## ABSTRACT

*Uzbekistan's tourism industry is undergoing significant changes driven by digital transformation, offering new ways for travelers to plan, experience, and share their journeys. This study investigates the specific trends, challenges, and opportunities associated with the digitalization of tourism in Uzbekistan. Utilizing a comprehensive analysis of current literature, qualitative interviews with local industry experts, and quantitative data from surveys, the research identifies key trends such as the increasing use of mobile technology, the development of smart tourism infrastructure, and the growing influence of social media and virtual experiences.*

*The study also highlights critical challenges faced by Uzbekistan, including the digital divide, concerns over data privacy and security, and the need for improved digital literacy and skills among tourism professionals. Additionally, the research emphasizes the importance of integrating digital technologies with traditional hospitality practices to maintain personalized service quality.*

*Opportunities presented by digital transformation are substantial, enabling enhanced tourist experiences, the creation of innovative business models, the promotion of sustainable tourism practices, and the potential for Uzbekistan to attract a broader international audience. By strategically adopting digital innovations, Uzbekistan's tourism sector can overcome existing challenges and capitalize on the benefits of digital transformation, fostering future growth and development. This research provides valuable insights for policymakers, industry stakeholders, and businesses aiming to navigate the digital landscape and enhance Uzbekistan's position in the global tourism market.*

**KEY WORDS:** *digital tourism, online travel companies, smart technologies, smart destination.*

## INTRODUCTION

In the contemporary landscape of the tourism industry, the burgeoning trend of digitalization has emerged as a transformative force, reshaping traditional paradigms and catalyzing innovation across various sectors. This article delves into the evolving landscape of digital tourism and the profound impact of digitalization on tourism export volumes, propelled by the integration of smart technologies and the proliferation of online travel agencies (OTAs). The advent of digitalization has ushered in a new era of connectivity and convenience for travelers, offering an array of innovative solutions and personalized experiences. From immersive virtual tours to seamless booking processes facilitated by OTAs, the digitalization of the tourism industry has revolutionized the way travelers plan, book, and experience their journeys. This paradigm shift has not only enhanced the efficiency and accessibility of tourism services but has also created new opportunities for destination marketing and revenue generation.

Key drivers of the digitalization trend include the rapid advancement of smart technologies such as artificial intelligence (AI), Internet of Things (IoT), and data analytics, which have enabled tourism stakeholders to optimize operational workflows and enhance customer experiences. Moreover, the proliferation of OTAs has democratized access to travel services, enabling travelers to compare prices, read reviews, and make bookings with ease, thereby driving tourism export volumes.

However, while digitalization presents immense opportunities for growth and innovation, it also poses challenges such as data privacy concerns, cybersecurity threats, and digital divide issues. As such, it is imperative for stakeholders in the tourism industry to navigate these challenges while harnessing the transformative potential of digitalization to drive sustainable development and competitiveness.

In light of these dynamics, this paper aims to explore the evolving landscape of digitalization in the tourism industry, examining its impact on tourism export volumes, the role of smart technologies, and the influence of OTAs. Through a comprehensive analysis of current trends, challenges, and opportunities, this study seeks to provide insights into the future trajectory of digital tourism and its implications for industry stakeholders and policymakers alike.

## **THEORETICAL FRAMEWORK**

### ***Definition of Digital Tourism***

The convergence of digitalization and the tourism industry has become a catalyst for profound transformation in the tourism and hospitality sector. The notion of digital tourism analyzed by many scientists. For example, Shevchenko (2019) [1] defined digital tourism as a segment of electronic commerce that swiftly integrates burgeoning fields like telecommunications and information technology into the domains of hospitality and management industries. Sanaz Shae (2019) [2] and Inta Egger (2020) [3] confirmed that digital tourism is the logical evolutionary development of traditional tourism and result of technological innovations. Cherevichko T.V (2019) [4] underlined that digital tourism is the online-purchasing the tour products also the introduction of mobile applications in the tourism industry. Besides this Verma (2022) [5] analyzed the impact of digital tools on buyer's behavior in the sector of tourism and hospitality. Saura (2020) [6] focuses on key digital marketing strategies and developments in the digital tourism industry.

Factors affecting to digital tourism.

It is important to notice, that many researchers were focused on the factors affecting digitalization of tourism industry. Buhalis and Law (2008) [7] defined relationship of economic growth with employment sector, penetration rate, technology and cost factor in tourism sector. Okhimenko (2019) [8] in his research discussed political factors. However, Watanabe (2019) [9] analyzed the impact of digitalization on tourism productivity. Methodology of assessing digital tourism.

Zhao, X and Mei (2022) [10] used index method for assessing the level of development of digitalization in tourism industry. Another research, which is conducted by Rui Tang (2022) [11], was dedicated to define the relationship between digital economy and developing tourism industry with the help of multiple regression. Besides that, Ernesto Lopez-Cordova [12] used gravity model to analyze the impact of digital tools on demand of tourism products.

## **RESEARCH METHODS**

This article uses methods such as: information collection, comparative analysis, induction, deduction.

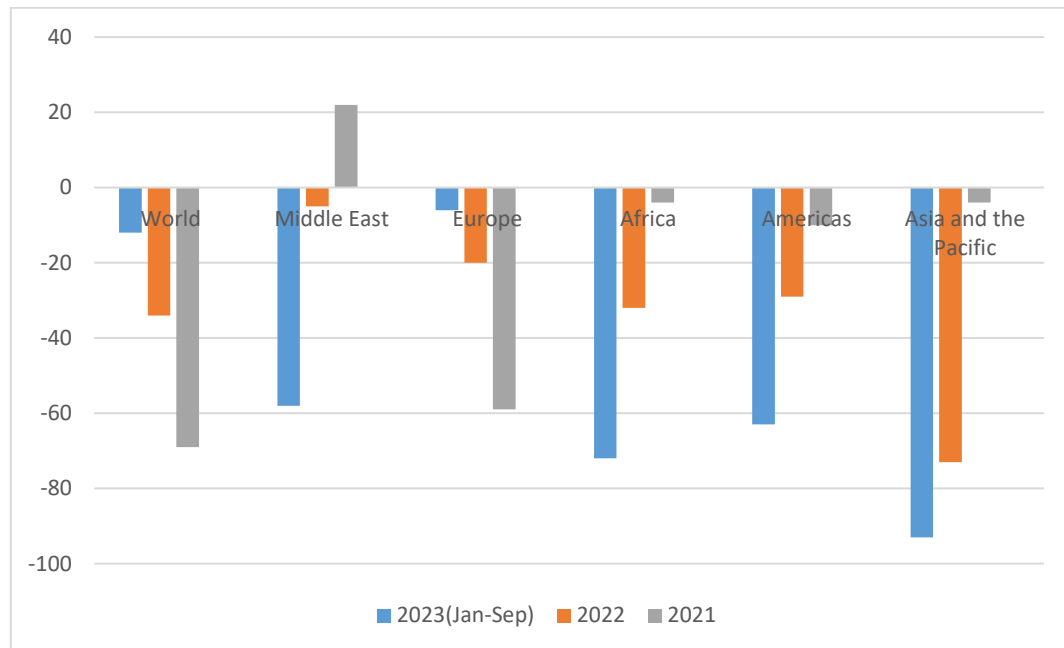

## **ANALYSIS AND DISCUSSION**

The COVID 19 pandemic has slowed down the development of the tourism industry. Travel restrictions, border closures and the cancellation of international flights have led to a sharp decline in the number of international tourists.

Many countries have introduced quarantine measures and testing requirements for arriving tourists, making travel between countries very difficult. All these led to a reduction of number of international tourism arrivals.

It is observed from the graph that, the countries of Middle East recovered faster pre pandemic level of tourism arrivals. One of the reasons for the rapid recovery of the tourism industry is the easing of quarantine measures in the countries of the Middle East, and it is also worth mentioning the development of religious tourism in these countries.

The next vital reason of increase international tourism arrivals in the countries of Middle East is the introducing digital tools to tourism industry, particularly, digital payment solutions, online booking platforms and etc.

The development of digitalization in the tourism industry is occurring at a rapid pace due to advances in technology, changes in consumer production and industry trends. Smartphones and tablets have become the gateway for passengers to use for study, planning, service levels and travel enjoyment.

During the period from 2017 to 2023, there has been a steady increase in sales of travel services, especially on digital platforms and using smart technologies. In 2023, about 69% of all travel services are purchased online. This trend is driven by the expansion and improvement of digital technologies, which creates a more convenient experience for travelers.

#### *Online Distribution Channels:*

1. Online Travel Agencies (OTAs)
2. Direct Booking Websites
3. Meta Search Engines
4. Social Media Platforms
5. Mobile Apps
6. Destination Marketing Organizations (DMOs)
7. Global Distribution Systems (GDS)

**Picture 2. Revenue share of sales channels in the travel and tourism industry market worldwide from 2017 to 2027.**

Travel applications offer an extensive array of services within the travel sector, encompassing functionalities such as travel reservations, transportation arrangements, hotel accommodations, and short-term lodging rentals.

As per insights derived from a Statista Digital Market Insights study, the global revenue generated by travel applications reached approximately one billion US dollars in 2022.

Upon segmentation of the travel application market by geographical regions, the United States and China emerge prominently as pivotal contributors, accounting for approximately 70 percent of the total revenue in 2022. Notably, the foremost application in the global landscape was Booking.com, an online travel agency, trailed by Airbnb and

Expedia. Furthermore, the Hopper application, positioned sixth in global download rankings, has garnered acclaim as a premier travel application within the United States during 2022, maintaining parity in market share with Airbnb, Expedia, and Lyft.

The most downloaded travel apps in the world in 2022 by total number of downloads are Google maps, Uber and Booking.com.

It is important to notice, that digitalization of tourism industry along with disadvantages has vital advantages. The table below shows a few of them.

The integration of cutting-edge technologies such as IoT, location-based services, AI, AR/VR, and blockchain has significantly enhanced the tourism experience, rendering it more attractive, efficient, and sustainable across various socio-economic and environmental dimensions. This technological integration has catalyzed innovation and prompted a reassessment of operational processes, particularly in addressing challenges like seasonality and overcrowding, thereby fostering the development of more intelligent tourism destinations.

**Table 1. Advantages and disadvantages of digitalization tourism industry**

Benefits	Drawbacks
Facilitate the augmentation of operational efficiency, conservation of time and resources, thereby creating avenues to concentrate on strategic entrepreneurship objectives and fostering the development of novel entrepreneurial frameworks	Increased reliance on digital platforms exposes tourism businesses to cybersecurity threats such as data breaches, hacking, and ransomware attacks, compromising sensitive customer information and damaging reputation.
Enhance market penetration, broadens global outreach, and facilitates entry into novel markets, thereby enabling internationalization of operations.	Digital Divide: Not all travelers have equal access to digital technologies, leading to a digital divide where some populations may be excluded from the benefits of digitalized tourism services.
Marketing Opportunities: Digital platforms provide extensive marketing avenues, allowing tourism businesses to reach a global audience through social media, search engines, and targeted advertising campaigns.	Market Saturation and Homogenization: Digital platforms can contribute to market saturation and the homogenization of tourism offerings, as businesses compete to meet the standardized expectations set by online reviews and ratings, potentially limiting diversity and creativity in the industry.
Digitalization fosters innovation in tourism products and services, allowing businesses to differentiate themselves in a competitive market through unique offerings and experiences.

The digitalization of the tourism sector has not only generated positive environmental outcomes but also holds promise for further advancements. Progress in manufacturing techniques, smart asset management, and resource optimization are poised to contribute to a more environmentally sustainable footprint for the industry.

Noteworthy changes in the sector include the evolution of intelligent travel facilitation, the rise of smart destinations, and the emergence of novel job roles tailored to the evolving needs of a technology-driven tourism ecosystem.

**Mobile Technologies:** With the widespread adoption of smartphones and tablets, there's a growing emphasis on mobile-friendly platforms and applications. Travelers increasingly rely on mobile devices for trip planning, booking, and on-the-go assistance, prompting tourism businesses to prioritize mobile optimization and responsive design.

**Personalization and AI Integration:** The integration of artificial intelligence (AI) and machine learning enables tourism businesses to deliver personalized experiences tailored to individual preferences and behaviors. AI-powered chatbots, recommendation engines, and virtual assistants enhance customer engagement and satisfaction by providing relevant and timely information and support.

**Augmented Reality (AR) and Virtual Reality (VR):** AR and VR technologies offer immersive experiences that enhance the pre-trip planning process and on-site experiences for travelers. From virtual tours of accommodations and attractions to AR-enhanced navigation and information overlays, these technologies enrich the tourism experience and drive engagement.

**Picture 4. Trends of digitalization tourism industry.**

**Blockchain for Transparency and Security:** Blockchain technology holds promise for improving transparency, security, and trust in the tourism industry. By providing secure, tamper-proof records of transactions and identities, blockchain can facilitate seamless and trustworthy bookings, payments, and sharing of traveler data while safeguarding against fraud and data breaches.

**Smart Destination Management:** Smart destination initiatives leverage IoT (Internet of Things) devices, sensors, and data analytics to optimize resource allocation, enhance infrastructure management, and improve the overall visitor experience. From smart transportation systems and crowd monitoring to personalized recommendations and real-time alerts, these initiatives empower destinations to become more efficient, sustainable, and visitor-friendly.

**Data-driven analytics:** Travel enterprises are employing data-driven analytics to acquire profound insights into the demographics and preferences of their clientele, thereby empowering them to enrich the customer journey through bespoke recommendations and incentives, including personalized suggestions and promotional incentives aimed at future reservations.

It is important to notice that the development of digitalization of tourism affects the development of related sectors of hospitality industry.

**Picture 5. The impact of digitalization on related sectors of the tourism and hospitality industry.**

The digital disruption in the tourism industry presents a dynamic landscape of trends, challenges, and opportunities. Embracing digital technologies can lead to enhanced customer experiences, new business models, and sustainable growth. However, addressing the challenges of digital divide, privacy, and adaptation is crucial for inclusive and secure digital transformation.

By strategically leveraging digital innovations, the tourism industry can navigate the complexities of digital disruption and harness its potential for future growth and development.

## CONCLUSION

In conclusion, the trajectory of digitalization within the tourism industry exhibits a robust tendency towards transformative advancements. By harnessing a spectrum of cutting-edge technologies such as the Internet of Things, artificial intelligence, augmented reality, virtual reality, and blockchain, the tourism sector is poised to offer an enriched and more sustainable experience for travelers worldwide. This paradigm shift towards digitalization not only enhances operational efficiency and customer satisfaction but also fosters innovation and redefines traditional processes, addressing longstanding challenges like seasonality and overcrowding. Moreover, the digitization of tourism holds promise for positive environmental outcomes, with advancements in manufacturing, smart asset management, and resource optimization contributing to a more eco-conscious industry footprint. As the sector evolves, notable transformations emerge, including the evolution of smart travel facilitation, the rise of intelligent destinations, and the emergence of novel job roles tailored to meet the demands of a technologically-driven landscape. Thus, embracing digitalization is imperative for stakeholders within the tourism industry, as it promises to shape a more sustainable, inclusive, and innovative future for global tourism.
