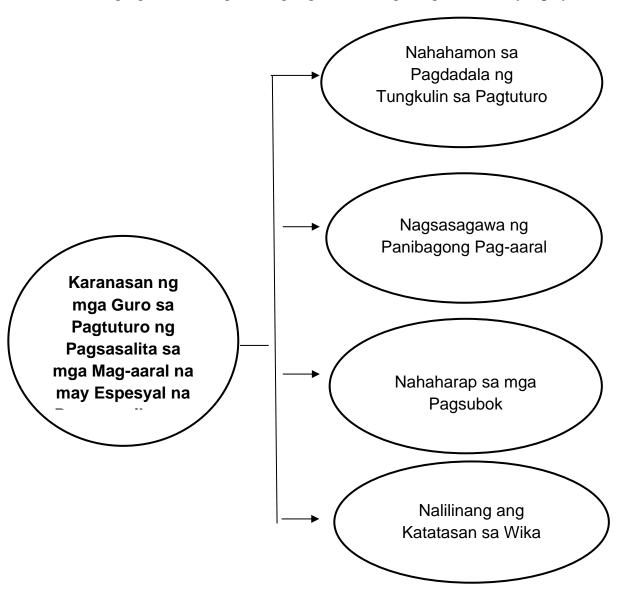

Pagtitiwala sa Kawastuhan ng Pag-aaral

Upang matiyak ang kawastuhan at kredibilidad ng pag-aaral, siniguro ng mananaliksik na ang mga proseso at resulta ng pananaliksik ay maaaring mapatunayan at maipapasa sa ibang konteksto. Ang mga hakbang na ito ay naglalayong mapanatili ang transparency at reproducibility ng mga natuklasan, at upang maitaguyod ang pagtitiwala ng mga mambabasa sa integridad ng pananaliksik.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

MGA RESULTA AT PAG TALAKAY

Karanasan ng mga Guro sa Pagtuturo ng Pagsasalita sa mga Mag-aaral na may Espesyal na Pangangailangan

Talangguhitan 1. Karanasan ng mga Guro sa Pagtuturo ng Pagsasalita sa mga Mag-aaral na may Espesyal na Pangangailangan

Sa pagsusuri ng mga karanasan ng mga guro sa pagtuturo ng pagsasalita sa mga mag-aaral na may espesyal na pangangailangan, lumitaw ang ilang mga hamon at mga kinakailangang estratehiya para sa mas epektibong pagtuturo. Nahaharap ang mga guro sa mga pagsubok tulad ng negatibong saloobin sa pagkakaiba-iba, pisikal at komunikasyon na mga hadlang, at kawalan ng sapat na pagsasanay. Ayon sa mga literatura tulad ng UNESCO, ang inklusibong edukasyon, bagama't itinuturing na ideal, ay patuloy na nakakaranas ng mga balakid lalo na sa kakulangan ng paghahanda at kaalaman ng mga guro sa paghawak ng mga mag-aaral na may espesyal na pangangailangan.

Ang mga guro, bilang pangunahing tagapagpatupad ng mga layunin ng inklusibong edukasyon, ay kinakailangang magkaroon ng malalim na pag-unawa sa mga pangangailangan ng kanilang mga mag-aaral. Binigyang-diin sa mga pag-aaral na ang epektibong pagtuturo ay nangangailangan ng pagiging sensitibo sa indibidwal na pangangailangan ng bawat mag-aaral at ang paggamit ng angkop na mga pamamaraan at materyales sa pagtuturo. Mga pagsasanay at suporta mula sa Kagawaran ng Edukasyon at iba pang mga institusyon ay mahalaga upang matiyak na ang mga guro ay sapat na nasasanay at napapalakas ang kanilang kakayahan sa pagtugon sa mga hamong ito.

Sa huli, mahalaga rin ang pagkakaroon ng malinaw na mga polisiya at suportang istraktura upang tulungan ang mga guro at

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

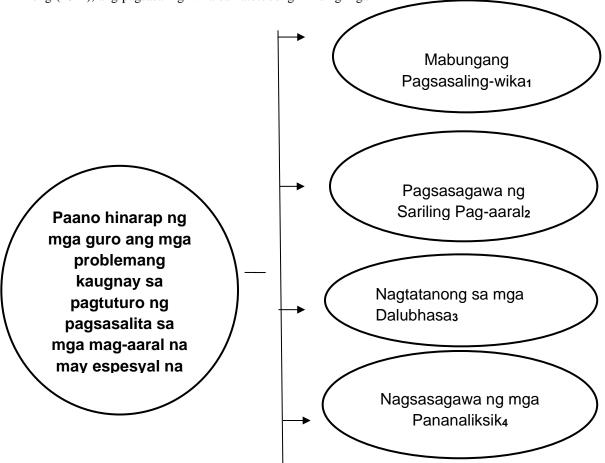

mag-aaral na magtagumpay sa inklusibong kapaligiran. Kasama dito ang patuloy na pagsasanay, pagbibigay ng mga nararapat na materyales at teknolohiya, at pagtiyak na ang mga paaralan ay pisikal at kultura na nakaka-akomoda sa mga mag-aaral na may espesyal na pangangailangan. Sa pamamagitan ng mga hakbang na ito, masisiguro na ang inklusibong edukasyon ay hindi lamang isang ideyal kundi isang aktwal na karanasan na nakatutulong sa lahat ng mag-aaral na maabot ang kanilang buong potensyal.

Paano hinarap ng mga guro ang mga problemang kaugnay sa pagtuturo ng pagsasalita sa mga mag-aaral na may espesyal na pangangailangan?

Sa pagsusuri sa mga tugon ng mga guro hinggil sa kanilang mga estratehiya sa pagtuturo ng kasanayan sa pagsasalita sa mga magaral na may espesyal na pangangailangan, lumitaw ang temang mabungang pagsasaling-wika. Ang estratehiyang ito ay isinasaalang-alang ang paggamit ng malinaw at simpleng mga salita para sa mas madaling pag-unawa at pag-iwas sa mga pagkakamali sa komunikasyon. Mahalaga ang papel na ginagampanan ng wika sa pagbuo ng mga pamantayang nagbibigay-daan sa mas epektibong pakikipag-ugnayan at pag-unawa sa loob ng inklusibong setting ng edukasyon. Ayon kay Hong (2012), ang pagsasaling-wika sa katutubong wika ng mga

mag-aaral ay nakakatulong upang mas mapadali ang kanilang pag-unawa at pagtanggap sa mga aralin, lalo na sa paglinang ng kasanayan sa pagsasalita. Dagdag pa rito, pinapaalalahanan ng mga eksperto tulad ni Smith (2018) na ang proseso ng pagsasalin ay dapat nagtataglay ng malikhaing katangian upang ito'y maging epektibo.

Sa pagharap sa mga hamon sa pagtuturo, ang mga guro ay nagtataguyod din ng sariling pag-aaral at pagtatanong sa mga dalubhasa upang matugunan ang mga pangangailangan ng kanilang mga mag-aaral. Ang mga guro ay gumagamit ng anecdotal records at iba pang mga pamamaraan ng pananaliksik upang mas maunawaan at matugunan ang iba't ibang pangangailangan sa kasanayan sa pagsasalita ng kanilang mga mag-aaral. Sa pamamagitan ng mga ganitong gawain, naipapalaganap nila ang inklusibong edukasyon sa pamamagitan ng pagbibigay ng pantay na pagkakataon sa bawat mag-aaral na umunlad at matuto sa isang kapaligirang nakakaengganyo at walang diskriminasyon. Ang mga inisyatibo tulad ng pagkonsulta sa mga eksperto at pagpapatupad ng mga pananaliksik ay nagbibigay-daan sa pagpapabuti ng mga estratehiya sa pagtuturo at sa huli, nagtataguyod ng mas inklusibong kapaligiran sa edukasyon.

Talangguhitan 2. Paraan ng Pagharap ng mga Guro sa Pagtuturo ng Pagsasalita sa mga Mag-aaral na may Espesyal na Pangangailangan

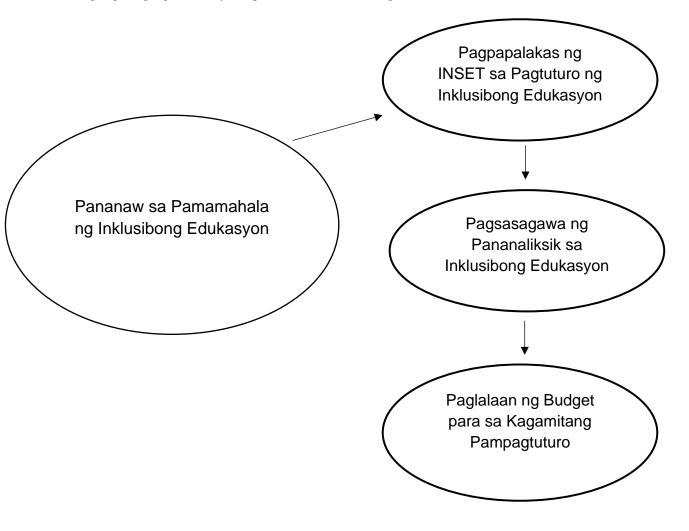

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Pananaw Sa Pamamahala Ng Inklusibong Edukasyon

Sa pagtugon sa pangatlong tanong ng pananaliksik hinggil sa pananaw ng mga guro sa pamamahala ng inklusibong edukasyon, lumitaw ang ilang mahahalagang tema na sumasalamin sa kasalukuyang estado at mga pangangailangan ng edukasyong inklusibo. Isa sa mga pangunahing tema ay ang pagpapalakas ng INSET, o ang in-service training, para sa mga guro na nagtuturo sa inklusibong setting. Kinikilala ng Kagawaran ng Edukasyon ang pangangailangan para sa mas pinalawak at mas madalas na pagsasanay na tutugon sa mga espesipikong pangangailangan ng mga mag-aaral na may kapansanan. Maraming guro ang nagpahayag ng pangangailangan para sa karagdagang pagsasanay upang mahusay nilang maisakatuparan ang inklusibong edukasyon sa kanilang mga silid-aralan.

Dagdag dito, isang malinaw na tema ang lumitaw tungkol sa pagpapalawig ng pananaliksik sa inklusibong edukasyon. Ipinapahiwatig ng mga guro ang kahalagahan ng pag-aaral at pagunlad ng mga bagong estratehiya at pamamaraan na maaaring magpatibay sa pagtuturo at pagkatuto sa inklusibong kapaligiran. Binigyang-diin ng pananaliksik ang pangangailangan para sa mga polisiya at batas na sumusuporta sa inklusibong edukasyon sa iba't ibang bansa, na nagpapakita na ang mga pagbabago at inobasyon sa edukasyon ay kinakailangan at dapat na sinusuportahan ng matalinong pagpaplano at sapat na mga mapagkukunan.

Bukod sa mga pagsasanay at pananaliksik, napakahalaga rin ng suporta mula sa mga magulang at ang pakikipagtulungan nila sa mga guro para sa tagumpay ng inklusibong edukasyon. Ang positibong pananaw ng mga magulang at ang kanilang aktibong pakikilahok ay makakatulong nang malaki upang magtagumpay ang inklusibong edukasyon sa pampublikong sistema. Nagsisilbi itong paalala na ang inklusibong edukasyon ay hindi lamang trabaho ng mga guro kundi isang komprehensibong pagsisikap na nangangailangan ng pagtutulungan ng bawat sektor ng komunidad, kabilang ang mga pamilya at iba pang mga stakeholder.

Talangguhitan 3. Pananaw sa Pamamahala ng Inklusibong Edukasyon

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

KONKLUSYON AT REKOMENDASYON

Sa pananaliksik tungkol sa kasanayan sa pagsasalita ng mga magaral na may espesyal na pangangailangan sa konteksto ng inklusibong edukasyon, binigyang-diin ng mga guro ang mga hamon at oportunidad sa pagtuturo sa ganitong setting. Naharap ang mga guro sa mga pagsubok ngunit patuloy silang nagsisikap na makahanap ng epektibong estratehiya upang matiyak na natututo ang lahat ng mag-aaral. Kinakailangan ang mas malalim na pag-unawa at pagtanggap sa mga mag-aaral na may espesyal na pangangailangan upang maipatupad nang maayos ang inklusibong edukasyon. Bukod dito, iminungkahi ng mga guro ang pagkakaroon ng dagdag na pagsasanay at mga seminar para sa mga guro at magulang upang mas mapabuti ang pagtugon sa mga pangangailangan ng mga mag-aaral na ito.

Ang kahalagahan ng pagsasanay at suporta mula sa Kagawaran ng Edukasyon at iba pang sektor ay muling pinatunayan sa pagaaral na ito. Iminumungkahi na magbigay ng karagdagang scholarship at pagsasanay para sa mga guro sa sekondarya na humahawak sa mga mag-aaral na may espesyal na pangangailangan, lalo na sa kasanayan sa pagsasalita, upang sila'y maging mas kompetente at handa sa mga hamon ng inklusibong edukasyon. Mahalaga rin ang papel ng mga magulang sa pagtutulungan upang maisulong ang inklusibong kapaligiran sa edukasyon, at ang patuloy na pananaliksik sa mga estratehiya sa pagtuturo ay kinakailangan upang mabisang matugunan ang mga pangangailangan ng mga mag-aaral.

Sa hinaharap, ang patuloy na pananaliksik at pagsusuri sa mga karanasan ng mga guro at mga mag-aaral sa inklusibong edukasyon ay makapagbibigay ng mahahalagang kaalaman at inspirasyon para sa pagpapabuti ng mga praktika sa pagtuturo. Dapat bigyang-diin ang paglalapat ng natutunan mula sa pagsasanay at mga seminar upang matiyak na ang inklusibong edukasyon ay hindi lamang isang ideyal kundi isang praktikal at epektibong realidad sa mga paaralan sa Pilipinas. Ang mga natuklasang ito ay makakatulong sa pagbuo ng mas inklusibo at mapagkalingang kapaligiran sa edukasyon para sa lahat ng magaaral, anuman ang kanilang mga pangangailangan.

ABSTRACT

Over a decade the banking practices in the country has been experiencing sea change with the implementation of number policy related changes, rise in privatisation and also due to technology upgradations. Modern-day banking activities have become more complex and complied with high-end technology intervention. It makes bank employees more sensitive towards their job. Thus, retain the existing work force with required skill sets is a dauting task for the administrations of banks. Talent management activities of banks generally revolve around employee engagement monitoring their performance, establishing connectivity between employee and the banking institution and they're by achieving bank's goal. It is concluded that talent management is an emerging issue and most focused topic in Indian banking sector. This task compliance with stringent procedures and time consuming too. Hiring talent in this pursuit and retaining them involve myriad steps to make the employees i.e., stimulate them to learn new concept and practice it in their day-to-day work adopt continuous training and monitor the performance of the employees

KEY WORDS: Talent Management, Public Sector Banks, Private Sector Banks, Competition

INTRODUCTION

Performance, growth and sustainability of banking operations in India is purely depended on the performance and level of commitment exhibited by its employees. As for as India is considered effective and active performance of banking activities is linked with the performance of the economy. Over a decade the banking practices in the country has been experiencing sea change with the implementation of number policy related changes, rise in privatisation and also due to technology upgradations. The human resource (HR) vested with the banking have to keep themselves prepared both technically and mentally to face and adopt to the fast-changing banking environment within the country and across the globe to meet the raising demand from their superiors and from the endcustomers (Dang, 2010).

RATIONALITY TO THE STUDY CONCEPT

Modern-day banking activities have become more complex and complied with high-end technology intervention. It makes bank employees more sensitive towards their job. Thus, retain the existing work force with required skill sets is a dauting task for the administrations of banks. Bank employee is expected to have a strong understanding about their role, responsibility and accountability along with sound decision making ability (Fathima, 2015). Success of banking operations are purely depended on their workforce. Management of the talent is a more crucial important for banking sector and it need to strategically management. Talent management practices of banks differ from one corporate body to another i.e., based on the internal policies of bank, Government policy towards banking activities and nature of talent (human force) recruited by the bank. Thus, talent management activities of banks generally revolve around employee engagement monitoring their performance, establishing connectivity between employee

and the banking institution and they're by achieving bank's goal (Gupta and Zala, 2021).

CHANGING ROLE OF BANK EMPLOYEES

Role banking employees has drastically changed from operation management and management of money to management of new business and creating base of valuable customers right from opening of new account to management of wealth of the customers. Banks operating in India have recruited more than one lakh employees and these large work force mainly render services at operational level and it buckoffice services. Thes day workforce are expected to be highly customer-centric and operate with sales mind set. Thus, the need of the hour. In reality banks faces issues and challenges in filling the gap between existing skill gaps and effective talent management to develop banking service marketing techniques among their employees. This task compliance with stringent procedures and time consuming too. Hiring talent in this pursuit and retaining them involve myriad steps to make the employees i.e., stimulate them to learn new concept and practice it in their day-to-day work adopt continuous training and monitor the performance of the employees (Bhowonik, 2023).

AIM OF THE ARTICLE

The author aims to assess the talent management practices adopted in the Indian banking sector and the nature of talent management practices adopted by the public and private sector banks through assessment of past literatures.

METHODOLOGY ADOPTED IN CONSTRUCTION OF THE ARTICLE

The article is constructed with the support of literature knowledge gathered from various past research studies, experts' opinion and discussion materials. In-depth literature analysis

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

act as a support tool in understanding the study concepts and nature of talent management practice carried by the public and private sector banks over a period of time i.e., from 2013 to 2024.

EVIDENCES FROM LITERATURE

Author have collected needed literature evidences that support the study concept.

Singh and Srivastava (2013) claim that public sector banks do not adopt active talent management activities, thus, there prevails hug gap between talent need as there is short supply of requited human capital, that act as a challenging force in being competitive and profitability. Shukla (2014) found that to meet the changing business environment and to retain their position in banking business, public sector banks are forced to adopt talent management practices. Hitu (2015) observed that public sector banks attempts to retain their workforce by offering job security, high pay and ensuring safe work environment. Dixit (2016) commented that the private sector banks have gracefully embraced the human capital shortage issues through strengthening their employees' skills and capabilities. The private sector banks offer great job experiences to their employees through rewards, recognition and offering career promotion opportunities.

Prasad and Manjrekar (2017) commented that talent management have become center-point of HRM (Human Resource Management) of modern-day banking activities. Private sector banks focus on the enhancing various managerial skills of their managerial manforce. Adding strength to the previous review Akar and Sharma (2018) commented that in highly competitive banking business environment, bank officials have started paying attention towards attraction fresh talents, training them with needed skills in both banking and non-banking operations and retaining them satisfied. Pooranee and Kavitha (2020) inferred that the private sector banks motivate the talent through recruitment, recognition of their services to the bank and its customers, active engagement through offering right training and retaining till their retirement. Pahuja et al., (2024) concluded that banks in India aims to achieve competitive advantage through effectively managing their human resources and retaining their talents strategically i.e., through employe engagement, enhancing their leadership and management practices.

Through the review of the literature author gain knowledge on the importance of talent management and its adoption in the public and private sector banks.

CONCLUSION

Banking sector in India is experiencing a phase of transition, the public sector banks are actively involving in curtailing their NPAs (Non-Performing Assets), at the same time it is in the process of trimming down its large workforce and looking forward in retaining cum enhancing skills of highly productive and skilled managerial grade staff. On the other hand, private sector banks have started expansion of its operation and branches across India after 2021 Government policy announcement of limiting the operation of public sector banks

through mergers and offering more scope for the private banks to expand. Nature of changes happening in both categories of banks demand highly skilled and more talented workforce, that influences the bank authorities to adopt effective talent pool and retention strategies. It is concluded that talent management is an emerging issue and most focused topic in Indian banking sector.

ABSTRACT

Fintech (Financial Technology) an advance payment-based technology is a growing service in India. With the introduction of number of innovative payment platforms that are alternative to cash transactions, people are motivated to choose best of best payment options. Fintech technology adoption rate in India is noticed as 87 per cent compared to 64 per cent of the world average. Growth of fintech services is influenced by number of factors like: nation having huge underserved financially excluded population, rising youth population, educated and rapid urbanisation, easily available of workforce, supportive Government policies and scope for raising capital for investments. Digital payments and fintech service market is expected to grow multi-fold in the near future, with active support from the user, Government and financial institution. The financial market is found be less matured and large number of people are still uncovered by various financial service, through enhancing their knowledge on easy and safe mode of payment either for physical or online shopping or for money transfer with support the fintech services to growth in India.

KEY WORDS: Fintech Services, Digital Payment, Financial Literacy of Fintech Service

INTRODUCTION

Modern day economists keep debating on the context whether cash circulation is healthy for an economy's growth or not. In an economy the usage of cash starts reducing, when the country become richer. As the education and income among the citizens in an economy rises, they start using credit cards or debit cards or migrate to the usage of alternative mode of payments widely. With the introduction of number of innovative payment platforms that are alternative to cash transactions, people are motivated to choose best of best payment options. Government rules and regulation in recent years modified and needed additions or corrections are made suitable to the modern-day payment system. Seamless security norms are framed to attract more people to use the electronic /digital payment platforms at merchant point-of-sales.

Fintech (Financial Technology) an advance payment-based technology is a growing service in India. Fintech service provider offers not fast and easy payments, it offers basket of services including lending, insurance, wealth management, broking services, offering of crypto currencies, under writing services and many more¹. Adoption to Fintech service ensure offering of innovative payment and transfer of fund from

cashless, branchless, human absence service by popular financial service companies through wireless medium to any knock or corner of the country. Digital payments in India are offered in a collaborated format i.e., the payment regulators, Government of India, banks and the fintech companies.

Digital payment companies have succussed in building trust and reliability among the millions of Indian (RBI, March, 2024). Fintech technology adoption rate in India is noticed as 87 per cent compared to 64 per cent of the world average. Market size of the fintech service (including new startups) was valued at US \$ 50 billion in 2021 in India and the same is expected to raise to US \$ 150 billion by the year 2025. The total fintech service market including all kind of service is expected to raise to US \$ 1.3 trillion by 2025. Nearly 550 startups have received over US \$ 22 billion through this fintech service in India between the year 2014-2024. Fintech service have greatly touched the life of common man, small- and large-scale business operations. India is the world's third largest fintech service providing country in the world, next to USA and China.

Growth of fintech services is influenced by number of factors like: nation having huge underserved financially excluded population, rising youth population, educated and rapid urbanisation, easily available of workforce, supportive Government policies and scope for raising capital for investments.

GROWTH OF FINTECH BUSINESS IN INDIA

Adoption of the fintech service is not only beneficial to traditional financial services operating in India, but it also provides scope for designing innovative service model and build-in close relationship with the customers (users) (ASSOCHAM Report, 2022). Fintech services have experienced a robotic growth in India with the active participation of the users, friendly policies framed by the Government and needed policy amendments made by the RBI (Reserve Bank of India).

TABLE: 1 FINTECH BASED TRANSACTION VALUE

(Values in Billions USD (US\$)

| Year | Digital Capital Raising | Digital Payments | Neo banking |
|------|-------------------------|------------------|-------------|
| 2017 | 0.85 | 80.76 | 2.04 |
| 2018 | 0.86 | 92.30 | 4.57 |
| 2019 | 0.86 | 111.40 | 9.85 |
| 2020 | 0.77 | 107.70 | 19.87 |
| 2021 | 0.81 | 153.70 | 37.18 |
| 2022 | 0.80 | 184.10 | 58.97 |
| 2023 | 0.82 | 216.20 | 85.46 |
| 2024 | 0.84 | 254.60 | 113.60 |
| 2025 | 0.86 | 296.90 | 138.70 |
| 2026 | 0.88 | 328.10 | 160.30 |
| 2027 | 0.89 | 361.80 | 179.10 |
| 2028 | 0.90 | 394.40 | 196.00 |

Source: https://www.statista.com/outlook/dmo/fintech/india#transaction-value

Prime segment of fintech services in India are five i.e., digital capital raising (crowd fund pulling), digital payments, digital investments, neo-banking ((an integrated payment solution with use of mobile applications and digital assets (wealth management). Of these five fintech service, Digital capital raising business has expected raised from US \$ 0.85 billion in 2017 to US \$ 0.90 billion by 2028. Digital payment is very active, most preferred and fast-growing service in India it has recorded a growth of US \$ 216.02 billion in 2023 significantly raised from US \$ 80.76 billion in 2017. Similarly, the neo-

banking fintech service have raised from merger value of US \$ 2.04 billion in 2017 to a whooping value of US \$ 85.46 billion by 2023. The market size for various fintech services is expected to rise in the near future.

ONLINE PAYMENT PRACTICES IN INDIA

Payment systems through electronic instruments are in practice in India for many years. In a retail market consumers believe that electronic/ digital payments systems are the highly secure and convenient modes. Even, after the wide popularity and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

usage of electronic and digital payments systems, small/ medium scale retailers and their customers predominantly prefer cash transactions and payment until 8th November, 2016. After the proclamation of demonetisation of currency in India in November, 2016, the retailers have started widely accepting the electronic and digital payments systems in their retail POS (Point of Sales). From, November, 2016, cash transactions have been reduced and the usage of modern-day payments systems have increased across India. There are many potential benefits to merchants from accepting credit and debit cards or other digital payments. Generally, the modern payments modes enable the consumers to spend beyond the cash they carry in person. Thus, merchants who accept their payments through this mode of payments often experiences increase in their average sales. Modern payments systems facilitate the retailers bookkeeping and currency conversion practices and it also decrease the merchants' operational cost and credit risks. Similarly, the consumer enjoys benefits like: convenience of electronic payment and greater security both in domestic and overseas travel. Convenient of remote purchasing-ordering / shopping online or by phone. Purchase products or services is made possible whenever and wherever they prefer that too with the option of paying immediately or later date.

Outbreak of Covid pandemic has supported in the extensive use of digital payments in the country. As there is a rise in the first-time users of digital payment platforms. Retail consumers are blessed to use different forms of alternative payments systems for settling their bill of essential or non-essential items purchased. The value of digital payments made in India has raised from ₹.162 crores in 2012-13 to ₹. 14, 726 crores in 2023-24, recording over 90 per cent growth in a period of 12 years. Nearly, 46 per cent of the world digital payments are made in India and there prevails wide scope for promotion of digital payment system in the country.

ADOPTION TO FINTECH AND DIGITAL PAYMENTS IN INDIA

Though fintech service and digital payment systems are fast growing in India, in reality there prevails a digital divide been the urban and rural peoples as the digital literature among these two segments of the population ensures frequency of usage of alternative cash payment mediums. Youth and younger generation citizens of this big country (aged between 18 years to 34 years) predominately use digital/electronic platforms, while its usage among the elderly populations are found to be less. middle income population are found to be major adopters and users of modern-day payment mediums compared to the other two extreme segments i.e., very low- or high-income categories. Salary credited in the bank by the employers, convenience realised in usage of digital or e-payments and safety feel motivated middle-income segment of population to adopt accept and frequently it. Whereas, digital/electronic illiteracy, fear of taxation, e-fraud and other malpractices restrict the lower- and upper-income category population to use these modern payment media in an elaborate form.

CONCLUSION

Digital payments and fintech service market is expected to grow multi-fold in the near future, with active support from the user, Government and financial institution. The financial market is found be less matured and large number of people are still uncovered by various financial service, through enhancing their knowledge on easy and safe mode of payment either for physical or online shopping or for money transfer with support the fintech services to growth in India.

AN EXPERIMENTAL STUDY TO ASSESS THE EFFECTIVENESS OF APPLICATION OF CABBAGE LEAVES ON REDUCTION OF BREAST ENGORGEMENT AMONG POSTNATAL MOTHERS IN SELECTED HOSPITALS OF JABALPUR

Smita Richesh Robert

Article DOI: https://doi.org/10.36713/epra16758

DOI No: 10.36713/epra16758

ABSTRACT

Background – The most innate and purest of all human activities is breastfeeding. Its an up breast in strengthening the mother baby bonding. Amongst the postpartum complications one of the commonest is breast engorgement. Its an painful overfilling of the mammary glands with milk. If not treated it can result in severe breast complications like mastitis. The nurse practioners knowledge of alternative and complementary therapy of dealing with engorgements would surely help in reducing this post partum morbidity and thereby improving the maternal and newborn care Need Of The Study---The investigator herself is a woman, hence she could discern the urgent requirement of promoting an efficacious technique for decreasing the breast engorgement following labour. Using cabbage leaves is a convenient method for this purpose. Hence the study was undertaken to determine the outcome of cabbage leaves application in reducing it. Method The study utilized a Quasi experimental research approach with two group pretest - posttest design. The data was collected from selected hospitals of Jabalpur city by using purposive sampling technique. The sample comprised 40 postnatal mothers. The tool used for collecting demographic data were a interview along with the analogue pain scale and Hill& Humenic breast engorgement scale, Application of cabbage leaves was done for 20 minutes after the breast feeding for reduction of breast engorgement in post natal mother

Result—The assessment of breast engorgement scale in this study shows that the Assessment control group indicate majority of engorgement scale Severe engorgement (11) 55% group, moderate was (8) 40% and mild engorgement is (1) 5% Finding of the present study shows the assess in breast engorgement scale indicate majority of engorgement scale Severe engorgement (13) 65% group, moderate was (6)30% and mild engorgement is (1)5% in Pre-Experimental group. Finding of the present study shows the assess in breast engorgement scale indicate majority of engorgement scale Severe engorgement (11)55% group, moderate was (8)40% and mild engorgement is (1)5% in Post-Experimental group. The t-test compared result showed positive correlation that calculated value is t=5.075 which is greater than t=1.685 at the 0.05 level of significance. Findings related to the comparison of severity of the breast engorgement score with control group and experimental group by the unpaired t-test, compared result showed positive correlation t=3.90 which is greater than the table value 2.02 at the 0.05 level of significance. Conclusion — In order to foster the MGDs 4 and MGD 5 simple and easily available techniques like cabbage leaves application on breast engorgement should be commonised in practice by the nurse administrators and midwifery practioners so that this major discomfort is relieved .cabbage leaves does not reduce the milk production and suplly but only works on the fluid trapped around . it helps in the capillary dilatation and acts a counter irritant . The inflammation ,pain and engorgement is reduced allowing the milk to flow freely

KEY WORDS-- Cabbage Leaves, Reduction of breast Engorgement, Postnatal mothers

INTRODUCTION

Sufficient milk, early supplementation and the higher percentage of breast feeding results in minimal or no engorgement in the first seven days postpartum . This leads to the decline in the early week. [1] (Dutta 2004)

It is well established that cabbage leaves contain sinigrin (allylisothiocyanate) rapine, magnesium, oxalate and sulphur

heterosides. sulpher and the sulpher and amino acid methionine in cabbage contains both antibiotic and anti-irritant qualities. It dilates local capillaries and hence reduces congestion in tissues. This results in enhanced blood flowwhich permits reabsorption of the fluid confined in the breast by the body. This in turn helps in relieving the engorgement and inflammation ensuring free flow of the breat milk.[2]

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

In May 2004, Cotterman conducted a study which proved that efficacious breastfeeding needs effective milk transfer through the nipple areola complex embraces sub-areola tissue.Resistance in sub-areola tissue enhancesduring engorgement, as there is competitition for space as a result of increased circulation and surplus interstitial fluid with expanding milk volumes. Breast anatomy often gets distorted owing to physiologic and iatrogenic activities. Several mothers get disheartened because of various underlying factors such as latch difficulty, slow milk ejection, reflex, low milk transfer, persistent pain and nipple injury. [3]

NEED OF THE STUDY

13.3% of non-breastfeeding mothers suffer from puperial fever as a result of breat engorgement. Although there are several medications, which go well with breastfeeding, minimizing the use of medication during brastfeeding is recommended.[4]

The incidence rate of breast engorgement all over the world is 1:8000 and in India its 1:6500. Symptoms of engorgement usually appear between days 3 and 5. Generally, more than 2/3 of women get tenderness on fifth day but some may show tenderness as late as ninth or tenth day. Two-thirds of women feel at least moderate symptoms. Engorgement reduces if the mother breastfeeds more during the first 48 hours. The 20% postnatal mothers particularly primigravida mothers suffer from breast engorgement as early as 0-4 days of postnatal period.[5]

Looking to both educate mothers and celebrate breastfeeding, UNICEF, WHO and WABA along with the scientific community strongly advocate beginning breastfeeding within of the first hour of birth. Various researches have proved that early start of breastfeeding can check 22% of all fatalities among infants under 1 month in developing countries. (Cape Cod Daily 2017)[6]

Investigator had observed many mothers who were suffering from breast engorgement during postnatal period. The maternal complications like mastitis and breast abscess were common. This results in the infant being deprived of adequate milk, incomplete emptying of the breast and sore and damaged nipples with an indirect adverse impact on the infant. The nurse should have a knowledge of the fruitful treatment of breast

engorgement and the resulting complications in order to diminish the pain of mothers a bit. The study was undertaken with the following objectives:

- 1. Assessment of the level of breast engorgement among post natal mothers in control group.
- 2. Assessment of the effectiveness of cabbage leaf application during breast engorgement among experimental group mothers.
- 3. Comparision of the breast engorgement score of postnatal mothers in control group with experimental group.
- 4. Association of the breast engorgement level with selected socio demographic variable in control group.
- Association of the breast engorgement level with selected socio demographic variable in the experimental group.

HYPOTHESES (All hypotheses were tested at 0.05 % level of significance)

H1: There will be significant mean difference between control group and experimental group in level of breast engorgement and pain among post-natal mothers.

H2: There will be significant association between breast engorgement score with selected demographic variable in control group.

H3: There will be significant association between the breast engorgement score with selected demographic variable in experimental group.

Modified Wiedenbach's Helping Art of Clinical Nursing Theory was adopted as conceptual frame.

RESEARCH METHODOLOGY

The study utilized a Quasi experimental research approach with two group pretest - posttest design. The data was collected from selected hospitals of Jabalpur city by using purposive sampling technique. The sample comprised 40 postnatal mothers. The tool used for collecting demographic data were a interview along with the analogue pain scale and Hill& Humenic breast engorgement scale, Application of cabbage leaves was done for 20 minutes after the breast feeding for reduction of breast engorgement in postnatal mothers.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

MAIN OPERATIONAL DEFINITIONS

1. Application of Cabbage leaves

In this study it refers to cover the engorged breast with the appropriate size cabbage leaves to decrease the breast engorgement during post-natal period for 20 minutes

<re>erepeated from introduction> Use of Cabbage Leaves for Breast Engorgement</ri>

- •The leaves were rinsed and the stem was carefully cut out so that the leaves might fit entire breasts leaving the nipples uncovered.
- •Clean cabbage leaves were placed on the breasts. Areola was left uncovered while wrapping the leaves around breastso that the area around areola might remain dry and intact.

2.Breast engorgement

In this study, breast engorgement refers to the disease condition in the mammary glands which results from expansion of blood vessels and the pressure of new breast milk filled within them and this is assessed by using Storr scale/ Hill & Humenic scale.

3. Postnatal mother

In this study it refers to all the mothers of post-natal period with normal delivery and lower segment caesarean delivery admitted in selected hospitals of Jabalpur without any breast complications.

CRITERIA FOR SAMPLE SELECTION

Inclusion criteria-

Post natal mothers,

- 1. Who are undergoing normal vaginal delivery
- 2. Who have had a lower segment caesarean section
- 3. Who have had classical caesarean section
- 4. Both primi and multi para mothers

Exclusion criteria-

Postnatal mothers.

- 1. Who were having mastitis and cracked nipples
- 2. Who did not agree to participate in the study
- 3. Who were absent when data were being collected.

VALIDATION OF THE TOOL

The prepared tool with statement, objectives, and hypotheses was submitted to ten obstetrics and gynecology department experts and five other experts. Necessary changes were made as per suggestions given by the expert's opinion.

RELIABILITY OF THE TOOL

The reliability was calculated by means of split half method, which measures the coefficient of internal consistency. The correlation obtained by using Karl Pearson's Correlation Coefficient.

The reliability for visual analogue pain scale was calculated and obtained value was r=0.93 which showed that the tool was reliable.

The reliability for breast engorgement scale was calculated and obtained value was r=0.93 which showed that the tool was reliable.

DESCRIPTION OF THE TOOL

The tools used in this study were:

1)Section A: Demographic data of post natal mothers 2)Section B:

- i. Assessment by visual analogue pain scale
- ii. Six point breast engorgement scale

Section A:

Socio-Demographic Data of Postnatal Mothers

A structured interview schedule was used to collect baseline data about socio-demographic variables like age, education, working, socio-economic status, parity of mother, type of delivery process, previous treatment for breast engorgement, breastfeeding initiated within and baby is with.

Section B

i. Assessment of Breast Pain Intensity

It comprised visual analogue pain assessment scale to assess the intensity of pain during breast engorgement.

ii. Six Point Engorgement Scale:

Developed by Hill & Humenick, it was utilized to assess the level of breast engorgement in the given scoring ranges from 1 to 6.9 In this the researcher rated the breast engorgement level of the post natal mothers. The scoring was done before and after application of cabbage leaves. Engorgement score increases from 1 to 6 according to severity of engorgement.

i. VISUAL ANALOUGE PAIN SCALE.[8]

| FACIAL EXPRESSION | SCORE |
|-------------------|-------|
| NONE | 0 |
| ANNOYING | 1-2 |
| UNCOMFORTABLE | 3-4 |
| DREADFUL | 5-6 |
| HORRIBLE | 7-8 |
| AGONIZING | 9-10 |

Score of postnatal women's response to the questions was marked as follows:

- soft breast and without any changes, score as-1
- slight changes in the breast, score as-2
- firm and no tender breast, score as -3
- firm, and beginning tenderness in breast, score as-4
- firm and tender of the breast, and score as-5
- very firm and very tender, score as-6

ENGORGEMENT SCORE:Mild: (1-2) Moderate: (3-4) Severe: (5-6)

RESULTS

Control Group

Finding of the variables shows that out of 40 samples maximum numbers of mothers are in the age group of 26-30 years which is 40%, in education group majority of mothers are primary which is 35%, in type of family majority belongs to nuclear family which is 45%, the maximum socio economic status was below Rs. 10000 (40%), maximum occupation of mother were self employed which is(45%), maximum age for menarche was 11 years and 12 years which is (35%), the maximum parity of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

mother was primi para was 10 which is (50%), the maximum mothers who faced breast engorgement were 18 which is (90%), the maximum delivery was lower segment caesarean section were 13 which is (65%), the maximum breast feeding initiated was feeding after 11-15 hours which is 9 that is (45%), the maximum babies were with mother were 15 which is (75%)

Experimental Group

Finding of the variables show that the maximum age group was between 21-25years 8 (40%), the maximum place of residence was urban (45%), the maximum educational standard of mother was senior secondary (35%), the maximum family type is joint family (60%), the maximum socio economic status was below Rs. 10000 which is (55%), the maximum occupation of mother were home maker (60%) the maximum parity of mother was primi para which is (55%), the maximum delivery were lower segment caesarean section which is(60%), in the maximum samples breast feeding was not initiated which is (55%) the maximum babies were with mother which is (75%)

FINDINGS RELATED TO THE SEVERITY OF BREAST ENGORGEMENT IN THE CONTROL GROUP

Finding of the present study shows the assess in breast engorgement scale shows that the

I Assessment control group indicate majority of engorgement scale Severe engorgement (11) 55% group, moderate was (8) 40% and mild engorgement is (1) 5%

Finding of the present study shows the assess in breast engorgement scale shows that the IIAssessment control group indicate majority of engorgement scale Severe engorgement (11)55% group, moderate was (8)40% and mild engorgement is (1)5%.

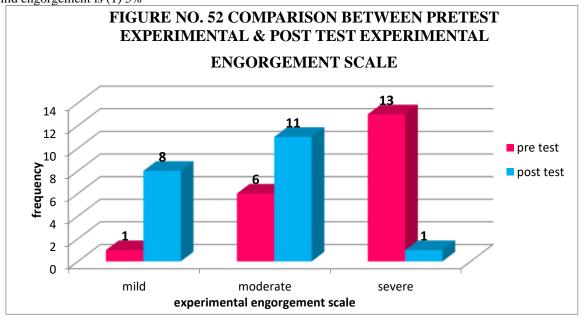

The t-test is 0.35, which is less than t=1.685 at the 0.05 level of significance. compared result showed to be non-significant. Thus it fulfilled the objective no.1

FINDINGS RELATED TO THE SEVERITY OF BREAST ENGORGEMENT IN THE EXPERIMENTAL GROUP

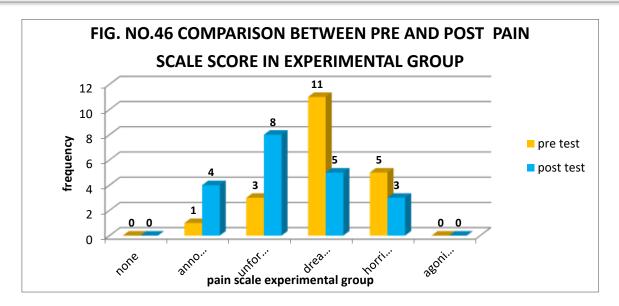

Finding of the present study shows the assess in breast engorgement scale indicate majority of engorgement scale Severe engorgement (13) 65% group, moderate was (6)30% and mild engorgement is (1)5% in Pre-Experimental group.

Finding of the present study shows the assess in breast engorgement scale indicate majority of engorgement scale Severe engorgement (11)55% group, moderate was (8)40% and mild engorgement is (1)5% in Post-Experimental group.

The t-test compared result showed positive correlation that calculated value is t=5.075 which is greater than t=1.685 at the 0.05 level of significance. Thus, it fulfilled the objective no.2

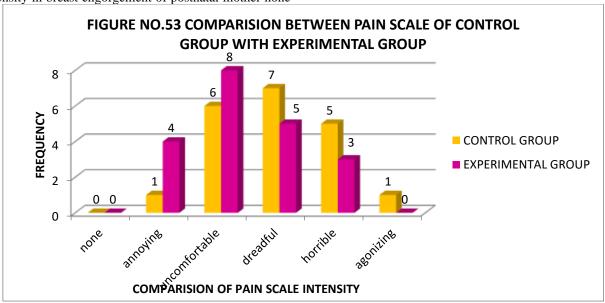

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

FINDINGS RELATED TO THE COMPARISION OF THE PAIN SCALE SCORE OF CONTROL GROUP WITH PAIN SCALE SCORE OF EXPERIMENTAL GROUP.

Control group indicate that the pain intensity of breast engorgement in postnatal mother none was 0, annoying was 1(5%), uncomfortable 6(30%), dreadful 7(35%), horrible 5(25%), agonizing 1(5%). Post-Experimental group indicate pain intensity in breast engorgement of postnatal mother none

was 0, annoying was 4(20%), uncomfortable 8(40%), dreadful 5(25%), horrible 3(15%), agonizing 0. The comparison between the control and experimental group in which the pain intensity among post natal mothers in experimental group, the pain is reduced, when compared to the control group. The paired t-test compared result showed positive correlation that calculated value is t= 2.974 which is greater than t=1.685 at the 0.05 level of significance

The comparison between the control and experimental group in which the pain intensity among post natal mothers in experimental group, the pain is reduced, when compared to the control group. The unpaired t-test compared result showed positive correlation that calculated value is t= 3.47 which is greater than t=1.685 at the 0.05 level of significance. 0 2 4 6 8 0 1 6 7 5 1 0 4 8 5 3 0 FREQUENCY COMPARISION OF PAIN SCALE INTENSITY COMPARISION BETWEEN **PAIN SCALE** OF **CONTROL GROUP** WITH **EXPERIMENTAL GROUP CONTROL GROUP** EXPERIMENTAL GROUP Thus it fulfilled the objective no.3

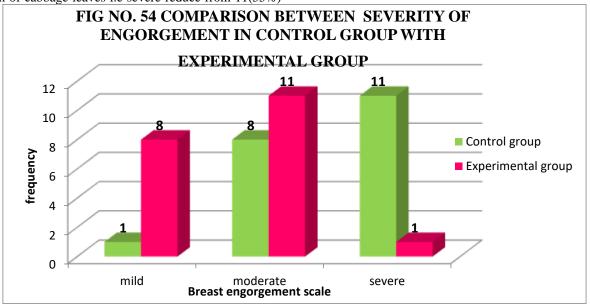

hence hypothesis 1 was accepted H1 - that there will be significant difference in mean control group and experimental group in the level of breast engorgement and pain among post-**FINDINGS** RELATED mothers. TO COMPARISION OF SEVERITY OF THE BREAST ENGORGEMENT SCORE WITH CONTROL GROUP AND EXPERIMENTAL GROUP. Control group indicate that the severity of breast engorgement in postnatal mother Severe engorgement (11)55% group, moderate was (8)40% and mild engorgement is (1)5%. Experimental group indicate that the severity of breast engorgement in postnatal mother, Severe engorgement (1)5% group, moderate was (11)55% and mild

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

engorgement is (8)40%. Thus, the severity of breast engorgement in experimental group has been reduced after the application of cabbage leaves i.e severe reduce from 11(55%)

to 1(5%), moderate increased from 8(40%) to 11(55%) and mild increased from 1(5%) to 8(40%)

The comparison of six point engorgement scale and engorgement score among post natal Mothers, The paired t-test, compared result showed positive correlation t=5.075 which is greater than the table value 2.02 at the 0.05 level of significance. The unpaired t-test, compared result showed positive correlation t=3.90 which is greater than the table value 2.02 at the 0.05 level of significance. Thus it fulfilled the objective no.3 hence hypothesis 1 was accepted H1 - that there will be significant difference in mean control group and experimental group in the level of breast engorgement and pain among post-natal mothers.

FINDINGS RELATED TO THE ASSOCIATION OF THE LEVEL OF BREAST ENGORGEMENT WITH SELECTED SOCIO DEMOGRAPHIC VARIABLE IN CONTROL GROUP.

MOST SIGNIFICANT In association of severity of breast engorgement with demographic variable, Age is most significant in control group its chi- square value 60, & p value is 0 so p< 0.001). On Day 3, tenderness vanished in 86.20% subjects in experimental group compared to 58.62% subjects in control group. Thus, the study concluded that application of cabbage leaves was effective in diminishing breast engorgement.

CONCLUSION

The study focused on the fact that home remedies are also of great scientific values. The simple measures like cabbage leaves application was very helpful in reducing the breast engorgement . The nurse midwives could use it effectively in minimizing the complications at the earliest, thereby promoting safe and sound maternal and neonatal care. This research helps in the implementation of the MDG 5 for fostering safe and sound postnatal care.

WAYS TO CONVEY THE MEANING OF THE INITIAL PHASE EXPRESSED BY THE GERMAN "BEGINNEN" AND "ANFANGEN" IN UZBEK

Sodikova Nazokat Gafforovna

Independent Researcher at Samarkand State Institute of Foreign Languages, Uzbekistan

ABSTRACT

This article explores the translation of analytical constructions from German literature into Uzbek, focusing on the purely phasal verbs "beginnen" and "anfangen + zu + infinitive." The study investigates the methods of conveying these constructions in the Uzbek language. The findings indicate that in Uzbek, the phasal meaning associated with initiation can be expressed analytically not only through exclusively phasal verbs but also through polysemous verbs containing a phasal seme.

KEY WORDS: onset phase, phase verb, polysemous verbs with a phase seme, phase analytical construction, constant phase component, variable procedural component, lexical-semantic groups, limit/non-limit verbs.

Analytical constructions in German literature are identified as formations consisting of an infinitive phase verb linked to a main verb (phase verb + the main verb), as illustrated by Baklushin (1989) and Rizaev (2019). Extending this framework to Uzbek, several studies have explored the nuanced meanings tied to phase stages within such compounds, including contributions from Nurmukhamedov (1976), Nasilov (1989:16-18), Nematov, Gulomov, et al. (1998:52), Shukurov (2004:11), Makhmudov, Nurmonova, et al. (2009:61), and Muminova (2021:42-44). Building on these insights, this article aims to examine the translation of the German verbs "Beginnen" and "Anfangen" into Uzbek, focusing on how the initial phase meaning is conveyed within the Uzbek language through these translations.

In this article, the term "Phase Analytical Compound" (PAC) is defined as a verbal or verb-based compound that encapsulates a phasal meaning, which is then paired with a linguistic element (such as a verb in various forms or a noun) that denotes a process and its stages—specifically, the initiation, continuation, or completion of that process. Rizaev (2019: 17) references this concept. Within such compounds, the verb conveying the phase is designated as the constant component (CC), while the element representing the process is termed the variable component (VC). This relationship is succinctly formulated in the generalized model of the phase-analytical compound: PAC = \overrightarrow{CC} + \overrightarrow{VC} .

In German, the concept of the initial phase is predominantly conveyed through two phasal verbs, "Beginnen" and "Anfangen", which are employed in a strictly lexical context with the singular seme of "beginning".

Among these, "Beginnen" is the more frequently utilized verb in the texts analyzed. Typically, "Beginnen" is paired with an infinitive form preceded by "zu", representing various processes. Thus, "Beginnen + infinitive" serves as the primary model for articulating the notion of the initial phase in German.

This model is translated into Uzbek in several different ways, as evidenced by examples in the study that feature the Uzbek equivalent of the verb "to begin".

- I. Models with beginning:
- 1. Beginning + adverb (a):
- Er begann zu zittern, als er es hörte (Remarque. Drei Kameraden, S. 474). -
- (1a) Hearing this, he began to tremble (Remark. Uch og'ayni, 273 p);
- Nacht. Draußen begann es zu regnen (Remarque, Drei Kameraden, S. 161). –
- (2a) Night. It started to rain. (Remark. Uch og'ayni, 94 **p**);
- Ich sprang über das Gitter und begann einen weißen Fliederbusch zu plündern. (Remarque. Drei Kameraden, S. 179). -
- (3a) I jumped over the fence and began cutting down lilac branches.. (Remark. Uch og'ayni, 105 p);
- Sie sperrte ab, trieb einen Keil in den Knäuel, riß die Haufen auseinander, löste sie auf und begann sofort abzutransportieren (Remarque. Drei Kameraden, S. 474). -
- (4a) They blocked all the roads, rushed into the crowd and, until silence fell, covered the crowd and began throwing people one by one into the truck. (Remark. Uch og'ayni. 278
- Die Kanonenkugel strich durch die Halle, (5) blieb hinter unserem Tisch stehen und begann wohlwollend zu kiebitzen (Remarque. Drei Kameraden, S. 529). -
- (5a) When the bald man walked through the hall and approached us, he began to watch the game with interest. (Remark. Uch og'ayni. 310 p);
- Dann begann sie sich zu pudern, das arme, abgezehrte Gesicht, die zerrissenen Lippen, die schweren, braunen Höhlen unter den Augen (Remarque. Drei Kameraden,
- (6a) Then he began to powder his tired, bloodless face, dry lips and sunken eyes. (Remark. Uch og'ayni. 332 p);

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- (7) Ich kam nicht los von ihm, und nicht ohne warnende Stimmen in mir zu vernehmen, nahm ich ihn wieder in die Hand und begann mich mit ihm auseinanderzusetzen (Hesse. Der Steppenwolf, S.76). -
- (7a) Even though I felt and noticed the inner warning voices, I picked him up again and began to openly "argue" with him. (Hesse. Cho'l bo'risi, 100 p).
- (8) Immer näher, immer deutlicher begann ich das Gespenst zu sehen, vor dem ich mich fürchtete (Hesse. Der Steppenwolf, S.79). -
- (8a) The shadow that struck fear into my heart moved closer and closer to me, and it began to appear more clearly in my eyes. (Hesse. Cho'l bo'risi,103 p)

Beginning + adverb -(ay): 1.

- (9) Graus Schultern begannen zu beben (Remarque. Drei Kameraden. S. 205). -
- (9a) Grouse's shoulders began to shake (Remark. Uch Og'ayni, 120 p);
- (10) Langsam begann sie die Vorhänge mit Nadeln zuzustecken (Remarque. Drei Kameraden, S. 300). -
- (10a) He slowly began to close the curtains (Remark. Uch og'ayni. 178 p).
- (11) Dann setzte ich mich an den Schreibtisch und begann mein Geld zu zählen (Remarque. Drei Kameraden, S.
- (11a) Then I sat down at the table and started counting my money. (Remark. Uch og'ayni, 230 p);
- (12) Die Wiesen schimmerten plötzlich von Reif, die Bäume standen wie aus Stahl gegossen vor dem fahler werdenden Himmel, in den Wäldern begann es zu wehen, und aus den Schornsteinen der Häuser stieg vereinzelt Rauch auf. (Remarque. Drei Kameraden, S. 519).
- (12a) The dew that covered the meadows sparkled, and the trees under the pale sky looked as if they were made of lead. The wind rose in the forests, and smoke began to rise from some roofs. (Remark. Uch og'ayni, 297 p).

Beginning + **noun**:

- (13) Die Vögel begannen zu zwitschern (Remarque. Drei Kameraden, S. 239). -
- (13a) The birds began to chirp (Remark.Uch og'ayni, 141 p);
- (14) Die Kapelle begann wieder zu spielen (Remarque. Drei Kameraden, S. 225). -
- (14a) The orchestra started playing again (Remark. Uch Og'ayni, 132 p);

4. Beginning + noun-verb combination (adjective -(a)):

- (15) Sie begann tiefer zu atmen, und ich stand leise auf und ging in den Garten hinaus (Remarque. Drei Kameraden, S. 278).
- (15a) He began to breathe deeper, I slowly stood up and went out into the garden. (Remark. Uch og'ayni. 164 p);
- (16) Dann begann sie zu singen, und es war, als schwebe ein dunkler Vogel durch den Raum (Remarque. Drei Kameraden, S. 564). -
- (16a) Then he started singing and it was as if a black bird was flying over us. (Remark. Uch og'ayni, 318 p).
- (17) Denn, unter uns, seit ich angefangen habe zu schreiben, war ich schon dreimal in den Begriffen, die Feder niederzulegen, mein Pferd satteln zu lassen und hinauszureiten

(Goethe. Die Leiden des jungen Werthers, S.14).

(17a) There's nothing to be done, since I started writing, I've had the idea three times to put down my pen, saddle my horse and ride in that direction. (Goethe. The Sorrows of Young

In German, expressions such as beginnen+infinitive are commonly used to denote the commencement of situations, conveying a distinct phasal meaning. In contrast, Uzbek employs a variety of verbs that bear a polysemous phasal seme to reflect similar meanings. The analysis of the material reveals several Uzbek verbs used to express phase-related concepts, including equivalents to the English verbs "go," "pass," "fall," "move," and "enter." The study provides examples of models formed using these verbs to demonstrate how the initial phase is articulated in Uzbek.

I. Models with verbs with ambiguous phase seme enter + action name (for):

- (18) Jeden Tag gab es ja Dutzende von Auktionen. Mit runden Gesten begann er den armseligen Kram zu versteigern. (Remarque. Drei Kameraden", S. 169). -
- (18a) There were dozens of auctions every day. With circular gestures he began to auction off the poor stuff. (Remark. Uch og'ayni. 98 p);

begin + action name + noun:

- (19) Ferdinand war bis dahin ziemlich zugeknöpft gewesen; jetzt begann er zu überreden (Remarque. Drei Kameraden, S. 175). -
- (19a) Ferdinand had been pretty buttoned up until then; now he began to persuade (Remark. Uch og'ayni, 103 p);

Will go down + action name:

- (20) Aber in Frankfurt stieg ein Mann mit einem Seehundsbart ein, der sofort einen Koffer auspackte und zu essen begann (Remarque. Drei Kameraden", S. 426) -
- (20a) But in Frankfurt a man with a seal's beard got on, immediately unpacked a suitcase and began to eat. (Remark. Uch og'ayni, 249 p).

Begin + noun:

- (21) Die Frau begann zu sprechen (Remarque. Drei Kameraden, S. 228). -
- (21a) The woman began to speak (Remark. Uch og'ayni, 134 p);

Begin + adverb -(ab):

- (22) Die Sonne ging hinter den Dächern des Gewerkschaftshauses auf. Die Fenster begannen zu blitzen (Remarque, Drei Kameraden, S. 241).
- (22a) The sun rose behind the roofs of the union building. The windows began to flash (Remark. Uch og'ayni, 142 p);
- (23) Sie ließ einen Foxtrott spielen, machte mir die ersten Schritte vor, nahm meine Hand und begann mich zu führen. (Hesse. Der Steppenwolf, S.114). -
- (23a) She played a foxtrot, showed me the first steps, took my hand and began to lead me. (Hesse. Cho'l bo'risi,144 p.)

Put + noun

- (24) Als ich ihre Lippen fühlte, begann ich zu zittern (Remarque. Drei Kameraden, S. 520). -
- (24a) When I felt her lips I began to tremble. (Remark. Uch og'ayni, 298 p);

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

6. To move (transition from one state to another):

- (25) Langsam **begannen** die Ketten klappernd durch den Schnee **zu mahlen** (Remarque. Drei Kameraden, S. 535) -
- (25a) Slowly the chains began to grind through the snow, clattering, (Remark. Uch og'ayni, 305 p).

7. Begin +-(ly)

- (26) Der Wagen **begann** langsam bergab **zu fahren**, in das Tal und in die Schatten. (Remarque. Drei Kameraden, S. 521)
- (26a) The car began to drive slowly downhill, into the valley and into the shadows. (Remark.Uch og'ayni, 306 p).

In some examples, the meaning of the initial phase given in German is not directly transmitted in Uzbek. For example, in example (27 a), the verb to give is used and together "they began to curse" is translated "cursed", cf.:

- (27) Es waren vier harmlose, ältere Leute. Einer von ihnen war betrunken. Sie **begannen zu schimpfen** (Remarque. Drei Kameraden, S. 493). –
- (27) There were four harmless, elderly people. One of them was drunk. They began to scold (Remarque. Three Comrades, p. 493). -
- (27a) Yo'lovchilar beozor, keksa odamlar ekan. Bittasini kayfi bor. Ular bizni **so'kib berishdi** (Remark. Uch og'ayni, 284 p).

In sentence (28a), instead of "the radio started playing", "they turned on the radio":

- (28) Ein Radio **begann zu spielen** (Remarque. Drei Kameraden, S. 534). –
- (28) They turned on the radio (Remarque. Three Comrades, p. 534). -
- (28a) Radioni **burashdi** (Remark. Uch og'ayni, 304 p). In the primary (29a) the first stage is removed after the treatment:
- (29) Die Reifen **begannen zu knarren zu zischen – zu heulen zu pfeifen** der Motor gab jetzt alles her, was er hatte (Remarque. Drei Kameraden, S. 290). –

- (29) The tires began to creak to hiss to howl to whistle the engine was now giving everything it had (Remarque. Three Comrades, p. 290). -
- (29a) G'ildiraklar goh g'ijirlar, goh vishillar, bir g'uvillab, bir chiyillardi- tezlik shu darajada baland edi (Remark. Uch og'ayni. 170 p).

Another example (30a) shows that the subject passes into a new state without transmitting the original meaning in Uzbek:

- (30) Langsam **begann** er **zu lächeln**, sein hübsches und jämmerliches Lächeln, mit dem er mir so oft das Herz schwer gemacht hat,... (Hesse. Der Steppenwolf, S.11).
- (30) Slowly he began to smile, his pretty and pitiful smile, with which he so often made my heart heavy... (Hesse. Der Steppenwolf, p.11).
- (30a) So'ng u asta **jilmaydi**, u har doim ana shunday o'ziga yarashgan, chiroyli tabassumi bilan yuraklarni ezib yuborardi. (Hesse. Cho'l bo'risi, 23 p).

The analysis of examples indicates that in most instances, the expression of the initial phase in Uzbek typically utilizes a single initial phase verb in various combinations, along with polysemous verbs that can convey multiple phase patterns.

Thus, in Uzbek, scenarios typically rendered in German by the combination of "beginnen + infinitive" are articulated not only with the direct Uzbek equivalent of the verb "to begin," which denotes the initial phase, but also with movement verbs that abstractly signify the onset of an action. Such verbs include translations for "go," "pass," "fall," "move," and "enter." These verbs are used to construct a range of models that represent the initial phase concept in different contexts.

Below is a table presenting the types of models identified in the study materials, illustrating the diverse linguistic strategies employed in Uzbek to convey these initial phase concepts.

Table 1

| German language model | Uzbek language model | | |
|------------------------------|-----------------------------------|--|--|
| | 1. Begin + adverb –(a) | | |
| | 2. Begin + adverb -(ay) | | |
| | 3. Begin + noun | | |
| | 4. Begin + noun-verb combination | | |
| | 5. Enter + action name (to) | | |
| | 6. Pass + (to persuade) | | |
| I. beginnen + zu + Infinitiv | 7. To fall + action name | | |
| | 8. To fall + noun (to a sentence) | | |
| | 9. Go + adverb -(ib) | | |
| | 10. Give + -(ib) not so much | | |
| | 11. To put + noun | | |
| | 12. To move (from place) | | |
| | 13. Go +(ib) | | |
| Es + beginnen + infinitive | Begin + noun-verb combination | | |

It has been noted that the verb Beginnen has a very wide range of conjugations. Constructions with it as a variable component in the infinitive form may involve verbs with different lexical meanings. These are (a) natural states (regnen - rain), (b) actions associated with speech and voice ((aus)sprechen -

speak, speak), überreden - persuade, convince), zwitschern - chirp, knarren - creak, zischen - hiss, heulen - cry, pfeifen - Pipes, (v) various actions and situations (versteigern - auction), (plündern - plunder), (beben - tremble), (spielen - play), (atmen - breathe), verbs denoting static states (blitzen - flash).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Functionally, verbs in German can be categorized into finite and non-finite groups based on how they express actions, states, or events. Impersonal verbs such as "regnen" (to rain), "sprechen" (to speak), "zwitschern" (to chirp), "knarren" (to creak), "zischen" (to hiss), "heulen" (to howl), "pfeifen" (to whistle), "beben" (to quake), "spielen" (to play), "atmen" (to breathe), and "blitzen" (to flash) represent actions or states without clear boundaries, signifying either the ongoing flow or repetition of a process (like "beben" and "atmen") or a static state (like "blitzen"). These verbs are therefore non-finite as they do not specify a beginning or an end to the action or state.

Conversely, verbs such as "aussprechen" (to express), "überreden" (to persuade), "plündern" (to plunder), and "versteigern" (to auction) indicate processes with a definite starting or ending point—for instance, "plündern" involves the initiation of taking possession, and "aussprechen" could mean concluding a sentence or speech. These verbs are classified as finite because they signify actions with discernible boundaries.

Thus, the verb "Beginnen" (to begin) is not only combined with the infinitive forms of impersonal (non-finite) verbs but also with finite verbs to reflect the commencement of the processes they denote.

In German, alongside "Beginnen," its synonym "anfangen" can also be paired with "zu + infinitive" to form similar analytical constructions. However, such combinations are less commonly found in texts compared to "Beginnen." In Uzbek, the concept conveyed by "anfangen + zu + infinitive" is typically expressed by pairing the verb equivalent to "to begin" with an adverb to denote the initial phase. For example, the specific Uzbek translation might adapt the verb "begin" with a qualifying adverb to mirror the German structure, capturing the essence of the starting phase of an action or process.

- (27) Sie **fing an zu weinen** (Remarque. Drei Kameraden, S. 297).
 - (27a) She started to cry (Remark. Uch og'ayni. 173 p);
- (28) Nase **fing an zu bluten**, ich verfehlte den nächsten Schlag... (Remarque. Drei Kameraden, S. 372). –
- (28a) Nose started bleeding, I missed the next blow... (Remark. Uch og'ayni, 223 p).
- (29) Der Auktionator **fing an,** die Sachen **auszubieten.** (Remarque. Drei Kameraden, S. 499).
- (29a) The auctioneer began offering the items. (Remark. Uch og'ayni, 287 p).
- (30) Drunten in der brennenden Stadt **fingen** die Glocken **an zu läuten,** aufgeregt und angstvoll (Hesse. Der Steppenwolf, S.184).
- (30a) Down in the burning city the bells began to ring, excited and fearful (Hesse. Cho'l bo'risi, 223-бет.)

In some cases, the initial stage of the process in German is given the meaning of the process, expressed without direct translation into Uzbek. Compare:

- (30) "Ich **fange an zu vergessen**", sagte ich schwärmerisch (Remarque. Drei Kameraden, S. 274). -
- (30a) "I'm starting to forget," I said enthusiastically (Remark. Uch og'ayni. 161 p).
- (31) Ich **fange** schon **an**, mich an Kaffee **zu gewöhnen** (Remarque. Drei Kameraden, S. 183). -

(31a) I'm starting to get used to coffee... – dedi Pat (Remark. Uch og'ayni,107 p).

The analysis reveals that in the German language, the meaning of the initial phase is predominantly expressed through two phase verbs, "Beginnen" and "Anfangen." In contrast, in Uzbek, this concept is conveyed in two primary ways: firstly, through a single verb that directly denotes the beginning, such as "boshlash" (to begin), along with its various conjugations; and secondly, through multiple verb combinations that also capture the seme of the initial phase.

This distinction highlights the linguistic adaptation required when translating concepts from German to Uzbek. While German often utilizes specific phase verbs to explicitly denote the commencement of an action, Uzbek might employ a broader array of verb combinations to express similar ideas. These Uzbek verb combinations are capable of conveying the nuanced aspects of the initial phase without necessarily relying on a direct counterpart to the German phase verbs. This flexibility in verb usage allows for a rich expression of temporal phases in Uzbek, accommodating both direct translations and more interpretive, contextually fitting expressions.

NAVIGATING THE JOB MARKET: A MULTIPLE CASE STUDY ON SENIOR HIGH SCHOOL GRADUATES IN JOB SEARCHING

Gea J. Lara, Michaella Darry G. Bagay, Lyka Garcia, Sharmane M. Pagtanan, Sandy Gee F. Pascual, Keanna Dy D. Vallecera, Jubert E. Gulo, MAED

Article DOI: https://doi.org/10.36713/epra16742

DOI No: 10.36713/epra16742

ABSTRACT

This multiple case study aimed to discover and understand the experiences of Senior High School graduates in job searching in Davao Region. The data were taken from the three (3) participants and three (3) informants whose responses were collected through in-depth interviews. Using the thematic analysis, essential themes were extracted from the participants' responses. On the lived experiences related to job searching, the results revealed nine (9) major themes: preference for college graduates over SHS graduates, difficulty in job application process, stress and pressure in job searching, sense of unfulfilled career potentials despite K to 12 training, job instability and short-term opportunities, impediments to self-confidence and job security, importance of preparation before a job interview, economic insecurity, and deprivation of field experience during the work immersion. Furthermore, on how they overcome their struggles from job searching, six (6) themes emerged: preventing burnout from rejections through leisure activities, earning income through side hustles, intensifying self-reliance and independence, cultivating positive mindset, seeking advice and preparing for interviews, and applying for an industry that accept SHS graduates. Moreover, from the insights gained by the participants, six (6) major themes emerged: disregard the educational-based bias, nurture job resiliency, enhance the job readiness skills for practical experiences, call for work immersion opportunities for SHS students, meet the demands of the industry, and invest in career guidance programs. Cross-case analysis were also utilized to determine the similarities and differences of the themes that transpired. The results of this study were deemed significant to senior high school graduates, parents, teachers, school administrators, DepEd authorities, and future researchers.

KEYWORDS: *job searching, multiple case study, senior high school graduates*

CHAPTER 1 INTRODUCTION

The Department of Education (DepEd) in the Philippines has launched the MATATAG program to strengthen the resilience of schools to natural disasters and other emergencies. However, the MATATAG initiative also recognizes other concerns that affect the future of Senior High School (SHS) graduates in the Philippines. One of the concerns identified by the program is the challenge of finding employment opportunities after graduation. Despite the increasing number of SHS graduates each year, there are still concerns about their employability and their readiness to enter the workforce.

The Bureau of Labor Statistics in United States [Department of Labor] revealed in February 2022 that the lowest unemployment rate, accounting for 2.2%, was among those with more senior high school graduate students (Bureau of Labor Statistics, 2023). Meanwhile, the problem of increasing unemployment in Indonesia arises from high school graduates of both vocational high schools (VHS) and general high schools (non-VHS). The national average unemployment rate of both school graduates was 8.72% and 11.11% respectively in 2016, and 7.92% and 10.42% respectively in 2019. The causes of unemployment from VHS and non-VHS graduates are: 1) the competence of VHS and non-VHS graduates unable to satisfy demands of the labor market; 2) the number of graduates higher than available job vacancies, and 3) the educational system in Indonesia not involving industry in the curriculum planning process (Ohara et al., 2020).

In the Philippines, 35% of the companies are not willing to hire and 41% are indefinite or are reluctant in hiring SHS graduates as they lack the necessary specialized skills for the job needed. On the other hand, research stressed out that some SHS graduates also do not apply because they think they lack the competencies, aside from not having confidence in competing with college graduates. More specifically, they added that most of the job openings were for college graduates (36%), SHS graduates were not qualified (25%), employers have no job openings for any position (20%), and SHS graduates lack work experience (16%) (Orbeta et al., 2019).

Hence, the researchers believed it is a need and essential to carry out the study to explore the challenges faced by SHS graduates in their job search and identify potential solutions to address these challenges. For educators, career counselors, and policymakers, they can develop programs and policies that may include offering job search skills training, career

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

counseling, and advocating for policies that promote equal access to employment opportunities for all.

Purpose of the Study

The purpose of this multiple case study was to discover and understand the challenges faced by senior high school graduates in job searching in Davao Region.

At this stage in the research, the experiences of senior high school graduates in job searching were generally defined as their quest in landing a job after graduating and if they pursue not to go in college. To give a clearer view of the story, this study explored the unique characteristics, experiences, coping mechanisms, and insights of the senior high school graduates.

Research Questions

This multiple case study aimed to find out the experiences of senior high school graduates in job-searching through the following questions:

- 1. What are the unique characteristics of each case of the senior high school graduate in finding a job?
- 2. What are the challenges encountered by the senior high school graduates in finding a job?
- 3. How does the senior high school graduate cope with the challenges of finding a job?
- 4. What are the insights of the senior high school graduates regarding finding a job that can be shared with others?
- 5. What are the similarities and differences of one case to the other cases?

Theoretical Lens

This study was gleaned through the Trait and Factor theory of Parsons (1909), which is a well-known career development theory. It emphasizes the importance of assessing individual characteristics such as interests, values, skills, and personality traits to make informed decisions. This examines how a senior high school graduate's abilities, interest, and personality traits match with the demands of the job market, and how it affects their career choices and job search strategies (Armitage & Amar, 2021).

Furthermore, this study was hinged on the Social-Cognitive Career Theory (SCCT) developed by Lent, Brown, and Hackett in 1994 which suggests that individuals' career choices and employability are influenced by their social environment, personal factors, and cognitive processes. This also emphasizes the role of self-efficacy, outcome expectations, and goals in career development. Moreover, this explores how they perceived job security or work-life balance in different industries (Lent & Brown, 2019).

Moreover, this was supported with the Attribution Theory proposed by Fritz Heider (1958) which explains the causes of events and behaviors of individual by making attributions, which are inferences about the underlying causes of those events and behaviors. Attributions theory suggest that SHS graduates may make attributions about the reasons why they are successful or unsuccessful in finding a job. This also explains how feedback from job applications or interviews affects SHS

graduates' attributions about their job search outcomes (Hewett et al., 2018).

CHAPTER 2 METHODOLOGY

Research Design

This study employed a qualitative multiple-case study approach to produce a high-quality description that accurately depicts the experiences of senior high school graduates in job searching. The goal of qualitative research is to thoroughly examine, comprehend, and explain social phenomena in their natural environment (Creswell, 2013.

Research Participants

In choosing the research participants, the researchers utilized purposive sampling. In this multiple case study, there were three (3) participants who are all senior high school graduates in the Davao Region. Also, one (1) informant for each of the participants was interviewed to support their distinct responses to the given research questions. These informants are friends or relatives who have known them so well.

The participants' selection was based on the following criteria, through which the researcher can get a reliable and rich understanding of the unique characteristics of senior high school graduates in job searching. As for the inclusion criteria for identifying the participants, we considered the following: (a) must be female or male; (b) must be aged between 18-26 years old; (c) must be a senior high school graduate in Davao Region; and (d) have experienced being rejected in a job application at least three times. For the exclusion criteria, individuals who have already secured a stable job and who are self-employed will be excluded.

Data Analysis

The results of the gathered data will be the basis for conclusions and recommendations for further research. Creswell (2013) developed the five steps in data analysis: data logging, anecdotes, vignettes, data coding, and thematic analysis. In this study, we will utilize data coding, thematic analysis, and even cross-case analysis in relation to a multiple-case study approach.

CHAPTER 3 RESULTS CROSS CASE ANALYSIS

This section provides a cross-case examination of all three cases in this study.

In this study, we have three (3) cases that are presented individually from the preceding chapters.

Table 1 displays the profile of each case. Firstly, Seeker in Rural Area is a resident of a rural area, which according to him has limited job opportunities. On the other hand, living in an urban area with diverse job opportunities, Applicant in Urban Area has been rejected five times. Lastly, PWD Job Aspirant faces challenges with limited job opportunities as a Person with Disability.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 1
Profile of the Students

| CASE (Pseudonym) | Job Opportunities | Rejection Frequency | Graduation Year | SHS Strand |
|-------------------------|--|-------------------------|-------------------------------|-------------------------------|
| Seeker in Rural Area | Limited Job Opportunities in a Rural Area | Three Times Rejected | Graduated SHS Year 2020 | General Academic Strand |
| Applicant in Urban Area | Diverse Job Opportunities in an Urban Area | Five Times Rejected | Graduated SHS Year 2018 | General Academic Strand |
| PWD Job Aspirant | Limited Job Opportunities for PWD | Three Times Rejected | Graduated SHS Year 2019 | TVL (Cookery) Strand |

Cross-Case Analysis on the Experiences of Senior High School Graduates in Job Searching

Table 3 illustrates a cross-case examination of senior high school graduates in job searching. After a rigorous and thorough investigation of the three cases' results, common essential themes were identified. Using the analysis of the responses of the participants in all cases, the researchers identified nine (9) essential themes that are shared by the two,

if not all three, cases: 1) preference for college graduates over SHS graduates; 2) difficulty in job application process; 3) stress and pressure in job searching; 4) sense of unfulfilled career potentials despite K to 12 Training; 5) job instability and short-term opportunities; 6) impediments to self-confidence and job security; 7) importance of preparation before a job interview; 8) experiences on economic insecurity; 9) deprivation of field experience during the work immersion.

Table 3
Cross Case Analysis on the Experiences of Senior High School Graduatesin Job Searching

| | | Cases | | |
|--|----------|-------|----------|--|
| Essential Theme | 1 | 2 | 3 | |
| Preference for College Graduates over SHS Graduates | ✓ | ✓ | ✓ | |
| Difficulty in Job Application Process | ✓ | ✓ | ✓ | |
| Stress and Pressure in Job Searching | ✓ | ✓ | ✓ | |
| Sense of Unfulfilled Career Potentials Despite K to 12 Training | ✓ | ✓ | √ | |
| Job Instability and Short-Term Opportunities | ✓ | ✓ | | |
| Impediments to Self-Confidence and Job Security | | ✓ | ✓ | |
| Importance of Preparation Before a Job Interview | ✓ | ✓ | | |
| Economic Insecurity | ✓ | ✓ | | |
| Deprivation of Field Experience during the Work Immersion | ✓ | | ✓ | |
| Numerous Career Choices for College Graduates | | ✓ | | |
| Hesitation to Cause Damage in Workplace | | | ✓ | |
| Importance of Dressing Well and Making a Good First Impression | ✓ | | | |
| Difficulty in Finding Suitable Job for PWD | | | ✓ | |
| Disparity of Salary in the Workplace | ✓ | | | |
| Envy of Friends Who Are Graduating | | | ✓ | |

Preference for College Graduates over SHS Graduates

The first common thread in all three examples is a preference for college graduates over high school graduates. All of the participants were able to experience the difficulties and results of an unfavorable attitude toward undergrads seeking employment. All three cases provided various contexts, each with indications of the inequality they face.

Difficulty in Job Application Process

Another theme that arises was difficulty in job application process. As evidenced by the responses in all three cases, the

job application process may be a difficult and frustrating experience. They discussed their difficulties in finding jobs as a result of unfair hiring practices, a highly competitive job market, and the demand for specified requirements, such as a college degree.

Stress and Pressure in Job Searching

The theme stress and pressure in job searching is also present in all three cases. For many people, especially SHS grads seeking employment, the job search process may be a scary and stressful experience. Participants shared their struggles with

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

financial concerns, commuting expenses, and the pressure of finding work to support themselves and their families.

Sense of Unfulfilled Career Potentials Despite K to 12 Training

The K-12 program was implemented in the Philippines with the goal of providing senior high school graduates with the necessary abilities and expertise to enter the workforce. This is not the case on all of the three cases. All participants offered their perspectives on whether the K-12 Program is truly beneficial in preparing students for the workforce.

Job Instability and Short-Term Opportunities

The themes of work insecurity and short-term prospects were both present in the replies to Seeker's case in rural areas and Applicant's example in urban areas. Working in an occupation that requires hard work for little in the way of compensation can be physically and financially stressful. The issue is that stable jobs need college degrees, which they lack.

Impediments to Self-Confidence and Job Security

Job searching is already an exhausting experience; being rejected is significantly a more challenging circumstance that can have a detrimental impact on one's self-confidence, mental health, and well-being. This is the case for Applicant in Urban Area and PWD Job Applicant.

Importance of Preparation Before a Job Interview

Both Seeker in Rural Area and Applicant in Urban Area both agree that excellent work preparation is critical to acquiring employment, especially in a competitive job market. From looking at the company's history to formulating potential

interview questions. Both individuals used a variety of strategies, which they discussed throughout the interview.

Economic Insecurity

Economic insecurity is a substantial barrier to employment for many people. This has been particularly the case for Seeker in Rural Area and Applicant in Urban Area. Both cases shed light on the financial pressures that come with the complicated world of job searching. Alongside this, they also mentioned some techniques they employed to deal with these particular challenges.

Along with the abovementioned similarities, there are certain essential themes that distinguish their experiences as senior high school graduates in job searching. These include numerous career choices for college graduates, hesitation to cause damage in workplace, importance of dressing well and making a good first impression, difficulty in finding suitable job for PWD, disparity of salary in the workplace, and envy of friends who are graduating.

Cross-Case Analysis on the Coping Mechanisms of Senior High School Graduates in Job Searching

Table 4 presents the cross-case analysis of the coping mechanisms of senior high school graduates in job searching. It seems that participants are trying to overcome their challenges in order to acquire employment. As a result, the following essential themes emerged: 1) preventing burnout from rejections through leisure activities; 2) earning income through side hustles; 3) intensifying self-reliance and independence; 4) cultivating positive mindset; 5) seeking advice and preparing for interviews; 6) applying for an industry that accept SHS graduate.

Table 4
Cross-Case Analysis on the Coping Mechanisms of Senior High School Graduates in Job Searching

| Eggantial Thoma | Cas | Cases | | |
|---|-----|-------|----------|--|
| Essential Theme | 1 | 2 | 3 | |
| Preventing Burnout from Rejections Through Leisure Activities | ✓ | ✓ | ✓ | |
| Earning Income through Side Hustles | ✓ | ✓ | ✓ | |
| Intensifying Self-Reliance and Independence | ✓ | ✓ | ✓ | |
| Cultivating Positive Mindset | ✓ | ✓ | ✓ | |
| Seeking Advice and Preparing for Interviews | ✓ | ✓ | | |
| Applying for an Industry that Accept SHS Graduates | ✓ | ✓ | | |
| Identifying Strengths and Neglecting Difficulties | | | √ | |
| Aspiring to be an Entrepreneur | | | √ | |

Preventing Burnout from Rejections Through Leisure Activities

The entire process of job searching has an impact on every part of a job seeker's life. It is critical to be aware of strategies for dealing with burnout and the frantic reality of job searching. All three individuals discuss their personal coping mechanisms and beliefs as they negotiate the harsh reality of job searching and rejection.

Earning Income through Side Hustles

Since SHS graduates had difficulty finding employment, the three participants all looked for means and solutions to add to, if not generate, their income. Life can be challenging now, and it is hard to provide for everyday needs without sufficient funds. During their unemployment, all of the individuals worked hard and found menial side hustles to increase their sources of income.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Intensifying Self-Reliance and Independence

Another theme that appears in all three cases is intensifying self-reliance and independence. All three of the participants agree that self-reliance and independence are crucial attributes in life, particularly in their journey of seeking employment despite being merely undergrads.

Cultivating Positive Mindset

Despite difficulties, particularly job rejections, as mentioned by the three participants, it is extremely important that you possess a positive mentality. Rather than perceiving rejection in a negative way, use it as fuel to improve. Not giving up is already an achievement in itself.

Seeking Advice and Preparing for Interviews

Seeking advice and preparing for interviews are one of the themes that are present in two cases. Both Seeker in Rural Area and Applicant in Urban Area talked about their instances of seeking guidance from several different people in order to improve and maximize their chances of employment.

Applying for an Industry that Accept SHS Graduates

Job searching is already difficult; doing it without a college degree is considerably harder. Both Seeker in Rural Area and Applicant in Urban Area both stated that they had difficulty finding work as SHS graduates. Most employers prefer college grads. As a result, the two of them both said that they looked for jobs that did not require such qualifications.

While there were some similarities in the coping mechanisms of senior high school graduates in job searching, there were also some differences. These include identifying strengths and neglecting difficulties and aspiring to be an entrepreneur.

Cross-Case Analysis on the Insights of Senior High School Graduatesin Job Searching

Table 5 presents the cross-case analysis of the insights of senior high school graduates in job searching. As analyzed, the following common themes have emerged; 1) disregard the educational-based bias; 2) nurture job resiliency; 3) enhance the job readiness skills for practical experiences; 4) call for a work immersion opportunity for SHS students; 5) meet the demands of the industry; 6) invest in career guidance programs.

Table 5 Cross-Case Analysis on the Insights of Senior High School Graduates in Job Searching

| Essential Thomas | Cases | | |
|--|----------|----------|---|
| Essential Theme | 1 | 2 | 3 |
| Disregard the Educational-Based Bias | ✓ | ✓ | ✓ |
| Nurture Job Resiliency | ✓ | ✓ | ✓ |
| Enhance the Job Readiness Skills for Practical | , | | |
| Experiences | V | ¥ | ¥ |
| Call for Work Immersion Opportunities for SHS Students | ✓ | ✓ | ✓ |
| Meet the Demands of the Industry | ✓ | ✓ | |
| Invest in Career Guidance Programs | ✓ | | ✓ |
| Promote Alternative Career Paths | ✓ | | |
| Job Accessibility and Equal Opportunity for PWDs | | | ✓ |
| Stay Confident and Manage Time | | √ | |

Disregard the Educational-Based Bias

Education and physical attributes aren't only the indicators of success. One of the themes that appear in all three cases is disregard the educational-based bias. This answers the still prevalent preference for college graduates over SHS graduates. The three participants came together and appealed for a fair and unbiased judgment, without prejudices.

Nurture Job Resiliency

Another theme that resurfaces in all three cases is nurture job resiliency. Things like staying positive, adapting, and persevering are some of the key concepts that emerged from the participants' responses. These are crucial during the job search process, especially in the face of rejection.

Enhance the Job Readiness Skills for Practical Experiences

In the job market, experience is undeniably crucial. A theme that emerges in all three cases is enhanced job readiness skills

for practical experiences. The three participants agreed on the importance of having relevant experience and abilities in the industry you wished to work in. As a result, their response included suggestions to emphasize this component more in high school.

Call for Work Immersion Opportunities for SHS Students

The last theme that appears on all of the three cases' responses is call for work immersion opportunities for SHS students. When applying for a job, all three participants stressed the importance of having prior experience. They are disappointed that an opportunity to learn something valuable was not properly implemented in the work immersion program that they participated in.

Meet the Demands of the Industry

Time is gold, and it should not be spent applying for jobs that do not match your interests, abilities, and other factors. Knowing the job hiring requirements entails being aware of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

what areas you need to improve or what skills you must possess. This is the initial stage in developing and improving yourself until you are qualified for the job. Both Seeker in Rural Area and Applicant in Urban Area emphasize this idea to increase chances of getting employed.

Invest in Career Guidance Programs

Investing in career advice programs is critical, particularly for students who have not gotten appropriate instruction or support from their schools. Seeker in Rural Area remarked that he wished they had been educated about a specific issue, such as what to do during an interview, and feels it should be included in the high school curriculum.

While there were some similarities in the insights of senior high school graduates in job searching, there were also some differences. These include promote alternative career paths, job accessibility and equal opportunity for PWDs, and stay confident and manage time.

Implications for Educational Practices

The results showed that the senior high school graduates were struggling to seek job opportunities and faced difficulties primarily due to the requirement of having a college degree or diploma.

Based from the findings, the researchers wanted to address the issue by delving into their experiences and know their struggles to give awareness to higher authorities. With this, the researchers find it significant to intensify the career guidance programs and the Gender and Development (GAD) principles, vocational education program as well as to foster relationship with the local industry, establish career centers, orient SHS students with Republic Act 11261 which is about the first-time job seekers assistance act, and contribute to the Sustainable Development Goal (SDG) 8 of UNESCO.

ABSTRACT

This study aims to identify the problems encountered by Barangay Tanods in Barangay Sto. Rosario in performing their duties and responsibilities during the COVID-19 pandemic. The Barangay Tanods, or Barangay Police Security Officers (BPSOs), serve as the lowest level of law enforcement officers in the Philippines and play a crucial role in maintaining peace and order in their respective barangays. However, their effectiveness and preparedness during the pandemic have been challenged due to various factors. The research utilizes a descriptive research design and qualitative descriptive approach to gather data through questionnaires, informal interviews, and observations. The data collected is analyzed using weighted mean and the Likert scale to assess the seriousness of the identified problems. The findings reveal several significant problems faced by Barangay Tanods during the pandemic. These include dealing with ill-tempered and stubborn individuals, non-compliance with safety protocols such as wearing face masks and observing social distancing, residents' resistance to following rules, encountering hostility and harassment, and facing challenges in correcting violators. These problems are categorized as serious to very serious based on their weighted mean scores. The study emphasizes the need for increased awareness and preparedness among Barangay Tanods in fulfilling their duties and responsibilities during the pandemic. The findings can serve as a basis for developing interventions and training programs to address these challenges effectively. By enhancing the competence and knowledge of Barangay Tanods, their ability to ensure the safety and well-being of their community can be strengthened even in the face of unprecedented circumstances like the COVID-19 pandemic.

INTRODUCTION

Barangays have ancient roots in the Philippines, serving as independent villages resembling city-states. Organized by indigenous communities, they were crucial to the social structure of the Philippine Archipelago. The term "barangay" stems from the Malay word "balangay," signifying early settlements with around 50 to 100 families (Jimenez, 2013).

Within the barangay governance structure, the Barangay Police Security Officers (BPSOs) or Tanods are frontline law enforcers within barangay governance. Supervised by the Barangay Captain, they serve as watchmen and peacekeepers. While collaborating with the Philippine National Police (PNP), they're not part of it but are acknowledged as force multipliers, assisting in law implementation within barangays (Manual on Barangay Peace Keeping Operation and Peace Keeping Action Team, 2009).

Barangay Tanods play a vital role in maintaining peace and order within their respective barangays, serving as an effective and indispensable instrument of even the smallest Local Government Units (LGUs). Composed of civilian volunteers, they safeguard their neighborhoods from lawless elements and deter criminals, particularly in areas where police presence may be limited. Equipped with nightsticks, they face inherent risks and dangers while carrying out their duties. However, the incentives provided to them are often inadequate compared to the risks they undertake (Gapangada, A.B., 2013).

In an effort to professionalize the BPSOs and enhance peace and order, the Department of Interior and Local Government (DILG) introduced a program that includes various training and seminars. However, due to financial constraints within the barangay, the selection process often skips this crucial stage. Consequently, the competency of barangay tanods in dealing with crimes comes into question. Their preparedness and awareness as first responders in

crime incidents continue to fall short, putting their lives and well-being at risk. Regrettably, a significant number of barangay tanods have already been assaulted, injured, or even killed, leaving their families and dependents to fend for themselves (DILG, 2003).

Amidst these challenging circumstances, The COVID-19 pandemic, caused by the SARS-CoV-2 virus, has surpassed previous outbreaks in global impact and death tolls. Emerging in Wuhan, China, in December 2019, COVID-19 primarily affects the respiratory system. While most cases are mild, some individuals, especially older adults and those with underlying conditions, face severe illness. Vaccines have been developed and proven effective in combating the virus (Joi, P. 2020; Center for Disease Control and Prevention, 2021).

Frontline workers, including many essential workers, play a vital role in meeting basic needs during the COVID-19 crisis. They often cannot work remotely and are disproportionately comprised of less educated and minority individuals, earning below-average wages. Providing hazard pay to these workers is justified due to the risks they face and for equity reasons (Francine D. et.al., 2022).

Jhoselle Tus's 2021 study sheds light on the challenges faced by barangay tanods amid the COVID-19 pandemic. Exposed to public areas, they not only risk contracting the virus but also endure mistreatment from violators while carrying out their duties. Tus identifies specific challenges within their work environment and explores the shifts in policing strategies necessitated by the pandemic, along with how barangay tanods cope with these changes. Meanwhile, Ayeo-eo, Paet, and Repoyo's study in the same year reveals three main challenges encountered by barangay front liners in Cabanatuan City. Residents' difficult behaviors, such as non-compliance with

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

safety measures like wearing facemasks and maintaining social distancing, pose significant hurdles for enforcement. Moreover, residents' resistance to following protocols and their unfriendly responses when confronted exacerbate the difficulties faced by barangay front liners (Ayeo-eo, S. et al., 2022).

Barangay tanods, as front-line workers, have not been exempt from the risks posed by the COVID-19 pandemic. Working in public areas, they face potential exposure to the virus. Apart from health risks, they also encounter mistreatment from violators. The sudden shift in their work environment has presented various challenges, and their ability to cope and adapt to new policing strategies is crucial. In response, the government has provided incentives to address their health

OBJECTIVES

The study determined the problems encountered by barangay tanods during the COVID-19 pandemic. It identified and analyzed the specific issues faced by barangay tanods in their work environment, including problems related to communication and other factors that hindered their ability to effectively perform their duties during the pandemic. By achieving these objectives, the study contributed to a better understanding of the challenges faced by barangay tanods during the COVID-19 pandemic. The findings could inform the development of targeted interventions, policies, and support systems to enhance the well-being and effectiveness of these essential frontline workers in the future.

STATEMENT OF THE PROBLEM

What are the problems encountered in performing their duties and responsibilities by the Barangay tanods of Brgy. Santo Rosario, Santa Rosa Nueva Ecija?

METHODOLOGY

The methodology for this study utilized a descriptive research design to address the research questions outlined above. A quantitative descriptive approach was employed, as it was best suited for providing a straightforward description focusing on the details of the event or experience, including the what, where, when, and why. To gather data for this study, a survey questionnaire was administered to the participants. The questionnaire was was adopted on the study of Ayeoeo,S.,Paet,E.,Repoyo,L., 2022Problems encountered by the barangay front liners on the onset of the covid-19 pandemic. It included a range of questions that explored their experiences, challenges, and interactions in the workplace.

The study involved 30 barangay tanods from Barangay Sto. Rosario, Sta. Rosa, Nueva Ecija, who served during the pandemic. These frontline responders played a crucial role in enforcing health protocols, ensuring compliance with quarantine measures, and assisting residents. Their experiences provide valuable insights into public safety and pandemic management at the grassroots level, highlighting adaptive strategies and community dynamics. Understanding their perspectives contributes to discussions on community resilience and preparedness for future crises.

Table 1. Likert Scale

| Numerical Rating | Statistical Limit | Descriptive Value | |
|------------------|----------------------------|-------------------|--|
| 4 | 4 3.26 - 4.00 Very Ser | | |
| 3 | 2.51 - 3.25 | Serious (S) | |
| 2 | 2 1.76 - 2.50 Moderately S | | |
| 1 | 1.00 - 1.75 | Not Serious (NS) | |

Table 1 represents the likert scale is used to gauge the seriousness of the problems encountered by the respondents regarding specific indicators.

RESULT AND DISCUSSION

Table 2 The Problems Encountered by Barangay Tanods

| Indicators | Weighted | Verbal | Rank |
|---|----------|-----------------------|------|
| | Mean | Interpretation | |
| 1. Ill tempered, Stern (Masusungit) | 2.60 | Serious | 7 |
| 2. Stubborn (Madalas Pasaway) | 2.75 | Serious | 6 |
| 3.Not frequent wearing of facemask (hindi madalas mag facemask) | 3.60 | Very Serious | 2 |
| 4.Not observing social distancing when gathered (ang di pagdistancia sa maraming tao) | 3.65 | Very Serious | 1 |
| 5.Not following rules (mga di sumusunod sa alituntunin) | 3.50 | Very Serious | 3 |
| 6. They hate you because of the prohibitions (may nakakagalit dahil sa mga ipinagbabawal) | 3.35 | Very Serious | 4 |
| 7. Sulking when corrected (nagtatampo sila pag nasisita) | 2.95 | Serious | 5 |
| 8.Harassed and bad-mouthed (inaaway at minumura) | 2.45 | Moderately Serious | 8 |
| TOTAL | 3.10 | Serious | |

These indicators evaluate the problems encountered by barangay tanods. Here is the interpretation for each indicator based on their weighted mean and the corresponding verbal interpretation:

Harassed and bad-mouthed (inaaway at minumura): With a weighted mean of 2.45, this indicator is classified as "Moderately Serious." It suggests that individuals who engage in harassment and verbal abuse are considered moderately serious. It ranks 8th among the indicators.

Ill tempered, Stern (Masusungit): This indicator has a weighted mean of 2.60, which falls under the category of "Serious." It suggests that individuals exhibiting ill-tempered or stern behavior are considered serious in terms of their impact or severity. It ranks 7th among the indicators.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Stubborn (Madalas Pasaway): With a weighted mean of 2.75, this indicator is also classified as "Serious." It implies that individuals who are frequently stubborn are regarded seriously. It ranks 6th among the indicators.

Sulking when corrected (nagtatampo sila pag nasisita): This indicator has a weighted mean of 2.95, falling under the category of "Serious." It implies that individuals who sulk or get upset when corrected are seen as a serious matter. It ranks 5th among the indicators.

They hate you because of the prohibitions (may nakakagalit dahil sa mga ipinagbabawal): With a weighted mean of 3.35, this indicator is also classified as "Very Serious." It suggests that individuals who are disliked or provoke anger due to prohibitions are considered a very serious issue. It ranks 4th among the indicators.

Not following rules (mga di sumusunod sa alituntunin): This indicator has a weighted mean of 3.50, falling under the category of "Very Serious." It indicates that individuals who fail to follow rules are regarded as a very serious concern. It ranks 3rd among the indicators.

Not frequent wearing of facemask (hindi madalas mag facemask): This indicator has a weighted mean of 3.60, falling under the category of "Very Serious." It indicates that individuals who do not often wear facemasks are considered to pose a very serious risk. It ranks 2nd among the indicators.

Not observing social distancing when gathered (ang di pagdistancia sa maraming tao): With a weighted mean of 3.65, this indicator is also classified as "Very Serious." It suggests that not adhering to social distancing guidelines when in a group is seen as a very serious violation. It ranks 1st among the indicators.

The total weighted mean for all indicators is 3.10, which falls under the category of "Serious." This indicates an overall serious level of concern for the evaluated behaviors or traits within the given context.

These factors suggest that face masks and social distances different fractions of asymptomatic individuals, as well as a realistic hypothesis of face masks protection during inhaling and exhaling, our simulations demonstrate that a synergistic use of face masks and social distancing is the most effective intervention to curb the infection spread. To control the pandemic, our models suggest that high adherence to social distance is necessary to curb the spread of the disease, and that wearing face masks provides optimal protection even if only a small portion of the population comply with social distance. In the case of COVID-19, community collaborations, healthcare systems, local governments, and the private sector will be critical in slowing the spread, mitigating the effects, and facilitating local recovery. Local governments are at the forefront of the fight: their leadership is not only distinguished by the language and speed with which they respond to this disaster, but it also has a direct impact on the health and wellbeing of their citizens. (B,M,D, Gupit, Cuevas, 2022)

CONCLUSION

1. In conclusion, the evaluation of indicators pertaining to the problems encountered by barangay tanods in Barangay Santo Rosario, Santa Rosa, Nueva Ecija, paints a concerning picture. The findings reveal a range of behaviors and issues, from ill-tempered attitudes to non-compliance with essential health protocols like wearing face masks and observing social

distancing. These factors collectively underscore a serious level of concern regarding the ability of barangay tanods to effectively carry out their duties in maintaining peace and order within the community.

Recommendation

Based on the identified problems of barangay tanods not observing social distancing and not wearing facemasks, the following recommendations can be made to address these concerns:

- 1. Implement targeted communication strategies to educate barangay tanods about the importance of social distancing and wearing facemasks. Utilize training sessions, informational campaigns, and materials to emphasize these practices' significance in disease prevention.
- 2. Provide comprehensive training programs to equip barangay tanods with the knowledge and skills needed to adhere to public health protocols. Ensure they understand the rationale behind these practices and the consequences of non-compliance.
- 3. Strengthen enforcement of social distancing and facemask mandates, assigning individuals or teams to monitor compliance. Implement penalties for violations to deter non-compliance effectively.
- Equip barangay tanods with necessary resources such as facemasks and sanitizers to enforce protocols effectively. Install signs and markings in public areas to remind individuals to maintain social distancing.
- 5. Encourage community members to actively participate in adhering to protocols and support barangay tanods in enforcement efforts. Foster a sense of collective responsibility for public health.
- Regularly assess the effectiveness of implemented strategies, gathering feedback from barangay tanods and community members. Use this feedback to refine approaches and adjust measures as needed for ongoing improvement.
- 7. By implementing these recommendations, barangay tanods can work towards addressing the problems of not observing social distancing and not wearing facemasks. Through effective communication, enforcement of rules, and community collaboration, the aim is to promote compliance and create a safer and healthier environment within the barangay.

ABSTRACT

Background: Kinesio tape is a stretchable medical tape used to treat a different of conditions, including musculoskeletal problems. To summarise all relevant data regarding the therapeutic efficacy of Kinesio taping for the treatment of improving pain and functional skills in various musculoskeletal conditions, a systematic review and network meta-analysis approach were employed. **Aim:** To ascertain whether Kinesio taping is a beneficial tool to decrease pain and functional abilities in different musculoskeletal conditions.

Method: A comprehensive research on PubMed, Medline, Google Scholar, and Science Direct database using keywords kinnesiotaping, musculoskeletal conditions, disorders, injuries, and physiotherapy evidence-based database was utilized for assessment.

Results: This review's findings demonstrate that Kinesio taping will improve in the pain and functional abilities in the Musculoskeletal conditions.

Conclusion: This review's findings provide enough proof that Kinesio taping will improve in the pain and functional abilities in the different musculoskeletal conditions.

KEYWORDS: Kinesio taping, taping techniques, musculoskeletal conditions, sham taping, scope of practice, evidence-based practice.

INTRODUCTION

Dr. Kenzo Kase introduced Kinesio taping (KT), the medical taping method, to Japan around 25 years ago. This method supports the connective tissue of fascia, the muscles, and joints in place of sports tape. But unlike sports tape, KT permits ROM and is said to hasten the recovery process following an injury by reducing inflammation as well as pain.¹

The media came to accept this different method of taping at the 1988 Seoul Olympics. Since then, it has been more well-liked as a therapeutic choice, especially for athletes. Physicians, physio therapists, & athletic trainers have all tried this technique to hasten the recovery process following musculoskeletal injuries.

KT tape has special qualities since it was made to resemble skin in terms of texture and weight and because it can flex between 30% and 40% of its resting length. This tape has an adhesive made completely of heat-activated acrylic and contains no latex. Patients don't need to reapply the tape for up to five days while using the shower or swimming pool since the 100% cotton fibres allow for rapid drying and evaporation. This prolongs the advantages of the therapy.

Usually, the tape is wrapped around and over the muscles to avoid over-contraction. It is believed that Kinesio tape reduces inflammation as well as pain by enhancing circulation & lymphatic circulation with no limiting the range of motion in an injured region.3. By using this method, stress and discomfort are released from the neurosensory receptors that may cause pain. Additionally, by microscopically raising the skin, the tape encourages lymphatic drainage, which lowers inflammation in the afflicted areas.³

One of the following mechanisms of action for Kinesio Taping may be at play: (1) increasing local circulation; (2) reducing exudative substances to lessen local edema; (3) promoting blood circulation via muscle facilitation; (4) delivering a positional stimulation on the skin, muscle, or fascial structures; (5) offering the appropriate afferent input to the CNS; or (6) restricting the ROM of the affected tissues.⁴

It is recommended to use kinesiology taping to treat chronic pain related to musculoskeletal disorders, such as lower back, shoulder, and knee discomfort, which are very usual in the adult general population. A tiny percentage of people may get mild skin irritation from kinesiology taping, but the likelihood and severity of hazards are low. When given the right instructions or training, patients or carers can do kinesiology taping on their

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

own for a cheap cost and without a prescription. Because of this, kinesiology taping is in line with best practices and may be used as a therapeutic alternative for musculoskeletal discomfort. Kinesiology taping is an approach which physical therapists commonly employ as an element of a comprehensive therapy programme for patients. Kinesiology tape helps best when combined with other therapies like manual therapy, according to the American Physical Therapy Association.⁵

METHODOLOGY

Study Design

Search Method and Eligibility Criteria

A thorough an examination of the literature was conducted using PubMed, Google Scholar, Medline, and Pedro as the search engines. According to research that is currently accessible, Kinesio taping can help with pain and functional abilities in orthopaedic diseases. Key words: scope of practice, evidence-based practice, musculoskeletal problems, Kinesio taping, taping techniques, and sham taping. The study only includes literature that discuss the use of KT for musculoskeletal problems; articles that have never been published in English were removed.

Sample Size

The terms Kinesio taping, taping techniques, musculoskeletal diseases, sham taping, scope of practice, and evidence-based practice were used to search a sample size of 32 articles. Twelve of these publications were ultimately selected for examination after papers meeting the inclusion and exclusion criteria were screened.

Inclusion Criteria

Articles that describe about Kinesio tape. Articles that were recently published. Articles with full text. Articles that are written in English.

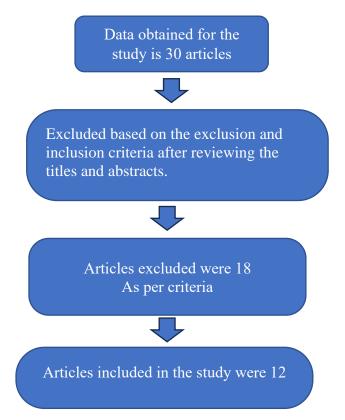

Exclusion Criteria

Articles before 2013.

Articles discussed other than Kinesio taping were excluded. Articles discussed other than musculoskeletal conditions were excluded.

Articles not containing the relevant discussion were excluded.

Flow chart

LITERATURE REVIEW

| s. | Author | Title | Study method | Study | Conclusion |
|----|--------------------------------|---|---|---|---|
| 1 | Anna Lina Rahlf 2019 | Kinesio taping improves perception of pain and function of patients with knee osteoarthritis | A randomised sham-controlled trial yielded 141 clinically and radiographically confirmed cases of knee OA. You can use Kinesio tape for three days, fake tape for three days, or no tape at all. The patients' self-reported discomfort, pain, and function were assessed using the WOMAC. The peak voluntary isometric contraction force for the quads femoris, the 10-meter walk test, the Balance Error Grading System, and the knee active ROM were among the other assessments. | design Randomized controlled trail | Reported clinical results of pain, stiffness in the joints, and function improved shortly after using Kinesio tape for three days in a row. This highlights the potential for Kinesio taping to be an effective conservative treatment for knee OA symptoms. |
| 2 | Majid Farhadi an 2017 | Effect of Kinesio taping on pain, range of motion, hand strength, and functional abilities in patients with hand osteoarthritis | A total of 38 individuals with a diagnosis of HOA were chosen for this randomized clinical study inquiry and placed in one of two groups: exercise or Kinesio tape with exercise. Nineteen people in each group participated in the eight-week intervention. The measures for pain quality, upper- extremity functional disabilities, range of motion, and hand grip strength were obtained prior to and following the treatment utilising the DASH questionnaire, goniometer, dynamometer, visual analogue scale, and 2-month follow-up. | Randomized controlled trail | According to the study's findings, Kinesio taping and hand exercises may be able to benefit HOA patients with their discomfort, ROM, hand strength, and functions and capacities in their upper extremities. Additionally, this problem can be treated by combining these two methods at the same time. As per the study's findings, Kinesio taping and hand exercises may be able to benefit HOA patients with their discomfort, ROM, hand strength, and functions and capacities in their upper extremities. Moreover, this illness can be treated by combining these two methods simultaneously. |
| 3 | Elaheh Aghapo ur 2017 | Effects of Kinesio taping on knee function and pain in athletes with patellofemor al pain syndrome | Fifteen individuals with unilateral PFPS (10 females and 5 males) underwent taped and untaped examinations and comparisons. circumstances. Seventy-five percent of KT's maximum stretch tension was used to tape the vastus medialis oblique of the damaged leg from origin to insertion. Important Outcome Measures The maximal eccentric and concentric maximum torques of the quadriceps were determined at 60 & 180°/s angular velocities using an isokinetic dynamometer. A VAS was used to gauge pain, while step-down and bilateral squats tests were used to assess functional performance. | Comparative study | When KT is applied over VMO, athletes with PFPS can have less pain, better functional performance overall, and increased quadriceps muscular strength. To assess the long-term impacts of this therapeutic technique, additional research is necessary. |
| 4 | Ebru Topde mir 2021 | The effectiveness of Kinesio taping on playing related pain, | Over the course of a week, a total of 117 people, comprising 82 women who had been professional violinists for at least two years, were randomised to receive either no application (control group), a sham tape application | A randomized controlled clinical trial | The discomfort associated with playing was somewhat improved in violinists who used KT, and after a week of use, left-hand grip strength and the degree of post-performance pain continued. It is also important |

DISCUSSION

Anna Lina Rahlf et al 2019 In comparison to a sham tape or no intervention, this study demonstrated that wearing a Kinesio tape for three consecutive days improves individuals with knee osteoarthritis' (OA) self-reported sense of pain, stiffness in their joints, and physical function. Although the exact mechanism underlying these benefits is yet unknown, it is thought that the flexibility of the tape and its application under strain cause the skin to mobilise during movements and enhance blood and lymph circulation, all of which have a direct impact on the feeling of pain. The study found that the Kinesio tape group experienced a decreased impression of stiffness, which might be attributed to the stimulation of cutaneous mechanoreceptors. This could potentially alter the relationship between cutaneous mechanoreceptors and proprioception. It is necessary to rigorously examine the clinical significance of WOMAC alterations since they are only considered clinically significant when the difference exceeds 12% of the baseline measurement or 6% of the highest value. For patients with knee OA, functional exercises combined with applied Kinesio tape are an effective therapy, especially during the transition phase, since it improves pain perception right away.6 This investigation concluded that Kinesio Taping over the lumbar spine for one week dramatically reduced pain and impairment in a randomised study of sixty persons with non-specific persistent low back pain. After one week, the experimental group improved by 4 points on the Oswestry Disability Index and 1.2 points on the Roland-Morris score; however, these improvements did not hold true after four weeks. Following treatment, the experimental group also reported a higher immediate reduction in pain compared to the control group; this

difference persisted for four weeks. Furthermore, after one week and four weeks, the trunk muscle endurance showed a significant increase. There was no discernible impact on other outcomes. The study found that in patients with persistent, nonspecific low back pain, Kinesio Taping decreased pain and impairment.¹⁸ Mostafavifar M et al 2012 Kinesio Taping (KT) is a therapeutic procedure that decreases pain, inflammation, and recovery times by enhancing blood and lymphatic circulation without limiting range of motion. The use of KT after musculoskeletal injuries is examined in this systematic study, with an emphasis on pain, function, and return to play. According to theory, KT reduces pain by microscopically elevating the skin, enhancing blood and lymph flow, and releasing pressure on and irritating neurosensory receptors. It has been found to relieve myofascial pain and meralgia paresthetica, two types of musculoskeletal discomfort that are not related to injuries. Supporting muscles without limiting movement improves function. Research indicates that while patellofemoral pain syndrome patients are not affected, healthy individuals may benefit from KT in terms of improved muscular effort and functional performance. It's still unclear, though, if KT is helpful as an adjuvant treatment to enhance function. There is no evidence that performance or return to play shortens the recovery period after a musculoskeletal injury. Although there is no conclusive evidence to support a link between the administration of KT and a faster return to play, the patient or athlete may believe that using KT enables them to do so. The search methodology, the restriction to English-language publications, and the lack of a precise criteria for musculoskeletal injury are some of the systematic review's limitations. The perceived benefits of KT are a major influence

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

in its use, and its advantages should be evaluated from a variety of angles.¹

CONCLUSION

The papers that were previously discussed demonstrated that Kinesio taping significantly improves pain and functional capacities in a variety of musculoskeletal disorders. When treating the majority of musculoskeletal disorders, the therapist is advised to do Kinesio taping alone or combine exercises with the Kinesio taping techniques.

SOCRATIC METHOD OF TUTORING: AN INNOVATION FOR BETTER STUDENTS' NUMERACY SKILLS

Rey O. Bongga

Zamboanga del Sur National High School - SHS, Pagadian City, Philippines

Article DOI: https://doi.org/10.36713/epra16836

DOI No: 10.36713/epra16836

ABSTRACT

This action research sought to determine the students' numeracy skills before and after using the Socratic Method of Tutoring (SMT). This exploration also measured the effect of SMT on the students' mathematical operations of numbers. Additionally, the study investigated the challenges encountered by the peer tutors in handling their peers' numeracy skills and their coping mechanisms in addressing the problems they experienced. The study used sequential explanatory research. The research participants consisted of thirty (30) students from the ABM strand and eighteen (18) peer tutors from the STEM strand of Zamboanga del Sur National High School – Senior High during the school year 2022-2023. The students obtained below-normal scores before the utilization of SMT, but the performance of the students in numeracy tests significantly improved after the intervention. The drastic shift in students' numeracy skills proved the effectiveness of the Socratic Method of Tutoring to the students. The Peer tutors experienced four (4) major problems or challenges: (1) the peer's lack of mathematical fundamentals, (2) the distracted peer's focus, (3) insufficient knowledge as tutors, and (4) management of time constraints as tutors. Further, the peer tutors articulated their four (4) coping mechanisms: (1) reviewing and reteaching the competencies to their Peers, (2) being patient towards their Peers, (3) self-preparation of the topic as tutors, and (4) proper time management as tutors. The findings of this research support the conduct of a learning program to capacitate the students in their numeracy skills and enhance the pedagogical skills of the Peer Tutors of the school.

KEYWORDS: Socratic Method of Tutoring; Numeracy Skills; Peer Tutors

1. INTRODUCTION

1.1 Context and Rationale

The careful assessment of K–12 students plays a crucial role in ensuring compliance with the standards and requirements set by the Department of Education (DepEd) for K–12 graduates. Education Secretary Leonor Briones, in conjunction with DepEd Order No. 18 series 2017, emphasized the importance of fostering reading skills in every child through the implementation of the Early Language, Literacy, and Numeracy Program (Department of Education 2017, 1). While numerous studies have been conducted on literacy programs, only a limited number have focused on numeracy. Numeracy encompasses the knowledge, skills, attitudes, and behaviors that students need to effectively apply mathematics in various contexts. It involves understanding the role of mathematics in the world and possessing the mindset and ability to utilize mathematical knowledge and skills proficiently (Numeracy for All Learners, 2022).

The Socratic Method of Tutoring (SMT) was anchored on the philosophies of teaching with the Greek philosopher Socrates. By probing the opinions of the pupils with questions, any contradictions will be made clear. Additionally, by employing this method of inquiry, it pushed people to challenge what they said and to look beyond the obvious (Scholle, 2020, 1). The

Socratic tutoring method can come across as adversarial. Students' views frequently contested by tutors to make them defend their decisions and demonstrate how a rule that produces a just outcome in one instance could have an unfavorable effect on another. When employing this method, tutors can be unpredictable by calling on students randomly or by giving them advance notice that they would be on call. Tutors often differ in demeanor and whether they will allow a student to opt out of providing an answer (Coughlin and Shadel, 2022, 1).

The inquiry method is another name for the Socratic method of tutoring. The method based on a student's current level of comprehension of a subject. Questions move from what the student already knows to new information and concepts the tutor leads the student into with their directed inquiry (Connor, 2003,1). A key component of the Socratic Method of teaching is the dialogue between the teacher and the students, who are then asked questions and given the opportunity to respond. This approach based on the principle that questions should be asked repeatedly until a student discovers the proper response to their academic query. It aims to support students in developing critical thinking abilities and meaningful engagement with their educational material (Saint Leo University, 2022, 1).

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Over time, a significant majority of students (63%) had trouble answering problems that called for knowledge of fractions, indices, logarithms, or units of measurement (Tariq et al. 2010, 47). It is alarming to know that some ZSNHS-SHS graduates have low levels of numeracy skills, considering the years they spent attending school.

1.2 Innovation, Intervention, and Strategy

The researcher designed a learning program to capacitate identified students who will act as tutors and determine those with low mastery levels in numeracy that will benefit the program. This learning program employs the Socratic Method of Tutoring to scaffold students' learning in numbers. In the aspiration to keep up the directive of the Department of Education to produce quality senior high school graduates, ZSNHS-SHS sought to implement tutorials among those students with the most minor numeracy skills at the school level. This strategy will reasonably convey the problems/challenges encountered by the tutors towards students' mathematical operation of numbers after implementing the innovation that affects the students' numeracy skills.

As an intervention, this learning program aims to: (1) sharpen the skills of participants in numeracy; (2) give technical assistance to students' difficulties in basic mathematical operations through tutors, and (3) convey the problems/challenges experienced by the tutors towards students' mathematical operations of numbers.

The usual tutoring method is a tutor-centered approach wherein most efforts of teaching-learning are within the tutors. At the same time, Socratic Method is a student-centered style of tutoring that utilizes the inquiry-based and discovery method of teaching-learning. Student tutors allowed their peers to express their prior knowledge of specific competencies and divulged their difficulties in solving mathematical operations of numbers. Repeated questions and exercises were given to their peers until they discovered the process of solving the mathematical operations of numbers.

Student tutors were purposely chosen from the STEM strand and assumed to have prior knowledge of the competencies. They have undergone training on how to employ the Socratic method of tutoring by the teacher knowledgeable with the approach. The tutorial program of their peers has started after the training of student tutors. The tutorial program lasted for four (4) weeks, every Friday, wherein students had ample time to attend the tutorial program. The tutorial program served as remediation for students who have difficulties executing mathematical operations of numbers.

The numeracy skills of individuals cover broad topics and competencies in Mathematics. In this innovation, the tutorial program focused on the following: the basic mathematical operations of fractions, indices, logarithms, exponents, and units of measurement. These competencies were the most common

topics that would come out during entrance tests and other professional examinations.

This intervention's main goal was to support the curriculum's learning objectives, notably in creating qualified and prepared K—12 Basic Education Program graduates. Senior High Schools are prepared for life after graduation, according to the Department of Education. The K-12 program framed to produce long-lasting learners who are competitive worldwide and equipped to pursue their chosen journey (Ciriaco, 2018). The researcher desired to implement a school-wide program that will capacitate, develop, and enhance the learners' numeracy skills.

1.3 Action Research Questions

Determining the impacts of the Socratic Method of Tutoring in numeracy skills on students at Zamboanga del Sur National High School - Senior High School (ZSNHS-SHS) during the school year 2022–2023 was the primary goal of this action research. This study aimed to use the Socratic Method of Tutoring to improve the student's numeracy abilities.

Specifically, this action research sought to answer the following queries:

- 1. What is the level of students' numeracy skills before and after applying the Socratic Method of Tutoring (SMT)?
- 2. How do students' numeracy skills levels compare when applied with SMT and not applied with SMT?
- 3. What are the problems/challenges student tutors encounter in handling peers' mathematical operations of numbers?
- 4. How do student tutors cope with the challenges encountered towards peers' mathematical operations of numbers?
- 5. Based on the findings, what learning program can be designed to capacitate students' numeracy skills?

2. MATERIAL AND METHODS / EXPERIMENTAL DETAILS / METHODOLOGY

2.1 Research Design

This study utilized a mixed methods sequential explanatory design incorporating sequentially quantitative and qualitative data collection and analysis in a progressive approach (Creswell & Piano Clark 2017, 77). This design is appropriate for this study which started with a quantitative description and comparison of students' numeracy skills before and after applying the Socratic Method of Tutoring (SMT). This exploration was followed by a subsequent qualitative phase on the problems and coping strategies to the challenges encountered by the student tutors in handling peers' mathematical operations of numbers.

2.2 Participants and Other Sources of Data and Information

The trained STEM strand students who served as tutors and the chosen students or tutees through the universal sampling of Accountancy, Business, and Management Strand (ABM) of ZSNHS-SHS were the participants in this action research. These

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

pupils, or tutees, responded to the verified pre-test and post-test created by the researcher.

Students who had an equivalent achievement level of utmost average down to absolutely no mastery during the pre-test were delegated into the learning program. In addition, non-probability sampling was used in choosing samples for the qualitative investigation in this action research. Data saturation was also utilized to determine the number of tutors who will supply information about the problems/challenges encountered in handling students' difficulties with the mathematical operation of numbers.

2.3 Research Instruments

The first research instrument used in the study is the researchermade Test on Students' Numeracy Skills. This instrument underwent content validation by the expert validators and an internal consistency reliability test using Cronbach's alpha. The 40-item numeracy skills test captured ten (10) competencies/objectives as reflected in the Table of Specification.

The second instrument used in the conduct of research is the interview guide which explores the problems and coping strategies for the challenges encountered by the student tutors in handling peers' mathematical operations of numbers. This interview guide was validated by content experts to ensure the validity of the data collection.

2.4 Data Gathering Procedure

In order to uphold the integrity of the research procedure, the researcher received permission from the Office of the Principal to carry out the study at the school level. Before deciding to participate as research subjects, the chosen students were asked for their informed consent.

As part of the initial stages of the data collection procedure, participants were informed of the privacy of any information obtained. The data collected is only utilized for the study. The study's relevance and significance, the explanation of risks and benefits, the required degree of commitment, and confidentiality protection were all brought up in the researcher's reminders to the research participants.

In this action research, both quantitative and qualitative data were progressively examined using the Sequential Explanation Design. Participants in the study responded to a validated researcher-made post-test to reassess the degree of the students' numeracy skills after using the Socratic Method of Tutoring and finishing the learning program. Results from the pre-test and post-tests were compared to see if the innovation had made any difference.

The interview method through a questionnaire was used to solicit qualitative data on the problems/challenges identified by the tutors regarding students' difficulties with the mathematical operation of numbers and their coping mechanisms to address those challenges.

2.5 Data Analysis

Descriptive and inferential statistics were employed to analyze this study's quantitative data. Specifically, mean, standard deviation and Mean Percentage Score (MPS) were utilized to summarize the level of students' numeracy skills before and after using SMT. From DepEd Memorandum No. 160, s. 2012, the degree of learners' numeracy abilities, the scaling of their score, and its descriptive equivalent are displayed here and have been modified to fit.

| Table 1. Mastery/Achievement Leve | Tab | <u>le 1.</u> | Mastery | /Achie | evement | Leve |
|-----------------------------------|-----|--------------|---------|--------|---------|------|
|-----------------------------------|-----|--------------|---------|--------|---------|------|

| Pre-test / Post-test Score | Descriptive Equivalent | |
|----------------------------|-------------------------------|--|
| 96 – 100% | Mastered | |
| 86 - 95% | Closely Approximating Mastery | |
| 66 - 85% | Moving Towards Mastery | |
| 35 – 65% | Average | |
| 15 – 34% | Low | |
| 5 - 14% | Very Low | |
| 0 - 4% | Absolutely No Mastery | |

Inferential statistics such as the paired-sample t-test was employed to determine the significant difference in the students' numeracy skills before and after using SMT. Moreover, thematic analysis was also utilized in inducing the themes of the qualitative data on students' difficulties with the mathematical operation of numbers and their coping mechanisms to address those challenges.

3. RESULTS AND DISCUSSION

Level of Students' Numeracy Skills. Students took two (2) sets of numeracy tests. The first was before the application of the Socratic Method of Tutoring (SMT), and the next test was after the application of SMT.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 2. Level of Students' Numeracy Skills Before SMT

| Test | Mean Score | SD | MPS | Descriptive Equivalent |
|---------------|---------------|------|--------|---------------------------|
| Numeracy Test | 17.37 | 4.13 | 43.42% | Average |

Total Items: 40

Scale: 96 – 100% = Mastered; 86 – 95% = Closely Approximating Mastery; 66 – 85% = Moving Towards Mastery; 35 –

65% = Average; 15 - 34% = Low; 5 - 14% = Very Low; 0 - 4% = Absolutely No Mastery

Table 2 shows that the level of students' numeracy skills before Socratic Method of Tutoring disclosed as Average (Mean = 17.37; SD = 4.13; MPS = 43.42%). The mean indicated that the students would typically get below 50% of the total items in every numeracy test conducted. The standard deviation proved that most students who took the test did not score more than 54%. Considering the years spent at school, the students obtained below-standard scores on the numeracy test. Moreover, the students demonstrated sub-par performance in mathematical operations of numbers. The school had some students with a low level of numeracy skills.

Among the ten (10) competencies considered in the numeracy test which was reflected in the Table of Specifications (TOS) (See Appendix B) and Test Item Mastery Level (TIML Pretest) (See Appendix C), only Competency no. 7. Solve problems involving sequences (TIML = 73%; Nearing Mastery) posted excellent level of numeracy skills. These results indicated the need to capacitate and enhance the student's skills in the operations of numbers. Numeracy appears to be a current area of relative difficulty, and learning increasingly complicated mathematical concepts seems to progress slowly. However, some teaching strategies that try to utilize comparative advantages in communicating number concepts seem to be useful in practice. To assess instructional strategies and identify the problems pupils confront, more research is needed (Buckley, Sue. 2007, 11–14).

Table 3 confirms the effectiveness of the Socratic Method of Tutoring as the interpretation change to Moving Towards Mastery (Mean = 32.87; SD = 4.93; MPS = 82.17%). On average, the students got 82% of the correct answers to the total items in the numeracy test. The standard deviation substantiated that more students could score up to 95% of the total items. The student's performance in numeracy tests significantly improved after SMT. The results inferred that the students could carry out good results with the guidance of their peers and their teachers. A notable increase in MPS is conspicuous after SMT.

Table 3. Level of Students' Numeracy Skills After SMT

| Test | Mean Score | SD | MPS | Descriptive Equivalent |
|------------------|------------|------|--------|---------------------------|
| Numeracy Test | 32.87 | 4.93 | 82.17% | Moving Towards Mastery |

Total Items: 40

96 – 100% = Mastered; 86 – 95% = Closely Approximating Mastery; 66 – 85% = Moving Towards Mastery; 35 – Scale: 65% = Average; 15 - 34% = Low; 5 - 14% = Very Low; 0 - 4% = Absolutely No Mastery

Out of ten (10) competencies included in the post numeracy test, which was reflected in the Table of Specifications (TOS) (See Appendix B) and Test Item Mastery Level (TIML_Post Test) (See Appendix D), only Competency no. 6. Solve problems involving factors of polynomials (TIML = 50%; Not Mastered) reported low levels of numeracy skills. This result convincingly shows the benefits of the Socratic Method of Tutoring (SMT) to the students. Positive evaluations praised the tutorials' inclusive communication style and clarity. Although research cannot verify that attending tutorials was the single factor in improving performance, it does indicate the benefit of early interventions to promote numeracy skills (Choudhary and Malthus 2017, 1-22).

Test of difference of students' numeracy skills before and after the Socratic Method of Tutoring (SMT). In this action research, the researcher used a paired-sample t-test to ascertain whether there was a significant difference between the students' numeracy abilities before and after SMT. The mean results of the pupils' numeracy examinations are shown in Table 4. (T-value = -19.09; p-value =.001). It showed that there is a substantial difference in the students' numeracy abilities before and after SMT. The fact that the students' performances significantly improved suggested that the tutorial session was effective in boosting their numeracy.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 4. Test of difference before and after SMT

| Variables | t-value | df | p-value | Interpretation |
|-------------------------|---------|----|---------|--------------------------------|
| Before and After SMT | -19.09 | 29 | .001 | With Significant Difference |

The outcome revealed that using SMT significantly improved pupils' numeracy abilities. Prior to SMT, the students' numeracy abilities were not very strong. However, with the aid of peer tutors after SMT, the students increased their knowledge and ability levels. Until students use the various parts of numeracy in real-world situations, they will not form the mental habits of a numerate citizen. Like literacy, numeracy is a skill that every person should be able to use (Steen 1999, 8-13).

One of the key benefits of the Socratic Method of Tutoring (SMT) is that it promotes active learning and engagement among students. By encouraging students to ask questions and participate in the learning process, they become more invested in their education and take ownership of their learning. This method leads to more excellent retention of information, as students are more likely to remember and apply concepts they have actively engaged. SMT also encourages student interaction and discussion, which is a bonus. Students learn cooperation and communication skills, which are crucial for success in both academic and professional settings when they are encouraged to collaborate to solve challenges.

SMT also encourages students to have a growth mindset, which encourages them to see barriers as opportunities for learning and development rather than things to fear. In general, the Socratic Method of Tutoring is a cutting-edge method of instruction that can greatly enhance students' numeracy abilities. By encouraging critical thinking, active learning, teamwork, and a growth mindset, this method aids students in acquiring the skills necessary to thrive in school and in their future employment. As a result, educators ought to think about incorporating it into their teaching methods.

Problems/Challenges Encountered by Student Tutors in Handling Peers' Mathematical Operations of Numbers. Selected STEM students were chosen to serve as peer tutors, assisting their peers in developing their numerical abilities and knowledge. Investigating the issues or difficulties the peer tutors faced while using the Socratic Method of tutoring is one of the goals of this study. To increase results, peer tutoring should address the students' difficulties and disappointments. According to Chow and Loke (2007, 237–244), peer tutors have better knowledge than teachers do of the learning difficulties that other peer learners encounter.

Using textual analysis of the qualitative responses, the peer tutors experienced four (4) major problems or challenges: (1) *Peer's lack of mathematical fundamentals*,

(2) Distracted Peer's focus, (3) Insufficient knowledge as a tutor, and (4) Management of time constraints as a tutor.

Theme 1: Peer's lack of mathematical fundamentals. Several peer tutors expressed that their peers lack mathematical fundamentals such as mathematical operations of fractions, decimals, indices, and others. Moreover, this should be the foundation for better numeracy skills of the students. The research participants (RP) disclosed the following:

"The problem that I have encountered with my tutees is they have to recall the basics such as: adding, subtracting, multiplying, and combining fractions. They also need to practice subtracting digits with decimals, as I observed with co-tutors. They had a hard time solving the operation. Nonetheless, they were able to cope with everything." -RP 3

"Honestly speaking, my tutees were hard to handle. They do not know how to multiply using the traditional way. They must depend on a scientific calculator." -RP 8

"One problem I encountered was their inability to recall the basics of Math, so I had to start from the very beginning before we had a smooth flow of the lessons." -RP 11

"Some of them do not know how to solve fractions. They also do not know how to evaluate simple problem/s. They do not know how to find the LCD." -RP 16

Theme 2: Distracted Peer's focus. Catching the attention of their peers is a great challenge confronting peer tutors. Some of the students were not motivated by every topic discussed by tutors. Addressing peer's focus plays an integral part in understanding the topic better as they communicated:

"At first, my assigned tutees lacked the presence of mind, which made it difficult to teach them even the most basic of math. It took them a while to fully comprehend the questions I prepared for them. It led to a point where I was also confused with my teachings." -RP 2

"Some of the tutees get distracted by their phone, and they go to their social media while I teach them." -RP 9

"I was having difficulty in teaching them since they tend to forget the lessons. One of the tutees does not pay attention. He gets distracted by his phone and social media." -RP 17

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

"One of my tutees is being distracted by his phone, which leads him not to understand the topic." -RP 26

Theme 3: Insufficient knowledge as a tutor. Peer tutors are not professional teachers, so they have limited content knowledge to teach and little experience in pedagogical skills to adjust to their peers' difficulties. Nonetheless, they have tried their best to help improve the numeracy skills of their peers. Peer tutors emphasized that they have difficulties in some topics or competencies tackled as they revealed:

" In my case, the difficulty in transferring knowledge was a problem or challenge. Because I know I am not good at Math and Problem-solving." -RP 7

"I have encountered the feeling of wanting to explain something concisely, but somehow, I cannot. Most of the items would take me a long time explaining it to them. However, I could still make them understand my point and the topic. It is a bit of a challenge when you should fully understand the whole lesson before teaching it to them." -RP 12

"Having trouble in solving those math problems and how I should answer it and explain it to them, and I felt nervous at the same time because I am not familiar with them." -RP 13

"After a month of tutoring my fellow schoolmates, I encounter some problems teaching them, like understanding the problem and solving the problem. As a student from the different building, they were shy to ask questions and sometimes hardly interact." -RP 14

Theme 4: Management of time constraints as a tutor. The process of having tutorials add a burden in the life of the peer tutors. As teachers mandated by the Department of Education to inculcate core values to the students, peer tutors responded by being Makatao in their peers by helping them. Moreover, peer tutors gave extra time to help students who have low numeracy skills. In this study, the peer tutors observed that time constraints should be dealt. The research participants (RP) expressed the following:

"The problems/challenges I faced were time management and balancing my priorities. Instead of having fun and playing with my classmates, I spent it teaching students. I did not know. I even got intimidated by my fellow tutors because of how smart they are." -RP 4

"I was challenged by the time given during tutorial as it seems it was not enough to perform the discussion." -RP 6

"I have encountered the feeling of wanting to explain something concisely, but somehow, I cannot. Most of the items would take a long time explaining it to them. But despite that, I was still able to make them understand the point and the topic." -RP 12

"To be honest, it takes much of time in teaching them for most of them forget the Basic Math." -RP 18

One of the most challenging tasks of teaching the students through SMT is their motivation to attend the learning program. Motivation serves as fuel to continue learning without expecting something in return. The use of diagnostic testing, according to studies, is only the first step in identifying the nature and severity of any skill impairments and treating them. Any identified issues must specify precisely for the best intervention plans to be developed and put into practice (Tariq 2004, 25-29). This exploration identified peer's lack of mathematical fundamentals, distracted peer's focus, insufficient knowledge as a tutor, and management of time constraints as the great challenges of the peer tutors. There are instances when students anticipated that a tutor would act as a knowledgeable group facilitator who would support them in their learning while fostering a good environment. They want the tutor to teach the content without thinking it is their responsibility to do the task (Holmes and Kaufman 1996, 371-377). Along with this proposition, this study claims the need to address the issues and concerns. Kindler et al. (2009) advocated with emphasis that the group, not just the tutor, is responsible for solving identified problems.

Coping Mechanisms for the Challenges Encountered by Tutors towards their Peer's Mathematical Operations of Numbers. Based on the coping mechanisms for the challenges encountered by peer tutors, the research participants articulated four (4) major categories: (1) Reviewing and reteaching the competencies to their Peers, (2) Being patient towards their peers, (3) Selfpreparation of the topic as tutors, and (4) Proper time management as tutors.

Theme 1: Reviewing and reteaching the competencies to their Peers. Recalling what has been discussed previously during the early years of study would probably give a smooth flow of the tutorial sessions. Some students could not remember because they did not understand the topic in the first place. Teaching the topics in another way could bridge the learning gap for the students. The research participants (RP) disclosed:

"I could cope by knowing their limitations and competencies in solving a particular operation. The tutees are indeed a fast learner as they are determined, focused, and has the eagerness to learn, therefore, the tutees were able to recall and solve problems effectively." -RP 3

"I have shown them how to multiply and taught them the way to multiply." -RP 8

"I was able to cope with the challenges by teaching them the basic maths again so they can recall it." -RP 9

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

"I taught them the things they forgot so we would not have a hard time progressing to the following lessons we needed to tackle." -RP 11

"Before jumping to the next problem, I make sure they understand by letting them solve a different math equation. I also explain to them some mathematical terms." -RP 15

Theme 2: Being patient towards their peers. Patience is a virtue. Peer tutors, like the teachers, also encountered different behaviors of their peers. It requires much energy to be patient, thinking you are the one giving the favor. However, some peer tutors pinpointed being patient as their coping mechanism when they shared:

" I managed to go through the obstacles through consistency. The consistent pursuit of teaching them lessons benefited them. I worked hard to teach them in different ways, such as oral, written, and games. In the end, they learned useful math from me." -RP 2

"I patiently wait for them if they use their phone, and I continue to teach them lessons." -RP 9

"I was being patient while teaching them because, without patience, our relationship can be ruined. As much as possible, we do our best to teach them in a fun way so that our goal in teaching will be successful. At the end of our tutorial session, we can see that my tutees are having improvements on themselves." -RP 17

"We used conversational and fun way of teaching them so that they will no't get bored during our tutorial." -RP 18

Theme 3: Self-preparation of the topic as tutors. Stock knowledge is beneficial as it will be a reliable wealth in the future. Peer tutors looked for ways to make the tutorial sessions better when they found out to have limited knowledge about the topic. Internet may be a good option for everyone. In this research, the participants emphasized the following:

" I deal with this challenge by asking how to do it so that you can learn to do it and have the knowledge to do it because confidence combined with preparation equals success." -RP 7

"Before I taught them everything I knew about certain topics, I studied. I was learning, reviewing previous lessons, searching up on youtube, managing my time and priorities well, and lastly taking down notes so I could later show it to them during our meeting." -RP 12

"By getting to know each other, sharing ideas, and helping each other with those math problems." -RP 13

"I cope with the challenges by teaming up together with my tutees. We study and learn together because some questions and mathematical problems are hard to understand. That is why we always ask sir Bongga to guide us." -RP 14

"I studied by myself before starting to tutor them." -RP 15

Theme 4: Proper time management as tutors. Some peer tutors conveyed that the time allotment for the tutorial program is short, considering that they met once a week for one (1) month. Nevertheless, they properly managed their time to complete the tutorial program. The research participants (RP) expressed the following:

" I cope with the challenge by managing my time wisely and doing my best. I did not care if I was not good at Math, but I am trying, and I know teaching those students will not only benefit them, but it will also benefit me as a person to be selfless and caring to others." -RP 4

"Considering many things to do, I set my schedule and priorities. Given that we only meet once a week for one month, I always check the level of the competencies we are about to teach. So far, the discussion went some progress." -RP 6

"Before I taught them everything I knew about certain topics, I studied. I was learning, reviewing previous lessons, searching up on YouTube, managing my time and priorities well." -RP 12

"I teach them the easiest way or fastest way in solving math problems to cover all the lessons we need to tackle. We usually do not proceed to the next topic if they do not yet understand the present topic." -RP 18

The peer tutors articulated the continuous implementation of the learning program to mitigate the problems/challenges they had encountered. Campbell et al. (2010) emphasize that the usage of mathematical terminology, strategic conversation, and praise between partners increased significantly during verbal encounters, while procedural speaking decreased. This study appeared to be largely successful in raising the self-esteem of both tutors and tutees, improving the frequency and quality of interactive math discussions among students, as well as the tutors' general social and communication skills.

Designing a learning program to capacitate the Students' Numeracy Skills. Based on the study's findings, the researcher created a learning program to boost students' numeracy abilities and enhance peer tutors' classroom management abilities. Senior High School students at Zamboanga del Sur National High School are being tutored using the Socratic Method to improve their numeracy skills. This intervention program supports the directive of the Department of Education to produce prepared and high-quality graduates of the K-12 Basic Education Program. In addition, this capacity-building program will also address the problems/challenges experienced by the peer tutors in handling the student's difficulties in the mathematical operations of numbers.

4. CONCLUSION

This study, which aims to determine the effects of Socratic Method of Tutoring (SMT) on students' numeracy skills,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

concluded that the use of SMT significantly improved students' numeracy skills as revealed by the pretest and posttest comparison of results. The remarkable increase in students' performance after the tutorial session warrants the claim that SMT is efficient in improving numeracy skills. Thus, SMT provides opportunities for learners to strengthen critical thinking, questioning, and dialogue to stimulate learning. Moreover, the thematic analysis induced four (4) major problems or challenges encountered by the peer tutors in handling their peers such as (1) the peer's lack of mathematical fundamentals, (2) the distracted peer's focus, (3) insufficient knowledge as tutors, and (4) management of time constraints as tutors. Further, the peer tutors articulated their four (4) coping mechanisms in handling the challenges encountered in the implementation of SMT: (1) reviewing and reteaching the competencies to their Peers, (2) being patient towards their Peers, (3) self-preparation of the topic as tutors, and (4) proper time management as tutors.

The findings of this research also recommend further exploration of the phenomenon, such as examining case studies or anecdotal evidence of the Socratic Method being used in teaching contexts. While these may not deliver immediate quantitative evidence of effectiveness, they can offer valuable insights and practical examples. Further research on the effectiveness of the Socratic Method of Tutoring is also recommended since the context in which the tutoring is taking place, and the specific goals through which SMT is implemented may vary depending on the subject, grade level, and individual learners.

ACKNOWLEDGEMENTS

The researcher is grateful for the invitation from the Schools Division Research Committee (SDRC), which is led by Dr. Ma. Colleen L. Emoricha, CESE, the Assistant Schools Division Superintendent, and Dr. Ma. Liza R. Tabilon, CESO V, the Schools Division Superintendent, has been a strong advocate for enhancing the research culture inside the Schools Division Office using the Basic Education Research Fund (BERF). This action research was funded by BERF.

The Peer Tutors, who granted an ample time to help their peers through tutoring despite their loaded schedules. The researcher guaranteed that this study's findings would help the school to produce quality graduates, capacitate the Peer Tutors in handling their peers, and convey the problems/challenges encountered in the implementation of the tutorial sessions.

To the Almighty Father, who is constantly patient, loving, provider, and merciful to the researcher. The researcher always glorifies His name!

ABSTRACT

The study unfolded the experiences of the school heads in award and recognition approach for teachers. This study employed a phenomenological research design which aims to determine the experiences and perceptions of the eight (8) participants. The generated themes on the positive experiences of teachers were improved work and creation of school-community Collaboration. On the other hand, the themes under negative experiences were the feeling of being left out, the sense of distrust and envy, and increased stress levels. Meanwhile, in the coping mechanisms of school heads in awards and recognition approach for the teachers, three subthemes were generated which were re-defining school cultures, providing appropriate motivation, and enacting different roles. Lastly, for the insights drawn from the experiences of the school heads three subthemes were also generated which were instituting a positive culture, creating trusting relationships, and provide adaptive leadership. These implied that school heads can provide effective support to teachers when utilizing a collaborative and coordinated strategy to facilitate improvement in teacher performance. Moreover, the results generated provided comprehensive data in conducting future research with similar scope. This study may be published in reputable research

INTRODUCTION

In the global world is that people influence important aspects of organizational performance in a multitude of ways. People conceive and implement the organizational strategy, while the mix of people and systems mostly determines an organization's capabilities. Competencies are required to execute the strategy, and these competencies are primarily a function of the skills and knowledge of an organization's human capital. Therefore, if an organization is to treat its employees as its most important asset, it has to be knowledgeable about what it is that motivates people to reach their full potential (Lawler, 2003).

Appropriate motivation plays a vital role in determining the quality of teacher work efforts. And the incentive system of the school largely determines how strongly teachers will be: motivated to perform their work responsibilities! These simple, intuitively obvious propositions have been largely ignored in most recent efforts to enhance the effectiveness of the public schools. Recognition is a very rewarding experience for an excellent classroom teacher and his or her students. Recognition for teachers builds off of some of the well-known extrinsic and intrinsic motivational theories. It offers hope for meaningful recognition to the other teachers working to improve studentlearning outcomes. It also brings pride and support from the teacher's students, administration, governing board, and the general public (Andrews, 2000).

However, in USA and Australia, there is a lack of recognition existing for outstanding teachers in the US and Australia. Based on the survey of 23,569 teachers in the countries found that only 50 percent of the teachers reported a recognition program existed in their schools. It is hard to believe that many school administrators, teacher unions, and governing boards have neglected to realize the importance of recognition as a motivator for their teachers (Andrews, 2000).

Further, in Somalia, it appears to be mounting concerns that unacceptably high proportions of teachers working in private secondary schools in Somalia are poorly motivated due to a combination of low morale and job satisfaction, poor incentives, and inadequate controls and other behavioral sanctions. standards of professional conduct performance are low and falling, and incentives for teachers to perform well are frequently weak. This has resulted in high labor turnover, teachers' part-timing as a means of topping up on the basic salary by teaching in two or more schools, late coming, lack of commitment to the job, and dodging classes which consequently results in poor performance of teachers and hence students.

In the public school system in the Philippines, where the organization is the largest, problems arise in terms of giving awards to teachers. The basis for giving awards and recognition depends on the availability of savings. There is an allotment of 5% of the human resource management, yet it is not even the priority or not enough for the department to use in recognizing the so many teachers in the entire country.

The award that employees most noticeably receive from their organization is pay, allowances, recognitions, and promotions, etc. These awards are used to encourage the employees to perform their tasks at full potential. Therefore, an organization has to be informed about what motivates people to perform in order to develop their employees' excellence (Lynch, 2000). Teachers are the most important part of the whole education system. Effective teaching and learning activity are impossible to take place if teachers themselves are not motivated. The theoretical foundation of this study was based on expectancy theory of motivation. It is stated that employees' performance is an outcome of their expectations (Vroom, 1964).

In the school setting, most teachers are not awarded and recognized for the countless hours they spend preparing for their students and the improvement they contribute to the learning outcomes. In an effort to determine what teachers are seeking, this study will collect data from the schools in Tagum Central Division, Tagum City. In doing so, this study investigated the experiences of school administrators on the awards and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

recognition approach for teachers. Awards are essential in order to motivate teachers and to make their performance effective. Through this investigation, one will discover some of the types of recognition teachers are looking for and some of the ways in which these recognition mechanisms may impact the culture of the school.

Purpose of the Study

The goal of the study was to investigate the experiences of school administrators on the awards and recognition approach for teachers. In a profession where teacher burnout is a major issue, it is necessary to determine ways to motivate and encourage individuals to continue doing this difficult work. When a teacher is motivated, it is more likely for them to have a positive impact on students and the school. This may also make the work environment more pleasant. In order to best support teachers, it is vital to understand what forms of recognition teachers seek. In addition, when such recognition systems are introduced, it is important to understand how the system may alter the environment.

Research Questions

The primary research questions of this study are the following:

- 1. What are the experiences of school heads on awards and recognition approaches for teachers?
- 2. How do they cope with the challenges of awards and recognition approach for teachers?
- 3. What educational insights are drawn from the study?

METHODOLOGY

Design and Procedure

This study adopted a phenomenological qualitative research design, exploring the lived experiences of school principals regarding awards and recognition for teachers. Phenomenology focuses on understanding the essence of experiences within a specific group, aiming to derive a deep, meaningful understanding of a phenomenon through detailed descriptions. The primary data collection method involved long interviews with school principals who have first-hand knowledge of the phenomenon. Additional data were gathered from documents and observations. The interviews were audio-recorded, transcribed verbatim, and then analyzed to identify themes and patterns that provide insights into the principals' experiences.

Ethical Considerations

Ethical integrity was paramount in the research design. The study adhered to the principles of social value, informed consent, and the minimization of risk. Participants, all professional teachers, voluntarily joined the study after being thoroughly informed about its purpose and procedures. They signed consent forms ensuring confidentiality and the right to withdraw at any point. The study also complied with the Data Privacy Act to protect participant identities, using pseudonyms in all reports.

Research Participants

The research involved eight school heads from Tagum Central District, selected through purposive sampling based on their experience and performance ratings. This method ensured that the participants could provide relevant and significant insights into the research questions.

Role of the Researcher

The researcher acted as a facilitator, expert in qualitative methods, data collector, and analyst. This involved conducting unbiased interviews, ensuring competent data collection and analysis, and safeguarding the data and participants. The researcher maintained a neutral stance throughout the study to avoid introducing personal bias into the data interpretation.

Data Collection

Data collection followed strict procedural guidelines, including obtaining necessary permissions from educational authorities and ensuring participant consent. The in-depth interviews were conducted using a researcher-developed questionnaire, which was validated by experts to ensure clarity and relevance. Responses were recorded and transcribed for analysis.

Data Analysis

The analysis utilized a thematic approach as described by Creswell (2012), beginning with data familiarization, followed by coding, and then theme development. The themes were reviewed to ensure they provided a comprehensive understanding of the data. This process involved a blend of inductive and deductive reasoning, ensuring a robust analysis that reflects the participants' true experiences and perspectives.

Analytical Framework

The analytical framework followed Ritchie and Spencer's (1994) five-step process: familiarization, identifying a thematic framework, indexing, charting, and mapping and interpretation. This structured approach allowed for a systematic analysis of the data, ensuring that findings were reflective of the participants' experiences and perspectives.

Trustworthiness of the Study

The study's trustworthiness was established through credibility, transferability, dependability, and conformability. Techniques such as prolonged engagement with participants, validation of findings through participant checks, and external audits were employed to enhance the study's reliability and validity. The researcher's adherence to a methodical process in data handling and analysis further reinforced the trustworthiness of the findings.

RESULTS & DISCUSSION

Experiences of School Heads on Awards and Recognition Approach for teachers

School principals encounter both positive and negative experiences with the awards and recognition approaches for teachers. The good and the bad experiences of school principals form an essential part of the context of their approach to the teachers. These experiences may influence subsequent behavior and may be especially important when they form the context for situations involving some level of risk or uncertainty.

Positive Experiences Paragraph

Awards and recognition systems in schools serve as potent motivators that significantly enhance teacher performance and engagement. Regular evaluations and adjustments, as highlighted by Susta (2019), ensure these systems remain relevant and effective, thus maximizing positive outcomes such as enhanced teacher performance and alignment with organizational goals. Beyond tangible rewards, these recognitions lead to intrinsic benefits including goal setting, professional development, and collaborative growth among teachers, as suggested by Kelly (1999). Additionally, such programs foster school-community collaboration, enhancing community involvement and support for the educational process. As noted by Andrews (2011), these initiatives not only highlight individual recognition accomplishments but also inspire other teachers and students, thereby setting high aspirational standards and strengthening community ties through visible recognition of teachers' hard work.

Negative Experiences Paragraph

However, the implementation of awards and recognition systems can also lead to several negative experiences among teachers. One significant issue is the feeling of exclusion for those who are not

$EPRA\ International\ Journal\ of\ Multidisciplinary\ Research\ (IJMR)\ -\ Peer\ Reviewed\ Journal\ Annel Control Con$

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

recognized, which can diminish morale and engagement, as described by Heneman (1989) and Breccia (2013). This sense of being left out can lead to disengagement and reduced job satisfaction among non-awarded teachers. Furthermore, as explored by Lange (2015) and Wang & Sung (2016), such systems can inadvertently foster negative competition, envy, and distrust among colleagues, disrupting teamwork and the collaborative environment that is crucial for educational

effectiveness. Additionally, the pressure to achieve and maintain recognition can lead to increased stress and anxiety, negatively impacting teachers' mental health and leading to burnout, which was highlighted in studies by Kelley (1999) and Saunderson (2010). This stress can decrease overall job performance and satisfaction, underlining the need for careful implementation and management of recognition systems within schools.

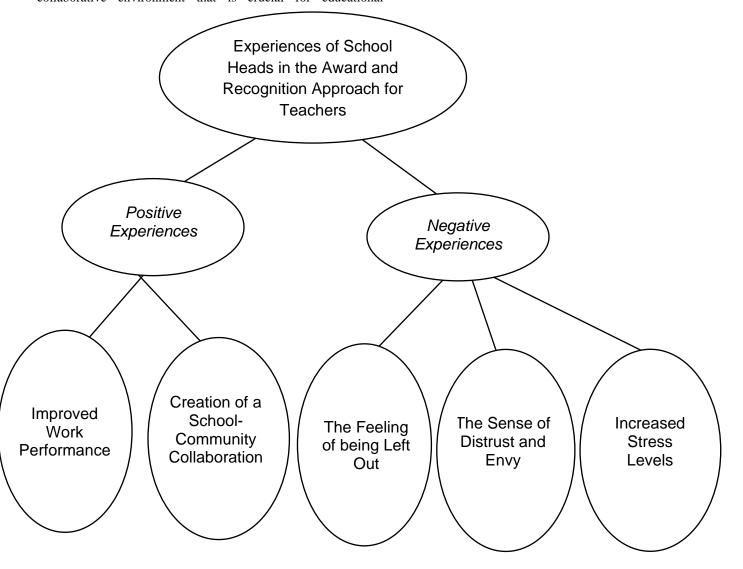

Figure 1: Emerging Themes on the Experiences of School Heads in Award and Recognition Approach for Teachers

Coping ways with the challenges of awards and recognition approach for teachers.

School heads employ several dynamic coping strategies to manage the complexities associated with awards and recognition systems for teachers. These strategies focus on re-defining school cultures, providing appropriate motivation, and enacting diverse roles, aimed at enhancing the efficacy and acceptance of these systems.

Re-defining School Cultures. School heads play a pivotal role in molding and adapting school cultures to support the effective implementation of awards and recognition programs. This involves a deep understanding and observation of existing cultural dynamics within the school, as suggested by Handrich (2014), who emphasizes the importance of school heads understanding teacher attitudes and the overall school atmosphere. Drew (2011) further asserts that school heads can enhance the positive aspects of school culture by integrating new values and attitudes that support recognition programs, thereby fostering a positive environment. Clear objectives and criteria,

which Becker (2011) notes as crucial for clarity and effective evaluation, are essential components that school heads work to define, ensuring that teachers fully understand what is expected of them and how they can meet these expectations.

Providing Appropriate Motivation. Motivation is critical in driving teacher participation and excellence within award systems. School heads focus on aligning motivation with the teachers' goals and the broader organizational objectives. The definitions by Obi Ndu, Ocho, and Okeke (1977) and Peretomode (1991) highlight motivation as a complex, socially learned behavior essential for achieving organizational goals. School heads involve teachers in decision-making processes regarding the award criteria and fund allocation, a practice supported by Andrews (2009) and Rosver (2010), who argue that such involvement is crucial for enhancing decision quality and promoting democratic values within the school setting.

Enacting Different Roles. The multifaceted roles school heads adopt are critical in navigating the award and recognition

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

landscape effectively. These roles, as identified by Casas (2014), range from interpretive to representational and authenticating, each playing a distinct part in shaping school and classroom cultures. By actively participating and supporting various facets of the award process, school heads ensure strategic implementation and visibility, which is essential for the success of recognition programs. These roles enable school heads to create and maximize opportunities for teachers, facilitating their professional development and aligning with the school's goals.

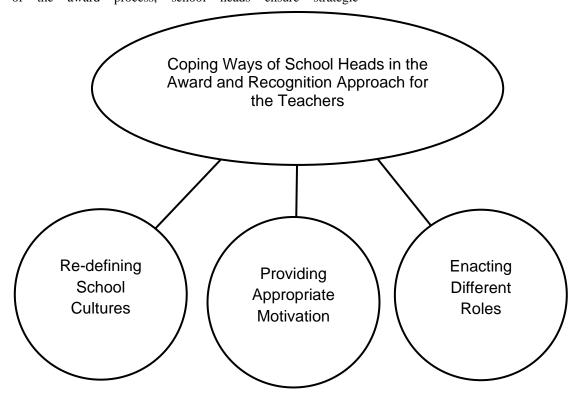

Figure 2. Emerging themes on the Coping Ways of School Heads in the Award and Recognition Approach for Teachers

Educational Management Insights Drawn from the Experiences of the School Heads

Instituting a Positive Culture. School heads recognize the critical role of cultivating a positive school culture to enhance the effectiveness of award and recognition programs for teachers. According to MacNeil, Prater, & Busch (2009), a positive school climate, which includes aspects like goal focus, cohesiveness, and adaptability, is foundational for fostering an environment where teachers feel motivated and valued. Participants in the study underscored the importance of creating a supportive atmosphere where teachers are encouraged and recognized, leading to reduced stress and increased job satisfaction. This aligns with Lindahl's (2001) assertion on the interdependence of school climate and teacher performance, suggesting that a supportive climate enhances both teacher satisfaction and effectiveness.

Creating Trusting Relationships. The ability to build trusting relationships is another vital aspect of educational management. Effective communication and empathy are essential, as they allow school heads to understand and address the concerns and aspirations of teachers. This collaborative approach not only involves teachers in the decision-making process but also strengthens their commitment to organizational goals, as noted by participants who emphasized the importance of empathy and understanding in leadership roles. The concept of emotional intelligence, as described by Mindtools (2019), plays a significant role here, enabling school heads to manage their emotions and better connect with their staff, thereby fostering a more cooperative and productive educational environment.

Providing Adaptive Leadership. Adaptive leadership is crucial for managing the diverse needs and capabilities of teachers, especially in the context of recognition and awards. School heads must be flexible and responsive to the varying expectations and professional goals of their staff. This involves creating opportunities for all teachers to achieve and be recognized, regardless of their starting points. Participants highlighted the need for school heads to harness the collective knowledge and expertise of their staff to navigate the challenges posed by award systems effectively. This approach aligns with Heifetz's (2018) views on adaptive leadership, which emphasizes the importance of collaborative problem-solving and innovation in contemporary educational settings.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

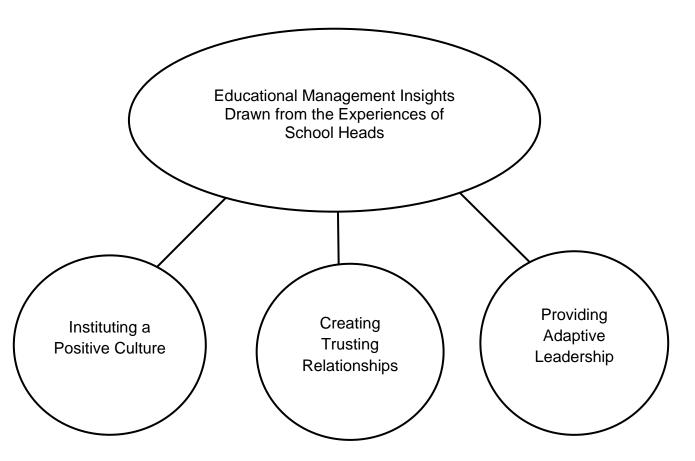

Figure 3. Emerging Themes on the Educational Management Insights Drawn from the Experiences of the School Heads

Implications and Future Directions Implications

The goal of this study is to investigate the experiences of the school heads in awards and recognition approach for the teachers. The first theme, which is all about the experiences of the school heads, generated five subthemes. The themes under positive experiences were improved work and creation of schoolcommunity collaboration.

Improved work. Implementing an effective awards and recognition approach creates a positive work environment that stimulates teacher growth and professional development. It encourages teachers to strive for excellence and engage in continuous learning. The prospect of recognition motivates educators to explore innovative teaching methods, participate in professional development programs, and pursue higher levels of academic qualifications. Ultimately, this improves the overall quality of education provided to students.

Creation of school-community collaboration. A successful awards and recognition approach requires collaboration between schools and communities. By involving the community, we extend appreciation beyond the school walls and strengthen the bond between educators and the society they serve. Community members can provide valuable insights, nominate outstanding teachers, and participate in the recognition process. This collaboration helps foster a sense of shared responsibility for education, as well as a deeper understanding of the challenges and triumphs in the teaching profession.

On the other hand, the themes under negative experiences were the feeling of being left out, the sense of distrust and envy, and increased stress levels.

The feeling of being left out

One of the significant challenges faced by school heads in implementing awards and recognition approaches is the feeling of being left out. As the focus shifts towards recognizing teachers, school heads might perceive their own contributions as undervalued or overshadowed. This can lead to a sense of exclusion and demotivation among school leaders. It is vital to address this concern by actively involving school heads in the selection process and recognizing their leadership and administrative achievements. Their role in creating an enabling environment for teachers should be acknowledged and appreciated.

Sense of distrust and envy

The implementation of an awards and recognition approach can inadvertently create a sense of distrust and envy among teachers and school heads. When recognition is perceived as unfair, biased, or influenced by favoritism, it erodes trust and damages the overall morale within the school community. School heads must ensure transparency and objectivity in the selection process, clearly communicating the criteria for awards and recognition. Open dialogue, feedback mechanisms, and appeals processes can help address any concerns related to fairness, thereby fostering a sense of trust and unity among all stakeholders.

Increased stress levels

The teacher awardee then has a reputation to live up to his/her accomplishments. While some saw this as a positive outcome, others may feel they were required to live up to what the award presented, always requiring them to work harder.

These implied that the tremendous successes made by school heads on the subject of award and recognition approach for teachers are enhancing the work performance of the teachers and inviting additional opportunities for school and community partnership. However, they face a significant obstacle in the form

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of the establishment of a healthy and safe working environment for the teachers within the organization.

Pertaining to the coping ways of school heads in the award and recognition approach for teachers, three subthemes were generated, which were re-defining school cultures, providing appropriate motivation, and enacting different roles.

Re-defining school cultures

Principals can promote a collaborative school culture by emphasizing teamwork and shared goals. Encourage teachers to collaborate on projects, share best practices, and support one another's professional growth. By nurturing a culture of collaboration, principals create an atmosphere where teachers view recognition and awards as celebrations of collective achievements rather than individual accomplishments.

Providing appropriate motivation

Appropriate motivation will help teachers achieve their career goals. If an individual is motivated, there is a high chance that they will be able to attain the performance standard and criteria. Job satisfaction would increase too.

Enacting different roles

Principals should play an active role in planning and executing recognition programs. Ensure that the selection process is fair, transparent, and inclusive. Involve teachers, students, parents, and community members in the decision-making process, thus reinforcing a sense of shared responsibility and ownership.

These implied that the school heads are working on the internal aspect of awards and recognition for the teachers. They restructure the school culture to make the approach accepting for the teachers. They also provide appropriate motivation to enhance teachers' commitment and engagement. And they enact different roles to enable teachers to acquire the varied support they need to achieve the performance standard.

Further, on the educational insights drawn from the experiences of school heads, the following subthemes emerged: instituting a positive culture, creating trusting relationships, and providing adaptive leadership.

Instituting a positive culture

Clearly define the core values and principles that guide the school community. These values should emphasize the importance of excellence in teaching, continuous learning, collaboration, and student success. Aligning the awards and recognition scheme with these values, principals can promote a positive culture that values and celebrates the achievements of teachers.

Creating trusting relationships

Foster open and transparent communication channels between principals and teachers. Regularly share information about the awards and recognition scheme, its purpose, criteria, and selection process. Ensure that the process is fair, objective, and accessible to all. Providing clear communication, principals build trust and confidence among teachers, reducing any apprehensions or misconceptions.

Provide adaptive leadership

Principals should articulate a clear vision for the awards and recognition scheme that aligns with the overall goals of the school. Inspire teachers by communicating the purpose, significance, and long-term benefits of recognition. A visionary leader creates a sense of purpose and direction, motivating teachers to strive for excellence and actively participate in the program.

These implied that school heads can provide effective support to teachers when utilizing a collaborative and coordinated strategy to facilitate improvement in teacher performance. The school leaders may strengthen the capability of both organizations and teachers, finally resulting in the achievement of great outcomes.

Future Directions

Data obtained had future directions for various stakeholders in education, including DepEd Officials, school administrators, teachers, students, other stakeholders, and future researchers.

DepEd Officials

The findings of the study prompt them to give webinars and training to school heads so that they could cope effectively with the challenges of the award and recognition approach for the teachers.

School Administrators

The findings of the study give insights on what strategies and best practices should be incorporated in giving awards and recognition to the teachers. The findings would also enlighten them on the importance of acknowledging the efforts and contributions of the teachers at school. The findings would also help school administrators to adjust and adapt to the varying needs of the teachers.

Teachers

The findings of the study give them information on the common challenges in awards and recognition; hence, they can benchmark collaborative efforts that would assist them in gaining awards and recognition.

Other Stakeholders

The findings of this study encourage stakeholders to be involved in planning school initiatives that help and assist teacher development. Such initiatives could be included in the crafting of a School Improvement Plan (SIP) in which stakeholders could participate.

Researchers

Several areas for future studies within this field remain need to be explored. Further development on the similar and different contexts can be done in this study. It is recommended to consider the experiences of the school heads in using varied ways of giving awards and recognition to the teachers (e.g., public recognition, private recognition, peer recognition, etc.). Surely, this will yield advantageous findings and implications tailored to the strengthening of awards and recognition approach in schools and other hierarchical organizations in the education sector.

TEACHERS' CONFLICT-INDUCING ATTITUDES AND THEIR REPERCUSSIONS ON STUDENTS' PSYCHOLOGICAL HEALTH

Chrysadel Ainee M. Masanguid, LPT¹, Wilson E. Gamao, PhD²

¹Teacher I, Tubaon National High School, Tubaon, Tarragona Davao Oriental, Philippines ²Professor IV, Rizal Memorial Colleges, Inc., RMC Buildings, Purok 5, Lopez Jaena & F. Torres Streets, Poblacion District, Davao City, Philippines

Article DOI: https://doi.org/10.36713/epra16792

DOI No: 10.36713/epra16792

ABSTRACT

This purpose of the study was to determine the influence of teacher's conflict-inducing attitudes on the student's psychological health. A total of 110 public elementary school teachers teaching in Tarragona District, Davao Oriental Division were identified through Tabachnick and Fidell (2007) calculation of sample size. The study utilized a descriptive-correlation design. Mean, Pearson r, and regression analysis were used as statistical tools of the study. Results revealed on the extent of teacher's conflict inducing attitudes in terms of Teacher Incivility were sometimes evident, in terms of Teacher Discrimination was sometimes evident, in terms of University Resources was oftentimes evident. On the Student's Psychological Health was always evident. Clearly, the findings inferred a strong significant relationship between teacher's conflict-inducing attitudes and student's psychological health. Based on the result of the analysis, the teacher's conflict inducing attitudes domains namely: teacher incivility, teacher discrimination, and university resources significantly influences student's psychological health by registering a p-value of <.000 in the level of significance. Further, the result indicates that for every unit increase in the three domains of teacher's conflict inducing attitudes predictors, the student's psychological health will increase by 3.894 holding other factors constant. Conflict inducing attitudes significantly influenced student's psychological health. Hence, this study recommends teachers should be encouraged professional development programs that target specific conflict-inducing attitudes, leading to personal growth and improved professional practice. Teachers should engage in training and workshops that help them develop stronger interpersonal skills and conflict resolution strategies.

KEYWORDS: Teacher's conflict inducing attitudes, psychological health, teacher incivility, teacher discrimination, university resources

INTRODUCTION

Conflicts are bound to arise since these are fundamental to human nature and are necessary for moral and emotional growth. Likewise, it is present at every school, too. Despite the fact that they are a reality that is minimized or "hidden" by teachers and school administrators, these conflicts have an impact on the quality of the learning environment as well as the relationships between individuals within the school, especially the learners. The mental and interpersonal behavior of students has a direct connection with effective teaching and learning environments. Despite the fact that many studies have concentrated on the positive behavior of teachers, there is little research on the conflict-inducing attitudes of educators.

Bad attitudes among teaching faculty members can unfortunately be worsened by a variety of factors, including but not limited to teachers' low pay, lack of comprehension, inappropriate behavior, authoritative behavior, excessive workload, lack of in-service training, gender bias among teachers, and university culture. Destructive behavior makes the issue worse and has a bad impact on the relationships between teachers and pupils. These conflictinducing attitudes may hamper the learning processes and psychological health of students in educational institutions (Kidger et al., 2016). Moreover, according to recent studies (Denhardt et al., 2012; Bibi & Karim, 2015), employee rudeness, discrimination, and higher levels of dissatisfaction with organizational resources might lead to conflict-inducing attitudes. The effects of rudeness, prejudice, and university resources on teacher-student relationships have been investigated in a number of studies, but their implications on the psychological health of students have not been studied.

In Istanbul, Turkey, the study by Agir (2019) looked at the impact of perceived teacher behaviors on students' attitudes toward learning and their sense of self-esteem. The perceived teacher

behaviors were found to have a negative impact on self-esteem, a positive impact on the expectations, openness, and nature of learning dimensions in the sub-dimensions of attitudes toward learning, and a negative impact on learning-related anxiety.

In the Philippine context, according to Rico and Rodriguez (2012), students have been exposed to many sorts of violent behavior from their teachers. In grades 1-3, 7 out of 10 in grades 4-6, and 6 out of 10 in high school, at least 5 out of 10 Filipino students reported experiencing some form of violence in the classroom, according to a 2009 report by the children's organization PLAN Philippines. Based on the report, psychological and verbal abuse are the most frequent types of violence that Filipino students encounter. These take the form of joking, calling names, swearing, yelling, and using foul language. It was shown that children who experience violent behavior from their teachers typically suffer from psychological problems like low self-esteem, anxiety, anger, and helplessness.

Meanwhile, in Davao Oriental, the goal of this study was to ascertain how student behavioral engagement in the Tarragona District was impacted by teacher behaviors such bullying. According to the study's findings, bullying by teachers has a big impact on how engaged their behavior is. Because of bullying in the classroom, students find it difficult to focus on their work, participate in class activities, and pay attention to their teacher's directions. As a result, they get disengaged from their studies.

Unfortunately, only a limited number of research investigated the issues on teachers' conflict-inducing attitudes and students' psychological health. Hence, the researcher is inspired to move further with this study as a result of the aforementioned manifestations since it is critical to gauge the extent of teachers' conflict-inducing attitudes and students' psychological health. There are several researches on the relationship between teachers'

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

attitudes and students' psychological health, but none of it has been specifically established for teachers' conflict-inducing attitudes, which place a strong emphasis on teacher incivility, teacher discrimination, and university resources. In order to determine how the two variables are related, it is imperative to continue with the current inquiry.

Statement of the Problem

The study aimed to determine the extent of teachers' conflict-inducing attitudes and extent of students' psychological health. Specifically, it sought to answer to the following questions:

- 1. What is the extent of teachers' conflict-inducing attitudes in terms of:
 - 1.1 Teacher incivility,
 - 1.2 Teacher discrimination, and
 - 1.3 University Resources
- 2. What is the extent of students' psychological health?
- 3. Which domains of teachers' conflict-inducing attitudes significantly influence students' psychological health?
- 4. What predictive model can be generated from the regression analysis?

METHODOLGY

The current study adopted a quantitative descriptive-correlational methodology to examine the relationship between teachers' conflict-inducing attitudes and students' psychological health. Utilizing multiple linear regression, the research aimed to determine the extent of these attitudes and their correlation with the psychological well-being of students. Descriptive methods helped characterize the current states of both variables, while the correlational approach assessed the strength and nature of their relationship. Participants were selected via purposive sampling from public schools in Tarragona District, Davao Oriental, ensuring that respondents could provide relevant data based on predefined inclusion criteria.

The research instruments comprised two main parts: a questionnaire assessing teachers' conflict-inducing attitudes and another for students' psychological health, both adapted and modified from Ali, Ashraf, and Shuai (2019) after expert validation to ensure reliability and validity. The instruments demonstrated satisfactory reliability indices from pilot testing, confirming their effectiveness for the main study. Respondents rated items on a five-point Likert scale, with established ranges aiding the interpretation of the severity and frequency of observed behaviors and attitudes.

Data collection followed a structured process that began with obtaining necessary permissions and conducting content validation and pilot testing to refine the questionnaires. The main

survey was distributed and administered face-to-face, followed by the retrieval of completed questionnaires for data analysis. Ethical considerations were rigorously maintained, ensuring respect, safety, and confidentiality for all participants. Data were analyzed using statistical tools such as mean, standard deviation, Pearson correlation, and linear regression to interpret the results, aiming to provide actionable insights into how teachers' behaviors impact student well-being and inform interventions to enhance educational environments.

RESULTS AND DISCUSSIONS

Extent Of Teacher's Conflict-Inducing Attitudes in Terms of Teacher Incivility

Table 1 in the study delineates the extent of teachers' conflict-inducing attitudes in terms of Teacher Incivility, arranging the data from highest to lowest mean scores to enhance clarity and understanding. The top-rated indicators include: teachers or supervisors addressing others unprofessionally at a mean of 3.67 (rated high), colleagues displaying hostile expressions like stares or sneers at 3.45 (high), and minimal attention to one's statements by coworkers or supervisors at 3.38 (high). Less severe but still notable were behaviors like ignoring colleagues (3.27, rated moderate) and making disrespectful remarks (2.58, low). The overall average score for Teacher Incivility stood at 3.27, indicating a moderate level of such attitudes being sometimes evident.

Research in educational settings identifies incivility as behaviors that disrupt relationships or the learning process, such as rudeness or non-inclusive decision-making, which can provoke conflicts stemming from personality clashes or miscommunication. Notably, incivility among faculty can diminish respect for educators, degrade the learning environment, and even lead to reduced productivity due to its impact on psychological wellbeing. Students perceive and are affected by teachers' uncivil behaviors, which might include unpreparedness, unexpected assessments, or lack of engagement in the classroom.

Furthermore, uncivil conduct has been linked to numerous adverse outcomes such as diminished self-esteem, psychological distress, and disrupted educational processes. Incidents of incivility can lead faculty to reconsider their career choices and impact their overall job satisfaction. The reciprocal nature of disrespect between students and teachers can foster an atmosphere that hampers both teaching effectiveness and student learning. Research underscores the need for addressing incivility within educational institutions to foster healthier, more productive teaching and learning environments.

| No. | Items | Mean | Descriptive Interpretation |
|-----|---|------|----------------------------|
| 1 | My coworkers and/or supervisors pay little attention to my statements or showed little interest in my opinions. | 3.38 | Moderate |
| 2 | My colleagues gave me hostile looks, stares, or sneers. | 3.45 | High |
| 3 | My coworkers and/or supervisors address me in unprofessional terms, either publicly or privately. | 3.67 | High |
| 4 | My coworkers and/or supervisors make insulting or disrespectful remarks about me. | 2.58 | Low |
| 5 | My coworkers and/or supervisors ignored me or failed to speak to me (e.g., gave me "the silent treatment"). | 3.27 | Moderate |
| | Overall | 3.27 | Very High |

Table 1. Extent of teacher's conflict-inducing attitudes in terms of Teacher Incivility

Extent of teacher's conflict-inducing attitudes in terms of Teacher Discrimination

Teacher Discrimination involves treating someone unfairly due to their gender, religion, ethnicity, or political affiliation, which can foster a culture of power, domination, and favoritism at work. This often leads to emotional distress and discomfort among employees. Discrimination can also impact teacher interactions

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and workload distribution, significantly affecting job satisfaction, emotional health, and teaching efficacy.

Table 2 details teacher's conflict-inducing attitudes regarding discrimination, presenting data from highest to lowest mean scores: discrimination by colleagues due to gender and ethnicity rated high at 3.44; doubting of one's judgment rated moderate at 3.38; accusations of incompetence rated moderate at 3.22; undervalued evaluations at 2.66, and exclusion from social and professional circles at 2.43, both rated low. The overall average was moderate at 3.02, indicating that discrimination occasionally occurred.

Globally, discrimination remains pervasive despite laws aimed to curb it, affecting various demographics across workplaces,

including education. Discrimination creates an environment where employees may feel undervalued and stressed, and it negatively impacts organizational performance. In education, discrimination can also lead to conflict and entrenched cultural stereotypes, complicating interactions among teachers and affecting the school's social harmony.

For example, in Australia, LGBTIQA+ teachers and school leaders report discrimination and disadvantage, affecting their employment and well-being. Such experiences can lower job satisfaction and overall well-being, underscoring the need for robust anti-discrimination policies and practices to foster inclusive and supportive workplace environments.

| No. | Items | Mean | Descriptive Interpretation |
|-----|---|------|-----------------------------------|
| 1 | I experience discrimination by my colleagues (due to gender and ethnicity). | 3.44 | High |
| 2 | My coworkers and/or supervisors accuse me of incompetence. | 3.22 | Moderate |
| 3 | My coworkers and/or supervisors doubt my judgment on a matter over which I have responsibility. | 3.38 | Moderate |
| 4 | My coworkers and/or supervisors rate me lower than I deserved on an evaluation. | 2.66 | Moderate |
| 5 | My coworkers and/or supervisors ignore or exclude me from social and professional comrades. | 2.43 | Low |
| | Overall | 3.02 | Very High |

 Table 2. Extent of teacher's conflict-inducing attitudes in terms of Teacher Discrimination

Extent of teacher's conflict-inducing attitudes in terms of University Resources

The competition for limited university resources, such as funding, materials, and facilities, often leads to conflicts among teachers, creating a tense and negative school environment that can adversely affect both educators and students. These resource conflicts typically manifest in teacher behaviors and school dynamics, as illustrated in Table 3, which presents data in descending order of severity. Notable concerns include poor physical resources adversely affecting working conditions (rated very high at 4.35) and difficulties accessing facilities (rated high at 5.05). Other significant issues highlighted include pressure to use only available resources and perceptions of inadequate compensation.

Such competition can result in open conflict and a lack of cooperation among staff, impacting the school's operational

efficiency and the psychological well-being of students. To mitigate these effects, schools must prioritize fostering a supportive culture through open communication, collaboration, and effective conflict resolution strategies. This approach can enhance overall academic success and student well-being by creating a more harmonious environment.

Furthermore, the distribution and management of resources play a crucial role in either exacerbating or alleviating conflicts within educational institutions. Effective administrative strategies that ensure equitable resource allocation and clear, transparent communication can reduce potential conflicts and build a more collaborative atmosphere. Addressing these issues is vital for maintaining a productive educational environment where both students and teachers can thrive.

| No. | Items | Mean | Descriptive Interpretation |
|-----|---|------|----------------------------|
| 1 | I think that lack of facilities creates conflict, due to inadequate | 3.42 | High |
| | financial resources. | | |
| 2 | Incentives and salary are less than I deserve. | 3.39 | Moderate |
| 3 | Poor physical resources of my school affect working conditions | 4.35 | Very High |
| | badly. | | |
| 4 | I have been pressured to use only available resources. | 3.97 | High |
| _ | | 4.05 | YY: 1 |
| 5 | Facilities and resources in school are not easily accessible. | 4.05 | High |
| | Overall | 3.83 | High |

Table 3. Extent of teacher's conflict-inducing attitudes in terms of University Resources

Summary on the Extent of teacher's conflict-inducing attitudes

Table 4 summarizes the extent of teachers' conflict-inducing attitudes across three indicators: Teacher Incivility, Teacher Discrimination, and University Resources. The mean ratings are as follows: Teacher Incivility scored 3.27 (Moderate), indicating

that conflict-inducing attitudes related to incivility occur occasionally; Teacher Discrimination scored 3.02 (Moderate), suggesting that discriminatory attitudes also occur sometimes; and University Resources scored 3.83 (High), showing that conflicts over resources are frequently evident. The overall mean for these domains is 4.19 (High), indicating that conflict-inducing attitudes among teachers are often evident.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Resource competition, such as for time, money, space, materials, and equipment, invariably leads to conflicts within educational settings. Insufficient resources can force tough decisions, often laying the groundwork for conflict when not all parties receive their desired share. Furthermore, scarcity can exacerbate competition, increasing the likelihood of conflicts over both tangible and intangible assets.

In terms of Teacher Incivility, uncivil behaviors by teachers, including non-participatory lectures, distant attitudes, and unpredictability in assessments or class schedules, deeply affect students' respect and comfort in the learning environment. Such

incivility not only disrupts classroom dynamics but also diminishes teachers' morale and motivation, negatively impacting their professional and personal well-being.

Regarding Teacher Discrimination, particularly among LGBTQIA+ staff in Australia, discrimination and disadvantage in schools are significant, despite a generally progressive societal stance. This discrimination can lead to job insecurity, altered responsibilities, and overall poorer well-being among affected teachers, demonstrating the profound impact of such biases on individuals and institutional culture.

| No. | Indicators | Mean | Descriptive Interpretation |
|-----|------------------------|------|----------------------------|
| 1 | Teacher Incivility | 3.27 | Moderate |
| 2 | Teacher Discrimination | 3.02 | Moderate |
| 3 | University Resources | 3.83 | High |
| | Overall | 4.19 | High |

Table 4. Summary on the extent of teacher's conflict-inducing attitudes

Extent of the Student's Psychological Health

Student Psychological Health refers to a state where individuals are effective, content, and able to fully express their potential, crucial for their overall well-being, academic performance, and long-term success. When students are psychologically healthy, they are more engaged, motivated, and academically successful. Recognizing and prioritizing mental health in educational settings is essential, involving raising awareness, providing counseling, and implementing support programs.

Table 5 shows the impact of negative teacher-student interactions on students' psychological health, with high mean scores indicating that such interactions frequently reduce students' concentration, self-esteem, morale, and prompt thoughts of retaliation. The overall mean rating is high at 4.26, suggesting these issues are consistently present.

Research highlights a growing prevalence of severe psychological issues among students, including depression, anxiety, and eating disorders. For example, a study at a major American university found significant numbers of students

suffering from anxiety, depression, and other mental health challenges, underscoring the need for comprehensive support and intervention strategies.

The cognitive function of students can be severely impaired by psychological conditions, with symptoms like reduced concentration and social withdrawal directly affecting their learning. Moreover, systemic issues such as inadequate access to mental health services exacerbate these challenges. Only a fraction of children in need receives proper treatment, which is vital for early diagnosis and management of mental health issues.

Furthermore, experiences of violence, discrimination, or lack of support can lead to significant psychological stress and long-term mental health problems. It is critical to foster a supportive educational environment that not only addresses these issues but also integrates mental health services effectively within schools. This includes collaboration across community systems, families, and educational staff to promote mental health through early detection, prevention, and intervention.

| No. | Items | Mean | Descriptive Interpretation |
|-----|---|------|-----------------------------------|
| 1 | Negative behavior and interaction with my teacher make me think that l am unable to do things well as most students do. | 4.25 | Very High |
| 2 | Negative behavior and interaction with my teacher give me the impression that I am not good at anything. | 4.36 | Very High |
| 3 | Negative behavior and interaction with my teacher reduce my concentration and attention span to focus on the lecture. | 4.42 | Very High |
| 4 | Negative behavior and interaction with my teacher lower my morale for active learning | 4.29 | Very High |
| 5 | Negative behavior and interaction with my teacher make me think of ways of taking revenge for my suffering. | 4.08 | High |
| | Overall | 4.28 | Very High |

Table 5. Extent of Student's Psychological Health

Domain of teacher's conflict-inducing attitudes that significantly influence student's psychological health

The study analyzes three domains of teachers' conflict-inducing attitudes—teacher incivility, teacher discrimination, and scarcity of university resources—to assess their impact on students' psychological health. Behaviors such as rudeness, prejudice, and insufficient resources are known to foster conflicts, complicate problem resolution, and contribute to a toxic work environment. The term "students' psychological health" refers to the mental and emotional well-being of individuals enrolled in educational

institutions, encompassing aspects such as emotional regulation, coping skills, self-esteem, and overall psychological resilience.

Unstandardized Regression Coefficients Results:

Table 7 presents a regression analysis examining the impact of teachers' conflict-inducing attitudes—specifically teacher incivility, teacher discrimination, and university resources—on students' psychological health. The results demonstrate a very strong significant relationship between these teacher behaviors and student well-being, evidenced by a correlation coefficient (r-value) of 0.859 and a p-value less than .000, indicating a highly

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

positive correlation and confirming the significant relationship hypothesized.

The regression model is robust, with an F-value of 68.84 and a p-value less than .000, suggesting a good model fit. Furthermore, the R-squared value of 0.738 indicates that 73.8% of the variance in students' psychological health is explained by these predictors, with the remaining variance attributable to other unaccounted factors.

Among the predictors, university resources had the most substantial influence on students' psychological health, as

indicated by a beta coefficient (β =0.312) and p-values less than .05, leading to the rejection of the null hypothesis. The analysis shows that for every unit increase in the measures of teacher incivility, discrimination, and university resources, there is a corresponding significant increase in the measure of students' psychological health by 3.894, holding other factors constant.

This high R-squared value surpasses the threshold needed to formulate a predictive model based on regression analysis, suggesting all examined dimensions of teacher's conflict-inducing attitudes significantly influence student psychological health.

| | Student's ps | ychological H | ealth | | | |
|-----------------------------|--------------|--------------------|--------------------------|---------|---------|--------------------------------|
| Teacher's conflict-inducing | | lardized cients | Standard Coefficients | | | |
| Attitudes | В | Std. Error | Beta | t-value | p-value | Decision @= 0.05 |
| Constant | 3.894 | .329 | | 18.610 | .000 | |
| Teacher Incivility | .268 | .036 | .491 | .7376 | .000 | Reject Ho |
| Teacher Discrimination | .231 | .079 | .408 | 2.918 | .000 | Reject Ho |

Dependent Variable: **Student's psychological Health** R= 0.859, R²=0.738, F-ratio=68.844 p-value= .000

Table 7. Domain of teacher's conflict-inducing attitudes that significantly influence student's psychological health

Generated Predictive Model from the Analysis

Below was the predictive model that was generated from the regression analysis:

PREDICTIVE MODEL

= $\alpha + \beta 1 X1 + \beta 2 X2 + \beta 3 X3 + \beta 4 X4$ = 3.894 + .268 (teacher incivility) + .231

(teacher discrimination) +

.312 (university resources)

PREDICTIVE MODEL = 3.894 + .268 (3.27) + .231 (3.02) + .312 (3.83)

PREDICTIVE MODEL = 3.894 + 0.8764 + 0.6976

+ 1.1950

PREDICTIVE MODEL = 6.66

The analysis conducted in this study revealed a significant predictive influence of factors such as teacher incivility, discrimination, and university resource constraints on students' psychological health. Specifically, it was found that for each unit increase in these conflict-inducing factors, there is a corresponding 6.66 unit increase in the negative impact on students' psychological well-being, highlighting the profound effect that teacher behavior and resource availability have on student health.

Resource competition is identified as a fundamental source of conflict within educational institutions. Plunkett et al. (1997) note that competition often arises when individuals attempt to outperform each other, potentially escalating into open confrontation and breakdowns in cooperation. This situation is exacerbated by resource scarcity, which, according to Zia & Syed (2013), Moen et al. (2019), and Rahim (2017), negatively impacts teachers' performance and their interpersonal relationships. Further compounding this issue, Barsky (2002) and Collins and Parson (2010) observed that a lack of resources diminishes teachers' motivation and their ability to effectively engage with students, thereby adversely affecting the educational environment.

The constraints on resources also lead to challenging budget allocations, as highlighted by Cannie & Sasse (2002) and Pohl (2023). These constraints can result in perceived injustices in how

resources are distributed among departments, heightening the potential for conflicts. Moreover, Mullins (2010) and Isabu (2017) emphasize the importance of effective communication and equitable resource distribution in mitigating conflicts and enhancing educational outcomes.

Furthermore, the scarcity of resources not only impacts teacher interactions but significantly affects students as well. Berger et al. (2018) and Francis (2018) discuss how deficiencies in resources contribute to poorer health outcomes in children, particularly in economically disadvantaged areas. These findings underscore the critical need to address both resource availability and teacher behavior to create supportive environments that foster educational success and psychological well-being.

Conclusions and Recommendations

This study aimed to assess the extent of teachers' conflict-inducing attitudes—namely teacher incivility, teacher discrimination, and university resources—and their impact on students' psychological health. Key findings indicated moderate levels of teacher incivility and discrimination, suggesting these behaviors occur occasionally, while conflicts related to university resources were more frequent. Student psychological health rated very high, highlighting the significant impact of the educational environment on student well-being.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The regression analysis confirmed a strong correlation between teachers' conflict-inducing attitudes and students' psychological health, with an F-value of 68.84, an R-squared value of 0.738, and a p-value of less than .05, leading to the rejection of the null hypothesis. This suggests that improvements in teacher behavior could lead to significant enhancements in student psychological health.

Conclusions drawn from the study revealed that unprofessional interactions and discriminatory practices among teachers were occasionally evident, contributing to a strained educational environment. Frequently occurring resource-related conflicts further compounded these issues. The strong correlation between teacher attitudes and student psychological health underscores the necessity for interventions aimed at improving the educational climate.

Recommendations based on these findings include:

Department of Education: Utilize this study's findings to inform discussions on how teachers' attitudes impact student well-being and educational outcomes. Insights from this research should guide policy revisions, program development, and resource allocation to foster a healthier educational environment.

Teachers: Engage in professional development programs focused on mitigating conflict-inducing behaviors. Participation in training sessions designed to enhance interpersonal skills and conflict resolution strategies could significantly improve teacher-student interactions.

Students: Schools should aim to create supportive classroom environments that not only reduce student stress and anxiety but also enhance academic, social, and emotional well-being.

Future Research: Further studies should explore additional aspects of the relationship between teachers' attitudes and students' psychological health that were not covered in this study.

CARCINOGENESIS IN OCCUPATIONAL DISEASE

Shruthi Stephen, Natalia Antonova, Eleesha Grace Varma

USMF, Nicolae Testemițanu State University of Medicine and Pharmacy, Republic of Moldova

Article DOI: https://doi.org/10.36713/epra16825

DOI No: 10.36713/epra16825

ABSTRACT

Carcinogenesis is one of the most significant research topics in the realm of occupational disorders. Substances with the potential to cause cancer are known as carcinogens. Carcinogens have a significant impact on public health and on worker safety. Worldwide, occupational exposure to carcinogens is a leading cause of mortality and disability, with an estimated 666,000 fatal work-related cancer cases occurring each year. The burden of occupational diseases is expected to increase in the future due to worker exposure to carcinogens, and occupational cancers are still cause for concern today. The objective of the study is to identify Occupational Carcinogens, to assess the epidemiological status of occupational cancer globally, to identify and assess the cancer risk and to determine which occupations have a potentially higher risk of developing cancer and to establish preventive measures for occupational cancers.

KEYWORDS: Occupational diseases, Workplace cancer, Occupational cancer, Carcinogenesis, Occupational health hazard.

INTRODUCTION

Occupational cancers are types of cancer that employees develop after extended exposure to carcinogenic substances in the workplace during a protracted latent phase . The process via which a normal cell can become cancerous is known as carcinogenesis. The development of cancer is the result of a cascade of events arising from the unchecked growth of malignant cells due to the combined influence of several genetic mutations [1]. Many carcinogens have been discovered in the workplace over the past few decades, and their presence is frequently linked to an increased cancer incidence. Occupational exposure involves several factors, and it is still unclear how carcinogens, occupational exposure, and cancer are related.

The type and length of exposure, a person's susceptibility, and other lifestyle choices like smoking or diet all have an impact on the development of occupational cancers. Certain heavy metals like arsenic and cadmium, asbestos, benzene, formaldehyde, diesel exhaust fumes, silica dust, and ionizing radiation (like Xrays) are a few common occupational carcinogens. A comparable cancer risk has been noted for individuals working night shifts; therefore, the most likely hypotheses regarding the causal relationship between shift work and breast cancer are still the changes in the circadian system and the decrease in melatonin production brought on by exposure to light during the night [1].

PURPOSE

The aim of studying carcinogenesis in occupational disease is to understand the mechanisms and factors involved in the development of cancer due to workplace exposures.

OBJECTIVES

- 1. To identify Occupational Carcinogens.
- 2. To assess the epidemiological status of occupational cancer globally.
- 3. To identify and assess the cancer risk and to determine which occupations have a potentially
- higher risk of developing cancer.
- 4. To establish preventive measures for occupational cancers.

METHODOLOGY FOR SELECTING BIBLIOGRAPHIC SOURCES

To achieve the purpose of this work, a search was performed on specialized platforms for relevant articles written in English about the carcinogenesis in occupational diseases that were published in international journals between 2014 and 2024. The final bibliography of the paper included 72 articles, which were selected for this review. The articles selection was selected from the sources: NCBI, Medscape, PubMed, Google Scholar.

BIBLIOGRAPHIC ANALYSIS

1.1 Definition and Classification of Carcinogens

The term "occupational carcinogens" describes exposures at work, especially those involving chemicals that are employed or emitted as intermediate compounds during manufacturing that have been linked to cancer, either conclusively or suspectly.

The International Agency for Research on Cancer (IARC) has classified agents into five groups: group 1 (probably carcinogenic to humans; 120 agents), group 2A (probably carcinogenic to humans; 82 agents), group 2B (possibly carcinogenic to humans;

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

311 agents), group 3 (its carcinogenicity to humans cannot be determined; 499 agents), and group 4 (probably not carcinogenic

to humans; Based on available data, IARC divides substances into five categories (Table 1; IARC,) [2][3].

Table 1. Carcinogenicity of different substances [2][3]

| Group | Definition | Used when |
|-------|--|--|
| 1 | Carcinogenic to humans | Sufficient evidence in humans |
| 2A | Probably carcinogenic to humans | Limited evidence in humans, and sufficient evidence in experimental animals |
| 2B | Possibly carcinogenic to humans | Limited evidence in humans, and absence of sufficient evidence in experimental animals, or inadequate evidence in humans or human data nonexistent and sufficient evidence in experimental animals |
| 3 | Not classifiable as carcinogenic to humans | Inadequate or unavailable evidence in humans and inadequate or limited evidence in animals |
| 4 | Probably not carcinogenic to humans | Evidence suggests a lack of carcinogenicity in humans and in experimental animals |

1.2 Common Types of Occupational Carcinogens

The petroleum industry is the one with the highest concentration of common occupational carcinogens, followed by the automotive and pharmaceutical industries, mining and quarrying (particularly copper and aluminum), and the production of metals, asbestos, rubber, and plastic products . Few of the common carcinogens found in the occupational setting are recorded in the following table (Table 2) [4].

Table 2. Common carcinogens in the working environments [4]

| | Carcinogen factors to | The organ it affects | Source or exposition |
|-----|--|--|---|
| | people | | |
| 1 | Nickel | Nose, nasal cavities, the bronchi, lungs | Metallurgy, alloys, catalysts |
| 2 | Cadmium | Lungs, prostate | Dyes and pigments production |
| 3 | Arsenic and compounds | Lungs, skin, liver | Arsenical insecticide production and packaging |
| 4 | Chromium (6 valent) | Nasal cavities, the bronchi, lungs | Galvanizing metals, dyes and pigments production |
| 5 | Asbestos | Lungs, serous membranes pleura, peritoneum | Insulation, filters, asbestos cement products and asbestos textile products |
| 6 | Hematite | | Miners in iron ore mines |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 23 | Cadmium and cadmium compounds | Respiratory and digestive systems, prostate | Battery manufacture |
|----|--|--|--|
| 24 | Leather dust; benzene and other solvents | Lymphatic and haemopoietic system (leukemia), nose, paranasal sinuses, bladder | Boot and shoe manufacture and repair |
| 25 | Crystalline silica | Lungs | Ceramic and pottery workers |
| 26 | Dyes (aromatic amines, aminophenols with hydrogen peroxide); solvents; propellants; aerosols | Bladder, lungs, lymphatic system (non-Hodgkin lymphoma), ovaries | Hairdressers and barbers |
| 27 | Ionising radiation | Skin, lymphatic and haemopoietic system (leukemia) | Medical personnel |
| 28 | Arsenic compounds | Lungs, skin, lips | Vineyard workers using arsenic insecticides |
| 29 | Aromatic amines | Bladder | Synthetic latex production, tyre curing, calendaring operatives (calendaring is a finishing process used on cloth), reclaim rubber, cable makers |
| 30 | Diesel engine exhaust; extremely low-frequency magnetic fields | Bladder, stomach, larynx, lymphatic and haemopoietic system (leukaemia), lungs | Filling station attendants,railway workers, bus and truck drivers, operators of excavating machines |
| 31 | UV radiation | Skin, lips | Fishermen, sailors, agriculturists |

According to Table 2 above, the most frequent occupational carcinogens include dyes, benzine, asbestos, ionizing radiation, diesel engine exhaust, crystalline silica, and UV radiation. Also, most occupational settings where people are exposed to carcinogens include railway workers, bus and truck drivers, hair salons and barbers, rubber manufacturers, and cement sectors associated with asbestos. People who work in synthetic latex production, vineyard workers using arsenic insecticides, medical

personnel, fishermen, sailors, and agriculturists are also exposed to workplace carcinogens.

1.3 Epidemiology of Occupational Cancer

According to estimates from the International Labour Organization (ILO), occupational cancer kills 666,000 people worldwide each year—more than double the number of deaths caused by occupational accidents. Within the European Union (EU28), occupational cancer kills 102,500 people annually—twenty times more than occupational accidents.

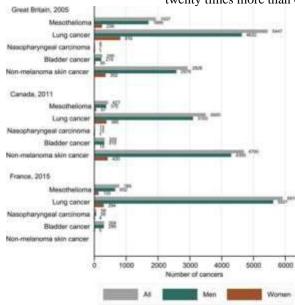

Figure 1. number of cancer cases attributable to occupational exposure at selected cancer sites [5].

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The 10 most significant occupational carcinogens, like asbestos, account for over 85% of all occupational deaths. Work exposures induce malignancies that have a high case fatality rate, such as lung cancer. The estimated total number of cancer deaths worldwide in 2016 attributable to 14 of the Group 1 agents was

349 000 [95% uncertainty interval (UI) 269 000–427 000], or 3.9% (95% UI 3.2–4.6%) of all cancer deaths. Of these, 299 998, or 17.6% (95% UI 13.8–21.3%), of lung cancer deaths were caused by these agents . Figure 2 shows the estimated total number of work-related deaths worldwide per region [6].

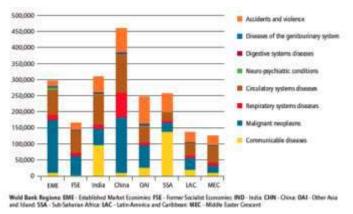

Figure 2. Region-specific estimates of the total number of work-related deaths worldwide [6].

1.4 Risk factors and High-Risk Occupations for Specific Cancers

It has been demonstrated that a variety of occupations and particular chemicals present in workplaces increase the risk of developing different types of cancer. Numerous industrial chemicals, dusts, metals, and combustion products, radiation exposure, entire industries and professions, and behavioral

patterns like shift work are among the risk factors for occupational cancer. The risk of developing cancer in various occupations may be slightly elevated due to the things that employees do or are exposed to. Examples of such exposure include working in the sun, silica dust, diesel engine exhaust, asbestos, and other particles [7].

Table 3. High-Risk Occupations for Specific Cancers [8].

| Work process / occupations | Cancer type | IARC classification |
|--|--|---------------------|
| Asbestos production | Lung | Group 1 |
| Aluminum production | Lung, bladder | Group 1 |
| Auramine production | Bladder | Group 1 |
| Boot and shoe manufacture and repair | Nasal cavity, leukemia | Group 1 |
| Chimney sweeping | Skin, lung | Group 1 |
| Coal gasification | Lung | Group 1 |
| Coal-tar distillation | Skin | Group 1 |
| Coke production | Lung | Group 1 |
| Furniture and cabinet making | Nasal cavity | Group 1 |
| Hematite mining (underground) with exposure to radon | Lung | Group 1 |
| Iron and steel founding | Lung | Group 1 |
| Isopropanol manufacture by the strong-acid process | Nasal cavity | Group 1 |
| Magenta production | Bladder | Group 1 |
| Painter | Lung, bladder (leukemia in offspring with maternal exposure) | Group 1 |
| Paving and roofing with coal tar pitch | Lung | Group 1 |

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Rubber manufacturing | Leukemia, lymphoma, bladder, lung, and stomach (prostate, esophagus and larynx) | Group 1 |
|---|---|----------|
| Manufacture of art glass, glass containers and pressed ware | Lung, stomach | Group 2A |
| Carbon electrode manufacture | Lung | Group 2A |
| Hairdresser or barber | Bladder, lung | Group 2A |
| Petroleum refining | Leukemia, skin | Group 2A |
| Shift work | Breast | Group 2A |

1.5 Preventive Measures and Control Strategies

Table 4. Overview of preventive measures [9].

| Groups | Type of measure | Examples |
|---------------------------------------|---|---|
| Chemicals | Avoidance, substitution with harmless agents | Substitution databases and tools |
| | Technical measures, including substitution with less hazardous agents | Closed system, e.g. airtight metal cleaning plant using perchloroethylene, specific local extraction systems |
| | Organizational measures | Access system for specifically trained workers |
| | Personal measures | Respirators with specific filters |
| Pesticides | Avoidance, substitution with harmless agents | Organic farming |
| | Technical measures, incl. substitution with less hazardous agents | Integrated pest management, using application procedures and devices that reduce exposure |
| | Organizational measures | Reducing the number of exposed, avoiding side-exposure of workers who are not applying pesticides, decontamination procedures, proper procedures for storage and cleaning of substances and equipment, maintenance of application devices, machinery and protective equipment |
| | Personal measures | PPE, protective clothing, hygienic procedures for separating and cleaning contaminated clothing |
| Pharmaceuti cals | General | Best practice examples described in the Commission guideline for the health care sector or NIOSH good practice guide on Managing Hazardous Drug Exposures: Information for Healthcare Settings |
| Biological factors | Organizational measures | Good hygiene practices, cleaning and hygiene plan, restricted access, black/white areas, spatial separation of polluted and unpolluted areas |
| | Personal measures | PPE, proper clothing, vaccination |
| Physical factors | Measures against sedentary work | Avoidance, reduction of sedentary work by dynamic workstations and/or treadmill desks, organization of work to avoid static work, prolonged standing and prolonged sitting, e.g. through breaks and reorganization of work procedures |
| | Measures against radiation | Closed, insulated systems, cordoning off areas, restricted access, recommended personal protective equipment |
| Shift work, night work | Technical and organizational | Shift work design according to scientific recommendations and best practice examples, design of schedules, limitation of years worked in shifts, health promotion, organization of rest periods, rest and eating facilities, making available appropriate meals |

DISCUSSIONS

In the context of occupational diseases, carcinogenesis is a complex process that includes the development of cancer because of exposure to carcinogens at work. This process is influenced by various factors, including the type of carcinogen, the duration and level of exposure, and individual susceptibility. Various agents, including chemicals, metals, and radiation, are considered occupational carcinogens and have been associated with the development of multiple cancer forms, including skin, bladder, and lung cancer. To minimize exposure and safeguard the health of employees, preventive measures and regulations must be put in place, which requires an understanding of these carcinogens. Moreover, public health policy and workplace safety standards are greatly influenced by research on the carcinogenesis of occupational diseases. Targeted interventions and control methods can be created by gaining insight into the mechanisms and factors that contribute to the development of cancer related to the workplace. This knowledge is essential for maintaining a safe and healthy workplace, lowering the total incidence of occupational cancer, and protecting employees' health [10].

CONCLUSIONS

The first step in preventing occupational cancer is identifying the carcinogens that are present in the workplace. Several important advantages can be obtained from identifying occupational carcinogens, mainly in the areas of public health and workplace safety. Once these carcinogens have been identified and characterized, preventive measures that can effectively lower the risk of occupational cancer can be established.

The global study of the epidemiological state of occupational cancer has provided valuable insights into the prevalence, distribution, and risk factors of malignancies associated with the workplace.

To better understand the intricate interactions between occupational exposures and the development of cancer, it is important to identify risk factors and high-risk jobs associated with cancers.

To reduce the incidence of occupational cancer, preventive actions against carcinogens in the workplace are important. These measures include avoiding harmful agents, substituting carcinogens with less harmful ones, regulating workplace exposures to carcinogens, providing personal protective equipment, the implementing of no-smoking policies, and the provision of information and training to workers.

OPPORTUNITIES AND CHALLENGES OF THE DIGITAL WORLD OF MULTIMODAL INTERVENTIONAL BREAST RADIOLOGY (REVIEW)

Rashidova Maxliyoxon Baxodir kizi¹, Ibragimov Said Sanjarovich²

¹Assistant at the Department of Medical Radiology ²Doctor of Medical Sciences, Professor of the Department of Medical Radiology Andiian State Medical Institute

ANNOTATION

The article presents the evolution of the introduction of digital technologies into the system of oncological screening, multimodal technologies of interventional radiology, statistical data on the growth of malignant neoplasms of the breast in the world and Russia, shows the advantages of digitalization of radiation diagnostics, interdisciplinary integration with systems biology "omics" technologies, contributing to the development of a new direction "radiogenomics", and also pointed out the existing problems of introducing the latest technologies of interventional radiology, the need to train a multimodal specialist.

KEYWORDS. multimodal approach, diagnosis, breast cancer, ultrasound

Relevance. Breast cancer (BC) is the most common oncological pathology in women both in Russia and throughout the world. In 2018, more than 70 thousand new cases of breast cancer were diagnosed in Russia and, despite modern treatment methods, 22.3 thousand Russian women died from the progression of the disease [6, 1 2]. The introduction of mammography screening programs in a number of European countries and the USA played an important role in reducing mortality from breast cancer. Screening, due to the detection of the disease at an early, potentially curable stage, has reduced mortality from breast cancer in countries with a developed screening system by 15-25% [10, 13, 14]. Tumors detected as part of mammographic screening for breast cancer are the most difficult in terms of preoperative differential diagnosis, since they do not have clinical manifestations and are most often represented by early forms of the disease (non-invasive cancer and invasive carcinomas up to 1.0 cm in size) [13].

Mammography (MMG) is the only method for correct screening of breast cancer and the leading method for diagnosing early forms of breast cancer, including the detection of carcinomas in situ and invasive tumors of minimal size. Digital mammography uniquely combines the diagnostic value of analog predecessors and the capabilities of digital technologies, and the use of the BIRADS formalized image assessment system makes it possible to standardize the analysis of the data obtained and provide the radiologist with the correct further tactics for treating patients [1, 9, 1 0].

An undeniable advantage of MMG is the ability to detect microcalcifications, which are often the only radiological sign of early breast cancer. The detection of intermediate and malignant microcalcifications even in the absence of a tumor node suggests the presence of early breast cancer [8, 9]. Unlike MMG, ultrasound diagnostics (US) does not have sufficient resolution for tumors less than 1.0 cm; Ultrasound diagnostic capabilities do not allow visualization of early forms of breast

cancer, manifested in the form of accumulation of microcalcifications, local stringy restructuring of the structure, as well as damage to the ducts of the mammary gland [4, 9].

At the end of the 90s, with the advent of the ultrasound elastography method, which is based on the high sensitivity of the shear acoustic properties of tissues to their pathophysiological state, qualitative and quantitative criteria for sonoelastography were developed to diagnose non-palpable formations [4, 7].

Magnetic resonance imaging (MRI) has entered the practice of examination for breast cancer relatively recently. The advantage of this method is the high resolution and contrast of displaying soft tissue elements, non-invasiveness, and the ability to obtain images in any arbitrary plane without mechanical movements. In order to increase the information content of the MRI method, contrast enhancement is used, with which the sensitivity in diagnosing breast cancer is 94%, specificity is 96.7% [7, 8].

Despite the presence in the arsenal of oncologists of such modern methods for diagnosing the disease as MMG, ultrasound and MRI of the mammary glands, the sensitivity of these methods for different biological subtypes of breast cancer has not been sufficiently studied, precise differential diagnostic criteria for preoperative assessment of the invasiveness of the tumor process have not been established, which is very relevant and timely for the development of a modern personalized approach [10, 11, 12]. In addition, the greatest diagnostic difficulties arise when identifying early forms of breast cancer, when the diagnosis is established on the basis of minimal signs of the disease, such as the presence of microcalcifications, changes in the structure of breast tissue and changes inside the ducts. Isolation and systematization of radiological signs characteristic of microcarcinomas will increase the frequency of detection of early forms of the disease at the preclinical stage,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

achieve maximum treatment efficiency with minimal financial investments,

which seems to be a very important task for practical healthcare [8, 9]. Thus, the study of radiological characteristics of early forms of breast cancer, their relationship with clinical and biological characteristics is an urgent problem and requires research on sufficient clinical material.

PURPOSE OF THE STUDY

To show the capabilities of modern digital radiation noninvasive and invasive technologies, as well as the need for interdisciplinary integration and training of multimodal specialists for early detection and determination of the breast cancer phenotype, which increases the efficiency of choosing adequate treatment tactics aimed at increasing the duration and quality of life of patients

MATERIALS AND METHODS

Literary data on the development of digital radiation methods for diagnosing breast diseases, including interventional radiology technologies, are presented. New data is also presented on the direction of "radiogenomics", which was born through the interdisciplinary integration of radiological digital systems, interventional technologies and high-tech systems biology.

RESULTS

The review presents the development of equipment and radiation methods for the early detection of breast diseases, based on technical progress, including the active introduction of digitalization and informatization in medicine. New artificial intelligence models act as a doctor's assistant during screening. The advantages of various options for interventional radiology technologies in cancer screening to improve the accuracy of pathomorphological diagnosis and determine the phenotype of tumors are shown. The latest data are presented on the feasibility of interdisciplinary integration of "computer vision" based on medical imaging features with the capabilities of systems biology in determining the tumor phenotype with a correlation reliability of 71%.

CONCLUSION

The undoubted advantages of digitalization and new opportunities of interventional radiology in identifying the earliest forms of diseases in an interdisciplinary format open up the prospect of highly accurate diagnostics and an adequate choice of organ-saving treatment tactics. The training of a multimodal specialist - radiation diagnostician - diagnostic radiologist and interventional radiologist, proficient in a wide range of radiation diagnostic methods, including invasive interventions, requires correction of organizational forms of work, new educational programs not only in the specialty, but also in the basics of digitalization, which will ensure rational and effective use of modern achievements of science and technology.

THE DIVERSITY OF EDUCATIONAL STYLES IN IMAM ZARNUJI'S "TEACHING STUDENTS WAYS TO GET SCIENCE

Kholmatov Ashurali Rajabovich

Majoring in Pedagogy and Psychology MM8 - PP-22 Group Undergraduates Bukhara Asian International University

ANNOTATION

This article presents some stories and examples of the great alloma, Hanafi fiqhi scholar, adib, author of several works Imam Zarnuji, his work "education al-mutaallim", the secrets of obtaining knowledge for students who are in demand for science, their time, thoughts on the reverence of teachers, as well as the relationship between discipleship and mentorship in these and other works. **KEYWORDS:** "Education al-mutaallim", science, Taliban science, patience, maturity, decency, pand-exhortation, teacher-disciple, cultivation of science, modern education, teaching methods.

Burhonul Islam Zarnuji was one of the scribes of the 6th century AH, mainly concerned with educational issues, and made several books on this matter. Tarojim (biography) does not list any reference to the person's real names. According to major researchers, the man was born in the village of "Zarnuj", located behind the oasis of "Özjand" in Turkestan, which belongs to the Turkish lands. This information is also from evidence that the man was from the Turkestan land.

Imam Zarnuji's" Educul Muta'allim – tariq at-TA'allum " presents important rules and methods regarding educational methods, which are mainly given ideas about what approaches a student should take in the process of obtaining science. This work focuses especially on scientific and spiritual education.

First of all, Zarnujiy considers regularity and patience important in education. He argues that education should continue "from the cradle to the Lahad", i.e. emphasizes that the demand for science should last a lifetime. This idea was expressed in order to encourage the student's passion for science to wake up and constantly increase his knowledge.

The views of the president of the Republic of Uzbekistan Shavkat Mirziyoyev that "raising our children as independent-minded people, possessing modern knowledge and professions, with a strong life position, as truly patriotic people is an issue of urgent importance for us," also indicate the role of teachers in the comprehensive mature upbringing of the younger and growing generation. Also, the teacher-disciple relationship, mutual respect being good are considered from the foundations of the above thoughts and place great responsibility on the educators.

In addition, the author emphasizes the importance of scientific debates and negotiations. In his opinion, through scientific communication and discussions, the student develops not only knowledge, but also the ability to carefully express his thoughts. Through the examples presented in the work, it encourages students to be fair and true in communication.

Zarnuji also singled out moral values in education. He encourages the importance of compassion, mutual respect and understanding between the teacher and the student. The teacher's compassion and affection for the disciple, in turn, has a positive effect on the educational process and increases the students 'passion for science.

Zarnuji's educational methods show that he takes into account not only the provision of knowledge, but also the personal and mental development of the student. In addition to science, his educational methods aim to educate in a state that includes morality and spirituality. These approaches are also relevant in modern educational methodology .³

Imam Zarnuji's" Tahrir MUT'allim - Tariq at-Ta'allum " (ways of students to take up science) is an important instruction on educational methods and reading culture to students and teachers at the time and even today. Through this work, Zarnujiy illuminates the different methods of education and their importance in meeting the specific educational needs of

The author offers a variety of reading techniques in his work. For example, he points out ways to make education effective through proper time management, emphasizing the Times used during study. Morning time and evening are seen as the most effective for reading, as these times are best suited for mental activity.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

students. The work explains the various forms of educational methods, their advantages and disadvantages, while showing ways to overcome the difficulties faced in the learning process.

As the first and most important method, Zarnujiy emphasizes the dialogue between the teacher and the disciple. He urges the master to treat the Disciple with kindness, compassion, and to teach science with love and interest. This approach helps to increase the motivation of the student and actively participate in the course of the lesson. For example, Zarnujiy encourages teachers to be patient and explain the teaching material in an understandable way.

Secondly, Zarnujiy emphasizes the importance of repetition in education. In his opinion, it is necessary to repeat it many times in order to deeply master a topic. This method increases the ability to keep learning material in mind and strengthens knowledge. For example, he calls on teachers to revise the lesson every time and be prepared to re-discuss the topic with the disciples.

Thirdly, Zarnujiy supports dialogue and debate. He notes the great importance of thought Exchange in the educational process. Through communication and discussion, students develop skills to express their thoughts, solve problems, and create new ideas. Zarnuji recommends the active development of inter-student and Inter-student communication, which serves to increase the effectiveness of the educational environment.

Fourth, Zarnujiy emphasizes the importance of personalizing education. He argues that since each student has specific needs and abilities, the teacher must take a separate approach to each student. This allows students to fully manifest their potential and promotes their self-development. Imam Zarnuji's educational methods are aimed at meeting the diverse academic needs of the students, and these techniques encourage students to be active, independent-minded, and persistent learners. His philosophy of education remains relevant today, as it places more emphasis on encouraging learning than knowledge⁴.

In modern education, rethinking and integrating ancient teaching methods and traditional educational approaches can add new dimensions to the learning process. For example, the teaching methods highlighted in Imam Zarnuji's "Tahrir Muta'allim-Tariqatta'allum" ("the disciples' ways of obtaining science") can still be used today to enrich the educational process.

The work emphasizes that the student is actively involved in the process of obtaining science, requires patience and regular repetition. In modern education, this approach can encourage students to think independently and gain in-depth knowledge. For example, Zarnuji's emphasis on "trying seriously to understand everything well during education" can be applied as

a method of active teaching in modern education, which helps students to independently solve complex issues.

Zarnuji's work also emphasizes the atmosphere of kindness, compassion and mutual respect between teachers and students. This is also very important in modern education, as the learning environment has a huge impact on the mental state and motivation of students. The teacher should be not only a cognitive giver to the students, but also a spiritual encouragement to them.

As noted in zarnuji's "secrets of obtaining science", any educational institution requires a deep study of science, its application to life experience and constant repetition. In modern education, this approach can be applied through practical projects, problem situation solutions and interactive methods. This increases students' ability to apply theoretical knowledge in practice.

In addition, the author's idea of bringing science and religious knowledge closer together can also play an important role in modern education. This encourages students to have a broader worldview and ensures that they are brought up in a spirit of respect for different cultures ⁵.

The integration of ancient educational methods into the modern educational system helps to make the learning process more effective and deeper. Through these techniques, students can develop the skills of independent thinking, logical reasoning, and creative solutions. Zarnuji noted that every student should sincerely seek knowledge and be patient along the way. This is one of the main goals of modern education.

In his works, Imam Zarnuji makes extensive and comprehensive views on the effectiveness of educational methods. His work, "Educul Muta'allim-Tariqatta'allum", provides an in-depth meditation on educational methods and the qualities necessary for the student. Imam Zarnuji, first of all, emphasizes the importance of communication between the teacher and the disciple in the educational process. He believes that the role of the teacher is not only to give knowledge, but also to promote the formation of the disciple as a recipient of knowledge.

Imam Zarnuji's book" teaching students ways to get science " takes into account important factors in assessing the effectiveness of educational methods. He views education not only as a means of learning, but as an important process that leads people to maturation. However, Zarnuji's techniques can present certain challenges as well as modern educational changes. For example, his methods are often traditional and text-centric, which is not consistent with interactive and technological approaches. Also, Zarnuji's educational styles are teacher-centered, which may not be consistent with

⁴ Mufid M., Tamam A. M. Islamic Education Theory Al-Zarnuji's Perspective in The Book Ta'lim Al-Muta'allim //Interdiciplinary Journal and Hummanity (INJURITY). – 2024. – T. 3. – №. 1. – C. 9-16.

⁵ Bela N., Jannah S. R., Jaenullah J. An Analysis of Book T'alimul Muta'alim on Education Character and It's Relationship with Education Character Programs at Indonesia //Bulletin of Pedagogical Research. − 2022. − T. 3. − № 1. − C. 10-37.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

environments that encourage student participation and selfgovernment in contemporary education.

To modernize Zarnuji's educational methods in the modern educational environment, in addition to traditional manuals, it is important to use modern educational resources, including electronic educational materials and multimedia Tools. This increases the adaptation of students to different learning methods and makes the educational process more efficient.

In addition, it is necessary to take into account religious and cultural differences when applying Zarnuji's educational methods based on religious and cultural context in different cultural environments. This increases the ability to apply these techniques globally and ensures that they are also accepted in communities with different religious beliefs.

At the same time, strict discipline and spiritual values in Zarnujiy's teaching should be coordinated with student-centered approaches to modern education. It does not limit students' personal freedom and creative opportunities for expression, but helps them develop spiritually and intellectually.

Now, as for the choice of a teacher, let him choose the most learned, the most pious and the oldest. Just as Abu Hanifa, after a long contemplation and Ta'ammullah alayhi alayhi, chose Hamad ibn Abu Sulayman Rahmatullah. The man said of his mentors: "I met my teacher in an old age, in a state of vigor, halim and patience in all his affairs. I read and grew up in the presence of Hamad ibn Abu Sulayman". Abu Hanifa said, "I heard from the hakim of Samarkand⁶. He said, "one Taliban has advised me on how knowledge can be obtained. After that, at the request of science, he swore to go to Bukhara. If you go to Bukhara, do not fall in love with the scribes. After living there for two months, think carefully and choose a mentor. If said that if you go to a scholar and start to learn from him, then soon his lessons will not satisfy you, and if you leave him for another, you will not be blessed in your knowledge.⁷"

About the veneration of the master, another scientist said the following. The master said to his disciple, "O disciple! O patient! Honor me, and make your decency, and they will not be admonished.

O man, for you are the world, your Affairs, your end, your future is under my servant, you will achieve it because of me, and you will think about the consequences of your affairs, and they will not give such instructions. Have you offended them, and afflicted them with your insolence, and be patient with your pain, and be patient with your pain. Or, be content with your self-esteem⁸.

As the story goes sent khazrati Khorun ar-Rashid O'g' Il to Imam Asmoi khuzur for learning science and etiquette. One day, the master notices that his treasures are abusing. His sons poured water on their feet. Then the khazrat of the Caliph itob (urishib) and reproached Imam Asmai:

– I felt sorry for your house to learn science and decency, so why not pour water with one hand and prescribe you to wash your feet with the other?! - they said⁹. So it turns out that following the teacher's respect, staying for his services, finding love and sustenance in his heart should become every student's khayotiy task. This is one of the main factors in the interest of both himself and others in science. Only when the student approaches this high duty with devotion and sincerity will he achieve success.

In Imam Zarnuji's" Education Muta'allim", the effectiveness of educational methods is expressed through the following main factors: first, he views education not only as a process of learning, but as a path of spiritual maturation. The author argues that through education it gives a person the power to open the doors of divine enlightenment and make it a real person. This process is measured by the deep acquisition of knowledge, the domestication of practice and regular repetition.

Secondly, Zarnujiy considers it important to organize scientific discussions among students. These discussions not only serve to increase the level of knowledge, but also develop students' thinking and motivate them to think independently. In his opinion, the student should be an active participant in the educational process in search of knowledge, and not just a recipient. The student should also have a high assessment of personal responsibility for studying and learning.

Thirdly, the moral qualities of students and teachers play an important role in improving the effectiveness of educational methods. Zarnujiy believes that the teachers should generously share their knowledge and experience and start the disciples on a full path.

Finally, as Zarnuji points out, it is important to constantly learn and repeat in the path of science. Science is not something to be mastered in one day, but a process that lasts a lifetime. All these factors represent the Deep content of Zarnuji's educational methods and are also of relevant importance in the context of modern pedagogy.

PROBLEMS OF INCREASING THE INTELLECTUAL CAPACITY OF YOUTHS IN UZBEKISTAN

Bakhodirkhan Khamidkhanov

Researcher, National University of Uzbekistan

ABSTRACT

In the article, the concept of intellectual potential, its importance in the development of the society was revealed on the example of the role of the intellectual potential of young people in the life of the society of Uzbekistan. In recent years, measures to increase the intellectual potential of the country, their legal bases, especially the work aimed at increasing the intellectual potential of young people, have been analyzed. Shortcomings observed in the implementation of policies aimed at increasing the intellectual potential of young people. Opinions on problems and their solutions are put forward.

KEYWORDS: youth, intellect, intellectual potential, knowledge, innovation, human capital, higher education, society, competition.

INTRODUCTION

The introduction of the digital industry in the modern world did not neglect the field of education, it made serious changes in its system and structure. In our country, the system of science and higher education is working on the implementation of a set of measures aimed at achieving specific goals related to the development of the digital sphere of higher education. The concept of development of the higher education system of the Republic of Uzbekistan until 2030 [1] within the framework of this development, it was determined that this area of development is a strategically important task of the state, as it significantly increases the country's competitiveness and ensures rapid economic growth. "In order to develop scientific and innovative activities in our country, young and talented personnel are first necessary" [2.173], said President Sh. Mirziyoev. That is why democratic reforms not only created historical opportunities for our nation to express its identity, but also demanded new ways of living and thinking, especially for young people, to take their rightful place in life, to acquire a new spirituality based on a national ideology compatible with universal human values.

In recent years, in the youth policy of our country, measures, especially systematic work aimed at increasing their intellectual potential, have been carried out in 7 directions. 396 thousand young people who need special attention of the state were attached to official leaders, and through individual work with them, 331 thousand were helped to find their place in life. In particular, 94,000 people were employed, 56,000 were trained in professions[3]. The number of types of assistance provided through the "Youth Register" has reached 30, and the period for considering applications has been reduced from 30 days to 5 days. Starting this year, the "Olympiad of Five Initiatives" was held in 4 directions - neighborhood, school, professional education and university system, and a total of 12 million young people were involved. In order to support talents, the first "Creative Park" which operates around the clock was put into use in the Palace of Youth Creativity in Tashkent. 2 million

young people were involved in "Zakovat" and other intellectual games. Such works show that the intellectual potential of young people is being systematically improved in our country.

LITERATURE REVIEW

The problem of forming and developing the intellectual potential of young people is a traditional topic of research in the works of many local and foreign scientists. Currently, the scientific category "intellectual potential" is actively used in various fields of social and humanitarian knowledge. The greatest contribution to the study of intellectual potential was made by representatives of local psychology.

It is impossible to understand the essence of a person's intellectual potential without fully understanding the content and structure of intellectual potential. From this point of view, in the study of problems within the scope of the research topic, issues related to logical-psychological foundations, structural elements of intellectual culture, interrelationship with other forms of intellectual processes, and the influence of education on it were systematically analyzed by M.K. Akimova, Researches of prominent representatives of psychology such as A.N. Voronin, Ye.A. Valueva, Ye.V. Dudorova, Z.Kh. Sierralta, N.A. Luzhbina are of great importance. The development of a person's intellectual potential is inextricably linked with changes in science. It should be noted that some philosophical issues related to this aspect of the problem were studied in the scientific works of scientists such as I.A. Bykovskii, N.Yu.Trushkina, A.S.Stepanenko, O.D.Shipunova, D.A.Rostovykh, R.V.Shutov, A.E.Nikitin, N.Yu.Popova. In our country, researchers such as U.Kerimov, H.Yorkulov, N.Rizaev, O.Okyulov, M.Qalandarova, V.I.Andriyanova did not conduct separate research on intellectual potential, but they focused on artistic-philosophical and legal problems. In the conducted research, they mention the aspects related to its composition. It describes its three elements, i.e. intellectualpedagogical, social-legal, spiritual-ethical aspects. The first element includes mastering the basics of science, as well as the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

formation of intellectual abilities and skills in a person. The second aspect is the socio-legal factors of intellectual culture, and the third is the role of national and universal factors in intellectual activity, which consists of the dialectical relationship between the object of education and the subject.

RESEARCH METHODOLOGY

If we summarize the level of study of the problem of intellectual potential and the factors of its provision, the mechanisms of increasing the role of knowledge and innovations in modern domestic and foreign literature, the topic of this article has been analyzed in the social sciences in a rather wide range. To solve them, the research used the following methods, including: problematic - chronological - historical significance of intellectual potential, attitude to knowledge in the development of Uzbek society, various forms of scientific activity and methods of their development are focused on determining the origin of the emergence. On the basis of the comparativehistorical method, it is possible to emphasize the development and complexity of intellectual potential and its increase, the increasing modern difficulties in increasing human intelligence. The method of concrete-sociological research envisages the determination of the influence of intellectual potential on the interests of the individual, society and the state, the trends and changes related to them, and the logical method allows to determine the exact relations between the existing events and processes. The combined use of these methods in the subject article made it possible to investigate the existing problem more accurately and in depth.

ANALYSIS AND RESULTS

Today, the development of the education system in our country has risen to the highest level of the state's policy, ensuring that young people acquire knowledge and skills in conditions appropriate to the requirements of the time, develop into mature people in all respects, their potential and talent, intellectual A lot of work is being done to realize the worldview, to educate young people with an innovative worldview, to develop feelings of patriotism, selflessness and hard work in their minds. It should be noted that, as in all spheres of the country's life, positive changes are being observed in the field of science and innovative development. The following measures are being implemented to fundamentally reform this sector:

Comprehensive measures aimed at strengthening the infrastructure of scientific research institutions and developing innovative activities in 2017-2021, which provide for the improvement of the activities of scientific research institutions, the strengthening of their material and technical base, and the creation of favorable conditions for the development of innovative activities, were approved;

The Ministry of Innovative Development was established in order to implement a unified state policy aimed at comprehensive development of society and state life in the field of innovative and scientific-technical development in the republic, increasing the intellectual and technological potential of the country;

The strategy of innovative development of the Republic of Uzbekistan in 2019-2021 aimed at making the Republic of Uzbekistan one of the 50 advanced countries of the world according to the Global Innovation Index rating by 2030 was adopted;

The Law "On Innovative Activity" was adopted in the country, which defines the legal basis for the regulation of relations in the field of innovative activity;

Systemic reforms implemented in Uzbekistan eliminated many shortcomings in science and innovation, as a result, according to the Global Innovation Index report, the republic's rating improved by 29 positions and took 93rd place among 131 countries [4].

In Uzbekistan, there are still some obstacles and problems in realizing the intellectual potential of young people and in the effective implementation of the state policy in this regard. Some of them are systemic problems of socio-political, economic and organizational form. For example, as for schools and universities, many tasks, lectures and even practical training have been transferred to remote mode. Digital technologies and their implementation have helped to create a wide and rich environment that provides a variety of educational resources, without restrictions on the content and helps to simplify the process of understanding and mastering the necessary material. This raises the following questions: - overcoming difficulties in self-organization and understanding; - changing traditional education with the help of technology; - the teacher's role in revealing and forming potential human abilities; - identifying problems in acquiring professional skills; - progressiveness, which is "impossible to continue."

Today's modern society is saturated with an unlimited flow of information, which affects the level of intellectual activity of a person. The human potential of a person is a partial thing given to him from birth, and to a greater extent it is the result of continuous development. In turn, the education system plays an important role in human development. Combining these two concepts, we can conclude that the intellectual potential of a person is based on two components: knowledge and information. Today, digital technologies have provided many opportunities to create an effective educational and production process. In this regard, the traditional approach to the educational process was forced to change, there was a need to form new competencies and completely reorganize the educational process. Students and teachers need to fundamentally change their attitude to the methods of cognitive development. Today, the task of professors and teachers is to use a variety of technological resources from the continuous flow of available information to create a clear, simple and comprehensive visually convenient educational platform, which allows to fully concentrate the student's attention and provide maximum knowledge.

Another change in the realization of the intellectual potential of young people is that the role of "passive" forms of education (for example, lectures) is decreasing dramatically, that is, standard concepts and models are no longer used. The

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

presentation of this or that material turns into an infographic and helps to completely reconstruct the thinking process, build logic and understand the set goals and objectives. There is a growing demand for interactive methods of presenting information (diagrams, slides, collages, etc.), which contribute to the active work of students. Simply put, educators have to perform demanding and complex jobs that must simultaneously be kept up-to-date by a changing information ecosystem. As President Sh. Mirziyoyev noted, it is necessary to bring to a logical conclusion the large-scale work we are conducting in this field, in particular, the adopted nationwide programs on education. For this purpose, the most important task of the government, relevant ministries and agencies, and the entire education system, our respected teachers and professors, is to provide thorough education to the young generation, to raise them to be physically and spiritually mature people [5.145-

Another issue in realizing the intellectual potential of young people is the diminishing role of professors and teachers in increasing intellectual potential. In the current period, the main task of the education system was to improve the qualifications of professors and teachers in the field of digital literacy. Teachers have always been guides in the labyrinth of science, helping to find the right reference point, they have built bridges between students and the wider world of knowledge. Now all this is boldly transferred to the hands of the technological process, so that the main, leading role of teachers is lost, and in fact the student is left to fend for himself. All this affects the level of the motivational mechanism, that is, the student's desire to master more and more new material.

One of the factors that have a negative impact on the intellectual potential of a person is the elimination of long-term direct relationships between a teacher and a student, which gradually destroys the effectiveness of the educational process. leads to hardening. Live interpersonal communication is lost, which leads to the formation of a socially poor psychotype. Digital development is occupying more and more areas of the world economy. Large enterprises strive to improve and restore the intellectual potential of a person in the conditions of digitization and to automate all structural processes, which reduces the need for simple labor actions and increases the demand for more advanced, rational implementation of labor activities. In other words, it requires experts who can do what a machine can't. In this regard, universities are striving to create and produce professional personnel fully suited to this role. Currently, many platforms have been created that allow students to learn the necessary skills remotely for conducting practical and laboratory training. However, if a graduate enters a strategic manufacturing facility, he or she may not be able to handle the installation that he or she has seen online. Many competencies require deep interaction in real-world environments. Working live with different machines and devices will help you better understand the internal mechanism of the machine, get involved in its process and study its every detail more clearly.

Another problem of realizing the intellectual potential of young people is the ineffectiveness of independent education. It can be argued that the new technologies of independent education, first of all, mean increasing the activity of students: the fact obtained by their own efforts has a great cognitive value. In teaching methods, the teacher often puts the student in the position of an object of information transmitted to him from the outside. With this formation of the educational process, the teacher artificially delays the development of the student's cognitive activity and causes great damage to him intellectually and morally.

Realization of the intellectual potential of young people is another problem, and the main factors of the formation of the strategy of effective development of the system in increasing the intellectual potential of the country should be considered as a whole system. This integrity should include the processes innovation support, science-education-production integration, from the guarantee of copyright to the student's assimilation of new knowledge. In Uzbekistan, striving towards a global educational space is one of the ongoing processes, and in this process, the formation of high intellectual potential in all strata of the population, especially in the youth, is the demand of the time. Because it is necessary to pay attention to the main factors of forming the innovative development strategy of the country as a whole system. In our opinion, such a comprehensive system should be based on the outlook position of every citizen, especially young people, and should be reflected in their lifestyle. Attitude towards youth is the existing, more precise emphasis of the law necessary for world development and development, youth is turning from a person of priority importance to a leading foundation that contributes to its development and implements the development of society. The social qualities of young people, such as intellectual potential, professional skills, intellectual perfection, have a positive effect on the level of development of the entire country. Such trends show that young people are becoming an active subject of society as a separate socio-demographic layer.

Another problem in increasing the intellectual potential of young people. Innovative economy as a stage of capital development implies the level of social relations and the type of sign corresponding to this type of production. Unlike Western countries, which have an economic system based on the socialization of property and the mechanism of management planning and distribution, a social type of society has developed in our country in the recent past, and a specific type of character has been formed, which still prevails.

In the following year, about seventy decisions, decrees and orders of the President of the Republic of Uzbekistan and the Cabinet of Ministers were adopted. This literally started the process of changes and updates in the education system. We can see the focus on youth in all 5 initiatives under the new system[6]. We can assess that these initiatives are directly aimed at increasing the intellectual potential of young people.

By increasing the intellectual potential of the young generation, the priority of the policy of state support for the effective modernization of the priority sectors of the economy, increasing the activity and systematization of the scientific and technical sector, and the production of modern finished products with high added value that are popular in foreign

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

markets increasing and raising to a new level, provides an opportunity to achieve stable high growth rates of export of finished products [7]. According to the conducted studies, the following main problems are distinguished when considering the issue of the future development of innovative activities, including: firstly, Uzbekistan has great potential in a number of fundamental science fields, but the mechanism for processing this potential has not been developed; secondly, the level of adoption of innovations by enterprises in the industrial sector remains low, which in turn leads to a low level of demand for advanced technologies by sectors of the economy.

CONCLUSIONS

- 1. In the world, a number of scientific studies are being conducted to improve the socio-political aspects of increasing the intellectual potential of young people, to determine the axiological attitude to scientific research activities. At the same time, attention is paid to deepening the theoretical foundations of the development of critical and creative thinking of young people, to the formation of scientific and innovative thinking in students based on its priorities and ideas. Currently, 32 percent of our country's population, or 10 million, are young people under the age of 30. The policy aimed at increasing the intellectual potential of young people, under the influence of internal and external factors, can be considered as the period of its most active formation, the period of realization of this potential, the source of change.
- 2. Individual elements of the human potential system can appear in different conditions of their formation, but potential-elements with certain functional independence do not exist separately. Only through interaction can they lead to a quality jump. In the period of transformational changes in society, the system of socio-cultural interdependence in society is changing and the problem of development prospects gives us constructive sources, factors, reasons for theoretical understanding of what is happening and practical decisions on social policy. It is especially important in the period when driving forces are being sought.
- 3. The concept of intellectual potential is determined by education and its formation is related to the growth of population education. From our point of view, it is necessary to apply a broader and differentiated approach to the structure of intellectual potential. Its components can be scientific, educational, innovative and cultural potential. If we analyze individual entrepreneurs at the state or regional level, it is appropriate to use the four components listed in the analysis; if we study individual entrepreneurs of the enterprise, then it makes sense to use the scientific and innovative potential; if we analyze and calculate individual entrepreneurs of a scientific institute or university, then components such as education and scientific potential are relevant for calculation.
- 4. The analysis of the general situation in the world and possible investments allows us to draw the following important conclusion: the only reliable source of stable and large-scale investment growth is the domestic

- factor, the growth of domestic consumption. In modern conditions, the development of the country's economy can take place primarily due to the expansion of the domestic market. This is the growth of internal demand, which is the main factor of the development of the modern economy, mainly for permanent consumers. Accordingly, this means that the majority of the population (ideally 100%) must have the financial means to purchase such goods and services. In today's Uzbekistan, a minority of the population is capable of this, i.e. no more than 15-20%.
- 5. In modern society, intellectual capital becomes the basis of socio-economic wealth. It determines the competitiveness of economic systems and serves as the main source for their development. The economy's ability to create and effectively use intellectual capital increasingly determines a nation's economic strength and prosperity. The successful socio-economic development of any country largely depends on the openness of the society to the introduction of various knowledge, ideas and information and the ability of the economy to effectively process them.

UNLOCKING THE POWER OF PASSIVE VOCABULARY: ENHANCING COMMUNICATION SKILLS

Zarina Sharapova¹, Azamatbek Khakimjanov²

¹Teacher ²Student Jizzakh Pedagogical University

ABSTRACT

Vocabulary learning always has been a crucial part of language learning especially for ESL learners. Students complain about their ability to use the learned vocabulary in communication due to inadequate utilitization of words and retaining phrases in long-term memory. This study examines empirical approaches to acquisition given vocabulary involving several techniques such as practice through reading, writing, speaking, and word games. Through actively taking part in learning vocabulary students are capable foster their overall language skills and widen their vocabulary more efficiently. By doing so, we suggest learners focus on practice repeatedly, embrace authentic language sources into application and use every chance to use vocabulary in real-life contexts mainly for B1, B2 learners.

KEYWORDS: *ESL learners, inadequate utilization, authentic sources, real-life contexts.*

INTRODUCTION

essential component of human connection is communication, which enables people to connect, communicate, and exchange ideas. According to Nichols and Rupley (2004), may be characterized as "an integral part of a balanced approach to teaching vocabulary instruction" (p. 55). Vocabulary is one important element that frequently contributes significantly to good communication. Unlocking the potential of passive vocabulary is just as vital as using more active vocabulary, which most people concentrate on growing because these are the words they use on a daily basis while speaking and writing. The term "passive vocabulary" describes terms that people know and comprehend but do not often use in everyday conversation. These terms could have come up when reading, listening, or learning a language, but they have not been completely incorporated into the person's current vocabulary. Nonetheless, people may greatly improve their communication abilities and express themselves more clearly and confidently by utilizing the possibilities of passive vocabulary. Improving understanding and fluency in spoken and written communication is one of the main advantages of building a passive vocabulary. People may grasp and communicate complicated concepts more effectively by learning new words and developing a deeper understanding of the intricacies and complexities of language. This can thus result in more precise and impactful communication, allowing people to express their ideas and feelings more clearly and effectively. Additionally, people may become more flexible and adaptive communicators by realizing the potential of passive vocabulary. "It has long been known that vocabulary knowledge and reading comprehension are closely related" (McNeil, 1992, p. 112). For this very reason, reading is primarily methods of learning vocabulary in contexts. People may more effectively adapt their language to various circumstances, audiences, and goals by being more familiar with a wider variety of words and expressions. This adaptability may be especially helpful in work environments because

establishing rapport, sharing knowledge, and accomplishing objectives all depend on efficient communication. Moreover, expanding one's passive vocabulary helps improve cognitive function and one's overall language proficiency. A wide and diverse vocabulary is linked to better levels of intellect, creativity, and critical thinking, according to research. People may hone their language skills, broaden their knowledge, and engage more with their passive vocabulary by actively using it. This will help them become more skilled communicators. Developing one's passive vocabulary may be a worthwhile and satisfying undertaking that has a good effect on communication abilities and general language competency. People may improve their comprehension, fluency, variety, and cognitive capacities by increasing their word knowledge and usage. This will ultimately enable them to communicate more successfully and confidently in both their personal and professional life.

Instructors looking for an efficient teaching approach can start by comprehending and putting into practice what is known about how kids learn and how the brain absorbs, stores, and uses information (Sousa, 1995). Jensen (2005) contends that word-based learning requires attentive, focused attention. If teachers teach language more effectively, classrooms can become vibrant, dynamic learning environments. According to Jensen (2005), "people will come to realize that you had better understand the brain if you wanted to understand human learning" (p. ix).

Students' brains are different from those of past generations, as Sousa (2003) notes. Diverse technologies and diversions including social media, religion, hobbies, and contemporary diets have an impact on kids' ability to think and their neural architecture. Educational scientists have discovered a great deal about the brain and how it works during learning in the last 10 years (Wolfe, 2001). Teachers are now far more aware of how critical it is to pay attention to and make content relevant during the teaching and learning process. They also know more about

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

how information is received, stored, and retrieved by the brain. As our understanding of the workings of the brain has grown, knowledgeable educational leaders are now better equipped to assist teachers in adapting their methods of instruction to better support the learning process. There are several problems in learning active vocabulary and I want to mention some of them before starting the article .

One of common issues called "Recall Difficulty" When speaking or writing actively, learners may find it difficult to remember and apply words they understand. It can be difficult to retrieve words from memory and incorporate them into writing or conversation on the spur of the moment. Learners do know the word but cannot remember since they have already become passive vocabulary in their brain.

Contextual Appropriateness: Students may find it difficult to utilize a term correctly in various settings even if they can passively understand its meaning. It might be difficult to grasp the subtleties of word usage and to know when and how to use a term effectively. Especially when students have a number of new words learned and they seem similar in their first language, learners struggle with choosing appropriate words which suits the context.

Lack of Confidence: Students may be reluctant to actively employ new words out of concern that they will pronounce them poorly or sound strange. Their apprehension about making mistakes may prevent them from embracing new words in their conversations. New learners usually try to avoid using these new learned vocabularies and they become passive in the end.

Limited Exposure to Usage: Words that are passively understood are frequently encountered in reading or hearing situations. However, learners may not be exposed to the word's practical usage if they are not actively speaking or writing with it, which makes it more difficult for them to internalize and employ. Practice is necessary to make the shift from passive to active vocabulary. Consistent practice and reinforcement are necessary. To reinforce their learning and usage, learners require opportunities to actively utilize recently learned terms in a variety of contexts.

It might be difficult to include new terminology into writing or speech that flows naturally. It could be challenging for learners to incorporate new words into their speech output without hesitating or pausing. As learners expand their active vocabulary, they may encounter words with varying levels of difficulty or complexity. Balancing the incorporation of new words with maintaining fluency and coherence in communication can be a challenge, especially for learners at different proficiency levels.

Cultural and Sociolinguistic Factors: Understanding the cultural and sociolinguistic contexts in which words are used is essential for effective communication. Learners may face challenges in grasping the cultural connotations or appropriate usage of words in different social contexts.

Active Reading: Examining reading engagement is crucial. According to Baker, Dreher, and Guthrie (2000), students who read regularly for pleasure, interest, and education are deemed engaged readers. According to Page 2, "engagement is the desire to learn new information about a subject, to follow the suspense of a story, and to broaden one's experience through print." According to a nationwide study, 44% of 9-year-old kids read for pleasure every day. By the age of 13, just 21% of people are reading for pleasure (Baker et al., 2000). According to Campbell, Voelkl, and Donahue (1997), just a small percentage of pupils engage in reading on a daily basis.

"Looking at what exceptional teachers do can help illustrate the current state of instructional practice" (Baker, et al., 2000, p. 11). Pressley, Wharton, McDonald, Allington, Block, and Morrow (1998) studied first grade. Five sites' worth of teachers who were recommended by their managers as successful in advancing their students' literacy were either watched or surveyed. These educators were classified as either exceptional or average. Examining teaching strategies, it was discovered that teachers classified as typical weren't bad educators—they were just average. Results showed that these teachers' methods of instruction had a discernible impact on the academic performance of their pupils (Baker, et al.). Expanding one's active vocabulary can present difficulties as learners come across words of varying levels of difficulty or complexity. Striking a balance between integrating new words and maintaining smooth and coherent communication can be challenging, particularly for learners at different proficiency levels.

Taking cultural and sociolinguistic factors into account is crucial for successful communication. Learners may encounter obstacles in grasping the cultural implications or appropriate usage of words in different social contexts. Turning passive vocabulary into active vocabulary through writing can be an effective strategy for language learners. Here is how you can approach it: Keep a Vocabulary Journal: Start by keeping a vocabulary journal where you list new words you encounter during reading or listening activities. Include the word, its definition, and an example sentence or phrase illustrating its usage.

Set Writing Goals: Establish specific writing goals that incorporate the use of new vocabulary. For example, aim to write a certain number of sentences or paragraphs each day or week using recently learned words.

Practice Word Usage: Select a few words from your vocabulary journal and incorporate them into your writing exercises. Focus on using the words in different contexts and sentence structures to deepen your understanding of their meanings and usage.

Write Regularly: Dedicate time to regular writing practice to reinforce the active use of vocabulary. This could include journaling, creative writing exercises, essays, or even writing emails or blog posts in the target language.

Seek Feedback: Share your writing with language partners, tutors, or teachers who can provide feedback on your use of

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

vocabulary. Ask them to specifically highlight instances where you've effectively incorporated new words into your writing and offer suggestions for improvement.

Use Writing Prompts: Utilize writing prompts or exercises that encourage the use of specific vocabulary. This can help you practice applying new words in different contexts and scenarios.

Revise and Edit: Review your writing regularly to identify areas where you can improve the use of vocabulary. Look for opportunities to replace common words with more precise or expressive alternatives from your vocabulary journal.

Experiment with Style and Tone: Explore different writing styles and tones to vary your use of vocabulary. Practice writing formal essays, informal blog posts, persuasive arguments, descriptive narratives, and other genres to broaden your vocabulary usage.

Expand Vocabulary Horizontally and Vertically: Horizontally expanding your vocabulary involves learning synonyms, antonyms, and related words to deepen your understanding of a word's usage. Vertically expanding your vocabulary involves learning words that are more complex or nuanced in meaning.

There are several ways to enhance our vocabulary learning skills through writing .

By consistently incorporating new vocabulary into your writing and actively practicing its usage, you can gradually transition passive vocabulary into active vocabulary while simultaneously improving your writing skills in the target language.

Actively participating in conversations with native speakers, language partners, or language exchange groups. Engaging in dialogue provides opportunities to naturally incorporate new vocabulary into your speech.

Participating in speaking-focused language activities such as role-plays, debates, discussions, or storytelling. These activities encourage you to actively use vocabulary in real-life contexts. Create speaking prompts or topics that require the use of specific vocabulary you want to practice. This could involve discussing current events, sharing personal experiences, or expressing opinions on various subjects. Using Vocabulary in Context: Paying attention to the context in which new words are used during conversations.

It is critical to use a variety of strategies that can support the reinforcement of these terms' usage in regular conversation in order to close the vocabulary gap between passive and active. Exposure to the new terms and regular practice are two successful approaches. This can be doing writing exercises, making flashcards for frequent study, or even incorporating them into everyday discussions. Context-based learning is an additional method for integrating passive vocabulary into active learning. One may better grasp how to utilize a term in their own communication by being aware of its meaning and usage in various contexts. Understanding the meaning of these terms

in everyday situations may be gained by reading books, articles, or watching films and television series. Actively employing passive vocabulary might also benefit from practice with a tutor or language partner. Confidence and fluency in the use of these terms can be developed by participating in discussions where they are accepted and corrected. Establishing clear objectives for introducing new vocabulary into everyday conversations—through written assignments, speeches, or even postings on social media—is also beneficial.

CONCLUSION

For B1 and B2 ESL learners, the journey of unlocking the power of passive vocabulary is a crucial step towards mastering the English language. While reading serves as a valuable tool for expanding vocabulary, it's equally important to actively incorporate these new words into both speaking and writing practice. In conversations, whether with classmates, teachers, or language exchange partners, strive to incorporate recently learned words and phrases. Don't be afraid to make mistakes; each conversation is an opportunity for growth and improvement. By actively using new vocabulary in real-life situations, you'll reinforce your understanding and develop confidence in your ability to express yourself effectively. Similarly, when writing, challenge yourself to incorporate a variety of vocabulary into your compositions. Whether it's a simple email, a journal entry, or a short story, aim to use newly learned words in context. Pay attention to how they fit into sentences and paragraphs, and practice using them in different grammatical structures. Remember, language learning is a journey, and progress comes with consistent effort and practice. By actively engaging with both passive and active vocabulary in reading, speaking, and writing, you'll gradually build the skills and confidence needed to communicate fluently in English. Keep exploring, keep practicing, and celebrate each milestone along the way!

SCIENTIFIC ACTIVITY OF ZAFAR AHMAD THANWI AND GENERAL DESCRIPTION OF THE WORK "I'LA AL-SUNAN"

Yusupov Kabil Khakimboevich

International Islamic Academy of Uzbekistan, Namangan Regional Branch of the Training Center, Lecturer at the Department of Social and Special Sciences.

ABSTRACT

The main purpose of the article is to shed light on the life and scientific activity of Zafar Ahmad Tahonavi (d. 1394/1974), a mature scholar from India, Hanafi scholar, and his books, especially the work "E'la al-Sunan".

Also, the general characteristics of the period in which he lived will be considered, and information will be given about the cultural life that prevailed in the country. In this work, it was found that he gave refutations to groups named "Ahli Hadith". *In addition, it contains the positive opinions of Zafar Ahmad Tahonaviy and his works from different countries of the world.*

KEYWORDS: Muhaddith, Faqih, Hadith, Asar, Musnad, Hafiz, Ahkom, Hanafi.

MAIN PART

In order to get to know the Indian scientist Zafar Ahmad Usmani Tahanawi, we will visit with information about the author's family, education, works and scientific activities. There is not enough information about the scientist and his family. However, despite the fact that the sources give only a few sentences about the author and his family, it is possible to form a general idea about them.

Maulana Zafar Ahmad ibn Latif Usmani Tahanawi was born on 13 Rabi' al-Awwal 1310/1892 in the city of Deoband, one of the centers of knowledge in India. When he was three years old, he was separated from his mother and was taken care of by his grandmother, who was a pious woman¹. He was the nephew of Ashraf Ali Tahonaviy.

Zafar Ahmad Usmani receives his primary education in Diyoband. From the age of five, he began to learn the recitation of the Holy Qur'an with the famous hafiz of Diyoband. His uncle Ashraf Ali Tahonaviy played an important role in his education. In Thana-Bhawan, he studied the science of tajwid with his uncle, as well as some lessons from Jalaluddin Rumi².

We can list the teachers who studied Zafar Ahmad Usmani Tahanawiy as follows:

a) Recitation lesson from famous teachers of Dar al-Ulum madrasa Hafiz Namdar, Hafiz Ghulam Rasulu and Maulana Nazi Ahmed.

- b) A lesson in sarf, nahv and literature from Maulana Muhammad Abdullah al-Ganguhi at the Imdad al-ilm madrasa,
- s) At the age of seven, he took Persian, Urdu and mathematics lessons from Sheikh Muhammad Yasin.
- d) From 1905 to 1908, he read the basic books of hadith science called "Mishkot al-Masobih" and "Kutubi sitta" from Maulana Muhammad Ishaq Bardavani and Maulana Muhammad Rashid Konpuri.

In 1909, he entered Mazohir al-Ulum, located in Saharanpur, where he studied logic, geometry and mathematics. In this madrasa, Maulana Khalil Ahmad Saharanpuri (d. 1346/1927-28)³ studied hadith and graduated from the madrasa in 1910 at the age of 18 with permission from the sciences of hadith and other intellectual and narrative sciences. He started working as a teacher at this madrasa when he was eighteen years old and taught jurisprudence, jurisprudence, logic and philosophy for seven years. Later, he worked as a teacher at Imdad al-Ulum madrasa, where he was a student. He taught hadith, tafsir and figh in this madrasa for many years⁴.

He started working in 1917 at Madrasai Irshad al-Ulum located in Garkipuh. In 1925, he completely memorized the Qur'an. In 1930, he began working as a mudarris at Madrasayi Randiyya in Rangoon, Burma. In 1937, he taught hadith, jurisprudence and usuli jurisprudence at Dhaka University. Later, he worked as the head mudarris of Madrasat al-Olia for eight years. Zafar Ahmed Usmani Tahanawi founded al-Jomeatu al-Qur'aniyat al-arabiya (Madrasai Ashraf al-ulum) in Dhaka (Bangladesh). In 1948, he left the University of Dhaka,

transferred to the Madrasa University, and in 1954 went on a pilgrimage. After returning from Hajj, he worked as a head teacher at Dar al-Ulum al-Islami in Ashrafabad. He became more involved in the teaching of hadith, thus becoming known as Shaykh al-Hadith⁵. Shaykh Abdul Fattah Abu Ghudda came to Zafar Ahmed Usmani Tahanawi and received from him the authorization of the sanad and hadith⁶.

Even at a young age, he studied religious and intellectual sciences. Due to his education in many fields, he had the opportunity to use different sciences in one way. Using the activities of scientists of his time and learning from advanced people in various fields, Zafar Ahmad Usmani Tahanawi's scope of thought expanded and his worldview grew. His works, considered the product of this, made him famous in the world of science.

Zafar Ahmed Usmanii has written works on tafsir, Sufism, hadith, fiqh written in Arabic and Urdu languages, among them "E'ala as-sunan" by Zafar Ahmad Usmanii Tahanawi is an important work that defended the Hanafi sect through hadiths. It was written between 1919 and 1938 and published in Karachi in 12 volumes⁷.

The work "Muqaddimai El'a al-sunan" consists of three parts, the first part is related to Qawaid fi ulum al-hadith. This part was published under the supervision and interpretation of Abdul Fattah Abu Gudda. The Turkish translation was done by Dr. Ibrahim Janan. The second part is related to Qawaid fi ulum al-fiqh. It was written by Maulana Habib Ahmad Qaranavi. The third part is Abu Hanifa and his companions al-Muhaddisin⁸.

The part "Abu Hanifa wa ashabuh al-muhaddisin" is also known as "Inja al-watan anil-izdiroi bi Imam az-zaman". This is a work that answers the objections about Abu Hanifa and covers the praises of Abu Hanifa by the scholars of his time and even those who came after him. This work was published at the end of Ela al-sunan.

"Ahkom al-Qur'an", "Dalil al-Qur'an ala masoil an-nu'man" is called "Dalil al-Qur'an ala mvsail an-nu'man" because many evidences from the Qur'an regarding the Hanafi sect are presented. Later, it will be changed to "Ahkom al-Qur'an", taking into account that it also covers doctrinal, jurisprudential and usul issues taken from the Qur'an. This work was written in a similar style to "Ahkom al-Qur'an" by Jassos (d. 370/981). Ashraf Ali Tahonaviy created a group consisting of four winters for the interpretation of the work. Among the

members of the group, Zafar Ahmad will recite from Fatiha to the end of Tawba Surah, Jamil Ahmed Tahonaviy from Yunus Surah to Furqan Surah, Muhammad Shafi' Diyubandi from Shuaro Surah to Hujarat Surah, and Muhammad Idris Kandehlavi from Qaf Surah to the last Surah of the Qur'an. Zafar Ahmad Tahanawi completed the section assigned to him up to the end of Surah Nisa and published this section independently (Karachi 1407/1986). Some time later, the parts completed by Muhammad Shafi'i and Muhammad Idris will be published together in five volumes (1413/1992). Later, Jamil Ahmad's drafts were corrected, and the parts left out by Zafar Ahmad (from Surah Ma'ida to the end of Surah Tawba) and some places left out by Muhammad Idris were filled in by Abdushakur al-Tirmizi, one of Zafar Ahmad's students. These parts were added to the previously published five volumes of Ahkom al-Qur'an as volumes VI-VIII. (VI-VIII, Lahore 1419/1998)⁹.

Al-Anwar al-Muhammadiya is an Urdu translation of al-Targhib wat-tarhib.

"Rahmat al-Qudus Tarjumai bakhhat an-nufus" Abu Muhammad Abdullah ibn Sa'd ibn Abu Jamra Al-Andalusi interpreted three hadiths in Bukhari from a mystical point of view, this work is an Urdu translation of the first hundred of these hadiths.

"Fatihat al-Kalam Phil-Kiraati Khalf al-Imam". This work is also written in Urdu, this work verifies that recitation is not necessary when following the imam in different prayers¹⁰.

The work "Al-Fatov al-Imdodiya" consists of fatwas issued by Ashraf Ali Tahanawi in response to questions. This seven-volume work contains fiqh and non-fiqh fatwas. Ashraf Ali Tahonaviy wrote this work called "Imdad al-ahkom fi masail al-halal wal-haram"¹¹.

"Tardidi Parviziyat". This work is a work that refutes those who deny the hadith.

In addition, "Inkishof al-haqiqat an istikhlof at-tariqat", "Al-Qawl al-madi fi nasb al-Qadi", "Kashf ad-dajo an wajh arriba", "Tahzir al-muslimin an muvolat al- mushrikin", "Injo al-watan an izdiroi bi imam az-zaman", "Al-Qawl al-matin fi al-ikhfa bi amin", "Shaqq al-ghayn an haqqi raf' al-yadayn", "Al-Itr al-vardi fi zikr al-masih al-mahdi", "Tardidi parviziyyat", "Al-Istidaq al-hasan ala Ihya as-sunan" are among the works written by Tahanawi with their own characteristics ¹².

Along with this, there are works that he has translated into Urdu. These are: "Adab al-ubudiyya" by Sha'rani, "al-Bahr almavrud", "al-Burhan al-muayyad" by Said Ahmed Rufai, "an-Nizam al-khalis", "Bahjat an-nufus" by Ibn Hajar Asqalani, Munziri's "al-Targib vat-tarhib", Allama Yofi's "Rawd arrayyahi" works, Ashraf Ali Tahanawi's one treatise.

Zafar Ahmed Usmani Tahanawi wrote works in many fields. It can be seen from the information given about him and the works he wrote that Zafar Ahmad Tahanawi used a lot of hadiths in presenting religious arguments, and this proves that he is a strong hadith scholar.

Zafar Ahmad Usmani Tahanawi is a person praised by many scholars. When he published the work "Ila al-Sunan", his uncle Ashraf Ali Tahanawi said: "Abu Hanifa had a 1200-year-old claim among Hanafi scholars. Praise be to God, it was fulfilled today." Zahid Kawsari praised Usmani by saying: "I was very surprised when I saw this special work of Maulana Zafar Ahmed Usmani and I envied the talent and skills of this enthusiastic scholar" 13.

He paid great attention to the witnesses and proofs of the issues presented in his works. He carefully studied the previously written rijal, mustalah, usul, fiqh, taharij, hadith commentaries, history and many other sources from beginning to end. If he came across an irregular rule in the works he studied, he identified it and arranged it in a beautiful way. In this way, he made great contributions to science. Kavsari said about him because he discovered neglected rules in some texts: "He supposedly had a lamp in his hand. He directed its rays to the inner parts of books and volumes, and from their invisible depths he found texts that became unique in the eyes of researchers and scientists ¹⁴.

Abdulfattah Abu Ghudda says that Osmaning was very patient, had deep thoughts and wrote his works with unique skills.

Despite the age of the scientist and the fact that he suffered from several diseases, he continued to study the science of hadith. This situation continued until December 1974, that is, until the scientist's death. He became closely acquainted with current issues in the ever-changing scientific environment of the Indian subcontinent and expressed his views on the issues related to them. In all his works, Zafar Ahmad Usmani Tahanawi focused on the current problems faced by Muslims and tried to find solutions to them¹⁵. He also sent letters objecting to some of Abul A'la Mawdudi's fatwas.

Zafar Ahmed Usmani Tahanawii came to Tando Allahyor in 1954 and taught there until the end of his life. He died on 8

December 1974 in this city (Sindh/Pakistan) on the 23rd of Zulqada 1394¹⁶.

The work "E'la as-sunan" written in Arabic was written in 20 years. This precious work, the result of many years and many efforts, is studied through the introduction, the reason for its writing, its period, its purpose, its content and its significance.

Zafar Ahmed Osmani Tahonaviy's work "Ila as-Sunan" written at the request of Ashraf Ali Tahonaviy is a collection of hadiths that support the views of the Hanafi sect. This work was also translated into Turkish and was published by Husayn Kayapinar and Ibrahim Tufakchi in 20 volumes under the name "Hadis bilan Hanafi fiqhi". The marriage section of the work is included in the eighth volume of this translation.

In India, in the middle of the 20th century, a group of scholars called themselves "Ahl al-Hadith" claimed that the Hanafis issued rulings that contradicted the hadiths on several issues. They also refused to imitate the imams of this sect. They begin to transfer their language to Hanafi jurisprudence and Imami Azam. According to their claims: Abu Hanifa opposed the hadiths, his views were based on comparison and opinion, and he did not know many hadiths, and he narrated weak hadiths while being the imams of the sect. Disturbed by these false claims, the great scholars of India devised measures to refute them, writing various works along the way¹⁷.

Ashraf Ali Tahonaviy took a place among those who opposed these opinions. The work "Ila al-Sunan" is a work that simultaneously compiles and interprets the hadiths taken as evidence for the views of the Hanafis. In addition, this work shows that the Hanafi imams were extremely subtle in presenting evidence with the Sunnah. The following sentences of Ashraf Ali Tahanawi to his nephew Zafar Ahmed Usman Tahanawi show the true purpose of the work: "Abu Hanifa had a claim of 1200 years in Hanafi scholars. Praise be to God, it has been fulfilled today¹⁸.

A group called Ahl al-Hadith claimed that the Hanafi school was not based on hadiths and that they preferred qiyas over hadiths. Those who criticized Imam Abu Hanifa. Ashraf Ali Tahanawi opposed this situation and began to compile the hadiths of Abu Hanifa, which he used as evidence in various books and treatises. At first, he began to compile a work called "Ihya as-sunan" by collecting scattered hadiths. But this work was lost before publication. Ashraf Ali Tahonaviy wrote the work "Jome al-asor" for the same purpose. In the work, he gives information about hadiths and shows how they can be used as evidence. He tries to resolve the conflicting situations between the hadiths by adding a work called "Tobe al-asor" to

this work. The manuscripts of these two works, which contain only matters of worship, are not as complete as the lost Ihya as-sunan. In order to study Tahanawi hadiths in detail from the point of view of sanad and text, Ahmed Hasan entrusts Sanbahli to conduct research on this topic. Sanbahli showed the parts he had written to Tahanawi, and Tahanawi, in turn, made corrections where he found it necessary. This situation continues until the Haj section. Later, Ahmad Hasan Sanbakhli made changes in many parts of the work and did not inform Ashraf Ali Tahonavi about this situation. As a result, both the work and the style changed in terms of content and took on a different tone than what Tahonaviy thought. This situation is felt after the publication of the first volume of the work. Hakim al-umma saw unacceptable problems during the review of the work, released Sanbakhli from the job and assigned this task to Zafar Ahmed Usmani Tahanawi. Uthmani gets acquainted with the work and makes the necessary corrections and writes a work called "al-Istidrok alhasan ala Ihya as-sunan"19.

Ashraf Ali Tahanawi likes the work done by Zafar Ahmed Usmani and gives his nephew the task he wants. Zafar Ahmed begins with the section of Tahonaviynamaz and ends the fiqh issues in the sixteenth chapter. Taking into account the rights of Tahonaviy Sanbakhli, Ashraf Ali does not give the title "Ihya as-unan" to Zafar Ahmad's work. He names the text part of Zafar Ahmad's work as "E'la as-sunan" and the commentary part as "Isda al-minan".

At the end of the work, the work "Istidrok al-hasan" was published in order to eliminate the shortcomings of the work published under the name "Ihya as-sunan". The remaining part was published under the name "E'alo as-sunan". Publication of the work in the form of several books with different names causes confusion in the minds of readers. In order to correct this situation, Zafar Ahmed will publish this work under the name of "E'la as-sunan". The writing period of the work lasted for 20 years and it was completed after the death of Ashraf Ali Tahonavi²⁰.

The first eleven volumes of this eighteen-volume work were lithographed in Tahonabihun (1922), and the twelfth to eighteenth volumes were lithographed in Karachi (1965-1967). published in the form of The work consists of twenty-two volumes together with the introduction, index and other indexes²¹.

Since the hadiths in the work are compiled using reliable sources, this work is considered a collection of reliable hadiths. Since the hadiths in the work are studied from the point of view of sanad and text, this work serves as a fundamental book for researchers in the field of hadith. Although the structure of this work looks like a hadith book, in fact it covers jurisprudential issues. Therefore, this work is considered a fiqh book. The work presents the views of the Hanafi sect as well as the views of other sects. This feature shows that the work is a book of comparative jurisprudence.

"E'la as-sunan" is organized according to fiqh issues. In addition to the chapter "Kitab al-adab wat-tasawuf", from "Kitab at-taharat" to the chapter "Kitab al-hiyal", a lot of space is given to fiqh issues. The classification of topics is given in the form of worship, treatment and punishment, just like the classification of classical fiqh books. The work has a book, chapter order.

Three prefaces were written to "E'alo as-sunan". The first is related to "Qawaid fi ulum al-hadith". This preface was written by Zafar Ahmad, and it is the first preface to comprehensively study the hadith method based on Hanafi views. This introduction was translated into Turkish by Ibrahim Janan under the title "Yangi Usuli Hadith". The second is related to "Qawaid fiy ulum al-hadith", which was written by Maulana Habib Ahmad Qarani. The third preface, "Abu Hanifa wa ashabuh al-muhaddisin" was written by Zafar Ahmad Tahanawitomani²².

CONCLUSION

First of all, the place where Zafar Ahmed Tahonavi was born and raised, the scientific and cultural environment there played an important role in his development as such a high scholar.

Secondly, I mentioned above that the teachers of Imam Tahonaviy were also accomplished scholars of their time, that they learned every science from their own experts, and that the students who studied under him also had great scientific potential and matured as teachers. You can also learn from the above information.

Thirdly, Zafar Ahmed Tahonaviy, who devoted his whole life to scientific research, left his works as a symbol of his productive life. He published his work entitled "Ilo as-sunan" for twenty years. The period of publication of the work shows the patience and thoroughness of the author. All parts of the work from head to toe are made with great precision. Ashraf Ali Tahonaviy and Zafar Ahmed Usmanii Tahonaviy's scientific struggle against the group known as "Ahli Hadith" is worthy of praise.

Fourthly, Imam Tahanawi studied in many cities of science in India and became a mature scientist of his time in both narrative and intellectual sciences.

Fifth, in the process of studying and analyzing the scientific heritage of Zafar Ahmed Tahonaviy, he was convinced that

ABSTRACT

Background: A stroke can profoundly affect the functionality of the lower limbs. It can significantly impact an individual's walking ability and balance maintenance. This is often due to a stroke disrupting the brain's control over muscle movements. No existing studies have concentrated on using CIMT to enhance lower limb functions. However, CIMT has demonstrated success in improving the lower limb functions of chronic stroke patients.

Aim: The research objective is to analyze the effect of CIMT on enhancing the lower limb functions of chronic stroke patients. **Methods:** A comprehensive research on Pubmed, Medline, Google Scholar, and Science Direct databases by employing keywords stroke, interventions used in stroke, lower limb functions, and physiotherapy evidence-based database was utilized for quality assessment.

Results: This review incorporated 13 studies, proving that constraint-induced movement therapy can enhance lower limb functions in patients suffering from chronic stroke.

Conclusion: This review's findings offer ample proof that constraint-induced movement therapy can enhance the functionality of lower limbs in patients recovering from a chronic stroke.

KEYWORDS: constraint-induced movement therapy, stroke, evidence-based practice, lower limb functions, evidence-based physiotherapy.

INTRODUCTION

A stroke is typically defined as a neurological impairment caused by an acute, localized injury to the central nervous system. This injury can be due to a vascular event such as a cerebral infarction, or intracerebral Hemorrhage is a medical term that refers to excessive bleeding, either internally or externally. (ICH), or subarachnoid Hemorrhage is a medical term that refers to excessive bleeding, either internally or externally. (SAH). It stands as one of the foremost reasons for disability and mortality on a global scale (1) Stroke is a significant and escalating global health issue. It is the main reason for physical disability acquired in adulthood worldwide, and it ranks second as a cause of death in middle-to highincome nations. In these countries, the total incidence of ischemic and hemorrhagic stroke has increased over the past decade to 85-94 per 100,000, but it is substantially higher (1151-1216 per 100,000) in individuals aged over 75 years. Furthermore, low-income countries account for 85% of all stroke-related deaths, and Approximately 87% of the disabilityadjusted life years experienced can be attributed to strokerelated issues.(2)

Considering the recent data revealing that approximately 0.84 out of every 1,000 people face a high risk of stroke, this alarming trend may lead to complications like hemiplegia and hemiparesis. Post-stroke weakness can substantially hinder daily routines and considerably diminish the affected individual's overall well-being. (3)

Stroke often leads to a variety of pathological symptoms that result in functional disorders, including disturbances in gait. Consequently, a primary objective of rehabilitation is to restore optimal gait. The abnormal gait observed in stroke patients is influenced by several factors such as asymmetrical stride time and length, reduced speed, poor control of joints and posture, muscle weakness and atypical muscle tone, and irregular muscle activation patterns. Muscle weakness, a prevalent issue after a stroke, often plays a substantial role in causing irregular walking patterns among patients. The power of one's lower limbs is significantly connected to their capacity to walk effectively. Therefore, the goal of stroke rehabilitation is to enhance muscle strength, which in turn improves the patient's walking ability. (4)

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Constraint-Induced Movement Therapy (CIMT), is a successful method to boost upper limb functionality after a stroke or related conditions This has resulted in the emergence of LE-CIMT, an enhanced version of the therapy. This therapeutic approach focuses on enhancing the functions of the lower limbs. CIMT and its modified version (mCIMT) are interventions designed for motor disabilities, involving restricted movement in the healthy limb, intensive practice, and behavioral shaping to increase the usage of the affected limb in daily activities. These therapies combat the "learned disuse" phenomenon following a stroke, aiming to enhance the functional use of the impacted upper limb. Research by Ro et al. (2006) demonstrates The beneficial effects of Constraint-Induced Movement Therapy on upper limb motor function and associated neural networks following a stroke. In recent years, mCIMT has been applied to the affected lower limb to counter "learned misuse" and enhance motor function quality. (5)

Constraint-Induced Movement Therapy (CIMT) was initially developed by Edward Taub and his research team, as referenced in their pivotal 1994 study. The main goal of this therapeutic intervention was to counteract the concept of 'learned non-use.' CIMT consists of four essential components: (1) providing daily, intensive therapeutic exercises over a continuous period, (2) employing a 'shaping' technique to offer function-focused, supervised exercises for the involved limb, (3) using Behavioral strategies, also called as a 'transfer package,' to help patients apply the learned skills in their daily activities, and (4) implementing techniques to encourage the use of the impaired limb, such as restraining the non-affected limb during upper extremity CIMT. The works of Morris, Taub, and Mark (2006), and Taub and other researchers in 2006 and 2013, Additionally, it has enhanced our comprehension and fostered the progress of this intervention method. (6)

METHODOLOGY

Study Design

Search Methods and Eligibility Criteria

To gather relevant articles, the search was conducted across Numerous databases, such as PubMed and Google Scholar, which have been used for this purpose., Medline, and Pedro, Based on available studies There is an improvement in lower limb functioning by constraint-induced movement therapy. Keywords used are stroke, lower limb rehabilitation, and constraint-induced movement therapy. Only the studies that focused on enhancing lower limb functionality through constraint-induced movement therapy were included in this research. Any articles not published in English were omitted from the study.

Sample Size

A sample size of 33 articles was searched with the keywords of stroke, lower limb rehabilitation, and constrained-induced movement therapy. Through the application of specific criteria, numerous articles were meticulously screened and narrowed down. Ultimately, 13 articles were selected and thoroughly reviewed for further analysis.

Inclusion Criteria

- Articles explaining stroke Rehabilitation were included.
- Articles published in recent years.
- Full-text articles.
- Articles published in English.

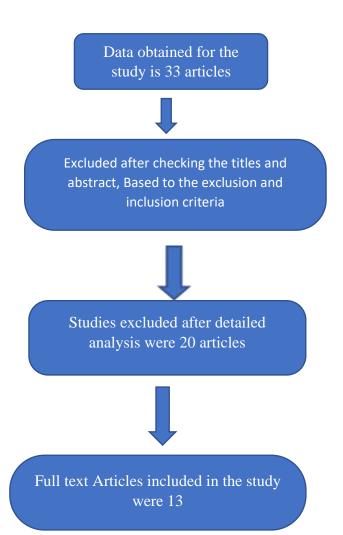

Exclusion Criteria

- Articles of past 2014.
- Articles explaining other than stroke were excluded.
- Articles discussed other than constraint-induced movement therapy were excluded.
- Articles not containing relevant discussion were excluded.

| 7. | Jaya Shankar tedla ⁽¹³⁾ 2022 | Effectiveness of constraint-induced Movement Therapy (CIMT) on balance And functional mobility in the stroke Population | This research study, an a comprehensive across various sources and platforms Various reputable databases, including Google Scholar, EBSCO, PubMed, PEDro, Science Direct, Scopus, and Web of Science, were utilized for the comprehensive search. were utilized to conduct an extensive search for relevant information. which evaluated 161 studies. Ultimately, eight (RCTs) were included the assessment of methodological quality was conducted utilizing the PEDro Evaluation approach. The study demonstrated that (CIMT) has a positive impact on poststroke patients' balance, with varying results compared to alternative interventions like neurodevelopmental treatments. | A systematic review and meta-analysis | This study indicates that treatments utilizing Constraint-Induced Movement Therapy (CIMT) have been found to positively influence the recovery of balance-related motor functions in stroke patients, especially compared to other treatment methods such as neurodevelopmental treatment, modified use therapy, and traditional physical therapy. |
| 8. | Ravi Shankar Reddy ⁽¹⁴⁾ 2022 | Impact of Constraint- Induced Movement Therapy (CIMT) on Functional Ambulation in stroke patients. | To collect relevant studies, a variety of databases, including EBSCO, PubMed, Pedro, Science Direct, Scopus, MEDLINE, CINAHL, and Web of Science, were employed. For this analysis, the focus was on clinical trials that involved stroke patients across different recovery stages, aged 18 and above, who underwent Lower Extremity Constraint-Induced Movement Therapy (LECIMT). In this review, a total of 10 studies were included and they fulfilled the selection criteria. The impact of LECIMT on outcomes related to gait speed and balance was evaluated using either a random or fixed-effect model. | A Systematic Review and Meta- Analysis | This meta-analysis suggests despite numerous studies pointing to the efficacy of LECIMT in improving lower-limb functions, the enhancements in gait speed and balance did not demonstrate a significant superiority of LECIMT compared to other treatment methods. |

| | | | | | , |
|-----|---|---|---|-------------------------------------|---|
| 9. | Anwal abdullahi Steven trujen et al (15) 2021 | Effects of constraint-induced movement therapy in people with Stroke | To gather relevant data, various databases such as PubMed, Pedro, OT Seeker, and CENTRAL, were searched, covering their entire available timeframes up to February 2021. We focused on lower limb CIMT studies that reported outcomes at both baseline and post-intervention stages. Key aspects like sample size, mean, and standard deviation related to the outcomes of interest, as well as the protocols for both experimental and control groups, were extracted from these studies. A thorough assessment of the methodological rigor of the included studies was conducted using the McMaster Critical Review Form as a comprehensive assessment tool. In this study, A cohort of 30 | a systemic review and meta-analysis | CIMT for lower limbs has shown a positive impact on various aspects such as referring to motor skills, equilibrium, and to perform daily tasks efficiently, gait speed, oxygen uptake, weight-bearing capacity, lower limb kinematics, and overall quality of life. Nonetheless, according to existing research, it demonstrates a notable advantage over control interventions only in enhancing the QOL specifically for stroke patients. |
| 10. | Canadan S, Livanelioglu ⁽¹⁶) 2019 | modified constraint- induced movement therapy for lower extremity in patients with stroke. | stroke patients was segregated into two distinct sub-groups. and both received neuro-developmental therapy (NDT) as a baseline treatment for four weeks. Following this, the study group underwent motor-cued Constraint-Induced Movement Therapy (mCIMT) for two weeks, while the control group continued with NDT during the experimental phase. The participants' strength was assessed using the Motricity Index, and their (QoL) was evaluated using the Stroke (SS-QoL) and Stroke Impact Scale (SIS) at three-time points: baseline, after four weeks, and after six weeks. | RCT | The study indicates that (mCIMT) It could potentially serve as a beneficial therapeutic approach for individuals experiencing stroke, as it effectively boosts the strength of enhances the well-being and quality of life for individuals with a compromised lower limb. |
| 11. | Sevim Acroz Ayse ⁽¹⁷⁾ 2017 | Effects of Modified Constraint- induced movement therapy for lower limb on Motor Function in stroke patients. | A 2-week randomized controlled study involving 30 participants divided into mCIMT and NDT groups was conducted. Motor function was assessed using FAC, BBS, 10-Meter Walk Test, gait parameters (cadence and step length ratio), and postural symmetry ratio at pretreatment and post-treatment (twice). | RCT | This study highlights the potential of CIMT (mCIMT) as a superior treatment option compared to neurodevelopmental therapy (NDT) for enhancing motor function, gait, balance, ambulation, and symmetry in stroke patients. This innovative approach to lower limb rehabilitation holds promise for improving overall patient outcomes. |

DISCUSSION

Stroke stands as a significant contributor to disability, often resulting in substantial alterations in both independent living and social engagement for approximately half of those affected by hemiparesis or hemiplegia. (20)Saleh M.Aloraini et al 2022 performed An investigation that will assess the efficacy of constraint-induced movement therapy- lower limb (CIMT-LE) on improving balance and walking abilities in Individuals poststroke. The study was a randomized, single-blinded trial, with participants divided into CIMT-LE and control groups. Key evaluation metrics comprised the Fugl-Meyer assessment, Berg balance scale, ten-meter walk test, and six-minute walk test, conducted at baseline, post-therapy, and after three months. Initially, Upon comparing the 38 subjects, two groups with 19 members each, no differences were noted between them. Both groups demonstrated improvements compared to their initial assessments, but the CIMT-LE group showed clinically significant changes. After three months, these improvements sustained. Compared to an intensity-matched conventional program, CIMT-LE yielded more substantial progress in lower extremity motor recovery, postural balance, and gait speed among stroke patients. Sakshi Jaitely et al 2023 This Quasi-Experimental research evaluates the efficacy of

Constraint-Induced Movement Therapy (CIMT) Concerning the analysis of lower limb functions in people who experienced a stroke. The 4-week CIMT program focused on the lower limb demonstrated Notable enhancements in participants' ability to move and maintain balance in daily activities were observed. The research determined that Constraint-Induced Movement Therapy (CIMT) effectively improves lower limb capabilities, particularly focusing on balance and functional movement. In this study, essential evaluation tools are the BBS Scale, Rivermead Mobility Index, and Barthel Index to assess the results. The results demonstrated substantial positive effects on improving balance and functional mobility. Despite the CIMT program, the Barthel Index did not show significant change observed in stroke patients.

Sevim Acroz et al 2019 performed a study aimed at assessing the effectiveness of constraint-induced movement therapy (mCIMT) targeted at lower limbs, focusing on strength and (QoL) improvements in individuals with stroke. The study included 30 participants, in two groups. Both groups received Neuro-Developmental Therapy (NDT) as a foundational treatment for four weeks. The study group then underwent MCIMT, while the control group continued NDT for two more

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

weeks as the experimental treatment. Strength was assessed using the Motricity Index, and QoL was evaluated through the Stroke Specific Quality of Life Scale (SS-QoL) and Stroke Impact Scale (SIS) at three time points: baseline, post 4 weeks, and post 6 weeks. Both groups experienced improvements in strength and OoL during all treatment periods (p<0.01). The mCIMT One group exhibited more substantial advancements compared to the other in paretic lower limb strength (p=0.029) and various SS-QoL subdomain scores after the mCIMT period (p<0.05). The perceived recovery domain of SIS was also higher in the mCIMT group compared to the control group (p<0.001). Total changes in strength and QoL were more correlated with improvement during the mCIMT period (r=0.709, p<0.01 and r=0.769, p<0.01) than in the baseline period (r=0.660, p<0.01 and r=0.505, p<0.01). This study suggests that MCIMT can be an efficient approach for enhancing the situation found in this method. paretic lower extremity strength and health-related QoL in stroke patients. Nan-Hyang Kim et al 2015 performed a study investigating the impact of intensive gait training employing a Constraint-Induced Movement Therapy (CIMT) approach targeting the non-paretic upper limb on stroke patients' balance capabilities. The research involved 20 participants randomly divided into experimental and a control group. The experimental group participated in gait training with CIMT for 30 minutes per session, conducted three times weekly, spanning four weeks. In contrast, the control group received standard gait training alone. The experimental group showcased substantial enhancements in their dynamic balance capabilities, with greater enhancement than the control group. Additionally, the experimental group shows advancements in movement distances towards the affected side. In contrast, the control group did not show any substantial improvements in balance indices following the intervention. In conclusion, integrating gait training with CIMT methods in stroke rehabilitation can be a beneficial treatment option, significantly improving the patients' balance.

CONCLUSION

Numerous research studies have consistently shown that constraint-induced therapy (CIMT) and modified constraint-induced movement therapy (MCIMT) yield substantial improvements in gait, balance, motor functions, and ambulation for chronic stroke patients. It is recommended that therapists consider incorporating either CIT or MCIMT in treatment plans for stroke patients.

ABSTRACT

Background: patellofemoral pain syndrome, a prevalent knee issue with multiple contributing factors, benefits from a multifaceted approach to treatment, including physiotherapy manual techniques. Despite these methods, Some individuals might have functional issues even after undergoing other medical treatments. focusing on the possibility of manual techniques being more effective in managing patellofemoral pain syndrome.

Purpose: This review manual physiotherapy approach in addressing patellofemoral pain, particularly in reducing pain levels and improving overall functionality for affected individuals.

Methods: A thorough, computer-based search was conducted to collect pertinent studies, ensuring a comprehensive scope for this review on the topic. Various databases were explored, including Some of the key databases for medical and healthcare research including Midline, Embase, CINAHL, Sports Discus, and the Cochrane Library. The search focused on publications from 2012 to 2023, aiming to include the most recent literature in the analysis.

Results: Among the all studies, 15 articles' outcomes show that physiotherapy manual techniques are more effective in treating patients with PFPS.

Conclusion: Research has demonstrated that manual physiotherapy methods can effectively alleviate pain and improve functionality for individuals suffering from patellofemoral pain, both in the immediate and long-term phases. In light of these findings, medical professionals, including physical therapists, are advised to incorporate these hands-on techniques into their dealing with this specific issue.

KEYWORDS: *Exercise, manual techniques, and patellofemoral pain syndrome.*

INTRODUCTION

Patellofemoral pain syndrome is a prevalent knee issue, affecting a wide range of individuals. Estimates suggest that its occurrence falls between 8% and 40%, with females experiencing it more frequently than males.1,2 PFPS routinely affects adolescents, young adults, and the athletic population.2–5 Suffering generally presents to sports physicians and physical therapists with peri- patellar pain aggravated by activities stressing the patellofemoral joint, such as squatting, prolonged sitting, stair climbing, and running. Although the precise cause of PFPS remains unclear, it is generally attributed to a combination of factors involving biomechanics, muscle imbalances, and overuse. factors contributing to PFPS are thought to include: proximal and distal muscle imbalance and weakness, overuse, soft tissue tightness, and poor lower limb alignment, such as increased Q angle and poor foot biomechanics. Sometimes

dynamic valgus is also noticed in patellofemoral pain syndrome and it is due to weak hip abductor muscles abnormal rear foot version with pes pronates valgus, vastus medialis and vastus lateralis disbalance, Hamstring tightness, and iliotibial band tightness. (1.5)

Patellofemoral Syndrome (PFS), commonly known as "runner's knee," is a prevalent knee issue characterized by discomfort around or beneath the patella. It is one of the leading causes of knee pain, often presenting as generalized anterior knee discomfort during activities that strain the patellofemoral joint. Despite extensive research, there is no consensus on the exact cause of PFS. Several factors are believed to contribute, including trauma, overuse, patellar malalignment, muscular imbalance, and, to a lesser extent, psychological factors such as mental health, fear, anxiety, and depression. This painful condition

ISSN (Online): 2455-3662 EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

predominantly affects young, physically active individuals and has a higher prevalence in women compared to men.

Patellofemoral pain, or PFPS, is believed to stem from the patella's irregular movement within the trochlear groove. Various contributing factors, such as lower limb misalignment, muscular imbalances or weakness, reduced flexibility, excessive patellar mobility, incorrect running techniques, and overuse, can lead to this discomfort. PFPS is a prevalent overuse injury in physically active adults, with studies indicating that it affects 19-30% of female runners and 13-25% of male runners. (2.3.4)

a frequent reason for anterior knee pain in outpatient settings, affecting adolescents and adults below 60 years old in the United States, with an incidence of 3% to 6%. Characterized by knee discomfort around the anterior region, it aggravates during weight-bearing activities involving knee flexion. Pain from PFPS tends to worsen in prolonged sitting or while descending stairs. A patient's squatting-induced pain is the most sensitive diagnostic indicator. Examining gait, posture, and footwear can help identify contributing factors. While X-rays of the knee are not essential for diagnosing PFPS, they can rule out other conditions, such as osteoarthritis, patellar fractures, and osteochondritis.

Need of study

Nowadays more peoples suffer from knee pain (patellofemoral pain syndrome) and some are compressing their lives with pain and someone trying to overcome the pain. But no one is happy with the pain, I to overcome that sadness or to get rid of the PFPS manual physiotherapy plays a major and key role.

METHODOLOGY

Inclusive criteria

- Articles explaining patellofemoral pain rehabilitation were included.
- Articles published in recent years.
- Full-text articles.
- Articles published in English

Exclusive criteria

These studies, each focusing on different approaches to managing Patellofemoral Pain Syndrome (PFS):

- 1. Combined Interventions: Researchers examine combining multiple treatments, such as exercise and manual therapy, in managing PFS.
- 2. Other Adjunctive Interventions: In this category, researchers explore additional treatments like therapies for managing PFS.
- 3. Individual Therapy Techniques: Studies in this area focus on the effectiveness of single treatment methods, such as specific exercises, massage, or other targeted therapies, in alleviating PFS symptoms.

Flow Chart

Data obtained for the study is 33 articles

Excluded after checking the titles and abstract, Based to the exclusion and inclusion criteria

Studies excluded after detailed analysis were 20 articles

Full text Articles included in the study were 13

DISCUSSION

In this comprehensive review, various studies evaluated diverse manual techniques in managing Patellofemoral Pain Syndrome (PFPS). The manual techniques employed in the selected studies encompassed a range of approaches, such as manipulation, mobilization, strengthening and stretching exercises for the muscles surrounding the knee joint, Proprioceptive Neuromuscular Facilitation (PNF) techniques, and tapping techniques, among others.

Patellofemoral Pain Syndrome (PFPS) often results from imbalances in the forces governing, particularly when the joint experiences excessive stress. (11) Manual techniques, as mentioned earlier, contribute to a more effective recovery from PFPS by addressing these imbalances and alleviating the associated discomfort.

The comprehensive findings of this review indicate that manual therapy (MT) or physical therapy interventions can help reduce pain and increase range of motion and increase strength.

PFJ joint congruency increases with knee flexion, and mobility subsequently decreases, mobilizing the individual's PFJ in the angle or position of symptom provocation or joint restriction may allow for enhanced PFJ load dispersion and decreased pain. identification and improvement in an individual's primary symptomatic movement (ie their comparable sign) are associated with an improved outcome at discharge. This means patellofemoral joint mobilizations are more effective in PFPS Individuals.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Some of the authors explained that along with the local manual techniques, spinal manipulations, and foot intervention (talonavicular joint mobilizations) play a major role reduction of pain and functional improvement. because sometimes PFPS is common due to sacroiliac dysfunction and flat foot. Sometimes weakness of the quadriceps leads to PFPS, so the strength and flexibility of those muscles do not hit the knee joint. The above review suggests that strengthening and stretching exercises to the quadriceps also help in the reduction of pain in PFPS. (8,11,13)

The manual technique known as tapping serves as a supportive complement to other interventions in addressing and managing Patellofemoral Pain Syndrome (PFPS) cases. One author also concluded in his review study that Mulligan mobilization with movement also helps This method of tapping aids in alleviating pain and improving overall knee function in patients experiencing Patellofemoral Pain Syndrome (PFPS). (14)

In this review literature, one limitation is that no single manual techniques give better results in individuals with PFPS, a combination of manual techniques plays or gives the best result.

CONCLUSION

Manual physiotherapy techniques have been found to provide pain relief and enhance function, both in the short and long term, for patients experiencing patellofemoral pain. Consequently, healthcare professionals, such as physical therapists, are encouraged to integrate these manual techniques into this condition.

ABSTRACT

Nasal in situ gel based formulations are those which upon administration get converted into gel by various mechanism like pH, Temperature & other factor. Eletriptan is BCS class 1 drug with lesser aqueous solubility which is used for Migrane. Existing market formulation include tablet for the same with less than 50 percentage bioavailability because of cytochrome induction and first pass metabolism. Mainly cause for failure of the formulation to achieve desired bioavailability and therapeutic action is because of first pass metabolism and cytochrome induction which can be avoided by nasal delivery. Polaxomer 407 and Carbopol 934 used to formulate the nasal in situ gel of Eletriptan by cold method of preparation. While polyethylene glycol400 increase the solubility of drug in polaxomer along with increasing the permeation through nasal membrane. Hence by formulating nasal in situ gel of Eletriptan we can avoid FTM and get brain targeted drug delivery for the migrane.

KEYWORDS: *Nasal in-situ gel, Eletriptan, Migraine, cytochrome induction, first pass metabolism, brain targeted drug delivery.*

INTRODUCTION (1,2,3)

Migraine is a nervous system disorder that causes severe headache, brain dysfunction, aura, and sometimes neurological symptoms. to contribute to its development. 3. A new class of selective serotonin (5-hydroxytryptamine [5-HT]) receptor agonists called triptans can activate 5-HT1B and 5-HT1D (5-HT1B/1D) receptors in many people with migraine. It has been shown to improve quality of life. Migraine symptoms are throbbing pain on one side of the brain and moderate to severe headaches.

Many patients also report light and sound sensitivity, dizziness and nausea. Approximately one in five men and one in five women suffer from migraines, making them painful. They usually begin after the person reaches adulthood. It has a range of anti-inflammatory effects on brain chemistry and neuronal activity in all migraine sufferers. These actions affect blood flow to the brain. Migraine is characterized by throbbing pain that usually affects one side of the brain more than the other. You may also experience symptoms

Gel is the space between the liquid and solid phase. The component consists of a three-dimensional central network of molecules that carries the liquid phase. In Situ Gel Delivery Systems In situ gelation is the process of forming a gel at the site of action after formulation when activated at the site of action. The semi-solid muco-adhesive ring is produced by the in situ gel effect, which is essentially the liquid of the medicinal product. This allows the drug to be administered in solution or liquid form

Drugs that are not safe to take orally are usually given intranasally in low doses and quickly mix into the bloodstream. Most drugs enter the body through the membranous water in the nasal mucosa. Therefore, the drug molecule is absorbed even if it is small and in solution. As the molecular size increases, nasal absorption decreases. Nasal mucociliary clearance is one of the less important parameters for nasal delivery. This greatly reduces the time it takes for the medication to be absorbed. Mucoadhesive formulations are designed to increase the time the formulation is in contact with the nasal mucosa.

PREFORMULATION STUDIES OF DRUG (ELETRIPTAN)

MATERIAL AND METHOD

Reagents required: Eletriptan, Polaxomer 407, Carbopol 934P, PEG 400, Benzyl alkolium chloride.

Instrumentation required: Weighing Balance, Hot plate, Mechanical Stirrer, Magnetic Stirrer, pH Meter, Incubator.

PROCEDURE (22)

The purpose of drug in situ gel formation is to provide a solution to the patient's identity as water drops that gel immediately after temperature changes when applied to the nasal mucosa. Preliminary experiments were performed to determine the temperature of the thermosensitive polymer (Polaxomer 407) at different concentrations of 15% and 25% w/v. It was found that at low polymer concentrations (15-16% w/v) phase change did not occur until the temperature reached 40°C. At a concentration of 17% (w/v), viscosity was found to increase from 38°C onwards. However, phase change occurs at 40°C. However, gelation occurs when the polymer concentration is increased from 18% to 25% (w/v).

The temperature decreases with increasing polymer pressure. 18% to 22% (w/v) of poloxamers were found at temperatures suitable for nasal use. Therefore, concentrations in the first group of eletriptan nasal in situ gel were found. Since the maximum drug concentration that could be added to clarify the in situ gel was 0.2% (w/v), the content of the starting drug was adjusted based on the solubility data. Since PEG 400 and PEG 6000 are more soluble, heavy weight (15 wt% each) was also included in the formulation. According to the data, three different amounts of polymer (0.1%, 0.3% and 0.5% w/v) were added to the samples. development. The final formulation also contained benzyl alcohol chloride, a known preservative, to prevent microbial development.

Table No.2 Formulation developments of nasal insitu gel

EVALUATION PARAMETER OF FORMULATION (25,26,27)

1. Sharpness

Sharpness can be evaluated visually on a black and white background.

Viscosity

Viscosity and rheological properties of polymeric formulations can be measured in solution or in gels formed from tissue products media using a variety of viscometers such as Brookfield, cone and plate viscometers. Patient compliance should be taken into account in the viscosity of the formulations.

Contents of the medicine

Place one milliliter of the preparation in the measuring bottle, adjust to ten milliliters, and then dilute with ten milliliters of distilled water. Then dilute 1 ml of this solution again with 10 ml of pure water. Finally, the absorbance of the solution at a specific wavelength is measured using UV-visible spectroscopy.

4. Gelling ability

You can use the remote control to measure this parameter. Under the action of the gelling agent, a certain amount of gel in the form of sol is formed in the beaker. It is important to push the probe slowly into the gel because the beaker containing the gel will rise at a noticeable rate. The depth at which the probe is immersed at the bottom of the gel can be used to calculate the change in probe loading.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

5. Gel time and pH of sol-gel transition

Sol-gel transition pits must be available for in situ gel formation systems. Gel time is the time it takes for the gel test to first detect gelation.

6. Examination of Drug-Polymer Interactions Using Fourier Transform Infrared (FTIR) Spectroscopy Interaction and Thermal Analysis

The KBr technique can be used to measure the types of interactions that occur during gelation. The percentage of water in the hydrogel can be determined using a thermogravimetric analysis (TGA) of the formation of the polymer layer. Use differential scanning calorimetry (DSC) to examine whether temperature changes when comparing pure components used for gelation.

7. Isotonicity Evaluation:

An important aspect of nasal and eye formulations is isotonicity. Maintain isotonicity to prevent tissue damage. Isotonicity testing showed that all nasal formulations had good release, gelling properties and appropriate dispersion. Mix with a few drops of blood, examine under a microscope at 45x magnification, and compare with commercial standards.

8. Sterility Test

Sterility test complies with IP 1996 rules. To detect fungal growth, the sample must be treated in thioglycolic acid liquid between 300-350 °C for at least the same period.

9. In vitro drug release

Plastic dialysis cells were used to study drug release from in situ drugs for oral or ocular administration. The transmitter and receiver are the two half cells that make up the battery. The two halves of the cell are separated by a cellulose membrane. The left form of the formulation is placed in the feeding chamber. After that, the finished cells were placed in the oven and shaken horizontally. Occasionally, the receptor may be removed entirely and replaced with new media. Analytical receptor media is used to study the release of drugs from these receptors. Then, water at the appropriate temperature is placed in the shaking bath. Remove and examine active samples.

10. Stability Test

The optimized milk was subjected to a 1-month stability study at 27°C / 80% RH.

RESULT AND DISCUSSION

| Sr No. | Evaluation Parameters | Result |
|--------|------------------------------|-------------------------------------|
| 1. | Clarity | Clear |
| 2. | Viscosity | Sol-245 Gel-980 |
| 3. | Drug content | Absorbance at 227nm |
| 4. | Gelling Capacity | |
| 5. | Gelation Time and pH | 5.20sec and 7.12 |
| 6. | FTIR | Compatible |
| 7. | Isotonicity | Isotonic solution |
| 8. | Sterility Testing | No growth of microorganisms |
| 9. | In-Vitro drug release | Within 8 hr 94% of drug in released |

Table No. 3 Result and Discussion of nasal in-situ gel

CONCLUSION

The aim of this study was to develop and evaluate Eletriptan nasal gel, a polymer-filled nasal gel for the treatment of migraine. The bioavailability and first pass metabolism of elatriptan are low. Once administered, it is not subject to first pass metabolism or cytochrome enzymatic cleavage. It can be concluded that nasal administration of eletriptan is beneficial in terms of increasing bioavailability and providing faster therapeutic results with less drug. Nasal inhalation may increase bioavailability. FTIR analysis was performed and no chemical or physical interaction was found between the drug and the additive. Once administered, the drug turns into a gel and acts directly on the brain without first going through metabolism, increasing bioavailability and allowing for a rapid onset of lower doses. It also increases patient compliance. They are also portable and wearable. They are very easy to manage. For this reason, nasal in situ gels are very popular in the pharmaceutical industry.

PERSPECTIVES OF SPECIAL EDUCATION TEACHERS ON OVERCOMING CHALLENGES IN MAINSTREAMING PRACTICES: A QUALITATIVE STUDY

Ruzty M. Donaire ^a, Daria A. Nalig ^b Datu Esmael F. Camsa ^c Jericho Geromiano ^d Wenefredo E. Cagape ^e

Article DOI: https://doi.org/10.36713/epra16838

DOI No: 10.36713/epra16838

ABSTRACT

This qualitative study delves into the perspectives of special education teachers on overcoming challenges in mainstreaming practices within inclusive educational settings. Seven special education teachers at Isulan Sped Central School participated in semi-structured interviews to provide detailed narratives, insights, and strategies related to mainstreaming practices. The research aims to elucidate the experiences, barriers, and recommendations of educators directly involved in inclusive education, shedding light on their efforts to navigate the complexities of mainstreaming and support diverse learners effectively. By exploring the unique challenges faced by special education teachers and their strategies for promoting inclusivity, this study seeks to contribute valuable insights to the discourse on inclusive education and teacher support in the field of special education.

KEYWORDS: Mainstream Education, Inclusive Education, Perspective, Challenges, Students with Special Needs.

1. INTRODUCTION

Understanding the perspectives of special education teachers is essential in addressing the challenges and barriers associated with mainstreaming practices for students with disabilities. In the field of education, the experiences and insights of educators play a pivotal role in shaping inclusive environments and determining effective strategies for supporting diverse learners. A qualitative study focusing on the "Perspectives of Special Education Teachers on Overcoming Challenges in Mainstreaming Practices" offers a valuable opportunity to delve into the lived experiences and professional perspectives of teachers working towards inclusive education. By exploring the unique challenges special education teachers face and their strategies for navigating mainstreaming practices, this research aims to contribute to the ongoing discourse surrounding inclusive education and teacher support.

According to Johnson and Smith (2019), special education teachers are at the forefront of inclusive education efforts, facing multifaceted challenges in mainstreaming practices. In their qualitative study, "Inclusion in Action: Exploring Special Education Teachers' Perspectives on Mainstreaming," Johnson and Smith highlight the complexities of inclusive practices and the critical role of special education teachers in promoting student success in diverse learning environments. The study underscores the need for tailored professional development, collaborative initiatives, and institutional support to empower special education teachers in overcoming barriers to effective mainstreaming.

Brown, L., & Williams, E. (2018). "Voices of Inclusion: Special Education Teachers' Experiences in Mainstream Classrooms." In their qualitative research, Brown and Williams delve into the firsthand experiences of special education teachers working in mainstream classrooms. The study explores the challenges encountered by teachers in adapting to inclusive practices, the strategies they employ to support students with disabilities, and the impact of collaboration with general education colleagues on the effectiveness of mainstreaming initiatives. By amplifying the voices of special education teachers, Brown and Williams offer valuable insights into the dynamics of mainstreaming practices and the essential role of educators in fostering inclusive learning environments.

Lopez, A., & Nguyen, T. (2017). "Breaking Barriers: Special Education Teachers' Perceptions of Inclusion Support." Lopez and Nguyen's study delves into the perceptions of special education teachers regarding the support structures available to facilitate successful inclusion of students with disabilities in mainstream settings. Through qualitative interviews and thematic analysis, the researchers uncover the perceived barriers to effective mainstreaming, the types of support deemed most beneficial by teachers, and the recommendations for improving inclusive practices. By addressing the nuanced perspectives of special education teachers, Lopez and Nguyen contribute valuable insights to the ongoing dialogue surrounding inclusive education and teacher empowerment.

Parents caring for children with special needs must employ diverse coping strategies, such as problem-focused and

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

emotional-focused mechanisms (Nurhidayah et al., 2022). Healthcare professionals play a vital role in offering customized support to parents of children with special needs, particularly in challenging situations where significant assistance is necessary (Lai et al., 2015). Additionally, focusing on parents' resilience is critical to aiding them in handling the challenges of caring for their children with special needs (Dey et al., 2019).

Inclusive education plays a crucial role in enhancing educational access for students with special needs. Beyond mere physical access to school premises, inclusive education entails providing equitable opportunities for students with special needs to fully participate in all aspects of learning, supported for their success (Artiles, A. J., & Dyson, A. 2005). This involves offering appropriate resources like assistive technology, modified curriculum, and accessible facilities to foster an inclusive learning environment. By eliminating barriers that hinder students with special needs from accessing quality education, inclusive education ensures that every child has an equal entitlement to an educational journey that nurtures their talents and capabilities (Barton, L. 2003).

The characteristics of individuals with special needs vary significantly based on each student's specific type and level of need. For instance, students with learning disorders like dyslexia may struggle with reading, spelling, or processing information orally and in writing, necessitating instructional methods that are more visual or kinesthetic (Malcom, S. M. 2013). Conversely, students with autism spectrum disorder may display distinct traits social interaction, communication, and sometimes unpredictable behavior, requiring a stable and structured learning environment with a consistent approach. Students with physical limitations may need accommodations in the physical environment such as wheelchair access, adjustable desks, or assistive technology to fully engage in classroom activities. Educators must acknowledge these individual differences and be prepared to adjust their teaching methods to ensure all students receive the necessary support for educational success (Kaczorowski et al., 2023).

The purpose of this study is to gain insights into the experiences and perspectives of special education teachers regarding the barriers they face in mainstreaming practices. This research can contribute to the existing knowledge on inclusive education by providing valuable insights into the perspectives of special education teachers, which can inform the development of effective support systems and strategies to promote inclusive practices in schools.

1.1 Statement of the Problem

To comprehensively examine and understand special education teachers' experiences, viewpoints, and strategies in addressing the obstacles and complexities associated with mainstreaming practices for students with disabilities. Through a qualitative research approach, this study aims to:

- 1. Explore the unique challenges faced by special education teachers in integrating students with disabilities into mainstream classrooms.
- 2. Identify and analyze specific barriers hindering the successful implementation of mainstreaming practices as perceived by educators in the special education field.
- 3. Investigate the strategies, interventions, and support mechanisms special education teachers utilize to overcome obstacles and create inclusive learning environments for students with disabilities.

Theoretical Lens

In the realm of special education teachers grappling with the complexities of mainstreaming practices, Lazarus and Folkman's (1984) Stress and Coping Theory provides a framework for comprehending how these professionals interpret and navigate stressors within their professional capacities. The theory underscores that stress is not solely dictated by external factors but is intricately influenced by cognitive evaluations and coping mechanisms. Challenges such as difficulties in reading, behavioral issues, and resource constraints encountered by special education teachers in the study can evoke stress responses. By delving into how educators assess these challenges and implement coping strategies, the research can illuminate the cognitive processes and adaptive methodologies utilized by teachers to manage stress and advance inclusive educational approaches.

2. METHODS

This study utilized a qualitative methodology, specifically employing phenomenology as the guiding framework. Phenomenology is a research approach that focuses on exploring the lived experiences of individuals within a social phenomenon (Creswell, 2019). By conducting in-depth interviews with seven special education teachers, the researchers aimed to uncover the intricate details and subjective meanings associated with the challenges and insights related to mainstream education. The qualitative nature of the interviews facilitated a comprehensive understanding of the distinct perspectives held by each participant (Moustakas, 2020).

In the exploration of the challenges encountered by teachers handling learners with special needs in mainstream education, this study follows Clark and Braune's (2019) comprehensive data analysis steps. The analysis process commences with data familiarization, followed by the generation of initial codes, organization of these codes into themes, iterative review and refinement of themes, and, ultimately, the definition and naming of the identified themes. This systematic approach ensures a meticulous examination of teachers' experiences, capturing the subtle nuances in their narratives regarding teaching children with special needs. By adhering to this rigorous methodology, the study aims to provide valuable insights into the coping mechanisms and resilience demonstrated by teachers in addressing the distinctive demands of teaching children with special needs within the mainstream educational setting.

In conducting this study, ethical considerations are paramount and are guided by the principles outlined in the Belmont Report (1979), specifically respect for persons, beneficence, and justice. To uphold respect for persons, informed consent will be diligently obtained from each participating special education teacher, ensuring a clear understanding of the study's purpose, risks, and benefits. The principle of beneficence underscores the commitment to maximizing benefits and minimizing harm, focusing on the study's positive impact on understanding the challenges faced by teachers supporting students with special needs in mainstream education. Justice will be upheld through the avoidance of exploitation, maintenance of confidentiality, and fair participant selection processes. This study adheres to rigorous ethical standards, prioritizing the well-being, rights, and dignity of the participating teachers in alignment with ethical research practices.

RESULTS AND DISCUSSION

Challenges Faced in Mainstreaming

"As a teacher, one of the primary challenges I encounter when integrating students with disabilities into mainstream classrooms is addressing difficulties in reading, including issues with decoding, blending sounds, and pronunciation. Additionally, these students often require more time and effort to complete tasks, struggle with behavior problems, and may experience absenteeism, all of which impact their academic progress and classroom participation."

"As a teacher, these challenges have a profound impact on my teaching practices and interactions with students with diverse learning needs. The feelings of frustration that arise from navigating these obstacles can be overwhelming, affecting my ability to effectively manage the classroom environment. The time delays in providing additional support and accommodations to students with disabilities often disrupt the flow of lessons, leading to challenges in maintaining the pace of instruction for the entire class. The increased effort required to assist students with diverse learning needs can be physically and emotionally taxing, highlighting the importance of self-care and support mechanisms for teachers. Prioritizing and focusing on the individualized needs of students with special needs becomes a crucial aspect of my teaching approach, emphasizing the importance of inclusivity and tailored support in promoting student success."

"As a teacher, I have encountered various instances where effectively including students with disabilities in mainstream educational settings posed significant challenges. One such challenge involves the need to simplify lesson content to enhance accessibility and ensure easy comprehension for all students, particularly those with learning disabilities. For example, while syllabication and decoding tasks may be straightforward for regular students, learners with disabilities often require additional attention, follow-up, and remediation to grasp and retain the competencies. Additionally, addressing absenteeism among students with disabilities further complicates their

academic progress and participation in classroom learning activities. The limited availability of resources and materials tailored to accommodate diverse learning needs also presents obstacles in creating an inclusive educational environment that meets the unique requirements of students with disabilities."

The statements provided by the teacher highlight the complex challenges faced when integrating students with disabilities into mainstream classrooms. One of the primary difficulties is addressing reading issues, such as decoding, blending sounds, and pronunciation, which require additional time and effort from both the teacher and the students. These challenges are further compounded by behavior problems, absenteeism, and the need for tailored support, impacting academic progress and classroom dynamics.

The emotional and physical toll of navigating these obstacles can be overwhelming for educators, affecting their ability to effectively manage the classroom environment and maintain the pace of instruction for all students. Simplifying lesson content to enhance accessibility for students with disabilities is crucial but often requires additional attention, follow-up, and remediation to ensure comprehension and retention. Addressing absenteeism and the limited availability of resources tailored to diverse needs further complicate the inclusive educational approach, emphasizing the importance of individualized support and inclusivity to promote student success.

Barriers to Successful Implementation

In my experience as a teacher, several key barriers hinder the successful implementation of mainstreaming practices for students with disabilities. These barriers include limited school activities tailored to accommodate diverse learning needs, time constraints that make individualized attention challenging, and the pressure to submit immediate reports while addressing student needs. Additionally, the lack of necessary resources, including supplies and support from the school, compromises the effectiveness of mainstreaming practices. Budget constraints further exacerbate the situation, impacting the availability of assistive technology and specialized materials. Moreover, a lack of focus on the program and its objectives within the school community creates additional challenges in creating an inclusive and supportive environment for students with disabilities.

As a teacher, these barriers directly impact my ability to effectively support students with disabilities in mainstream classrooms. The challenges of limited resources, time constraints, and a lack of specialized facilities hinder my efforts to meet individual student goals and ensure their progress and improvement. The absence of proper teacher training in special education further complicates my approach to addressing diverse learning needs. Additionally, the delay in lessons and the focus on accommodating students with disabilities disrupt the learning experience for all students, impacting their performance and ability to meet educational standards within the designated timeframe. These barriers pose significant obstacles to creating

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

an inclusive and supportive classroom environment that fosters academic success for all students.

As a teacher, I encounter various challenges in promoting inclusive education due to administrative policies, resource limitations, and prevailing attitudes towards inclusion. Attending training sessions and seminars, as well as engaging in professional development related to Special Needs Education (SNE), are crucial for enhancing my expertise in supporting students with diverse needs. Collaborating with stakeholders and seeking parental support are vital steps in implementing inclusive practices effectively. However, resource constraints often obstruct the execution of proposed SNE programs and initiatives, impacting the level of support that can be provided to students. Additionally, negative attitudes towards inclusion within the educational community can hinder the progress and acceptance of inclusive education practices. It is imperative to address these barriers through comprehensive strategies that prioritize adequate resources, supportive policies, and a positive shift in attitudes towards inclusive education to create an optimal learning environment for all students.

The statements provided collectively emphasize the multifaceted challenges faced by teachers in promoting inclusive education for students with disabilities in mainstream classrooms. Limited school activities, time constraints, and the pressure to submit immediate reports pose significant hurdles in providing individualized attention and support. Moreover, the lack of necessary resources, including specialized facilities and supportive materials, due to budget constraints, undermines the effectiveness of mainstreaming practices. These barriers directly impact teachers' abilities to support students with disabilities, hindering their progress and creating disruptions in the classroom. Additionally, administrative policies, resource limitations, and negative attitudes towards inclusion further complicate the implementation of inclusive education. Adequate training, collaboration with stakeholders, parental support, and a shift in attitudes are essential to overcome these barriers and create an inclusive and supportive learning environment that fosters academic success for all students.

Strategies and Support Mechanisms

In my experience as a teacher, several strategies and interventions have been effective in creating an inclusive learning environment for students with disabilities in mainstream classrooms. Utilizing Differentiated Instruction to tailor teaching methods to individual learning styles and needs has proven beneficial in accommodating diverse learners. Providing tutorials and remediation sessions offers additional support and reinforcement for students requiring extra assistance. Incorporating repetition for mastery helps solidify key concepts, while implementing a one-on-one approach allows for personalized guidance and attention. Extending time for learners with Special Needs Education (SNED) ensures that they have sufficient opportunities to engage with the material at their own pace. Ensuring resources are readily available, such as assistive

technology and specialized materials, is essential in facilitating effective learning experiences for students with disabilities in inclusive settings.

Collaboration with colleagues, support staff, and families is essential in addressing the diverse needs of students and cultivating an inclusive classroom environment. Building a support system with colleagues allows for sharing ideas, strategies, and resources to better meet the needs of all students. Engaging with parents and fostering open communication and involvement in their child's education is crucial to understanding and addressing the individual needs of students. Seeking support from school administrators and stakeholders ensures alignment with school policies and resources for implementing inclusive practices effectively. By working collaboratively with these key stakeholders, we can create a supportive and inclusive learning environment that promotes the success and well-being of all students, including those with diverse needs.

In my experience, several support mechanisms, resources, and professional development opportunities have been instrumental in overcoming obstacles and promoting inclusivity in mainstreaming practices. Attending seminars and enrolling in post-graduate studies have provided valuable insights and strategies for supporting students with disabilities. Developing patience, resourcefulness, and a mindset of compassion towards children with special needs has been crucial in creating an inclusive environment. Supporting school programs dedicated to inclusivity and maintaining an attitude of continuous learning help in adapting and becoming more effective in teaching students with disabilities. Embracing new ideas and approaches through professional development opportunities has enhanced my ability to overcome challenges and foster a welcoming and inclusive classroom for all learners.

The statements provided reflect a comprehensive approach to promoting inclusivity and supporting students with disabilities in mainstream classrooms. Effective strategies such as Differentiated Instruction, personalized approaches, and extended time for learners with Special Needs Education have been highlighted for creating an inclusive learning environment. Collaboration with colleagues, families, and support staff is underscored as essential for addressing diverse needs and fostering inclusivity. Moreover, the importance of attending seminars, engaging in professional development, and embracing a mindset of patience and compassion is emphasized in overcoming obstacles and promoting inclusivity. These collective experiences and strategies exemplify a holistic and collaborative approach to creating an inclusive and supportive educational environment for all students, including those with disabilities.

CONCLUSION

The collective experiences and insights shared by special education teachers shed light on the unique challenges, specific barriers, and effective strategies encountered in integrating

students with disabilities into mainstream classrooms. The exploration of challenges, including difficulties in reading, behavior issues, absenteeism, and resource limitations, underscores the complexities and nuances involved in promoting inclusive education. These challenges necessitate proactive measures and collaborative efforts to ensure the academic and social success of all students. Additionally, the identification and analysis of barriers such as limited resources, time constraints, and negative attitudes towards inclusion underscore the systemic challenges that impact the successful implementation of mainstreaming practices. These barriers highlight the importance of addressing structural constraints, fostering inclusive policies, and promoting a positive school culture that supports diversity and equity. The investigation into strategies, interventions, and support mechanisms employed by teachers, such as Differentiated Instruction, collaboration with stakeholders, and continuous professional development, illustrates the proactive approaches taken to overcome obstacles and create inclusive learning environments that cater to the diverse needs of students with disabilities. By embracing a holistic and collaborative approach, educators can navigate challenges, overcome barriers, and foster inclusive educational settings that prioritize the well-being and academic success of all learners, ensuring equitable access to quality education for students with disabilities.

ABSTRACT

This tracer study aimed to assess the employment rate and status, as well as self-rated perceptions of work attitude, educational quality, and skills development among Bachelor of Science in Criminology (BSC) graduates of Kapalong College of Agriculture, Sciences and Technology (KCAST) from academic years 2019 to 2023. The study utilized a descriptive research method to gather information on the traceability of BSC graduates. A complete enumeration random sampling method was employed, with a total population of 171 graduates (81 males and 90 females). Findings revealed that most graduates were single and aged between 20-30, with batch 2023 producing the highest number of graduates. A small percentage pursued vocational courses or further studies. The employment rate stood at 35%, with a majority employed as regular or job order employees. Graduates reported a relevant college degree to their present work, with a significant portion earning monthly incomes ranging from 11,000 to 30,000. The majority took 0-8 months to secure employment postgraduation. Additionally, a notable proportion worked in degree related jobs. The study found high levels of work ethic, educational quality provision, and skills and abilities development among BSC graduates. These findings contribute to KCAST's commitment to providing quality education and enhancing graduates' employability, aligning with its institutional goals and social responsibilities.

INTRODUCTION

In order to keep curriculum relevant and give graduates specific advantages, graduate tracer, also known as tracer studies, are used to improve the marketability of educational programs. Sufficient understanding of the career prospects of graduates from training programs might aid in the development of policies aimed at addressing social issues like unemployment. Graduates of all courses in particular must gain a sense of competence in their field of interest and cultivate the courage to pursue new opportunities and jobs, particularly in light of growing rivalry among coworkers. One type of empirical research that can suitably offer useful data for assessing the outcomes of the instruction and training of a particular higher education institution is the graduate tracer study (Woya, 2019).

The necessity for conducting tracer studies has been identified globally, and in particular at Medan State University of Indonesia, in order to ascertain the competences that alumni possess with regard to their application to the workplace and to ascertain the supervisor's appraisal for graduates who are now employed. The study's findings clarified that graduates' positions and involvement in the workforce, as well as their abilities, are in line with what the workforce requires (Hasibuan et al., 2022). Also, universities are supporting initiatives to raise the general caliber of their offerings, including the profiles of its alumni. One measure of the quality of a graduate's profile is now their absorptivity in industries or consumers. The purpose of the tracer research was to collect information from graduates on the suitability of their acquired knowledge and abilities for their respective jobs (Romadlon & Arifin, 2021).

Also, in order to define themselves as centers of excellence and centers for developing degree programs, Higher Education Institutes (HEIs) in the Philippines are required by the Commission on Higher Education (CHED) to carry out tracer studies. The Accrediting Agency of Chartered Colleges and Universities in the Philippines (AACCUP), Inc., for example, has documented standards, one of which is the graduate profile. The results of a tracer study might be used to reassess the variables influencing and adding to graduates' job status. The majority of graduates, according to the literature currently in publication, found employment locally, especially in the public sector (Cuadra et al., 2019). Thus, this present study proposes to trace the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

graduates of criminology department for the academic years 2019 to 2023 including information as to their employability.

Furthermore, in order to ascertain the employability status of 2019 criminology graduates who were working in various agencies in accordance with law enforcement and public safety procedures, as well as other related and unrelated fields, the Nueva Ecija University of Science and Technology (NEUST) carried out a tracer study. The research employed the descriptive approach to gather data from the 117 College graduates who also served as study respondents. Data were gathered by interviews and a survey questionnaire, and frequency counts and percentages were employed for analysis (Aydinan, 2019).

Moreover, the goal of St. Paul University Surigao's College of Criminal Justice Education was to track and ascertain the job status of its graduates in the field of criminology between 2013 and 2020. The study's respondents, seventy-one (71) criminology graduates, were specifically chosen. Online tools like email and chat were used to collect data, among others. A few parametric tests as well as descriptive statistical methods were used to assess the data. Results indicated that 43 of the 71 respondents were successful in finding employment connected to the course they completed (Cosmiano et al., 2023).

This tracer study was therefore carried out under this premise in order to ascertain the employment rate and status of the graduate students as well as their self-rated assessment of their work ethic, the institution's quality of education, and the growth of their skills and abilities as Bachelor of Science in Criminology graduates. This is the institution's way of responding to its ideals and social responsibilities by creating a curriculum that will guarantee students' employment after graduation and bolstering and expanding its ongoing provision of high-quality education.

OBJECTIVES OF THE STUDY

The primary purpose of this study was to:

- Describe the demographic profiles of the graduaterespondents in terms of:
 - 1.1. sex when grouped per academic year;
 - 1.2. civil status;
 - 1.3. age;
 - 1.4. year graduated; and
 - 1.5. educational attainment and development.
- 2. Describe the employment profile and features of the graduate-respondents in terms of:
 - 2.1. employment rate;
 - 2.2. employment status;
 - 2.3. level of income;
 - 2.4. period of seeking the first job after college;
 - 2.5. relevance of college degree to the present job; and
 - 2.6. job mismatching.
- 3. Describe the level of the graduate-respondents self-rated evaluation with their attitude to work?
- 4. Determine the level of the graduate-respondents selfrated evaluation with the quality education provision of the institution?

5. Determine the level of the graduate-respondents selfrated evaluation with the skills and abilities obtained in the institution and its usability with their present occupation?

METHODS

Design

This study utilized the descriptive research method. In order to provide adequate and reliable information for the evaluation of the study, the descriptive method of research was used by the researcher to facilitate the gathering of information on the traceability of Bachelor of Science in Criminology graduates of Kapalong College of Agriculture Sciences and Technology for the A.Y. 2019–2023. Descriptive studies examine the features of the population, pinpoint issues that arise inside a group, an organization, or a population, or they examine differences in traits or customs among institutions or even nations (Siedlecki, 2020). Also, studies of status are the focus of descriptive research, which is extensively employed in the behavioral sciences, nutrition, education, and epidemiology. Its usefulness stems from the idea that observation, analysis, and description may be used to solve issues and improve methods. Surveys, which can take the form of phone surveys, personal interviews, questionnaires, or normative surveys, are the most often used approach in descriptive research (Koh & Owen, 2000). Lastly, descriptive research is a research methodology that aims to provide an accurate description of the phenomena under study. The term "existing phenomena" distinguishes descriptive research from experiment research, which observes both the phenomena under study and the phenomena after a specific period of treatment. The phenomena under study in descriptive research are already known. The researcher's task is to gather the available data by using instruments like tests, questionnaires, interviews, or even simple observation. The primary objective of descriptive research is to provide an organized description of the phenomena under study (Atmowardoyo, 2018).

Population and Sample

The population and sample of this tracer study were the graduates of Bachelor of Science in Criminology in Kapalong College of Agriculture, Sciences and Technology from academic year 2019 up until academic year 2023. Hence, the study used complete enumeration random sampling since the very purpose of the study is to track and trace graduates in terms of their employment status and rate. To be specific, in year 2019, there were 55 graduates of which there were 22 males and 33 females; in year 2020, there were 3 males and 1 female; in year 2022, there were 27 males and 18 females; in year 2023, there were 29 males and 38 females which made a total of 171 graduates. Thus, the total population and sample of this study were 81 males and 90 females for a total of 171 Criminology graduates.

Research Instrument

The study employed the research instrument from Escandallo's (2024) tracer study, "A Tracer Study on the Elementary Education

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Graduates from Academic Year 2015 To 2019: Employment in Focus." The survey questionnaire's internal consistency is excellent, as indicated by its Cronbach alpha of 0.955.

Data Collection Procedure

Gathering data to help the researcher answer research questions is one of the primary steps of a research project. The process of gathering information with the goal of learning more about the study topic is known as data collection (Taherdoost, 2021). In order to collect the necessary data for the study, the researcher mostly followed these responsible actions.

First, since the institution's graduate students pursuing a Bachelor of Science in Criminology made up the population and sample for the study, the researcher requested information from the college registrar regarding the total number of graduates from the academic years 2019 to 2023 so that precise and accurate data could be taken into account and given priority.

Second, after collecting the total number of graduates, the researcher used the Escandallo (2024) survey tracer questionnaire to ascertain each criminology education graduate's employment rate, employment status, educational attainment and development, work attitude, and quality of education provided.

Third, the researcher started monitoring the graduates using Google Forms, looking at things like employment rate and status, educational achievement and development, work attitude, and access to quality of education.

Fourth, after the graduate students had completed answering the questionnaire, the researcher gathered it and began tallying in order to be ready for data treatment and analysis.

Lastly, the data was examined and assessed by the institution's authorized statistician and given in tabular and graphical form to facilitate a clearer and more comprehensive comprehension of the results.

Data Analysis

In order to get the average score for the data analysis, the mean was utilized to gauge the graduates' attitude toward their jobs, their assessment of the quality of the education they received, and their development of various skills and talents.

RESULTS AND DISCUSSION

Demographic Characteristics of BSC Graduates

The primary objective of this tracer research is to describe the demographic features of criminology graduates from academic years 2019 to 2023. The demographic factors include sex, age, year of graduation, and educational achievement and development.

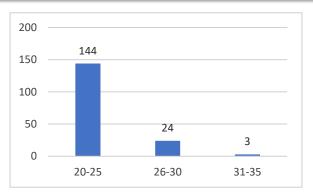

Sex. The total number of Bachelor of Science in Criminology graduates from the academic years 2018–2019 through 2022–2023 is displayed in the figure. Of the 55 graduates of the 2019 class, 22 are male, or 40% of the total, and the remaining 33 are female, or 60%. Of the four graduates of batch 2021, three, or 75%, are male and the remaining one, or 25%, is a female. Of the 45 graduates of class 2022, 27 are male, representing 60% of the total, while the remaining 18 are female, or 40%. Of the 67 graduates of batch 2023, 29 are male, or 44% of the total, and the remaining 38 are female, or 56%.

Civil Status. The civil status of the graduates of the Bachelor of Science in Criminology program from the academic years 2018–2019 to 2022–2023 is displayed in the figure. According to data, there are 91% of graduate students—157—who are single, and 9%—or 15—who are married. Additionally, widowed and

separated are possibilities on the survey form, although as of right now, none of the graduates have this civil status.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

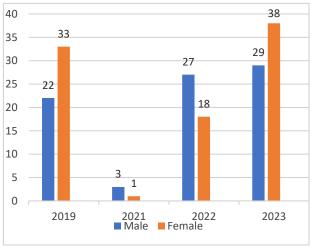

Age. The age distribution of Bachelor of Science in Criminology graduates from the 2018–2019 academic year to the 2022–2023 academic year is displayed in the figure. 144 graduates, whose ages range from 20 to 25, 24 graduates, whose ages range from

26 to 30, and 3 graduates, whose ages range from 31 to 35, are among the 172 graduates who completed the online survey administered using Google Forms

Year Graduated. The total number of Bachelor of Science in Criminology graduates from the academic years 2018–2019 through 2022–2023 is displayed in the figure. There were 55 graduates for the year 2019, of whom 33 were female and 22 were male. There were four graduates in 2020; three of them were male

and one was a female. There were 45 graduates in 2022, consisting of 18 females and 27 males. Finally, out of the 68 graduates in 2023, 29 of them were male and 38 of them were female.

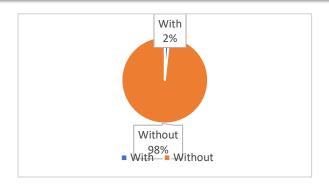

Educational Attainment and Development. This figure represents the total number of graduates with a Bachelor of Science in Criminology from the academic years 2018–2019 to 2022–2023 who obtained a national certificate and/or vocational education. According to the survey, 2% of graduates obtained a

vocational education, while 98% of graduates did not obtain any vocational education. The vocational education programs included in this figure are Computer Hardware Service, Computer Literacy, Electrical Installation and Maintenance, and Security Service.

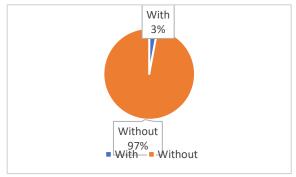

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

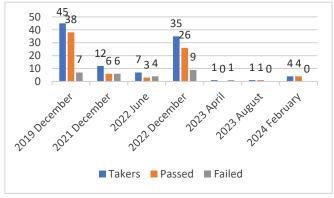

The total number of Bachelor of Science in Criminology graduates who pursued postgraduate degrees or studies during the academic years of 2018–2019 and 2022–2023 is displayed in the figure. According to the survey, 97% of graduates decide not to pursue higher education, while only 3% of graduates have

completed postgraduate coursework or received a degree. Additionally, the study revealed that the sole degree earned by graduates was a Master of Science in Criminal Justice, for which they were enrolled at PHINMA and University of Mindanao and received money from their jobs and scholarships.

The statistic shows the total number of 2018-2019 and 2022–2023 Bachelor of Science in Criminology graduates who took and passed the Criminologists Licensure Examination. The statistics indicates that 38 out of 45 participants in the December 2019 CLE passed, with just 7 failing. 6 of the 12 test takers in December 2021 passed, and the remaining 6 failed. 3 of the 7 people that

took the exam in June 2022 passed it, while 4 failed. Afterwards, 26 of the 35 graduates who sat the test in December 2022 passed it, while 9 failed. One graduate took the CLE test in April 2023 but failed it. The exam was then taken and passed by one graduate in August 2023. Lastly, in February 2024 CLE, 4 graduates took and passed the examination.

Employment Profile and Features of BSC Graduates

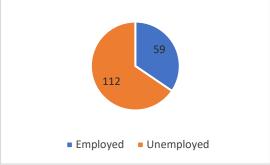

Determining the employment profile and features of the Bachelor of Science in Criminology from the academic years 2018–2019 to 2022–2023 is the second research objective of this tracer study. This includes the following: employment rate, employment status, income level, time spent looking for first job after college, relevance of college degree to current job, and job mismatching.

Employment Rate. The employment rate for Bachelor of Science in Criminology from the 2018–2019 academic year to the 2022–2023 academic year is displayed in the figure. Out of the 172 graduate students that replied favorably to the online survey, 112 (or 65%) were unemployed, while 59 (or 35%) worked in

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

government agencies, academia, law enforcement, or non-degree related fields.

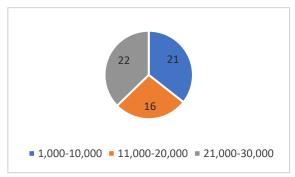

Employment Status. The job status of Bachelor of Science in Criminology graduates from the academic year 2018–2019 to 2022–2023 is displayed in the figure. The survey's results revealed that, of the 59 graduate students who answered on this

particular topic, 16 work as regular employees, 16 have contracts, another 17 are employed in job orders, and the other 10 work part-time.

Level of Income. The monthly salary for a Bachelor of Science in Criminology from the 2018–2019 academic year to the 2022–2023 academic year is displayed in the figure. The survey's results revealed that, out of the 59 graduate students who answered in

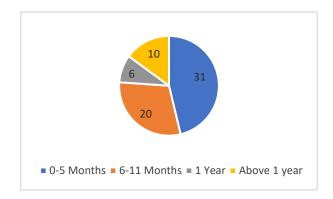

this regard, 21 (or 36%) made between P1,000 and P10,000 per month, followed by 16 (27%), who made between P11,000 and P20,000 per month, and 22 (37%), who made between P21,000 and P30,000 per month.

Period Seeking of Job After College. The range of job searching after completing a Bachelor of Science in Criminology from the academic year 2018–2019 to 2022–2023 is depicted in the figure. The survey's results revealed that, out of the 59 graduate students who answered in this category, 31 (or 46%) found their first job

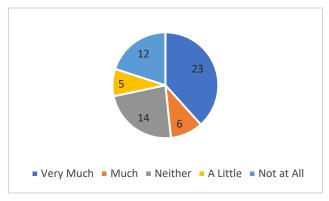

in just 0–5 months, while another 20 (30%) were able to obtain employment in 6–11 months. The remaining 6 or 9% are able to obtain employment within a year, and the remaining 10 or 15% do so after a year has passed.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

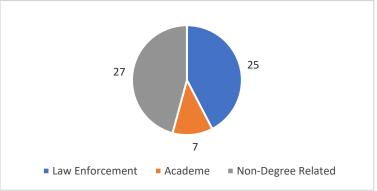

Relevance of College Degree to the Present Job. The assessment of the Bachelor of Science in Criminology students from the academic years 2018–2019 to 2022–2023 about the relevance of their degree to their current position is displayed in the figure. According to the survey's results, out of the 59

graduate students who answered on this topic, 23 or 39% selected extremely relevant, 6 or 10% selected much relevant, and 14 or 23% selected neither. The remaining 5 or 8% selected some information that was important, while the final 12 or 20% selected none at all.

Job Mismatching. The chart shows the mismatch in employment or alignment of jobs for the Bachelor of Science in Criminology from the 2018–2019 academic year to the 2022–2023 academic year. Out of the 59 graduate students who responded to the survey, 25 or 42% are employed by law enforcement, either as traffic or security officers or as members of the PNP, AFP, BFP,

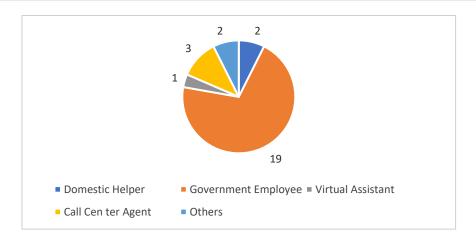

NBI, or other law enforcement organizations. On the other hand, seven to twelve percent more people are employed in academia, specifically in Higher Education Institutions (HEIs). Lastly, the next chart illustrates those 27 graduate students, or 46% of the total, are working in occupations unrelated to their degrees.

The non-degree related job specifications for the Bachelor of Science in Criminology from the academic year 2018–2019 to 2022–2023 are displayed in the figure. The survey's findings revealed that, of the 27 graduate students in non-degree-related employment shown in the figure, 19—or 70%—work for the

government in capacities including PSA, DOLE, and other local government units. The remaining three, or 11%, are employed by the BPO sector. A virtual assistant makes up the remaining 1 or 4%, domestic assistants make up the remaining 2 or 8%, and business makes up the remaining 2 or 7%.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Level of the Bachelor of Science in Criminology Graduates Attitude to Work

The degree of work ethic of Bachelor of Science in Criminology graduates is displayed in Table 1, where they achieved an overall mean score of 4.25, which is considered to be extremely high. Given that the respondents firmly agree with each of the subquestions that make up attitude to work, this descriptive meaning and equivalent implies that the degree of the BSC graduates' attitude to work is always manifested.

The first sub-question in the table, "I am very interested, happy, and satisfied with my work and it is very important for me," had

the lowest mean score of 4.05 out of the ten, with a descriptive equivalent that was similarly high. This indicates that the BSC graduates frequently exhibit the said item and/or construct in their work or workplace. On the other hand, items seven and nine, which state, "I have a good relationship with my colleagues and co-employees" and "I performed my task and job with excellence and outstanding quality", had the highest mean score of 4.38. This indicates that the BSC graduates consistently demonstrate the aforementioned items and/or constructs in their work or workplace.

Table 1.
Level of the Bachelor of Science in Criminology Graduates Attitude to Work

| Attitude To Work | | Mean | Description |
|------------------|---|------|-------------|
| 1 | I am very interested, happy and satisfied with my work and it is very important for me. | 4.05 | High |
| 2 | I like the kind of job and work I am doing. | 4.18 | High |
| 3 | I accepted assignments and tasks given to me at work without complaints. | 4.11 | High |
| 4 | I arrived on time to prepare my work and extend working hours if necessary. | 4.23 | Very High |
| 5 | I can work better and functional under different working environment and situations. | 4.28 | Very High |
| 6 | I participated in all activities and events inside my workplace. | 4.27 | Very High |
| 7 | I have a good relationship with my colleagues and co-employees. | 4.38 | Very High |
| 8 | I submitted necessary documents and papers on time and beat deadlines. | 4.35 | Very High |
| 9 | I performed my task and job with excellence and outstanding quality. | 4.38 | Very High |
| 10 | I seek assistance and help from others whenever I have clarifications and queries. | 4.35 | Very High |
| OVE | RALL | 4.25 | Very High |

Level of the Bachelor of Science in Criminology Graduates Quality Education Provisions

Table 2 displays the quality of education provided to Bachelor of Science in Criminology graduates. These graduates received an overall mean score of 4.19, which is considered high. Since the respondents frequently agree to all of the indicated sub-questions

under quality education provision, this descriptive meaning and equivalent implies that the degree of the BSC graduates' quality education provision is frequently expressed.

From the ten sub-questions, items number six and seven stating quality of different courses offered in the program that develops

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the total sum of the student skills and level of optimum interaction and contact with my fellow students through different in-campus activities obtained the lowest mean score of 4.07 with a descriptive equivalent as high which means that the said items and/or constructs is often manifested by the BSC graduates as they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST). Further, the item which obtained the

highest mean score of 4.39 is item number one stating -availability of course materials and different learning resources needed for our studies which is described as very high which means that the said item and/or construct is always manifested by the BSC graduates as they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST).

Table 2.
Level of the Bachelor of Science in Criminology Graduates Quality Education Provisions

| Quali | ty Education Provisions | Mean | Description |
|-------|--|------|-------------|
| 1 | Availability of course materials and different learning resources needed for our studies. | 4.39 | Very High |
| 2 | Quality of course contents from courses offered as well as the teaching and learning process. | 4.21 | Very High |
| 3 | Conduciveness of the learning environment and atmosphere. | 4.29 | Very High |
| 4 | Provision of quality practicum guidelines and activities that develops more my skills and abilities from different industry partners and linkages. | 4.25 | Very High |
| 5 | Quality of learning facilities for first-hand and direct experiences like of different laboratories. | 4.23 | Very High |
| 6 | Quality of different courses offered in the program that develops the total sum of the student skills. | 4.07 | High |
| 7 | Level of optimum interaction and contact with my fellow students through different in-campus activities. | 4.07 | High |
| 8 | Well-trained and self-renewing Faculty members and staffs. | 4.14 | High |
| 9 | Different trainings, seminars and workshops that prepare students for employment. | 4.12 | High |
| 10 | Varied learning assessments and instructions which assess students' progress and learning fairly and equally. | 4.09 | High |
| OVE | RALL | 4.19 | High |

Level of the Bachelor of Science in Criminology Graduates Skills and Abilities Development

Shown in Table 3 is the level of the Bachelor of Science in Criminology graduates' skills and abilities development which obtained and earned an overall mean score of 4.17 described as high. This descriptive meaning and equivalent entails that the level of the BSC graduates' skills and abilities development is often manifested since the respondents often agree to all of the identified sub-questions under skills and abilities development. From the fifteen sub-questions, item number seven stating communication and interpersonal skills obtained the lowest mean

score of 4.06 with a descriptive equivalent as high which means that the said item and/or construct is often manifested by the BSC graduates after they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST). Further, the item which obtained the highest mean score of 4.43 is item number five stating - time management and decision-making skills which is described as very high which means that the said item and/or construct is always manifested by the BSC graduates after they studied in Kapalong College of Agriculture, Sciences and Technology (KCAST)

Table 3.
Level of the Bachelor of Science in Criminology Graduates Skills and Abilities Development

| Skills and Abilities Development | | Mean | Description |
|----------------------------------|---|------|-------------|
| 1 | Organizational and leadership skill. | 4.17 | High |
| 2 | Problem solving and critical thinking skills. | 4.18 | High |
| 3 | Ability to work independently as well as teamwork and team play. | 4.23 | Very High |
| 4 | Creative thinking and creativity, initiative and taking a risk if | 4.31 | Very High |
| | necessary. | | |
| 5 | Time Management and decision-making skills. | 4.43 | Very High |
| 6 | Writing competence and skills including technical writing. | 4.08 | High |
| 7 | Communication and interpersonal skills. | 4.06 | High |
| 8 | Computer and ICT Skills | 4.12 | High |

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| 9 | Technical and Entrepreneurial Skills | 4.08 | High |
|-----|---|------|-----------|
| 10 | Ability to work under pressure. | 4.08 | High |
| 11 | Keen understanding of human behavior and psychology. | 4.05 | High |
| 12 | Ability to Follow the legal, ethical, and moral standards of society. | 4.24 | Very High |
| 13 | Ability to demonstrate Forensic Laboratory Examination | 4.10 | High |
| 14 | Analytical and Investigative skills. | 4.17 | High |
| 15 | Ability to maintain confidentiality of sensitive information data. | 4.27 | Very High |
| OVE | RALL | 4.17 | High |

DISCUSSION

Below is the summary of findings based on the gathered data conducted through online survey using google forms, the conclusions drawn and the recommendations.

Demographic profile of the BSC Graduates

The study's primary research objective was to determine the demographic profile of criminology graduates from batches 2019 to 2023. The survey results revealed that the majority of graduates were women, yet more men worked in law enforcement. Furthermore, the majority of the population was unmarried, with ages ranging from 20 to 30, with just three of them being 31 or older.

Further, in higher education, women outnumber males on average and have greater success rates. An examination of the literature revealed that institutional, external, and gender variations in learner attributes might all contribute to these discrepancies (Severiens & Dam, 2011).

Yet, for a considerable amount of time, feminist researchers have maintained that patriarchy has an impact on both the way men and women conduct their lives and the way society is structured. The representation of men and women in the legal, correctional, and law enforcement fields, as well as the organizational cultures and structures of these fields, are thought to differ (Batton & Wright, 2018).

Moreover, Neupane et al. (2022) states that due to population aging, the labor force is getting older worldwide. The overall labor force is reduced as a result of older people' declining employment and fewer younger workers joining the job market at the same time.

Lastly, if there are needs relating to the family, women are more likely to enter the workforce. Therefore, age, gender, and marital status are demographic characteristics that may have an impact on unemployment (Shakur et al., 2020).

Educational Attainment and Development

This tracer study also describes the educational attainment of Criminology graduates. According to the survey results, only a few of the graduates earned and obtained a vocational educational degree and/or National Certificate Level II, which includes a national certificate in computer and security servicing. In addition, a few alumni went on to get a Master of Science in

Criminal Justice. Also, 75% of the graduates who took the Criminologist Licensure Examination passed.

In relation to this, Cooper et al. (2018), investigated determinants of plans to pursue graduate education in criminology, criminal justice, or a closely related discipline, their study uses data from 388 junior and senior criminal justice majors. The findings of the logistic regression show that the following groups of students are more likely to report graduate school intentions: women, students who feel more pressure to go to graduate school, students who don't dislike reading, writing, or statistics, and students who think there is more intolerance for diversity.

Moreover, Barreda (2022) state that to be granted complete permission to practice criminology, a graduate with a baccalaureate degree in the field must pass the Professional Regulation Commission of the Philippines' Licensure Examination in order to be recognized as a Licensed Criminologist. Republic Act No. 11131, which is titled "the law creating the Board of Criminology," requires this. Higher education institutions' teaching and learning must be up to the standards set by the profession in order to satisfy this expectation. As an indicator of the caliber of teaching and learning produced by higher education institutions, the passing percentage on the board test ought to be greater than the national passing rate.

Employment Profile and Features of BSC Graduates

Based on the result of the survey of this tracer study, 35% of the graduates are already employed and some of them are working in the law enforcement, few are in teaching profession, also, some are working in the government, as call center agents and domestic helper. Also, most of them are in regular status and job order status to which earning 1000 to 30,000 per month.

In relation to this, a graduate in criminology may work as a prison officer, drug enforcement agent, fireman, or port police officer in addition to being a police officer. Others could work as department store security officers, private investigators, criminology instructors, traffic enforcers in the area, hotel and resort internal security, or security consultants. Despite all of these options, some criminology graduates may find themselves employed in fields unrelated to their field of study that still shape, prepare, and improve their skills (Ruiz, et al., 2020).

Moreover, although criminal justice is a popular undergraduate college major, many graduates pursue other careers for reasons that are not fully understood. McMahon (2022) wants to identify

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the reasons why some undergraduate criminal justice students are no longer interested in policing as a career choice.

Lastly, in the study of Refugia (2021) suggests that graduates of criminology degrees chose permanent employment in a manner akin to that of graduates from other disciplines. Acceptable benefits of permanent work include paid time off, insurance, retirement benefits, chances for professional growth and promotion, a sense of stability, and job security.

Level of the Bachelor of Science in Criminology Graduates Attitude to Work

The level of the Bachelor of Science in Criminology graduates with their attitude to work was described as very high. This descriptive meaning and equivalent entails that the level of the BSC graduates' attitude to work is always manifested since the respondents strongly agree to all of the identified sub-questions under attitude to work.

In addition, whatever disposition or work attitude of criminology graduates' exhibit in completing their assignments will invariably reflect on the college from which they graduated. Graduates are thought to have a big role in enhancing the college's or university's reputation. Thus, the employer's appraisal of the graduates acts as a feedback system so that the university may create new plans for enhancing the qualities of its graduates (Ayeo-Eo & Doquilla, 2021).

Also, according to Mina and Aydinan's (2019) study, trainers rated the attitudes of BS in Criminology students toward their jobs. An extraordinary average weighted mean of 3.32 was obtained by the pupils. Additionally, students received great ratings for their enthusiasm in carrying out their duties, punctuality, reliability, and trustworthy behavior—particularly when it came to completing their given tasks satisfactorily and exhibiting a helpful attitude at work. During their instruction, students who were obedient to their teachers developed a strong character by learning to comply with the expectations and needs of their immediate superiors.

Level of the Science in Criminology Graduates Quality Education Provisions

The level of the Bachelor of Science in Criminology graduates with quality education provisions was described as high. This descriptive meaning and equivalent entails that the level of the BSC graduates' quality education provision is often manifested since the respondents often agree to all the identified subquestions under quality education provision.

Furthermore, the goals of the CHED Memorandum Order No. 21 Series of 2005, on Policies and Standards for Bachelor of Science in Criminology, are to prepare students for careers in crime prevention, law enforcement, scientific crime detection, and correctional administration; and foster the values of leadership, integrity, accountability, and responsibility while serving their fellow citizens, community, and country (Pacatang, 2016).

Also, in the study of Habiatan (2019), findings demonstrated that Isabela State University Cabagan's Bachelor of Criminology program complies with the minimal requirements set out by the Commission on Higher Education. The following issues surfaced in the respondents' assessment of the program's shortcomings: inadequate lab spaces, furnishings, and equipment; scant teaching resources; scant research undertaken; inadequate buildings, spaces, furnishings, and tables; and scant library holdings.

Level of the Bachelor of Criminology Graduate Graduates Skills and Abilities Development

The level of the Bachelor of Science in Criminology graduates with the skills and abilities development was described as high. This descriptive meaning and equivalent necessitate that the level of the BSC graduates' skills and abilities development is often manifested.

Regarding this, the Ruiz et al., (2020) study disclosed the technical skills needed for employment among criminology graduates. The majority are adept at both dismantling and reassembling weapons. Additionally, they knew how to gather, store, and manage evidence. The area where knowledge of question formulation in respect to performing polygraph examinations was found to be the least proficient. This was to be expected, as the majority of criminologists were not afforded the chance to become specialists in criminalistics, namely in polygraphy and investigation. Even people who have worked with the Philippine National Police can attest to this.

Also, according to the study, of Libradilla et al. (2023) states that criminology internships significantly contribute to the improvement of interns' knowledge and skill sets. These results emphasize the value of hands-on training in the criminology intern's growth as it gives students a chance to put their academic knowledge to use in practical settings. The knowledge and skills development of criminology interns is greatly influenced by the internship program, self-efficacy, and experiential learning. This is evident in the development of the interns' professional skills, theoretical knowledge application, and personal skills.

Lastly, regardless of position or level, it is beneficial for crime scene examiners and field forensic practitioners to have advanced cognitive and leadership skills. Police investigations and crime prevention heavily rely on tasks like processing crime scenes, analyzing evidence in mobile laboratories, or mapping serial crimes using forensic intelligence (Kelty et al., 2017).

Summary of Findings

After the conduct of the survey which successfully responded to most of the respondents, the following are the summary of findings: the institution, Kapalong College of Agriculture, Sciences and Technology produced a total of 171 graduates which composed of 81 males and 90 females. In terms of civil status, the survey showed that 91% of the graduates is single and 9% is married. Talking about age, most of the total population of the

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

ISSN (Online): 2455-3662

graduates ages 20-30 of which there are only 3 graduates whose age is 31 above. Further, batch 2023 has the greatest number of graduates of 67 students and batch 2020 has the least number of graduates of 4. Lastly, there are 2% of the graduates obtained a vocational course or National Certificate and only 3% of the graduate proceed to further studies.

In addition, when it comes to the employment rate, 35% of the graduates are employed and 65% are unemployed. Also, survey showed that many of the graduates who responded in the survey are regular employee while others are working as job order. Further, most of the graduates have a monthly income of 11,000 to 30,000 and there are only few who earned at least 31,000 above monthly and most of them took 0-3 and 4-8 months to land a job after college to which most graduates agreed that their college degree is very much relevant with their present as it obtained a total of 68.4%. Lastly, there is 38.2% of the graduates who responded with the survey who work as nonteaching.

Lastly, survey showed that level of attitude of work of the BSC graduates is very high, the level of the quality education provision of the institution is high and the level of the skills and abilities development is also high.

CONCLUSION

After conducting a thorough survey, the following conclusions have been reached, first the employment rate among BSC graduates from the batches spanning 2019 to 2023 stands at 35%, indicating that a significant portion of graduates possess the skills and qualifications necessary to secure employment. Notably, a considerable number of graduates have been able to secure job orders or full-time positions, highlighting their readiness for the workforce.

Also, the relevance of the college degree to graduates' employment underscores the quality of education provided by the institution. This correlation suggests that the courses and disciplines offered by the institution effectively prepare graduates for their respective fields, affirming the institution's commitment to delivering quality education.

Additionally, the survey revealed the following insights, graduates demonstrate a high level of work attitude, as evidenced by their strong agreement with the performance of tasks and responsibilities efficiently and effectively. This positive attitude towards work reflects favorably on the institution's ability to instill a strong work ethic among its students.

Moreover, the quality of education provided by the institution is rated as good, indicating that KCAST offers a robust educational experience characterized by diverse training opportunities, seminars, ample learning resources, and competent faculty and staff members. These factors contribute to a rich and conducive learning environment for students.

In addition, the development of graduates' skills and abilities is assessed as high, indicating that KCAST effectively nurtures and enhances the diverse interests, skills, and abilities of its students throughout their academic journey. This highlights the institution's success in fostering holistic growth and development among its graduates.

Overall, the findings affirm KCAST's commitment to providing quality education, fostering a positive work ethic, and nurturing the skills and abilities of its students, ultimately preparing them for successful careers in their chosen fields.

RECOMMENDATIONS

Based on the comprehensive findings and conclusions drawn from the study, several recommendations are proposed. First, establishing a dedicated Graduate Employability Coordinator within the school can significantly enhance employment prospects for graduates. This coordinator would be responsible for tracking and monitoring graduates' employment status, as well as organizing online forums to disseminate information about job vacancies and career opportunities. By fostering stronger connections between graduates and potential employers, the school can better support its alumni in securing meaningful employment.

Also, addressing the issue of graduates working in non-degree related jobs requires proactive measures. The school should offer a variety of training sessions, seminars, and workshops tailored to the interests and career aspirations of its students. By equipping students with relevant skills and knowledge, particularly in the realm of law enforcement, the school can inspire greater motivation and enthusiasm among graduates to pursue careers aligned with their academic backgrounds.

Moreover, strengthening the development of multidisciplinary research expertise is crucial for enhancing the academic preparedness of graduates. Given the low mean score attributed to expertise in multidisciplinary research, the institution should prioritize the improvement of thesis writing programs for BSC graduates. By enhancing their proficiency in research methodologies and thesis crafting, graduates will be better equipped to contribute effectively to their respective fields of work, thereby bolstering their overall professional competence.

Furthermore, accelerating the transition from graduation to employment necessitates forging closer partnerships with local industries and community stakeholders. By expanding collaboration with industry partners and community linkages, the institution can facilitate smoother transitions for graduates into the workforce. Through these strategic partnerships, graduates can gain access to a broader range of job opportunities, thereby reducing the time it takes to secure employment post-graduation.

In summary, these recommendations aim to optimize the employability and career prospects of graduates by fostering stronger connections with potential employers, enhancing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

relevant skill development initiatives, improving research competencies, and expanding collaborative networks within the local community and industry sectors. By implementing these proactive measures, the institution can better fulfill its commitment to preparing graduates for successful and fulfilling careers.

CHRISTOPHER MARLOWE'S DOCTOR FAUSTUS AS A MORALITY PLAY

Prasad.N

Assistant Professor of English, Government First Grade College, K R Sagara, Srirangapatna Taluk, Mandya dist. 571607.

Article DOI: https://doi.org/10.36713/epra16854

DOI No: 10.36713/epra16854

Christopher Marlowe was the greatest of Shakespeare's predecessors. He may be regarded as the true founder of English drama. Though he was born and brought up in very poor family.he was able to get good education. Marlowe was the greatest of a group of young writers generally called "University wits" Before his untimely death at the age of twenty-nine he had founded English romantic tragedy, had written one of the greatest poetical dreams in the English language. One of the best psychological grandeur with doctor Faustus. For this great symbolic tragedy deals with a theme which is not only of the author's inner experience but of the very stuff which nourished the renaissance spirit. The pride of intellect by which both the Faustus of Marlowe and the Lucifer of Milton feel was the subtlest and most dangerous temptation of the age.

Marlowe was able to give his audience an impression of greatness; he made them tremble with enthusiasm. His success was immediate but even when his plays had come to seem extravagant, they remained popular. His characters are too large to be realistic or convincing; and yet they have the breath of life in them. Marlowe is regarded as a pioneer and arable. He raised the standard of revolt against the convention of writing plays in rhyme and against the "clown age" of popular comedy. The place and the value of Christopher Marlowe as a leader among English poets would be almost impossible for historical criticism to overestimate. He first and he alone guided Shakespeare into the right way. He is the greatest discoverer, the most daring and inspired pioneer, in all our poetic literature. Before him there was neither genuine blank verse nor a genuine tragedy in our language. After his arrival the way was prepared, the paths were made straight for Shakespeare.

The old Legend that a man could obtain supernatural power by selling his soul to the devil found in climax in the 16th century in a person of Doctor Faustus who really in the first half of that century. This man was a wandering scholar notorious as a necromancer, braggart and super- quack, who abandoning the disinterested pursuit of knowledge, in favor of its worldly exploitation and attaining some temporary success, ultimately met disaster Marlowe raises the character of Doctor Faustus to a higher level than is touched by his character in the original and the serious scenes of the play seem to some extent to be a sublimation of the vulgar sensationalism of the original. The serious and the comic scenes together form a curiously incongruous alternation. Marlowe makes excellent use of a religious convention which is undoubtedly Christian. What Marlowe creates out of the story of Faustus is a medieval mortality play with a late Renaissance temper.

FAUSTUS AS A MORALITY PLAY

Doctor Faustus marks the culmination of the English Morality tradition. As a morality it vindicates humility, faith and obedience to the law of god. Indeed, an eminent critic has described this play as the most obvious Christian document in all Elizabethan drama. It preaches the basic Christian values and should therefore be regarded as morality play.

The basic beliefs of Christianity are inherent in every line of Doctor Faustus and the Doctrine of damnation pervades it. The devil and hell are omnipresent in this play and are tarrying realities, Faustus makes a bargain with the devil and for the sake of Earthly learning, earthly power, earthly satisfaction goes down to horrible and everlasting prediction. The "Hero" is depicted as a wretched creature who for lower value give-up higher ones. Thus the drama is morality play in which heaven struggles with hell for the soul of a renaissance. Everyman loses the battle on account of his psychological and moral weaknesses.

It would be Incorrect to treat Faustus as the noble victim of tyrannical deity. On the contrary god is exceedingly good in his gifts to the hero until the latter becomes the victim of his own in satiable desires and even then god is willing to forgive of the repents. But Faustus intentionally refuses all aid and so goes down to damnation. There is no ambiguity at all in the play on this main issue. Marlowe establishes the moral values of the play by various means; by the Chorus, by Faustus's own recognition, by the good angel, by the old man, by the action itself and even Mephistopheles. As an example of the pervasive Christian view point, we also witness the deterioration and the coarsening of Faustus's character and his indulgence in cheap, sadistic fun.

The straggle between Faustus's uncontrolled appetites and the powers of haven continues the good angel and the evil angel

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

reappear the former urging him to give up magic, and the latter encouraging him to "go forward in that famous art"

Faustus consciously and deliberately sets his will against gods. But he is in this state Mephistopheles summons a few devils who offer him sensual satisfaction in order to distract his mind from spiritual concern. Repeatedly God Angel confirms Faustus's feeling by saying; "Faustus repent; yet god will pity thee" but overwhelmed by the will power he says, "My heart is hardened, I cannot repent. This must be taken as an egocentric conclusion.

Hell Strives against Heaven and despair strives against repentance, but as soon as Mephistopheles threatens to tear Faustus's flesh for disobedience. Then the weak-willed voluptuary quickly surrenders. There are some silent protests against the official Christianity of play. On the whole we can conclude that, if a person yields to a temptation, it would mean a 4.

failure of his willpower. But Faustus's self damnation is not due to a failure of his will power but to an assertion of his willpower the foundation of Marlowe's Philosophical position is that man has certain over-riding desires whose realization is denied by any form of servitude, and that the scheme of things as laid down by the god, who demands servitude.

BHARATHI KIRCHNER'S FICTION: FACTORS THAT INFLUENCE THE WRITING STYLE AND THE CHOICE OF SUBJECTS

Prasad.N

Assistant Professor of English, Government First Grade College, K R Sagara, Srirangapatna taluk, Mandya dist. 571607.

Article DOI: https://doi.org/10.36713/epra16855

DOI No: 10.36713/epra16855

Bharti Kirchner reflects in her novels both Indian Culture and also a great deal of multiculturalism which is experienced by the Indian immigrants not only in foreign countries but also in India as well.

Kirchner has published four critically acclaimed novels; Shiva dancing, Darjeeling, Sharmila's book and her latest pastries; A Novel of desserts and discoveries. The title of the novel, 'Shiva dancing' symbolises the great celestial dance of creation that will go on forever .It also means that the voyage of life does not stop and is uncontrollable. Kirchner use of myth Shiva is quite subtle. It is not just inferred by the title or alluded by oblique reference; it is interpretative that the novelist manipulates her characters to make speeches about Shiva.

In the novel 'Shiva dancing 'the sevenyear old Meena Kumari was about to marry her best friend Vishnu Ratan according to the ancient custom of Child marriage, Number Seven her people always believed as an auspicious number. Meena Kumari was to marry on her Seventh birthday and the groom also was named after friend god Vishnu whose number is Seven (7)

"Fresh literary terrain......Shiva dancing is a past travel guide, a past socio political study of contemporary India and even past cook book".

Kidnapped from her homeland, young Meena is unable to find her way home and is soon adopted by an American couple, Meena as time feels a desire to return to her village and find the man chosen for her by her Father to be her husband. Meena compares herself with Sita but she promptly realises that," This is modernday America unlike Sita." Further reference to the mythical Sita is the incident of Meena's condemnation for abandoning her Childhusband, Vishnu when she was in fact kidnapped by bandits. Therefore, Kirchner's use of an ancient bat popular myth has a clear feminist indication underlining the injustice meted out to Indian Women, Bharthi Kirchner is very much aware of the

position of Women in India. Shealso delineates the difference between modern American girl and traditional Indian mentality.

Shiva dancing can also be implied and interepreted that the Shiva is the God the destroyer, the one who creates a cycle of birth and death which symbolizes construction and destroction eventually the constructor, the destroyer and the re-constructor of Meena's life by dancing, Meena's life is destroyed when she is kidnapped recreated when she is adopted , destroyed when her adoptive mother dies, and again recreated when she returns to India and concludes her predicament.

The story unveils numerous parallel lines as it traces the separate lives of Meena Kumari in America and Vishnu Chauhan in India. It places before us two separate cultures the western and eastern and it also employs the overriding motifs of the dance of 'Shiva' which is performed in gaiety and triumph. Social consciousness comprise of customs, traditions, rituals etc. Meena who always been longing for her root to find her husband Vishnu, her culture, tradition gets excited to know that Vishnu is a journalist and well know reporter in Calcutta.

After an email reunion with Vishnu her Childhood husband Meena-family decides to make a trip to India to rekindle her Indianness and find her old Village .She faces intense humiliation from Vishnu's family in particular and the entire Village ingénues she compares her situation with that of goddess 'Sita', she says, I feel humiliates like her [Sita] I just want to disappear.

Kirchner's another novel, 'Goddess of Fire set up in the seventeenth century India. One of the most reprehensible customs of old India is the practice of Sati. The novel speaks about Moorti a widow who silently opposed the practice of Sati but was forced by her relatives. The novel also speaks about the rescue of Moorti by a Britisher. Moorti turned out as Maria and worked for the benefit of her Home town. She gets a job through job charnock and within a very short period of time she proved and saved her

ISSN (Online): 2455-3662

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

job. Further the relationship between Maria and job turned out to be one of the intimate ones. Job her rescuer renames her Maria, the author brings to the notice of the reader that Moorti as Maria has some misgivings of losing her identity, especially Anglicizing her name. The story takes a turn when Maria goes back to her Village and becomes a witness to see the horrific situations of her family members. The resultant of her rejection towards the natural order of Sati made her parents to lose their lives and her brothers to be virtual slaves.

The novel makes a strong statement about the prejudices and turmoil between English and Indians. While giving readers a detailed glimpse into the more exotic India the author says as a nation and the people of the nation must come to terms with tumultuous changes set a flame by English traders.

The works of South Asian Women writers follow this pattern and the novels are increasingly introspective, open ended and questioning. Issues are no longer black and white answers are neither stereotypical nor easy to find. Menare no longer seen as enemies to women kind . Female protagonists are seen to be in search of self fulfilment, order, meaning and security amidst the confusions and uncertainties of their new conditions.

BHARTI KIRSTNER AND AMULYA MALLADI; AUTHENTIC ARTICULATIONS OF THE PROBLEMS OF NON - RESIDENT INDIANS IN THEIR FICTION

Prasad.N

Assistant Professor of English, Government First Grade College, K R Sagara, Srirangapatna taluk, Mandya dist. 571607.

Article DOI: https://doi.org/10.36713/epra16856

DOI No: 10.36713/epra16856

Literature is a work of art blended with an aesthetic and artistic creation specifically in the written form. There are indeed many different kinds of Literature around the globe, but Indian English Literature has its special qualities that make it stand out to readers. Indian English Literature is an amalgamation of various themes such as socio-historical, multi cultural and multilingual objectives. Amulya Malladi is an Indian women diasporic writer she brings the concept of Cultural dilemmas in her work. This paper investigates Amulya's second fiction The Mango season and highlights the societal complications Cultural confusions faced by the protagonist Priya Rao. Due to religious and Cultural differences, the protagonist suffers a lot to decide between her love for her family and her primarily the result of two living experiences that develop in one's own Country and in the host land. The Mango season is very naturalistic in its depiction of Cultural confusions and societal norms faced by the pro agonist.

2 Who is well educated and graduated in the west while her Parents are down rooted in the Orient Culture?

The modern diasporic Indian writers can be grouped into two distort classes, the first class comprises of those who have spent a part of their life in India and have carried the baggage of their native land to a foreign land .The other class comprises of those who have been bred up since Childhood from outside India. Both the groups have produced an enviable corpus of English Literature. These diasporic writers live on the margins of two countries and create Cultural theories.

The Indian diasporic writers particularly Malladi and Bharti Krichner stay abroad and write about Indian Culture and ethos, have engraved for themselves a place in Indian English Literature. They have explored this inters feeling of immigrant sensibility through their fiction with the help of different aspects of life. In the post, Indians were intellectually fed on the thoughts of dickers, scot and the like. Today people all over the world are being nourished by the writers of the diaspora namely Amulya Malladi, Chitra Banerjee, Bharthi Kirchner and others such writers have brought about Indian life and Culture to the world

outside Malladi and Kirchner explore the experience of being caught between two cultures with cultural conflicts, displacement and dilemmas. As a women writer, she views gender from a women's point of view and thus extends the boundaries of women experience from different perspective and dimensions.

The novels of these two writers mainly focus on the themes like family tension , the changing possibilities of memory and the elusive nature of mind , the misunderstandings between two generations , the conflict between modernity and traditional values and the changing status of women from traditional roles to conflicting women characters . The major issues reflected in her works are related to women their self actualization, Psychological transformation, problem of identity cultural displacement, issues of gender and culture.

Culture is the context in which a person lives, thinks and feel. It is a collective identity of which everyone is an integral part; displacement is a key term in post colonial theory which applies to all migrant situations. It refers both to physical displacement and a sense of being socially and culturally "out of place". Immigrants unknowingly imbibe the host cultural when cultural displacements occur such cultural displacement can be seen in The Mango season by Amulya and Bharthi kirchner's Goddess of fire, cultural displacement is a shift or dislocation of a home cultural when an immigrant faces an inevitable situation and gradually accepts the host cultural, Cultural displacement can be experienced by an immigrant who is transferred from the native country to any foreign country.

The love and affection among individuals and trust towards each other is a basic phenomenon of human beings. Man and society are always inter-connected to spread the value of relationship in society. Without the existence of human beings society has no meaning. Thus human relationship is the main juncture of the society to uphold their emotions. Especially Anglicizing her name. The story takes a turn when Maria goes back to her Village and becomes a witness to see the horrific situations of her family

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

members. The resultant of her rejection towards the natural order of sati made her parents to loose their lives and her brothers to be virtual slaves.

The novel makes a strong statement about the prejudices and turmoil between English hand Indians. While giving readers a detailed glimpse in to the more exotic. India the author says as a nation and the people of the nation must come to terms with tumultuous changes set a flame by English traders.

The workers of south Asian women writers follow this pattern and the novels are increasingly introspective, open ended and questioning. Issues are no longer black and white, answers are neither stereotypical nor easy to find. Men are no longer seen as enemies to women kind. Female protagonists are seen to be in search of self fulfilment order meaning and security amidst the confusions and uncertainties of their new conditions.

SUMMARY

Introduction: cervical degenerative myelopathy (DCM) is a general term that entails multiple etiologies. DCM is a group of pathological entities that originate compression of the cervical spinal cord, where spasticity, hyperreflexia, pathological reflexes, loss of manual dexterity, among others, are found.

Objective: to detail the current information related to cervical degenerative myelopathy, epidemiology, clinical presentation, role of complementary examinations, pathophysiology, pathogenesis and treatment.

Methodology: a total of 32 articles were analyzed in this review, including review and original articles, as well as clinical cases, of which 21 bibliographies were used because the other articles were not relevant to this study. The sources of information were PubMed, Google Scholar and Cochrane; the terms used to search for information in Spanish, Portuguese and English were: cervical degenerative myelopathy, cervical spondylotic myelopathy, cervical pain, ossification of the yellow ligament and degenerative disc disease.

Results: cervical myelopathy occurs in almost all individuals with canal stenosis greater than 60%. Spinal cord injury (SCI) is a devastating disorder that influences remarkable neurological morbidity and significant wear and tear on quality of life. The incidence and prevalence of SCI in North America is between 4.1 and 60.5 per 100,000, robust epidemiological data is difficult to obtain because of the multifactorial etiology of the disease process.

Conclusions: cervical degenerative myelopathy involves multiple etiologies, all these entities together represent the most common reason for degenerative and non-traumatic alteration of the spinal cord in adult individuals. Degenerative disorders are more common at C5 and C6 or C6 and C7, because of the increased mobility in these sections. It is difficult to obtain solid epidemiological

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

data because of the multifactorial etiology of the disease process. The symptoms and signs presented by the pathology are varied, so an adequate physical examination and a good clinical history should be taken. The pathology can significantly alter neurological function and lead to disability, so early recognition and treatment can prevent further deterioration of affected individuals. Surgical decompression is almost universally indicated with the intention of preventing progression and achieving maximum recovery potential.

KEY WORDS: myelopathy, cervical, degenerative, pain, spinal, neuralgia.

INTRODUCTION

Cervical degenerative myelopathy (DCM) is an umbrella term that carries multiple etiologies, among them are cervical spondylotic myelopathy (CSM), ossification of the yellow ligament (OLF), ossification of the posterior longitudinal ligament (OPLL), and degenerative disc disease (DDD). All these entities together represent the most common reason for degenerative and non-traumatic spinal cord impairment in adult individuals(1-3).

The German Herbert von Luschka is credited with the discovery of the changes in the development of the anatomical structures of the cervical spine. Cervical degenerative myelopathy (DCM) is a group of pathological entities that cause compression of the cervical spinal cord, resulting in a clinical syndrome with spasticity, hyperreflexia, pathological reflexes, loss of manual dexterity, gait disturbances and sphincter dysfunction. Some individuals are more likely to form myelopathy in the cervical spine as a result of congenital cervical canal stenosis. Degenerative changes are more common at C5 and C6 or C6 and C7, because of increased mobility in these sections. There are also other factors that contribute to spinal canal stenosis such as hypertrophy of the yellow ligament, listhesis, osteophytosis and facet hypertrophy. Cervical myelopathy occurs in almost all individuals with canal stenosis greater than 60%, considering the sagittal disc space to be less than 6 mm. The pathology has an insidious onset, progressing gradually with reduced function. If the affected person does not receive treatment, it can lead to significant paralysis and loss of function. The level of neurological impairment can be measured using the modified Japanese Association Scale (mJOA) or the Nurick grade. Treatment sometimes requires anterior or posterior decompression surgery of the stenosed surface and sometimes fusion(1,4).

METHODOLOGY

A total of 32 articles were analyzed in this review, including review and original articles, as well as cases and clinical trials, of which 21 bibliographies were used because the information collected was not important enough to be included in this study. The sources of information were Cochrane, PubMed and Google Scholar; the terms used to search for information in Spanish, Portuguese and English were: cervical degenerative myelopathy, cervical spondylotic myelopathy, cervical pain, ossification of the yellow ligament and degenerative disc disease.

The choice of bibliography exposes elements related to cervical degenerative myelopathy, epidemiology, clinical presentation, role of complementary examinations, pathophysiology, pathogenesis and treatment.

DEVELOPMENT

Epidemiology

The incidence and prevalence of DCM in North America is between 4.1 and 60.5 per 100,000, solid epidemiological data are difficult to obtain because of the multifactorial etiology of the disease process. There are authors who estimate that degenerative diseases of the spine are among 59% of non-traumatic spinal cord injuries in Japan, 54% in the United States, 31% in Europe, 22% in Australia and 30% in Africa. It is further stated that the area incidence per million was 76 in North America, 26 in Europe and 6 in Australia. Although these data are not limited to cervical spinal cord impairment and several individuals with minor symptoms were excluded from multiple studies included in the review, it could be inferred that since DCM is one of the most common origins of non-traumatic cervical spinal cord injury, it is a major drawback for the North American population(1-3).

A clinical trial comparing magnetic resonance imaging (MRI) data from asymptomatic individuals showed that about 25% of individuals under 40 years of age had radiological findings compatible with cervical spondylosis. The incidence of these findings was approximately 60% among individuals older than forty years(5,6).

Clinical Presentation

Spinal cord injury (SCI) is a devastating disorder that results in marked neurological morbidity and significant impairment of quality of life.

The presentation of the affected individual presents with a wide range of symptoms ranging from barely perceptible dysfunction, through numbness or loss of motor dexterity, to severe dysfunction, such as tetraparesis and sphincteric impairment. It should be noted that paresthesias in the limbs are usually the first sign and because they are mild, they are often not recorded by affected individuals and health personnel(7).

The following clinical signs and symptoms may generally be present in individuals with DCM:

- Motor deficits.
- Numbness of the hands.
- Hoffmann's sign.
- Tenar atrophy.
- Ankle clonus.
- Inverted brachioradialis reflex.
- Hyperreflexia.
- Babinski's sign.
- Spasticity.
- Romberg's sign.
- Lhermitte's phenomenon.
- Impaired gait.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

- Incontinence.
- Clumsy hands.
- Weakness.
- Paresthesias(1).

The myelopathic signs in the physical examination present different sensibility and specificity: hyperreflexia comprising between 72 and 43 percent, showing the biceps as the most sensitive and the brachioradialis the most specific, Hoffmann's sign comprising between 59 and 84 percent, brachioradialis reflex comprising between 51 and 81 percent, clonus comprising between 13 and 100 percent and Babinski comprising between 13 and 100 percent(8).

Role of Complementary Tests

The diagnosis of cervical degenerative myelopathy is complex. Somatosensory evoked potentials (SSEP) and motor evoked potentials (MEP) are usually used to find objective evidence of functional abnormalities of the spinal cord(5).

Evaluation of cervical degenerative myelopathy usually includes plain radiographs. Lateral views allow assessment of spinal canal narrowing, disc height, presence of ossification of the posterior longitudinal ligament (OPLL), cervical sagittal alignment and subluxation. In individuals with cervical degenerative myelopathy, increased C2-C7 Cobb angles, superior C7 slopes, inferior C7 slopes and superior T1 slopes are usually shown(5,9).

Source: The Authors.

A study showing the correlation between preoperative computed tomography (CT) myelograms and clinical outcomes following the surgical procedure showed that individuals with greater spinal cord cross-sectional area at the degree of maximum compression had better outcomes. Other studies

show that kinematic CT scans have limited potential to demonstrate myelopathy or correlate findings with clinical outcomes of DCM. Research projects based on tomography play a fundamental role in the diagnosis of diseases such as OPLL (10,11).

Source: The Authors.

MRI can provide direct evidence of spinal cord compression, playing an important role in the choice of appropriate treatment, as well as predicting outcomes. Magnetic resonance imaging allows the observation of soft tissue structures such as intervertebral discs, showing early signs of degeneration, as well as spinal ligaments and other structures that are not easily visualized. At the moment there is no certainty as to whether there is a direct relationship between the amount of

degeneration and changes in the cord signal independent of canal stenosis. MRI scans can find modifications in the signal intensity of the vertebral plaques. When related to disc degeneration, they are named Modic endplate changes (MEC).

There are 3 subtypes described in the literature according to MRI. Some bibliographies showed that type 2 modifications were the most common, mostly at C5-6 and C6-7 levels.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

However, SCMs are a dynamic phenomenon. Other studies show that the natural history of cervical degenerative myelopathy in 426 individuals with neck pain and the prevalence of cervical degenerative myelopathy type 1 increased from 7.4% to 8.2% after 2.5 years of follow-up. Likewise, the prevalence of type 2 increased from 14.5% to 22.3%. In addition, 12 segments with type 1 converted to type 2 during follow-up and no conversions from type 2 to type 1 were seen. MRI also gives the possibility to assess spinal canal stenosis(5,12,13).

Pathophysiology and Pathogenesis

Typically, degeneration of the cervical spine occurs over time as a result of structural loading, repetitive microtrauma and agerelated modifications in the physiology of the bones, muscles and intervertebral discs. The degenerative process usually begins with disc wear, which acts to distribute pressure forces evenly across the vertebral plates and facet joints. Because of the decrease in proteoglycans and water, the discs lose their elastic and supporting capacity, beginning to create unequal pressure forces on adjacent vertebrae, triggering the formation of osteophytes. In addition, the vertebrae progressively lose their height and gradually widen. The completion of these processes converges in the form of spinal canal stenosis leading to chronic compression of the spinal cord and subsequent development of myelopathy. Thus, individuals with a narrow spinal canal or a large spinal cord or imbalance between the canal and the spinal cord are at increased risk of developing DCM over the course of their years. In addition to static injury. these significant morphologic changes can lead to increased mobility or both stable and unstable spondylolisthesis. Being unstable, increased range of motion may result in dynamic injury and repetitive minor trauma. From a pathophysiological point of view, spinal cord injury over time modifies the bloodspinal cord barrier, causing neuroinflammation, ischemia and apoptosis, which together allow demyelination, astrogliosis and axonal degeneration. This will later end with the manifestation of symptomatic myelopathy with its characteristic clinical findings(14-17).

Compression of the spinal cord by degenerative changes may also result from enlargement and ossification of the ligaments of the spinal canal, especially the posterior longitudinal ligament (PLL) and the yellow ligament (LF). Ligamentous enlargement may occur as a result of bulging of the disc into the canal resulting in enlargement of the PLL, which may progress to reactive ossification of the PLL, or loss of disc height, which usually results in buckling and infrequently ossification of the LF and compression of the spinal cord from the posterior aspect. In addition, genetic factors have been implicated in the formation of ossification of these spinal ligaments, so it is possible that these individuals do not have clear degenerative findings. Affected individuals from East Asia have been shown to be uniquely compromised by OPLL.

In the pathogenesis of the disease, 3 main factors can be observed: static, dynamic and histopathological.

Static Factors

These are structural elements of the spine that cause the narrowing of the spinal canal. The degenerative cascade of DCM commonly begins with deterioration of the intervertebral disc that gradually collapses and protrudes into the spinal canal, reducing its caliber. The reduction in disc height causes the spine to shorten and exhibit abnormal biomechanics. The yellow ligament can also cause posterior spinal cord compression by thickening and proliferation. The ossification of the posterior longitudinal ligament can lead to cervical degenerative myelopathy by direct compression of the spinal cord anteriorly. All these alterations cause stiffness of the cervical structures involved. To compensate for the reduction of motion at the affected sites, the adjacent regions of the spine become hypermobile.

Dynamic Factors.

Abnormal repetition of cervical spine motion during flexion and extension causes irritation and compression of the spinal cord. Flexion can compress the spinal cord anteriorly against osteophytes and intervertebral discs. Hyperextension may result in narrowing of the spinal cord between the posterior edges of the vertebral body anteriorly and the hypertrophied yellow ligament posteriorly.

Histopathological Factors.

Mechanical compression of the spinal cord leads to vascular modifications causing ischemia and inflammation. Chronic compression of the spinal cord can result in cell loss, degeneration of the posterior columns, anterior horn cells and endothelial damage due to dysfunction of the blood-brain barrier of the affected spinal cord, generating continuous functional deterioration(7).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Source: The Authors.

Treatment

Cervical degenerative myelopathy is most often considered a surgical problem, with 20-62% of individuals worsening between 3 and 6 years of follow-up when management is expectant. In addition, in individuals who have asymptomatic cord compression, the incidence of symptomatic myelopathy formation is about 8% per year and almost 23% at 4 years of follow-up. A published article also shows improvement in all age groups treated surgically, with significant recovery within 1 week and 6 months after surgery. Surgical decompression is almost universally indicated with the intention of preventing progression and achieving maximum recovery potential.

Surgical approaches to decompress the spinal cord can be done by eliminating the causative compressive pathology, expanding

the spinal canal through removal or manipulation of the posterior lamina of the vertebrae. Anterior approaches are preferred in individuals with cervical kyphosis and in individuals with large anterior pathology, while posterior approaches are indicated when you have multilevel cervical compression or OPLL. The literature suggests that adjunctive pharmacologic treatment may be used, addressing glutamateinduced excitotoxicity with riluzole, accompanied by surgical decompression. Conservative treatment may be indicated when it is the choice of the affected individual or if surgical risk is unacceptable. Conservative treatment options include structured and careful physiotherapy, the use of a soft collar, massage therapy, analgesics and antineuralgic drugs, however there is limited evidence regarding efficacy(7,14,18-21).

CONCLUSIONS

Cervical degenerative myelopathy involves multiple etiologies, all these entities together represent the most common reason for degenerative and non-traumatic alteration of the spinal cord in adult individuals. Degenerative disorders are more common at C5 and C6 or C6 and C7, because of the increased mobility in these sections. It is difficult to obtain solid epidemiological data because of the multifactorial etiology of the disease process. The symptoms and signs presented by the pathology are varied, so an adequate physical examination and a good clinical history should be taken. The pathology can significantly alter neurological function and lead to disability, so early recognition and treatment can prevent further deterioration of affected individuals. Surgical decompression is almost universally indicated with the intention of preventing progression and achieving maximum recovery potential.

ABSTRACT

Breastfeeding during the initial phase of an infant's life is crucial for supplying all the necessary nutrients that are specially tailored to meet the needs of a growing baby. It is an ideal meal for an Infant. But in the multi-tasker role of a woman as a mother and a professional, it always be a tough challenge to feed the child during the working hours in her busy schedule. Due to this, the child gets neglected and it also hampers the growth and development of the child. The challenge of balancing breastfeeding with work responsibilities is a significant concern for many working women. Without adequate support, resources, and awareness, it can be extremely challenging for women to continue breastfeeding while maintaining their employment. On the other hand, effective workplace accommodations, facilities, awareness, and support can promote breastfeeding and also help to maintain their employment. By prioritizing breastfeeding we can enhance maternal and infant health outcomes, reduce healthcare costs, and contribute to the well-being of future generations. In addition to these challenges, hence some solutions to tackle this challenge and support breastfeeding in the workplace are mentioned intern it can also lead to enhanced productivity, growth, and efficiency for employers.

KEYWORDS – breastfeeding, lactation, maternal health, infant health

INTRODUCTION

Breastfeeding, in the initial phase of an Infants life, supplies all the necessary nutrients to the body which are exclusively needed for the growth and development of the child. A child alone on breastmilk in the initial 6 months of life usually has high IQ levels, timely onset of milestones and it also saves the child from various diseases and infections by building immunity. It is an ideal meal for infants. Breastfeeding also impacts on the health of a mother.

Every woman has a great role to play as a multitasker whether it is her personal life or professional life. Sometimes, professional life interrupts to excel the most important phase of her life i.e. motherhood. The typical problem they face during their working life is to breastfeed their child. Currently, breastfeeding for working women is a matter of concern to manage because of the lack of awareness, resources and places to nurse the child. Hence it is noted that either the women decide to quit the job or else the child may be neglected due to a lack of support at the workplace. In both conditions either she loses her professional carrier which might be a dream job for her or either a child may lack an exclusive need for the body to sustain a healthy diseased-free life which all parents wish for.

BREASTMILK - A NEED FOR CHILD

Breastfeeding is a basic necessity to survive and lead a healthy life for an infant. Breast milk contains various essential nutrients such as proteins, fats, vitamins, minerals, carbohydrates, hormones, enzymes, immunoglobulins, etc^[1].

- It helps for the growth and development of the child
- Boosts immunity (*Vyadhi kshamatava*)
- Enhances intellectual power, memory and cognition.
- Reduces chances of infection
- Minimizes the chances of chronic ailments
- Accelerates recovery from the diseases, if happens (*Vyadhi pratibandhakatavam*)
- Improves quality of life of a child

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

• Ojo vardhanam

For this, the WHO (World Health Organization) and UNICEF (United Nations International Children's Emergency Fund) together work globally to promote breastfeeding.

BENEFITS OF BREASTFEEDING FOR MOTHER

Breastfeeding is not only necessary for the child but it is also beneficial for the mother to safeguard herself from various health ailments.

- Reduces risk of cancers of ovaries and breast
- Postpartum haemorrhages can be reduced by the release of oxytocin by breastfeeding. Also, oxytocin helps to re-size the uterus after delivery.
- Prevents depression and stress.

CHALLENGES AT THE WORK PLACE FOR BREASTFEEDING

Usually, women face a lot of troubles during the breastfeeding phase of life because there is a lack of awareness among people regarding the importance of breastfeeding for the child. Due to this, the employer will not allow breaks for mothers, lack of a place to breastfeed and the hectic schedule made mothers to reduce breastfeeding in early infancy which will impact the health, growth and development of a child.

A PLAN FOR BREASTFEEDING EMPLOYERS AT THE WORKPLACES

The challenges can be overcome with the support of organizations and a friendly workplace environment. The great support of the organization impacts a lot on the health status of breastfeeding mothers and children. Every organization should provide support to breastfeeding mothers in numerous ways by implementing some special laws or policies to work.

- 1. Work From Home Recently, the pandemic gave rise and promoted a culture of 'Work from home' for employees. That helps to generate business for companies without closing or hampering their work. The same rules can be implemented by the organization for breastfeeding mothers, for nursing and for taking care of their children in Infancy. Even Government has to come forward with some plans for working females to care for their children even up to Toddler age. Such plans will not only help to support the parents financially without losing jobs but also reduces the load on the hospitality sector as the chances of illness will reduce by this at an early age.
- 2. **Mid Breaks -** If unable to post the person to do work from home then there should be adequate mid-breaks for breastfeeding mothers to feed the child. Due to this, there must be a reduction and liberation of working hours for the mother without deducting the money.
- 3. **Liberal work hours** for lactating mothers. It will also avoid the negligence done by mothers to feed their children because of commitments or hurry at work.
- 4. Awareness among the Mentors / Head of the departments/ Managers The head of every department whoever has a leading role to play to manage man force, must have sufficient awareness and be educated about the importance of breastfeeding. So, they should liberally

support their staff concerning time and morality to nurse the child.

- 5. **Workshops** A training program of 2-3 hours will be sufficient to aware the mentors, and employees to ensure exclusive breastfeeding importance among them. It will help the organization with the proper implementation of guidelines or policies for breastfeeding support at the workplace.
- 6. Workplace surrounding / Infrastructure It must have clean separate rooms or a place for feeding children. The rooms should have adequate facilities like a suitable sitting place to feed in the correct position with privacy, and an attached bathroom to maintain hygiene before breastfeeding and to dress well after feeding. A fridge for the provision to store milk in bottles by withdrawal from breast pumps so that in case of emergency works child will be nursed at least on proper time without substituting the breast milk with alternatives (available in the market). Even there can be a provision of a conducive environment with the staff (nannies) to take care of children at workplace like Creche. It favours the companies by providing minimal short breaks instead of long breaks which may be needed to travel. Also, it contributes to generate employment.
- 7. Stress-Free Environment improves work efficiency of employer This is a need for every individual to work in harmony but it should be focused well in concern to pregnant ladies, breastfeeding mothers, and diseased employees. In fact, a less stressful environment is most essential for organizations as it yields productive, creative and maximum output. [2] Education and awareness among people will help to develop such environments.
- 8. Role of government agencies in promoting breastfeeding at workplace The astringent actions need to be taken by the Government agencies to conduct surveys, check the norms of organizations for breastfeeding mothers, and monitor the conducive environment by the industries. There is an act called Maternity Benefit (Amendment) Act 2017^[3] was also established for breastfeeding mothers to feed their children by visiting 4 times at creche. These creches should be nearer to the office to promote the breastfeed and it also reflects its importance. But still, these efforts are neglected and lactating mothers are facing these issues. Hence need to form some supportive agencies to check these protocols at proper intervals.

ADVANTAGE OF FRIENDLY WORKPLACE FOR BREASTFEEDING WORKERS

The major advantage of providing friendly workplace for breastfeeding mothers build a life time bond with employ. It gives value to the work and also boost the confidence of mothers. It helps to retain the employ for the company's welfare. Creating a breastfeeding-friendly workplace offers advantages such as improved employee retention, enhanced morale, and increased productivity. By supporting breastfeeding employees with facilities and flexible schedules, companies demonstrate commitment to employee well-being and attract top talent. Reduced absenteeism and healthcare costs are additional benefits, along with compliance with legal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

requirements and a positive public image. Promoting diversity and inclusion, such initiatives foster a supportive environment for all employees. Overall, prioritizing breastfeeding support contributes to a more inclusive, productive, and socially responsible workplace within a concise framework.

CONCLUSION

In conclusion, breastfeeding at the workplace is a vital aspect of supporting the health and well-being of both working mothers and their infants. While the benefits of breastfeeding are well-established, there are still challenges that need to be addressed to create truly positive breastfeeding-friendly workplaces. Here, employers, facilities like lactation rooms, mid breaks, work from home culture etc will play a crucial role to manage such conditions and also supports a precious bond of a mother and child. Also, the Government policies need to be framed and executed well to ensure, educate, aware and promote breastfeeding at workplaces. If the barriers are resolved then people can work and nurse their children efficiently and the nutritional needs of a child will be adequately fulfilled. Along with this the productivity, growth and efficiency of the employer will also improve.

"A need to build a breastfeeding culture at workplace, but culture exists if an organization thinks"

ABSTRACT

This research aims to determine the effect of innovative pop-up book learning media on improving students' mathematical communication skills and mathematics learning interest. This research was conducted at Inpres Kayawu Elementary School. This research is using experimental method. Data collection techniques use tests and questionnaires whose validity and reliability have been tested. To determine the validity of each item, the Pearson Product Moment technique is used. Reliability testing is carried out on each item whose validity has been tested using the Cronbach Alpha (a) technique. Data management in this research uses descriptive analysis, normality test, hypothesis I and II tests using the t test, hypothesis III test using the Manova test, and coefficient of determination (R²) test. The results of this research show that, 1) there is an influence of the use of pop-up book innovative learning media on mathematical communication skills in grade III students at Inpres Kayawu Elementary School, and 2) there is an influence of the use of pop-up book learning media on mathematical communication skills and mathematics learning interest in grade III students at Inpres Kayawu Elementary School

KEYWORDS: Pop-Up Book Media, mathematical communication skills, mathematics learning interest

Abstrak

Penelitian ini bertujuan untuk mengetahui pengaruh media pembelajaran inovatif pop-up book terhadap peningkatkan kemampuan komunikasi matematis dan minat belajar matematika siswa. Penelitian ini dilakukan di SD Inpres Kayawu. Penelitian ini menggunakan metode eksperimen. Teknik pengumpulan data menggunakan tes dan angket yang telah diuji validitas dan reliabilitasnya. Untuk mengetahui validitas tiap item adalah teknik Pearson Product Moment. Uji reliabilitas dilakukan pada setiap item-item yang sudah teruji validitasnya dengan teknik Cronbach Alpha (a). Pengelolaan data dalam penelitian ini menggunakan analisis deskriptif, uji normalitas, uji hipotesis I dan II menggunakan uji t, uji hipotesis III menggunakan uji manova, dan uji koefisien determinasi (R²). Hasil penelitian ini menunjukkan bahwa, 1) terdapat penggunaan media pembelajaran inovatif pop-up book terhadap kemampuan komunikasi matematis pada siswa kelas III SD Inpres Kayawu, dan 2) terdapat penggunaan media pembelajaran inovatif pop-up book terhadap minat belajar matematika pada siswa kelas III SD Inpres Kayawu, serta 3) terdapat penggunaan media pembelajaran inovatif pop-up book terhadap kemampuan komunikasi matematis dan minat belajar matematika pada siswa kelas III SD Inpres Kayawu

Kata Kunci: Media Pop-Up Book, Kemampuan Komunikasi Matematis, Minat Belajar Matematika

INTRODUCTION

Learning is a functional communication process between students and teachers and students with students, in order to change attitudes and mindsets that will become habits for the students concerned. Especially through learning mathematics, a person is trained to think creatively, critically, honestly, and can apply mathematics in solving problems of everyday life and other disciplines (Katihokang et al., 2024). In this case communication is a process of expressing ideas or ideas and mathematical understanding using numbers, pictures, and words, in various communities including teachers and students. Interactions between teachers and students during classroom activities provide opportunities to develop their mathematical skills. Student interactions where mathematical ideas are

explored from various views can help students to deepen their understanding, and develop their skills to communicate, explain, justify, and discuss mathematical ideas. In this case, mathematical communication skills are important things that students must have. The importance of mathematical communication skills to develop the ability to convey information or communicate ideas, among others, through oral talks, pictures, graphs, maps, diagrams, in explaining ideas.

Mathematical communication is the skill to express mathematical ideas coherently to friends, teachers, and others through oral and written language accompanied by explanation and justification. Lomibao et al. (2016) stated that mathematical communication skill is the ability to express ideas, describe,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and discuss mathematical concepts coherently and clearly. Prayitno et al. (2013) argues that mathematical communication is needed to communicate ideas or solve mathematical problems, either orally, in writing, or visually, either in mathematics learning or outside of mathematics learning. Mathematics learning emphasizes more on written mathematical communication because during the learning process there is a lot of use of symbols or images to make it easier to solve a problem. Students' mathematical communication skills can be developed through the education process at school, one of which is the mathematics education process (Hodiyanto, 2017). In addition to mathematical communication skills, students must have an interest in learning.

Interest in learning is a sense of preference and a sense of interest in a thing or activity, especially interest in learning, without anyone telling you to. According to Aldefer (Achru P., 2019) learning interest is the tendency of students to carry out learning activities which are driven by the desire to achieve the best possible learning achievement. Interest is basically the acceptance of a relationship between oneself and something outside oneself. Interest in learning is an act of behavior change that occurs because of a desire in the form of attention so that there is a feeling of pleasure. Supardi et al. (2012).

In the world of education, especially in mathematics subjects after using innovative learning media, it can increase students' mathematical communication skills and mathematics learning interest. As for the results of research by Yuwono et al. (2021) the use of pop-up book learning media can be used effectively in learning mathematics. However, most teachers do not never use teaching media in class, but teachers lack innovation and only use teaching media in the form of image media directly from textbooks with the lecture method. So that the learning process is less varied and less interesting.

This research was conducted using alternatives for the implementation of learning as desired, namely with innovative learning media that are in accordance with the characteristics of students and in accordance with learning needs. So that the learning process can provide a variety of material presentations in the form of innovative learning media. Media is an important component in the learning process. "Learning media according to (Aqib, 2013) is anything that can be used to channel messages and stimulate the learning process in students. Media is used to help create good learning. Innovative learning media that can be used to help the learning process in elementary schools are very diverse. In this study, researchers used products that had been made as learning media, namely pop-up book media. Pop-up book media provides learning materials that can provide more interesting visualizations to students.

Pop-up book media is a three-dimensional teaching tool that can stimulate children's imagination and increase knowledge so that it can make it easier for children to know the depiction of the shape of an object, and increase children's understanding (Hanifah, 2014). This is in line with Ningtiyas et al. (2019) who suggest that a pop-up book is a card or book that when opened can present a 3-dimensional or embossed construction.

Solichah & Mariana (2018) also explained that pop-up book media includes a type of 3D media that can provide an interesting effect, because each page opened will reveal a picture that appears and the material contained in the pop-up book can be adjusted to the teaching material to be conveyed. Based on this explanation, it can be concluded that pop-up book media is a book that has three-dimensional elements that can move when the page is opened, and provides a more interesting visualization and display to increase student understanding of the material.

This study discusses pop-up book media (X), mathematical communication skills (Y₁) and mathematics learning interest (Y₂). The difference between this research and previous research conducted by Ni Kadek Diana Yuni Pertiwi et al (2022) is in the pop-up book background object. The object of pop-up book media in this study is math material while in the research conducted by Pertiwi et al. (2022) the object of pop-up book media uses Balinese Cultural Nuances Picture Background ". Then the difference between this research and the second previous research conducted by Sari & Soesanto (2022), is in the learning media. This study uses innovative learning media pop-up book while in the research conducted by Sari & Soesanto (2022) using kahoot media.

This research can provide material for teachers in conducting self-development in improving performance as an educator and innovating in making learning media and improving students' mathematical communication skills and learning interests. The purpose of this study was to analyze the effect of innovative learning media pop-up book on improving mathematical communication skills and mathematics learning interest of grade III students in elementary school".

METHOD

This study uses a quantitative research approach. Quantitative research data is in the form of numbers and analysis using statistics (Sugiyono, 2019). This study aims to test the hypothesis proposed by analyzing the relationship between existing variables, namely the effect of using pop-up book learning media on mathematical communication skills and students' mathematics learning interest.

This research was conducted at Inpres Kayawu Elementary School. This research was conducted in the 2023/2024 school year. The population of this study were grade III students at Inpres Kayawu Elementary School in the odd semester of the 2023/2024 school year based on characteristics related to the three variables in this study. The sample in this study were all grade III students of Inpres Kayawu Elementary School, totaling 20 students.

The data collection techniques used in this study were tests and questionnaires. In this study using the initial test/pretest and final test/posttest and questionnaire using student response questionnaire to innovative pop-up book learning media and questionnaire student mathematics learning interest. The instruments in this study have been tested for validity and reliability and the results are valid and reliable instruments used. Furthermore, the data analysis techniques used in this study are descriptive analysis, normality test, hypothesis testing

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

in this study, namely simple linear regression analysis using the t test to measure the effect of pop-up book media (X) on mathematical communication skills (Y_1) and the effect of pop-up book media (X) on mathematics learning interest (Y_2) partially. Multiple linear regression analysis using the manova test aims to determine the effect of pop-up book media (X) on mathematical communication skills (Y_1) and mathematics learning interest (Y_2) simultaneously, and the coefficient of determination (R^2) test.

RESULT AND DISCUSSION

This research was conducted in grade III students of Inpres Kayawu Elementary School based on the formulation of existing research problems. Respondents in this study amounted to 20 students who were students enrolled in the 2023/2024 school year. After completing the research, the next step is to analyze the data and then process the existing data with the aim of seeing the effect of pop-up book media on mathematical communication skills and mathematics learning interest in grade III students of Inpres Kayawu Elementary School with the help of the IBM SPSS application. In this study, descriptive analysis, normality test, hypothesis test, and coefficient of determination (R2) test were first conducted. Descriptive analysis was carried out to see a general description of the data such as the average value (Mean), highest (Max), lowest (Min), and standard deviation of each variable, namely Pop-Up Book Media (X), mathematical communication skills (Y₁), and mathematics learning interest (Y₂). The results of descriptive analysis on variable X are known to have an average value (mean) of 94, the highest value (max) 100, the lowest value (min) 80, standard deviation 4.99368. The results of descriptive analysis on variable Y₁ are known to have an average value (mean) of 93, the highest value (max) 100, the lowest value (min) 73, standard deviation 7.83296. The results

of the descriptive analysis on variable Y_2 are known to be the average value (mean) 94, the highest value (max) 100, the lowest value (min) 80, standard deviation 4.99368. The results of descriptive analysis on variable Y_1 are known to be the average value (mean) 98, the highest value (max) 100, the lowest value (min) 93, standard deviation 1.86096.

Before conducting hypothesis testing, a normality test is first carried out to determine whether the data is normal or not by looking at the significant value of the One Sample Kolmogorov-Smirnov Test using the SPSS application. The results of normality testing on the XY_1 data group show a significant number of 0.741 > 0.05. This indicates that the data is normally distributed. While in the XY_2 data group the results of normality testing showed a significant number of 0.801 > 0.05. Thus, the data is normally distributed.

After doing the normality test, the next step is to test the hypothesis. Hypothesis testing in this study aims to determine the effect of the independent variable on the dependent variable and answer the research hypothesis. There are two hypothesis tests carried out in this study. Namely simple linear regression analysis to determine the effect of variables partially and multiple linear regression analysis to determine the effect of variables simultaneously. Simple linear regression analysis was carried out to test hypotheses I and II, while multiple linear regression analysis was carried out to test hypothesis III.

Hypothesis I in this study is that there is an effect of using innovative learning media pop-up book on mathematical communication skills in grade III students of Inpres Kayawu Elementary School. Data analysis used t test to test hypothesis I about the effect of pop-up book innovative learning media variables on mathematical communication skills. The results of the t test analysis are as follows:

Table 1. Simple Regression Test Results (X - Y1)

| Model | | Unstandardized Coefficients | | t | Sig. |
|--------------|---------|--------------------------------|------|--------|------|
| | В | Std. Error | Beta | | |
| 1 (Constant) | 132.486 | 16.737 | | 7.916 | .000 |
| Pop-Up Book | 423 | .178 | 489 | -2.377 | .029 |
| Media | | | | | |

Based on the analysis results in table 1, a significant value of 0.029 < 0.05 was obtained. So the obtained significance value of 0.029 < 0.05, so it can be concluded that the pop-up book media variable (X) affects the mathematical communication ability variable (Y₁). Then H_0 is rejected, so it can be concluded that the pop-up book media variable has an effect on the mathematical communication skills variable. Thus, H_a is accepted which states that there is an effect of pop-up book media on mathematical communication skills in grade III students of Inpres Kayawu Elementary School.

Hypothesis II in this study is that there is an effect of using innovative learning media pop-up book on mathematics learning interest in grade III students of Inpres Kayawu Elementary School. Data analysis used t test to test hypothesis II about the effect of pop-up book innovative learning media variables on mathematics learning interest. The results of the t test analysis are as follows:

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

| Table 2. Simple Regression Test | Results | (X - | Y2) |
|---------------------------------|---------|------|-------------|
|---------------------------------|---------|------|-------------|

| Model | | Unstandardized Coefficients | | Standardized Coefficients | t | Sig. |
|-------|-------------|--------------------------------|------------|------------------------------|-------|------|
| | | В | Std. Error | Beta | | |
| 1 | (Constant) | 48.901 | 15.936 | | 3.069 | .007 |
| | Pop-Up Book | .513 | .169 | .581 | 3.029 | .007 |
| | Media | | | | | |

Based on the analysis results in table 2, a significant value of 0.007 < 0.05 was obtained. So the significance value is 0.007 < 0.05, so it can be concluded that the pop-up book media variable (X) has an effect on the mathematics learning interest variable (Y₂). Then H₀ is rejected, so it can be concluded that the pop-up book media variable has an effect on the mathematics learning interest variable. Thus, H_a is accepted, which states that there is an effect of pop-up book media on mathematics learning interest in grade III students of Inpres Kayawu Elementary School.

Hypothesis III in this study is that there is an effect of using innovative learning media pop-up book on mathematical communication skills and mathematics learning interest in grade III students of Inpres Kayawu Elementary School. Data analysis used manova test to test hypothesis III about the effect of pop-up book innovative learning media variables on mathematical communication skills and mathematics learning interest. The results of the manova test analysis are as follows:

Table 3. Multiple Regression Test Results

| | Value | F | Hypothesis df | Error df | Sig. |
|-----------------------|-------|--------------------|------------------|-------------|------|
| Wilks' lambda | .080 | 2.542a | 18.000 | 18.000 | .028 |
| Hotelling's trace | 8.980 | 3.991 | 18.000 | 16.000 | .004 |
| Roy's largest root | 8.685 | 9.649 ^b | 9.000 | 10.000 | .001 |

Each F tests the multivariate effect of X. These tests are based on the linearly independent pairwise comparisons among the estimated marginal means.

Based on the results of data analysis through SPSS using the Wilk's Lambda method, it is known that the significance value is 0.028 < 0.05, so from the results of this data analysis it can be concluded that the regression model has a significant effect together between the pop-up book media variables on mathematical communication skills and students' mathematics learning interest. Thus, H_a is accepted in this study which states that there is an influence between pop-up book media on mathematical communication skills and mathematics learning

interest in grade III students of Inpres Kayawu Elementary School.

The next stage is to analyze the coefficient of determination (R_2) test to estimate the extent to which the independent variable plays a role in influencing the dependent variable. The results of the coefficient of determination (R_2) test analysis using the help of IBM SPSS obtained model (Model Summary) can be seen in table 4 below.

Table 4. Summary of Pop-Up Book Media Variable Model on Mathematical Communication Ability

| Model Summary | | | | | |
|------------------------------------|----------------|--------------|----------|---------|--|
| Model R R Adjusted R Std. Error of | | | | | |
| Square Square the Estimate | | | | | |
| 1 | .489a | .239 | .197 | 3.87460 | |
| a. Predictor | rs: (Constant) |), Pop-Up Bo | ok Media | | |

Based on the results of the analysis of the coefficient of determination (R_2) test of pop-up book media on mathematical communication skills in table 4, it is known that $\hat{Y}=132.486+0.423X$. The coefficient X of 0.423 states that every 1% addition of pop-up book media value, the value of mathematical communication skills increases by 0.423. The regression coefficient of mathematical communication skills is positive,

this shows the unidirectional movement of these two variables which explains that the better the pop-up book media, the students' mathematical communication skills increases. The coefficient of determination or the determining coefficient (KP) is obtained by the formula $KP=r^2 \times 100\%$, so that the coefficient of determination is 23.9%. This means that 23.9% of mathematical communication skills can be explained by the

a. Exact statistic

b. The statistic is an upper bound on F that yields a lower bound on the significance level.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

pop-up book media variable, while the remaining 76.1% is explained by other variables.

Table 5. Summary of Pop-Up Book Media Variable Model on Interest in Learning Mathematics

| Model Summary | | | | |
|------------------------------------|--------------|---------------|-----------|--------------|
| Model R R Adjusted R Std. Error of | | | | |
| | | Square | Square | the Estimate |
| 1 | .581a | .338 | .301 | 3.68907 |
| a. Predict | ors: (Consta | nt), Pop-Up B | ook Media | |

Based on the results of the analysis of the coefficient of determination (R₂) test of pop-up book media on mathematics learning interest in table 5, it is known that $\hat{Y} = 48.901 +$ 0.513X. The coefficient X of 0.513 states that every 1% increase in the value of pop-up book media, the value of students' mathematics learning interest increases by 0.513. The regression coefficient of student learning interest is positive, this shows the unidirectional movement of these two variables which explains that the better the pop-up book media, the student's mathematics learning interest increases. The coefficient of determination or the determining coefficient (KP) is obtained by the formula $KP = r^2 \times 100\%$, so that the coefficient of determination is 33.8%. This means that 33.8% of students' mathematics learning interest can be explained by the pop-up book media variable, while the remaining 66.2% is explained by other variables.

In hypothesis I research shows that there is an effect of pop-up book media on mathematical communication skills in grade III students of Inpres Kayawu Elementary School. The results of this study are in line with research by Setiyanigrum (2019) where the results showed that the mathematical communication skills of students taught with the savi model assisted by pop-up book can reach the minimum completion value. So it can be concluded that the activities of elementary school students using the Savi model assisted by pop-up book have a positive effect and improve students' mathematical communication skills. Thus, the first hypothesis, namely that there is an effect of pop-up book media on mathematical communication skills in grade III students of Inpres Kayawu Elementary School, is accepted and very significant.

In hypothesis II research shows that there is an effect of pop-up book media on mathematics learning interest in grade III students of Inpres Kayawu Elementary School. This research is in line with the research statement by Tumurang et al. (2022) that media is a tool that functions and can be used to convey learning messages. The results of this study are in line with research conducted by Riana et al. (2023) which examines the use of pop-up book media on student learning interest, where the results show that the use of pop-up book media effectively affects student learning interest in grade III elementary school mathematics subjects. In addition, the results of this study are also in line with the results of research by Tangkudung et al. (2022) that learning media has a positive and good impact on increasing student interest and motivation to learn. Thus, the second hypothesis, namely that there is an effect of pop-up book media on mathematics learning interest in grade III students of Inpres Kayawu Elementary School, is accepted and very significant.

In hypothesis III research shows that there is an effect of popup book media on mathematical communication skills and mathematics learning interest in grade III students of Inpres Kayawu Elementary School. The results of this study are also in line with the results of previous studies examining mathematical communication skills and student learning interest, such as the results of research conducted by Lubis et (2023) which examines students' mathematical communication skills in mathematics learning, where it is explained in the introduction that students' mathematical communication skills are very important and affect the learning process in class, considering that mathematical communication is the ability of students to express their mathematical ideas through language, notation or symbols so that they are able to understand, interpret, describe relationships and solve contextual problems into mathematical models orally and in writing. The results of research by Banobe et al. (2022) which discusses learning interest where it is explained that interest has a huge influence on a person's activities because with interest he will do something he is interested in. Conversely, without interest a person is unlikely to do something.

CONCLUSION

The results showed that the better the pop-up book media, the mathematical communication skills and students' mathematics learning interest increased. The results of this study provide implications for teachers to be able to always develop existing knowledge so that in learning in order to improve performance as an educator and innovate in making learning media. For students to be able to further improve their mathematical communication skills and mathematics learning interest so that learning can be optimal. Then, from the results of this study, the school also needs to create a good environment where teachers can be more creative and innovative in carrying out their duties and responsibilities, especially in learning mathematics, so that students' mathematical communication skills and mathematics learning interest can continue to increase.

ANALYSIS OF DIFFERENTIATED LEARNING IN IPAS SUBJECTS FOR 4TH GRADE ELEMENTARY SCHOOL IN MINAHASA

Sartika Sarageti, Joulanda A.M Rawis, Jeanne M. Mangangantung

Program Studi Pendidikan Guru Sekolah Dasar S2 Universitas Negeri Manado

Article DOI: https://doi.org/10.36713/epra16843

DOI No: 10.36713/epra16843

ABSTRACT

This study aims to describe the analysis of differentiated learning in IPAS (Natural and Social Sciences) subjects for 4th grade elementary school in Minahasa as well as the role of teachers and students in differentiated learning and explain the impact of differentiated learning. The research method used in this research is descriptive qualitative. The data collection technique used interview, observation and documentation techniques. The subjects of this research is the teacher mover in Minahasa, found in 8 schools. The results of this study found that there are things that need to be considered in differentiated learning including 'Merdeka' curriculum teaching modules, the content of differentiated teaching modules. Teachers have a key role in identifying the potential, interests, and learning needs of each student, teachers can design learning that accommodates student diversity, so that each student can develop optimally. The impact is that student learning outcomes can be very significant, because differentiated teaching modules can adjust the needs and learning styles of individual students so that there is an increase in student involvement in the learning process.

KEYWORDS: Differentiated Learning, IPAS Subjects for 4th Grade of Elementary School

PENDAHULUAN

New paradigm learning provides flexibility for teachers to formulate learning and assessment designs according to the characteristics and needs of students. New paradigm learning ensures that learning practices are student-centered. Learning is a cycle that starts from mapping competency standards, planning the learning process, and implementing assessments to improve learning so that students can achieve the expected competencies (Kemdikbud RI, 2022).

The government pays serious attention to the field of education because the progress of a country starts from the field of education. The Merdeka Curriculum then comes as an effort to answer the problems and challenges of learning innovation in Indonesia. This curriculum emphasizes learning that liberates students, helps teach students, and encourages the development of students' potential ranging from intellectual, physical, emotional, social, artistic, to spiritual potential holistically.

The curriculum was developed with the aim of improving the quality of education because the heart of an education is the curriculum (Siregar et al., 2021). The Merdeka curriculum creates active and creative learning. This program is not a replacement for the current program, but to provide improvements to the current system (Achmad et al., 2022). The implementation of the Merdeka Curriculum has been realized since 2021.

Indonesian education is currently leading to positive changes in accordance with Ki Hajar Dewantara's thinking, that education is oriented towards four perspectives, namely physical, intellectual, spiritual, and social goals. The position of teachers is a facilitator and motivator for students (Febriyanti, 2021). Teachers must be able to strengthen themselves in order to participate in ongoing technological developments. In order to adequately adapt to the different characteristics of contemporary life, especially before the Industrial Revolution 4.0, teachers must be able to recognize new information in every change, lead and guide students (Supit et al., 2023).

Ki Hajar Dewantara's educational philosophy is in line with the concept of differentiated learning (Herwina, 2021). One of the efforts in developing the concept of "Merdeka Belajar" that is being launched in the current National Education System, and in accordance with Ki Hajar Dewantara's thoughts is differentiated learning (Wahyuni, 2022). Tomlinson (2001) and Suwartiningsih (2021) revealed that differentiated learning has a pattern of collaboration strategies from all differences to get information from what is learned. Quality education is education that is able to meet and support the needs of each student. Each student is unique as an individual with characteristics that vary from one another. Even though students attend school and are placed in the same class, differences in characteristics among students cannot be avoided, such as differences in interests, learning styles, backgrounds, and students' ability to obtain information about the subjects being taught (Miqwati et al., 2023).

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Differentiated learning should be rooted in meeting students' learning needs and how teachers respond to those learning needs. Thus, teachers need to identify learning needs more comprehensively, so that they can respond more appropriately to the learning needs of their students. (Suwartiningsih, 2021). Differentiated learning has three important aspects. In the differentiated learning process, there are three important aspects, namely content differentiation, process differentiation and product differentiation. According to Maryam (2021): first, content differentiation includes what students will learn. Content is related to the curriculum and material to be taught. Second, process differentiation is the way students process ideas and information. And third, product differentiation is how students show what they have learned..

Natural Science is a subject in elementary school that is intended for students to have organized knowledge, ideas and concepts about the surrounding nature, which are obtained from experience through a series of scientific processes including investigation, preparation and presentation of ideas. The opinion of (Mangangantung & Tuerah, 2021) tells that the natural science process is not sufficient to convey information about concepts but must also understand the process of natural phenomena by sensing as much as possible, observing events that occur directly through demonstration and experiment activities, and recording information that arises from these events. Therefore, it is necessary to create meaning and invite students to play an active role through demonstration activities and experiments during the process.

In this Merdeka curriculum between science and social studies learning, namely becoming IPAS as found by Agustina et al. (2022). This research is important to do to see how the teacher's role in differentiated learning is as far as how the teacher can determine the three important aspects of differentiated learning, namely content, process, product. apart from these three aspects, what the teacher must also pay attention to is how student readiness, as well as students' interests, and talents before starting learning. In order for learning not to be monotonous and because this Merdeka curriculum gives freedom to teachers and students, this year it is combined, therefore trying every semester, in this Merdeka curriculum because it gives freedom to teachers and students.

In IPAS learning which is the focus of research for teachers mover in Minahasa district, namely about differentiated learning which contains 3 aspects in it, namely content, process and product. In IPAS subjects for 4th grade elementary school in Minahasa district for semester 1 focuses on science subjects and for semester 2 focuses on social studies subjects. And in this study, researchers focus on science subjects. For the material presented is the body parts of plants. In the material there is content in the form of images and reading text on how to identify plant body parts and describe their functions. For the

process in this 4th grade IPAS teaching module using the PBL (Problem Based Learning) learning model where in the learning process follows the syntax or existing learning steps. And for the products expected from this learning, namely students are able to know what are the parts of plants and their functions in the form of LKPDs that have been prepared and made by students and students' ability to understand the material that has been delivered by the teacher.

Research on differentiated learning has been carried out but is limited to the character and abilities of students, such as those carried out by (Jenyana, 2022) which is about differentiating according to student needs and (Faizah & Kamal, 2024) also discusses the different learning needs of students according to the potential of each student. While in this study it is more focused on the core of differentiated learning, namely differentiation of content, process, and product.

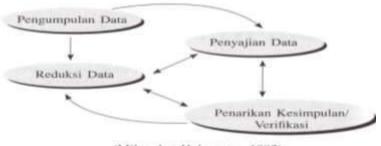

The impact of this research on teachers is to be a source of information about differentiated learning that does not only look at student needs and student potential. However, the results of this study provide an overview of the important aspects of differentiated learning, namely content, process and product differentiation. Based on the description above, this research was conducted with the aim of describing differentiated learning, analyzing the role of teachers and students in differentiated learning and explaining the impact of differentiated learning in teaching modules on IPAS learning for 4th grade.

METODE PENELITIAN

The research method used in this study uses descriptive qualitative. Meanwhile, Creswell & Poth (2016) defines a qualitative approach as a research and understanding process based on a methodology that investigates a social phenomenon and human problems (Murdiyanto, 2020). The data analysis technique uses Miles & Huberman (1994) adaptation flow analysis, the author uses a qualitative descriptive approach. Descriptive qualitative research, descriptive is a problem formulation that guides research to explore or portray the social situation to be studied thoroughly, broadly and in depth. In this research, it is hoped that the analysis of differentiated learning in IPAS subject for 4th grade in Minahasa will be able to describe the data thoroughly and accurately. The data were obtained by means of observation, interviews and documentation. The data of this research was obtained from eight teachers in eight schools in Minahasa district.

The data from the research were then processed using the data analysis technique according to Miles & Huberman (1994). There are four qualitative data analysis techniques, namely data collection, data reduction, data presentation and conclusion drawing. This process takes place continuously during the research.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

(Miles dan Huberman, 1992)

HASIL DAN PEMBAHASAN

Differentiated learning is learning that accommodates students' learning needs. Teachers facilitate students according to their needs, because each student has different characteristics, so they cannot be given the same treatment (Mahfudz MS, 2023). Differentiated learning should be rooted in the fulfillment of students' learning needs and how teachers respond to these learning needs. Thus, teachers need to identify learning needs more comprehensively, so that they can respond more appropriately to the learning needs of their students (Suwartiningsih, 2021). In the differentiated learning process, it does not only look at the characteristics and needs of different students but must look at 3 important aspects, namely content differentiation differentiation. process and differentiation According to Maryam (2021): first, content differentiation includes what students will learn. Content is related to the curriculum and material to be taught. Second, process differentiation is the way students process ideas and information. And third, product differentiation is how students show what they have learned.

The results of the researcher's interviews with teachers from eight schools in Minahasa found that differentiated learning is a method or approach taken by teachers to adjust the learning process with the aim of meeting the needs and expectations of specific students. Learning using differentiated teaching modules is necessary because differentiated learning provides a more flexible learning space and allows students to adjust to their respective needs, including interest readiness and learning styles and how teachers design teaching modules that contain aspects of content, process and products that will be produced in learning. In a lesson with a learning strategy that encourages student activeness can increase student interest in learning, of course, by involving learning media provided by the teacher to facilitate student needs (Surentu et al., 2023). Learning can be effective and relevant for students because of learning that uses differentiated learning modules so that teachers can implement the principles of an Merdeka curriculum that can adjust the individual needs of each student. these results are in accordance with research that has been conducted that by using differentiated learning, each student can show unique skills, backgrounds, talents, interests, and also learning preferences. Teachers realize that students have a diversity of personalities so that teachers provide specific services to each student. Therefore, it is important to incorporate differentiated teaching into the Merdeka curriculum, namely different content for each student who has different learning needs. Before implementing differentiated teaching, teachers must also understand about

differentiated learning, so it is very important for teachers to first understand the things that need to be considered in implementing the Merdeka curriculum in differentiated teaching modules in this case, namely in the IPAS subject.

The role of teachers and students in differentiated learning in IPAS subjects for 4th grade is greater. Teachers have a key role in identifying the potential, interests, and learning needs of each student. With the Merdeka Curriculum approach, teachers can design learning that accommodates student diversity, so that each student can develop optimally. The role of the teacher in differentiated learning is very important when the teacher must map out different content in learning, then different processes in learning and products that will be produced differently according to students' abilities and needs. The role of the teacher in differentiated teaching modules is very important because in compiling differentiated teaching modules the teacher must see 3 important aspects that must be present in the teaching module and integrated in learning, namely content differentiation, process differentiation and product differentiation. Differentiated learning not only looks at students' interests, talents but looks at important aspects in the teaching module and the teacher has played a good role, it can be seen from the performance of teachers who have played a role in designing learning experiences, using differentiated teaching modules that are integrated into 3 aspects, namely content, process and product, managing classes with collaboration, compiling learning materials, and measuring student learning outcomes. These teacher roles can be seen from teachers who have understood the individual characteristics of students, including their ability levels, interests and needs. With this knowledge, teachers can design effective and differentiated learning experiences for each student. Teachers are also able to adapt IPAS learning materials by adjusting student differences, teachers identify student needs see content or materials that suit needs, and ensure that each student gets appropriate support, teachers conduct assessments that are in accordance with the characteristics and needs of students. This involves classroom management in an inclusive learning process and pays attention to individual differences. In addition to teachers, students have also played a good role in differentiated learning in IPAS subjects for 4th grade, which can be seen through the results of interviews conducted by researchers that students are not only recipients of information, but also as active learning subjects. As active learning subjects, students have maximized individual progress, increased motivation, and created a more positive learning experience.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

The impact of differentiated learning in IPAS subjects for 4th grade elementary school. The impact is that student learning outcomes can be very significant by maximizing the important aspects of differentiated learning in learning, namely connectivity, process and product. because differentiated teaching modules can adjust the needs and learning styles of individual students so that there is an increase in student involvement in the learning process. There are positive and negative impacts of differentiated learning in IPAS subjects for 4th grade elementary school in Minahasa. The positive impact can be seen through the role of teachers and students who work together to achieve learning objectives in the differentiated teaching module in accordance with the principles of the Merdeka curriculum. And the negative impact of differentiated learning is a challenge for teachers because if teachers do not carry out this differentiated learning well, it will have an impact on learning differentiation can cause slower students to feel left behind or less recognized, while brighter students will not feel sufficient challenge. Therefore, the solution lies in the role of teachers in differentiated learning in IPAS subjects for 4th grade elementary school in Minahasa must work hard fairly, effectively and maximally to overcome the negative impacts that may occur.

In an era of education that increasingly recognizes individual diversity among students, differentiated learning has become increasingly important. Based on the research in the field, it can be seen that differentiated learning is an approach to teaching in which teachers vary teaching methods, content, processes, products and assessments to meet the different learning needs of each student in the class. Differentiated learning also implements a teaching module. This differentiated teaching module is a learning tool designed to accommodate the diverse learning needs of students in one class. This teaching module is designed in such a way by paying attention to the aspects of differentiated learning, namely content, process and product so that it can be adjusted to the level of ability, interest, learning style, and individual needs of each student. Differentiated teaching modules provide a variety of options, flexibility and customization that allow teachers to adjust learning according to the unique characteristics of each student. It can be seen that differentiated learning with the IPAS approach in grade 4 elementary school is very relevant and important in dealing with individual student diversity. By paying attention to the principles of an Merdeka curriculum, teachers can adapt learning according to students' needs and interests, as well as a diverse learning environment. Differentiated teaching modules are an effective tool to provide a variety of learning options that match the unique characteristics of each student. Through this approach, it is expected that each student can reach their maximum potential in learning, increase their learning motivation, participation and academic achievement, and better prepare them to face the challenges of life and the diverse world of work in the future. The discussion above is in accordance with the results of the researcher's interviews with the teachers mover at Minahasa Elementary School, the results of which show that differentiated learning with the IPAS teaching module for 4th grade can implement the principles of an Merdeka curriculum because it is known from the results of the

research that differentiated learning is an approach that understands each student who has different needs, learning styles, interests, and levels of understanding by integrating them in teaching modules that look at student needs through differentiated content, process and product. It adapts materials, teaching methods and assessments to the individual characteristics of students so that they can learn effectively and successfully reach their full potential.

Teachers are people whose duties are related to efforts to educate the nation's life in all its aspects, both spiritual and emotional, intellectual, physical, and other aspects. Teachers are also the main figure in the world of education that has an irreplaceable role in shaping, guiding, and motivating students towards academic and personal success. The differentiated teaching module in IPAS subject for 4th grade is an increase in student involvement in the learning process. With this approach, students become more active and involved in learning because the material presented can be tailored to their level of understanding and interest. In addition to the positive impact, of course, researchers found a negative impact in the interview results. The negative impact of differentiated learning in IPAS subjects for 4th grade can cover several aspects. One of them is the potential increase in workload for teachers. Designing and managing differentiated learning for each student in a class requires additional time, effort and energy from the teacher. From the interviews, it can be seen from the various impacts above that differentiated learning has a positive impact on students' engagement in learning. This is reflected in the increase of students' motivation, interest and participation in the learning process. In addition, differentiated learning also accommodates students' individual learning styles, allowing them to learn according to their individual needs and interests. It can be concluded that differentiated learning in IPAS subjects for 4th grade has a significant impact. The positive impacts include increased student involvement in learning, higher learning motivation, and accommodating students' individual learning styles. However, there are also negative impacts such as increased workload for teachers and the potential to increase the gap between students who are able to be independent and those who need more assistance.

Therefore, in differentiated learning not only see the needs, interests and talents of students but how teachers are able to make differentiated teaching modules which contain three very important aspects, namely content differentiation where teachers must create appropriate content. process differentiation where in the learning process differentiated students who are proficient and who still need guidance, and the last is product differentiation where in the final result of a differentiated learning the teacher must know that there are various kinds of differences that exist in the classroom which will produce different final products from each student. From the results of the research obtained that learning using differentiated modules in which there are three important aspects is very effective and efficient to be used in daily learning in the classroom.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

KESIMPULAN

In the era of education that increasingly recognizes individual diversity among students, differentiated learning has become increasingly important. Based on the results of the research from the researchers in the field, it can be seen that learning can be effective and relevant for students because of the learning that uses differentiated learning modules so that teachers can implement the principles of an Merdeka curriculum that can adjust the individual needs of each student.

ABSTRAK

Ang pag-aaral na ito ay may layuning matukoy ang makabuluhang ugnayan ng pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan ng mga guro sa Lungsod ng Davao Oriental, Rehiyon XI para sa Taong Panuruan 2022-2023. Nagsagawa ng simple random sampling ang mananaliksik upang makakuha ng 52 na mga guro sa sekondarya. Gumamit ng Mean, Pearson Product-Moment Correlation, at Multiple Linear Regression sa pagsusuri ng datos. Nakapagtala ng mataas na antas sa pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan. Nagpakita rin na ang pagtuturo ng wika batay sa nilalaman ay may makabuluhang impluwensiya sa paglinang ng ika-21 siglong kasanayan ng mga guro. Batay sa resulta ng pag-aaral, iminungkahi ng mananaliksik ang rekomendasyon na ipagpatuloy at panatilihin ang pagpapahalaga sa pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan sapagkat pareho itong nakakuha ng katumbas na paglalarawan na mataas. Ang kinalabasan ng pag-aaral na ito ay gagamitin sa paggawa ng mga seminar-workshayp at programa na tutugon sa pangangailangan ng mga guro sa pagtuturo.

MGA SUSING SALITA: Pagtuturo ng Wika, Nilalaman, Ika-21 Siglong Kasanayan, Davao Oriental, Rehiyon XI.

INTRODUKSYON

Ang sistema ng edukasyon sa Pilipinas ay patuloy na humaharap sa mga hamon sa kalidad ng edukasyon. Sa pagtugon sa pangangailangan ng makabagong panahon, maraming pagbabago ang isinasagawa ng pamahalaan, partikular na ang Kagawaran ng Edukasyon, upang masiguro ang pagkakaroon ng kalidad na edukasyon. Ayon kina Acosta at Acosta (2017), ang mga pagbabagong ito ay nakatuon sa layunin na masiguro ang paglinang ng kasanayan ng mga mag-aaral na naaayon sa mga pangangailangan ng ika-21 siglo.

Nakatuon ang mga pagbabago sa edukasyon sa pagpapalakas ng mga kasanayan ng mga mag-aaral sa kritikal na pag-iisip, komunikasyon, kolaborasyon, at pagkamalikhain. Mahalaga ito hindi lamang para sa kanilang pag-unlad bilang indibidwal kundi pati na rin para sa kanilang kakayahan na makipagsabayan sa pandaigdigang kompetisyon. Ayon sa United Nations Educational, Scientific and Cultural Organization (UNESCO, 2015), ang mga kasanayang ito ay hindi lamang makatutulong sa pag-unlad ng indibidwal kundi maaari ring maging pundasyon ng isang mas maunlad na lipunan.

Nagsisilbing gabay ang mga internasyonal na organisasyon tulad ng UNESCO sa pagtukoy ng kahalagahan ng mga kasanayang ito para sa pag-unlad. Sa konteksto ng Education for Sustainable Development (ESD), hinahamon nito ang mga mag-aaral na gumawa ng mga matalinong desisyon at aksyon upang itaguyod ang integridad ng kapaligiran, ekonomikong adaptasyon, at isang mas pantay na lipunan. Ito ay ayon nina Wiek, Withycombe, at Redman (2011).

Sa Pilipinas, isang hakbang patungo sa pandaigdigang kasangkapan ang ipinatutupad na Enhanced Basic Education Act o RA 10533, na nagpapatibay sa K to 12 na kurikulum. Ipinakikita nito ang pagtugon ng bansa sa mga hamon ng pandaigdigang kompetisyon at integrasyon sa ASEAN. Ayon naman kay Cox (2014), ang ganitong hakbang sa larangan ng edukasyon ay nagpapataas ng abot tanaw ng pagsasalin ng balangkas ng edukasyon ng bansa sa mga pandaigdigang pamantayan.

Ang pagpapalakas ng mga kasanayan sa ika-21 siglo ay mahalaga rin para sa mga guro. Ayon kina Anter at Bulonos (2022), ang kanilang papel ay hindi lamang maghatid ng kaalaman kundi bagkus ay magbago ng buhay ng kanilang mga mag-aaral at komunidad. Subalit, kinakailangan pa ring suriin at linangin ang mga pamamaraan sa pagtuturo upang masiguro na ang mga guro ay nakapagbibigay ng mahusay na gabay sa mga mag-aaral sa pag-unlad ng kanilang kasanayan sa ika-21 siglo.

Layunin ng Pag-aaral

Isinagawa ang pag-aaral na ito upang matukoy ang makabuluhang ugnayan ng pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan. Sa katiyakan, para mabigyan ng kasagutan ang sumusunod na tanong:

- 1. Ano ang lawak ng pagtuturo ng wika batay sa nilalaman batay
 - 1.1. pagkakaloob ng mga nauunawaang input;
 - 1.2. pagkaiiba-iba ng estratehiya; at
 - 1.3. pagbibigay suporta sa pagkatuto?
- 2. Ano ang lawak ng paglinang ng ika-21 siglong kasanayan ayon
 - 2.1. kritikal na pag-iisip;
 - 2.2. komunikasyon;
 - 2.3. kolaborasyon; at
 - 2.4. pagkamalikhain?
- 3. Mayroon bang makabuluhang ugnayan ang pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan?
- 4. Ano-anong indikeytor ng pagtuturo ng wika batay sa nilalaman ang may makabuluhang impluwensiya sa paglinang ng ika-21 siglong kasanayan?

METODOLOHIYA

Disenyo ng Pananaliksik. Ang pag-aaral ay gumamit ng mga disenyo na kuwantitatibo, deskriptibo, at korelasyonal. Ang deskriptibong pananaliksik ay naglalarawan ng partikular na aspeto ng isang grupo gamit ang patuloy na datos. Ginamit ang analisis ng kwantitatibong datos upang suriin ang suliranin, kung saan ang mga survey ang ginamit na instrumento para sa pangangalap ng datos. Ang korelasyonal na pananaliksik ay sumusuri sa ugnayan ng mga baryabol, kung saan ang

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

pangangalap ng datos ay ginamit upang tukuyin ang antas ng ugnayan sa pagitan ng dalawang o higit pang baryabol.

Mga Kalahok. Kabilang sa mga kalahok ang mga guro ng Filipino sa sekundaryang paaralan sa mga pampublikong paaralan ng Davao Oriental para sa Taong Akademiko 2021-2022. Ginamit ang Total Enumeration, kung saan ang lahat ng guro mula sa mga tinukoy na paaralan ay awtomatikong kasama.

Mga Instrumento ng Pananaliksik. Ang pangangalap ng datos ay nangangailangan ng mga survey questionnaires na ipinamamahagi sa mga kalahok, na nagpapatibay ng kalinawan at angkop na mga tanong. Ang content validity ay itinatag sa pamamagitan ng pagsusuri ng mga dalubhasa. Ginamit ang Likert Scale para sa pagmamarka ng datos, na nagbibigay ng tumpak na interpretasyon.

Proseso ng Paglilikom ng Datos. Humingi ang mananaliksik ng pahintulot mula sa mga kinauukulan at ipinamahagi ang mga survey questionnaires sa mga kalahok. Sinunod ang mga alituntunin sa etika, tiyak na nagsiguro ng boluntaryong pakikilahok, anonimato, at kumpidensyalidad.

Pagsusuri ng mga Datos. Ang mga datos na nakuha ay inanalisa gamit ang mga estadistikong pamamaraan tulad ng Mean, Pearson-r Correlation, at Multiple Regression upang tukuyin ang lawak ng pagtuturo ng wika batay sa nilalaman at ang pag-unlad ng mga kasanayan sa ika-21 siglo ng mga guro sa Filipino.

Etykal na Mga Pangangailangan. Sumunod ang pag-aaral sa mga etikal na pamantayan, iniwasan ang plagiarism, pinanatili ang pahintulot ng mga kalahok, at nagpatupad ng kumpidensyalidad. Sinunod ang mga protocol para sa kalusugan at kaligtasan sa panahon ng pandemya ng COVID-19.

Interpretasyon ng Mga Datos. Ang pagsusuri ng mga datos ay nagbigay-daan sa wastong interpretasyon ng mga resulta hinggil sa epektibong pagtuturo ng wika at ang pag-unlad ng mga kasanayan sa ika-21 siglo ng mga guro.

MGA RESULTA AT PAG TALAKAY

Lawak ng Pagtuturo ng Wika Batay sa Nilalaman Pagkakaloob ng mga Nauunawaang Input

Sa Talahanayan 1, ipinakita ang mga paraan ng pagtuturo ng wika at ang kanilang mean rating: pagpapayabong ng nauunawaang input (3.23, mataas), pagsasanay para sa kaalaman ng nilalaman (4.10, mataas), pakikilahok sa klase (3.50, mataas), pakikipagusap sa mga mag-aaral (4.03, mataas), at pagsusuri sa output ng mag-aaral (3.07, katamtaman). Sa kabuuang mean rating na 3.59, mataas para sa limang indikator ng pagkakaloob ng nauunawaang input, mahalaga ang papel ng mga guro sa pagbibigay ng sapat na impormasyon at kasanayan sa kanilang mga mag-aaral.

Gayunpaman, ang pagsusuri sa output ng mag-aaral ay may pinakamababang mean score (katamtaman), nagpapahiwatig na hindi ito madalas na ginagawa ng guro. Sa pamamagitan ng ganitong uri ng pagtuturo, natutulungan ng mga guro na malaman ang mga pangangailangan ng kanilang mga mag-aaral at magbigay ng mga solusyon sa kanilang mga problema. Ipinapakita rin nito ang kahalagahan ng pagsasaayos ng mga tagubilin para sa bawat indibidwal na mag-aaral.

Ayon kay Barberos, Gozalo, at Padayogdog (2018), ang mabisang pagtuturo ay nakabatay sa mga indibidwal na pangangailangan ng mag-aaral. Ang ganitong paraan ng pagtuturo, na nakatuon sa pagtutok sa mga pangangailangan ng bawat mag-aaral, ay nagbibigay-daan sa mga ito na mas mapalawak ang kanilang kasanayan sa wika, lalo na sa Ingles, na mahalaga para sa kanilang mga tungkulin sa hinaharap.

Talahanayan 1. Antas ng Pagtuturo ng Wika Batay sa Nilalaman Ayon sa Pagkakaloob ng Nauunawaang Input

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|---|------|------------------------|
| 1. | Nagtuturo ako ng mga paraan kung paano mapayabong ang nauunawaang input ng mga mag- aaral. | 3.23 | Mataas |
| 2. | Nagsasagawa ako ng mga pagsasanay sa mga mag-aaral upang mahasa ang kanilang kaalaman sa nilalaman. | 4.10 | Mataas |
| 3. | Nagsusulong ako ng pakikilahok ng mga mag-aaral sa klase. | 3.50 | Mataas |
| 4. | Nakikipag-usap ako sa mga mag- aaral hinggil sa kanilang nauunawaan batay sa nilalaman. | 4.03 | Mataas |
| 5. | Sinusuri ko ang mga nabuong awtput ng mga magaral. | 3.07 | Katamtaman |
| | Kabuoan | 3.59 | Mataas |

Pagkaiiba-iba ng Estratehiya

Sa Talahanayan 2, inilarawan ang pagtuturo ng wika base sa pagkakaiba-iba ng estratehiya, kung saan ang mga guro ay gumagamit ng iba't ibang pamamaraan. Ang kabuuang mean rating para dito ay 3.77, mataas, na nagpapahiwatig na karaniwan ang paggamit ng iba't ibang estratehiya sa pagtuturo at ito ay binibigyang pansin. Gayunpaman, ang pagtataya sa kahusayan ng estratehiya ay nagpakita ng mean score na katumbas sa katamtaman, nagpapahiwatig na hindi laging nasusukat ang epekto nito sa pagkatuto ng mga mag-aaral.

Ang pag-aaral ay nagbibigay-dagdag na kaalaman sa mga guro hinggil sa kahalagahan ng paggamit ng iba't ibang estratehiya sa pagtuturo. Mahalaga ang tamang pagtataya sa kahusayan ng mga estratehiya upang mapabuti ang kalidad ng edukasyon na ibinibigay sa mga mag-aaral. Binabanggit din ng mga pananaliksik ang kahalagahan ng sapat na pagsasanay sa pagtuturo, na maaaring magdulot ng hindi epektibong pagtuturo kung kakulangan dito. Kaya't mahalaga ang patuloy na pagsasanay at pagpapahusay ng mga guro upang mapabuti ang kalidad ng edukasyon na kanilang ibinibigay at magpatuloy ang pag-unlad ng kaalaman ng mga mag-aaral.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Talahanayan 2. Antas ng Pagtuturo ng Wika Batay sa Nilalaman Ayon sa Pagkaiiba-iba ng Estratehiya

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|---|------|---------------------|
| 1. | Nagagamit ko ang iba't ibang estratehiya sa pagtuturo sa mga mag-aaral. | 3.10 | Katamtaman |
| 2. | Naipaliliwanag ko nang maayos ang aralin gamit ang mga angkop na estratehiya. | 4.90 | Lalong Mataas |
| 3. | Natutulungan ko ang mga mag-aaral na maunawaan ang paksa. | 3.50 | Mataas |
| 4. | Pinupuri ko ang positibong pag- uugali ng mga mag-aaral. | 4.13 | Mataas |
| 5. | Nagbibigay ako ng pagtataya sa mga mag-aaral upang malaman kung mabisa ba ang ginamit na estratehiya. | 3.23 | Katamtaman |
| | Kabuoan | 3.77 | Mataas |

Pagbibigay Suporta sa Pagkatuto.

Sa Talahanayan 3, ipinakita ang lawak ng pagtuturo ng wika batay sa pagbibigay suporta sa pagkatuto. Ang kabuuang mean rating para dito ay 3.53, mataas, na nagpapahiwatig na karaniwan ang pagbibigay suporta sa pagkatuto at ito ay binibigyang pansin ng mga guro. Gayunpaman, ang ilang aspeto tulad ng pagsusuri sa kaalaman ng mga mag-aaral at pagtatakda ng gawain para sa pagkatuto ay nagpakita ng mean score na katumbas sa katamtaman, nagpapahiwatig na bihira lamang ang pakikipagugnayan ng mga guro para sa suhestiyon at hindi nabigyang-diin ang pagtatakda ng mga gawain na makakatulong sa paglinang ng kasanayan ng mga mag-aaral.

Mahalaga ang malaking papel ng guro sa pagkatuto ng mga magaaral, kung saan dapat nilang bigyan ng pansin ang mga programa o gawain na magpapatibay sa kakayahan at kasanayan ng mga mag-aaral. Ang mga gawain na ito ay maaaring magdulot ng malaking pagbabago sa pagkatuto ng mga mag-aaral, lalo na kapag ang kanilang karanasan ay awtentiko.

Batay sa mga pag-aaral ni Snow (2014) at Donato (2016), ang pagtuturo na nakabatay sa nilalaman ay nagbibigay ng mga pagkakataon para sa integrasyon ng apat na kasanayan sa wika, at ang mga mag-aaral na tinuruan gamit ang ganitong pamamaraan ay nakakamit ng mas mahusay na mga resulta kaysa sa mga tradisyunal na pamamaraan ng pagtuturo.

Sa kabuuan, mahalaga ang patuloy na pagpapabuti ng mga estratehiya at mga programa sa pagtuturo upang mapabuti ang kalidad ng edukasyon na ibinibigay sa mga mag-aaral at mapalakas ang kanilang kakayahan sa wika at iba pang kasanayan.

Talahanayan 3. Antas ng Pagtuturo ng Wika Batay sa Nilalaman Ayon sa Pagbibigay Suporta sa Pagkatuto

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|--|------|---------------------|
| 1. | Nakikipagtulungan ako sa ibang mga guro para sa mga solusyon at suporta sa pagkatuto ng mga mag-aaral. | 3.23 | Katamtaman |
| 2. | Hinihikayat ko ang mga mag-aaral na malayang makilahok sa klase. | 4.90 | Lalong Mataas |
| 3. | Nagbibigay ako ng mga babasahin sa mga mag- aaral upang malinang ang kanilang komprehensiyon sa pagbasa. | 3.50 | Mataas |
| 4. | Nagsasagawa ako ng pagsusuri sa kaalaman at natutuhan ng mga mag-aaral. | 2.80 | Katamtaman |
| 5. | Nagtatakda ako ng mga gawain na susuporta sa pagkatuto ng mga mag-aaral. | 3.20 | Katamtaman |
| | Kabuoan | 3.53 | Mataas |

Buod sa Antas ng Pagtuturo ng Wika Batay sa Nilalaman

Sa Talahanayan 4, ipinakita ang buod ng pagtuturo ng wika batay sa nilalaman, kung saan ang bawat indikator ay may katumbas na mean rating: pagkakaloob ng nauunawaang input (3.59, mataas), pagkaiiba-iba ng estratehiya (3.77, mataas), at pagbibigay suporta sa pagkatuto (3.53, mataas). Ang kabuuang mean rating ay 3.63, mataas.

Sa kabuuang resulta, ipinapakita na ang pagtuturo ng wika batay sa nilalaman ay madalas na ginagawa, namamasid, at pinaniniwalaan ng mga guro. Ang mataas na mean rating ay nagpapahiwatig na mahalaga ang aspetong ito ng pagtuturo sapagkat dito nakasalalay ang pagkatuto ng mga mag-aaral.

Ang prinsipyo ng pagtuturo ng wika batay sa nilalaman ay nagbibigay diin sa importansya ng pagbibigay ng input sa target na wika ng mga mag-aaral, na may mas mataas na priyoridad sa nilalaman kaysa sa wika mismo. Sa pamamagitan ng ganitong pamamaraan, mas nagiging madali para sa mga mag-aaral na magkaroon ng mas malalim na pag-unawa sa mga konsepto at kasanayan sa wika.

Gayunpaman, may mga pag-aaral na nagpapakita ng mga hamon sa pagtuturo ng wika batay sa nilalaman, kabilang ang pagkakaroon ng kalaboan sa pagtutok sa layunin ng pag-aaral ng wika. Gayunpaman, ang mga prinsipyo ng pagtuturo ng wika batay sa nilalaman ay patuloy na nagbibigay ng gabay sa pagpapabuti ng pagtuturo ng wika sa iba't ibang konteksto, kabilang ang mga programa ng pagtuturo ng Ingles.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Talahanayan 4. Buod sa Antas ng Pagtuturong Wika Batay sa Nilalaman

| | Mga Aytem | Mean | Palarawang Katumbas |
|------|----------------------------------|------|---------------------|
| Blg. | | | |
| 1. | Pagkakaloob ng Nauunawaang Input | 3.59 | Mataas |
| 2. | Pagkaiiba-iba ng Estratehiya | 3.77 | Mataas |
| 3. | Pagbibigay Suporta sa Pagkatuto | 3.53 | Mataas |
| | Kabuoan | 3.63 | Mataas |

Antas ng Paglinang ng Ika-21 Siglong Kasanayan *Kritikal na Pag-iisip*.

Sa Talahanayan 5, ipinakikita ang lawak ng paglinang ng kritikal na pag-iisip sa ika-21 siglo. Mayroong mga aspeto ng pag-aaral na tinututukan tulad ng paghahambing ng impormasyon mula sa iba't ibang pinagkukunan, pagsusuri ng mga impormasyon mula sa iba't ibang hanguan, at ang kakayahan na mabisa ang kritikal na pag-iisip sa pagtugon sa mga gawain. Ang mataas na mean rating para sa mga ito ay nagpapahiwatig ng kanilang kahalagahan sa paghubog ng kaalaman ng mga mag-aaral.

Ang implikasyon ng resulta ay naglalarawan ng pangangailangan na suriin at kilatisin ng maigi ang impormasyon mula sa iba't ibang pinagkukunan upang maiwasan ang kalituhan sa pag-iisip ng mga mag-aaral. Ito ay maaaring magdulot ng balakid sa kanilang pagunawa sa isang paksa. Ang mga guro ay maaaring gamitin ang pagtuturo ng kritikal na pag-iisip sa iba't ibang paraan, tulad ng pagtugon sa tunay na mga problema, pagpapalawak sa kasanayan sa pag-iisip, at pagpapalawak ng pag-unawa sa mga disiplina.

Ang kritikal na pag-iisip ay hindi lamang nagpapabuti sa kasanayan sa pag-iisip ng mga mag-aaral, kundi nagdudulot din ng positibong epekto sa kanilang kasanayan sa komunikasyon. Ito ay nagpapalakas sa kanilang kakayahan sa pagsasalita at nagpapataas ng kalidad ng kanilang pakikipagtalastasan. Sa ganitong paraan, ang paglinang ng kritikal na pag-iisip ay nagbubunga ng mas malalim na pag-unawa at mas mahusay na kasanayan sa komunikasyon ng mga mag-aaral.

Talahanayan 5. Antas ng Paglinang ng Ika-21 Siglong Kasanayan Ayon sa Kritikal na Pag-iisip

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|--|------|---------------------|
| 1. | Inihahambing ko ang mga impormasyon sa iba't ibang pinagkukunan. | 3.23 | Katamtaman |
| 2. | Sinusuri ko ang mga impormasyong nakuha mula sa iba't ibang hanguan. | 3.00 | Katamtaman |
| 3. | Binibigyan ko ng sariling interpretasyon ang mga nabasang pahayag. | 3.50 | Mataas |
| 4. | Sinusubukan kong paunlarin ang aking kritikal na pagisip sa pamamagitan ng palutas sa sariling problema. | 4.13 | Mataas |
| 5. | Nagagawa kong mabisa ang aking kritikal na pag-iisip sa pagtugon sa mga gawain. | 3.27 | Katamtaman |
| | Kabuoan | 3.43 | Mataas |

Komunikasyon

Sa Talahanayan 6, ipinapakita ang lawak ng paglinang ng ika-21 siglong kasanayan sa komunikasyon. Ang mga aytem tulad ng paghahanda para sa pasalitang presentasyon, pagpapaunlad ng kasanayan sa pagsasalita ng mga mag-aaral, pagpapalakas ng kasanayan sa komunikasyon sa klase, pagsusuri ng pagsasalita ng mga mag-aaral sa mga ulat, at pagbibigay ng pagkakataon sa verbal na pagpapahayag ng mga ideya ng mga mag-aaral ay nagpapakita ng kanilang kahalagahan sa pagtuturo.

Ang resulta ay nagpapahiwatig na ang mga guro ay dapat magbigay ng sapat na pansin sa paghuhubog ng mga kasanayang ito sa mga mag-aaral. Ang mga aytem na ito na nakakuha ng mean rating na katamtaman ay nagpapakita na ito ang mga aspeto na maaaring magkaroon ng kaunting pagpapabuti. Mahalaga ang paglinang ng kasanayan sa komunikasyon dahil ito ay may malaking epekto hindi lamang sa akademikong pag-unlad kundi pati na rin sa interpersonal na ugnayan.

Ang pag-aaral nina Bernales et al., 2016 ay nagpapatunay sa kahalagahan ng komunikasyon sa pagkatuto. Ito ay nagpapabukas ng mga oportunidad sa mga mag-aaral upang maibahagi ang kanilang kaalaman at karanasan sa kanilang kapwa mag-aaral, na nagtutulak sa mas malalim na pag-unawa at paggamit ng wika. Ang ganitong pagpapalakas ng komunikasyon ay hindi lamang nagpapabuti sa kanilang pag-aaral kundi nagbubunga rin ng mas mabuting interpersonal na ugnayan.

Kaugnay nito, mahalaga rin ang papel ng mga guro sa pagpapalakas ng kasanayan sa komunikasyon. Hindi sapat na mayroon silang sapat na kaalaman at paniniwala; dapat din nilang palakasin ang kanilang kasanayan sa pagpapahayag upang maging epektibo silang tagapagturo. Sa ganitong paraan, magiging mas mabisang tagapag-udyok sila sa kanilang mga mag-aaral.

-365

Kolaborasyon

Sa Talahanayan 7, ipinakita ang lawak ng paglinang ng ika-21 siglong kasanayan sa kolaborasyon. Ang mga resulta ay nagpapahiwatig na ang ilang aspeto ng kolaborasyon, tulad ng paghuhubog sa mga gawain na nagpapalawak ng kasanayan sa pakikipagtulungan ng mga mag-aaral at ang pagsusuri ng mga guro sa mga ito, ay nangangailangan ng higit na pagtuon at pagpapabuti.

Mahalaga ang mga gawaing pangkat sa paglinang ng kasanayan sa pakikipagtulungan, ayon sa mga resulta. Ang pagpapalakas ng kasanayan sa kolaborasyon ay nagbibigay-daan sa mga mag-aaral na matuto at makatulong sa kanilang mga kapwa. Ang pagtukoy ng mga guro sa layunin at plano para sa pangkat na gawain ay isang mahalagang bahagi ng pagpapalakas ng kolaborasyon, nagbibigay-daan ito sa mga mag-aaral na maunawaan ang kanilang mga papel at responsibilidad sa isang grupo, pati na rin ang pagpapalakas ng kanilang kakayahan sa pakikipagtulungan.

Nakatuon ang mga resulta sa kahalagahan ng kolaborasyon hindi lamang sa larangan ng edukasyon kundi maging sa hinaharap na trabaho. Ang mga kasanayan sa kolaborasyon ay hinahanda ang mga mag-aaral para sa pagtatrabaho sa isang kapaligiran na nangangailangan ng pakikipagtulungan at pagtutulungan. Sa pamamagitan ng mga gawaing pangkat, ang mga mag-aaral ay natututo ng kasanayan sa pakikipagtulungan, pagsusuri, at pagpapasya na mahalaga sa kanilang mga karera at buhay sa hinaharap.

Nakalalasong mahalaga ang pagpapalakas ng mga kasanayan sa kolaborasyon hindi lamang sa loob ng silid-aralan kundi pati na rin sa paghahanda ng mga mag-aaral para sa kanilang hinaharap. Ito ay hindi lamang nagpapabuti sa kanilang pagkatuto kundi nagpapalakas din ng kanilang mga kakayahan sa interpersonal na ugnayan at tagumpay sa kanilang mga karera.

Talahanayan 7. Antas ng Paglinang ng Ika-21 Siglong Kasanayan Ayon sa Kolaborasyon

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|---|------|------------------------|
| 1. | Gumagawa ako ng mga gawain na lilinang sa kasanayan sa pakikipagtulungan ng mga mag- aaral. | 3.23 | Katamtaman |
| 2. | Nagbibigay ako ng pidbak sa ginawang pangkatang gawain ng mga mag-aaral. | 3.70 | Mataas |
| 3. | Sinusubukan ko ang mga grupo na gumawa ng mas mahusay na mga desisyon sa kanilang presentasyon. | 3.50 | Mataas |
| 4. | Nakikipagtulungan ako sa mga mag- aaral upang magtakda ng mga layunin at plano para sa isang gawain. | 4.13 | Mataas |
| 5. | Gumagawa ako ng mabisang pagsusuri sa mga kasanayan sa pakikipagtulungan ng mga mag- aaral. | 3.23 | Katamtaman |
| | Kabuoan | 3.56 | Mataas |

Pagkamalikhain.

Batay sa Talahanayan 8, mahalaga ang paglinang ng kasanayan sa pagkamalikhain sa mga mag-aaral, partikular sa paggamit ng mga estratehiya upang hikayatin ang kanilang pagiging malikhain at pagpapalawak ng kanilang kaisipan.

Ang mga resulta ay nagpapakita na ang mga guro ay dapat maglaan ng sapat na oras at pansin sa paglinang ng pagkamalikhain sa mga mag-aaral. Ito ay maaaring makamit sa pamamagitan ng paggamit ng iba't ibang estratehiya at pamamaraan upang masubaybayan ang pag-unlad ng kanilang pagkamalikhain. Mahalaga rin na bigyan ng mga mag-aaral ng pagkakataon na ipahayag ang kanilang mga ideya sa paraang malikhain upang maitaas ang kanilang kumpiyansa at gana sa pag-aaral.

Ang mga pag-aaral na sumusuporta sa paglinang ng pagkamalikhain ay nagpapakita na ang pagtuturo ng pagkamalikhain ay hindi lamang tungkol sa pagbuo ng mga gawaing pangmalikhain, kundi higit sa pagpapalakas ng kasanayan ng mga mag-aaral sa pagsusuri at paglutas ng mga problemang may iba't ibang pananaw at konsepto. Sa pamamagitan ng malikhaing pag-iisip, nagkakaroon ang mga mag-aaral ng kakayahan na makahanap ng mga alternatibong solusyon sa mga suliranin at magpakita ng pagiging mapanlikha sa kanilang mga gawain.

Ipinapakita rin ng mga resulta na ang paggamit ng mga estratehiya at pamamaraan sa pagtuturo ng pagkamalikhain ay nagbibigay-daan sa mga mag-aaral na magkaroon ng positibong karanasan sa pag-aaral at mas maging handa sila sa mga hamon sa hinaharap. Sa pangkalahatan, ang paglinang ng pagkamalikhain sa mga mag-aaral ay hindi lamang nagpapabuti sa kanilang pag-aaral kundi nagbibigay din sa kanila ng mga kasanayang mahalaga para sa kanilang personal at propesyunal na pag-unlad.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Talahanayan 8. Antas ng Paglinang ng Ika-21 Siglong Kasanayan Ayon sa Pagkamalikhain

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|--|------|------------------------|
| 1. | Gumagamit ako ng mga teknik o estratehiya sa paglikha ng mga ideya. | 3.23 | Katamtaman |
| 2. | Sinubukan kong paunlarin ang pagkamalikhain at mga kasanayan sa pagbabago ng mga mag-aaral. | 4.90 | Lalong Mataas |
| 3. | Lumilikha ako ng isang pagganap upang maipahayag ang kanilang mga ideya sa malikhaing paraan. | 3.50 | Mataas |
| 4. | Naglalahad ako ng mga sitwasyon sa mga mag-aaral upang malutas ang mga problemang may iba't ibang pananaw at konsepto. | 4.13 | Mataas |
| 5. | Ginagawa kong mabisang masuri ang pagkamalikhain ng mga mag-aaral. | 2.97 | Katamtaman |
| | Kabuoan | 3.75 | Mataas |

Buod sa Antas ng Paglinang ng Ika-21 Siglong Kasanayan

Batay sa Talahanayan 9, mahalaga ang paglinang ng ika-21 siglong kasanayan tulad ng kritikal na pag-iisip, komunikasyon, kolaborasyon, at pagkamalikhain. Ang mga mataas na palarawan sa bawat kasanayan ay nagpapakita na ang mga guro ay madalas na naglalaan ng pansin at pagtutok sa paglinang ng mga ito sa kanilang mga mag-aaral.

Ang implikasyon ng mga resulta ay nagpapakita na ang paglinang ng mga nabanggit na kasanayan ay may malaking epekto sa pagkatuto ng mga mag-aaral. Ipinapakita rin nito ang halaga ng pag-aaral sa pag-unlad ng kurikulum upang mapabilis ang pag-unlad at pag-aadapt sa mga hamon ng ika-21 siglo, kabilang ang teknolohiya ng impormasyon at komunikasyon.

Sa pag-aaral ng mga kompitensing na hindi gaanong nakalilinang sa mga pangunahing kasanayan, mahalaga ang pagtukoy ng mga ito upang mabatid kung aling aspeto ng paglinang ng kasanayan ang nangangailangan ng dagdag na pagpapaunlad. Sa ganitong paraan, maaaring mabigyan ng mga guro ng karagdagang gawaing makatutulong sa higit na paglinang ng mga kasanayan na ito.

Ang mga pag-aaral na binanggit ay nagpapakita rin na ang paggamit ng teknolohiya, partikular ang teknolohiya ng impormasyon at komunikasyon (ICT), ay may mahalagang papel sa pagpapabuti ng mga kasanayan ng mga mag-aaral sa ika-21 siglo. Ipinapakita rin nito na mahalaga ang pag-aangkop sa mga modernong pamamaraan ng pagtuturo upang masiguro ang interes at kahusayan ng mga mag-aaral sa kasalukuyang panahon.

Talahanayan 9. Buod sa Antas ng Paglinang ng Ika-21 Siglong Kasanayan

| Blg. | Mga Aytem | Mean | Palarawang Katumbas |
|------|-----------------------|------|------------------------|
| 1. | Kritikal na Pag-iisip | 3.43 | Mataas |

Mga Indikeytor ng Pagtuturo ng Wika Batay sa Nilalaman na may Makabuluhang Impluwensiya sa Paglinang ng Ika-21 Siglong Kasanayan Sa Talahanayan 11, ipinakita ang mga indikator ng pagtuturo ng wika batay sa nilalaman na may makabuluhang impluwensiya sa paglinang ng ika-21 siglong kasanayan. Nakita na ang mga domeyn tulad ng pagkakaloob ng nauunawaang input, pagkaiiba-

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

iba ng estratehiya, at pagbibigay suporta sa pagkatuto ay may mataas na antas ng kahalagahan, na mas mababa sa 0.05 (sig. value <0.05). Tinanggihan ang hipotesis na walang domeyn ng pagtuturo ng wika batay sa nilalaman na may makabuluhang impluwensiya sa paglinang ng ika-21 siglong kasanayan. Ang mga indikator na ito ay pawang may makabuluhang impluwensiya sa paglinang ng ika-21 siglong kasanayan.

Ang pag-aaral na ito ay sumasalig sa Input Theory of Language Acquisition ni Krashen (1982), na nagmumungkahi na ang pagtuturo ng wika ay batay sa pagbibigay ng input na naiintindihan ng mag-aaral. Ayon dito, mahalaga na maunawaan ng mag-aaral ang binibigay na input upang magamit nila ito. Ang mga indikator na binanggit ay naglalayong siguruhin na ang mga guro ay nagbibigay ng makabuluhang input na nauunawaan at naaangkop sa antas ng kasanayan at interes ng mga mag-aaral.

Ang Socio-cultural Theory ni Vygotsky (1978) ay nagpapatibay sa mahalagang natuklasan ng pag-aaral. Ayon dito, ang wika ay naglalaro ng mahalagang papel sa paghubog ng pag-iisip at pag-uugali ng mga bata. Sa pamamagitan ng wika, sila ay natutong magplano, mag-organisa, at mag-ugali nang may kasanayan. Ang pagsasalita at paggamit ng gramatika ay nagpapakita ng self-regulatory mechanism sa paglinang ng kanilang kakayahan.

Sa kabuuan, ang mga indikator ng pagtuturo ng wika batay sa nilalaman na nabanggit ay nagpapakita ng kahalagahan ng wastong pagbigay ng input, paggamit ng iba't ibang estratehiya, at suporta sa pagkatuto upang mapabuti ang paglinang ng ika-21 siglong kasanayan ng mga mag-aaral.

Talahanayan 11. Mga Indikeytor ng Pagtuturo ng Wika Batay sa Nilalaman na may Makabuluhang Impluwensiya sa Paglinang ng Ika-21 Siglong Kasanayan

| Indicators | Unstandardized Coefficients | | Standardized Coefficients | t-ratio | Sig |
|---|--------------------------------|------------|------------------------------|---------|------|
| | В | Std. Error | Beta | | |
| Constant | β0 | 4.37 | 0.44 | 21.00 | 0.03 |
| Pagkakaloob ng mga Nauunawaang Input | β1 | 1.56 | 0.94 | 29.09 | 0.02 |
| Pagkaiiba-iba ng Estratehiya | β2 | 01.58 | 0.47 | 6.20 | 0.01 |
| Pagbibigay Suporta sa Pagkatuto | β3 | 0.23 | 0.68 | 12.07 | 0.02 |

Kongklusyon

Ang pag-aaral na ito ay nagbigay-diin sa kahalagahan ng pagtuturo ng wika batay sa nilalaman at paglinang ng ika-21 siglong kasanayan. Sa pamamagitan ng kuwantitatibong pananaliksik, natukoy na may kaugnayan ang dalawang aspetong ito at mahalaga ang kanilang impluwensiya sa pag-unlad ng mga mag-aaral.

Una, lumalabas na ang pagtuturo ng wika batay sa nilalaman ay may positibong epekto sa paglinang ng ika-21 siglong kasanayan. Ito ay nagsisilbing pundasyon sa pagpapaunlad ng kritikal na pagiisip ng mga mag-aaral, na mahalaga para sa kanilang kakayahan sa pagharap sa mga suliranin at kompetisyon sa hinaharap.

Pangalawa, matapos suriin ang mga indikeytor ng pagtuturo ng wika batay sa nilalaman, natuklasan na may malaking impluwensiya ang mga ito sa paglinang ng ika-21 siglong kasanayan ng mga guro. Samakatuwid, mahalaga ang pagtutok sa pagpapabuti ng mga indikeytor na ito upang mas mapabuti ang kalidad ng edukasyon na kanilang naibibigay sa mga mag-aaral.

Sa pag-aaral na ito, pinatibay ang teoryang Input Theory of Language Acquisition ni Krashen at Socio-cultural Theory of Vygotsky. Ang unang teorya ay nagpapakita na ang mga uri ng input na ibinibigay ng guro ay mahalaga sa pag-unlad ng wika at kasanayan ng mga mag-aaral. Samantalang, ang huli ay nagbibigay-diin sa papel ng wika sa pagpapaunlad ng self-regulation at pag-uugali ng mga bata.

Sa huli, ang mga natuklasan sa pag-aaral na ito ay nagpapalakas sa kamalayan sa kahalagahan ng wastong pagtuturo ng wika at paglinang ng mga kasanayan para sa hinaharap ng mga mag-aaral at guro.

Rekomendasyon

Ang layunin ng pag-aaral na ito ay bigyang-diin ang kahalagahan ng paglinang ng kakayahan ng mga guro sa pagtuturo ng wika batay sa nilalaman at pagpapaunlad ng ika-21 siglong kasanayan. Batay sa mga natuklasan, narito ang ilang rekomendasyon upang mapalakas ang kalidad ng edukasyon sa Pilipinas:

Opisyales ng Kagawaran ng Edukasyon. Dapat magsagawa ng masusing pagsusuri sa kasalukuyang kurikulum upang matiyak na ang mga kompetensiya ay naaayon sa pangangailangan ng mga mag-aaral. Kailangang magtalaga ng mga eksperto na magsusuri sa kurikulum at mag-implementa ng mga programa na magpapabuti sa kalidad ng edukasyon, partikular na sa paglinang ng ika-21 siglong kasanayan.

Mga Punong Guro. Ang mga punong guro ay dapat magsagawa ng mga pagsasanay na naglalayong palakasin ang kakayahan ng kanilang mga guro sa pagtuturo. Mahalaga rin na maging aktibo ang mga guro sa mga pagbabagong nangyayari sa sistema ng edukasyon sa pamamagitan ng pagsasali sa mga seminar at workshop na may kaugnayan sa ika-21 siglong kasanayan.

Mga Guro. Mahalaga para sa mga guro na patuloy na magbahagi at magbahagi ng kanilang kaalaman sa pamamagitan ng pagsasanay. Dapat silang magpakita ng bukas na pagtanggap sa mga bagong pamamaraan at estratehiya sa pagtuturo na nagtataguyod ng ika-21 siglong kasanayan. Kaya't ang kanilang pakikilahok sa mga pagsasanay ay makatutulong sa kanila upang maenhance ang kanilang kakayahan sa pagtuturo.

Mga Mananaliksik. Mahalaga ang patuloy na pagsasagawa ng mga pag-aaral hinggil sa ika-21 siglong kasanayan upang

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

mapalawak ang kaalaman ng mga guro sa makabagong pamamaraan sa pagtuturo. Dapat rin itong magbigay-diin sa mga pagbabago at pag-unlad sa sistema ng edukasyon, upang maging handa ang mga guro sa pagharap sa mga hamon ng pagtuturo sa hinaharap.

LIVED EXPERIENCES OF TEACHERS USING ADAPTIVE STRATEGIES IN TEACHING ASD LEARNERS: A PHENOMENOLOGICAL STUDY

Jennifer G. Oyan, Angel Fe D. Alas and Judy Ann L. Bautista

Master of Arts in Education, Holy Cross of Davao College

Article DOI: https://doi.org/10.36713/epra16837

DOI No: 10.36713/epra16837

ABSTRACT

This qualitative study delves into how teachers apply adaptive strategies to instruct learners with Autism Spectrum Disorder (ASD) in Special Education (SPED) settings. Employing a phenomenological approach, the research utilized individual interviews and focus group discussions to explore various challenges, coping mechanisms, and insights related to the effectiveness and appropriateness of these strategies. Ten participants from SPED schools in Davao City were randomly selected to ensure diverse perspectives, with five engaging in individual interviews and the remaining five participating in focus group discussions. The initial findings reveal significant themes emphasizing the importance of adaptive strategies in teaching ASD learners. Key concepts include the utilization of visual aids, structured environments, and positive reinforcement, aligning with previous research indicating their efficacy in improving understanding and communication among ASD learners. Challenges in implementation, such as the variability in ASD presentations, underscore the necessity for personalized approaches. Furthermore, positive outcomes like personalized learning experiences and increased engagement highlight the beneficial impact of adaptive strategies. Subsequent findings shed light on the coping mechanisms employed by teachers to navigate challenges associated with implementing adaptive strategies. Individualized Education Plans (IEPs), support from colleagues, and open communication with families emerged as crucial coping mechanisms. Additionally, strategies for managing emotional and cognitive demands, ongoing professional development, and adapting instructional practices were emphasized, contributing to a deeper understanding of effective support mechanisms for ASD learners. Further insights into the effectiveness and appropriateness of adaptive strategies highlight themes such as individualized approaches, alignment with specific needs, and enhancement through teacher training and technology, emphasizing the importance of personalized, flexible, and collaborative approaches. These findings provide valuable guidance for educators and policymakers, drawing on relevant literature and research. In conclusion, the study underscores the significance of adaptive strategies in supporting ASD learners within SPED classrooms, advocating for personalized, structured, and inclusive educational approaches.

KEYWORDS: ASD learners, adaptive strategies, special education, lived experiences, qualitative inquiry, coping mechanisms, teacher training, individualized approach.

INTRODUCTION

In the realm of special education, the experiences of teachers implementing adaptive strategies for learners with autism spectrum disorder (ASD) hold profound importance. This study delves into the rich tapestry of educators' experiences in Special Education (SPED) classrooms, focusing specifically on learners with ASD. It extends its scope from global perspectives to the local context within the Davao Region of the Philippines.

Globally, there has been a growing recognition of the diverse needs of learners with ASD. International efforts emphasize evidence-based practices to enhance the educational experiences and outcomes for individuals with ASD. For instance, the World Health Organization (WHO) highlights the importance of evidence-based interventions and educational strategies for individuals with ASD (WHO, 2018). While global initiatives provide a broad framework, there is a need for localized research to understand the practical implementation and effectiveness of adaptive strategies in various educational contexts.

In the Philippines, inclusive education is gaining prominence, supported by legislation such as the Magna Carta for Persons with Disabilities (Republic Act No. 7277). However, there is limited research specifically focusing on the experiences of teachers using adaptive strategies to teach ASD learners within the SPED context. One national study conducted by Reyes and colleagues (2019) examined the challenges faced by teachers in implementing inclusive education, highlighting the need for

targeted support and resources for learners with ASD. This underscores the importance of further research to explore the specific strategies employed by teachers and their impact on the educational experiences of ASD learners.

Zooming into the Davao Region, understanding the specific challenges and opportunities in implementing adaptive teaching strategies for learners with ASD becomes imperative. While national policies shape the broader educational landscape, local dynamics play a significant role in determining the effectiveness of interventions. Local studies within the region are scarce, indicating a gap in knowledge regarding the lived experiences of teachers in this context. However, insights from regional initiatives such as the Davao Autism Intervention Program (DAIP) can provide valuable context-specific information on the challenges and successes encountered in teaching ASD learners (DAIP Annual Report, 2020).

These literatures highlight the importance of exploring the lived experiences of teachers using adaptive strategies in teaching ASD learners within the SPED context. From a global perspective, there is a recognition of the diverse needs of individuals with ASD and the importance of evidence-based practices. However, localized research is essential to understand the practical implementation of adaptive strategies and their impact on educational outcomes. In the Philippines, inclusive education is supported by legislation, but there is a need for targeted research to inform effective practices for ASD learners. Similarly, within the Davao Region, understanding

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

local dynamics is crucial for developing context-specific interventions. By bridging the gap between global policies and local realities, this qualitative inquiry aims to provide insights that can inform educational practices and support the needs of ASD learners in diverse contexts.

This study holds profound importance and urgency within the landscape of special education. As the prevalence of autism spectrum disorder (ASD) continues to rise globally, there is a critical need to understand the practical application and impact of adaptive teaching strategies tailored to ASD learners. By delving into teachers' lived experiences within Special Education (SPED) contexts, this research seeks to bridge the gap between theory and practice, offering invaluable insights into the day-to-day realities faced by educators. These insights are crucial for informing evidence-based practices that resonate with the complexities of SPED classrooms, ultimately enhancing the educational experiences and outcomes for ASD learners.

Moreover, amidst the escalating demand for effective educational interventions and the paradigm shift towards inclusivity, the urgency of this research is underscored. By amplifying teachers' voices and experiences, this research has the potential to catalyze positive change, fostering more inclusive educational environments that honor the individuality of ASD learners and empower educators to meet their diverse needs effectively.

STATEMENT OF THE PROBLEM

The utilization of adaptive strategies in teaching learners with autism spectrum disorder (ASD) within Special Education (SPED) settings presents a complex and multifaceted challenge. While there is growing recognition of the importance of tailored approaches to meet the diverse needs of ASD learners, there remains a gap in understanding the lived experiences of teachers implementing these strategies. Therefore, this qualitative inquiry seeks to explore the lived experiences of teachers using adaptive strategies in teaching ASD learners within the SPED context, with a focus on the Davao Region of the Philippines. Specifically, this research aims to answer the following questions:

- 1. How do teachers describe their lived experiences in utilizing adaptive strategies to teach ASD learners within SPED classrooms?
- 2. What coping mechanisms do teachers employ to navigate the challenges associated with implementing adaptive strategies for ASD learners?
- 3. What insights do teachers offer regarding the effectiveness and appropriateness of adaptive strategies in meeting the unique needs of ASD learners within the SPED context?

REVIEW OF RELATED LITERATURE AND STUDIES

Theoretical Foundations in ASD Education

The theoretical foundations of our research on the impact of adaptive teaching strategies for learners with Autism Spectrum Disorder (ASD) in Special Education (SPED) are deeply rooted in the evolving landscape of inclusive education and evidence-based practices. Inclusive education emphasizes the right of every learner, regardless of abilities, to access quality education within mainstream settings, extending beyond physical presence to encompass effective instructional strategies catering to diverse learning profiles. Adaptive teaching strategies, such as visual supports and sensory integration techniques, are highlighted as crucial for accommodating the learning needs of individuals with ASD.

Previous studies emphasize the significance of evidence-based practices in ASD education, advocating for empirical support in guiding instructional decisions. Theoretical perspectives draw from ecological systems theory and social-communication models, highlighting the dynamic interplay between individual characteristics, the classroom environment, and communication challenges inherent in ASD. Embracing the neurodiversity paradigm, the research seeks to move beyond deficit-oriented approaches to recognize and harness the inherent strengths and capabilities of individuals with ASD.

Relevant Studies

Two relevant studies, conducted by Vismara et al. (2019) and Hume et al. (2021), offer valuable insights into the effectiveness of specific adaptive teaching strategies. Vismara et al.'s study delves into the efficacy of early start Denver model interventions, while Hume et al. explore the outcomes of peermediated interventions for students with ASD. These studies contribute valuable data but highlight the need for quantitative explorations within the unique context of SPED classrooms.

Bridging the Gap in Research

While existing literature provides valuable insights, there's a noticeable gap in research systematically exploring the interplay between adaptive teaching strategies, the classroom environment, and the effectiveness of education for learners with ASD in SPED. Our study aims to bridge this gap by offering a quantitative exploration, contributing to the conceptual evolution of evidence-based practices in ASD education. By integrating theoretical frameworks from inclusive education, adaptive teaching strategies, evidence-based practices, and global initiatives, our research seeks to provide a holistic understanding of the factors influencing the educational experiences of learners with ASD in SPED classrooms.

Theoretical Lens

The qualitative research aims to delve into the intricate dynamics of educators' experiences in implementing adaptive strategies for learners with autism spectrum disorder (ASD) within Special Education (SPED) settings, with a particular focus on the Davao Region of the Philippines. To guide this inquiry, we will draw upon main and supporting theories that offer theoretical frameworks for understanding the lived experiences of teachers and the effectiveness of adaptive strategies in meeting the unique needs of ASD learners.

Social constructivism, as proposed by Vygotsky (1978), emphasizes the role of social interactions and cultural context in shaping individuals' learning experiences and understanding. Within the context of teaching ASD learners, social constructivism provides a lens through which to explore how teachers' interactions with students, colleagues, and the broader educational environment influence their perceptions and practices. According to this theory, knowledge is co-constructed through meaningful interactions, and teachers' lived experiences can be understood as situated within social and cultural contexts (Gergen, 1995).

Moreover, Bronfenbrenner's (1979) ecological systems theory posits that individuals are influenced by multiple interconnected systems, ranging from the microsystem (immediate environment) to the macrosystem (cultural values and societal norms). Within the SPED context, this theory provides a framework for understanding the complex interplay of factors that shape teachers' experiences in implementing adaptive strategies for ASD learners. By examining the interactions between teachers, students, families, and broader

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

institutional contexts, this theory illuminates the multifaceted nature of teachers' lived experiences and the various influences on their instructional practices.

Lastly, Self-determination theory (Deci & Ryan, 1985) emphasizes the importance of autonomy, competence, and relatedness in fostering intrinsic motivation and well-being. Within the context of teaching ASD learners, this theory offers insights into the psychological factors that may impact teachers' engagement and effectiveness in implementing adaptive strategies. By examining teachers' perceptions of their autonomy in selecting and implementing adaptive strategies, their perceived competence in meeting the needs of ASD learners, and their sense of connection with students and colleagues, this theory can provide valuable insights into the motivational dynamics underlying teachers' lived experiences.

These main and supporting theories offer theoretical lenses through which to explore the lived experiences of teachers using adaptive strategies in teaching ASD learners within SPED settings. By drawing upon these theoretical frameworks, this qualitative inquiry seeks to uncover the complexities of teachers' experiences and contribute to the development of evidence-based practices that support the diverse needs of ASD learners in the educational context.

METHOD

In this research, several methodological considerations will be employed to ensure rigor and ethical integrity throughout the study. Philosophically, this research will be grounded in qualitative assumptions, recognizing the subjective nature of lived experiences and the importance of understanding phenomena within their natural context (Creswell & Poth, 2017).

The design will adopt a phenomenological approach to explore teachers' lived experiences in utilizing adaptive strategies, employing both individual interviews and focus group discussions. Seven participants will be selected for individual interviews to allow for in-depth exploration of personal experiences, while another seven will participate in focus group discussions to facilitate rich dialogue and shared reflections (Creswell & Poth, 2017).

Participants will be drawn from teachers currently teaching ASD learners using adaptive strategies in SPED schools in Davao City, selected through random sampling to ensure a diversity of perspectives. Ethical considerations will be paramount, with informed consent obtained from all

participants, and confidentiality and anonymity strictly maintained throughout the research process.

Moreover, the role of the researchers will be transparent, serving as facilitators of dialogue and stewards of ethical practice. Data collection will commence only after obtaining approval from the Research Ethics Committee (REC) for the Initial Review, ensuring adherence to ethical guidelines (Creswell & Poth, 2017).

Furthermore, data analysis will involve thematic analysis, identifying patterns and themes within the qualitative data to uncover the essence of teachers' experiences (Braun & Clarke, 2006). Lastly, the trustworthiness of the study will be ensured through various strategies, including member checking, peer debriefing, and triangulation of data sources, to enhance the credibility and validity of findings (Creswell & Poth, 2017).

RESULTS AND DISCUSSION

This chapter delves to the rich tapestry of results gleaned from our qualitative inquiry, offering a profound exploration into the lived experiences of educators employing adaptive strategies in teaching learners with Autism Spectrum Disorder (ASD) within the Special Education (SPED) context. As we venture into the heart of our findings, we embark on a journey illuminated by the voices of these dedicated teachers, whose narratives provide invaluable insights into the nuanced challenges, triumphs, and evolving methodologies encountered within the realm of ASD education. Through rigorous analysis and reflective discourse, this chapter serves as a beacon, casting light upon the multifaceted landscape of adaptive teaching strategies and their profound impact on both educators and ASD learners alike.

Lived Experiences in Utilizing Adaptive Strategies to Teach ASD Learners within SPED Classrooms

The initial findings of the research titled "Exploring the Lived Experiences of Teachers Using Adaptive Strategies in Teaching ASD Learners" shed light on the intricate dynamics of utilizing adaptive strategies within Special Education (SPED) classrooms to cater to the needs of learners with Autism Spectrum Disorder (ASD). These results provide valuable insights into the challenges faced by educators and the positive impacts observed when employing adaptive strategies. Understanding these experiences is crucial for enhancing the effectiveness of teaching practices and promoting inclusive education for ASD learners.

Figure 1 shows the lived experiences in utilizing adaptive strategies to teach ASD learners within SPED classrooms.

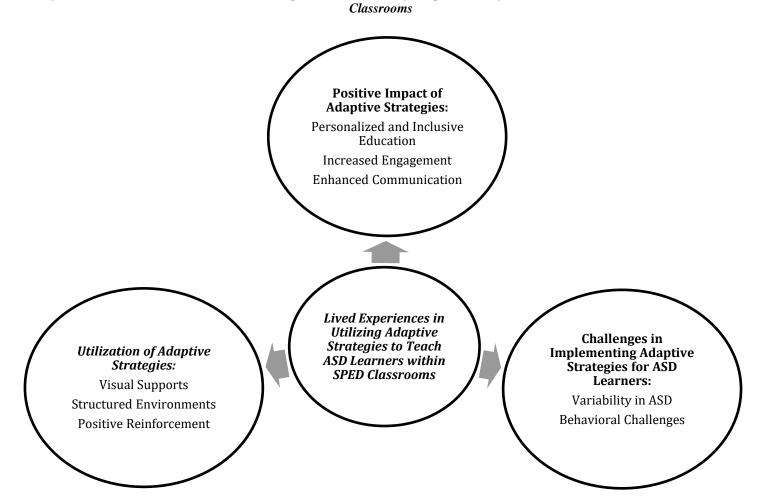

Fig. 1
Major Themes and Core Ideas on the Lived Experiences in Utilizing Adaptive Strategies to Teach ASD Learners within SPED

Utilization of Adaptive Strategies

Educators consistently emphasized the significance of utilizing adaptive strategies in teaching ASD learners effectively.

Visual Support

Visual support emerged as a prominent core idea, reflecting the importance of using visual aids to facilitate comprehension and communication for ASD students. Visual supports are tools that provide individuals with visual cues to aid comprehension, communication, and organization. These can include visual schedules, picture symbols, and task cards. Research suggests that visual supports can enhance learning and independence for individuals with various cognitive and developmental disabilities (Sainato, Strain, & Lefebvre, 2012). By presenting information visually, individuals may better understand expectations and sequence of tasks, leading to increased engagement and success in completing activities.

"Teaching ASD learners involves using adaptive strategies such as visual supports, structured environments, clear communication, and individualized instruction." - IDI1

"So, with those experiences, I can also apply it in teaching ASD learners within SPED classrooms by implementing visual schedules." - IDI2

In conclusion, the utilization of visual supports offers significant benefits in promoting understanding, communication, and independence for individuals with disabilities. Incorporating visual cues into daily routines and activities can enhance comprehension and engagement, ultimately supporting individuals in achieving their goals.

Structured Environments

Structured environments were also highlighted, indicating the necessity of providing predictable and organized surroundings to promote a sense of security and stability. Structured environments involve organizing physical spaces and daily routines to provide clear expectations and minimize distractions. This approach aims to create predictability and consistency, which can be particularly beneficial for individuals with autism spectrum disorder and other developmental disabilities (Koegel, Koegel, & Brookman, 2003). By establishing clear boundaries and routines, structured environments help individuals feel more secure and confident in navigating their surroundings.

"It involves using visual supports, structured environments, sensory accommodations, individualized instruction, positive reinforcement, collaboration, flexibility, and patience..." - IDI5

"While a structured environment reduces anxiety." - IDI1

"Should have schedules then, after having a schedule I incorporate sensory breaks." - IDI2

"...to create an inclusive and supportive learning environment that meets the unique needs of each of my learners." - IDI5

In summary, implementing structured environments can significantly support individuals with developmental disabilities by reducing anxiety, promoting independence, and facilitating positive behavior. By creating predictability and consistency, structured environments offer a supportive framework for individuals to thrive and succeed in various settings.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Positive Reinforcement

Additionally, positive reinforcement was identified as a crucial strategy for encouraging desired behaviors and fostering a conducive learning environment for ASD learners. Positive reinforcement involves providing rewards or praise to increase the likelihood of desired behaviors. This strategy is based on the principles of operant conditioning and has been widely used in behavior management interventions for individuals with disabilities (Miltenberger, 2008). By reinforcing desired behaviors with positive consequences, individuals are motivated to continue exhibiting those behaviors, leading to skill acquisition and behavior improvement.

"I will also use positive reinforcement techniques, of course, that's important because I am promoting engagement in the class and reducing anxieties in ASD learners which is very important to a SPED Teacher ..." - IDI2

"Individualized instruction, positive reinforcement, collaboration with support professionals, technology integration, and parent involvement contribute to a holistic approach..." - IDI1

To conclude, the utilization of positive reinforcement techniques offers an effective means of promoting desired behaviors and skill development in individuals with disabilities. By emphasizing positive consequences for desired behaviors, this approach fosters a supportive and encouraging environment that facilitates learning and behavior change. These core ideas collectively underscore the essential role of adaptive strategies in accommodating the diverse learning needs of ASD students within SPED classrooms.

Positive Impact of Adaptive Strategies Personalized and Inclusive Education

Personalized and inclusive education emerged as a core idea, highlighting the ability of adaptive strategies to create learning environments that accommodate the diverse needs and abilities of all students, including those with ASD. Personalized and inclusive education refers to tailoring educational experiences to meet the unique needs and abilities of each learner, including those with diverse backgrounds and abilities. This approach fosters a sense of belonging and support for all students, ultimately leading to better academic outcomes and personal growth. According to research by Hattie and Yates (2014), personalized learning has a significant positive impact on student achievement, with effects sizes ranging from 0.18 to 1.44. By implementing adaptive strategies such as differentiated instruction, individualized learning plans, and flexible grouping, educators can create an environment where every student feels valued and empowered to succeed.

"The overall impact of adaptive strategies on teaching practices and the educational experiences of ASD learners is generally positive. It leads to more personalized and inclusive education..." - IDI1
" Since I implemented flexible learning activities and experiences for my learners, they were able to adapt easily to my activities.- IDI3

Personalized and inclusive education strategies not only enhance academic achievement but also foster a sense of belonging and empowerment among students. By tailoring instruction to meet individual needs and promoting inclusivity, educators can create a supportive learning environment where all students can succeed.

Increased Engagement

Adaptive strategies can significantly increase student engagement by providing opportunities for active participation and personalization of learning experiences. When students feel connected to the material and see its relevance to their lives, they are more likely to be motivated and engaged in the learning process. Research by Fredricks, Blumenfeld, and Paris (2004) highlights the importance of engagement in academic achievement, stating that engaged students are more likely to persist in challenging tasks and demonstrate higher levels of learning. By incorporating adaptive techniques such as project-based learning, gamification, and peer collaboration, educators can create dynamic learning environments that capture students' interest and promote deep learning.

"... My ASD learners have learned by teaching them, but I am also learning from my ASD learners because I enhance and develop my teaching practices." - IDI2
br>

"The learners were able to easily adapt to my activities, and it was easier for them to engage with my lessons and activities. They enjoyed my activities more."- IDI3

Increased engagement through adaptive strategies leads to better academic outcomes and a more fulfilling learning experience for students. By incorporating methods that promote active participation and personalization, educators can cultivate a learning environment where students are motivated to explore, learn, and succeed.

Enhanced Communication

Adaptive strategies facilitate enhanced communication between students, educators, and other stakeholders, fostering understanding, and collaboration, support. communication is essential for creating a positive learning environment where students feel heard, valued, and connected to their peers and teachers. Research by Vygotsky (1978) emphasizes the importance of social interaction in the learning process, stating that communication with others plays a central role in cognitive development. By implementing adaptive techniques such as peer feedback, collaborative learning tasks, and digital communication platforms, educators can promote meaningful interactions and facilitate the exchange of ideas and perspectives.

> "Adaptive strategies have a transformative impact on my teaching practices and the educational experiences of ASD learners... fostering communication and social skills..." - IDI5

Enhanced communication through adaptive strategies strengthens relationships, promotes collaboration, and fosters a supportive learning community. By facilitating meaningful interactions and providing platforms for dialogue, educators can create an inclusive and engaging learning environment where students feel connected and supported in their academic journey.

Increased engagement was also noted, indicating the effectiveness of adaptive strategies in capturing student interest and motivation, thereby enhancing overall learning outcomes. Furthermore, enhanced communication emerged as a key outcome, reflecting the improved ability of ASD learners to express themselves and interact with peers and educators effectively. These core ideas underscore the transformative potential of adaptive strategies in promoting student success and fostering a supportive and inclusive educational culture within SPED classrooms.

Challenges in Implementing Adaptive Strategies for ASD Learners

Despite the inherent benefits of adaptive strategies, educators encountered various challenges in their implementation for ASD learners.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Variability in ASD

The variability in ASD emerged as a prominent core idea, highlighting the diverse range of abilities, behaviors, and needs among ASD students. This variability necessitates individualized approaches and flexible strategies tailored to meet each student's unique requirements. Variability in ASD refers to the wide range of characteristics and behaviors exhibited by individuals on the autism spectrum. This variability can manifest in various ways, including differences in communication skills, sensory sensitivities, and social interactions. Implementing adaptive strategies for ASD learners can be challenging due to this variability, as what works for one individual may not be effective for another. For example, a study by Bishop-Fitzpatrick et al. (2017) found that individuals with ASD exhibit diverse patterns of sensory sensitivities, with some being hypersensitive to certain stimuli while others are hyposensitive. This variability highlights the need for personalized approaches to intervention and support for ASD learners.

> "Implementing adaptive strategies for students with autism spectrum disorder (ASD) poses challenges due to the disorder's diverse nature and individualized needs "-IDII

"So far, the challenges that I've encountered in implementing adaptive strategies have been individual variability..."-IDI5

The variability in ASD presents a significant challenge in implementing adaptive strategies for learners on the spectrum. Personalized approaches that take into account individual differences are essential for addressing the diverse needs of ASD learners effectively.

Behavioral Challenges

Additionally, behavioral challenges were identified as a significant hurdle, indicating the complexities associated with managing and addressing behavioral issues effectively within SPED settings. Behavioral challenges are another significant obstacle in implementing adaptive strategies for ASD learners. These challenges can include difficulties with emotional regulation, repetitive behaviors, and meltdowns. For instance, a review by Mazurek (2015) identified that individuals with ASD often struggle with emotional dysregulation, which can lead to disruptive behaviors in various settings. Addressing these behavioral challenges requires a comprehensive understanding of the underlying factors contributing to them, such as sensory sensitivities or communication difficulties.

"Identifying and managing behavioral issues is crucial, involving understanding underlying causes and implementing appropriate strategies."-IDI1

"So sometimes there would be changes of behaviors and patterns every day. Because sometimes that's also part of their behaviors."-IDI4

Behavioral challenges pose a substantial barrier to implementing adaptive strategies for ASD learners. Strategies that target the underlying causes of these behaviors, such as sensory accommodations or communication supports, are essential for promoting positive outcomes for individuals on the autism spectrum.

These core ideas underscore the importance of understanding and navigating the challenges inherent in implementing adaptive strategies for ASD learners. In conclusion, the first set of results from the study sheds light on the multifaceted experiences of educators utilizing adaptive strategies to teach ASD learners within SPED classrooms. By delineating key themes and core ideas, the study underscores the crucial role of adaptive strategies in addressing the unique needs and challenges associated with ASD education. Despite encountering various challenges, educators emphasize the positive impacts of adaptive learning approaches on student engagement, socialization, and academic achievement. Moving forward, these insights can inform the development of more effective and inclusive educational practices aimed at enhancing the learning experiences and outcomes of ASD learners within SPED contexts.

Coping Mechanisms Employed to Navigate the Challenges Associated with Implementing Adaptive Strategies for ASD Learners

The second set of results from the research on teachers utilizing adaptive strategies for ASD learners' sheds light on the multifaceted challenges inherent in special education contexts. ASD learners present unique needs that require tailored approaches to education, often demanding significant adjustments from teachers. Understanding how teachers cope with these challenges and navigate the complexities of implementing adaptive strategies is essential for enhancing educational outcomes for ASD learners. By exploring the coping mechanisms employed by teachers, researchers can uncover valuable insights into the support structures, strategies, and resources necessary for effective special education practices.

Figure 2 shows the coping mechanisms employed to navigate the challenges associated with implementing adaptive strategies for ASD learners.

Fig. 2

Major Themes and Core Ideas on Coping Mechanisms Employed to Navigate the Challenges Associated with Implementing Adaptive Strategies for ASD Learners

Professional Development for Adaptive Strategies:

resources
Collaborative learning and sharing experiences

Cultivating a culture of continuous learning

Accessing diverse skill-building

Coping Mechanisms Employed to Navigate the Challenges Associated with Implementing Adaptive Strategies for ASD Learners

Coping Mechanisms for Implementing Adaptive Strategies for ASD Learners:

Creating Individualized Education Plans (IEPs) Seeking Support from Colleagues and Supervisors Open Communication with Families

Adapting Instructional Practices for ASD Learners:

Individualized Planning Flexibility in Approach Evaluation and Modification of Strategies

Coping Mechanisms for Implementing Adaptive Strategies for ASD Learners

In this theme, teachers detail their coping mechanisms for implementing adaptive strategies tailored to ASD learners' needs. Creating Individualized Education Plans (IEPs) emerges as a crucial coping mechanism, emphasizing the importance of personalized educational approaches to address the diverse requirements of ASD learners. Seeking Support from Colleagues and Supervisors highlights the significance of collaborative efforts and professional networks in navigating the challenges associated with ASD education. Open Communication with Families underscores the essential role of parental involvement and partnership in supporting ASD learners' educational journey.

Creating Individualized Education Plans (IEPs)

It is crucial for implementing adaptive strategies for learners with Autism Spectrum Disorder (ASD). IEPs are personalized plans designed to meet the unique needs of each student with ASD, encompassing academic goals, behavioral interventions, and necessary support services (Zachor et al., 2020). These plans involve collaboration among educators, specialists, and parents to tailor educational experiences that address the specific strengths and challenges of the learner. Through the customization of learning objectives and instructional methods, IEPs provide a framework for accommodating diverse learning styles and fostering success for students with ASD within inclusive educational settings.

"... but effective coping mechanisms include creating Individualized Education Plans (IEPs) tailored to specific needs..." - IDI1

The creation of Individualized Education Plans (IEPs) facilitates the implementation of adaptive strategies by providing a personalized roadmap for addressing the unique needs of learners with ASD. By fostering collaboration among educators, specialists, and families, IEPs promote inclusivity and enable tailored support to enhance the educational experiences and outcomes of students with ASD.

Seeking Support from Colleagues and Supervisors

Educators may encounter challenges in understanding and implementing appropriate interventions for students with ASD due to the complexity of the disorder and individual variations in presentation (Lang et al., 2019). Collaborating with colleagues who have expertise in special education or have experience working with ASD learners can provide valuable insights and resources to support effective teaching practices. Additionally, seeking guidance and support from supervisors or administrators can help ensure that educators have access to necessary training, resources, and accommodations to meet the diverse needs of students with ASD in educational settings.

"I prioritized self-care by setting boundaries, practicing mindfulness, and seeking support from colleagues and supervisors..." - IDI2

"... I also seek help from my special ed instructional facilitator, my supervisor, and some of my colleagues." - IDI5

Seeking support from colleagues and supervisors is vital for the successful implementation of adaptive strategies for learners with ASD, as it facilitates access to expertise, resources, and guidance necessary for effectively addressing the unique needs of these students. Collaboration and guidance from experienced professionals enhance educators' ability to provide inclusive and supportive learning environments that promote the academic and social-emotional development of students with ASD.

Open Communication with Families

Parents and caregivers play a crucial role in advocating for their child's needs and providing valuable insights into their strengths, challenges, and preferences (Nolan et al., 2021). By fostering open communication and collaboration between educators and families, schools can ensure that instructional approaches and support services align with the individualized needs and goals of the learner. Additionally, involving families in the development and implementation of intervention plans promotes consistency between home and school environments, enhancing the effectiveness of strategies aimed at supporting the academic and social-emotional growth of students with ASD.

"...develop the habit of open communication with the family of my learners to understand their needs and preferences." - IDI5

Open communication with families is essential for the successful implementation of adaptive strategies for learners with ASD, as it promotes collaboration, consistency, and alignment between home and school environments. By valuing and incorporating the perspectives and insights of parents and caregivers, educators can create supportive partnerships that optimize the educational experiences and outcomes of students with ASD.

Professional Development for Adaptive Strategies

This theme delves into the professional development strategies employed by teachers to enhance their capacity in implementing adaptive strategies for ASD learners. Cultivating a culture of continuous learning emphasizes the importance of fostering an environment that encourages ongoing professional growth and learning opportunities. Accessing diverse skill-building resources underscores the necessity of leveraging various educational resources and training programs to acquire the knowledge and skills required for effective ASD education. Collaborative learning and sharing experiences highlight the benefits of peer collaboration and knowledge exchange in enhancing teachers' proficiency in implementing adaptive strategies for ASD learners.

Cultivating a Culture of Continuous Learning

Establishing a workplace culture that prioritizes continuous learning is paramount for professional development. This involves encouraging employees to actively seek out learning opportunities, whether through formal training programs, workshops, or self-directed learning. According to a study by Bersin & Associates, organizations that promote a culture of learning are 46% more likely to be the leader in their industry. This culture fosters adaptability, innovation, and resilience among employees, enabling them to stay abreast of industry trends and acquire new skills to navigate evolving challenges. Through regular feedback mechanisms and recognition of learning achievements, employees feel motivated to engage in lifelong learning, contributing to their personal growth and organizational success.

"To effectively implement adaptive strategies, organizations should cultivate a culture that values innovation and continuous learning..." - IDI1

Cultivating a culture of continuous learning is indispensable for professional development. By prioritizing learning, organizations empower employees to adapt to change, innovate, and contribute to organizational success.

Accessing Diverse Skill-Building Resources

Access to diverse skill-building resources is essential for professionals to adapt to changing demands in the workplace. This encompasses a wide range of resources, including online courses, mentorship programs, industry conferences, and networking opportunities. Research by LinkedIn Learning indicates that employees who have access to a variety of learning resources are 47% more likely to be motivated to learn and grow professionally. By providing employees with access to diverse skill-building resources, organizations not only invest in their development but also foster a culture of inclusivity and equity, enabling individuals from diverse backgrounds to thrive and contribute meaningfully to the workforce.

"I also attend workshops, conferences or training sessions focused on evidence-based practices and strategies for supporting the diverse needs of ASD learners..." - IDI5

Access to diverse skill-building resources is crucial for fostering inclusive professional development. By offering a range of learning opportunities, organizations empower employees to acquire new skills and stay relevant in an ever-changing landscape.

Collaborative Learning and Sharing Experiences

Collaborative learning and sharing experiences are effective strategies for professional development as they facilitate knowledge exchange and collective problem-solving. This approach encourages employees to learn from one another's experiences, perspectives, and expertise, fostering a culture of collaboration and teamwork. A study published in the Journal of Workplace Learning found that collaborative learning enhances employee engagement, improves retention of information, and promotes a sense of community within the organization. By creating platforms for collaborative learning, such as peer mentoring programs, cross-functional projects, and knowledgesharing sessions, organizations harness the collective intelligence of their workforce, driving innovation and fostering a culture of continuous improvement.

"... but we do have, like, seminars that we can actually do as a group or as a school or as a district..." - IDI4
Collaborative learning and sharing experiences are powerful drivers of professional development. By leveraging the collective knowledge of employees, organizations foster a culture of collaboration and innovation, enabling individuals to learn from one another and drive organizational success.

Adapting Instructional Practices for ASD Learners

Teachers discuss strategies for adapting instructional practices to meet the diverse needs of ASD learners in this theme. Individualized Planning underscores the significance of developing tailored instructional plans that accommodate the unique strengths and challenges of each ASD learner. Flexibility in Approach highlights the importance of being adaptable and responsive to the evolving needs and preferences of ASD learners throughout the educational process. Evaluation and Modification of Strategies emphasize the iterative nature of instructional design, emphasizing the importance of regularly assessing and refining adaptive strategies to optimize learning outcomes for ASD learners.

Individualized Planning

By tailoring teaching methods and materials to meet the specific needs and abilities of each student, educators can maximize learning outcomes. According to Howlin (2012), individualized planning allows educators to address the unique strengths and challenges of ASD learners, promoting engagement and skill development. This involves conducting thorough assessments to

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

identify each student's preferences, learning styles, and areas of difficulty, which serves as the foundation for creating personalized learning goals and strategies.

"Gathering information from various sources, including parents and professionals, is essential to understand each learner's strengths, weaknesses, preferences, and sensitivities." - IDII

"... we as teachers should do - to collect data from the learners so we can understand their backgrounds, what they don't like, what's forbidden for them, what triggers their tantrums, and so on."- IDI3

In conclusion, individualized planning is a cornerstone of effective instruction for ASD learners. By customizing teaching approaches and materials to meet the diverse needs of students on the spectrum, educators can create a supportive learning environment where each individual can thrive. This personalized approach maximizes engagement and facilitates skill acquisition, ultimately enhancing educational outcomes for ASD learners.

Flexibility in Approach

Given the heterogeneity of characteristics and needs within the ASD population, a one-size-fits-all approach is ineffective. Flexibility allows educators to adapt teaching methods in real-time based on students' responses, interests, and levels of comprehension. As noted by Koegel and Koegel (2006), flexibility enables educators to modify their instructional strategies to accommodate the unique learning styles and sensory preferences of ASD learners, fostering greater participation and learning success.

"The approach should be flexible because they have diverse needs." - IDI2

"The important thing here is to be clear in giving instruction and should be flexible and be creative in teaching style." - IDI2

In conclusion, flexibility in approach is paramount for effectively supporting ASD learners in educational settings. By being responsive to students' individual needs and adjusting teaching methods accordingly, educators can create an inclusive learning environment where all students can access and engage with the curriculum. This adaptability promotes student success and fosters a positive learning experience for ASD learners.

Evaluation and Modification of Strategies

It's essential for educators to regularly assess the effectiveness of their teaching strategies and make adjustments as needed to meet the evolving needs of students. According to Simpson (2005), ongoing evaluation allows educators to identify which strategies are most effective in promoting learning and which may require modification or replacement. By collecting data on student progress and feedback, educators can make

informed decisions about the appropriateness and effectiveness of their instructional practices.

> "So, you also need to evaluate the activity so that next time, you can adapt, change, or frame it according to their actual needs."- IDI3

"So there would be a lot of avenue that you have to modify it so that you could also access their interests and thing" - IDI4

The process of evaluating and modifying instructional strategies is integral to supporting the diverse needs of ASD learners. By continually assessing the impact of their teaching methods and making adjustments based on student feedback and progress, educators can optimize learning outcomes for students on the spectrum. This iterative approach ensures that instructional practices remain responsive to the unique needs and abilities of ASD learners, ultimately enhancing their educational experiences.

In general, the second set of results from our research highlights the diverse coping mechanisms employed by teachers to navigate the challenges associated with implementing adaptive strategies for ASD learners within the SPED context. These coping mechanisms encompass various aspects of professional practice, including individualized planning, self-awareness, continuous learning, and flexibility in approach, underscoring the complex and multifaceted nature of supporting students with ASD in educational settings.

Insights Regarding the Effectiveness and Appropriateness of Adaptive Strategies in Meeting the Unique Needs of ASD Learners within the SPED Context

In exploring the lived experiences of teachers utilizing adaptive strategies within Special Education (SPED) contexts for learners with Autism Spectrum Disorder (ASD), the third set of results delves into the effectiveness and appropriateness of these strategies. Given the diverse and unique needs of ASD learners, understanding how adaptive strategies are implemented and their impact is crucial for improving educational outcomes and fostering inclusive environments. This set of results focuses on key themes and core ideas that emerged from qualitative inquiries, providing insights into the nuances of adaptation within SPED settings.

Figure 3 shows the insights regarding the effectiveness and appropriateness of adaptive strategies in meeting the unique needs of ASD learners within the SPED context.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Fig. 3

Major Themes and Core Ideas on the Insights Regarding the Effectiveness and Appropriateness of Adaptive Strategies in Meeting the Unique Needs of ASD Learners within the SPED Context

Alignment between Adaptive Strategies and Individualized Needs

This theme underscores the importance of alignment between adaptive strategies and the unique needs of ASD learners. Flexibility and customization are crucial to adapting teaching methods and interventions to meet the ever-changing needs of learners on the spectrum. Targeted interventions address specific areas of difficulty, allowing for focused support and progress monitoring. Collaboration and integration of sensorial activities facilitate holistic learning experiences, tapping into various modalities to enhance engagement and comprehension.

Flexibility and Customization

Flexibility and customization in educational strategies refer to the ability to adapt teaching methods, materials, and activities to meet the diverse needs of individual students. This approach recognizes that learners have unique strengths, preferences, and learning styles that may require different approaches to instruction (Hummel & Huitt, 2011). By offering a variety of instructional options and allowing for flexibility in pacing, content delivery, and assessment methods, educators can better address the specific needs of each student (Tomlinson, 2001). For example, a student with dyslexia may benefit from audio recordings of texts or alternative forms of assessment that emphasize verbal expression rather than written responses. By incorporating flexibility and customization into teaching

practices, educators can create a more inclusive learning environment where all students have the opportunity to succeed.

> "As a SPED teacher you should see your own way or customize your own ways or approach to meet the needs or tasks that the child will be able to do. Customize yourself. See your own way to meet the needs of the child." - IDI2

Flexibility and customization in educational strategies are essential for aligning adaptive strategies with individualized needs. By recognizing and accommodating the diverse needs of learners, educators can create a more inclusive and effective learning environment that promotes student success.

Targeted Intervention

Targeted intervention involves the systematic identification and addressing of specific learning needs or challenges faced by individual students. This approach requires ongoing assessment and monitoring to identify areas where students may require additional support, followed by the implementation of targeted interventions designed to address those needs (Gersten et al., 2009). For example, a student struggling with math concepts may benefit from small-group instruction, one-on-one tutoring, or specialized intervention programs aimed at improving mathematical skills. By providing targeted intervention, educators can help students overcome obstacles to learning and make progress towards their academic goals.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

"Since I adapted my strategy, we still achieve the competency we aim for or our goal within a certain time frame."- IDI3

Targeted intervention plays a crucial role in aligning adaptive strategies with individualized needs by providing personalized support and assistance to students who require additional help in specific areas. By addressing learning needs proactively and systematically, educators can help students overcome challenges and achieve success in their academic pursuits.

Collaboration and Integration of Sensorial Activities

Collaboration and the integration of sensorial activities involve creating opportunities for students to engage with learning material through multiple senses and modalities, such as sight, sound, touch, and movement. This approach recognizes the importance of multisensory learning experiences in promoting deeper understanding and retention of information (Dunn & Dunn, 1993). By incorporating sensorial activities into instruction and fostering collaboration among students, educators can accommodate diverse learning styles and preferences while promoting active engagement and participation in the learning process. For example, a science lesson on plant anatomy might involve hands-on activities like dissecting flowers, observing plant growth, and conducting experiments to explore different sensory aspects of plant life.

"It makes teachers creative in planning and preparing our lesson because it helps us to integrate different sensorial activities to the lesson and to the activities that we will implement." - ID13

"They must join together and you also have to know more about this." - IDI4

Collaboration and the integration of sensorial activities are effective strategies for aligning adaptive approaches with individualized needs by providing diverse learning experiences that cater to students' sensory preferences and strengths. By offering opportunities for hands-on exploration and collaboration, educators can create a dynamic learning environment where all students can thrive and succeed.

Enhancing Implementation of Adaptive Strategies

For adaptive strategies to be effective, they must be implemented with precision and support. Training for teachers is essential, equipping them with the knowledge and skills necessary to effectively implement adaptive strategies and support ASD learners. Access to resources and facilities ensures that educators have the tools and environments conducive to implementing these strategies successfully. Collaboration and communication among stakeholders foster a supportive ecosystem wherein the needs of ASD learners are prioritized and addressed comprehensively.

Training for Teachers

Through training, teachers can gain the necessary skills and knowledge to effectively implement adaptive strategies tailored to the diverse needs of students. Research by Hattie (2012) highlights the significance of teacher professional development in improving student outcomes, indicating that well-designed training programs can have a substantial impact on student achievement.

"So, first is training for teachers. So, that's what I would recommend initially, to train the teachers in selecting adaptive strategies that will be helpful or suitable for their learners."- IDI3

"Ongoing professional development for SPED teachers, differentiated instruction to accommodate varied learning styles is very essential." - IDI1

Additionally, training can help teachers stay updated on the latest educational research and best practices, enabling them to adapt their instructional approaches accordingly. By investing in comprehensive training initiatives, educational institutions can empower teachers to successfully implement adaptive strategies in their classrooms, ultimately fostering a more inclusive and effective learning environment.

Access to Resources and Facilities

Adequate resources, such as assistive technologies, instructional materials, and specialized equipment, are essential for accommodating diverse learning needs and ensuring equitable access to education. Moreover, accessible facilities, including classrooms, libraries, and laboratories, are necessary to create an inclusive learning environment where all students can thrive. Research by Black-Hawkins et al. (2007) underscores the importance of resource provision in supporting inclusive education, emphasizing that insufficient resources can impede the effective implementation of adaptive strategies.

"The SPED classroom should be visible, it will be easy for you to access if you help your child." - IDI2
"And even having such good and even conducive and friendly environment. As much as you can, make your room appropriate for learning for them." - IDI4

Therefore, ensuring sufficient resources and facilities is paramount for successfully integrating adaptive strategies into educational practices.

Collaboration and Communication among Stakeholders

Collaborative efforts involving teachers, administrators, parents, and community members can facilitate the sharing of knowledge, expertise, and resources, leading to more comprehensive support for diverse learners. Effective communication channels, such as regular meetings, workshops, and digital platforms, enable stakeholders to exchange ideas, coordinate efforts, and address challenges collaboratively. Research by Farrell and Ainscow (2002) highlights the importance of collaborative approaches in promoting inclusive education, suggesting that collaboration fosters a sense of shared responsibility and collective ownership of educational goals.

"Collaboration and teamwork among educators, therapists, and students, and other professionals involved in supporting ASD learners and open communication with parents." - IDI5
"Insights from parents or other professionals. This is what we call IEP – Individualized Educational Plan." - IDI2

Thus, fostering collaboration and communication among stakeholders is essential for creating an inclusive educational ecosystem that effectively supports the implementation of adaptive strategies.

In conclusion, training for teachers, access to resources and facilities, and collaboration and communication are integral components for enhancing the implementation of adaptive strategies in education. By investing in teacher professional development, providing adequate resources and facilities, and fostering collaboration among stakeholders, educational institutions can create an inclusive learning environment where all students have the opportunity to succeed. These efforts are essential for promoting educational equity and ensuring that every learner receives the support they need to reach their full potential.

Advancement of Adaptive Strategies for ASD Learners

Continuous improvement and innovation are central to advancing adaptive strategies for ASD learners. Leveraging technology allows for personalized learning experiences tailored to the unique needs and preferences of each learner. Professional development opportunities empower educators to stay abreast of best practices and emerging trends in ASD education. Research and collaboration drive innovation, facilitating the development

of evidence-based practices and fostering a community of practice dedicated to enhancing outcomes for ASD learners.

Leveraging Technology for Personalized Learning

The advancement of technology offers promising avenues for personalized learning experiences tailored to the unique needs of learners with Autism Spectrum Disorder (ASD). Tools such as educational apps, virtual reality simulations, and adaptive learning software can be customized to accommodate various learning styles and preferences. For instance, interactive applications can provide visual supports, repetition, and immediate feedback, which are beneficial for individuals with ASD who often excel in visual learning environments (Grynszpan et al., 2014). Moreover, the use of assistive technology devices, such as communication apps and devices with picture exchange systems, can enhance communication skills and social interactions among ASD learners (Ramdoss et al., 2012).

"... for Autism Spectrum Disorder (ASD) education involves leveraging personalized learning technologies such as adaptive platforms and virtual reality." - IDI1 "A future where adaptive strategies are even more effective, inclusive, empowering, and supporting Eastern learners." - IDI2

Leveraging technology for personalized learning holds immense potential in catering to the diverse learning needs of individuals with ASD. By providing tailored experiences and incorporating assistive tools, technology can empower ASD learners to thrive academically and socially.

Professional Development for Educators

Investing in professional development programs for educators is essential for enhancing their capacity to support ASD learners effectively. Teachers equipped with specialized knowledge and skills are better equipped to create inclusive and supportive learning environments that accommodate the diverse needs of students with ASD. Professional development initiatives can cover topics such as understanding ASD characteristics, implementing evidence-based instructional strategies, and fostering positive behavior support techniques (National Professional Development Center on Autism Spectrum Disorder, 2020). Moreover, ongoing training and coaching can help educators stay abreast of the latest research findings and best practices in the field of autism education.

"Professional development for educators, and community involvement contribute to a cohesive and supportive learning experience." - IDI1 "So, with that, mas dali sa part sa teachers na mo create ug plan. Kay naa na man mga strategies na pilian niya, diba?" - IDI3

Professional development programs play a crucial role in equipping educators with the knowledge and skills necessary to effectively support ASD learners. By investing in ongoing training and resources, educational institutions can foster inclusive learning environments where all students, including those with ASD, can thrive.

Research and Collaboration

Advancing adaptive strategies for ASD learners requires a concerted effort in research and collaboration among educators, researchers, clinicians, and stakeholders. Rigorous scientific inquiry into the efficacy of interventions and instructional approaches is essential for identifying evidence-based practices and refining existing methodologies to better serve ASD learners (National Research Council, 2001). Collaborative efforts involving interdisciplinary teams can facilitate the development of comprehensive intervention programs that address the multifaceted needs of individuals with ASD across various settings. Additionally, partnerships between researchers and

educators can bridge the gap between theory and practice, ensuring that interventions are practical, feasible, and sustainable in real-world educational settings.

"... for advancing ASD learners' educational journey through collaborative efforts across educators, developers, researchers, and communities." - IDI1 "...having such great research would actually help us teachers to really know what are the things that we can actually do." - IDI4

Research and collaboration are paramount in advancing adaptive strategies for ASD learners. By fostering partnerships and conducting rigorous research, stakeholders can develop and implement interventions that are tailored to the unique needs of individuals with ASD, ultimately promoting their academic and social success.

In summary, this reveals crucial insights into three major themes: alignment between adaptive strategies and individual needs through flexibility, targeted interventions, and collaboration; enhancements in implementation via teacher training, resource access, and stakeholder communication; and the advancement of adaptive strategies through technology, professional development, and research collaboration. These findings emphasize the importance of tailored, flexible, and collaborative approaches in supporting ASD learners within SPED, aiming for continuous improvement and personalized support.

CONCLUSION AND RECOMMENDATIONS Conclusion

The culmination of findings from the qualitative inquiry into the lived experiences of teachers utilizing adaptive strategies for learners with Autism Spectrum Disorder (ASD) within Special Education (SPED) classrooms unveils essential themes and core ideas. These results shed light on the significance of personalized, structured, and inclusive approaches to education. The first set of results illuminates the utilization of adaptive strategies such as visual supports and structured environments, resonating with research highlighting the efficacy of visual schedules and personalized interventions in enhancing understanding and communication among ASD learners. Challenges implementation, including the variability in ASD presentations and behavioral challenges, underscore the necessity for individualized approaches, aligning with research emphasizing tailored accommodations for improved outcomes. Moreover, the positive impact of adaptive learning on personalized experiences, transitioning to mainstream classrooms, and enhanced engagement and social skills underscores the transformative potential of tailored interventions. Coping mechanisms, strategies for managing emotional and cognitive demands, professional development, and adapting instructional practices emerge as crucial aspects in effectively supporting ASD learners, emphasizing the importance of ongoing training, collaboration, and flexibility in addressing diverse needs. Insights into the effectiveness and appropriateness of adaptive strategies further reinforce the need for personalized, flexible, and collaborative approaches informed by continuous research and professional development efforts. Overall, these findings underscore the dynamic and multifaceted nature of supporting ASD learners within the SPED context, emphasizing the pivotal role of adaptive strategies in fostering inclusive and empowering educational experiences.

Recommendations

Based on the insights gleaned from the qualitative inquiry into the lived experiences of teachers utilizing adaptive strategies for learners with Autism Spectrum Disorder (ASD) within Special Education (SPED) classrooms, several recommendations can be proposed. Firstly, educators should prioritize the implementation

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

of personalized and structured approaches, including visual supports and individualized accommodations, to cater to the diverse needs of ASD learners. Secondly, continuous professional development opportunities should be provided to equip educators with the necessary skills and strategies for effectively supporting ASD learners, emphasizing self-awareness, collaboration, and flexibility. Thirdly, there should be a concerted effort to enhance communication and collaboration among educational professionals, families, and support networks to foster a holistic support system for ASD learners. Additionally, leveraging technology and research collaborations can advance the development and refinement of adaptive strategies to ensure ongoing improvements in educational outcomes for ASD learners. Overall, these recommendations underscore the importance of a collaborative, inclusive, and evidence-based approach to effectively support ASD learners within the SPED

ABSTRACT

Background: TKR is a surgical technique where a synthetic or artificial joint replaces an inoperative knee joint. The main manifestations of TKR are discomfort and functional constraints. For individuals to be evaluated a candidate for TKR, their everyday activities tend to be significantly impacted by pain and functional limitations. An excessive immune reaction to a pro-inflammatory stimulus causes arthrofibrosis (AF), which is characterised by pathological periarticular fibrosis and ensuing symptoms including reduced joint range of motion. A rare, localised, and irreversible delayed impact of surgery that has been reported in a variety of tissues and organs is called postoperative fibrosis (POF). In this study we use dry needling as an approach towards arthrofibrosis which develop after total knee arthroplasty.

Case presentation: We presented the case of 69 year old female patient who had total knee arthroplasty and has fibrosis. Physiotherapy procedure was commenced along with dry needling.

Conclusion: As a result the physiotherapy with dry needling aided patient in his recovery.

KEY WORDS: Total Knee Replacement, Arthrofibrosis, Dry Needling, Physical Therapy, Case Report

INTRODUCTION

TKR is a surgical method where a damaged knee joint gets substituted with a prosthetic or artificial joint. Pain is the main indication of TKR, followed by functional impairment(1). Usually, a person's everyday activities must be considerably affected by pain and functional restrictions for him or her to be deemed a candidate for TKR. (TKR) By 2040, 78.4 million persons are expected to be affected by arthritis, with a lifetime prevalence of symptomatic knee arthritis anticipated at 44.7%⁽²⁾. Fast-track physical therapy-based total joint replacement programmes show promise in enhancing both the immediate and long-term rehabilitation following surgery. Patients enrolled in these fast-track programmes for total knee replacement (TKR) and total hip replacement (THR) exhibit higher levels of short-term functionality⁽³⁾.An excessive immune reaction to a pro-inflammatory stimulus causes arthrofibrosis (AF), which is characterised by pathological periarticular fibrosis and ensuing symptoms including reduced joint range of motion. The hallmark of AF is capsular constriction due to abnormal extracellular matrix deposition, which can result from hemarthrosis, postinfectious arthritis, surgical insult, or periarticular trauma. Primary AF seldom

happens, but when it does, it usually has an unknown cause⁽⁴⁾. People of various ages are affected by arthrofibrosis, with differing reported rates. Due to a lack of diagnostic biomarkers and a limited understanding of the pathophysiology, the risk factors and optimal therapy techniques remain mainly unclear⁽⁵⁾.

CASE PRESENTATION

A 69 year old female who is house wife complains of bilateral knee pain (L>R) which is insidious in onset and gradually progressive with symptoms like swelling, crepitus and medial joint line tenderness. Because of the pain her daily activity was hampered. She visited to hospital and was diagnosed with grade IV osteoarthritis of knee, due to which she undergone into a total knee replacement surgery, pre and post X-ray is shown in Fig1. Secondary to surgery she develops arthrofibrosis. Due to development of arthrofibrosis there was swelling and grade 2 tenderness on lateral aspect of knee and stiffness. Her manual muscle testing (MMT) and range of motion (ROM) seemed restricted. Robotics approach was used for her surgery and the implant which is been used was stryker. Since it was a comfortable position, she was laid out supine on the bed.

During the phase 4 of the physiotherapy protocol the dry needling practice was use, needle was prick in the knee shown in fig 2. As patient develop arthrofibrosis the dry needling shows the immense effect on the condition. Many articles

suggested that dry needling was effective in post TKA, but in this study dry needling shows the satisfactory results towards arthrofibrosis which develop after TKA.

Figure 2: Dry Needling Practice

FOLLOW UP AND OUTCOME

Following appropriate rehabilitation, the individual's range of motion (ROM), both passive and active, had increased by the

time of discharge. Results from manual muscle testing (MMT) both before and after exhibited an improvement in muscle strength⁽⁶⁾.

| JOINT | | AROM | | PROM | |

| 1 | +3 |

DISCUSSION

One very incapacitating consequence of total knee arthroplasty (TKA) is arthrofibrosis. It is a standard cause of TKA failure and one of the main reasons for hospital readmission. Being conscious of this, physical therapy's objective in post TKA with arthrofibrosis is to restore the range of motion, muscle strength and reduce stiffness and pain. Dry needling combine with physical therapy shows the significant improvement in arthrofibrosis. More research and Subsequent randomised clinical trials ought to delve more into the efficacy of this strategy in comparable circumstances⁽⁷⁾.

The author Kate G Hendreson ,et.al in there systemic review and meta analysis shows the effectiveness of physiotherapy after TKA. The author in there study stated that physiotherapy regime shorten the hospital stay of patient and pain, activity and range of motion is also increased by physiotherapy and hydrotherapy respectively⁽⁸⁾.

Michelle R .Rauzi, et.al in there study author shows the effectiveness of physical therapy in arthrofibrosis after TKA, the author concluded that Seventy percent of patients refuse to be operated on while sedated, the implementation of the multimodal physical therapy programme is possible for treating early-stage arthrofibrosis following total knee arthroplasty. Physiotherapy helped patient gaining confident after arthrofibrosis after TKA⁽⁹⁾.

Rodrigo Nunez Cortes, et.al in there study author discussed about the effectiveness of dry needling combine with the

physical therapy. Author states that Patients with post-TKA chronic pain had statistically significant improvements in pain, function, range of motion, and myofascial trigger points following the use of dry needling in conjunction with therapeutic activities⁽¹⁰⁾.

CONCLUSION

Together, dry needling and physiotherapy sessions have significantly improved the patient's condition after TKA, but dry needling shows the significance effect in arthrofibrosis by reducing the symptoms. At the conclusion of the session, muscle strength, range of motion were increased, stiffness and pain was reduced after the session. The efficacy of this technique in comparable circumstances ought to be further explored in future randomised clinical trials.

ABSTRAK

The purposes of this research are: (1) the influence of learning motivation on mathematics learning achievement of fifth grade students of Advent 1 Tikala Manado Elementary School. (2) the influence of learning environment on mathematics learning achievement of fifth grade students of Advent 1 Tikala Manado Elementary School. (3) the influence of learning motivation and learning environment on the mathematics learning achievement of fifth grade students of Advent 1 Tikala Manado Elementary School. This type of research is causal associative research with survey research method. The population in this research were fifth grade students of Advent 1 Tikala Manado Elementary School, totaling 42 students. The sampling technique is the total sampling technique, because the population is less than 100 people so that the entire population is sampled. Methods in data collection (1) using a questionnaire. (2) using the value of the results of the midterm exam in mathematics. Data analysis techniques used are descriptive statistics, normality test, linearity test, hypothesis testing (partial test or t test and simultaneous test or F test). The research findings show that 1) There is a positive influence of Learning Motivation on Mathematics Learning Achievement. 3) There is an influence of Learning Motivation and Learning Environment together on Mathematics Learning Achievement of fifth grade students of Advent 1 Tikala Manado Elementary School.

KEYWORDS: Learning Motivation, Learning Environment, Mathematics Learning Outcomes

A. INTRODUCTION

Each education provider in general has made efforts to improve student achievement. Many efforts have been made by schools to improve mathematics learning achievement including running additional hours or tutoring programs, and problem solving. However, the achievement of the results of each of these efforts from one school to another tends to differ due to various factors. Efforts to improve the quality of education can use the assessment of student learning achievement as a direct indicator of the quality of education. The quality of education will be higher as student learning achievement increases. Advent 1 Tikala Manado Elementary School as an institution that organizes learning activities always tries to realize high quality education. The school's high commitment to improving learning achievement is realized in various academic and non-academic activities.

Based on observations that have been made, in the fifth grade students of Advent 1 Tikala Elementary School, Manado City, there are 42 students but students who have reached the KKM (Minimum Completeness Criteria) score of less than 20% of students who have not been completed in achieving Mathematics Learning Achievement, for the KKM value applied for mathematics subjects is to reach a score of 70. This

can interfere with and hinder students in their efforts to achieve mathematics learning achievement as expected..

There are several factors of mathematics learning achievement (Goni et al., 2020). Besides that there are also factors that cause problems, one of which is learning mathematics is a scourge for students (Lumintang et al., 2023) and has implications for not optimizing student learning motivation. Motivation is one of the factors that determine the success of children in learning (Gara et al., 2022). In general, learning motivation that is not optimal often occurs in students. Students sometimes forget or even do not understand the purpose of learning at all, so their learning motivation is not optimal. Based on the facts in the field at Advent 1 Tikala Elementary School, Manado City, the learning motivation of fifth grade elementary school students who are not optimal is shown by the presence of students who are busy by themselves during lessons, secretly using cellphones, late entering class, paying less attention to teacher explanations, lack of response to material, and sleeping in class. It is suspected that this shows that low student learning motivation is one of the factors that affect math learning achievement. Low learning motivation is one of the factors that make students not achieve maximum math learning achievement.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Another factor that affects math learning achievement is the learning environment. According to (A. Rohman, 2011), the learning environment is everything that surrounds students when doing learning activities. Learning Environment factors come from the non-social environment and the social environment. The non-social environment is a physical factor which includes a place to study, the location of the school, learning tools, learning resources, school building conditions, classrooms, cleanliness of the school environment and learning support facilities, while social factors include the family environment, the student's social environment at home, and the school's social environment. Based on the facts in the field, it shows that a conducive learning environment creates a comfortable atmosphere for learning. Supportive learning environment conditions such as the availability of physical learning facilities, a comfortable place to study, a calm atmosphere, harmonious relationships with the social environment can provide encouragement to students to study mathematics so that students' mathematics learning achievement increases. Conversely, if the conditions of the learning environment are less supportive, it will reduce students' enthusiasm for learning so that students' math learning achievement will decrease.

B. METHOD

This research uses a quantitative approach with a survey research method. The survey research method is an information collection technique carried out by compiling a list of questions submitted to respondents. In this research, researchers examined the characteristics or causal relationships between all variables, without the intervention of researchers (Lestari & Yudhanegara, 2018). Causal relationship is a relationship that is cause-and-effect, one variable (independent) affects another variable (dependent) (Sugiyono, 2015). This causal associative by researchers is used to determine whether there is an influence of learning motivation and learning environment on the mathematics learning achievement of fifth grade students of Advent 1 Tikala Manado Elementary School. The population in this research were all fifth grade students of Advent 1 Tikala Manado Elementary School, totaling 42 students. The sampling technique used population samples where the number of samples is the same as the population because the population is less than 100 the entire population is used as a research sample (Sugiyono, 2015). So the sample in this research was a large number of the population of fifth grade students of Advent 1 Tikala Manado Elementary School totaling 42 students.

The source of data in the research were students of Advent 1 Tikala Manado Elementary School. Data collection using questionnaires and documents. The questionnaire used has two components, namely learning motivation and learning environment. Source of document data, namely in the form of odd semester midterm exam results for the 2023-2024 school year in mathematics subjects.

For data analysis techniques in this research, descriptive statistical analysis techniques were carried out, normality tests using the One Sample Kolmogorov-Smirnov Test with the provisions if Asymp. Sig> 0.05 then the data is normally

distributed, linearity test for testing using Test For Liniarity with the provision that if Deviation from Linearity> 0.05 then the two variables have a linear relationship, and hypothesis testing using partial test or t test and simultaneous test or F test.

C. RESULT AND DISCUSSION

Descriptive data analysis on the Learning Motivation variable shows that the range or range of values is 56; the minimum score or lowest score is 91; the maximum score or highest score is 147; then the mean data or average score is 124.12, for the score Std. Deviation or standard deviation of 13.067; and data variance or data variance of 170.742. Furthermore, descriptive data analysis on the Learning environment variable shows that the range or range of values is 60; the minimum score or lowest value is 82; the maximum score or highest value is 142; then the mean data or average score is 120.19, for the Std score. Deviation or standard deviation of 13.067; and data variance or data variance of 277.524. While the descriptive data analysis on the Mathematics learning achievement variable shows that the range or range of values is 14; the minimum score or lowest score is 80; the maximum score or highest score is 94; then the mean data or average score is 88.93, for the Std. Deviation or standard deviation of 3.460; and data variance or data variance of 11.970.

After descriptive data analysis, the analysis is continued with prerequisite testing, namely normality test and linerity test. The normality test was carried out on all data, namely Learning Motivation data, Learning Environment data and Mathematics Learning Achievement data using the SPSS 23 One Sample Kolmogorov-Smirnov test with the provisions if Asymp. Sig> 0.05 then the data is normally distributed. Based on normality testing using spss, a significance value of 0.796> 0.05 was obtained for the Learning Motivation variable. Furthermore, the significance value is 0.397> 0.05 for the Learning Environment variable. While the significance value for the Mathematics Learning Achievement variable is 0.132> 0.05. It can be concluded that the significance results of the three variables, both the Learning Motivation variable, the Learning Environment and the Mathematics Learning Achievement variable, get a significance value greater than the test criteria (sig 0.05), so it can be stated that the three data groups in the research are normally distributed.

After the data is normally distributed, then the linearity test is carried out. The linearity test aims to determine whether two variables have a linear relationship or not significantly. Testing using Test For Liniarity with the provisions if Deviation from Linearity> 0.05 then the two variables have a linear relationship. Based on data analysis using spss, the results of the linearity test of the Learning Motivation variable with the Mathematics Learning Achievement variable have a significance value of 0.362> 0.05. These results indicate that the Learning Motivation variable with Mathematics Learning Achievement has a linear relationship, because the significance value is more than 0.05. Furthermore, the linearity test on the Learning Environment variable with the Mathematics Learning Achievement variable found a significance value of 0.516> 0.05. This result shows that the Learning Environment variable and the Mathematics Learning Achievement variable have a

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

linear relationship, because the significance value is more than 0.05. After the prerequisite test is fulfilled, namely that the data is normally distributed and has linearity, then proceed to hypothesis testing.

Testing the first and second hypotheses is done with the t test to determine the partial influence of the independent variable on the dependent variable. This test is by comparing the probability value or p-value (sig-t) with the significance level of 0.05. If the p-value is smaller than 0.05 then Ha is accepted, and vice versa if the p-value is greater than 0.05 then Ha is rejected.

Table 1 SPSS output testing of hypothesis 1 and 2

| Model | | andardized efficients | Standardized Coefficients | t | Sig. |
|-----------------------|--------|--------------------------|------------------------------|--------|------|
| | В | Std. Error | Beta | | |
| (Constant) | 93.962 | 6.306 | | 14.901 | .000 |
| 1 Learning Motivation | 1.022 | .042 | .284 | 1.525 | .000 |
| Learning Environment | .219 | .033 | .192 | 1.574 | .001 |

a. Dependent Variable: Math Learning Outcomes

The results of the t test as in table 1 for testing the first hypothesis show that the Learning Motivation variable (X1) obtained a t count of 1.525 with a probability / significance value of 0.000 < 0.05. Thus, the first hypothesis is accepted, which means that there is a significant positive influence of Learning Motivation (X1) partially on Mathematics Learning Achievement (Y).

The results of this research are in line with the results of research by Vina Aulia Al Haq (2019) Where it is revealed that there is a positive influence of learning motivation on learning achievement. The results of this research also agree with Sumadi Suryabrata in (Djaali, 2015) motivation is a condition contained in a person that encourages him to carry out certain activities in order to achieve goals. Students who do not know about their purpose of learning at school will certainly affect their learning motivation. Therefore, learning motivation is one of the most important factors in influencing the learning process, because without realizing it, learning motivation can be influenced by active and passive students in participating in the learning process in the classroom. This condition can affect the learning outcomes and achievements that students will obtain. This means that learning motivation which is an internal and external encouragement in students who are learning to make changes in behavior in general with several indicators or elements that support. Students also learn without coercion so that children have the urge to always be active in learning and make it possible to improve their learning outcomes.

Furthermore, in testing hypothesis 2 presented in table 1, it can be concluded that the Learning Environment variable (X2) obtained t count of 1.574 with a probability of 0.001 <0.05. Thus, the second hypothesis is accepted, which means that there is a significant positive influence of Learning Environment (X2) partially on Mathematics Learning Achievement (Y). The results of this research support the research of Reni Puspita (2019) which states that the results of the analysis obtained that both partially and simultaneously the independent variable learning environment has a positive and significant influence on the learning achievement variable.

Therefore, the learning environment factor has an influence on the success of the learning process. According to (F. Rohman, 2018), the learning environment is everything that surrounds students when doing learning activities. Learning Environment Factors come from the non-social environment and the social environment (Nabillah & Abadi, 2020). The non-social environment formed from facilities and infrastructure (Nurfirdaus & Sutisna, 2021), namely physical factors which include a place to study, the location of the school, learning tools (Choiri, 2017), learning resources, school building conditions, classrooms, cleanliness of the school environment (Hanipah et al., 2022) and learning support facilities, while social factors include the family environment, the social environment of students at home, and the social environment of the school. A conducive learning environment certainly creates a comfortable atmosphere for learning (Arianti, 2019). Supportive Learning Environment conditions such as the availability of physical learning facilities, a comfortable place to study, a calm atmosphere, harmonious relationships with the social environment can provide encouragement for students to learn mathematics so that students' mathematics Learning Achievement increases. Conversely, if the conditions of the Learning Environment are less supportive, it will reduce students' enthusiasm for learning so that students' mathematics Learning Achievement will decrease. One of them is a school environment that is less conducive (Gampu et al., 2022).

The success of a learning process can be measured based on the results obtained by each student (Saputra, 2020). In the learning process, there is a need for learning discipline that must be considered. Teachers should not only provide teaching material to their students (Rasam & Sari, 2018). Teachers must also instill a disciplined attitude in learning to their students. Students must also have an early awareness of the importance of discipline in learning (F. Rohman, 2018) so that the learning process can take place well and can obtain learning achievements.

Furthermore, the third hypothesis testing was carried out using the simultas test (F test). The F test shows whether all independent variables have a joint influence on the dependent variable. The results of the F test can be seen in the table below:

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Table 1 SPSS output testing of hypothesis 3

| | Table 1 51 55 carpar testing of hypothesis c | | | | | |
|---|--|----------------|----|-------------|-------|-------|
| M | odel | Sum of Squares | df | Mean Square | F | Sig. |
| | Regression | 88.235 | 2 | 46.117 | 1.332 | .000b |
| 1 | Residual | 482.551 | 39 | 12.373 | | |
| | Total | 490.786 | 41 | | | |

- a. Dependent Variable: Math Learning Outcomes
- b. Predictors: (Constant), Learning Environment, Learning Motivation

Based on table 2 above, the F count is 1,332 with a probability of 0.000 which is below 0.05. This shows that all independent variables, namely Learning Motivation and Learning Environment, have a significant influence simultaneously (together) on the Mathematics Learning Achievement of fifth grade elementary school students.

Based on these results, it can be seen that Learning Motivation and Learning Environment affect the Mathematics Learning Achievement of fifth grade elementary school students. The findings of this research support the findings of (Utaminingtyas et al., 2021) which state that math learning outcomes are influenced by learning motivation and learning environment. This is in accordance with the opinion of (Purwanto, 2013), which states that the factors that influence learning can be divided into two groups, namely: Factors that come from within the student (individual factors) and factors that come from outside the student (social factors). Individual factors consist of maturity / growth factors (Syafi'i et al., 2018), intelligence, training, motivation and personal factors. Meanwhile, social factors include family factors / household conditions, teachers and their teaching methods, tools used in teaching and learning, conditions and opportunities available and social motivation. Learning activities are carried out by every student, because through learning they gain experience from the situation they face. Thus learning is related to changes in the individual as an achievement of his experience in the environment.

D. CONCLUSION

Based on the results of the research and discussion that has been stated previously, the researcher draws the following conclusions:

- 1. There is significant and a positive influence of Learning Motivation on Mathematics Learning Achievement.
- 2. There is significant and a positive influence of Learning Environmenton Mathematics Learning Achievement.
- 3. There is a significant and simultaneous influence (together) of the Learning Motivation variable and the Learning Environment variable on the Mathematics Learning Achievement of fifth grade students at Advent 1 Tikala Manado Elementary School.

Article DOI: https://doi.org/10.36713/epra16997

DOI No: 10.36713/epra16997

ABSTRACT

The purpose of this research was to identify the relationship between the gadgets use on interaction patterns and students' motivation to learn in grade five of Advent Aimadidi Elementary School. This research used a quantitative approach. The research involved students who were in grade five at Advent Airmadidi Elementary School. The research data were collected from grade five students at Advent Airmadidi Elementary School through a questionnaire that included three elements: gadget use, social interaction patterns, and motivation to learn. The data analysis began with pre-requisite testing, namely normality using the Kolmogrov Smirnov formula, and linearity with linear regression. Furthermore, hypothesis testing was conducted using the manova test to evaluate the differences between several independent variables and the dependent variable. This research shows that first, the social interaction pattern of Grade Five students at Advent Airmadidi Elementary School is influenced by the gadgets use. Second, gadget use influence learning motivation. Third, the social interaction pattern and learning motivation of grade five students Advent Airmadidi Elementary School is influenced by the gadgets use.

KEYWORDS: Gadget Use, Social Interaction Patterns, Students' Learning Motivation.

INTRODUCTION

Technological progress is something that cannot be avoided. Along with the times and scientific advances, technology will always innovate. In this era of globalization, it is very beneficial to be able to surf in cyberspace with very sophisticated technology that can be easily operated (Nainggolan, 2016). Technological innovation in the form of gadgets can be an electronic device that has practical purposes and functions to help human work (Iswidharmanjaya, 2014).

According to the development of this era, gadgets are currently much loved by the community, especially among children to adolescents (Agusli, 2008), even gadgets are not only electronic devices used as communication tools, but have turned into tools for socialization, entertainment, including learning (Kusumadewi, 2016). Gadgets can have a positive impact on their users, namely increasing imagination, training intelligence, increasing self-confidence, and developing problem-solving skills. However, on the contrary, gadgets can also have a negative impact such as decreased school quality, and can damage the physical (e.g. eyes) and mental health of its users (Rozalia, 2017).

However, in many cases, gadgets can be a bridge to social support, especially for individuals who may feel physically isolated or have difficulty interacting in person. Therefore, gadgets can influence social interaction patterns in different ways. The use of

gadgets can also be a bridge to increase insight in digging up information and can affect students' interest in learning, as written in a journal entitled "The Effect of Online Learning Media and Learning Interest on Mathematics Learning Outcomes of Grade Five Students at Public Elementary School 03 Manado" by Banobe et al. (2022), where online learning using electronic devices such as smartphones and laptops combined with interesting learning can help increase math learning outcomes in grade five elementary school students (Lasut et al., 2022).

Although, it is undeniable that gadgets can reduce students' learning interest due to the absence of guidance and supervision from parents in using gadgets, considering that elementary school children experience development in exploring and tend to be happy with new things (Witarsa et al., 2018). This makes the use of gadgets uncontrollable and affects student learning outcomes. Therefore, it is very important in education to understand the impact of software use on social interaction patterns and student interest in learning because the use of electronic devices can have an impact on the quality of student learning (Rogahang et al., 2022).

Therefore, a teacher at school is expected to create an interesting and meaningful learning environment and provide motivation so that someone can be encouraged to act to do something to achieve certain goals (Hamdu & Agustina, 2011). The discipline of

EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

learning and appreciation also play an important role in improving student learning outcomes because student learning motivation is the key to achieving optimal results (Datu et al., 2022).

AdapMoreover, the purpose of this research is to find out whether there is an influence of gadgets on the interaction patterns and learning motivation of grade five students at Advent Airmadidi Elementary School. Similar research has been conducted by (Budiwati et al., 2022) with the title "The Effect of Gadgets on Social Interaction Skills of Elementary School Students". The difference between this research and previous research is in student learning motivation where in previous studies, the research did not look for the influence of gadgets on student learning motivation while in this study, researchers want to see whether student learning motivation can be influenced by the gadgets use or not.

Through this research, it is hoped that it can provide insight to better fellow researchers on how to overcome the problem of gadget use and create a healthier learning environment for students. The researcher hopes that this research will be useful for students, teachers, and parents so that all parties can pay more attention to the impacts that gadget use can have, especially for students who are still in elementary school. Likewise, schools can pay more attention and can also take action against excessive gadget use.

METHOD

In this research using a quantitative approach with, type of causal associative research. Causal research is a type of research that aims to determine the relationship between two or more variables. The causal relationship is a cause-and-effect relationship, in which one independent variable affects another variable, namely the dependent variable (Sugiyono, 2015). This research used the survey method. This research involved all 71 grade five students of Advent Airmadidi Elementary School in the 58th batch of the 2023/2024 school year. Considering that the population was less than 100, a total of 71 students were taken as samples (Arikunto, 2014). The research data were collected from the grade five students of SD Advent Airmadidi through a questionnaire. Students provided direct data for this study through a questionnaire covering three elements: gadget use, social interaction patterns, and motivation to learn.

The independent variable and dependent variable are the two variables responsible for this study. Social interaction pattern (Y1) and learning motivation (Y2) are the dependent variables. Meanwhile, the independent variable is gadgets use (X).

Data analysis begins with prerequisite testing, namely normality using the Kolmogrov Smirnov formula, and linearity with linear regression. Furthermore, hypothesis testing was carried out using the manova test (Multivariate Analysis of Variance) or Multivariate Analysis of Variance which is used to evaluate

differences between several independent variables and the dependent variable.

The hypotheses of this study are 1) The use of tools has a significant influence on students' social interaction patterns in grade five elementary schools; 2) The use of tools has a significant influence on students' learning interest in grade five elementary schools; 3) The gadgets use has a significant impact on students' social interaction patterns and learning interest in grade five elementary schools.

RESULTS AND DISCUSSION

The results of descriptive data analysis can be presented as follows: Gadget Use Variable (X): has a value range of 39, with a minimum value of 65 and a maximum value of 104. The average is 86.056, with a standard deviation of 9.628 and a variance of 92.711. While the Social Interaction Pattern Variable (Y1): has a value range of 35, with a minimum value of 69 and a maximum value of 104. The average is 87.985, with a standard deviation of 8.107 and a variance of 65.728. While the Learning Motivation Variable (Y2): has a value range of 41, with a minimum value of 68 and a maximum value of 109. The average is 84.563, with a standard deviation of 8.656 and a variance of 75.449. These results provide an overview of how respondents rated their gadget use, social interaction patterns, and learning motivation. To get a better understanding of the influence of gadget use on social interaction patterns and learning motivation of grade five students at Advent Airmadidi Elementary School, this data will be compared with the category criteria for each variable.

The results showed that in general the gadgets use was in the high category, with 30% of respondents in that category. In addition, 25% of respondents were in the medium category, 14% in the low category, and 7% in the very low category, according to the formula proposed by (Azwar, 2011). While 21.3% of respondents indicated very high social interaction patterns, followed by 35% of respondents in the high social interaction pattern category. In addition, 20% of respondents were in the category of moderate social interaction patterns, 11% in the category of low social interaction patterns, and 4% in the category of very low social interaction patterns. While the description of learning motivation in most respondents, namely 25%, is in the category of very high learning motivation, followed by 28% of respondents who are in the high learning motivation category. Meanwhile, 23% of respondents were in the medium learning motivation category, 17% in the low learning motivation category, and 7% in the very low learning motivation category.

The data analysis of testing the first hypothesis shows the average value (mean) of the social interaction pattern questionnaire is 94.23. Meanwhile, the mean value of the gadget use questionnaire is 90.70. So it is concluded that the social interaction pattern questionnaire is greater than the average value (mean) of the gadget use questionnaire. The normality test of this research data is seen from the Asymp.Sig value. (2-tailed). If Asymp. Sig. (2-tailed) > 0.05 then the data is said to be normally distributed. The

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

data normality test uses the Kolomogorov-Smirnov test with the aim of evaluating whether the data on a variable has a normal distribution or not (Umar, 2011). The results of testing the normality of the data for the questionnaire value of social interaction patterns are 0.229 and learning motivation is 0.582 and the gadget use questionnaire is 0.306. Therefore, the three data are normally distributed because the Sig value> 0.05. After testing the normality requirements, the next test is the linerity test. In testing the linerity of the X_1Y relationship. The results of data analysis using spss show the results of the linerity test for gadget use with social interaction patterns of 0.364>0.05. This states that both variables are linear. Data that is normal and has linearity is then tested with Manova test analysis. The result for the calculation of the questionnaire value is 0.435> 0.05. So it can be concluded that there is an influence of gadget use on the social interaction pattern of grade five elementary school students.

The results of this research are supported by the research findings of Hizam & Hamdi (2020) on the Influence of Parenting on Learning Motivation and Student Learning Outcomes at Mi Yusuf Abdussatar Kediri and MI Attarbiyah Addiniyah Gersik West Lombok. In their research, the findings revealed that parenting has a significant influence on learning motivation. Therefore, this research is in accordance with the opinion of Merriam Webster (Agusli, 2008), where the gadgets use is the use of a mechanical or electronic device with practical use but is often known as a novelty. In addition, nowadays gadgets are more often a medium used as a modern communication tool. Gadgets are increasingly facilitating communication activities interactions between humans, because now communication activities are developing more advanced with the emergence of gadgets.

The data analysis in testing the second hypothesis shows that the average value (mean) of the learning motivation questionnaire is 94.23, while the questionnaire for gadget use is 90.70. So it can be concluded that the learning motivation questionnaire is greater than the average value (mean) of the gadget use questionnaire. The normality and homogeneity test of this research data is seen from the Asymp.Sig value. (2-tailed). If Asymp. Sig. (2-tailed). > 0.05 then the data is said to be normally distributed. The data normality test uses the Kolomogorov- Smirnov test. The results of testing the normality of learning motivation data are 0.582 and the gadget use questionnaire is 0.306. So that both data are normally distributed because the Sig value> 0.05. After the data is declared normally distributed, the next step is the linearity test. The result of the linearity test for the relationship between the gadget use variable and the learning motivation variable is 0.956> 0.05. This shows that the data is linear. Data that are normal and have linearity are then tested with Manova test analysis (Tabachnick & Fidell, 2013). The result for the calculation of the questionnaire score is 0.435 > 0.05. So it can be concluded that there is an influence of gadget use on the learning motivation of grade five students at Advent Airmadidi Elementary School.

The results of testing the third hypothesis with the manova test on Multivariate show that the Sig value. 0.037 for the social interaction pattern, based on the criteria shows that (0.037<0.05), and the Sig. 0.027 for learning motivation, based on the criteria shows that (0.27<0.05). So there is a difference between the social interaction pattern and learning motivation that is influenced by the gadget use. So it can be concluded that there is an influence of gadget use on social interaction patterns and learning motivation.

Basically, whether or not a person is mentally healthy is the result of a person's interaction with their environment (Hasanah, 2017). The influence of gadget use on children is felt if it affects children's conditions when learning, such as when children receive lessons at school, children tend to be discouraged. This happens if at home children play gadgets until late at night and parents do not supervise the use of gadgets while at home. On the other hand, by using gadgets, one can find news and even information more easily. Thus, the gadgets use must be used appropriately and as necessary, do not use gadgets excessively because it is not good for children's health and motor development. Based on the explanation above, it can be concluded that the results of this study are in line with the hypothesis (Ha), namely that there is an influence of gadget use on interaction patterns and learning motivation.

CONCLUSION

Based on the research findings and previous discussion, the researcher came to the following conclusions:

- 1. Social interaction patterns in grade five students at Advent Airmadidi Elementary School are influenced by the gadgets use. This shows that the gadgets use influences the social interaction pattern.
- 2. The gadgets use has an influence on students' learn interest in grade five students at Advent Airmadidi Elementary School. This result shows that the learning interest is influenced by the gadgets use.
- 3. There is an influence of gadget use on interaction patterns and learning motivation

HRM IN DYNAMIC BUSINESS CONTEXT

Ms. Madhvi

Assistant Professor, Commerce, I.B(PG)College, Panipat

ABSTRACT

Among all the resources in an organization, most important are the human resources. HRM basically ls with the efficient management of people to achieve individual and organizational goals. HRM is all about management of employees from recruitment to retirement. Earlier HR was just used to "Hire and Fire employees", but now it is becoming strategic. With different emerging trends reshaping the business these days, the role of HR managers is changing. Due to the various issues like Globalization, work force diversity, cut throat competition old practices are becoming obsolete. Technological advancements at unprecedented rate are adding fuel to the fire. Mundane tasks previously carried out by HR professionals are being automated This paper examines how the role of HRM is changing and what challenges are being faced by HRM?

KEYWORDS: HRM, Strategic, Globalization, work force diversity, Talent, Artificial Intelligence

INTRODUCTION

All the resources in an organization are waste if the human resources are not competent. The onus of using all the resources properly and studying of business environment lies with human resources. So, it is necessary that in order to stay ahead of the curve, human resources are managed properly. It is Human resource management that organizes these resources so that they perform effectively and goals of organization are achieved. HRM ensures that the organization has the right people, in the right job, at the right time. It ensures effective utilization of people towards attainment of personal and organizational goals. With the rapid changes in the business environment, the role of HRM is also changing. HRM is moving away from traditional roles which are generally outsourced. Now it concentrates on value added tasks by strategically utilizing people. It not just focuses on functional activities but makes recommendations towards processes in order to improve the ability of employees in the long run. SHRM assures that all the activities directly or indirectly contribute to the achievement of objectives. In the modern era of digitalization, technology is changing the face of HRM also.

Literature Review

Sathyanarayana (2015) focused on the changing dimensions in the global era and pointed out that Globalization in the 21st century presents distinctive HRM challenges to businesses especially those operating across national boundaries as multinational or global enterprises. So, HR professionals must play special roles in dealing with the changes and must develop specific competencies to support these roles.

Sharma (2022) described about HRM practices measures in top IT Companies and analysed the existing retention strategies in IT companies and the factors based on which employee decides to stay with the company or quit.

Angelo, Gazarolli, Corvinno & Gozoli (2022) highlighted that in the current context, it is no longer sufficient to take individual actions (often based on urgency) among the figures in the organisation who are involved in HR management-what is needed are more structured systems of action that allow for the construction of processes and actions at multiple levels in HR management. In other words, it is necessary to build and nurture constant convergence between decisions and actions at the individual, middle and top organisational levels to make them more effective based on a more consistent, sustainable, and conscious approach.

Zhang and Chen (2023) highlighted that HRM digital transformation will bring certain implications, including how to parallel and transit between the old and new HRM systems, what are the challenges of the new digital HRM, the impact on performance, and digital ethics. In the digital era, there is not enough research in the field of HRM digital transformation, which also gives us researchers more opportunities to explore.

Dede (2022) highlighted that In the Human Resources Management (HRM) processes, computers and internet has made it possible for human resources departments to assume more strategic roles to contribute to the operational results. Recruitment. success assessment, in-house transfers. remuneration, work security, personnel affairs, training and development, performance measurements, rewarding and punishment management processes were transferred to electronic systems, and it was possible to manage these processes with a holistic approach.

RESEARCH OBJECTIVE

The aim of this paper is to study how the role of HRM is changing and what are the challenges being faced by HR managers due to dynamic business environment.

٩

RESEARCH METHODOLOGY

This paper is based on secondary data collected from various sources like books, journals, newspaper, magazines. Different informative websites were also explored.

HRM in the age of AI

As the landscape of business is changing, HR is moving away from the traditional tasks like payroll processing and is becoming strategic. The main function of SHRM is to associate the HR practices with the overall organizational goals and objectives to contribute directly to the business success. SHRM focusses on creating a skilled workforce, cultivating employee engagement, and fostering a strong organizational culture to support overall organizational growth and success. SHRM acts as an interface between employees and objectives and assures that utilization of human assets leads to the achievement of objectives. In today's digital world, all the functions in business are being affected by the technology and HRM is not an exception.HR departments are embracing AI and repetitive tasks like recruitment, Performance Management, Training and Development are left to the care of AI. So, HR managers are left with more time for decision making.AI makes the recruitment and selection easy by quickly filtering, resume, cover letters. Apart from this, AI also takes care of improving the skills of employees .AI driven tools assess the knowledge of the employees and provide the content needed to upgrade their skills. Also they are used to measure the performance of human resources and assist in their career planning. AI has a huge potential in shaping the future of HR but there are a lot of challenges associated with it.

Actually human beings are emotional and social creatures and they need to be understood in order to get the things done from them. When HR activites are left to the technology, humans may feel disconnected and this may lead to loss of emotional connection with the organization. Also, in the age of AI, protection of sensitive data from unauthorized access is a big challenge.

Challenges faced by HRM

Arthur lewis observed "There are great differences in development between countries which seem to have roughly equal resources, so it is necessary to enquire into the difference in human behavior". Physical resources are totally useless without human resource component as these are transformed into productive resources by them. As the business environment is dynamic, so is HR environment. Due to continuously changing business environment, trends in HRM are also changing. It has become necessary for the managers to hire and retain talented employees. Following challenges are being faced by HRM these days.

1. Workforce Diversity: Globalisation has made the organisations heterogeneous mix of people due to entrance of workforce with different backgrounds and cultures. Significant changes have also been observed with the entry of SC, ST candidates, thanks to the protective policy of Government. More

and more females are joining the workforce due to increased career orientation which further complicates the task of HRM as females have different types of issues. Workforce diversity these days has become a necessity and assists a company to reach more people but it's a big challenge for HR to manage this diversity as Cultures around the world vary widely in their norms, values, and communication styles. It requires complete modification of old HR practices.

- 2. **Globalization:** Due to globalization, organisations develop international influence or start operating on an international scale which has increased competition. When the operations are extended beyond borders. It has effect on both current workers and also to new employees. Managers are required to think globally, but act locally. Globalization on one side gives acess a larger pool of labour and on the other hand also increases the chance of linguistic and cultural barriers which creates problems where team work is required. It is a challenging task for HR professionals.
- 3. Technological Advancements: Technology has significant impact on business operations. Keping pace with Technological advancements is a challenge. No doubt it helps in saving time and cost of production. Sophisticated technology obviously brings down the number of employees in the organizations as hazardous jobs as well as repetitive jobs are being handled by AI. This would make HR plan the training of employees in Alternate skills. A new breed of organisations is being developed which is called virtual organization. where employees are spread geographically and communicate via phone, email, and the internet. These Jobs in virtual organization require different skills which is a challenge for HR and he needs to update their skills continuously which is an additional burden for them.
- 4.**Retaining Unique Talent:** Hiring talented employees is not enough. The major challenge is to retain them. Organizations try hard to hire employees from the competitors by providing attractive opportunities to them. In private sector, people leave jobs frequently in search of lucrative jobs and retaining the employees today has become a challenge for HRM. Job satisfaction is a precondition to increase retention rate. Employees should be made to feel an integral part of the organisation. HR should provide them ample opportunities to learn and grow. There should be open communication and their efforts should be recognised. All this put a tremendous pressure on HR.
- **5. Remote Workforce Management:** With technological advancements, remote work is gaining momentum and the Pandemic has made everyone accustomed to it. No doubt, it offers flexibility but it is a challenging task for HR Managers to collaborate with employees working remotely. Not only this, the employees are often in different time zones which further complicates the task. Apart from this,problems with internet connection and other glitches cause delay in completion of work. It is a must that remote work policy in tune with organizational objectives should be framed.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

6. **Stress Management:** In today's worls ,every person is under stress. Stress is a root cause of many problems like fatigue, decreased concentration, loss of memory and most importantly decreased productivity. So to reduce turnover and improve the overall productivity , it is a must that employers should try to keep the workplace stress free which is quite challenging. Besides ,motivating the employees, employers should encourage workplace wellness, arrange counselling sessions and social activites for the. If employees are happy, the achieving organizational goals will become easier and turnover rates will be reduced.

CONCLUSION

Physical resources are totally useless without human resource component as these are transformed into productive resources by them. HRM is about guiding human resources so that they perform to the best of their abilities with a high degree of morale. Management of people has always been difficult but the challenges that have been thrown by dynamic environment Workforce diversity, technological advancements, economic liberalization and globalization have made it even more complicated. Artificial intelligence is transforming the HR function. In order to survive in this competitive era,, Human Resource Managers will have to be well versed with Social ,Technical and Conceptual skills and should frame effective strategies to address these challenges.Old HR strategies need to be redefined and employees well being should be prioritized.Beyond doubt, Technology can take care of repitive tasks but understanding the feelings and emotions of human beings is imperative for the success of business which still needs to be done by humans beings.

A SCOPING REVIEW TO DETERMINE THE EFFICACY OF MUSCLE ENERGY TECHNIQUE ON LOW BACK PAIN

Divya Kumari¹, Pinky Dutta², D. Arnold Nikhilesh³

¹Master of Physiotherapy student, Garden City University, Bengaluru

- ² Associate Professor, Garden City University, Bengaluru
- ³ Assistant Professor, Garden City University, Bengaluru

Article DOI: https://doi.org/10.36713/epra16955

DOI No: 10.36713/epra16955

ABSTRACT

Background: Low back pain has shown detoriation in patient health. Absenteeism has found to be increased in work place. There is a high need to find a effective treatment for the cause.

Objective: The aim of the study is to find out whether muscle energy technique is effective in case of low back pain.

Study design: Systemic review

Method: Around 65 articles were screened for the study with the help of google scholar, PubMed and Cochrane. Out of which 10 articles were considered for the review on the basis of inclusion criteria. These articles were verified and read thoroughly.

Results: Muscle energy technique came out to be effective in treatment of low back pain. As it aimed to decrease pain and improve functional disability.

Conclusion: This study conclude that the muscle energy found to be effective in individual with low back pain. It helps in improving the joint range of motion, managing the pain, improves stability, strengthening weak muscles. MET has shown effect in LBP in chronic condition, involvement of SI joint, mechanical LBP and also non-specific low back pain.

KEYWORDS: low back pain, muscle energy technique, non-specific back pain

INTRODUCTION

One of the most common musculoskeletal disabilities is low back pain. Acute low back pain is considered when the pain is of less than 4-6 weeks. Around 80% individual experience low back pain at some point of time. People with wide variety of profession like heavy labour, repetitive stress and other experience acute low back pain which include labours, teachers, computer professionals and students. There are many factors for low back pain which can be various risk factors such as age, lifestyle, gender, psychosocial profile, pain perception. [1] Mostly acute low back pain results from sprain, strains and mechanical loading in back. Low back pain varies it may be dull, sharp achy or stabbing. For identifying low back pain, we can use questionnaire to identify. It is one of the common reasons for patient to visit to a physiotherapist. [2]

The causes of low back pain can be mechanical, non-specific or can be due to trauma. Overuse of soft tissue is the most common cause of low back pain. Muscles which are associated are mainly quadratus lumborum, iliopsoas, erector spinae group. Piriformis, hamstring, quadriceps and iliotibial band. All these muscles could develop shortening which can be the cause for pain in lower back. Due to stiffness in some muscles also pain is felt while doing movements.

Approaches use by physiotherapist to manage low back pain is to by using a variety of interventions such as various modalities, exercises like resistance training, manual therapy and neuromuscular re-education. [3] Many other techniques are

found to be effective in low back pain like myofascial release and interferential modality and TENS but this treatment didn't show a long-term effective improvement in the condition. In manual therapy we have many techniques that are considered to be beneficial in treating low back pain which include soft tissue manipulation, myofascial release technique, functional techniques and strain counterstain technique, muscle energy technique. [4]

Muscle energy technique is a manual treatment that involves voluntary contraction of muscle in a controlled contraction at varying level of intensity against a distant counter force. This is an active technique in which patients also have to actively participate during the treatment unlike static stretching. Autogenic inhibition and reciprocal inhibition are the concepts on which muscle energy technique is based upon. This technique is useful for muscle which are shortened, contracted and spastic. Strengthening a physiologically weakened muscles in reducing localized edema and relieve passive congestion. And also, useful in mobilizing an articulation which has mobility restriction. MET has been found to be effective in lumbopelvic pain. [5]

Muscle energy technique is found to be effective in low back pain but there is no strong study to prove its effectiveness so the study needs to be done to know which all parameter supports the effectiveness of MET in low back pain.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

As no thrusting is used in this procedure, has very low likelihood of producing any complications. It has been stated that MET improves tissue extensibility, strengthen the muscles, stimulated mechanoreceptors and also improves the restricted joints. Strengthening physiologically weakened muscles in reducing localized edema and relieve passive congestion. And also, useful in mobilizing an articulation which has mobility restriction. MET has been found to be effective in lumbopelvic pain.

Methodology

Articles selected for the review were 11.

Source of evidence searched

- Google Scholar
- PubMed

Cochrane

Inclusion criteria

- Articles sorted from year 2004 to 2022.
- Articles included low back pain complaint
- Articles included Muscle energy technique as an intervention.
- Limited to human

Exclusion criteria

- No case report was included.
- No articles included before 2004.
- Articles with low back pain along with lumbar dysfunction were discarded.
- Articles with surgical pain and degeneration pain leading to LBP were not included.
- Muscle energy not a secondary intervention.

FLOW CHART

Around 65 articles were found according to the keywords used. (google scholar, PubMed, ScienceDirect)

Selected articles after reading the abstract and screening of the article.

$$n = 28$$

Articles excluded which were not accessible as whole.

$$n = 9$$

Based on exclusion criteria and inclusion criteria articles excluded

$$n = 20$$

Articles included in the study.

$$n = 11$$

REVIEW OF LITERATURE

- 1. TeUaBA, UzorCU, et al. conducted research with the aim of determining the efficacy of positional release technique and muscle energy technique on acute and subacute low back pain. 44 volunteers were chosen for the study, and they were split into two groups: the first group got the MET approach, and the other group got the positional release technique. It was discovered that
- both strategies worked well for treating low back pain. To treat low back pain, any of the treatments can be utilized on its own. [3]
- 2. Prachi N. et al did research in which they have used muscle energy technique for quadratus lumborum in patients with acute LBP. 40 subjects who were diagnosed with acute low back pain were included. In which they have included two group in one group that is

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

the controlled group received interferential modality and interventional group muscle energy technique with interferential modality. The group with MET + IFT found to be effective statically significant difference showed decreased in pain and increase in spinal range of motion. [5]

- 3. Priyanka rishi et al. did research on non -specific LBP they included MET along with a supervised exercise and MET on quadratus lumborum and iliopsoas. These two interventions were compared in their research with 30 participants. Significant improvement was found in MET with supervised exercise. [6]
- 4. Marzouk A. Ellythy et al. they did research on strain counter strain along with muscle energy technique. Their research includes 30 subjects both male and female age ranging from 35 to 55 years divided into half one receiving MET and the other one received strain counterstains for 4 weeks. data was recorded and calculated. According to the data interpretation and analysis it came out that both techniques showed significant results. And are effective in managing low back pain. Great improvement in joint range of motion and muscle extensibility was shown with muscle energy technique. [7]
- 5. Usman abba Ahmed et al. have done a systemic review on effectiveness of muscle energy technique in mechanical low back pain. They performed a systemic search of online databases with help of keywords and collected the articles. 25 thousand plus articles were selected then screening was done and finally 15 articles were selected in which 11 articles met all the inclusion criteria and eligibility. These 11 articles were used for analysis and discussion. It came out that muscle energy technique is standalone treatment in many articles for treatment of MCLBP. They included further study to be conducted to see long term effect. [8]
- 6. Capt. Eric Wilson et al. conducted a prospective pilot clinical trial. They carried on this research with 2 group. One group received moist heat + muscle energy technique followed by exercises. And the second group carried on with moist heat and randomized placebo manual therapy followed by exercise. The exercise program they included were drawing hip maneuver, Romanian dead lift, simple supine obliques, standing extension and dumbbell overhead. The result showed that MET group showed supervised as compared to other. [9]
- 7. Noelle M. Selkow et al. did a pilot study in which their objective was to know the effect of the MET they compared this with other group that is the sham group. It was double blinded study; subjects were randomly assigned by the third party in the group. According to the result the main finding was that the group with MET as intervention showed decreased in VAS score after the treatment. They concluded that MET can be used to treat low level of pelvic pain. There are number of limitations in this research. Further study has to be done with multiple MET treatment in one session to determine

- how many treatments are effective in pain management. [4]
- 8. Praveen Kumar et al. did research on 30 subjects with hamstring tightness for chronic LBP. Outcome measures used were pre and post knee range of motion and NPRS. 3 groups were made, in which one received muscle energy technique, second one received PNF stretching and the last one received static stretching for hamstring. These three groups have equal number of subjects. All the three group show significant improvement in NPRS score and Range of motion. And hence these therapeutic manoeuvres can decrease pain, increase range of motion. [2]
- 9. Wahyuddin et al. did a pilot study on 21 subjects and compared the treatment intervention between muscle energy technique and LSE. The outcome measures were pain intensity, disability level and kinematic changes. This was the first study to compare the immediate changes in subjects after the MET and LSE intervention given. They concluded that the difference in effect were not found. Although the study shows increased in active side bending. Decrease in pain intensity and also in disability level.
- 10. Supreet Bindra et al. did study on 30 subjects in which 24 were females and 6 males between 30 to 50 years reported with chronic LBP. 2 groups were made group 1 received Muscle energy technique and group 2 received conventional therapy. Outcome measures were Visual analogue scale, Oswestry disability index and limb length measurement treatment were given for 6 days, pre and post measurement were taken. This study show that MET along with conventional therapy shows better management. He concluded it by saying that therapeutic management can help in treating LBP. [11]
- 11. 11. Ganesh Sundaram Subramanian conducted research to demonstrate the efficacy of MET in conjunction with Tens for treating lumbar strain-related low back pain. Based on predetermined criteria, a total of thirty volunteers—a mix of male and female—without a history of musculoskeletal diseases were chosen. Three groups of participants were created: the first group witnessed TENS treatment, the second group underwent MET treatment, and the third group received treatment that combined TENS and MET. The combined TENS and MET treatment shown significantly higher gains in lowering pain and disability compared to either treatment alone. The results showed a decrease in both pain and disability across all groups. These results imply that using TENS and MET together may be very beneficial. [12]

DISCUSSION

Low back pain occurs in mostly every individual and are often overlooked in youth. This causes more strain over the back muscle which may gets shortened. Low back pain can occur due to many other reasons like sacroiliac joint dysfunction and lumbar dysfunction. Weakening of core muscles also can cause low back pain. Working on quadratus lumborum and iliopsoas can eventually helpful in managing the acute pain. With regard

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

to muscle energy technique, it is one of the interventions that is found to effective in managing low back pain, improving disability level. Decreasing the pain intensity and providing stability. Praveen Kumar et al. mentioned that muscle energy technique on hamstring helps in relieving low back pain and increase in range of motion. [2] Noelle M. Selkow et al. concluded that muscle energy technique has a short-term effect, he mentioned further study on long term effect on low back pain in muscle energy technique. The data from the systemic review cleared that muscle energy technique with supervised exercise program is effective. MET is useful in chronic low back pain whether specific or non-specific mechanical low back pain and SI joint dysfunction. There was not much evidence regarding acute low back pain for MET further more studies can be done to show the effectiveness of muscle energy technique on acute low back pain. MET with strain and counter-strain also shows a great outcome. [4] TeUaBA et al. find out that MET is independently enough for the management of low back pain The outcome measures used were VAS, Oswestry disability index and range of motion. All these shows significant improvement after MET. [3] The present study describes the positive effect of muscle energy technique in regard to low back pain. It improves functionality, decrease disability, stability and increase strength to the muscle. Prachi et al. mention that MET on quadratus lumborum in patients with acute low back pain found to be effective and helpful in decreasing pain intensity. MET on quadratus lumborum, iliopsoas and hamstring are more effective in LBP cases. As muscle energy technique is manual therapy training and practicing in this area as physiotherapist can help many individuals with low back pain without wasting much energy. It would be one of that treatment that can be solely effective in case of treating patient with low back pain

CONCLUSION

This study conclude that the muscle energy found to be effective in individual with low back pain. It helps in improving the joint range of motion, managing the pain, improves stability, strengthening weak muscles. MET has shown effect in LBP in chronic condition, involvement of SI joint, mechanical LBP and also non-specific low back pain. The data from the systemic review cleared that muscle energy technique with supervised exercise program is effective. MET is useful in chronic low back pain whether specific or non-specific mechanical low back pain and SI joint dysfunction. There are few articles to support MET in acute condition of low back pain. a study has to be done for acute condition. MET along with the conventional therapy and supervised exercise also has shown good result. Further study can be made for MET along with other manual therapy to show its effectiveness. Also, we need to look for in how many days MET can show a good improvement in an acute case.

DOI No: 10.36713/epra16971

ABSTRACT

Scholars from all around the world have always been interested in the life of Mahatma Gandhi since it is a classic and unique subject. They have studied him from a wide range of sources and discussed him in a variety of ways in various contexts. These include articles, special workshops, international or national conferences and symposia, biographies and autobiographies, books by well-known authors, journals, and his works (a publication of the Government of India). The trilithon framework of truth, love, and non-violence that characterizes Gandhian philosophy is how the understanding of Gandhian management is expressed. The good of an individual is contained in the good of all, while the good of all is contained in the good of individuals. "We are developing, 'we are progressing' and 'we are shining' often used synonymously, without any regard to queries.

- **❖** Who is developing?
- **❖** What is developing?
- * How are we developing?
- How much have we moved towards our destination? and
- **What means we are using for development?**

This paper is an attempt to apply principles of Gandhian Thoughts, skills, and approaches to manage the organization to make a sharable life world.

KEYWORDS: Management, Managerial Skills, Self-Search, Principles, Deadly Sins.

INTRODUCTION

Dispelling contempt for the past and dispensing with arrogance of the present if we look without prejudice into the gestalts of Gandhian management the world can still learn important lessons to avoid pitfalls and avert crisis and catastrophe in the future. He studied the genesis of the problems, the ground realities, and legal implications; only then did he decide methods and means to attend the goal. He always reinvents himself and his environment by applying checks and balances to adapt to the changes without changing the rock-solid premises of his philosophy. His approach to manage men, machine, materials, and methods were not derived from any legislation, force, or fright, but were distillated of humanitarianism and an outcome of his self-searching spirit.

THOUGHTS OF GANDHIAN MANAGEMENT Human

Gandhi stresses the need for holistic and integrated development of every individual, at a micro level and the macro level development of community and welfare state. He considered no work as inferior and believed that working with dignity should be the only way to make one's dignity of life and work. He realized that human resources are the fountain head of all activities and therefore management must frame people centric policies and the state must promote programmes that support enhance the quality of human life. He relied on intrinsic qualitative worth of human capital.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Figure 1 Thoughts of Gandhian Management

Self-Search

Self-Search, Gandhi believed, is the first training stage to prepare oneself for service to society. If we cannot perform our own work, how do we serve others? He clipped his hair and washed his cloth not because he could not afford charges of barber or washer man but because he did not want to be helplessly dependent. He willingly cleaned toilets at colonies of lower esteemed inhabitants. No order, only an act for and with inner Sympathy. Disorder can be cured by personal act. One learns to discard the crutches of dependence on others, if one tries to become self-restrained and self-reliant for one which needs to have moral uprightness, intellectual, self-assurance, emotional maturity, and physical fitness.

HR Services

He was seriously concerned with the problems of workers and working class because he was against the mechanistic approach of treating humans as a spare part of a machine. He held that workers need to be trained and retrained to improve their efficiency and thereby productivity in their job. In matter of workers participation in the decision-making process, he believed that management must solicit workers consent on the issues and matters that concerned him directly or even indirectly since they also stake their fate in success and failure of business. Non-violence does not only mean non killing nonaggression or non-injury but also being free from prejudice, jealousy, hatred, pride, and ego mechanism. Since this element can cause some kind of violence towards one's own self and others.

Truth

Science is nothing but a search for truth. Truth not only in the physical world but in the world of logic, psychology, behavior and so on. A manager must manage the affairs of the organization without ego, pride, prejudice, jealousy, hatred, coercion, fear etc. Absence of love and truth on any pretext and the presence of violence in any form would interfere with SWOT analysis and PEST analysis and would jeopardize setting of smart goals.

Without any official position and power, he remained an unchallenged and unmatched leader who controlled the psyche of millions of people from all rungs of society for about half a century.

Ethics

Both macro and micro level ethics would contribute to more secure, secular, and negotiable management. Individuals should practice micro-level ethics, while the entire organization and the community should practice macro-level ethics.

Communicative parlance

The above ethics are possible when there is communicative parlance. It brings out institution from autocratic framework. However, with the help of equity sharing – togetherness and by respecting the spirit of resilience democracy of the institution becomes possible.

Mass Mobilization (Satyagraha)

Gandhi's capacity to convert (arriver) into a navigable canal people through mass movement and protests with minimum collateral damage, arouses as much inquisitiveness as his capabilities to mobilize masses. The purpose of civil disobedience as Gandhi perceived is not to destroy the person but to abolish institutions or systems that work against human values and humans. We are all aware of his large-scale civil disobedience movements across the provinces of Transvaal and Natal. India movement of Dandi yatra against Salt Law. Reaching the Dandi Sea on 5th April 1930 he picked a handful of salt from the seashore, thus breaking the law. This was the beginning of the countdown and the meltdown of British colonial rule in India. He knew that disparity due to differences in wealth and wisdom would continue but he was well convinced that by one's sacrifice and dedication, it would not be difficult to form a cohesive group of people ready to come forward to work for human dignity and rights of the people.

Gandhian Skills for Managers

Gandhi had extraordinary leadership skills which should be

practiced by corporate managers of the 21st Century to ensure sustainable development.

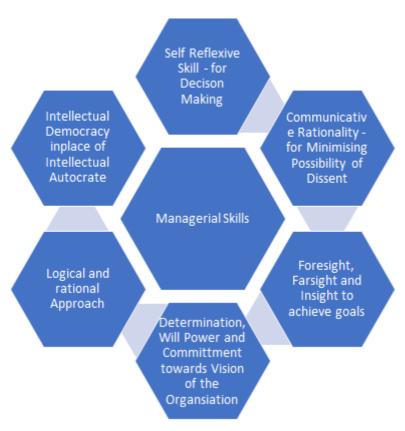

Figure 2 Gandhian Skills for Managers Principles of Gandhian

Management

Mahatma Gandhi gave seven principles of Management which can be applicable for holistic development of an individual, Business Organisation, and society, they are the foundation for effective quality leadership, Service, Team Building, Organisational alignment, and other strategic development. What we need according to Gandhian Principles are depicted below in figure No 3.

Business should be coupled with ethics

Natural resources are limited and under those circumstances anyone possessing more than they require obviously denies others their rightful share. "There is enough for our need but not for our greed." Its observance can guide one to lead a life of simplicity. It also inculcates in the mind of the follower of this pledge the propensity to develop and the attitude of detachment, one which could gradually be extended to developing greater levels of tolerance, there by extending for harmony and peace. The dream he wanted to realize was not the spoliation of private

property owners, but to restrict its enjoyment to avoid all pauperism, consequent discontent and the hideously ugly contrasts that exist today between the haves and have nots. Machinery must have Human face. The present use of machinery tends more to concentrate wealth in the hands of a few in total regards of millions of men and woman whose bread is snatched away. Economics that hurt the moral well-being of an individual or a nation are immoral and sinful. Thus, the economics that permit one country to prey upon another are immoral. It is sinful to buy and use articles made by sweated labor. The economics that disregard moral and sentimental considerations are like wax works that being lifelike still let the life of the living flesh. At every crucial moment, these newfangled economic laws have broken down in practice and the nation or individuals who accept them guiding maxims must perish.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

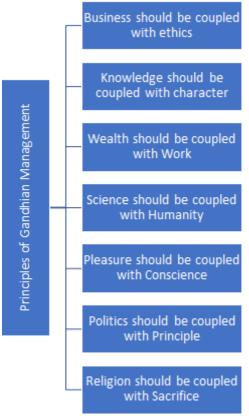

Figure 3 Principles of Gandhian Management

Knowledge should be coupled with character

Knowledge without character is a power for evil only, as seen in the instances of so many "talented thieves and gentleman rascals in the world" when setan comes disguised as a champion of liberty, civilization, culture and the like, he makes himself almost irresistible. All of us of our learning or recitation of Vedas, correct knowledge of Sanskrit, Latin, Greek, and what will not avail us nothing if they do not enable us to cultivate absolute purity of heart. The end of all knowledge must be building up of character and innocent youth is a price-less possession not to be squandered away for the sake of momentary excitement, miscalled pleasure. As per Gandhian scheme of things the hand will manage tools before it draws or traces the writing, the eyes will read the pictures of letters and words as they will know other things in life, the ears will catch the names and meaning of things and sentences. The whole training will be natural, responsive, and therefore, the quickest and the cheapest in the world. If we are to reach real peace in this world and if are to continue a real war against war, we shall have to begin with children; and if they will grow up in their natural innocence, we won't have to struggle, we won't have to pass fruitless idle resolutions, but we shall go with love to love and peace to peace, until at last all the corners of the world are covered with that peace and love for which consciously or unconsciously the whole world is hungering. Real education consists in drawing the best out of yourself. What better book can there be than the book of humanity?

Wealth should be coupled with Work.

Gandhi was regarded as a social scientist, for he never used any Adhoc method in his search for solution the problems which he has not encountered in his own life. He studied the genesis of

the problem, ground reality and legal implications; only then he decided methods and means to act and attend the goal. His approach for managing men, machine, materials, and methods were not derived from any legislation, force or fright but were the distillate of humanitarian thrust and an outcome of selfreflection, self-actualization and introspection sustained by inner force and inner self discipline. Every man has an equal right to the necessaries of life even a bird and beasts have and since every right carry with it a corresponding duty and the corresponding remedy for resisting any attack upon it, it is merely a matter of finding out the corresponding duties and remedies to vindicate the elementary fundamental equality. The corresponding duty is to labor with my limbs and the corresponding remedy is too non-cooperate with them who deprives me for the fruit of my labor. America is the most industrialized country in the world and yet it has not banished poverty and degradation. That was because it neglected a universal workforce and concentrated power in the hands of the few who amassed fortunes at the expense of many. The result is that its industrialization has become a menace to its own poor and the rest of the world. If India must escape such disaster it had to imitate what was best in America and other western countries and leave aside its attractive looking but destructive economic policies. Therefore, real planning consisted in the best utilization in the whole workforce of India and distribution of raw products in India in her numerous villages instead of sending them outside and rebuying finished articles at fabulous prices. If true and non-violent combination of labor would act like a magnet attracting to it all needed capital, Capitalist would then exist only as trustees, when that joyful day dawns, there would be no difference between capital and labor. The labor

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

will have ample food, good and sanitary dwellings, all necessary education for their children, ample leisure for selfeducation and proper medical assistance.

Science should be coupled with Humanity

The world has changed drastically in the last sixty years. An objective view of this issue will convince one that while the external circumstances have undergone sea change, mankind's essential tendencies, aspiration, reaction, desire, cravings, including instincts have continue to be doggedly unchanged. While inventions and discoveries have changed the face of the world for the better, they have also exponentially increased the potential for the disaster and untold harm.it is from this viewpoint that science without

Humanity and its relevance directly address the core of human nature, and will forever be valid, relevant, and enlightening to those who follow. It provides an all-time blueprint for happiness, joy, peace, love, and truth to prevail over all humankind with its diverse communities, beliefs, and weaknesses. Gandhi objects to the craze for machinery, not machinery as such the craze is for what they call labor saving machinery. Men go on "saving Labor", till thousands are without work and thrown on the open streets to die of starvation.

Pleasure should be coupled with Conscience.

An innocent youth is a priceless possession not to be squandered away for the sake of momentary excitement, miscalled pleasure. Drugs and drinking are the two arms of the devil with which he strikes his helpless victims into stupefaction and intoxication. People drink because of the conditions to which they are reduced. It is the factory laborers and others that drink. They are forlorn, uncared for and they take to drinking, smoking is a vice. It deadens One's conscience and is often worse than drinking that it acts imperceptibly. It is a habit which is difficult to get rid of when it seizes fold of a person. It fouls the breath, and sometimes even causes cancer. Drinking, Smoking, Prostitution, drugs all these vices are for momentary excitement and root causes of all physical problems. Everyone indulged in these vices is aware of the fact. One should never act against self-conscience for momentary enjoyments. You should always respect your inner voice.

Politics should be coupled with Principle.

Power is of two kinds; one is obtained by the fear of punishment and the other by the arts of love. Power based on love is a thousand times more effective and permanent than one derived from fear of punishment. In matters of consciousness, the law of majority has no place. Possession of power makes man blind and deaf; they cannot see things which are under their very nose and cannot hear things which invade their ears. There is thus no knowing what power intoxicated governance may not do. So patriotic man ought to be prepared for death, imprisonment, and similar eventualities. Whilst power, super imposed, always needs the help of police and military, power generated from within should have little or no use for them. All is well with you even though everything goes deadly wrong if you are spare for yourself. Reversely, all is not well with you although everything outwardly may seem to go right if you are not spare

with yourself.

Religion should be coupled with Sacrifice

The one religion is beyond all speech. Imperfect men put it into such language as they can command, and their words are interpreted by other men equally imperfect. Whose interpretation is to be held to be the right one? Everybody is right from his own standpoint, but it is not impossible that everybody is wrong. Hence the necessity of tolerance, which does not mean indifference to one's own faith, but a more intelligent and purer love for it. Tolerance gives us spiritual insight, which is as far from the south. True knowledge of religion breaks down the barriers between faith and faith. It is not necessary for toleration that I must approve of what I tolerate. I heartily dislike drinking, meat eating and smoking, but I tolerate theses in Hindus, Mohmendens and Christians, even as I expect them to tolerate my abstinence from all theses, although they may dislike it. Religion which takes no account of practical affairs and does not help to solve them in no religion.

CONCLUSION

Management in all organizational activities is the act of getting people together to accomplish desired using available resources efficiently and effectively. The Management comprises planning, organizing etc., The Mahatma Gandhi knew the importance of management very well. He applied it in his every Ashram and in constructive work. He taught his every associate about management. Mahatma Gandhi wrote about management in this word; "I am sorry to say that the management of these houses is far from satisfactory and consequently they are not doing a swinging business. And I should like educated traders who have a good knowledge of English to go there, mix with the people, see the secret of their success, and then return to India, open branches in England and India in an improved style. I have been told that we stand a fair chance of doing good business selling carved wood and stones and feathers in England. Everyone knows how many feathers are daily wasted away in every part of India. Since they are a saleable commodity in Europe, we are wasting away real wealth simply through sheer ignorance or indifference attitude. And he regards as soldiers in this campaign. It is not possible for you to reason things for yourselves. You have come to the Ashram because you have faith in the management. That does not mean faith in me. I am not a manager. I am directing the movement as far as ideals and general direction are concerned. Your faith therefore must be in those who are managers for the time being

To apply the Gandhian model would require a revamping of current management practices. This is true that Gandhi has nowhere formulated a theory of management as such. Hence, a model can be evolved from his social philosophy, Principles, Ethics, and his thoughts.

ABSTRACT

The aim of this study is to prepare Guda amalaka Yoga as per classical methods and to do its organoleptic and Physico-chemical analysis. Guda amalaka yoga was prepared as per the classical method of Modaka Kalpana and was evaluated for its organoleptic and Physico-chemical characteristics. The final product Guda amalaka yoga was of desirable consistency and quality. The general method of preparation of both Vati and Modaka are similar, but they do differ in the size. When there is a need of administration of more quantity of medicine, Modaka form is preferred. From the pharmaceutical study of Guda amalaka yoga, it can be concluded that, the proper Paka Lakshana for attaining Modaka consistency is of 2-3 threads.

KEYWORDS: Guda amalaka yoga, Gada Nigraha, Pharmaceutical Study

INTRODUCTION

The basic pillars of Ayurvedic pharmaceutics are Pancha Vidha Kashaya Kalpanas. It includes five main types of pharmaceutical preparations like Swarasa, Kalka, Kwatha, Hima and Phanta. There are various other preparations like Vati, Taila, Avaleha etc. which comes as Upakalpanas to these basic preparations. According to Acharya Sharangadhara, Modaka is considered as asynonym of Vati Kalpana. Drugs taken in the form of Churna along with a base drug like jaggery are the main active ingredients in the preparation of Modaka. It can be prepared with Agni Samyoga in Gudapaka method and without Agni Samyoga by doing Mardana in Khalwa Yantra. The formulations prepared with Agni Samskara will be having comparatively more shelf life than the one without Agni Samskara. Also, formulations prepared with Agni Samskara will be comparatively lighter for digestion. In the preparation of Guda amalaka yoga, the Guda Paka method was adopted. The appropriate Paka Lakshana for Modakas can be ascertained only after doing pilot studies as it can vary from formulation

to formulation based on various factors like ratio of the base with that of powdered ingredients etc. In the present study of Guda amalaka yoga, 2-3 threads consistency was observed as appropriate for obtaining the Modaka consistency.

MATERIALS AND METHODS

Raw drugs required for the preparation of Guda amalaka yoga were collected from Local market of Puri, Odisha and authentified by the experts of Dravyaguna department and Rasa Shastra and Bhaishajya Kalpana Department, Gopabandhu Ayurveda Mahavidyalaya, Puri.

Pharmaceutical study was done in the laboratory of PG Department of Rasa Shastra and Bhaishajya Kalpana, Gopabandhu ayurveda Mahavidyalaya, Puri.

Khalwa Yantra, mixer grinder, sieves, clothes, weighing machine, appropriate vessels, spoons, gas stove as fire source andwide mouthed vessel were used for this practical.

Ingredients of Guda amalaka yoga

Table 1: Ingredients for the Formulation Guda amalaka yoga

| Drug | Botanical Name | Family | Part Used | Quantity |
|---------|----------------------|---------------|-----------|----------|
| Amalaki | Embilica officinalis | Euphorbiaceae | Fruit | 2 kg |
| Guda | - | - | - | 1500 g |

The raw drug was removed of impurities, weighed, and then separately crushed in the Khalwa Yantra to make coarse powder. This was again powdered in mixer grinder and sieved to obtain the fine powder which was then weighed, labelled, and stored in air-tight containers for further use.

For the preparation of Guda amalaka yoga, the powder of the ingredient was measured as per requirement. The vessel for keeping the final product was removed of moisture content, smeared with ghee, and kept ready. The jaggery was crushed in Khalwa and then melted in sufficient quantity of water, filtered,

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

and kept for Paka. Stirring and heating was continued till the jaggery syrup turned thicker and finally attained 1 thread consistency. Immediately flame was switched off and vessel was removed from stove and the finely powdered drugs were added little by little with continuous mixing until homogenous mixture was obtained. Then with hands smeared with ghee, it was rolled into Modakas of approximately 6gm size before it cooled down and after drying, stored in air-tight containers.

Precautions to be Taken

One should be keen in observing for 2-3 threads consistency and immediately the flame should be switched off. The powders should be mixed vigorously with minimum spillage. Also, the Modakas should be immediately rolled as it gets hardened on cooling.

RESULT

Table 2: Observations on Powdering of Raw Drugs

| Total quantity taken | 2000g |
|-------------------------|--------|
| Total quantity obtained | 1560g |
| Loss | 440 g |
| Total time duration | 2 days |

Table 3: Observations on Guda amalaka yoga Nirmana

| Total quantity taken | 3060 g |
|-------------------------|-----------------------|
| Total quantity obtained | 3000 g |
| Loss | 60 g |
| Total time duration | 1 hours and 5 minutes |

Table 4: Organoleptic Characteristics of Guda amalaka yoga

| Colour | Dark brown |
|-------------|---|
| Smell | Smell of Guda and Amalaki was prominent |
| Taste | Bitter and astringent along with |
| | Sweet taste |
| Consistency | Solid with smooth texture |

DISCUSSION

While powdering the raw drugs, wastage was seen in Amalaki. When powdering of Amalaki was done, the loss was seen as dusting of the powder in the mixer grinder and while sieving, some parts remained in the form of rough particles due to the presence of fibre content in it. The thread consistency observed while preparing Guda amalaka yoga was of 2-3 thread. One should be alert during this stage as, if the Paka is prolonged, it can affect the final consistency of the product. Also, if the flame is switched off before proper 2-3 threads consistency, the final product will be softer, and the firmness won't be there. The Modakas should be rolled immediately after mixing of the powdered ingredients as it gets hardened quickly on cooling. Also, while placing the Modakas, sufficient space should be there between each other. This plate also should be smeared with ghee to prevent the sticking of Modakas to the plate. The final product was dark brown. The usage of Guda and powdered drug like Amalaki may be the reason for this colour. The product had Kashaya-madhura Pradhana Rasa. The Kashaya Rasa might be contributed by Amalaki which is the major constituent of the formulation. Madhura Rasa was faintly noticeable due to the presence of Guda(jaggery). The formulation Guda amalaka yoga had characteristic smell of the ingredients and the smell of Amalaki & Guda was easily identifiable. The consistency of the formulation Guda amalaka yoga was solid and hadsmooth texture which shows the proper

binding of the ingredients in the formulation.

CONCLUSION

The formulation Guda amalaka yoga is mentioned in the text Gada Nigraha, Mutrakruchhra rogadhikar Adhyaya. The present study shows that the proper consistency of Guda amalaka yoga can be obtained by doing the Guda Paka till 2-3 threads consistency and then homogenously mixing the fine powders and rolling into Modakas before cooling. The practical difficulty while preparing Modaka is assessment of Paka Lakshana and the fast hardening of the contents on cooling. Hence, one should be prepared for rolling the Modakas immediately for a successful practical.

SUMMARY

Introduction: Scaphoid fractures are the most common fractures of the carpal bone and commonly occur in young males. Inadequate treatment of these fractures commonly leads to pseudarthrosis, resulting in pain and significant disability. Tenderness to palpation and/or pain with axial loading of the thumb should be managed as if it were a scaphoid fracture until proven otherwise.

Objective: to detail current information related to scaphoid fractures, description, epidemiology, etiology, presentation, diagnosis, treatment and prognosis.

Methodology: a total of 37 articles were analyzed in this review, including review and original articles, as well as clinical cases, of which 20 bibliographies were used because the other articles were not relevant to this study. The sources of information were PubMed, Google Scholar and Cochrane; the terms used to search for information in Spanish, Portuguese and English were: fracture, scaphoid, carpal bones, trauma, surgery.

Results: Scaphoid fractures account for 2% to 7% of all fractures and 60% to 70% of carpal bone fractures. They are infrequent in children with approximately 3% of all pediatric hand and wrist fractures. Non-displaced fractures have high healing rates with cast treatment. Radiographs may miss fractures up to 25% of the time. Physical therapy is important in both operative and nonoperative treatment.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Conclusions: Knowledge of the clinical presentation, diagnosis and treatment of scaphoid fractures is of utmost importance, because sometimes this type of fracture can go undetected on radiographs, which can lead to complications such as pseudarthrosis. The diagnosis of scaphoid fractures is sometimes complicated, so when there is clinical suspicion, appropriate complementary examinations should be performed to better determine the pathological condition, as is the case of computed tomography. Conservative or surgical management will depend on the type of fracture. Smoking cessation is recommended to improve fracture healing and physiotherapy both after surgical and non-surgical treatment.

KEY WORDS: fracture, scaphoid, carpal bones, trauma, surgery.

INTRODUCTION

Scaphoid fractures are the most common fractures of the carpal bone and commonly occur in young men; however, the incidence in women has increased in recent years. Studies show that about 2.4% of all wrist fractures are scaphoid fractures, with an incidence rate of 1.47 per 100,000 people per year. They are infrequent in children with approximately 3% of all pediatric hand and wrist fractures. Tenderness to palpation and/or pain with axial loading of the thumb should be managed as if it were a scaphoid fracture until proven otherwise or the diagnosis is evidenced by serial radiographs or more advanced commonly imaging.Inadequate treatment pseudarthrosis, resulting in pain and significant disability. The diagnosis of fracture may be more difficult at times, mostly when presenting with apparently normal radiographs at the time of diagnosis. Clinical intuition may be augmented by physical examination and complementary tests available at the time, such as ultrasound, in the emergency department, however, definitive diagnosis should be made with CT and MRI to verify the presence of displacement. The vast majority of displaced scaphoid fractures will require surgical treatment to reduce the risk of pseudarthrosis. Non-displaced fractures have high healing rates with cast treatment, however, they require prolonged periods of immobilization(1-7).

METHODOLOGY

A total of 37 articles were analyzed in this review, including review and original articles, as well as cases and clinical trials, of which 20 bibliographies were used because the information collected was not important enough to be included in this study. The sources of information were Cochrane, PubMed and Google Scholar; the terms used to search for information in Spanish, Portuguese and English were: fracture, scaphoid, carpal bones, trauma, surgery.

The choice of the bibliography exposes elements related to scaphoid fractures; in addition to this factor, the description, epidemiology, etiology, presentation, diagnosis, treatment and prognosis of the disease are presented.

DEVELOPMENT

Anatomically, the scaphoid has 2 poles, proximal and distal, and a waist between them. The blood supply to the scaphoid comes mostly from branches of the radial artery, mainly the dorsal carpal branch. These penetrate to the dorsal crest and supply up to 80% of the proximal pole by retrograde flow. The second site of blood supply comes from the superficial palmar arch, a branch of the volar radial artery, which penetrates to the distal tubercle and irrigates the distal pole. The retrograde behavior of the blood supply implies that fractures at the waist

of the scaphoid leave the proximal pole at greater risk of avascular necrosis. Ligamentous insertions of the scaphoid include the radioscaphoid ligament, which variably inserts on the ulnar aspect of the scaphoid waist, and the dorsal intercarpal ligament, which provides the main vascularization to the scaphoid(8,9).

The scaphoid, the largest bone of the proximal carpal row, plays an important role in the transfer of compressive loads from the hand to the forearm, as well as being vital in maintaining carpal stability. Scaphoid fractures can be divided according to the main mechanisms and can be traumatic or stress-induced. The origin is usually due to a fall on the outstretched hand, which generates a forceful hyperextension of the wrist(1,10-12).

Scaphoid fractures account for 2% to 7% of all fractures and 60% to 70% of carpal bone fractures. Individuals may have wrist pain following a fall on the outstretched hand. Axial loading of the wrist in forced hyperextension and radial deviation may result in fracture when the scaphoid impacts the dorsal border of the radius. Contact sports and traffic accidents are also common causes. Tumors and infections are infrequent causes of pathological scaphoid fractures (12,13).

Scaphoid fractures can generate pain and swelling at the base of the thumb at the anatomic clog. Affected individuals have wrist pain following a recent history of trauma. The pain is usually located on the radial side of the wrist and is worse with mobility, and there may be decreased range of motion of the wrist. It is recommended that the wrist examination should have the "look, feel, move" pattern. Deformity is unlikely unless a related carpal dislocation is present. The distal radius, ulna and metacarpals should be palpated to assess for associated injury. Occasionally it may also be accompanied by pain on palpation over the scaphoid tubercle on the volar aspect, feeling a bony prominence radial to the radial carpal flexor at the level of the distal palmar crease. The scaphoid compression test is the most sensitive and involves placing the examiner's index finger and thumb on each pole of the scaphoid and compressing, usually this maneuver generates pain in the presence of a fracture. Pain at the anatomical snuffbox with ulnar deviation of the wrist also provides a signal suggestive of a scaphoid fracture(12,14).

The diagnosis of scaphoid fractures is sometimes complicated. X-rays can miss fractures up to 25% of the time, resulting in unnecessary delays and immobilization. Computed tomography, magnetic resonance imaging, bone scintigraphy and ultrasound provide greater accuracy and faster results. Ultrasound is promising because of its availability and accuracy. MRI is considered the best for occult fractures and

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

related injuries. MRI or computed tomography (CT) scans may be important for individuals with positive clinical findings. Repeat radiographs can be performed if necessary. CT scans and the use of 3D printing may have an impact on diagnosis and surgical planning(5,15).

Classification

Based on fracture pattern (Russe):

- Horizontal oblique.
- Transverse.
- Vertical oblique.

Displacement based:

- <u>Stable</u>: nondisplaced fractures that do not exhibit any steps in any plane.
- <u>Unstable</u>: joint step displaced 1 mm or more, scaphosemilunate angulation > 60° or radiosemilunate > 15°.

Based on location:

- Tuberosity: 17% to 20%.Distal pole: 10% to 12%.
- Waist: 66% to 70%.
 - Horizontal oblique: 13% to 14%.
 - Vertical oblique: 8% to 9%.
 - Transverse: 45% to 48%.
- Proximal pole: 5% to 7%(9).

The differential diagnosis can be made with distal radius fracture, other carpal bone fractures, scapholunate dissociation, De Quervain's tenosynovitis, osteoarthritis, tendinitis, lunate dislocation, carpal radial flexor tendon rupture, carpometacarpal joint arthrosis and Kienböck's disease(9,12,16-18).

Figure 1. Anteroposterior, profile and oblique radiograph of the wrist, after surgical treatment of scaphoid fracture with Hebert screw.

Source: The Authors.

Conservative Management

Fractures that are not displaced and are within the distal third of the bone can be managed conservatively with cast immobilization. There is divergence of opinion on whether a long or short arm cast is optimal and whether a thumb spica should be made to immobilize the thumb. However, at present there is insufficient evidence to clarify which alternative is better. Commonly, the cast is worn for six weeks and at this time repeated radiographs are taken to assess healing. The time to heal is different according to the specific location of the fracture. The distal third would be expected to heal within 6 to 8 weeks, the middle third between 8 to 12 weeks and the proximal third between 12 to 24 weeks. The relative increase in time to recovery when moving from distal to proximal is secondary to subdued blood supply and retrograde arterial flow(19,20).

Surgical Treatment

The indications for surgical fixation are:

- Transcaphoid perilunate dislocation.
- Fractures of the proximal pole
- Comminuted fractures.
- Displacement greater than 1 mm.
- An intrascaphoid angle greater than 35 degrees.
- A radiolunate angle of more than 15 degrees.
- Non-displaced waist fractures in people who need to return quickly to work/sport.
- Pseudoarthrosis or avascular necrosis.

Surgical fixation involves the placement of screws or K-wires and can be done percutaneously or through an open procedure. Open fixation is preferred in pseudarthrosis, as well as fractures that have significant displacement.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

Technique

Screw placement is important and should be in the middle third of the central axis of the scaphoid, generating greater stability, as well as decreasing union time and improving alignment.access to the scaphoid can be done through a dorsal or volar approach, depending on the approach, the surgeon's preference, type and location of the fracture. The volar approach goes in the interval between the radial carpal flexor and radial artery and is the effective approach for waist and distal pole fractures. It has benefits such as allowing exposure of the entire scaphoid and radioscapholunate ligament, as well as being less detrimental to the vascular supply. As for the dorsal approach, it is preferred for fractures of the proximal pole, but it places the vascular supply at greater risk of injury, compared to the other access(12).

Treatment of scaphoid pseudarthrosis can be managed in several ways. Initially open reduction and internal fixation with bone grafting may be an alternative. A bone graft can come from the distal radius or the iliac crest. It is important to know that failure of surgical treatment of established pseudarthrosis of the scaphoid bone is more associated with smoking. Alternative treatments include total or partial arthrodesis, excision of the proximal fragment and radial styloidectomy or carpectomy of the proximal row. The latter are considered rescue procedures and are usually considered when there is arthritis compromising the radiocarpal joint(12,14).

Scaphoid fractures with a displacement of less than 1 mm have a healing rate of about 90%. The prognosis is worse when the fracture is displaced, undiagnosed or if the fracture is in the proximal pole. If left untreated, it is possible to generate chronic pain, in addition to a decrease in range of motion and grip strength. Physical therapy is important in both surgical and nonsurgical treatment. Physical therapy allows the affected individual to regain range of motion and wrist strength(12).

CONCLUSIONS

Knowledge of the clinical presentation, diagnosis and treatment of scaphoid fractures is of utmost importance, because sometimes this type of fracture can go unnoticed in radiographs, which can lead to complications such as pseudarthrosis. The diagnosis of scaphoid fractures is sometimes complicated, so when there is clinical suspicion, appropriate complementary examinations should be performed to better determine the pathological condition, as is the case of computed tomography. Conservative or surgical management will depend on the type of fracture. Smoking cessation is recommended to improve fracture healing and physiotherapy both after surgical and nonsurgical treatment.

FUNCTIONS OF MYTHOLOGICAL CONCEPT UNITS IN FAIRY TALE DISCOURSE

Usenova Venera Jengisbaevna

PhD Student Karakalpak State University named after Berdakh, Nukus, Uzbekistan

ABSTRACT

This article delves into the linguistic functions of mythological conceptual units within fairy tale discourse. It explores the mythologeme as a unit encapsulating the mythological worldview with distinct semantics inherent to the mythological system. Drawing from the perspectives of various scholars, it elucidates the rich and sacred origins of the mythological worldview, intricately intertwined with the cultural contexts in which it is articulated across diverse discourses.

KEY WORDS: myth, mythological view, mythological concept, fairy tale, discourse, mythologeme, linguoculturology

INTRODUCTION

In the realm of mythological perspectives, the essence of a myth is articulated through the conceptual units that embody it. Each of these units carries its own purpose, such as depicting objects and events. As our exploration pertains to the realm of language and literature, we shall examine them distinctly.

Within the discourse of fairy tales, mythological conceptual units serve several pivotal roles, facilitating the creation of a distinctive ambiance, unraveling layers of meaning, and exerting influence upon the reader or listener. Stylistic tropes, akin to symbols and metaphors, are instrumental in conveying the essence of these conceptual units. They often serve as poignant reminders, fulfilling symbolic roles while harboring deeper metaphorical significance. For instance, the motif of the "dragon" in fairy tales symbolizes the arduous challenges to be surmounted.

Numerous mythological symbols within fairy tales embody the dichotomy of good and evil, thus injecting tension and dynamism into the narrative, enabling readers to grasp the conflict and its resolution more vividly.

Mythological elements within fairy tale discourse serve a clandestine and elusive function, subtly drawing the reader's attention towards the unexplored and enigmatic facets of mythology.

The mythological framework aids in delineating the thematic elements of fairy tales; for instance, motifs of gods or heroes signify potency and supernatural prowess.

A mythological element often serves as the pivotal twist in the plot, instigating suspense and paving the path for subsequent events.

Hence, these roles can be delineated based on individual fairy tales and their mythological constituents. The alignment of these elements with the narrative is imperative for enriching the story's substance and fostering intrigue within the realm of fairy tales

LITERATURE REVIEW

Mythological concepts serve as building blocks for creating a unique world. They are magical (mythical) creatures, gods, and noble places, and they can be used only if they give a special appearance to the fairy tale. In addition, the problems of verbalization of these cultural changes were also studied in Arnold van Gennep's book "The Rites of Passage". He was a French ethnologist and folklorist who contributed to the study of mythological elements in culture. [Gennep 1999:19].

The importance of education and upbringing is one of the most discussed issues in national pedagogy. At the same time, mythological concepts are often used to introduce ethical lessons and truths of life into the fairy tale discourse. It gives the readers the necessary information to compare the good qualities or bad qualities shown by the heroes of the fairy tales and to train them, and at the same time, it is clear that they should learn to avoid experiencing these negative actions in life. In the scientific work "Morphology of the Folktales" by V. V. Propp, tasks representing educational and upbringing issues in mythological concept units are given.

Characters with mythological characters can develop the taste of the reader. Encounters with surprising creatures or events can change the character, making him stronger, smarter, or kinder. Of course, these issues belong to society. It is closely related to the clarification of social norms. Klaus Schmitt is a German scientist explores this more widely in his work "Critical Communication Studies: Essays on Communications, History, and Theory in America".

The roles of mythological concepts in the discourse of fairy tales in the linguistic analysis of linguoculturology and structural linguistics have been studied by a number of researchers. Some of them are engaged in the tasks of mythological interpretations in literature and fairy tales. It is worth pointing that these issues were studied in English by V. V. Propp, Y. Kampferbek, K. P. Muller, A. van Gennep, K. Schmidt, in Karakalpak J.X. Khoshniyazov, S.S. Kazaqbaev, Sh.M. Kunnazarova and G.K. Kdırbaeva.

RESULTS AND DISCUSSION

Mythological concept units in the discourse of fairy tales perform various linguistic tasks, enrich the language and add semantics to the text. Linguistic functions of such units are as follows:

Vocabulary enrichment: mythological concepts are used to add new terms and vocabulary to the text. This may include wonder, supernatural creatures, artifacts, place terms, and other terms. "The ancient forest was inhabited by mystical creatures known as Sylvanfolk, who guarded the sacred groves." (The Enchanted Woodland Quest).

Enriching imagery: the use of mythological images gives the text subtlety and an attractive visual appearance. Characteristics of gods, sacred places, and events can create visual images. "The dragon's scales glittered like a thousand jewels as it soared through the starlit sky." (Starlight Serenade of the Crystal Dragon).

V. V. Propp was the first to interpret the structure of fairy tales in terms of structural technique in his study "Morphology of fairy tales". In this case, the emphasis is on the structural and functional field, and it is possible to define certain functional elements and discuss the structure.

Metaphorization and symbolization: mythological concepts are mostly used as metaphors, symbols or allegories. They can give deeper meaning to the text and express abstract ideas: "The phoenix, rising from the ashes, symbolized the eternal cycle of renewal and rebirth." (The Phoenix's Lament: A Tale of Renewal).

Identify the theme and ideas: mythological concept units clarify the theme and ideas of the tale. For example, the themes of good and evil, struggle and victory can be embodied with the help of mythological characters: "The phoenix, rising from the ashes, symbolized the eternal cycle of renewal and rebirth." (The Oracle's Prophecy: Unraveling Destiny).

Forms linguistic style: the use of mythological concepts can give a story a unique style. For example, depending on the chosen myth, the text may be archaic, familiar, or vice versa, this language may be close to the vernacular: "With a voice as ancient as the hills, the sorcerer chanted the incantation that would unlock the portal to another realm." (The Sorcerer's Chant: Echoes of Another Realm).

Mystery and devotion: the introduction of mythological elements into the text of the fairy tale gives mystery to the content of the text and creates dramatic action. Readers or

listeners can be introduced to the undiscovered side of mythology with great interest: "As the night descended, the eerie howls of the werewolves echoed through the haunted castle, sending shivers down the spine." (Moonlit Howls: Secrets of the Haunted Castle).

Plot structuring: it is possible to use mythological concepts in plot construction and development. A set of challenges that contains elements of surprise can also advance the story: "To obtain the Golden Fleece, the hero faced a series of trials, each more perilous than the last, guided by the advice of the wise old centaur." (The Hero's Odyssey for the Golden Fleece)

Enrichment of the speech of the characters: it is possible to use a special language to enrich the speech of the heroes who have mythological characters. This includes archaic word phrases, invocations of gods, prayers, etc.: "The elfin princess spoke in a language infused with archaic beauty, her words carrying the grace of ancient poetry" (The Elfin Princess's Enchanted Dialogue).

Creation of phrases: some mythological concepts can be the basis for idioms and phrases that are recognized in a certain tale, affecting the linguistic richness of the text: "Facing the monstrous challenge, the knight remembered the sage advice of his mentor: 'To conquer the Hydra, strike at its heart." (Hydra's Heart: Wisdom of the Knight's Mentor).

Imparting emotional cues: mythological elements can enhance emotional cues in a story. This can be achieved by using mythological creatures or events that evoke feelings of excitement, pleasure or unease: "As the god of thunder unleashed his wrath, the heavens themselves trembled, emphasizing the cataclysmic power he wielded." (Thunder God's Wrath: Tremors in the Heavens).

William Hogarth points out a number of peculiarities of the study of mythological concepts in literature, folklore and culture in his work "The Analysis of Beauty: Written and Illustrated by William Hogarth". It is also possible to analyze the functional aspects of mythological concepts. In addition to studying questions about the impact of mythological concepts on language and culture in this literature, it also mentions researchers in the field of linguoculturology. [Hogarth 1987:54].

These linguistic functions of mythological concepts together help to form a rich, multi-faceted language in fairy tales. These discussed examples are used in place of various linguistic tasks of mythological concepts in fairy tales, adding clarity and depth to the texts. In these examples, it was revealed that some linguistic tasks of mythological concepts in the terms of fairy tales are gathered into mythologemes, in which it was shown that book lovers have the possibility of creating new content from the images of the mystery.

S.A. Kosharnaya pays more attention to the term mythoconcept, and defines it as a creative element of the composition of the mythological view of the universe. The

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

uniqueness of the mythological concept is explained by its mythological nature: "Mythological concepts are presented as archaeological evidence, and it is clear that the semantic reconstruction of the ancient cognitive paradigm of the ethnos will not be complete without them". [Kosharnaya 2002: 86].

There are several indicators representing mythological concepts, which describe the cognitive consciousness, knowledge and experience of a certain ethnic group in the mythological worldview. S.A. Kosharnaya used them as an "archaeological" source-mythological concept, later Lévi-Strauss, N.S. Popov, O.I. Bikova and O.N. Rakinina called them miphemas as a denotative component with the displacement of semas, T.V. Tritenko defines this concept as a mythologeme (a unit related to language). According to this researcher, "mythological concept is one of the structural divisions of the general field of understanding of mythology, and it is an intellectual picture determined by how things are connected with each other and how they are grouped." According to the author, the verbalizers of mythological concepts are mythologemes. We, in turn, agree with V. Tritenko's opinion and use the terms mythological concept (mythoconcept) and mythologeme in the following places of our research.

From the special terminological dictionaries and scientific works of researchers, we quote the several definitions of mythologeme that are similar to a certain degree, some of them consist of contradictory opinions. In other words, mythologeme - (ancient Latin $\mu\tilde{\upsilon}\theta\sigma\varsigma$ - narrative, legend, and ancient Greek $\lambda\acute{o}\gamma\sigma\varsigma$ - thought, reason) is a term used to describe a mythological plot, scene, image, universal character and a unit that is widely used by the nations of the world.

[https://www.textologia.ru/slovari/literaturovedcheskieterminy/mifologema/?q=458&n=348];

According to K.G. Yung's definition: mythologeme "... permanent and popular constructions that are repeated in social fantasy, which generally represent reality in the form of concrete-sensory symbols and various creatures that are accepted as very real by the archaic consciousness ". [Yung 1991: 31];

According to A.K. Bayburin: mythologeme "... is a term with variable content, used to define a unit of mythological concept. <...> Considered separately from the motif of folklore, mythologeme is a fractional unit with a high taxonomic level. [Bayburin 1991:78];

According to G. I. Isina, a mythologeme is "... a meaningful unit of linguistic consciousness, a product unit of an unconscious society, stored in the national memory of a special ethnic group, and based on the evolution of a specific national culture, it is described separately in the form of its linguistic nature". [Isina 2015: 65];

G.K.Kdırbaeva suggests that the mythologeme is "... an independent unit of the mythological system, on the basis of

which sacral, cognitive, symbolic signs are a lexical unit that illuminates the full content". [Kdırbaeva 2022:940].

Verbalization of mythological concepts is carried out by mythologemes, and determining the exact definition of the term "mythologeme" is one of the actual issues in the field of philology, because, as we have seen, there are still ambiguous definitions. The formation of this scientific question is related to the need to form the "mythological worldview of Karakalpak", and on this basis it is clear that national characteristics are defined in cultural type dictionaries.

CONCLUSION

Thus, the discourse surrounding the mythological worldview, mythological cognition, national-cultural concepts, and mythologies' role in shaping linguistic consciousness presents a multifaceted exploration of the intricate interplay between culture and language. We concur with the notion of adopting modern approaches and employing systematic methodologies in research, recognizing the reciprocal influence between them. Consequently, the linguistic consciousness of individuals possessing distinct linguistic backgrounds perceives the world through diverse lenses, thereby revealing both shared commonalities and unique nuances in apprehending the world through language.

To conclude, culture is a complex phenomenon, and it is not only a phenomenon that belongs to society, but also an evaluation system of an individual who owns a special culture. In this, any culture finds its own unique meaning in the language. Mastering only the form of the language, not taking into account the cultural content of the language, causes students to deviate from the norms of the culture they are learning, and as a result, it causes mutual disagreements between the speakers of both languages.

In summary, culture embodies a complex phenomenon, serving not merely as a societal construct but also as an evaluative framework for individuals within a particular cultural milieu. Within this framework, language assumes a pivotal role, imbuing each culture with its distinctive essence. Neglecting the cultural content of language acquisition leads to a divergence from the norms inherent in the culture being studied, potentially fostering discord between speakers of different languages.

In the context of languages originating from disparate cultural contexts, students must cultivate intercultural communication skills sensitively attuned to linguistic and psychological intricacies. Such proficiency entails a nuanced understanding that extends beyond the surface-level attributes of diverse cultures, encompassing their interrelations. Intercultural communication, therefore, necessitates the ability of individuals to transcend their cultural confines and engage in communicative interactions without compromising their cultural identities. The cultivation of such competence hinges upon a profound comprehension of various academic disciplines and the intricacies of cultural-linguistic constructs

ABSTRACT

OBJECTIVE: This study explores the effectiveness of cognitive stimulation therapy to improve cognition in people with dementia. SELECTION METHOD: PubMed, Google Scholar, Science Direct, Cochrane from these databases, articles were searched using keywords.

SELECTION CRITERIA: The articles were collected based on the inclusion criteria focusing on the cognition in people with dementia.

RESULTS: The preliminary results suggested that the tasks like measuring attention, memory, speed processing, executive functions, and speed processing following the cognitive stimulation treatment (CST). Evidence shows that CST promisingly improves people's cognitive functions as measured by the (MMSE) mini-mental state examination. This test investigates memory, orientation, language, and visuospatial abilities. CST has led to significant improvements in quality of life, along with care givers. Analyses suggests CST is equally effective as many dementia drugs.

CONCLUSION: Cognitive stimulation therapy improves cognition in people with dementia and benefits the quality of life. Evidence from several studies indicates that cognitive stimulation therapy along with multiple component interventions improves not only cognition but also the language, behavior, and quality of life of people with dementia. Results from interviews of CST sessions found key themes, including positivity being in the groups, due to a supportive and good environment, improvements in confidence, mood, and concentration.

KEY WORDS: Non-Pharmacological intervention, Cognitive stimulation therapy (CST), People with Dementia (PwD), Cognition, Older adults, assessment scales, Quality of life (QoL).

1. INTRODUCTION

Dementia is a progressive neurocognitive disorder that leads to deterioration in cognitive function. It is a global challenge, with increasing life expectancy along with the number of people suffering from chronic health conditions associated with aging. It affects memory, orientation, language, learning capacity, comprehension, judgement, and self-care abilities. (1)

Over 50 million people around the world are now living with dementia, according to World Health Organization (WHO) the number of people living with dementia worldwide is projected to reach 71.2 million (8.1 % of women and 5.4% of men over 65 years) by 2030 and could exceed 106.8 million by 2050.⁽²⁾ Dementia is characterized by disorders of thinking and consciousness, personality changes, abnormal behavior, and reduced ability to perform daily activities. Additionally, up to 90% of people with dementia exhibit behavioral and psychological symptoms, such as anxiety, depression, agitation, delusions, apathy, wandering, sleep disturbances, and

irritability and they negatively affect quality of life, which not only present an economic and social burden, but also a burden for those living with the disease, their family and careers. People with dementia are more likely to suffer depression than other older adults, moreover depression was associated with an increased risk of dementia. (1) Some studies showed that depression is the key factor to progress the mild cognitive impairment to dementia. (3)

As per the evidence suggested, options for treating dementia include pharmacological and non-pharmacological interventions. (1) Efficacy of current pharmacological therapy for dementia is very much limited and hence research focused on non-pharmacological treatment. The practice of physical activity is one of the variables that should not be forgotten in this condition, it has an improvement in the QOL older people as well as a guarantee of good aging in terms of health, yet there is good evidence that some non-pharmacological treatments can improve cognitive functions and physical, social

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

interactions, activities of daily living skills and quality of life of PwD, with the benefit of some being cost-effective. (4) Therefore, social psychological interventions have attracted the attention of many researchers because of their efficacy and low cost. Among the various cognitive interventions available in dementia cognitive stimulation therapy is the intervention with the most robust. (3)

Cognitive stimulation therapy (CST), which originated in the UK, is a people –oriented social psychological, kind of group-based intervention on the principle of "use it or lose it". The central assumption underlying cognitive stimulation is that a lack of cognitive stimulation can hasten the decline in both normal aging and dementia. First developed in 2001, CST was designed to improve the cognition of people with dementia through experiential learning, recognizing people, objects, and remembering the past. CST has been the focus of many recent studies of dementia interventions. Therefore, people with dementia can benefit from CST due to its adaptive and long-term use nature. Cognitive stimulation therapy is a brief, evidence- based group programme developed for people with mild to moderate dementia. (3)

According to Spector et al, in the year 2003 evaluated a group CST programme in a single-blind, large multi-centre, randomized controlled trial and demonstrated the importance of two measures of cognitive functions in the Mini-Mental State Examination (MMSE) and cognitive subscale of the Alzheimer's Disease assessment scale (ADAS- Cog). CST provides a stimulating environment for dementia patients. The activities are chosen for participants according to their needs and ability and their interest is stimulated so they can participate actively. CST can delay further decline of cognitive function and improve the patients through stimulation. CST involves a series of engaging activities carried out in small groups that stimulate memory, thinking, and orientation, including 14 structured thematic cognitive stimulation activities, (two per week, each 45 min in duration). Each activity includes 10 minutes warm up and 10 minutes conclusion (class summary), and 25 minutes of cognitive stimulation. (2) A wide range of activities are included to ensure cognitive stimulation, such as

mental stimulation, thoughts, promoting new ideas, associations, a focus on rather than facts, respect and person centredness, and maximising the potential of people with dementia. (14)

Currently, CST is the only psychosocial intervention recommended by the NICE Guidelines in the UK. CST has been translated into atleast eight languages and used in 24 countries, indicating its efficacy. In a Cochrane review, Aguirre et al; confirmed its positive impact on cognitive function, depression, activities in daily life (ADL), and behavior of people with dementia. Subsequently, evidence showed that CST is associated with changes in patterns of neural activation in cognitively important brain regions among healthy older adults and in people with mild cognitive impairment. (12)

2. METHODOLOGY SEARCH METHOD AND ELIGIBILITY CRITERIA

A thorough literature search was carried out using PubMed, Google Scholar, Science Direct, Sage Journal, Research Gate. Unpublished English articles were removed. Dementia, Cognition, Older Adults, Cognitive stimulation therapy were the keywords used in this search to find relevant articles. The articles were collected in full text. A total of 36 articles were collected and only 16 articles are used in this study for the research.

STUDY SELECTION

INCLUSION CRITERIA

- Articles explaining about Dementia, Cognition and Cognitive stimulation therapy were included.
- Older adults.
- Articles published in recent years.
- Full text articles.
- Articles published in English.

EXCLUSION CRITERIA

History of recent trauma and fracture

3. REVIEW OF LITERATURE

4. DISCUSSION

The aim of the review was to explore the effectiveness of cognitive stimulation therapy in patients with mild to moderate dementia. Evaluating the number of studies included in this review, there is a need for additional research in the use of CST in different cultural setting and in the use of CST. It is an evidence-based intervention for dementia that is widely implemented in the health care settings. The practice of physical activity is one of the variables that should not be forgotten in this condition, it has an improvement in QOL older people as well as a guarantee of good aging in terms of health, yet there is good evidence that some non-pharmacological treatments can improve cognitive functions and physical, social interactions, activities of daily living skills and quality of life of PwD, with the benefit of some being cost effective. The results are promising on the tasks measuring attention, memory, speed of processing, executive functions following the cognitive stimulation programs. For instance, some intervention programs were administered in groups along with structured sessions targeted a specific cognitive function whereas other programs were unstructured format sessions and targeted multiple cognitive functions.

The findings showed that 40 sessions (8weeks) of cognitive stimulation therapy resulted in a significant improvement of behavioral symptoms and cognitive in patients with mild to moderate dementia (Spector et al., 2001) After 8 weeks of cognitive stimulation treatment, the patients showed the decrease in dementia severity, a better outcome results in memory, planning, abstraction, and visuospatial ability. Thematic activities like physical games, sound, word association, childhood, using objects, word and team games etc. When implementing CST, multi-component interventions should be used whenever possible, which will be more effective than single- component interventions. CST usually includes 14 group sessions, twice a week for about 45min each, (Rai et al.,2018) however treatment outcomes achieved by longer duration programs appear to be better (Sun et al., 2022), such as maintenance cognitive stimulation therapy, which continues

for an additional 24 weeks of CST sessions after completing a 7-week CST program (Orrell et al., 2014)

Xue Chen Mmed et al., in the year September 2022 studied about the effectiveness of cognitive stimulation therapy (CST) on cognition, quality of life for patients living with dementia. The authors carried out a randomized control trial; The study was to assess the effectiveness of CST for improving cognition, quality of life (QoL) people with dementia. Totally 10 studies CST for improving cognition, QoL, behavior, language and activities of daily living were evaluated. The authors concluded that CST improved the cognitive ability, QoL, language and activities of daily living of dementia. However, the effect of neuropsychiatric symptoms on dementia requires further exploration.

A feasibility randomized control trial of individual cognitive stimulation therapy for dementia, (Luke Gibbor et al.,2021) identified with 33 PwD were taken in the study and randomly assigned with CST of 14 session with 45mins of treatment as usual TAU over seven weeks, and the results indicated with high attendance to sessions, with significant improvement in CST compared to TAU. So, the authors concluded that with 14 session programme of CST delivered a feasible benefit to cognition and improved the quality of life in people with dementia. Adelina Comas-Herrera et al., in the year May 2016 studied about the Cognitive Stimulation Therapy (CST), a summary. The authors carried out randomized controlled trial (RCT). The first trial found that CST worked as well as standard anti-dementia medication and the second study found that CST had benefits for people in addition to those from the antidementia medication, they were taking CST has also been evaluated in an RCT in which 236 people with dementia, who had previously completed 14 sessions of standard CST, took part. MCST helped improve the quality of life of those taking part: this was observed from self-reports by people with dementia at 6 months, from reports by their family or other at 3 months. This may be for improvements in cognition already having been achieved by CST.

Volume: 10| Issue: 5| May 2024|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2024: 8.402 || ISI Value: 1.188

LIMITATIONS

Limited generalizability of the findings to a broader in cognitive deficits in dementia population.

In addition, few studies reported follow up data, so there is no high-quality evidence to corroborate the long-term benefits of CST on cognitive function, to provide a reliable reference for improving the quality of life of dementia patients.

CONCLUSION

Research from multiple studies suggested that Cognitive stimulation therapy improves the cognition in people living with dementia. The result showed that CST can improve the cognitive ability and QOL of PwD and reduce their depression. It also had a significant effect on ability to perform daily living activities and language in PwD, so the articles supported the feasibility and effectiveness of CST for PwD. Therefore, more rigorous and in-depth studies are needed.

CONFLICTS OF INTEREST

The authors declare no conflict of interest.

ABSTRACT

The concept of Positive Psychology is comparatively new in the realm of psychology. It is related to the happiness of an individual or a group. Happiness or the frequent positive affective state of mind also impacts mental well-being and, hence, an individual's mental health and development. The educational system developed by Rabindranath Tagore in Santiniketan dated back to 1901 in the form of a Brahmacharya Vidyalaya had the prime aim of "joy of mind" of the students. Closeness to nature, classes in the open air, multidimensional curriculum were some of the significant principles of the educational institution established by a Rabindranath Tagore. All these principles certainly aim to strengthen the students' happiness base. More than a century before, Tagore had applied these principles of positive psychology to his educational experiments. The present study is a humble effort to trace Tagore's educational efforts related to happiness, positive psychology, and positive schooling.

KEYWORDS: Positive Psychology, Positive Schooling, Rabindranath Tagore's educational Practices

INTRODUCTION

Nowadays, education in almost all nations is developing based on the principles of educational psychology. Various psychological theories and principles are applied to make the educational system more effective and fruitful. At the same time, the student's achievement is also being focused on while using psychological approaches in education. Curriculum development, teaching methods, selection of books, evaluation process, grading system, remedial lessons, and other fields of education are developed based on the principles of educational psychology to make education joyful and effective. Mainly in the early days of learning, the principles of positive psychology are being emphasized for developing a positive attitude toward education.
